isotoxic (i-so-tok'sik). Same as isolytic.

isotoxin (i-so-tok'sin) [Gr. loos equal + loxin].
A toxin formed in an animal by the inoculation of material from another animal of the same species.

isotransplant (i-so-trans'plant) [Gr. loos equal + transplant]. A piece of tissue taken from one individual and transplanted into another individual of the same species.

isotransplantation (i"so-trans-plan-ta'shun). The making of an isotransplant.

isotrimorphism (i"so-tri-mor'fizm) [Gr. loos equal $+ \tau_{\rho\epsilon}\hat{\imath}s$ three $+ \mu_{\rho\rho}\varphi\hat{\eta}$ form]. Isomorphism between the three forms of two trimorphous substances.

isotrimorphous (i"so-tri-mor'fus). Having the quality of isotrimorphism.

isotropic, isotropous (i-so-trop'ik, i-sot'ro-pus) [Gr Ισος equal + τροπή turn]. Having like properties in all directions, as in a cubic crystal or in an egg without predetermined axis.

isotypical (i-so-tip'ik-al) [Gr. loos equal + typical]. Of the same type.

isouretin (i-so-u-re'tin). Formamidoxim, NH₂.-CH: NOH, a compound isomeric with urea.

ispaghul (is'pag-ul). A plant of East India, Planta'go is' paghula. The seeds contain a large amount of mucilage.

issue (is'yu). A suppurating sore made and kept open by inserting an irritant substance. i.-pea, a pellet of orris-root, ivy-wood, or other material used in making and maintaining an issue.

istarin (is'tar-in). A substance said to be obtainable from brain tissue.

isthmectomy (is-mek'to-me) [isthmus + Gr. ἐκτομή excision]. Excision of an isthmus; particularly excision of median goiter by removal of the isthmus of the thyroid gland.

isthmian, isthmic (is'me-an, is'mik). Pertaining to any isthmus, as the isthmus faucium.

isthmitis (is-mi'tis). Inflammation of the isthmus of the fauces.

isthmocholosis (is"mo-ko-lo'sis) [Gr. lσθμός isthmus + χολή bile]. Faucial catarrh with bilious disturbance.

isthmoplegia (is-mo-ple'je-ah) [Gr. tσθμόs isthmus + πληγή stroke]. Paralysis of the isthmus faucium.

isthmospasm (is'mo-spazm). Spasm of the isthmus of the fallopian tube

isthmus (isth'mus, ist'mus, is'mus) [Gr. lσθμόs].

A narrow strip of tissue or a narrow passage connecting two larger parts, especially a narrow seg-ment of the brain forming the plane of separation between the rhombencephalon and the cerebrum. Called also rhombocephalic i. aortic i., i. aor'tm [B N A], a narrow part of the aorta, seen especially in the fetus, at the point where the ductus arteriosus is attached. i. cartilag'inis au'ris [B N A], a bridge of cartilage connecting the cartilage of the external auditory meatus with the main part of the cartilage of the auricle. i. of the eustachian tube, the narrowest part of the custa-chian tube. i. fau'cium [B N A], the passage be-tween the mouth and the fauces. Guyon's i., a prolongation and narrowing of the internal os uteri.

i. gy'ri fornica'ti [B N A], the narrow convolution joining the gyrus fornicatus and the uncinate gyrus. Haller's i., the fretum of Haller. His's i., isthmus rhombocephali. Krönig's i., a narrow, ribbon-like area of resonance extending over the shoulder and connecting the larger areas of Kronig in front and behind. i. of limbic lobe. Same as i. gyri fornicati. i. prostatus [B N A], the middle lobe of the prostate. rhombocephalic i. Sae ichtere i of the throad alic i. See isthmus. i. of the thyroid, the band or strip of tissue that connects the lobes of the thyroid gland. i. tu'bæ auditi'væ [B N A], the narrowest part of the eustachian tube. i. tu'be uteri'ni [B N A], the narrow part of the fallopian tube where it joins the uterus. i. u'teri, Guyon's isthmus.

istisin (is'tiz-in). An orange-yellow crystalline powder, dioxyanthraquinone, used as a purgative.

isuria (i-su're-ah) [Gr. loos equal + οὐρον urine]. Excretion of urine at a uniform rate.

isutan (is'u-tan). Same as bismutan.

Italian method (it-al'yan). See under rhinoplasty.

Itard's catheter (e-tahrz') [Jean Marie Gaspard Itard, French otologist, 1774-1838]. See catheter.

Itard-Cholewa sign (e-tar'ko-la'yahz) [Itard; Eras-

mus Rudolph Cholewa, German physician, bern 1845]. See under sign

itate (i'tat). A substance in milk which oxidizes nitrite to nitrate.

itch (itsh). 1. A skin disorder marked by itching. the hands of bakers, and due to the irritation produced by yeast and dough. barbers' i. See time sycosis. barley i. See Pedu uloides. bath i., pruritus due to bathing in cold water. Bedouin i., a vesiculopapular eruption of Algeria, analogous to lichen tropicus. brick-layers' i., eczema in bricklayers caused by the caustic action of lime chorioptic i. Chorioptes. coolie-i., an itching disease, of unknown cause, of hot countries, probably uncinariasis. copra i., a dermatitic eruption affecting workers in copra and caused by the presence of an acarus (Tyroglyphus) found in that material. Cuban i. See amaas. dew i. Same as ground-i. dhobie i., the name given to tinea cruris in certain tropical countries, where it assumes a form more intensely inflammatory than in temperate climates Cf. tinea cruris filarial i., craw-craw. foot i., ground-itch frost i. See pruritus hiemgrain i., an urticarial eruption in those who handle grain, caused by Pediculoides ventriculosus and Ditropenotus aureoviridis. grocers' i., an eczema of the hands peculiar to grocers, and said to be sometimes due to a sugar-mite (Tyroglyphida) ground-i., the itching eruption caused by the ground-1., the itching eruption caused by the entrance into the skin of the larvæ of uncinaria Called also foot i, toe i., dew i., mazamorra, panighao, and wet-weather i lumbermen's i., pruritus hiemalis. Malabar i., a skin disease occurring on the Malabar coast, believed to be a variety of tinea trichophytina. millers' i. See Pediculoudes miners' i., ground-itch. Norway i., an itch produced by a species of Sarcables parasitic on the wolf noultryman's Sarcop'tes parasitic on the wolf poultryman's i., a dermatitis caused by a chicken mite, Dermanyssus gallinæ. prairie i., a name for various skin affections marked by pruritus, and seen among farmers, lumbermen, etc, due probably to uncleanliness and the irritation of coarse underclothing. straw i., straw-bed i., a dermatitis accompanied by itching, caused by a mite, Pediculoi'des ventrico'sus, which preys on the larvæ of a certain insect which lives on straw. The disease affects persons who sleep on mattresses containing infected straw. Called also dermalitis schambergi. summer i., prurigo æstivalis. swamp i., toe i., ground-itch. tar i., a diffuse form of dermatitis seen in persons working with or exposed to tar. warehousemen's i., eczema of the hands affecting those who handle goods in a warehouse. washerwomen's i., psoriasis or eczema on the hands of washerwomen. water i., wet-weather i. Same as ground-i. See panighao. winter i., pruritus hiemalis

itch-disease. See under disease.

itching (itsh'ing). Pruritus; a teasing irritation of the skin.

itch-mite (itsh'mīt). A mite of the family Sarcoptidæ, especially Sarcoptes scabiei.

itchol (itsh'ol). A proprietary ointment for the relief of itching, containing iodoform, phenol, oil of eucalyptus, etc.

itch-pus. The contents of the itch vesicles from which the homeopathic remedy, psorinum, is prepared.

iter (i'ter) [L]. A way or tubular passage. i. ad infundibu'lum, the passage from the third ventricle to the infundibulum. i. a ter'tio ad

quar'tum ventric'ulum, the aqueduct of Sylvius. i. chor'dæ ante'rius, the opening by which the chorda tympani nerve leaves the tympanum. i. chor'dæ poste'rius, the passage by which the chorda tympani nerve enters the tympanum. i. den'tium, the passage through which a permanent tooth makes its appearance.

iteral (i'ter-al, it'er-al). Pertaining to an iter.

-ites [Gr. $\iota\tau\epsilon s$, a masculine termination agreeing with $\delta\delta\rho\omega\psi$, dropsy (understood)— ϵ . g, tympanites, the windy dropsy] A termination indicating dropsy of the part to the name of which it is attached.

ithycyphos, ithyokyphosis (ith-is-i'fōs, ith"-e-o-ki-fo'sis) [Gr. lθύs straight + κυφός humped]. Backward projection of the spinal column.

ithylordosis (ith''e-lor-do'sis) [Gr. ιθύς straight + λόρδωσις bending forward]. Lordosis without any lateral curvature.

-itis [Gr. ιτις, a feminine adjectival termination agreeing with νόσος (understood)—e.g., neuritis = η νευριτις νόσος, the disease of the nerves, which soon becomes the inflammatory disease]. A termination denoting inflammation of the part to the name of which it is attached.

itrol (it'rol). Silver citrate, CO OAg.C(OH) (CH₂-COOAg)₂, a light, tasteless powder, slightly soluble in water. It is antiseptic, and is used for gonorrhea, gleet, wounds, and skin diseases, and in mouth-washes, gargles, and ointments, in 1-2 per cent. ointment or 1 4000 solution

itrosyl (it'ro-sil). Concentrated nitrous ether.

ittiolo (it-e-o'lo). A brownish-black syrupy liquid, ammonium sulphoichthyolate, a distillate from the bituminous shales of Siffoni Vallepiana, Italy used like ichthyol.

I. U. Abbreviation for immunizing unit.

ivain (i'va-in). A bitter, yellow substance from Achii'lea moscha'ta.

ivaol (i'va-ol). A thick, fragrant, oily substance obtained by distillation from Achil'lea moscha'ta.

ivory (i'vo-re) [L e'bur, ebur'neus]. 1. The bone-like substance of the tusks or teeth of elephants.
 2 Dentin. i. black. Same as animal charcoal.

ivyol (i've-ol) A solution in olive oil of an irritant oil extracted from the leaves of poison ivy, Rhus toxicodend*on: used internally in ivy poisoning

Ixodes (iks-o'dēz) [Gr ἰξώδης like bird-lime]. A genus of acarids, including cattle-ticks, woodticks, and other vermin that become parasitic on man and beasts. I. hexag'onus occurs on squirrels in Cahforma I. holocyc'lus, a species which causes tick paralysis in young stock in New South Wales I. pilo'sus, a species which causes tick paralysis in sheep in South Africa. I. rici'nus, the European castor-bean tick; so called because of its resemblance to a castor-oil bean. It is parasitic on cattle and transmits Puroplasma bigeminum.

ixodiasis (iks-o-di'as-is) Any disease or lesion due to the bite of ticks; tick infection.

ixodic (ik-sod'ik). Caused by ticks.

Ixodidæ (iks-od'id-e). A family of the Acarina. It includes the true ticks which are characterized by the presence of a scutum. It includes the following genera Amblyomma, Dermacentor, Hemaphysalis, Ixodes, Margaropus, and Rhipicephalus.

ixodin (iks'o-din). A briny extract of wood-ticks.
Used intravenously, it diminishes the heart's action and lessens inspiration.

Ixodoidea (iks-o-doi'de-ah). An order of ticks of the class Arachnida, the ticks.

ixomyelitis (ik"so-mi-el-i'tis) [Gr. ξξυς waist + μυελός marrow + -ιτις inflammation]. Inflammation of the lumbar part of the spinal cord

izal (i'zal). A proprietary disinfectant for external use in \(\frac{1}{3}\) to 1 per cent solution. It is an albuminous emulsion of monotonic phenols boiling between 205° and 300° C.

Ţ

J. Symbol for Joule's equivalent.

jaba (jah'bah). An Asiatic plant, Hibis'cus ro'sa sinen'sis: used in menorrhagia.

jaborandi (jab-o-ran'de) [Brazilian]. The leaf-lets of the rutaceous shrub, Pilocar'pus jabo-ran'di, a South American plant, and other con-generic species. Jaborandi produces salivation, sweating, increased flow of the secretions, and lowering of temperature and blood-pressure. It is used as a diaphoretic and sialogogue in dropsy and hydrothorax, in the early stages of acute fevers, pneumonia, malarial fever, uremia, etc.; it is also employed as a miotic and to reduce intra-ocular tension. Dose of extract, 2-10 gr. (0.133-0.666 gm), of fluidextract, 30-60 min. (2-4 c.c.); of tincture, 2-4 fl dr. (8-16 c.c.); of infusion, 1-2 fl. oz. (30-60 c c.). See pilocarpin. large leaved j., Pernambuco j. See Pilocarpus jaborandi. small leaved j., Pilocarpus microphyllus.

jaboridin (jab-o'rid-in). An alkaloid, C₃₂H₃₂N₄-O4, from jaborandi.

jaborin (jab'o-rin). An alkaloid, C₁₁H₁₆N₂O₅, from jaborandi: it resembles atropin in its properties.

Jaboulay's button, operation (zhab-oo-laz') [Mathieu Jaboulay, French surgeon, 1860-1913]. See under button and operation.

Jacaranda (jak-ah-ran'dah). A genus of bignoniaceous trees of tropical America. J. caro'ba is used in syphilis, urethritis, skin diseases, and rheumatism. Dose of fluidextract, 16-60 min. (1-4 c c). **J. lancifolia'ta** is used in gonorrhea, etc. Dose of tincture, 15 min. (1 cc), of fluidextract, 16-30 min. (1-2 c.c.).

jacareuba (jak-ah-ra'oo-bah). The Calophyl'lum brasilien'se, a medicinal plant of South America.

Jaccoud's fever, sign (zhah-kooz') [Sigismond Jaccoud, French physician, 1830-1912] See under fever and sign.

jacket, plaster-of-Paris (jak'ct). A casing of plaster of Paris enveloping the body for the purpose of correcting deformities. Sayre's j., a plaster-of-Paris jacket used as a support for the spinal column. **strait-j.**, a contrivance for restraining the limbs, especially the arms, of a violently insane person. **Willock's respiratory** i., a sort of jacket used to strengthen the movements of respiration in emphysema of the lungs.

Jackson's membrane (jak'sunz) [Jabez North Jackson, surgeon in Kansas City, born 1868]. See under membrane.

Jackson's sign (jak'sunz). 1. [James Jackson, Jr., Boston physician, 1810–1834]. See under sign. 2. [Chevalier Jackson, American laryngologist]. See asthmatoid wheeze, under wheeze.

jacksonian epilepsy (jak-so'ne-an) [after John Hughlings Jackson, English physician, 1834-1911] See under epilepsy.

Jacob's membrane, ulcer (ja'kubz) [Arthur Jacob, Irish ophthalmologist, 1790-1874]. See under membrane and ulcer.

Jacobson's nerve, organ, etc. (ja'kub-sunz) [Ludwig Levin Jacobson. Danish anatomist, 1783-1843]. See under nerve, organ, etc.

Jacobson's retinitis (ja'kob-sunz) [Julius Jacobson, German ophthalmologist, 1829-1889]. Syphilitic retinitis.

Jacquemier's sign (zhahk-me-āz') [Jean Marie Jacquemier, French obstetrician, 1806-1879]. See under sign.

Jacquet's disease (zhak-āz') [L. Jacquet, French dermatologist, 1860-1913]. See under disease.

jactation (jak-ta'shun). Jactitation.

jactitation (jak-tit-a'shun) [L. jactita'tio; jactita're to toss]. The tossing to and fro of a patient a're to toss]. in acute disease.

jaculiferous (jak-u-lif'er-us) [L. ja'culum dart + fer're to bear]. Bearing prickles.

Jadassohn's disease (yah'das-ōnz) [Josef Jadassohn, Swiss dermatologist, born 1853]. Maculopapular erythrodermia.

adelot's furrows, lines (zhad-lōz') [Jean Francois Nicolas Jadelot, physician in Paris, died Jadelot's 1830]. See under furrow and line.

Jaeger's test-types (ya'gerz) [Edward Jaeger von Jastthal, Austrian oculist, 1818-1884]. See under test-types.

Jaffé's test (zhah-fāz') [Max Jaffé, German physiologic chemist, 1841-1911]. See under tests.

jagzietkte (yahg'ze-ek'te) [Dutch jagt to drive + ziekte sickness]. A specific chronic catarrhal pneumonia of sheep in South Africa.

jail-fever (jal'fe-ver). Typhus fever.

Jaksch's anemia (or disease), sign, test, etc. (yaks) [Rudolf von Jaksch, physician in Prague, born 1855] See anemia infantum pseudoleukamica, also under sign and tests.

jalap (ja'lap) [L. jala'pa, from Jalapa, a city of Mexico] The root of Erogo'nium jala'pa and other plants of the same genus growing in Mexico. It is a hydragogue cathartic and cholagogue, and is given in constipation, for the purpose of removing dropsical effusions by the bowels, and to produce revulsion in congestion of the brain See also convolvulin. Dose in powder, 15-30 gr. (1-2 gm.); of abstract, 1-5 gr. (006-033 gm), of fluidextract, 15-30 min. (1-2 c c), of tincture, 30-60 min. (2-4 c.c.); of extract, 4-8 gr. (0 260-0 533 gm.); of resin (res'ina jala'pæ, U S P), 2-5 gr. (0 133-0333 gm.); of compound powder (pul'vis jala'pa compos'ıta, U. S. P.), 10-60 gr. (0666-4 gm.). Orizaba j. See ipomea.

jalapin (jal'ap-in). 1. A purgative resinous glucosid, C₃₄H₅₆O₁₆, from various kinds of jalap. A concentration or impure resin from jalap: purgative Dose, 3 gr. (o 2 gm.).

jalon (1'al-on) A proprietary colloidal silver solution for internal use.

jambu assu (zham'boo as-oo') The root of Pi'per jaboran'di, a tree of Brazil a stimulant febrifuge. Dose of fluidextract, 10-30 min. (0.666-2 c c.).

The bark of Euge'nia jam'bos, jambul (jam'bul) a tree of the East Indies a stomachic astringen. Dose, 5-10 gr. (0.333-0 666 gm.), of fluidextract, 10-20 min (0.666-1 333 c c.)

jambulol (jam'bu-lol) A phenolic compound from jambul seeds

James's powder [Robert James, English physician. 1705-1776]. Pulvis antimonialis.

jamrosin (jam-ro'sin) The fluidextract of an East Indian myrtaceous plant: used in diabetes in doses of 6 drops.

Janet's disease, test (zhan-ēz') [Pierre Janet, French phys-ician, born 1859]. See under disease and tests.

Janeway's pill (jān'wāz) [Edward Gamaliel Janeway, physician in New York, 1841-1911]. Compound pill of aloes and podophyllin.

Janeway's sphygmomanom-eter (jān'wāz) [Theodore C. Janeway, American physician, 1872-1917]. See sphygmomanometer.

janiceps (jan'is-eps) [L. Ja'nus a two-faced god + ca'put head].

A monster with one head and two faces. j. asym'metros, a janiceps with one

imperfect and one more complete face.

Janiceps.

Jansen's operation (yahn'senz) [Albert Jansen, contemporary German otologist]. See operation.

Janthinosoma (jan-thin-o-so'mah). A genus of mosquitos. J. lut'zi, a species which transports the eggs of bot-flies (Dermatobia) glued to its abdomen. J. postica'ta, a species which also transports the eggs of a bot-fly.

Janus green. See under green.

japaconin (jap-ak'o-nin). An amorphous alkaloid, C₂₈H₄₃NO₉, derivable from japaconitin.

japaconitin (jap-ak-on'it-in). An exceedingly poisonous alkaloid, C₃₄H₄₉NO₁₁, derived from a Japanese aconite.

Japanese river fever. See tsutsugamushi disease, under disease.

japhenzaconin (jap-ben-zak'o-nin). An alkaloid, C₃₂H₄₇NO₁₀, from a Japanese aconite.

japonic acid (jap-on'ik). An acid from catechu or terra japonica; a variety of tannic acid.

jargonaphasia (jar'go-naf-a'ze-ah). A speech defect in which several words are run into one.

Jarisch's ointment (yah'rish-es) [O. Jarisch, Austrian dermatologist, born 1850]. See ointment.

Jarjavay's muscle (zhar'zha-vāz) [Jean François Jarjavay, French surgeon, 1815-1868]. The depressor urethræ muscle.

Jarvis's snare (jahr'vis-ez) [William Chapman Jarvis, New York laryngologist, 1855-1895]. See under snare.

jasmin, yellow (jas'min). See Gelsemium.

jasmone (jas'mōn). A yellowish oil or ketone derived from oil of jasmin.

Jateorrhiza (ja"te-o-ri'zah). See calumba.

jatrevin (ja-tre'vin). A condensation product of menthol and isobutylphenol. used as a spray in respiratory diseases in a 2-5 per cent. solution.

Jatropha (jat'ro-fah) [Gr. laτρός physician + τροφή nourishment]. A genus of tropical euphorbiaceous plants. J. cur'cas affords the physic-nut See Curcas. J. man'ihol produces tapioca and casareep.

jaundice (jawn'dis) [L. ic'terus]. Yellowness of the skin, eyes, and secretions, due to the presence of bile-pigments in the blood; icterus tion j., that due to absorption of bile into the blood-vessels. acathectic j., jaundice due to pathologic changes in the liver-cells, which become unable to retain their secretions. acholuric j., jaundice without bile-pigments in urine or with only minute quantities of them. acute febrile j., acute infectious j. See Weil's disease, under disease. anhepatogenous j., jaundice which is not hepatogenous. black j., Winckel's disease. blue j. See cyanosis. Budd's j., acute parenchymatous hepatitis See hepatitis. catarrhal j., that which is due to closure of the common bile-duct by duodenal catarrh; catarrhal cholangitis. complete j., the presence of both bile-pigments and bile salts in the blood. dissoclated j., dissociation j., jaundice in which either the pigment or the salts of bile formed within the liver are separately shunted from the biliary path into the lymph- or blood-vessels of the liver. See hepatic dissociation j. and renal dissociation j. emotional j., jaundice resulting from deep emotional j., jaundre resulting from deep emotion, such as great anxiety. epidemic ca-tarrhal j. See Weil's disease, under disease. familial acholuric j. See hemolytic j. fe-brile j., an acute infectious jaundice. See Weil's disease, under disease. hemaphoe j. Same as urobilin 1. hematogenous j., that which is due to disintegration of the red bloodcorpuscles. hematohepatogenous j., jaundice that is partly hematogenous and partly hepa-togenous. This form includes toxemic jaundice and the jaundice seen in malaria, yellow fever, typhoid, typhus, acute malaria, yellow atrophy of the liver, etc. hemolytic j., a rare, chronic, and generally hereditary disease characterized by periods of excessive hemolysis due to abnormal fragility of the

red corpuscles. It is accompanied by enlargement of the spleen and by jaundice. The hereditary or congenital form is known as congenital family icterus, samilial acholuric j., and Minkowski-Chauffard syndrome; the acquired form is known as acquired hemolytic j. and Hayem-Widal syndrome. hemorrhagic j. See Weil's disease, under disease. hepatic dissociation j., the presence of bilirubin or bile-salts separately in the blood-stream. hepatogenic j., that which is due to some disease or disorder of the liver. infectious j. See Weil's disease, under disease. inogenous j., icterus neonatorum due to change of the hemoglobin in the tissues. lutein j. Same as carotinemia. malignant j. See icterus See icterus See biliary fever of dogs, under fever. i. of the newborn. See icterus neonatorum. obstructive j., that which is due to a mechanic impediment to the flow of the bile. occult j., bile in the blood in such small quantity as to cause no symptoms.

iologic j., mild icterus neonatorum lasting during the first few days after birth picric acid j., jaundice due to picric acid poisoning in munition workers or by its ingestion in malingering soldiers. renal dissociation j., the presence of bile-pigments in the blood due to separation of the biliary elements through renal filtration of the bile-salts. **retention j.**, obstructive jaundice. **spirochetal j.**, Weil's disease. See under *disease*. **toxemic j.**, jaundice produced by poisons, such as phosphorus, arseniureted hydrogen, picric acid, snake-poison, etc. urobilin-j., jaundice due to the presence of urobilin in the blood. xanthochromic j., jaundice marked by yellow discoloration of the palms, soles, and mucous membranes, but without bile pigment in the urine.

Javal's ophthalmometer (zhav-alz') [Louis Emile Javal, French oculist, 1839-1907]. See ophthalmometer.

javanin (jav'an-in). An alkaloid from cinchona.

Javel solution (zha-vel') [Named from Javel Works, near Paris, where the solution was first made by Percy] See under solution

javellization (jav-el-iz-a'shun). The purification of water-supplies by treatment with Javel solution of hypochlorites.

javenin (jav'en-in). A crystalline alkaloid from Cincho'na calisa'ya var. Javanica.

jaw, j.-bone (jaw, jaw'bōn). See maxilla. j.-chattering, clonic masticatory spasm causing a movement like chattering of the jaws. j.-jerk. See under reflex lock-j. See trismus. lumpy j. See actinomycosis. phossy j., a popular name for necrosis of the jaw due to phosphoruspoisoning. pig-j., abnormal protrusion of the upper jaw of the horse, with hypertrophy of the teeth.

Jaworski's bodies or corpuscles, test (yahwor'skēz) [Valery Jaworski, Polish physician, born 1840]. See under corpuscle and tests.

jaw-winking. Involuntary movements of the eyelid occasionally associated with movements of the jaw

Jeanselme's nodules (zhah-selmz') [Edouard Jeanselme, French physician, born 1858]. See under nodule.

jecolein (je-ko-le'in). A glycerid of jecoleic acid from cod-liver oil.

jecoral (jek'o-ral). Pertaining to the liver.

jecorin (jek'o-rin) [L]c'cur liver] 1. A water-soluble glucophospholipin, C₁₀₈H₁₈₆N₅SP₃O₄₆, found both in normal and in diabetic blood, the liver, spleen, brain, etc. 2. A patented cod-liver oil substitute containing calcium chlorhydrophosphate, lactic acid, phosphoric acid, bromin, iodin, and ferrous iodid.

jecorize (jek'or-īz) [L. je'cur liver]. To impart to a food the therapeutic qualities of cod-liver oil, as by treating milk with ultraviolet ray.

jecorol (jek'or-ol). A proprietary preparation of cod-liver oil.

jecovol (jek'o-vol). An egg emulsion of cod-liver oil. with glycerophosphates of calcium, sodium, and iron.

jecur, jecus (je'kur, je'kus). Latin for liver.

Jeddah ulcer (jed'ah) [Jeddah, a town of Arabia]. Furunculus orientalis.

Jeffersonia (jef-er-so'ne-ah) [named for T. Jefferson, 1743-1826]. A genus of berberidaceous herbs. The root of J dsphylla, of North America, is tonic, diuretic, and expectorant: emetic in large doses. Dose of fluidextract, 20-60 min. (1 333-4 c.c.).

jejunal (je-ju'nal). Pertaining to the jejunum.

jejunectomy (jej-u-nek'to-me) [jejunum + Gr. ἐκτομή excision]. Excision of the jejunum or a part of it.

jejunitis (jej-u-ni'tis). Inflammation of the jejunum.

jejunocolostomy (jej"u-no-ko-los'to-me) [jejunum + colon + Gr. στόμα mouth]. The formation of an artificial passage between the jejunum and the colon.

jejuno-ileitis (jej"u-no-il-e-i'tis). Inflammation of the jejunum and ileum together.

jejuno-ileostomy (jej"u-no-il-e-os'to-me) [jejunum + ileum + Gr. στόμα mouth] The formation of an artificial passage between the jejunum and the ileum.

jejunojejunostomy (jej"u-no-jej-u-nos'to-me). The operative formation of an anastomosis between two portions of the jejunum.

jejunostomy (jej-u-nos'to-me) [jejunum + Gr. στόμα mouth]. The surgical creation of a permanent opening through the abdominal wall into the jejunum.

jejunotomy (jej-u-not'o-me) [jejunum + Gr. τέμνειν to cut] Surgical incision of the jejunum. jejunum (je-ju'num) [L. "empty"]. That portion of the small intestine which extends from the duodenum to the lleum

Jellinek's sign (yel'in-eks) [Samuel Jellinek, contemporary physician in Vienna]. See under sign.
 jelloid (jel'oid). A medicated gelatin tablet or lozenge.

jelly (jel'e) [L. gelati'na]. A soft substance which is coherent, tremulous, and more or less translucent. enamel-j., a soft material in a growing tooth between the epithelial investment and the calcifying cells of the young enamel glycerin-j., a compound of glycerin, zinc oxid, and gelatin: used in cases of eczema. mineral j., a soft, semisolid substance prepared from petroleum, used as a basis for salves and ointments; vaselin petroleum j. Same as mineral j. j. of Wharton, the soft, pulpy, connective tissue that constitutes the matrix of the umbilical cord.

Jendrassik's maneuver (yen-drah'siks) [Ernst Jendrassik, physician in Budapest, 1858–1922]. See under maneuver.

Jenner's stain (jen'ers) [Louis Jenner, contemporary English physician]. See under stains, table of

jennerian (jen-e're-an). Pertaining to Edward Jenner (1749-1823), the discoverer of vaccination.

jennerization (jen-er-iz-a'shun). Production of immunity to a disease by repeated inoculation with cultures of bacteria similar to those producing the disease, but deprived of their virulence.

jequiritin (je-kwir'it-in). Same as abrin.

jequiritol (je-kwir'it-ol). An abrin preparation used in treating pannus, trachoma, and opacities of the cornea.

jequirity (je-kwir'it-e). The poisonous seeds of Ab'rus precato'rius: used in treating trachoma.

jerk, crossed (jerk). Movement of the opposite leg in attempt to elicit the knee-jerk on one side.

biceps-j., biceps reflex. See under reflex. jaw-j. See under reflex. knee-j. See under reflex. triceps-j., triceps reflex. See under reflex.

jerks (jerks). A variety of dancing mania, sometimes associated with religious excitement.

jervic acid (jer'vik) See under acid.

jervin (jer'vin). A poisonous alkaloid, C₂₈H₃₇-NO₃, from Vera'trum al'bum and Vera'trum vir ide: a depressant to the motor and vasomotor centers.

jesaconitin (jes-ak-on'it-in). An amorphous alkaloid, C₄₀H₅₁NO₁₂, from a Japanese aconite.

jessamin (jes'am-in). See Gelsemium.

jessanodine (jes-an'o-dīn). A proprietary antiseptic and anodyne preparation.

Jesuits' bark (jez'u-its). See Cinchona.

Jesus Haly. See Ali ben Iza.

jigger (jig'er.) See chigger.

iimson-weed (iim'zn). See stramonium.

Jobert's fossa, operation, suture (zho-behrz')
[Antoine Joseph Jobert de Lamballe, French surgeon, 1799–1867]. See fossa, operation, and suture.

Joffroy's reflex (zhof-rwahz') [Alexis Joffroy, physician in Paris, 1844–1908]. See under reflex.

ioha (jo'hah). An oily solution of salvarsan, mar-

keted in ampules of 1 and 3 c.c.

johannisin (jo-han'is-in). An alkaloid from anda oil. johimbin (jo-him'bin). An aphrodisiac alkaloid from the bark of an African tree called *johimbehe*. Dose, $\frac{1}{2}0-\frac{1}{10}$ gr. (0.003-0 0065 gm). See *yohimbin*.

Johne's bacillus, disease (yo'nēz) [Albert Johne, German physician]. See under bacillus and disease.

Johnson's test [Sir George Johnson, English physician, 1818–1896]. See under tests.

joint (joint) [L. articula'tio]. An articulation between two bones; more especially one which admits of more or less motion in one or both bones. amphidiarthrodial j., amphidiarthrosis. arthrodial j. See arthrodia. ball-and-socket j. See enarthrosis. biaxial j., a joint in which there are two chief axes of movement at right angles to each other. bilocular j., a joint divided into two cavities by the interarticular cartilage. bleeders' j., hemorrhage into a joint in persons of a hemorrhagic

Brodie's diathesis. j., hysteric neuralgia of a joint. Charcot's neuralgi**a** j., chronic inflamma tion of the synovial membrane of a joint, extending to the substance of the bone. seen in tabes and in certain diseases of the spine. Chopart's j., the union of the os calcis and astragalus with the remaining bones of the tarsus the mediotarsal articulation. cochlear j., a form of hingejoint which permits of some lateral motion. compound j_:,

Section of true joint: f.l., ribrous layer; s.l., synovial layer of joint capsule. The articular cartilages are white, bones dotted, and the joint cavity black in the figure (Sisson.)

joint composed of several bones. condyloid j., a joint consisting of an ovoid head moving in an elliptic cavity, permitting of all movements except axial rotation. Cruveilhier's j., the atlanto-odontoid joint. diarthrodial j. See diarthrosis. dry j., a chronic villous arthritis. See under arthritis. ellipsoid j., a joint with two axes of motion, both of them through the same bone. enarthrodial j. See enarthrosis. fringe j., a joint affected with villous arthritis. ginglymoid j. See einglymus. gliding j. See arthrodia. hemophilic j. See bleeders' j. hinge-j. See ginglymus. hys-

teric j., a hysteric condition which resembles arthritis. immovable j. See synarthrosis. intercarpal j's, the articulations formed by the a hysteric condition which resemcarpal bones in relation to each other. irritable j., a condition in which a joint is subject to attacks of inflammation without discoverable cause: tarsometatarsal articulation. Lisfranc's j., the tarsometatarsal articulation. midcarpal j., the joint between the scaphoid, semilunar, and cuneiform bones and the second row of the carpus. mixed j. See amphiarthrosis. movable j. See diarthrosis. multiaxial j. Same as enarthrosis. open j., a veterinary term for inflammation of a joint with sloughing which exposes the joint surfaces. pisocuneiform j., the articulation of the pisiform and cuneiform carpal bones. pivot j., a rotary joint. polyaxial j. Same as enarthrosis. rotary j., a lateral ginglymus or rotating diarthrosis. saddle j., a joint having two saddle-shaped surfaces at right angles to each other. simple j., a joint made up of two bones. **spheroid j.**, an enarthrosis with spheric surfaces. **spiral j.** Same as cochlear j. **synar-throdial j.** See synarthrosis. **tomato-j.**, a See synarthrosis. tomato-j., a painful condition of one or more joints attributed to an acid state of the system caused by eating tomatoes. **trochoid j.**, a rotary joint. **uni**axial j., a joint which moves on one axis only. unilocular j., a joint having only one cavity.

The capsular ligament of a joint. joint-capsule. joint-evil. 1. Anesthetic leprosy of the West Indies (Towne, 1726). 2. Joint-ill.

joint-ill (joint'il). Pyemia affecting the joints of young animals soon after birth, due to infection through the navel.

joint-mouse. A movable cartilage or other body in a joint.

joint-muscle. A muscle which moves a joint.

Jolles's test (yol'ēz) [Adolf Jolles, Austrian chemist, born 1862]. See under tests.

Jolly's bodies (zho-lez') [J. Jolly, contemporary French physician]. Howell's bodies. See under See under body.

Jolly's reaction (yo'lēz) [Friedrich Jolly, German neurologist, born 1844]. See under reaction.

Jones's position, splint [John Jones, American surgeon, 1729-1791]. See under position, splint.

Jonnesco's fold, fossa, operation, spinal anesthesia (jo-nes'kōz) [Thomas Jonnesco, Rumanian surgeon, 1861-1926]. See under fold, fossa, operation, and anesthesia.

Jorissenne's sign (zhor-is-enz') [Gustav Jorissenne, Belgian physician]. See under sign.

joss-stick (jos'stik). A Chinese preparation of amadou in sticks, sometimes perfumed: burned as a pastil to overcome ill smells in the sick-room.

joule (jool). The work expended by a current of one ampere flowing for one second against a resistance of one ohm.

Joule's equivalent (joolz) [J. P. Joule, English physicist, 1818-1899]. See equivalent.

Jourdain's disease (zhoor-daz') [Anselme Louis Bernard Jourdain, French surgeon, 1734-1816]. See under disease.

juccuya (uc-koo'yah). The ulcerative type of dermal leishmaniasis.

juga (ju'gah). Plural of jugum.

jugal (jugal) [L. juga'lis: ju'gum yoke]. 1. Connecting like a yoke. 2. Pertaining to the cheek. jugale (ju-ga'le). The jugal point. See point.

jugged (jugd). Having glanderous swellings: said

of horses.

juglandic acid (jug-lan'dik). An acid from the bark of Jug'lans cine'rea: thought to be the same as nucin.

juglandin (ju-glan'din). **iglandin** (ju-glan'din). A compound from the green shell and leaves of the walnut tree: used in scrofulous conditions and skin diseases.

Juglans (ju'glans) [L. "Jove's nut," walnut]. A genus of juglandaceous trees the walnuts. See walnut. 2. The root-bark of J. cine'rea, the butternut tree. It is an aperient, and is sometimes given in remittent and intermittent fevers. Dose of extract, 5-20 gr. (0.333-1.333 gm.).

jugomaxillary (ju-go-mak'sil-a-re). Pertaining to the malar bone and the maxilla.

jugular (ju'gu-lar) [L. jugula'ris: ju'gulum neck]. Pertaining to the neck.

jugulation (jug-u-la'shun) [L. jugula're to cut the throat of]. The sudden and rapid arrest of disease by therapeutic measures.

jugum (ju'gum), pl. ju'ga [L. "a yoke"]. A depression or ridge connecting two structures. j. alveola're [B N A], a depression on the anterior surface of the alveolar process, between the ridges caused by the roots of the incisor teeth j. cerebra'le [B N A], one of the elevations on the orbital plate of the frontal bone between the digital impressions. j. pe'nis, a forceps for compressing the penis. j. sphenoida'le, the structure connecting the two wings of the sphenoid bone.

juice (jūs) [L. jus broth]. Any fluid from an animal or plant tissue. cancer-j., a milky juice which may be obtained from cancerous tissue, and containing cancer-cells. **duodenal j., duodenic j.,** a remedy used in some disorders of digestion. **gastric j.,** the clear liquid secreted by the stomach intestinal j., the transparent liquid secreted by the follicles of Lieberkuhn. pancreatic j., the thick, transparent fluid secreted by the pancreas. press j., the liquid obtained by submitting to great pressure finely ground tissue. This fluid contains in suspension the endo-enzymes of the tissue-cells.

jujube (ju'jūb). The fruit of Ziz'yphus vulga'ris: a pectoral.

julep (ju'lep) [L. jula'pium] A sweetened alcoholic drink or cordial, of various kinds.

jumbul (jum'bul). The plant, Syzyg'ıum jambola'num: used for diabetes.

jumentous (ju-men'tus) [L. jumen'tum a beast of burden]. Having a strong animal odor; said of urine.

jumper (jum'per). A neurotic person affected with palmus and enfeebled will.

junction (junk'shun). The place of meeting or coming together. amelodental j., the dentoenamel j. dentocemental j., the line of meeting between the dentin and cementum enamel j., the line of meeting of the dentin and enamel myoneural j., the point of junction of a nerve with the muscle to which it is distributed

junctu'ræ ten'dinum. Narrow bands extending obliquely between the tendon of insertion of the extensor digitorum communis on the back of the

Jungbluth's vasa propria (yoong'bloots) [Hermann Jungbluth, contemporary German physician]. See vasa propria.

jungle plant (jun'gl). See Combretum sundi-

juniper (ju'nip-er). See Juniperus. j. moss. See Polytrichum.

Juniperus (ju-nip'er-us) [L]. 1 A genus of coniferous trees, 2. The berry or fruit of Junip'erus commu'nis, or juniper tree; the oil of the fruit is a stimulant diuretic See gin. Dose of oil, 3-5 min. (0.19-9 33 c.c.); of spirit, 30 min (2 c.c.).

junk (jungk). 1. A form of cushion used in dressing fractures. 2. Oakum, somewhat used in surgical dressings.

junket (jungk'et). Curds and whey flavored and used as food.

Junod's boot (zhoo-nōz') [Victor Theodor Junod, French physician, 1809–1881]. See boot.

jurisprudence, medical (ju-ris-pru'dens) [L. ju'-ris pruden'tia knowledge of lawl. The appli-

cation of the teachings of medical science to questions of law and justice; also the application of the principles of law to the relations between physicians and patients.

jury-mast (ju're-mast). An upright bar used in supporting the head in cases of Pott's disease.

Juscul. Abbreviation for L. jus'culum, broth.

jusculum (jus'ku-lum) [L.]. Soup or broth. justo major (jus'to ma'jor) [L.]. Larger than is

normal or usual. j. minor, smaller than is normal or usual.

Justus's test (joos'toos) [J Justus, contemporary Hungarian dermatologist] See under tests.

jute (jut). The fibers of Cor'chorus olito'rius: used in surgical dressings.

juvantia (ju-van'she-ah) [L. pl]. Adjuvant and palliative medicines or appliances.

juvenile (ju'ven-īl). Pertaining to youth or childhood.

juvenin (ju'ven-in) [L. juvenis young]. The yohim-bin and strychnin salts of methyl arsenic acid: used in sexual neurasthenia.

iuxta-articular (juks"tah-ar-tik'u-lar) [L. jux'ta near + artic'ulus joint]. Situated near a joint or in the region of a joint.

juxtangina (juks-tan'jin-ah) [L. "almost quinsy "]. Inflammation of the pharyngeal muscles.

juxtaposition (juks"tah-po-zish'un) [L. jux'ta near + posit'io place]. An adjacent situation; apposition.

juxtapyloric (juks"tah-pi-lor'ik). Situated near the pylorus.

juxtaspinal (juks-tah-spi'nal) (L. jux'ta near + spine]. Close to the spinal column.

K

K. The symbol for potassium [L. ka'lium]; also abbreviation for electrostatic capacity, kathode, and absolute zero.

Symbol for magnetic susceptibility.

Ka. An abbreviation for kathode, or cathode.

kabure (kah-boo're). A skin disease found in Japan; it is probably caused by the burrowing of the cercarize of Schistosoma japonica in the skin

kadamba (kad-am'bah). An Asiatic plant, Nau'clea cadam'ba. the flowers are vulnerary.

Kader's operation (kah'ders) [Bronislaw Kader, contemporary Polish surgeon]. See operation.

kaffir pox (kaf'ēr) See amaas

kafirin (kaf'er-in). A protein substance isolated from the seeds of kafir, Andropogon Sorghum.

Kafka's test (kaf'kaz). See under tests

Kahlbaum's disease (kahl'bowmz) [Karl Ludwig Kahlbaum, German physician, 1828-1800] atonia

Kahler's disease (kah'lerz) [Otto Kahler, Austrian physician, 1849-1893]. See multiple myeloma, under myeloma.

Kahn's test (kahnz) [R. L. Kahn, bacteriologist in Lansing, Michigan]. See under tests.

kaif (kīf) [Arabic]. Dreamy tranquillity from the

use of drugs

kainite (ki'nīt). An earth containing potassium chlorid and magnesium sulphate.

kainophobia (ki-no-fo'be-ah) [Gr. καινός new + φόβοs fear] Fear of new things.

kairin (kı'rin). The hydrochlorid of hydroxy-normalethyl-tetrahydroquinolin, OH CoHoN(HCl)C2H5; a powerful and somewhat dangerous antipyretic remedy, prepared from quinolin. It is used as a substitute for quinn Dose, 3-15 gr. (02-1 gm.) k. ethyl, k. æthyl, or k.-a., a substance similar in composition and properties to ordinary kairin; its composition is C₀H₁₅(OH)C₂H₅N.H₄HCl. k. methyl, k.-m., ordinary kairin.

kairolin (ki'ro-lin). An antipyretic medicine, normal-methyl-tetrahydroquinolin, C9H10N.CH3, prepared from quinolin and chlorin k. a., a sulphate of quinolin ethyl hydrid: an antipyretic, now discarded. k. m., a sulphate of quinolin methyl hydrid. an antipyretic, now discarded.

kaiserling (ki'zer-ling). An abbreviated name for Kaiserling's solution; also for a specimen preserved in Kaiserling's solution. See under solution.

Kaiserling's solution (ki'zer-lings) [Karl Kaiserling, German pathologist, born 1869]. See solution. kakesthesia (kak-es-the'ze-ah). See cacesthesia.

kakidrosis (kak-id-ro'sis) [Gr. κακός bad + ιδρώς perspiration]. An extremely disagreeable odor of the sweat.

kakke (kahk'ka) [Japanese]. Same as beriberi. **kakodyl** (kak'o-dil). See cacodyl.

kakosmia (kak-oz'me-ah) [Gr. κακός ill + δσμη smell]. A foul or disagreeable odor.

kakotrophy (kak-ot'ro-fe). See cacotrophy.

kala-azar (kah-la-az'ar) [native "black fever"]. An extremely fatal infectious disease occurring along the Mediterranean shore, in West Africa, Mesopotamia, Southern Russia, India, and North China It is marked by fever, progressive anemia, wasting, enlargement of the spleen and liver, and dropsy, and is caused by the parasite Leishmania donova'ni, which infests the endothelial cells, especially of the spleen, liver, and bone-marrow. It is transmitted to man by the bite of the sand-fly, Phlebotomus argentipes, and perhaps by the Indian bedbug, Cimex hemipterus, and by a mosquito, Anopheles punctipennis. The disease is also called febrile tropical splenomegaly, visceral leishmaniasis, dumdum fever, cachectic fever, black fever, and non-malarial remittent fever. infantile k., Mediterranean k., a form affecting infants, chiefly in countries bordering on the Mediterranean, formerly ascribed to Leishman'ıa infan'tum, which is now regarded as identical with L. donova'ni. Called also ponos.

kaladana (kal-ah-da'nah). The dried seeds of I pomæa nil: used as purgative or anthelmintic. Dose, 30-50 gr (2-3 gm.).

kalagua (kah-lah'gwah). A South American drug used in tuberculosis.

kali (ka'li, kah'le). German for potash.

kaligenous (ka-lij'en-us) [L. ka'li potash + Gr. γενναν to produce Producing potash.

kalimeter (kal-im'et-er). Same as alkalimeter.

kalium (ka'le-um) [L.]. Same as potassium.

kallak (kal'ak). A pustular dermatitis common among the Eskimos.

kalmarid (kal'mar-id). A proprietary potassium mercuric iodid. used in treating catgut for sutures.

Kalmia (kal'me-ah). A genus of shrubs. The leaves of *K. latifo'lia*, the mountain laurel, have been used in syphilis, diarrhea, and chronic inflammatory disorders.

kalmopyrin (kal-mo-pi'rin). Calcium acetylsalicylate used as a febrifuge in rheumatism and neuralgia.

kalymana-bacterium. A Brazilian term proposed for the coccus of venereal granuloma.

kalzan (kal'zan). A proprietary preparation of cal-cium lactate and sodium lactate.

kalzin (kal'zin). A calcium-chlorid-gelatin preparation: used by subcutaneous injection in hemorrhagic diathesis, bronchial asthma, etc.

kamakosin (kam-ak-o'sin). An anthelmintic preparation of the active principles of kamala and kousso.

kamala (kam'al-ah). The glands and hairs of the capsules of *Mallot'us philippinen'sis*, an East Indian shrub. It is purgative, and is used mainly against teniæ and lumbrici. Dose, 1-2 dr. (4-8 gm.); of fluidextract, 30-60 min. (2-4 c.c.).

kamalin (kam'al-in). An alkaloid from kamala.

Kaminer reaction. See Freund's reaction, under reaction.

kanagugui (kan-ah-goo'gwe). A Japanese plant, Lin'dera erythrocar'pa: its fluidextract is used in secondary syphilis.

kangaroo (kang-ah-roo'). A marsupia mammal of Australasia, of many species, from its tail a tendon is derived that is valued as a ligature.

kangri cancer (kan'gre). See under cancer.

kaodzera (kah-od-ze'rah). Rhodesian trypanosomiasis: a disease prevalent in Rhodesia, similar to sleeping-sickness and due to *Trypanosoma rhodesiense*.

kaoliang (ka-o-le'ang). A sorghum grain of Africa and India whose seed can be milled into a flour.

kaolin (ka'o-lin) [Chinese; L. kaoli'num]. A fine clay employed in skin diseases, and in pharmacy for coating pills and for ointments. Chemically it is a native hydrated aluminum silicate.

kaolinosis (ka"o-lin-o'sis). A kind of pneumonoconiosis caused by inhaling particles of kaolin.

Kaplan's test (kap'lanz) [David M Kaplan, contemporary New York physician]. See under tests.

Kaposi's disease (ka-po'sēz) [Moriz Kohn Kaposi,

Austrian dermatologist, 1837-1902]. See disease. **kapselcoccus** (kap-sel-kok'us). A microbe found in pyosalpinx.

kaputine (kap'u-tin). A proprietary acetanilid preparation for headache.

kardin (kar'din). See cardin.

Karell's treatment (kah'relz) [Philip Karell, Russian physician, died 1886]. See under treatment.

kargon (kar'gon). A proprietary preparation of buchu and potassium acetate.

karno (kar'no). A proprietary preparation consisting of a dark, syrupy, liquid beef-extract.

karnoid (kar'noid). A proprietary meat powder.
 karus (ka'rus). A South African plant: useful in dysentery and in ulcerative and hemorrhagic intestinal affections.

Karyamo'ba falca'ta. See Karyamobina.

Karyamobina (kar"e-am-e-bi'nah). An amoeba with the peripheral chromatin clumped in a few large, elongated masses *K. falca'ta*, a form found in the intestinal tract of man in California

karyapsis (kar-e-ap'sis) [Gr. $\kappa \dot{\alpha} \rho \nu \sigma \nu$ nucleus + $\dot{\alpha} \psi \iota s$ joining]. The union of the nuclei in a conjugating cell.

karyenchyma (kar-e-en'kim-ah) [Gr. $\kappa \dot{\alpha} \rho \nu \sigma \nu$ nucleus $+ \dot{\epsilon} \nu$ in $+ \chi \nu \mu \dot{\alpha} s$ juice]. The nuclear juice of a cell.

karyochromatophil (kar"e-o-kro-mat'o-fil) [Gr. κάρυον nucleus $+ \chi \rho \hat{\omega} \mu \alpha$ color $+ \varphi \iota \lambda \epsilon \hat{\iota} \nu$ to love]. Having a stainable nucleus

karyochrome (kar'e-o-krōm) [Gr. κάρυον nucleus $+ \chi \rho \hat{\omega} \mu a$ color]. A nerve-cell the nucleus of which is stainable, while the body is not, a nerve-cell in which the stained nucleus is larger than that of a cytochrome. There are varieties designated by the Greek letters.

karyochylema (kar''e-o-ki-le'mah). Nuclear sap. karyogamic (kar-e-o-gam'ik) [Gr. κάριον nucleus + γάμος marriage]. Pertaining to, or characterized by, union of nuclei.

karyogamy (kar-e-og'am-e) [Gr. κάρυον nucleus + γάμος marriage]. Cell conjugation with union of nuclei.

karyogen (kar'e-o-jen) [Gr. κάρυον nucleus + γεννᾶν to produce]. An organic iron compound

found in certain cell-nuclei, especially the head of the spermatozoon.

karyogenesis (kar"e-o-jen'es-is) [Gr. κάρυον nucleus + γένεσις production] The development of the nucleus of a cell.

karyogenic (kar"e-o-jen'ik). Forming the nucleus of a cell; pertaining to karyogenesis.

karyogonad (kar"e-o-go'nad) [Gr. κάρυον nucleus + γονή seed]. The reproductive nucleus of a cell as distinguished from the trophonucleus: called also gonad nucleus.

karyokinesis (kar"e-o-kin-e'sis) [Gr. κάρυον nut + κίνησις motion]. Same as mitasts. asymmetric k., that in which the chromosomes divide unequally and into dissimilar masses. hyperchromatic k., that in which the number of chromosomes is abnormally large. hypochromatic k., that in which the number of chromosomes is abnormally small.

karyokinetic (kar"e-o-kin-et'ik). Pertaining to or of the nature of karyokinesis.

karyoklasis (kar-e-ok'las-is) [Gr. κάρυον nucleus + κλάσις breaking]. The breaking down of the cell-nucleus.

karyolobic (kar"e-o-lo'bik). Having a lobe-shaped nucleus.

karyolobism (kar"e-o-lo'bizm). A lobed condition of a cell-nucleus, especially the nucleus of a leukocyte.

karyolymph (kar'e-o-limf) [Gr. κάρυον nucleus + lymph]. The nuclear sap, the liquid part of a cell-nucleus, as contrasted with the chromatin and linin Called also paralinin.

karyolysis (kar-e-ol'is-is) [Gr. κάρυον nut + λύσιs loosening]. I Same as karyokinesis 2. The morbid destruction of the nucleus of a cell.

Karyolysus lacerta'rum (kar-e-ol'is-us) [Gr. κάρυον nut + λύειν to loose]. A hemogregarina from the blood of lizards.

karyolytic (kar"e-o-lit"ik). Producing or pertaining to karyolysis.

karyomere (kar'e-o-mër). 1. Same as chromomere. 2. The head of the spermatozoon

karyomicrosome (kar"e-o-mi'kro-sōm) [Gr κάρυον nucleus + microsome]. See nucleomicrosome.

karyomit (kar'e-o-mit) [Gr. κάρυον nut + μίτος thread]. Same as chromosome.

karyomitome (kar-e-om'it-ōm) [Gr. κάρυον nut + μίτος web]. The nuclear chromatin network.

karyomitosis (kar"e-o-mi-to'sis) [Gr. κάρυον nut + μίτος thread]. Same as karyokinesis

karyomitotic (kar"e-o-mit-ot'ik). Pertaining to karyomitosis.

karyomorphism (kar"e-o-mor'fizm) [Gr. κάρυον nucleus + μόρφη form]. The shape of a cell-nucleus, especially that of a leukocyte.

karyon (kar'e-on) [Gr. κάρυον nucleus]. The nucleus of a cell.

karyophage (kar'e-o-fāj) [Gr. κάρυον nucleus + φαγεῖν to eat]. An intracellular sporozoon.

karyoplasm (kar'e-o-plazm) [Gr. κάρυον nucleus + πλάσμα plasm] The nucleoplasm, or protoplasm of the nucleus of a cell.

karyoplasmic (kar"e-o-plaz'mik). Pertaining to karyoplasm.

karyoplast (kar'e-o-plast). The nucleus of a cell. karyoplastin (kar'e-o-plas'tin). The plastic substance of a cell-nucleus; the parachromatin.

karyoreticulum (kar'e-o-re-tik'u-lum) [Gr. κάρυον nucleus + reticulum] The fibrillar part of the karyoplasm as distinguished from the fluid part or karyolymph.

karyorrhexis (kar"e-or-ek'sis) [Gr. κάρυον nut + βῆξις split]. The rupture of the cell-nucleus: especially a degeneration of the cell-nucleus in which the chromatin is deposited upon the nuclear wall and undergoes division.

karyosome (kar'e-o-som) [Gr. κάρυον nucleus + σωμα body]. One of the spherical masses of chromatin in cell nucleus. Called also false nucleolus, chromatin nucleolus, and chromatin reservoir.

karyota (kar-e-o'tah) [Gr. κάρυον nut, nucleus]. Nucleated cells.

karyotheca (kar''e-o-the'kah) [Gr. κάρυον nut + θήκη sheath]. The envelop or sheath of a cellnucleus.

karyotin (kar'e-o-tin). The substance of the nuclear framework.

karyozoic (kar"e-o-zo'ik) [Gr. κάρυον nucleus + ζώον animal]. Existing in or inhabiting the nuclei of cells.

kasagra (kas-ag'rah). A proprietary aromatic fluidextract of cascara sagrada.

kassa (kas'ah). A Japanese term for leprosy.

kasyl (ka'sil). A germicidal preparation of cresol and tincture of green soap.

kat-, kata-. For words thus beginning see cat-, cata.

katabolic, katabolism. See catabolic, catabol-

katachromasis (kat"ah-kro'mas-is). The process by which the daughter-chromosomes reconstruct the daughter-nuclei.

katakinetomere (kat-ah-kin'e-to-mēr) [Gr. κατά down + $\kappa l \nu n \sigma \iota s$ motion + $\mu \epsilon \rho o s$ part]. Mathews's name for matter in which the molecules and atoms are poor in energy content and therefore dead. Cf. anakinetomere.

katakinetomeric (kat"ah-kin-e-to-mer'ik). Poor in energy content. Cf anakinetomeric.

katalase (kat'al-ās). Same as peroxidase.

kataphraxis (kat-af-raks'is). The operation of inclosing or surrounding an organ with metal supports to keep it in place.

kataphrenia (kat-ah-fre'ne-ah). Cataphrenia. kataphylaxis (kat-ah-fi-lak'sis). The transport of phylactic agents to the site of infection.

kataplasia (kat-ah-pla'se-ah). Cataplasia.

katathermometer (kat-ah-ther-mom'et-er). pair of alcoholic thermometers, one with a dry bulb and one with a wet bulb. They are heated to 110° F., exposed to the air, and the time noted that it takes each bulb to fall from 100° to 90° F. From this the temperature as it affects the body can be deduced.

katatonia. See catatonia.

Katayama disease (kat-ah-yah'mah). See under disease.

Kataya'ma nosop'ora. A snail which is the intermediate host of Schistosoma japonicum.

katharmon (kath-ar'mon) A preparation of hamamelis, hydrastis, boric acid, etc.. used as an astringent and antiseptic.

katharol (kath'ar-ol). A proprietary name for two or more hydrogen dioxid preparations.

katharsis (kath-ar'sis). Same as catharsis.

katheterpurin (kath-e-ter'pu-rin). A proprietary lubricant for catheters and cystoscopes.

kathisophobia (kath-i-so-fo'be-ah).

katin (ka'tin). An alkaloid, C10H18ON2, from Ca'tha ed'ulis. It acts on the nervous system like cocain, but has no local anesthetic properties.

kation (kat'e-on). See cation.

katjang idjo (kat'jang id'jo) The Phase'olus radia'tus, used for beri-beri. The fruit of

katolysis (kat-ol'is-is) [Gr. κάτω below + λύσις dissolution]. The incomplete or intermediate conversion of complex chemical bodies into simpler compounds; applied especially to digestive processes.

katophoria (kat-o-fo're-ah). Katotropia.

katotropia (kat-o-tro'pe-ah) [Gr. κάτω below + τρέπειν to turn]. A tendency of the visual axes to fall below the object looked at. Called also kato-

Katzenstein's test (kats'en-stinz) [Moritz Katzenstein, contemporary German surgeon]. See under tests.

Kaufmann's method or treatment (kowf'-manz) [Fritz Kaufmann, German neurologist, born 1875]. See under treatment.

kava, kava-kava (kah-vah, kah"vah-kah'vah) [Polynesian]. I. The root of Macrop'rper latifo'lium used for cystitis, gout, and wasting diseases. Dose of fluidextract, 20-60 min. (1.333-4 cc). 2 An intoxicating drink prepared from the above.

kavain (kav'ah-in). An alkaloid from kava.

kavol (ka'vol). A proprietary preparation of sandalwood oil and kava. used internally in gonorrhea.

kawahin (kaw'ah-hin). A crystallizable principle from kava. medicinally active.

kawin (kah'win). A resin from kava a motor depressant, anesthetic, and cardiac stimulant.

kayak vertigo (kah'yak). See under vertigo.

Kayserling. See Kaiserling.

kazol (ka'zol). A preparation of fermented milk similar to matzoon.

KBr. Potassium bromid

KC. Abbreviation for kathodal closing.

KCC. Abbreviation for kathodal closing contraction.

KC2H2O2. Potassium acetate.

KC1. Potassium chlorid.

KClO. Potassium hypochlorite.

KClO₈. Potassium chlorate.

K₂CO₃. Potassium carbonate.

KCT. Abbreviation for kathodal closing tetanus.

KD. Abbreviation for kathodal duration.

KDT. Abbreviation for kathodal duration tetanus.

Keating-Hart's method or treatment (ke'ting-hart) [Walter Valentine de Keating-Hart, French physician, 1870-1922]. See fulguration.

kedani disease (ka-dan'e). See tsutsugamushi disease, under disease.

Keeley cure (ke'le) [Leslie G. Keeley, American physician, 1832-1900]. See under cure

Keen's operation, sign [William Williams Keen, Philadelphia surgeon, born 1837] See under operation and sign.

keeper (kep'er). The armature of a magnet.

kefilac (ke'fil-ak). A proprietary preparation of lactic acid bacteria for the making of sour milk.

kefir, kefyr, kephyr (kef-ēr'). A preparation of milk acted upon by kefir grains, which are small, irregular, yellowish, granules of a gelatinous consistency, used in the Caucasus for fermenting milk. The essential organisms in these grains seem to be Lactobacillus caucasicus and Torula kefir. arsenical k., any one of a series of preparations consisting of kefir medicated with Fowler's solution of arsenic. guafacol-carbonate k., any one of a series of proprietary preparations of guaiacol carbonate and kefir.

Kehr's incision, operation (kahrz) [Hans Kehr. German surgeon, 1862-1916]. See under incision and operation.

keimol (ki'mol). A proprietary antiseptic prepara-

keirospasm (ki'ro-spazm) [Gr. κείρειν to shear + spasm]. Shaving cramp.

Keith's bundle, node (keths) [Arthur Keith, London physician, born 1862]. See under bundle and node.

Keith-Flack node [Arthur Keith; Martin Flack, physiologists in London]. See under node.

kelectome (ke'lek-tōm) (Gr. κήλη tumor + ἐκτομή A device used in removing specimens excision). of tissue from tumors.

kelene, kelin (ke'lēn, ke'lin). A proprietary preparation of ethyl chlorid, used as a local an-

kelis (ke'lis) [Gr. κηλίς stain]. Same as morphea; also keloid.

kellin (kel'in) [from kel, the Egyptian name of the plant]. A cardiant and spinant remedy derived from Am'mi visna'ga.

Kelling's test (kel'ings) [Georg Kelling, contemporary German physician]. See under tests.

Kelly's operation, speculum (kel'ēz) [Howard Atwood Kelly, Baltimore surgeon, born 1858]. See under operation and speculum.

keloid (ke'loid) [Gr. κηλίς scar + είδος form]. A new-growth or tumor of the skin, consisting of whitish ridges, nodules, and plates of dense tissue. These growths tend to recur after removal, and are sometimes tender or painful. The condition is very frequent in the colored race, and is believed to be dependent upon traumatism. acnek., an affection, chiefly of the nape of the neck, resembling sycosis and keloid. Addison's k., Alibert's k., cicatricial k., false morphea. k., a growth resembling a true keloid, but due to hypertrophy of a cicatrix.

kelos (ke'los). Same as keloid.

kelosomus (ke-lo-so'mus). See celosomia.

kelotomy (ke-lot'o-me) [Gr. κήλη hernia + τέμνειν to cut] The surgical division of the stricture in strangulated hernia.

kelvin (kel'vin) [Lord Kelvin (William Thompson), British physicist, born 1824]. A unit of electricity representing 1000 volt hours.

kenophobia (ken-o-fo'be-ah) [Gr. κενός empty + φόβοs fear]. Morbid dread of large open spaces.

kenotoxin (ken'o-toks-in). The toxin of fatigue; produced in muscle by muscular contractions.

kentrokinetic (ken"tro-kin-et'ik). Pertaining to kentrokinesis, excitomotor.

kephaldol (kef'al-dol). A proprietary antipyretic preparation, citrophenetidin chininasodium

kephalepsalis (kef-al-ep'sal-is) [Gr. κεφαλή head + Valls scissors Shears for use in embryotomy.

kephalin (kef'al-in), and other words beginning kephal-. See cephalin, etc.

kephaline (kef'al-in). A proprietary headache

cure. kephalose (kef'al-ōs). A French headache remedy.

kephir, kephyr (kef'er). Same as kefir.

kephirin (kef'er-in). A proprietary name for acetylsalicylic acid. See aspirin.

keracele (ker'as-ēl) [Gr. κέρας horn + κήλη tumor].

A horny tumor. Kerandel's symptom (ker-an-delz') [Jean Francois Kerandel, French colonial physician, born

1873] See under symptom.

keraphyllocele (ker-af-il'o-sēl) [Gr. κέρας horn + $\varphi b \lambda \lambda \delta \nu$ leaf + κήλη tumor]. A horny tumo the inner surface of the wall of a horse's hoof. A horny tumor on

kerasin (ker'as-in). A galactosid, probably, C₄₇H₈₉-NO₇, obtained from brain substance. It yields on hydrolysis galactose, sphingosin, and lignoceric acid.

keratalgia (ker-at-al'je-ah) [Gr. κέρας horn + aλγοs pain]. Pain in the cornea.

keratectasia (ker"at-ek-ta'ze-ah) [Gr. κέρας horn + εκτασις extension]. Protrusion of the cornea.

keratectomy (ker-at-ek'to-me) [Gr. κέρας cornea + έκτομή excision]. Excision of a portion of the cornea: usually done for anterior staphyloma.

keratiasis (ker-at-i'as-is) [Gr. λέρας horn]. The presence of horny warts on the skin.

keratic (ker-at'ik). Pertaining to horn.

keratin (ker'at-in) [Gr. κέρας horn] An albuminoid which forms the base of epidermis, hair, and of all horny tissues. It is a very insoluble protein, contains sulphur, and yields tyrosin and leucin on decomposition. Its solution is sometimes used in coating pills.

keratinize (ker-at'in-īz). 1. To render horny. 2. To become horny.

keratinoid (ker'at-in-oid). A form of tablet not soluble in the stomach, but readily soluble in the intestine.

keratinose (ker-at'in-ōs). An albumose obtained from keratin by hydrolyzing with an acid, alkali, or ferment.

keratinous (ker-at'in-us). Containing or of the nature of keratin; horny.

keratitis (ker-at-i'tis) [Gr. κέρας horn + -uis].
Inflammation of the cornea k. bandelette. Inflammation of the cornea k. bandelette. Same as ribbon-like k. k. bullo'sa, the formation of large or small bullæ or blebs upon the cornea. See interstitial k. dendriform k., deep k. dendritic k., that which results in a dendriform ulceration of the cornea. k. discifor'mis, keratitis with the formation of a round or oval, disk-like opacity of the cornea. fascicular k., keratitis attended by the formation of a band of bloodfurrow k., dendritic keratitis. vessels. petic k., keratitis occurring along with herpes zoster. hypopyon-k., suppurative keratitis associated with purulent infiltration and hypopyon interstitial k., a chronic variety of keratitis with deep deposits in the substance of the cornea, which becomes hazy throughout and has a ground-glass appearance (Sichel, 1837). The disease is associated with congenital syphilis, and occurs in children before the fifteenth year. Called also parenchymatous k. and deep k. lagophthalmick., that which accompanies lagophthalmos; it is due to exposure of the eyeball to the air. mar**ginal k.**, phlyctenular keratitis in which the papules are arranged around the margin of the cornea. mycotic k. Same as keratomycosis paralytic k., that which follows disease of the oystershuckers' k., a kind trifacial nerve. oystershuckers' k., a kind of suppurative keratitis produced by pieces of oyster-shell which have entered the cornea. parenchymatous k. See interstitial k phlyctenular k., a variety characterized by the formation of pustules or papules on the cornea. k. profun'da, interstitial keratitis. k. puncta'ta, punctate k., descemetitis, cyclitis, or serous iritis resulting in dotted opacity of the cornea. k. puncta'ta subepithelia'lis, a form with gray areas on the cornea under Bowman's membrane, with an intact superficial epithelium. purulent k., that in which there is formed either a suppurating ulcer or an abscess. reapers' k., suppurative keratitis due to the wounding of the cornea by the awn of some grain, as barley. ribbon-like k., the formation of a transverse film sclerosing k., keratitis assoon the cornea ciated with scleritis, leading to hyperplasia. **secondary k.**, keratitis due to disease of some other part of the eye. **suppurative k.**, keratitis attended with, or associated with, suppuration. trachomatous k. See pannus. traumatic k., that which results from a wound. vascular k., keratitis accompanied by the formation of blood-vessels beneath the conjunctiva and outer layers of the cornea vasculonebulous k., pannus. vesicular k., keratitis with the development of small vesicles on the surface **xerotic k.**, softening of the cornea.

kerato- [Gr κέρας horn, cornea]. A prefix denoting some relation to horny tissue or to the cornea

kerato-angioma (ker"at-o-an-je-o'mah). Same as angiokeratoma

keratocele (ker'at-o-sēl) [Gr. κέρας horn + κήλη Hernia of the innermost layer of the hernia]. cornea (Descemet's membrane).

keratocentesis (ker"at-o-sen-te'sis) [Gr κέρας horn + κέντησις puncture]. Puncturation of the cornea.

keratoconjunctivitis (ker''at-o-kon-junk-tiv-i'-tis). Inflammation of the cornea and conjunctiva. keratoconus (ker''at-o-ko'nus) [Gr. κέσας horn +

keratoconus (ker"at-o-ko'nus) [Gr. κέρας horn + κῶνος cone]. A cone-shaped deformity of the cornea.

keratocricoid (ker''at-o-kri'koid). The posterior cricothyroid muscle.

keratoderma (ker"at-o-der'mah) [Gr. κέρας horn + δέρμα skin]. 1. A horny skin or covering. 2. The cornea.

keratodermatitis (ker'at-o-der-mat-i'tis) [Gr. κέραs horn + δέρμα skin + -ιτιs inflammation]. Inflammation of the stratum corneum of the skin.

keratodermia (ker"at-o-der'me-ah) [Gr. κέρας horn + δέρμα skin]. Hypertrophy of the horny layer of the skin.

keratogenetic (ker''at-o-jen-et'ik). Pertaining to keratogenesis.

keratogenous (ker-at-oj'en-us) [Gr κέρας horn + γεννᾶν to produce]. Giving rise to a growth of horny tissue.

keratoglobus (ker''at-o-glo'bus) [Gr κέρας horn + L. glo'bus globe] A globular enlargement and protrusion of the cornea.

keratoglossus (ker"at-o-glos'us). See muscles, table of.

keratohelcosis (ker"at-o-hel-ko'sis) [Gr. κέρας horn + ἔλκωσις ulceration]. Ulceration of the cornea

keratohyalin (ker"at-o-hi'al-in). A form of hyalin found in the skin.

keratohyaline (ker"at-o-hi'al-īn). Both horny and hyaline, like the material of the stratum granulosum of the epidermis

keratoid (ker'at-oid) [Gr. $\kappa\epsilon\rho$ as horn + $\epsilon l\delta os$ form]. Resembling horn or corneal tissue

keratoiditis (ker"at-oi-di'tis) Same as keratitis.

kerato-iridocyclitis (ker"at-o-i"rid-o-sik-li'tis).
Inflammation of the cornea, iris, and ciliary body.

kerato-iridoscope (ker"at-o-i-rid'o-skŏp) [Gr. κέραs horn + lριs iris + σκοπεlν to see] A form of compound microscope for examining the eye.

kerato-iritis (ker"at-o-i-rı'tis) [Gr. κέραs horn + lρις iris]. Inflammation of the cornea and iris.

keratoleptynsis (ker"at-o-lep-tin'sis) [Gr κέρας horn $+ \lambda \epsilon \pi \tau b \nu \epsilon \nu$ to make thin] Removal of the anterior thickness of the cornea and covering of the denuded area with bulbar conjunctiva. An operation for preserving a non-functioning eye for esthetic purposes

keratoleukoma (ker"at-o-lu-ko"mah) [Gr. κέρας horn + leukoma]. A white opacity of the cornea. **keratolysis** (ker-at-ol'is-is) [Gr κέρας horn + λύσις a loosening]. The peeling off of the skin.

keratolytic (ker"at-o-lit"ik). Pertaining to or producing keratolysis.

keratoma (ker-at-o'mah), pl. kerato'mata [Gr. κέρας horn + -ωμα tumor]. Any horny tumor; a growth of horny tissue. k. diffu'sum, ichthyosis congenita. k. planta're sulca'tum, a thickned fissured condition of the skin of the soles of the feet. It may be the tertiary lesion of frambæsia tropica k. seni'le, the lesion of senile keratosis.

keratomalacia (ker''at-o-mal-a'se-ah) [Gr. κέρας horn + μαλακία softness]. Softening of the cornea

keratome (ker'at-ōm) [Gr. κέρας horn + τέμνειν to cut]. A knife for incising the cornea.

keratometer (ker-at-om'et-er) [Gr. κέρας horn + μέτρον measure] An instrument for measuring the curves of the cornea.

keratometry (ker-at-om'et-re). The measurement of the cornea.

keratomycosis (ker"at-o-mi-ko'sis) [Gr. κέρας cornea + μθκης fungus]. Fungous disease of the cornea. k. lin'guse. See black tongue, under tongue.

keratonosis (ker"at-o-no'sis). Any anomaly in the horny structure of the epidermis.

keratonosus (ker-at-on'o-sus) [Gr. κέρας cornea + νόσος disease]. Any disease of the cornea.

keratonyxis (ker''at-o-niks'is) [Gr. κέρας cornea + νύσσειν to puncture]. Puncture of the cornea, as in certain operations on the cornea.

keratoplasty (ker'at-o-plas-te) [Gr. κέρας cornea + πλάσσειν to form]. Plastic surgery of the cornea; especially the transference of a piece of the cornea of a lower animal to the human eye to take the place of an opaque spot therein. Optic k., the transference of a piece of corneal tissue to replace a scar which interferes with vision. tectonic k., transplantation of corneal material with a view simply to supply lost tissue.

keratoscleritis (ker"at-o-skle-ri'tis). Inflammation of the cornea and sclera.

keratoscope (ker'at-o-skōp) [Gr. κέρας cornea + σκοπεῦν to observe]. An instrument for examining the cornea.

keratoscopy (ker-at-os'ko-pe). The examination of the cornea; more especially the study of the reflections of light from its anterior surface.

keratose (ker'at-os). Horny.

keratosic (ker-at-o'sik). Pertaining to or characterized by keratosis.

keratosis (ker-at-o'sis) [Gr. κέρας horn]. Any horny growth, such as a wart or callosity; any disease attended by horny growths. k. blennor-rha'gica, a condition marked by thickened horny growths on the skin and associated with gonor-rheal arthrits k. diffu'sa foeta'lis. See ichthyosis congenta k. follicula'ris, a skin disease characterized by papules containing scabby crusts that can be squeezed out. It is a cornification of the epithelial layers of the skin. Called also Darier's disease, uchthyosis follicularis, pseudo-spermosis, acne sebate cornée, ichthyosis sebacea cornea k. follicula'ris conta'giosa, Brooke's name for a rare form of cornification of the skin, apparently of a contagious nature k. ni'gricans, a skin affection consisting of dark colored warty growths, especially on the back of the neck and axillary and pectoral folds Called also acanthosis nigricans. k. obtu'rans, a mass of epidermic scales and cerumen in the external auditory meatus k. pila'ris, a disease of the skin marked by the formation of a hard elevation around each hair-follicle. k. seni'lis, a harsh, dry state of the skin in old age.

keratotome (ker-at'ot-om). See keratome.

keratotomy (ker-at-ot'o-me) [Gr. κέρας cornea + τέμνειν to cut] Surgical incision of the cornea.

keraunoneurosis (ker-aw"no-nu-ro'sis) [Gr. κεραυνός lightning + νεῦρον nerve]. A nervous disorder due to lightning-stroke.

keraunophobia (ker-aw-no-fo'be-ah) [Gr. κεραυνόs lightning + φόβοs fear]. Morbid dread of lightning.

kerectomy (ke-rek'to-me) [Gr. κέρας cornea + ἐκτομή excision] Removal of a part of the cornea.

kerion (ke're-on) [Gr. κηρίον honey-comb]. A pustular disease of the scalp; tinea kerion Celsus' k., pustular inflammation of the hair-follicles of the scalp in tinea tonsurans.

keritherapy (ker-ith-er'ap-e) [Gr. κέρος wax + θεραπεῖα treatment]. 1. Treatment by baths of liquid paraffin used in gout, sciatica, and nutritional disorders. 2. Treatment of extensive burns with paraffin solutions.

Kerkring's folds, ossicles, valves (ker'kring2) [Theodorus Kerkring, Dutch anatomist, 1640–1693]. See under fold, ossicle, and valve.

kermes (ker'mēz) [Arabic, Persian]. The Coc'cus il'icis, an insect found on the leaves of various oaks, chiefly on Quer'cus coccif'cra (kermes-oak). It furnishes a red pigment which is used as a dyestuff. k.-mineral, antimony oxysulphid.

kernel (ker'nel). That part of an atom left after removal of the ionizable electrons.

Kernig's sign (ker'nigz) [Vladimir Kernig, a physician in St. Petersburg, born 1840]. See under sign.

Kernschwund (kārn'shwund) [Ger]. Congenital faulty development or absence of nuclei in the cells of the central nervous system; e. g., in congenital ophthalmoplegia (Moebius).

kerocain (ker'o-ka-in). Novocain of British manufacture.

keroid (ker'oid) [Gr. κεροειδήs horn-like]. Resembling the cornea.

kerol (ke'rol). A mixture of the high boiling hydroxyl compounds of coal-tar containing a diphenyl nucleus—used as an antiseptic.

keroline (ker'o-līn) A liquid used as a solvent for ichthyol.

kerosolene (ker-os'o-lēn). A volatile fluid from petroleum: it smells like chloroform and is anesthetic.

kerotherapy (ker-o-ther'ap-e). Keritherapy.

kerril (ker'il). A venomous sea-snake, Hydro'phis jerdo'ni, of the Indian Ocean.

kestin (kes'tin). Trinitrophenol combined with resorcinol, ammonium chlorid, orthoboric acid, and formaldehyd a proprietary antiseptic, antipruritic, and analgesic agent.

ketene (ke'tēn) A colorless gas of penetrating odor, carbomethane, H₂C · CO. It is the simplest of the ketones; combines with water to form acetic acid

keto-. A prefix which denotes the possession of the carbonyl group, : C:O.

keto-aldehyd (ke-to-al'de-hīd). A compound which is a ketone and an aldehyd.

ketogenesis (ke-to-jen'es-is) [ketone + Gr. γένεσις generation]. The production of acetone bodies.

ketogenetic (ke"to-jen-et'ik). Forming ketones.

ketogenic (ke-to-jen'ik) Forming ketone; capable of being converted into ketone. The ketogenic substances in metabolism are the fatty acids and certain of the amino-acids of protein.

ketogenic-antiketogenic ratio. See under ratio.

ketonexose (ke-to-heks'ōs). A hexose which is a ketone derivative. Cf. aldohexose.

ketol (ke'tol). See indol.

ketolytic (ke-to-lit'ik) [ketone + Gr. λυτικός dissolving] Splitting up acetone bodies; antiketogenic. In metabolism carbohydrate is the ketolytic substance.

ketone (ke'tōn). Any compound containing the carbonyl group, CO. k. bodies, acetone bodies. See under body dimethyl k. See acetone.

ketonemia, ketonæmia (ke-to-ne'me-ah) [ketone + Gr. αΐμα blood]. The presence of ketone (acetone) bodies in the blood.

ketonuria (ke-to-nu're-ah) [ketone + Gr. οὖρον urine] The presence of ketones (acetone bodies) in the urine.

ketoplasia (ke-to-pla'se-ah). The formation of ketone bodies.

ketoplastic (ke-to-plas'tik) [ketone + Gr. πλάσσειν to form]. Causing the formation of ketone.

ketoreductase (ke"to-re-duk'tās). An enzyme in liver, muscle, and kidney which transforms aceto-acetic acid into l-β-oxybutyric acid.

ketose (ke'tōs). A sugar which is the ketone of a hexatomic alcohol; any sugar which contains a carbonyl group.

ketosid, ketoside (ke'to-sid). Any glucosid which yields ketose on hydrolysis.

ketosis (ke-to'sis). A condition marked by excessive formation of ketones in the body.

kettle, croup (ket'l). A kettle arranged for giving off a continuous stream of steam: used in giving

vapor inhalations and for keeping the atmosphere of the room humid in cases of croup or laryngitis.

key, DuBois-Reymond's (kē). An appliance by means of which electric currents can be sent through both electrodes or through a short circuit.

keynote (ke'nōt). A homeopathic term for the characteristic property of a drug which indicates its use in treating a similar symptom of disease.

Key-Retzius foramina [Ernst Axel Henrik Key, Swedish physician, 1832-1001; Magnus Gustaf Retzius, Swedish histologist, born 1842]. See foramen.

Kg. Abbreviation for kilogram.

kharsin (kar'sin). The proprietary name of sodium 3-methyl-4-aminophenylarsonate, a white, crystalline powder used in protozoan diseases.

kharsivan (kar'siv-an). A British-made substitute for salvarsan.

khat (kat). See Catha.

KHCO3. Potassium acid carbonate.

khosam (ko'sam). See kosam.

K. H. P. Abbreviation for Honorary Physician to the King.

K. H. S. Abbreviation for Honorary Surgeon to the King.

KHSO4. Potassium bisulphate.

KI. Potassium iodid.

kibe (kīb). The same as chilblain.

kibisitome (ki-bis'it-ōm) [Gr. κίβισις pouch + τομή cut]. Same as cystitome.

kidinga pepo (kid-in'gah pe'po) [cramp-like pains]. A disease of Zanzibar, probably same as dengue.

kidney (kid'ne) [L. ren] Either of the two glandular bodies in the lumbar region that secrete the urine. Each kidney is about four inches long, two inches wide, and one inch thick, and weighs from four to six ounces The kidney is of characteristic shape, presents a notch on the inner border, known as the hilus, which communicates with the cavity or sinus by which the vessels, nerves, and ureter The kidney consists of a cortical substance The medullary and of a medullary substance. substance forms pyramids, whose bases are in the cortex, and whose apices, which are called papilla, project into the calices of the pelvis of the kidney. The renal pyramids of Malpighi are in three rows, and number from ten to fifteen. The parenchyma of the kidney is composed of uriniferous tubules, held together by a little connective tissue The terminal orifices of these open at the summit of each papilla A uriniferous tubule begins at a capsule of Malpighi within the cortex, has a neck or constriction below the capsule, becomes the proximal convoluted tube, then the spiral tube of Schachowa, and successively Henle's loop, irregular tubule, distal convoluted tubule curved tubule, and the straight collecting tubule, which opens at the apex of a renal papilla. The straight collecting tubes converge as they descend, forming groups in the center, known as medullary rays. The pyramids of Ferrein are the subordinate cones of the kidney papilla. The tubules are lined with pavement epithelium; the epithelium in other portions are lined with pavement epithelium; the epithelium in other portions are lined and contains a ferrein and the contains a ferrein and the contains and the contains a ferrein a ferrein and the contain tions varies in shape and size. An envelop of a glomerule of the kidney is known as Bowman's cap sule. Urine is formed by a process partly physical and partly vital, the watery elements being extruded from the blood by filtration; the solid portions by a special elaborative action of the renal epithelium. amyloid k., one that is the seat of amyloid or waxy degeneration. arteriosclerotic k., a kidney contracted as a consist of the renal arteries. atrophic k., a kidney chronic nephritis. branny rotic k., a kidney contracted as a result of sclerok., a kidney which appears as if it contained bran due to fatty degeneration in spots. cicatricial k., a shriveled, irregular, and scarred kidney: usually the last stage of a surgical kidney. cirrhotic k., granular kidney. contracted k., granular kidney. cyanotic k., passive congestion of the kidney. cystic k., a kidney containing cysts disk k., a condition in which the two kidneys are fused, one kidney being superimposed upon the other fatty k., a kidney affected with fatty degeneration. floating k., one which is loosened and displaced. Formad's k., an enlarged and deformed kidney, sometimes seen in chronic alcoholism. gouty k., granular k., one affected with chronic interstitial inflammation. See diffuse chronic nephritis, under nephritis. head-k., the pronephros. horseshoe-k., the two kidneys partially united or fused. larda-ceous k., an amyloid kidney. large white k., one affected with chronic interstitial nephritis. leaky k., a condition in which the kidneys allow sugar to pass through into the urine at a lower level of blood-sugar, concentration than usual, resulting in renal glycosuria. massage-k., a condition of chronic renal incompetence and uremia due to excessive excretory effort on the part of the kidney, resulting from the improper and excessive application of massage to a gouty patient. mural k., a kidney located in a pocket of peritoneum in the abdominal wall. palpable k., slight nephroptosis. pelvic k., dislocation of the kidney into the pelvis. pigback k., a kidney congested and enlarged as a result of chronic alcoholism. primordial k., the pronephros. red contracted k., a gouty kidney Rokitansky's k., amyloid kidney Rose-Bradford k., a form of fibrotic kidney of inflammatory origin found in young subjects. sclerotic k., granulaf kidney. sigmoid k., a deformed and fused kidney somewhat resembling the horseshoe form, the upper pole of one kidney part of the kidney, resulting from the improper the horseshoe form, the upper pole of one kidney being fused with the lower pole of the other. small white k., an atrophied and degenerated state of the kidney following a chronic interstitial nephritis. soapy k., a large white kidney which contains myelins instead of simple fats. solitary k., a kidney made up of two kidneys fused sucsupercenturiate k., a suprarenal body. super-numerary k., an occasional kidney-like structure detached from the kidney proper surgical k., suppurative pyelonephritis following an operation upon a urinary organ wandering k., a floating or displaced kidney. waxy k., an amyloid

Kielland's forceps (kyel'ands) [Christian Kielland, contemporary Norwegian obstetrician]. See under forceps.

Kienboch's disease (kēn'boks). Chronic osteitis of the semilunar bone.

Kienboeck unit (kēn'bek) [Robert Kienboeck, Austrian physician, born 1871]. See under unit.

Kiernan's space (ker'nanz) [Francis Kiernan, English physician, 1800–1874]. Interlobar space of the liver

kieselguhr (ke'sel-goor) [Ger.]. A fossil earth used for clearing fluids and as an absorbent dressing.

Kiesselbach's area or space (ke'sel-bahks) [W. Kiesselbach, German laryngologist, 1839–1902]. See under area.

kiestein (ki-es'te-in). Same as kyestein.

kikekunemalo (ki"ke-ku-ne-mah'lo). A resin much resembling copal used for varnishes.

kil (kil). A white, sticky, and soapy clay from the Black Sea region. When sterilized, it is employed as an ointment-base for use in skin diseases.

Kilian's line (kil'e-anz) [Herman Friedrich Kilian, German gynecologist, 1800-1863]. See under line.

Killian's operation (kil'e-anz) [Gustav Killian, German laryngologist, 1860-1921]. See under operation.

kilogram (kil'o-gram). One thousand grams, or 2.68 pounds troy. See weights and measures.

kilogrammeter (kil'o-gram-me-ter). A unit of work, representing the energy required to raise 1 gm. a meter vertically against gravitational force,

equivalent to about 7.2 foot-pounds and equal to 1000 grammeters.

kiloliter (kil'o-le-ter) [Fr. kilolite]. One thousand liters; 35.3171 cubic feet. See weights and measures.

kilometer (kil'o-me-ter) [Fr. kilomeire]. One thousand meters. See weights and measures.

kilurane (kil'u-rān). A unit of radio-activity, being 1000 uranium units.

Kimpton-Brown tube [Arthur Ronald Kimpton, Boston surgeon]. See under tube.

kinæsthesia, kinæsthesis (kin-es-the'ze-ah, kin-es-the'sis). See kinesthesia.

kinanesthesia (kin-an-es-the'ze-ah) [Gr. κίνησις motion + anesthesia]. Loss of power of perceiving the sensation of movement, due to derangement of deep sensibility.

kinase (kin'as) [Gr. κίνησις motion]. A colloidal substance existing in various tissues which serves to activate the specific enzyme of those tissues.

kinazyme (kin'az-im). A proprietary preparation of extracts from the pituitary, pancreas, liver, and spleen given as a stimulus to metabolism.

kinectine (kin-ek'tin). A preparation, benzosulphone-para-amino-phenyl-arsenate of quinin: used in influenza, coryza, catarrh, hay-fever, malaria, etc.

kinematics (kin-e-mat'iks) [Gr. κίνεμα motion].

The science of motion, including the movements of the body.

kinematograph (kin-em-at'o-graf) [Gr. κίνεμα motion + γράφειν to record]. An instrument for exhibiting pictures of objects in motion. it is of considerable service in diagnosis.

kineplastics (kin-e-plas'tiks). Kineplasty.

kineplasty (kin'e-plas-te) [Gr. κίνησις motion + πλάσσειν to form]. Plastic amputation; amputation in which the stump is so formed as to be utilized for motor purposes.

kinergety (kin-er'jet-e). The capacity for kinetic energy.

kinesalgia (kin-es-al'je-ah) [Gr. κίνησις movement + ἄλγος pain]. Pain on muscular exertion.

kinescope (kin'es-kōp) [Gr. κίνησις motion + σκοπείν to view]. An instrument for measuring ocular refraction, in which the patient observes a fixed object through a slit in a moving disk.

kinesia, kinetia (kin-e'se-ah, kin-e'te-ah). Motion sickness, including sea-sickness, car-sickness, etc.

kinesialgia (kin-e-se-al'je-ah). Kinesalgia.

kinesiatrics (kin-c-se-at'riks) [Gr. κίνησις motion + ἰατρικός curative]. Same as kinesitherapy.

kinesi-esthesiometer (kin-e"se-es-the-ze-om'eter) [Gr κίνησις motion + αίσθησις sensation + μέτρον measure]. An instrument for estimating or measuring the muscular sense.

kinesimeter (kin-e-sim'et-er) [Gr. $\kappa l \nu \eta \sigma \iota s$ motion $+ \mu \epsilon \tau \rho \rho \nu$ measure]. 1. An instrument for the quantitative measurement of movements. 2. An instrument for exploring the surface of the body to test cutaneous sensibility.

kinesiodic (kin-e-sc-od'ik) [Gr. κίνησις motion + δδός way] Pertaining to motor nerve-paths.

kinesiology (kin-e-se-ol'o-je) [Gr. κίνησις motion + λόγος discourse]. The sum of what is known regarding muscular movements, especially hygienic or therapeutic movements.

kinesiometer (kin-e-se-om'et-er). Same as kin-esimeter.

kinesioneurosis (kin-e"se-o-nu-ro'sis) [Gr. klpησιs movement + neurosis]. A functional nervous disorder characterized by derangement of the nervous system. external k., one that affects the muscles of external relation. internal k., visceral k., one that affects the muscles of the viscera. vascular k. Same as angioneurosis.

kinesipathy (kin-es-ip'ath-e). An incorrect synonym of kinesitherapy.

kinesiphony (kin-e-sif'o-ne) [Gr. κίνησις motion + φόνη sound]. The employment of a buzzer in retraining the hearing.

kinesitherapy (kin-es''e-ther'ap-e) [Gr. κίνησις motion + θεραπεία cure]. The treatment of disease by movements or exercise; lingism.

kinesodic (kin-e-sod'ik) [Gr. κίνησις motion + δδός way]. Pertaining to the conveyance of motor impulses.

kinesthesia, kinesthesis (kin-es-the'ze-ah, kin-es-the'sis) [Gr. κινείν to move + αἴσθησις sensation] The sense by which muscular motion, weight, position, etc., are perceived.

kinesthesiometer (kin"es-the-ze-om'et-er) [kin-esthesia + (ir. μέτρον measure] A device by which to measure or test the muscular sensibility.

kinesthetic (kin-es-thet'ik). Pertaining to kinesthesia or the muscular sense.

kinetic (kin-et'ik) [Gr. κινητικόs]. Pertaining to or producing motion.

kinetism (kin'et-izm). The ability to perform or initiate muscular action.

kinetogenic (kin-e"to-jen'ik) [Gr κινητός movable + γεννῶν to produce]. Causing or producing movement.

kinetographic (kin-et-o-graf'ik) [Gr. κινητός movable + γράφειν to record] Recording graphically the movements of parts and features.

kinetonucleus (kin-et-o-nu'kle-us) [Gr. κινητός movable + nucleus]. The micronucleus or centrosome of a cell as distinguished from the principal nucleus or trophonucleus.

kinetoplasm (kin-et'o-plazm) [Gr. κινητός movable + πλάσμα something formed]. The most highly contractile portion of the cytoplasm of a cell; the energy-plasm the term is applied to the chromatophilic elements in the nervous tissue.

kinetoscope (kin-et'os-kôp) [Gr. κινητός movable + σκοπεῖν to view]. A form of chromophotograph. useful in diagnosis and in physiologic study.

kinetoscopy (kin-et-os'ko-pe). Serial photography which exhibits the motions of the limbs or features. used in diagnosis.

kinetosis (kin-e-to'sis), pl. kinetoses [Gr. κίνησις motion]. Any disease due to unaccustomed motions, as car-sickness and sea-sickness.

kinetotherapy (kin-et-o-ther'ap-e). Same as kin-esitherapy.

king's evil. Scrofula.

kink, Lane's (kink'). A bending and twisting of the ileum in its last six inches, with adhesions of the folds to one another, producing narrowing and obstruction of the lumen. Called also ileal k and angulation of the ileum.

marsu'pium, of southern Asia, and of various other trees. It is a strong astringent, and is used in diarrhea mixtures and gargles. Dose, 5-30 gr. (0.333-2 gm.); of compound powder (pul'vis ki'no compos'itus), 5-15 gr. (0.333-1 gm.); of tincture (tinctu'ra ki'no, U. S. P.), \frac{1}{2}-2 dr. (2-8 c.c.).

kinocentrum (ki-no-sen'trum). The centrosome. **kinoin** (ki'no-in). A principle, $C_{14}H_{12}O_6$, from Australian kino.

kinology (ki-nol'o-je). Kinesiology.

kinometer (kin-om'et-er) [Gr. κινεῖν to move + μέτρον measure]. An instrument for measuring uterine displacements.

kinone (kin'on). Same as quinone.

kinoplasm (ki'no-plazm) [Gr. κινεῖν to move + πλάσμα plasm]. The specific kinetic or motor substance of a cell; functional protoplasm. Called also archoplasm and ergastoplasm.

kinoplastic (ki-no-plas'tik). Pertaining to kino-

kinosphere (ki'no-spēr) [Gr. κινείν to move + sphere]. Same as aster.

kinotoxin (ki-no-tok'sin) [Gr. κινεῖν to move + toxin]. A fatigue toxin.

kinovin (kin-o'vin). Same as quinovin.

kiono-. For words thus beginning, see under ciono-.

kiotome (ki'ot-ōm) [Gr. $\kappa l\omega\nu$ column + $\tau \dot{\epsilon}\mu\nu\epsilon\iota\nu$ to cut]. A knife for amputating the uvula.

kiotomy (ki-ot'o-me). The use of the kiotome; amputation of the uvula.

Kirmisson's operation (ker'me-sawz') [Edouard Kirmisson, French surgeon, born 1848]. See under operation

kirrhonosis (kir-on-o'sis). Kirronosis.

kirronosis (kir-ron-o'sis) [Gr. κιρρός yellow + νόσος disease]. Lobstein's term for fetal jaundice, affecting the serous membranes exclusively.

Kirstein's method (kēr'stīnz) [Alfred Kirstein, German physician, 1863-1923]. See under method. kissing bug. See Melanolestes picipes.

Kissingen salts (kis'ing-en) An aperient salt from the waters of a spring at Kissingen, Bavaria.

Kitasato's bacillus, filter, serum (ke-tas-ah'-tōz) [Shibasaburo Kitasato, Japanese bacteriologist, born 1856]. See under bacillus, filter, serum.

Kittel's treatment (kit'elz) [M. J. Kittel, contemporary German physician] See treatment.

k.-j. Abbreviation for knee-jerk.

Kjeldahl's method (kyel'dahlz) [Johann Kieldahl, Danish chemist, 1849-1900]. See under method.

kl. Abbreviation for klang and kiloliter.

klang (klahng) [Ger.]. A compound musical tone; a fundamental tone combined with its overtones.

Klapp's creeping treatment (klaps) [Rudolf Klapp, surgeon in Berlin, born 1873] See treatment.

klatsch-preparation (klatsh). A cover-glass preparation made by pressing a cover-glass on a plate-culture of bacteria.

Klebs-Löffler bacillus (klebs-lef'lar) [Edwin Klebs, bacteriologist in Berlin, 1834–1913, Friederich A. J. Loffler]. See under bacillus.

klemmolin (klem'o-lin). A proprietary preparation of pine-leaves and poplar-buds a rheumatism cure.

kleptomania (klep-to-ma'ne-ah) [Gr κλέπτειν to steal + μανία madness]. An insane impulse to steal; insanity marked by a desire to steal.

kleptomaniac (klep-to-ma'ne-ak). A person affected with kleptomania.

kleptophobia (klep-to-fo'be-ah) [Gr. $\kappa \lambda \acute{\epsilon} \pi \tau \epsilon \iota \nu$ to steal $+ \varphi \acute{o} \beta o s$ fear]. Insane dread of becoming a thief.

Klieg eye (klēg) [named from *Kliegal*, the name of the manufacturer of the electric lamps used in moving picture making]. See under eye.

klim (klim). A proprietary milk powder.

klinol (kli'nol). A proprietary analgesic and antipyretic.

Klinophilus (kli-nof'il-us). Same as Cimex.

Klippel's disease (klip'elz) [Maurice Klippel, French neurologist, born 1858]. Arthritic general pseudoparalysis.

kliseometer (klis-e-om'et-er). Same as cliseometer.

Kluge's method (kloo'gez) [Karl Alexander Ferdinand Kluge, German obstetrician, 1782–1844]. See under method.

Klumpke's paralysis (kloomp'kez) [Madame A. Déjerine Klumpke, contemporary Parisian neurologist]. See under paralysis.

Km. Abbreviation for kilometer.

KMnO₄. Potassium permanganate.

Knapp's forceps, streaks (naps) [Hermann Knapp, New York ophthalmologist, 1832-1011].

nee (ne) [L. ge'nu]. The anterior aspect of the leg at the articulation of the femur and tibia; also the articulation itself. automobile k., knee (ne) [L. ge'nu]. chronic congestion of the ligaments of the kneejoint due to the posture in driving an automobile. big-k. 1. Bursitis over the knees of cattle. 2. A tumor of the hony parts of the knee-joint in horses. **Brodie's k.**, a chronic synovitis of the knee-joint in which the affected parts acquire a soft and pulpy consistence. broken k., an injury of the knee of a horse due to violence. k.-cap, k.-pan, the patella. capped k., distention of the synovial bursa over the knee-joint of horses or cattle. football k., a knee-joint of norses or cacue.

swollen, relaxed, somewhat tender knee seen in football players: hooped k., the presence house in the knee of a horse. houseof exostoses in the knee of a horse. maids' k., inflammation of the bursa in front of the patella, with accumulation of fluid therein in-k., knock-k., genu valgum; the condition in which the knees come together while the ankles are far apart. k. of the internal capsule, the bend at the junction of the anterior and posterior limbs of the internal capsule. k.-jerk. See under reflex. k.-joint, the articulation of the femur and tibia. out-k., genu varum, or bow-leg. septic k., a suppurating knee-joint. sprung k., forward bending of the knee of a horse, due to shortening of the flexor tendons.

kneippism (nīp'izm) [after Rev. Father Kneipp (1821-1897), who introduced the practice]. Cure by walking barefoot in the morning dew, cold bathing, etc.

knife (nif). A cutting instrument, of various shapes and sizes, for surgeons' and dissectors' use. Beer's k., a knife with a triangle-shaped blade, used in operations for cataract and for excising staphyloma of the cornea. cataract k., a knife for cutting the cornea in operations for cataract. cautery k., a knife having the blade connected with an electric battery, so that the tissues may be seared while cutting, thus preventing bleeding Graefe's k., a slender knife used in linear extraction of cataract

knismogenic (nis-mo-jen'ik) [Gr. κνισμός tickling + γεννᾶν to produce]. Producing a tickling sensation.

knitting (nit'ing). The repair of a fractured bone.knives, Liston's. Long-bladed knives for amputation

KNO₃. Potassium nitrate.

knock, pericardial. A clear metallic clicking sound heard over the precordium in certain cases of penetrating chest wounds in the neighborhood of the pericardium, it has been ascribed to emphysema of the mediastinal connective tissue or to free air in the interstitial connective tissue of the lung.

knock-knee (nok'nē). Genu valgum. See knee.

knot (not). An intertwining of the ends or parts of one or more cords so that they cannot easily be separated. **clove-hitch k.**, a knot consisting

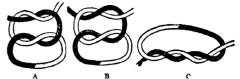

of two contiguous loops which are placed around an object, the ends of the cord being toward each other: used for making traction on a part for the reduc-

Clove-hitch knot (Erichsen).

tion of dislocations. double k. Same as friction k. false k. Same as granny k. friction k., a knot in which the ends of the cord are twisted twice around each other before being tied. granny k., a double knot in the second loop of which the end of one cord is over, and the other under, its fellow, so that the loops do not lie in the same line. Hensen's k., the first appearance of

the primitive streak of the embryo in the form of a knot-like thickening. protochordal k. Same as Hensen's k. reef k., a double knot in which the free ends of the second knot lie in the same plane as the ends of the first knot. Called also sailors' k. and square k. sailors' k., square k. See reef k. Staffordshire k., a

Knots: A, Square or reef knot; B, granny knot; C, surgeon's knot (DaCosta)

knot for tying pedicles, as of the ovary. It is made by passing a ligature through the pedicle by a needle, which is withdrawn so as to leave a loop which is passed over the pedicle. One of the ends of the ligature is drawn through the loop, and the two ends are tied by a reef knot: called also Tait's k. Stay k., a knot made with two or more ligatures, each being tied with the first half of a reef knot; then all the ends of one side are taken in one hand, and all the ends on the other side in the other hand, and tied as if they formed one single thread. surgeons' k., surgical k., a knot in which the thread is passed twice through the same loop. Tait's k. See Staffordshire k.

knuckle (nuk'l).

phalangeal joint.

2. An extruded loop, as of the bowel or omentum in hernia.

k. pads. See under bad

knuckling (nuk'ling). A condition in which the fetlock joint of a horse is pushed upward and forward, due to shortening of the tendons behind.

koagulen (ko-ag'u-len). Same as coagulen.

Kobelt's tubes (ko'belts) [Georg L. Kobelt, German physician, 1804-1857]. See under tube.

Kobert's test (ko'bertz) [Eduard Rudolf Kobert, German chemist, 1854-1919]. See under tests.

KOC. An abbreviation for kathodal opening contraction.

Koch's lymph, etc. (kōks) [Robert Koch, German bacteriologist, 1843-1910]. See under lymph, etc.

Koch's node (köks) [Walter Koch, German surgeon, born 1880] Atrioventricular node. See node.

Koch's test (köks). See under tests.

Koch-Weeks bacillus (kök-wēks) [Robert Koch; John Elmer Weeks, New York oculist, born 1853]. See under bacillus.

Kocher's forceps, operation (kök'erz) [Theodor Kocher, Swiss surgeon, 1841-1917]. See under forceps and operation.

Kocks's operation [Joseph Kocks, German surgeon, born 1846]. See under operation.

kodol (ko'dol). A proprietary digestant and dyspepsia cure.

kodozonol (ko-do-zo'nol). A proprietary ozonized preparation of cod-liver oil.

Koeberlé's forceps (ke-ber-läz') [Eugene Koeberlé, French surgeon, 1828-1915]. Hemostatic forceps.

Koebner's disease (keb'nerz) [Heinrich Koebner, German dermatologist, born 1838]. Epidermolysis bullosa.

KOH. Potassium hydroxid.

Köhler's disease (ka'lerz) [Alban Köhler, German physician, born 1874]. See under disease.

Kohlrausch's fold or valve (köl'rowsh) [Otto Ludwig Bernhard Kohlrausch, German physician, 1811-1854]. See under fold.

Kohnstamm's phenomenon (kön'stahmz). See after-movement.

koilonychia (koi-lo-nik'e-ah) [Gr. κοίλος hollow + δνυξ nail]. A condition in which the nail is concave; spoon-nail.

kola (ko'lah). The seeds of Co'la acumina'la, a tree of Africa and several other species; it is a cardiac, aphrodisiac, and nerve stimulant. Dose of tincture, 60 min. (4 c.c.); of fluidextract, 20-30 min (1.333-2 c.c.) k. cardinette, a therapeutic combination of kola and phosphates from cereal grains. k. tannin, a compound of caffein and tannin derived from kola.

kolabon (ko'lah-bon). A proprietary confection containing kola.

kolanin (ko'lan-in). An active principle from kola.

Kolle's serum (kol'ez) [Wilhelm Kolle, German bacteriologist, born 1868]. See under serum.

Kölliker's layer, nucleus, etc. (kel'ik-erz) [Rudolph Albert von Kolliker, German anatomist, 1817-1905]. See under layer, nucleus, etc.

kolloxylin (kol-ok'sil-in). A substance allied to celloidin, and used in histologic work.

Kolmer's test (köl'merz) [John A. Kolmer, Philadelphia pathologist, born 1886] See under tests.

kolp-. For words beginning thus, see those beginning colp-.

kolynos (kol'in-os) [Gr. κωλεύειν to hinder + νόσος disease]. A proprietary antiseptic dental paste.

kolyone (ko'le-on). See colyone.

kolypeptic (ko-lip-ep'tik) [Gr. κωλεθείν to hinder + πεπτικός peptic]. Hindering or checking digestion.

kolyseptic (ko-lis-ep'tik) [Gr. κωλεθειν to hinder + σηπτικός septic]. Checking or hindering septic processes.

kombe (kom'ba). An African arrow-poison from Strophan'thus kom'be.

Kondoleon's operation (kon-do'le-onz) [Emmanuel Kondoleon, contemporary surgeon in Athens]. See under operation.

König's operation (kān'igz) [Franz Konig, German surgeon, 1832-1910]. See under operation.

König's rods (kān'igz) [Charles Joseph Konig, German otologist, born 1868]. See under rod.

konimeter (ko-nim'et-er). Same as konometer.

koniology (ko-ne-ol'o-je). Same as coniology.

konometer (ko-nom'et-er) [Gr. κόνις dust + μέτρον measure] An apparatus for counting the number of dust particles in the air.

konseal (kon'sēl). A proprietary form of cachet or capsule for enclosing a dose of medicine.

kontralnesin (kon-tral-ne'sin). A preparation of colloidal mercury with arsenic, phosphorus, and salicyl-sozoidol-quinin sublimate used for syphilis.

kontrastin (kon-tras'tin). Zirconium oxid.

koosin (koo'sin). See koussin.

kooso (koo'so). See kousso.

kopf-tetanus (kopf-tet'an-us) [Ger. Kopf head + tetanus]. Tetanus following a wound of the head.

kophemia (ko-fe'me-ah) [Gr]. Word-deafness; logokophosis.

kopiopia (ko-pe-o'pe-ah) See copiopia.

Koplik's spots (kop'liks) [Henry Koplik, New York pediatrist, 1858–1927]. See under spot.

Kopp's asthma [Johann Heinrich Kopp, German physician, 1777-1858]. See asthma.

kopræmia (kop-re'me-ah). Same as copremia.

kopratin (kop'rat-in) [Gr κόπρος dung]. The chemical substance which produces the so-called pyridin-hemochromogen spectrum in the pyridin test for blood. It is produced from alpha-hematin by putrefaction.

koprosterin (kop-ro-ste'rin). Same as stercorin.

Korányi's auscultation or percussion, treatment (ko-ran'vēz) [Baron F. von Koránvi. Hungarian physician, 1829-1913]. See under auscultation and treatment.

koronion (ko-ro'ne-on), pl. *koro'nia* [Gr. κορώνη crest]. A point at the apex of the coronoid processes of the inferior maxilla.

koroscopy (ko-ros'ko-pe). See coroscopy.

626

Korsakoff's psychosis or syndrome (kor-sak'-ofs) [Sergei Sergeyevich Korsakoff, Russian neurologist, 1853-1900]. See psychosis.

kosam (ko'sam). The seeds of *Bru'cea sumat*ra'na, of southeastern Asia a Chinese remedy for dysentery and uterine hemorrhage. Dose, 5-10 gr. (0.333-0.666 gm.).

Koshevnikoff's disease (ko-shev'nik-ofs) [Alexici Jakovlevich Koshevnikoff, Russian neurologist, 1836–1902]. A mild epilepsy.

kosin (ko'sin). Same as koussin

kosotoxin (ko-so-toks'in). A yellowish, amorphous powder, C₂₆H₃₄O₁₀, from kousso. a powerful muscle poison.

Köster's nodule (kes'terz) [Karl Koster, German pathologist, born 1843]. See nodule.

Kottmann's reaction or test (kot'manz). See under lests.

koumiss, kumiss (koo'mis) [Tatarian]. A fermented alcoholic drink prepared from cows' milk, originally from mares' milk by the Tartars. kefir k., milk fermented with kefir fungi

koussein (koo'se-in). A yellowish-brown powder, the active principle of brayera. It is soluble in alcohol, ether, and chloroform, and sparingly soluble in water used as an anthelmintic. Dose, 15-30 gr. (1-2 gm.).

koussin (koo'sin). An anthelmintic resin, $C_{31}H_{38}$ - O_{10} , from kousso. Dose, 20–40 gr. (1 333–2 666 gm). Called also *brayerin*.

kousso (koo'so). The flowers of Hage'nia abyssın'ııa, or Braye'ra anthelmın'tıca See brayera

Kovalevski's canal (ko-val-ev'skēz) [Pavel Ivanovich *Kovalevski*, Russian anatomist, born 1845]. See under canal.

Kowarsky's test (ko-var'skez) [A. Kowarsky, physician in Berlin]. See under tests.

Koyter's muscle (kor'terz) [Volcherus Koyter, Dutch anatomist, 1534–1600] The corrugator supercilii.

Kr. The chemic symbol of krypton.

Kraepelin's classification (kra'pa-linz) [Emil *Kraepelin*, Berlin psychiatrist, 1846 1926]. Division of mental diseases into the manic-depressive and schizophrenic groups.

Krameria (krah-me're-ah) [after J. G. H. Kramer]. A genus of polygaleaceous shrubs and herbs. The root of K. trian'dra. or Peruvian rhatany, and of K. argen'lea, or Brazilian rhatany, are astringent, like tannic acid: used in diarrhea, hemorrhages, and locally in leukorrhea, fissure of the anus, fissured nipples, etc. Dose of extract, 5-10 gr. (0.333-0 666 gm.); of fluidextract, 5-30 min. (0.333-2 c.c.); of syrup, ½-4 fl.dr. (2-16 c.c.); of tincture (U. S. P.), 5-60 min. (0.333-4 c.c.).

Kraske's operation (kras'kēz) [Paul Kraske, German surgeon, born 1851]. See under operation.

krauomania (kraw-o-ma'ne-ah). A tic marked by rhythmic movements, such as balancing, head rotation, etc.

kraurosis (kraw-ro'sis) [Gr. κραῦρος dry]. A dry, shriveled condition of a part, especially of the vulva (Breisky, 1885).

Krause's bundle, corpuscles, membrane (krow'zehz) [Wilhelm Krause, German anatomist, 1833-1910]. See bundle, corpuscle, and membrane.

Krause's gland, ligament, valve (krow'zehz) [Karl Friedrich Theodor Krause, German anatomist, 1707-1868]. See gland, ligament, and valve.

Krause's operation (krow'zehz) [Fedor Krause, German surgeon, born 1852]. See oberation. 627

kreatin, kresol, etc. See creatin, cresol, etc.

krebisote (kre'bis-ōt). A combination of creosote and bismuth: used like iodoform and internally in dysentery. Dose, 3-15 gr. (0.3-1 gm.).

krelos (kre'los). A proprietary antiseptic and germicide, consisting of a solution of cresols and rosin soap.

kreosal (kre'o-sal). A brown powder, the tannic acid ester of creosote: used in diseases of the throat, nose, and larynx.

kreosolid (kre-o-sol'id). A triturate of creosote and magnesia in equal parts, for internal use. Dose, 2-8 gr. (0.125-0 5 gm.).

kreosotal, kreosote, etc. See creosotal, creosote, etc. k. kefir, a preparation of creosotal and kefir in a series of different strengths.

kreotoxicon (kre-o-tok'sik-on) The substance in poisonous meat that produces the toxic symptoms.

reotoxin (kre-o-tok'sin). Any basic poison generated in a flesh-food by a plant microkreotoxin organism.

kreotoxism (kre-o-tok'sizm) [Gr. κρέας meat + τοξικόν poison]. Poisoning by meat.

kreozonol (kre-o-zo'nol). A proprietary ozonized preparation of oil of tar.

resamin (kres-am'in). A yellowish, alkaline liquor, containing 25 per cent. each of trikresol kresamin (kres-am'in). and ethylendiamin used as an antiseptic and in skin diseases in 0.1-1 per cent. solution or 1-5 per cent, ointment.

kresapol (kres'ap-ol). An antiseptic solution of cresol in potassium soap.

kresatin (kre'sat-in) Metacresyl acetate, an oily liquid used in diseases of the nose, throat, and ear.

A brownish solution of creskresin (kres'in) ylic acid and sodium oxyacetate: disinfectant.

kresival (kres'iv-al) The calcium salt of cresol sulphonic acid in a concentrated solution of sugar. used as an expectorant.

kreso (kre'so). A coal-tar product containing cresols and phenols used as a disinfectant and sterilizer for instruments, etc

kresofuchsin (kres-o-fuk'sin). A blue-gray powder used as a stain in histology. Its aqueous solution is red, the alcoholic solution blue.

kresol (kres'ol). Same as cresol.

kresosteril (kre-so-ster'il). Metacresolorthooxalic acid ester, used as a disinfectant.

Kretz's paradox. See under paradox.

Kreysig's sign (kri'zigz) [Friedrich Ludwig Kreysig, physician in Dresden, 1770-1839]. See

krinin (krin'in). See crinin.

krinosin (kri'no-sın). An amino-lipin, C₃₈H₇₉NO₅, obtained from brain substance.

Krishaber's disease (krēs-ab-airz') [Maurice Krishaber, Hungarian physician in France, 1836-1883]. See under disease.

kristallin (kris'ta-lin) A proprietary lining varnish for tooth cavities, consisting of a solution of trinitrocellulose in anhydrous amyl acetate.

Kristeller method or technic (kris'tel-er). See under method.

Kromayer's lamp (kro'mi-erz) [Ernst Kromayer, German dermatologist]. See lamp:

Krompecher's tumor (krōm'pek-erz) [Edmund Krompecher, pathologist in Budapest, 1870-1926]. Rodent ulcer.

kromskop (krōm'skōp) [Gr. χρώμα color + σκοπεῖν to view]. An apparatus used for the color photography of pathologic specimens.

Kronecker's center, serum, etc. (kro'nek-erz)

[Hugo Kronecker, Swiss pathologist, 1839-1914]. See center, serum, etc.

kronethyl (kron'eth-il). An ethereal fluidextract of Chinese cantharides used externally for relieving gouty and neuralgic pains.

Krönig's area, field, isthmus, steps (kra'nigz) [Georg Kronig, physician in Berlin, 1859-1911]. See area, field, isthmus, and steps.

Krönig's method (kra'nigz) [Bernhard Krönig, German gynecologist, 1863-1918]. See method.

Krönlein's hernia, operation (krān'līnz) [Rudolf Ulrich Kronlein, surgeon in Zurich, 1847-1910]. See herma, operation.

Krukenberg's tumor (kroo'ken-bergz) [Friedrich Ernst Krukenberg, German gynecologist, born 1871]. See tumor.

Kruse's brush (kroo'sez) [Walther Kruse, German bacteriologist, born 1864]. See brush.

krymotherapy (kri-mo-ther'ap-e). See crymotherapy.

kryofin (kri'o-fin). A substance in white crystals derived from paraphenetidin and methyl-glycolic acid, C2H6O.C6H4.NH CO.CH2.OCH3, antipyretic and antineuralgic Dose, 5-8 gr. (0.3-0.5

kryogenin (kri-oj'en-in). See cryogenin.

kryoscopy. See cryoscopy.

kryptomnesic (krip-tom-ne'sik) [Gr. κρυπτός hidden + $\mu\nu\hat{a}\sigma\theta\alpha\iota$ to remember]. Hidden in the memory; subconscious.

krypton (krip'ton) [Gr κρυπτός hidden] gaseous chemic element found in the atmosphere, atomic weight, 82 9; symbol, Kr.

krysolgan (kri-sol'gan). A proprietary gold preparation, NH2.C6H3(S.Au)COOH, for use in tuberculosis.

KSC. Abbreviation for kathodal closing contraction. K₂SO₄. Potassium sulphate.

KST. Abbreviation for kathodal closing tetanus.

kuatsu (koo-at'soo). The Japanese method of reviving patients rendered unconscious.

KUB, K. U. B. Abbreviation for kidney, ureler, and bladder

kubisagari, kubisgari (koo-bis-ag-ah're, koo-bis-gah're). A form of paralytic vertigo endemic in Japan (Gerlier-Nakano, 1884).

Kuhn's mask (koonz) [Ernst Kuhn, Prussian physician, born 1873]. See under mask.

Kühne's method of staining (ke'nēz) [Willy Kuhne, German histologist, 1837-1900]. See stains, table of.

Kühne's methylene-blue (ke'nez) [Heinrich Kühne, German histologist]. See methylene-blue.

Kuhnt's operation (koont) [Hermann Kuhnt, German oculist, 1850-1925]. See operation.

kukolin (ku'ko-lin). An alkaloid contained in Cocculus diversifolius, having a paralyzing action on muscle.

Külz's cylinders, test (kelts) [Rudolph Eduard Kulz, German physician, 1845-1895]. See under cylinder and tests.

Kümmell's disease (kim'elz) [Hermann Kummell, surgeon in Hamburg, born 1852]. See under dis-

kumyss (koo'mis). See koumiss

Kundrat's lymphosarcoma (kund'rats). See lym phosarcoma

kuorin (ku-o'rin). A proprietary preparation used in a 3 per cent solution as a serum reagent in testing for syphilis and leprosy.

Kupffer's cells (koop'ferz) [Karl Wilhelm Kupffer, anatomist in Munich, 1829-1902]. See cell.

kupramite (ku'pram-it). A gas mask absorbent for ammonia fumes.

Kupressoff's center (koo-pres'ofs) [J. Kupressoff, Russian physician of the nineteenth century]. See center.

kuprosan (koo'pro-san). A copper preparation used in treating gonorrhea by intramuscular injection.

kurchein (koor-tshe'in). An alkaloid, the active principle of kurchi.

kurchi (koor-tshi') [E. Ind.]. The root-bark of Holarrhe'na antidysenter'ica of Asia: an astringent febrifuge and antidysenteric.

kurhaus (koor'hows) [Ger. Kur cure + Haus house]. A house designed for the convenience of patients at mineral springs.

Kurloff's bodies (koor'lowfs) [Mikhail Georgiyevitch *Kurloff*, Russian physician, born 1859]. See under *body*.

Küss's experiment (kes) [Emil Küss, German physiologist, 1815–1871]. See experiment.

Kussmaul's disease, etc. (kus'mowlz) [Adolf Kussmaul, German physician, 1822-1902]. See under disease

Küster's operation (kis'terz) [Ernst Georg Ferdinand Kuster, German surgeon, born 1839]. See under operation

Küstner's sign (kist'nerz) [Otto Ernst Kustner, gynecologist in Breslau, born 1850]. See under sign.

kuttarosome (kut-ar'o-sōm) [Gr. $\kappa b \tau \tau \alpha \rho os$ a cavity $+ \sigma \hat{\omega} \mu a$ body]. A structure at the neck of a retinal cone composed of a series of parallel bars.

K.W. Abbreviation for kilowatt.

kyanophane (ki'an-o-fān) [Gr. κύανος blue + φαίνοι to appear]. A supposed bluish pigment from the oil-globules of the retinal cones

kyanopsia (ki-an-op'se-ah). See cyanopsia.

kyestein (ki-es'te-in) [Gr κύησις conception] A film sometimes seen on stale urine, formerly believed to be a sign of pregnancy.

kyllosis (kil-o'sis) [Gr κύλλωσις]. Club-foot or other like deformity of the foot or feet.

kymatism (ki'mat-izm) [Gr. κύμα wave]. Same as mvokymia.

kymogram (ki'mo-gram). The curve made by a kymograph.

kymograph (ki'mo-graf) [Gr. κῦμα wave + γράφειν to record]. An instrument for recording variations or undulations, arterial or other (Carl Ludwig, 1847).

kymographion (ki-mo-gra'fe-on). One form of kymograph.

kymoscope (ki'mo-sköp) [Gr. κῦμα wave + σκοπείν to observe]. A device for observing the bloodcurrent.

kynocephalus, cynocephalus (ki-no-sef'al-us, si-no-sef'al-us) [Gr $\kappa \dot{\nu} \omega \nu \text{ dog } + \kappa \epsilon \varphi \alpha \lambda \dot{\eta} \text{ head}].$ A fetal monster with a head like that of a dog.

kynophobia (ki-no-fo'be-ah) [Gr. κύων dog + φόβος fear]. Morbid fear of dogs or of hydrophobia.

kynurin (ki-nu'rin) [Gr. $\kappa b \omega \nu \, \text{dog} + o \bar{b} \rho \sigma \nu \, \text{urine}].$ A crystalline substance, $C_{18} H_{14} N_2 O_2$, obtainable from cynurenic acid and other sources.

kyphos (ki'fos) [Gr. κυφός humpbacked]. The hump of the spine in kyphosis

kyphoscoliosis (ki"fo-sko-le-o'sis) [kyphosis + scoliosis]. Backward and lateral curvation of the spinal column.

kyphosis (ki-fo'sis) [Gr. κύφωσις] Humpback; abnormal curvature and dorsal prominence of the vertebral column.

kyphotic (ki-fot'ik). Affected with or pertaining to kyphosis

kyphotone (ki'fo-tōn) [Gr. κυφός crookedness + τόνος brace]. An apparatus for reducing deformity in Pott's disease.

kyrin (ki'rın). A basic tripeptid obtained by Siegfreid by the partial hydrolysis of proteins.

kysthitis (kis-thi'tis) [Gr. κύσθος vagina + -ιτις inflammation]. Vaginitis; colpitis

kysthoptosis (kis-thop-to'sis) [Gr κύσθος vagina + πτῶσις falling]. Prolapse of the vagina.

kyto-. For words beginning thus, see those beginning cyto-.

L

L. 1. An abbreviation for Latin, left, lithium, lightsense, libra (pound, balance), liter, length, and coefficient of induction 2. Ehrlich's symbol for lethal (deadly, fatal).

Lo. Ehrlich's symbol for a toxin-antitoxin mixture which is completely neutralized and therefore will not kill an animal.

L+. Ehrlich's symbol for a toxin-antitoxin mixture which contains one fatal dose in excess and which will kill the experimental animal.

La. Symbol for lanthanum.

1-. A prefix which signifies levo-.

lab, lab-ferment [Ger. Lab rennet]. The ferment of rennet, causing coagulation of milk. 1.-secretion, secretion of lab-zymogen or lab-ferment by stomach. 1.-zymogen, a proenzyme in the stomach transformed into lab-ferment by acids of gastric juice.

Labarraque's solution (lab-ar-aks') [Antoine Germain *Labarraque*, French chemist, 1777-1850]. See under solution.

Labbé's triangle, veins (lab-āz') [Léon Labbé, French surgeon, 1832-1916]. See triangle and veins, table of.

labdanum (lab'da-num) [L.]. Same as ladanum. labia (la'be-ah) [L.]. The plural of la'bium, lip.

labial (la'be-al) [L. labia'lis]. Pertaining to a lip, or labium.

labialism (la'be-al-izm). Defective speech, with use of labial sounds.

labially (la'be-al-e). Toward the lips.

labichorea (la"be-ko-re'ah). Same as labiochorea. labidometer (lab-id-om'et-er) [Gr. $\lambda \alpha \beta ls$ forceps + $\mu \acute{e}\tau \rho o\nu$ measure] A forceps-like instrument for measuring the fetal head in the forceps. Called also labimeter.

labile (la'bil) [L la'bi to glide]. 1. Gliding; moving from point to point over the surface. 2. Chemically unstable.

lability (lab-il'it-e). Chemic instability.

labimeter (la-bim'e-ter). See labidometer.

labio-alveolar (la"be-o-al-ve'o-lar). Pertaining to the lip and the dental alveoli; pertaining to the labial side of a dental alveolus.

labiocervical (la"be-o-ser'vik-al). Pertaining to the labial surface of the neck of a tooth.

labiochorea (la"be-o-ko-re'ah) [L la'bium lip + chorea]. A choreic stiffening of the lips in speech, with stammering.

labiodental (la"be-o-den'tal). Pertaining to the labial surface of a tooth.

labioglossolaryngeal (la"be-o-glos"o-lah-rin'jeal) [L. la'bium lip + Gr γλωσσα tongue + larynx]. Pertaining to the lips, tongue, and larynx.

labioglossopharyngeal (la"be-o-glos"o-far-in'je-al). Pertaining to the lips, tongue, and pharynx See paralysis.

labiograph (la'be-o-graf) [L. la'bium lip + Gr.

γράφειν to write]. An instrument for recording the motions of the lips in speaking.

labiomancy (la'be-o-man-se) [L. la'bium lip + Gr. μαντεία foretelling] Lip reading; the art of understanding speech by observing the motion of the lips of the speaker.

labiomental (la"be-o-men'tal). Pertaining to the lip and chin.

labiomycosis (la"be-o-mi-ko'sis) [L. la'bium lip + Gr. μbκης fungus]. Any disease of the lips due to a fungus, such as perlèche and thrush.

labionasal (la"be-o-na'zal). Pertaining to the lip and nose.

labiopalatine (la"be-o-pal'at-in). Pertaining to the lip and palate.

labioplasty (la'be-o-plas-te) [L. la'bium lip + Gr. πλάσσειν to mold]. Same as cheiloplasty.

labiotenaculum (la"be-o-ten-ak'u-lum) [L. la'-bium lip + tenaculum]. An instrument for holding the lip.

labioversion (la"be-o-ver'shun). The state of being displaced labially from the line of occlusion: said of a tooth.

labitome (lab'it-ōm) [Gr. λαβls forceps + τέμνειν to cut]. A cutting forceps.

labium (la'be-um), pl. la'bia [L.]. A lip or lip-shaped organ. 1. ante'rius, the anterior lip of the external opening of the uterus. 1. cer'ebri, the margin of the cerebral hemisphere that overlaps the callosum. 1. infe'rius, the lower lip. 1. ma'-jus (pl., la'bia majo'ra), the hairy fold of the skin on either side of the slit of the vulva. 1. mi'nus (pl. la'bia mino'ra), the fold of mucous membrane within the labia majora, the nympha. la'bia o'ris [B N A], the lips. 1. poste'rius, the posterior lip of the external opening of the uterus. 1. supe'rius, the upper lip 1. tympan'icum [B N A], the lower border of the sulcus spiralis. 1. ure'thræ, either lateral margin of the external urinary meatus. 1. u'teri, the thickened margin of the external os uteri. 1. vestibula're [B N A], the upper part of the sulcus spiralis 1. voca'le [B N A], a projection at either side of the rima glottidis, the free edge of which forms the true vocal cord.

labor (la'bor) [L. "work"]. Childbirth; the bringing forth of a child. artificial 1., that which is facilitated or induced by mechanic or other extraneous means. atonic 1., that which is protracted by atony of the uterus. complicated 1., that in which there occurs a hemorrhage, eclampsia, or some other untoward event. dry 1., one in which the liquor amnii escapes too soon. false 1., one in which no progress toward delivery is made induced 1., labor brought on by artificial means. instrumental 1., that which is facilitated by the use of instruments. metastatic 1., labor in which the contractions occur in some part other than the uterus. missed 1., retention of the dead fetus in utero beyond the period of normal gestation. multiple 1., labor with two or more fetuses present. obstructed 1., that in which there is some mechanic hindrance, as from a tumor or a contracted parturient canal perverse 1, that in which the child occupies an abnormal position. **postponed 1.**, that which takes place later than the normal limit **power**less 1., that in which there is atony of the uterus. precipitate 1., that which is accomplished with undue celerity. premature 1., labor taking place before the normal period. protracted 1., one which is prolonged beyond the ordinary limit. spontaneous 1., one that requires no artificial aid. tedious 1., parturition that is abnormally protracted. twin 1., tedious labor due to the presence of two fetuses.

laboratorian (lab"or-at-o're-an). A person who devotes himself to laboratory work, as distinguished from a clinician.

laboratory (lab'or-at-o-re) [L. laborato'rium]. A place fitted up for experimental work.

Laborde's forceps (lab-ordz') [Jean Baptiste Vincent *Laborde*, French physician, 1830–1903]. See *forceps*.

labordin (lab'or-din). Same as analgen.

labrocyte (lab'ro-sit) [Gr. λάβρος greedy + κύτος cell]. A mast-cell.

labrum (la'brum) [L.]. Brim, lip. 1. glenoi-da'le [B N A], the glenoid ligament of the shoulder.

labyrinth (lab'ir-inth) [Gr. λαβύρινθος]. 1. Any system of intercommunicating cavities or canals.
 2. The internal ear, made up of the cochlea, vestibule, and canals. See ear. bony 1., the bony part of the internal ear. Called also osseous l. cortical 1., a network of tubules and blood-vessels in the cortex of the kidney. 1. of the ethmoid, either lateral mass of the ethmoid bone. Ludwig's 1's, spaces between Bertin's columns and the cortical arches. membranous 1., the membranous contents of the osseous labyrinth. olfactory 1. Same as l. of the ethmoid. osseous 1. See bony l.

labyrinthine (lab-ir-in'thin) [L. labyrinthi'nus]. Pertaining to a labyrinth.

labyrinthitis (lab"ir-in-thi'tis). Inflammation of the labyrinth, otitis interna.

labyrinthus (lab-ir-in'thus). Labyrinth.

lac (lak) [L., gen lac'tis]. 1. Milk. 2. Any milk-like medicinal preparation. 3. A substance collected from various tropical trees, caused by an insect, Coc'cus lac'tis 1. cani'num, dog's milk, and its homeopathic preparation. 1. deflora'tum, skimmed milk: recommended as a remedy in diabetes and anemia. 1. fermen'tum, fermented milk, or koumiss. 1. humaniza'tum, humanized milk. 1. sulphu'ris. See precipitated sulphur, under sulphur. 1. vacci'num, cows' milk. 1. virgina'le, virgin's milk a strained liquor of litharge, an ancient remedial wash, variously prepared, but now entirely obsolete.

lac-bismo (lak-biz'mo). A proprietary preparation of bismuth hydroxid and subcarbonate. Dose, 1-4 fl dr (4-16 c.c.).

laccase (lak'ās). An oxidizing ferment which causes the formation of Japanese lacquer. Laccase is found in many plants, as the beet, turnip, apple, pear, clover, etc., and has the property of oxidizing many polyatomic phenols.

lacerable (las'er-ab-l). Liable to become lacerated.

lacerated (las'er-a-ted) [L. lacera're to tear].
Torn, of the nature of a rent.

laceration (las-er-a'shun) [L. lacera'tio]. 1. The act of tearing. 2. A wound made by tearing.

lacertofulvin (la-ser-to-ful'vin) [L. lacer'tus lizard + ful'vus yellow] A yellow coloring-matter from the skin of certain reptiles.

lacertus fibro'sus (las-er'tus) [L. "fibrous arm"] [B N A] An aponeurotic band from the tendon of the biceps to the forearm; the bicipital fascia.

lachesis (lak'es-is) [L.; Gr. λάχεσιs fate]. A homeopathic preparation of the venom of Lach'esis mu'tus, a South American serpent.

lachry-. For words beginning thus, see those beginning lacri-

lacinia (las-in'e-ah) [L. "fringe"]. Same as fimbria.

lacmoid (lak'moid). A deep-blue dye, formed when resorcinol is heated with sodium nitrite. It is used as an indicator and has a PH range of 4 4 to 6.2.

lacmus (lak'mus) [Ger. Lackmus]. Litmus.

lacrimal (lak'rim-al) [L. lacrima'lis; lac'rima tear]. Pertaining to the tears.

lacrimalin (lak-rim'al-in). A substance obtained from the secretion of the lacrimal gland: said to have induced a flow of tears.

lacrimase (lak'rim-ās). A ferment obtained from the secretion of the lacrimal gland. lacrimation (lak-rim-a'shun) [L. lacrima'tio]. The secretion and discharge of tears.

lacrimotome (lak'rim-o-tōm) [L. lac'rima tear + Gr. τομή a cut]. A knife for operating upon the lacrimal sac or lacrimal duct.

lacrimotomy (lak-rim-ot'o-me) [L. lac'rima tear + Gr. τέμνειν to cut]. Incision of the lacrimal sac or duct.

lactacidase (lak-tas'id-ās). An enzyme of lactic acid bacteria which produces lactic acid fermentation.

lactacidin (lak-tas'id-in). A food preservative composed of lactic and salicylic acids.

lactacidogen (lak-tas-id'o-jen) [lactic acid + Gr. -γεν to produce] A compound of a monosaccharid and a phosphate, hexose diphosphate, 4C₆-H₁₀O₄(K₂PO₄)₂, found in muscle tissue and in fermenting mixtures. It is thought that it splits into lactic acid and phosphoric acid during the contraction of muscle.

lactaciduria (lak-tas-id-u're-ah) [lactic acid + Gr. οὐρον urine]. The presence of lactic acid in the urine.

lactagogue (lak'tag-og) [L. lac milk + Gr. ἀγωγός leading]. See galactagogue.

lactagol (lak'tag-ol). A galactagogue extract of cotton-seed oil.

lactalase (lak'tal-ās). A ferment which converts dextrose into lactic acid.

lactalbumin (lak-tal-bu'min). An albumin found in milk and resembling scrum-albumin.

lactam (lak'tam). A cyclic amid formed from aminocarboxylic acids by the elimination of water. They are isomeric with lactims, which are enol forms of lactams.

-C:O -C-OH
|-NH -N
|actam | lactim

lactamid (lak-tam'id). The amid of lactic acid, CH₃CHOH CONH₂.

lactamin (lak-tam'in) Alanin.

lactampule (lak-tam'pūl). A pure culture of Baculus bulgaricus in ampules.

lactase (lak'tās). An intestinal enzyme that splits lactose into glucose and galactose

lactate (lak'tāt). Any salt of lactic acid.

lactation (lak-ta'shun) [L. lacta'tio, from lacta're to suckle]
 1. The secretion of milk.
 2. The period of the secretion of milk.
 3. Suckling.

lactational (lak-ta'shun-al). Pertaining to lactation.

lacteal (lak'te-al) [L. lac'teus milky]. r. Pertaining to milk.
2. Any one of the intestinal lymphatics that take up chyle.

lactein (lak'te-in). Same as lactolin.

lacteol (lak'te-ol). A proprietary culture of lactic acid bacilli in tablet form

lactescence (lak-tes'ens) [L lactes'cere to become milky] Resemblance to milk; milkiness.

lactic-acid fermentation, etc. (lak'tik-). Secarid, fermentation, etc.

lactiferous (lak-tif'er-us) [L. lac milk + fer're to bear]. Producing or conveying milk.

lactification (lak-tif-ik-a'shun). The production of lactic acid by the lactic-acid bacteria.

lactifuge (lak'tif-ūj) [L. lac milk + fuga're to expel]. 1. Checking or stopping the secretion of milk. 2. An agent that checks the secretion

of milk. 2. An agent that checks the secretion of milk.

lactigenous (lak-tii'en-us) [L. lac milk + Gr.

lactigenous (lak-tij'en-us) [L. lac milk + Gr. γεννῶν to produce]. Producing or secreting milk.

lactigerous (lak-tij'er-us) [L. lac milk + ger'ere to carry]. Same as lactiferous.

lactim (lak'tim). See under lactam.

lactimorbus (lak-tim-or'bus) [lac milk + mor'bus disease]. Milk-sickness.

lactin (lak'tin). 1. Lactose, or sugar of milk. 2. A proprietary sterile milk in ampules for injection in non-specific protein therapy.

lactinated (lak'tin-a-ted). Prepared with sugar of milk.

lactinum (lak-ti'num) A proprietary form of neutral aluminum lactate.

lactivorous (lak-tiv'or-us) [L. lac milk + vora're to devour]. Feeding or subsisting upon milk.

lactobacillin (lak-to-bas-il'in). A preparation of lactic-acid bacteria to be added to milk to cause lactic-acid fermentation: used internally to counteract intestinal fermentation

Lactobacillus (lak-to-bas-il'us) [L. lac milk + A genus of bacterial organisms. bacillus] are Gram-positive, non-motile rods that ferment carbohydrates with the production of acid (usually lactic acid) and often gas (mostly carbon dioxid and hydrogen). L. acidophil-aëro'genes, an anaerobic organism closely resembling L. acidophilus except that it ferments many carbohydrates. L. acidoph'ilus, an anaerobic, Gram-positive organism found in the normal yellow stool of the infant It produces acid in milk and will live and grow in a higher hydrogen-ion concentration than most other bacteria. L. bifl'dus, a strictly anaerobic, non-pathogenic organism found in the stools of normal infants. It is rather polymorphic and at times shows terminal bifurcation. L. bulgar'icus, a rod-shaped organism found in Bulgarian yahourth. It ferments milk and produces a high degree of acidity. Such milk is drunk in the hope that the acid production will lessen the growth of putrefactive organisms in the intestines Called also Bacillus bulgaricus B gastrophilus, b of Massol, Boaz-Oppler bacillus, and filamentary bacillus. L. caucas'icus, a sporogenic species found in Kesir grains L. odontolyt'icus, a species credited with being one of the agents in decay of teeth.

lactobiose (lak-to-bi'ōs). Lactose.

lactobutyrometer (lak"to-bu-tir-om'et-er) [L. lac milk + butyrometer]. An instrument for measuring the proportion of cream in milk.

lactocele (lak'to-sēl). Same as galactocele.

lactochrome (lak'to-krōm) [L lac milk + Gr χρωμα color] An alkaloid of milk, $C_6H_{18}NO_6$.

lactocin (lak'to-sin). A hypnotic preparation said to be prepared from the juice of Lactu'ca viro'sa

lactoconium, **lactokonium** (lak-to-ko'ne-um-[L. *lac* milk + Gr. κόνις dust] One of the smal) particles, of unknown nature, seen with the ultral microscope in the milk of animals.

lactocrit (lak'to-krit) [L lac milk + Gr. κριτής judge]. An instrument for estimating the amount of fat in milk.

lactodensimeter (lak"to-den-sim'et-er). An instrument for ascertaining the specific gravity of milk

lactoform (lak'to-form). A preparation of milk and formaldehyd used in rheumatism.

lactoglobulin (lak-to-glob'u-lin). The globulin of milk.

lactojod (lak-to-i'od). See projodin.

lactol (lak'tol). I. A colorless, tasteless powder, C₁₀H₁O.OC.CH(OH)CH₃; a lactic-acid ester of beta-naphthol: an intestinal antiseptic. Dose, 3½-8 gr. (0 25-0.5 gm.). 2. Actol lactate: a silver preparation used in gonorrhea.

lactola (lak-to'lah). A food preparation of skimmed milk and cotton-seed oil

lactolase (lak'to-lās). A vegetable enzyme which causes the formation of lactic acid.

lactolin (lak'to-lin). Condensed milk.

lactometer (lak-tom'et-er) [L. lac milk + me'trum measure]. An instrument for ascertaining the specific gravity of milk.

lactonaphthol (lak-to-naf'thol). Same as lactol.

lactone (lak'tōn). r. An aromatic fluid, C₁₀H₅O₄, prepared by distillation from lactic acid. 2. Tablets containing lactic-acid bacteria: used in preparing buttermilk.

lactopeptin (lak-to-pep'tin). A proprietary digestant remedy of milk-sugar, 120 parts; pancreatin, 18 parts; peptone, 24 parts; lactic acid, 2 parts; hydrochloric acid, 2 parts; and diastase, 1½ parts. Dose, 5-15 gr. (0.333-1 gm.).

lactophenin (lak-to-fe'nin). A patented bitter, crystalline powder derived from phenetidin and lactic acid. Its formula is C₆H₄(OC₂H₅).NH.-CO CII(OH)CH₃. It is soluble in 500 parts of cold and in 55 parts of boiling water, and it is used as a sedative and antipyretic. Dose, 8-15 gr. (0.5-1 gm.).

lactophosphate (lak-to-fos'fāt) [L. lac milk + phos'phas phosphate]. Any salt of lactic and phosphoric acids.

lactopicrin (lak-to-pik'rin). A bitter substance, one of the active principles of Lactu'ca canaden'sis.

lactoprecipitin (lak"to-pre-sip'it-in). A precipitin which will precipitate the casein of milk.

lactoprotein, lactoproteid (lak-to-pro'te-in, lak-to-pro'te-id). Any one of the proteins of milk. lactorrhea (lak-to-re'ah). Galactorrhea.

lactosazone (lak-to-sa'zōn) The phenyl-osazone of lactose. It is a yellow crystalline substance made by treating lactose with phenylhydrazin and acetic acid. The crystals melt at 200° C. and may be used in identifying lactose

lactoscope (lak'to-skōp) [L. lac milk + Gr. σκοπεῖν to inspect]. A device showing the proportion of cream in milk.

lactose (lak'tōs) [L. sac'charum lac'tis]. Milk-sugar, C₁₂H₂₂O₁₁ + H₂O, a white, crystalline disacchard obtamed from cow's milk. It is a glucosegalactosid and on hydrolysis with acids or certain enzymes yields glucose and galactose.

lactoserum (lak-to-se'rum). The serum of an animal into which has been injected milk from another animal. This serum precipitates milk from an animal of the same species as that from which the milk was taken

lactosomatose (lak-to-so'mat-ōs). A patented food-preparation of the albumoses of milk with 5 per cent, of combined tannin.

lactosum (lak-to'sum). The U S. P. name for lactose.

lactosuria (lak-to-su're-ah) [lactose + Gr. οὖρον urine]. A condition characterized by the occurrence of lactose in the urine.

lactotoxin (lak-to-toks'in). A ptomain found in

Lactuca (lak-tu'kah) [L.]. 1. A genus of composite-flowered plants, including L sati'va, common lettuce, and L viro'sa, the principal source of lactucarum 2 The herb, L. viro'sa, of Europe' a mild hypnotic and sedative. Dose of extract, 5-15 gr. (0.333-1 gm.); of fluidextract, 4-16 min (0.25-1 c c.). L. canaden'sis, a wild lettuce of North America, has similar uses. Dose of extract, 4-12 gr. (0.25-0.78 gm.); of fluidextract, 4-16 min. (0.25-1 c c).

lactucarium (lak-tu-ka're-um) [L]. The bitter inspissated juice of various species of Lactu'ca, chiefly L. viro'sa. It is a mild hypnotic and sedative. Dose. 8-15 gr (0.5-1 gm.), of tincture, 10-30 min. (0.666-2 c.c.); of fluidextract, 8-30 min. (0.5-2 c.c.), of syrup, 1-3 fl dr (4-12 c c.).

lactucerin (lak-tu'se-rin) [L lactu'ca lettuce + ce'ra wax]. A waxy, crystallizable principle found in lactucarium.

lactucin (lak-tu'sin). A bitter principle, $C_{11}H_{12}$ - O_3 , from lactucarium. sedative. Dose, 1-5 gr. (0.066-0.333 gm.).

lactucism (lak'tu-sizm). Poisoning by lactuca.
lactulum unguis (lak'tu-lum un'gwis). The nail
matrix.

lactupierin (lak-tu-pik'rin). A bitter acid principle, C₄₄H₃₂O₂₁, from lactucarium.

lactyltropein (lak-til-tro'pe-in). A remedy in white needles, C₈H₁₄NO CO.CH.(OH)CH₃, derived from tropein and lactic acid a stimulant of the heart and respiration.

lacuna (lak-u'nah), pl. lacu'næ [L.]. A small pit. hollow, or depression. absorption 1., How-ship's 1., small depressions of bone under the periosteum air-1., cavities filled with air, as in the hairs. 1. cer'ebri, the cerebral infundibulum. intervillous 1., any one of the blood-spaces of the placenta in which the fetal villi are found. 1. latera'lis. Same as parasinoidal sinus. See sinus. 1. mag'na, the largest of the orifices of the glands of Littré **Morgagni's l.**, the lacuna of the urethra. **l. musculo'rum** [B N A], the compartment beneath Poupart's ligament for the passage of the iliopsoas muscle and femoral nerve, separated from the lacuna vasorum by the iliopectineal ligament. parasinoidal 1., parasinoidal sinus. See under sinus. 1. pharyn'gis, a depression at the pharyngeal end of each eustachian tube. 1. of the urethra, depressions or follicles in the mucous membrane of the urethra, especially numerous in the region of the bulb. 1. vaso'rum [B N A], a compartment separated from the lacuna mus-culorum by the iliopectineal ligament for the passage of the femoral vessels.

lacunar (lak-u'nar). Pertaining to or containing lacuna; of the nature of a lacuna.

lacunule (lak-u'nūl) [L lacu'nula]. A small lacuna.
lacus lacrima/lis (la'kus) [L. "lake of tears"].
[B N A] The triangular space that separates the two evelids at the inner canthus.

ladanum (lad'an-um) [L., Gr λήδανον]. A resin from various species of Cis'tus: little used as a medicine in civilized countries.

Ladendorff's test (lah'den-dorfs) [August Laden-dorff, German physician of the nineteenth century]. See under tests.

Lady Webster's pills. See pill.

lady's-slipper (la'dez-). See Cypripedium.

189-. For words thus beginning, see le-.

Lælaps (le'laps). A genus of tick-mites found on rats.

Laennec's cirrhosis, pearls, etc (len-eks') [René Théophile Hyacinthe Laennec, French physician, 1781-1826]. See under cirrhosis, pearls, etc.

levo. For words beginning thus, see those beginning levo.

Lafayette's mixture (lah-fa-ets'). See mixture.

Lag. Abbreviation for L. lage'na, a flask.

lagena (laj-e'nah) [L. "flask"]. A part of the upper extremity of the scala media.

lagging (lag'ing). Decreased or retarded movement of the affected side of the chest in phthisis.

Lagochilas'caris mi'nor. A nematode worm found in the intestine of man in Trinidad.

lagophthalmos, lagophthalmus (lag-of-thal'mos, -mus) [Gr. λαγώs hare + ὁφθαλμός eye]. A condition in which the eye cannot be completely closed; called also hare's eye.

Lagrange's operation (lag-rahnzhs') [Felix Lagrange, contemporary French surgeon]. See under operation.

la grippe (lah grip'). See influenza.

Lahore sore (la-hor'). See furunculus orientalis.

laibose (la'ib-ōs). A concentrated food preparation composed of the solids of pure milk and the digestible portion of whole wheat.

laifan (li-fan'). A Chinese neuralgia remedy: said to be crude Blumea camphor.

laiose (li'ōs). Leo's sugar; a pale-yellow syrup, $C_0H_{12}O_0$, found in the urine in diabetes mellitus. It is non-fermentable and levorotatory.

632

laira (la'rah) ["barking"]. An epidemic of hysterical barking in women, which broke out at Arnon, France, in 1613, and at Blackthorn (Oxfordshire) in 1700.

lakcit (lak'sit). A dried preparation of humanized citrated milk for infant-feeding.

laking (la'king). The separation of hemoglobin from the red blood-corpuscles.

laky (la'ke). Resembling a pigment of the class known as lakes: used of blood in which the red corpuscles have been partially destroyed.

Lallemand's bodies (lal-mahz') [Claude Francois Lallemand. French surgeon, 1790-1853]. See under body.

lalling, lallation (lal'ing, lal-a'shun) [L. lalla'-tio]. A babbling, infantile form of speech.

lalognosis (la-log-no'sis) [Gr. $\lambda \alpha \lambda \epsilon \hat{\imath} \nu$ to babble + $\gamma \nu \hat{\omega} \sigma \iota s$ knowledge]. The understanding of speech. laloneurosis (la"lo-nu-ro'sis) [Gr. λαλεῖν to babble + neurosis]. Any nervous speech disorder.

lalopathy (la-lop'ath-e) [Gr. λαλείν to babble - $\pi \dot{a} \theta o s$ illness). Any disorder affecting the speech. lalophobia (la-lo-fo'be-ah) [Gr. λαλεῖν to babble + φόβος fear]. Morbid or extreme dislike of speaking, often associated with stuttering.

laloplegia (la-lo-ple'je-ah) [Gr. λάλος speech + πληγή stroke]. Paralysis of the organs of speech. lalorrhea (lal-o-re'ah) [Gr. λάλος speech + ροῖα flow] An abnormal or excessive flow of words.

Lalouette's pyramids (lal-oo-ets') [Pierre Lalouette, French physician, 1711-1742]. See under pyramid.

Lamarck's theory (lam-arks') [Jean Baptiste Pierre Antoine de Lamarck, French naturalist, 1744-1829]. See theory.

lambda (lam'dah) [Gr. letter Λ or λ]. The point at the site of the posterior fontanel where the lambdoid and sagittal sutures meet.

lambdacism, lambdacismus (lam'das-izm, lamdas-iz'mus) [Gr. $\lambda \alpha \mu \beta \delta \alpha \kappa \iota \sigma \mu \delta s$]. 1. The substitution of l for r in speaking. 2. Inability to utter correctly the sound of l.

lambdoid (lam'doid) [Gr. λάμβδα "1" + είδος form]. Shaped somewhat like the Greek letter Λ or λ .

Lamblia intestina'lis (lam'ble-ah). See Giardia intestinalis.

lambliasis, lambliosis (lam-bli'as-is, lam-ble-o'sis). Infection with Lamblia intestinalis.

Lambotte's treatment (lam-bots') [Albin Lam-botte, Belgian surgeon, 1856-1912]. See treatment. lamella (lam-el'ah), pl. lamel'la [L. dim. of lam'ina].

1. A thin leaf or plate, as of bone. 2. A medicated disk or wafer. articular 1., the layer of bone to which an articular cartilage is attached. concentric 1., the bony plates that surround the haversian canals. Havers's 1., concentric layers of bone around Havers' canals. intermediate 1., the plates which are found between the concentric layers of a bone. osseous 1., any one of the thin plates into which bone can be divided. periosteal 1., peripheral 1., the layers of bone lying next to the periosteum. triangular 1., the layer that joins the choroid plexuses of the third ventricle. vitreous 1., Bruch's membrane; the inner layer of the choroid coat of the eye.

lamellar (lam-el'ar). Disposed in lamellæ.

lamin (la'min). An alkaloid from the flowers of La'mium al'bum, or dead-nettle. Its hydro-chlorid and sulphate are strongly hemostatic: used subcutaneously.

lamina (lam'in-ah), pl. lam'inæ [L.]. 1. A thin, flat plate. 2. Either neurapophysis of a vertebra. 1. affix's [B N A], a plate in the floor of the pars centralis of the lateral ventricle over the superior surface of the thalamus. 1. basa'lis [B N A], Bruch's membrane. 1. basila'ris [B N A], the ventrolateral plate. See under plate. Bowman's 1. Same as Bowman's membrane. 1. choriocap-

illa'ris [B N A]. Same as entochoroidea. chorioi dea, the epithelial wall of the cerebral ventricle. 1. cine rea, the layer of gray matter between the callosum and the optic chiasm. cribro'sa. 1. The fascia that covers the saphenous opening. 2. Either one of the two perforated spaces at the base of the brain. 3. The two plates through which the saccular and cochlear branches of the auditory nerve enter the internal ear. The sieve-like part of the sclera through which NA] The cribition plate of the ethmoid bone. dental 1. Same as dental ridge. See ridge. dentate 1. Same as crista spiralis. 1. denticated. ula'ta, a cartilaginous layer on the upper outer portion of the osseous lamina spiralis. 1. elas'-tica ante'rior [B N A] [bowman'], Bowman's membrane. 1. elas'tica poste'rior [B N A] [demour'si, desceme'ti], Descemet's membrane. 1. epithelia'lis, either of the four parts of the developing neural tube which will form the brain wall. They are the dorsal plate, dorsolateral plate, ventral plate, and ventrolateral plate.

1. exter'na [B N A], the outer table of the skull.

1. fibrocartilagin'ea interpu'bica [B N A], the cartilaginous layer of the symphysis pubis. I. fus'ca [B N A], the lamina suprachoroidea or outer pigmented layer of the choroid coat. lateral 1., the external pterygoid plate of the sphenoid bone. 1. media/lis, the internal pterygoid plate l. medulla'ris thal'of the sphenoid bone ami, a sheet of white fibers within the optic thalamus dividing it into the internal and external nuclei. 1. modi'oli [B N A], a bony plate, the continuation of the modiolus, extending upward toward the cupola. 1. papyra'cea [B N A], the os planum of the ethmoid periclaustral 1., the layer of white matter between the claustrum and the insula. 1. perpendicula'ris [B N A], the perpendicular plate of the ethmoid bone. 1. pro'pria, the middle or fibrous layer of the membrana tympani. 1. quadrigem'ina [B N A], the layer of gray matter roofing over the aqueduct of Sylvius. 1. reticula'ris, the perforated layer of membrane that covers the organ of Corti. 1. rostra'lis | B N A], the thin terminal part of the rostrum of the corpus callosum. 1. spira'lis, the septum, partly membranous and partly bony, that divides the cochlea into the two scale. 1. suprachoroi'dea [B N A], a delicate layer of connective tissue interposed between the sclera and choroid coat of the eye. 1. supraneuropor'ica, the area of the membranous roof of the diencephalon which covers the foramen of Monro 1. termina'lis [B N A], the anterior boundary of the third ventricle; called also terminal plate and l. cinerea. 1. trag'ica, a plate of cartilage forming the beginning of the cartilaginous part of the external auditory meatus. 1. vasculo'sa [B N A], the outer part of the choroid which contains the largest vessels. 1. vit'rea, the homogeneous glassy membrane that lines the choroid; Bruch's membrane.

laminar (lam'in-ar) [L. lamina'ris]. Made up of laminæ.

 Laminaria (lam-in-a're-ah) [L.]. 1. A genus of sea-weeds.
 The stems of L. digita'ta and L. clousto'ni (sea-tangle) used in making tents and bougies.

laminated (lam'in-a-ted). Made up of thin layers or laminæ; disposed in laminæ or layers.

lamination (lam-in-a'shun). 1. A laminated structure or arrangement. 2. The slicing of the fetal head in embryotomy.

laminectomy (lam-in-ek'to-me) [L. lam'ina layer + Gr εκτομή excision]. The excision of the posterior arch of a vertebra.

laminitis (lam-in-i'tis). Inflammation of a lamina, and especially of the laminæ of a horse's foot; a form of founder.

lamnectomy (lam-nek'to-me) [L. lam'ina + Gr. λαμνία layer + έκτομή excision]. Excision of the lamina of a vertebra.

lamp (lamp). Any apparatus for furnishing artificial light. Gullstrand's slit 1., a diaphragm containing a slit-like opening, by means of which a narrow, flat beam of intense light may be projected into the eye. It gives intense illumination so that microscopic study may be made of the conjunctiva, cornea, iris, lens, and vitreous, the special feature being that it illuminates a section through feature being that it maintains a section wayer's the substance of these structures. **Kromayer's** 1., a quartz lamp of mercury vapor used in treating skin diseases with actinic rays. **Loring** 1., an electric lamp used in Finsen light treatment. mignon 1. (min'yun). A minute electric light used in cystoscopy, etc. Nernst 1., an light used in cystoscopy, etc. **Nernst 1.**, an incandescent electric lamp the filament of which is made of metallic oxids **quartz 1.**, a mercury vacuum lamp made of melted quartz glass cm-bedded in a running water-bath, used for applying Finsen light. Simpson 1. See Simpson light, under light. slit 1. See Gullstrand's slit 1. zoalite 1., a device for producing radiant heat for therapeutic purposes.

lampas (lam'pas). A swelling of the mucous membrane that covers the hard palate and projects in a ridge immediately behind the upper incisors in horses.

lampblack (lamp'blak). Finely powdered carbon derived from the burning of oils, rosin, etc.

lamprophonia (lam-pro-fo'ne-ah) [Gr. λαμπρός clear $+ \varphi \omega \nu \dot{\eta}$ voice]. Clearness of voice.

lamprophonic (lam-pro-fon'ik). Having a clear voice.

Lamus (la'mus). A genus of predatory insects of the family Reduviida L. magis'tus, a large the family Reduviidae black bug of tropical America which transmits Trypanosoma (Schizotrypanum) cruzi. It frequently bites the face and so is called Barberio by the natives. L. rubrofascia/tus, brown bug of South Africa which bites man and may transmit kala-azar. L. sanguisu'ga, the bloodsucking cone nose or Mexican bedbug of the southern United States. Its bite is painful and causes irritation, swelling, and nausea. Other species which harbor para-

(female).

sites closely resembling Trypanosoma cruzi are L chaga'si, that was found in an uninhabited desert, L. dimidia'ta, of Central America; L. genicula'ta, which inhabits the burrows of the armadillo; L. infes'tans, the vinchuca or great black bug of the Pampas; L. mexica'nus found in Mexico; L. nigrova'rrus, widely distributed in South America, L, protrac'ta, of the southern United States; L. rubrofascia'ta, the Malay bug of tropical Asia, Madagascar, and parts of Africa. It has a large proboscis and produces a nasty sting; L. sor'dida of Sao Paula; and L. vil'ticeps, of Rio de

A disease of cattle in South Africa secondary to bovine osteophagia. The cattle, in their effort to satisfy their craving for phosphorus, sometimes eat bones from putrefying carcases and thus become infected with Parabotulinus bovis.

main (lan'a-in). Purified wool-fat.

ma kerol (lah'nah ke'rol). A proprietary bactericidal preparation: used in skin diseases.

nce (lans) [L. lan'cea]. 1 Same as lancet. To cut or open with a lancet. Mauriceau's 1., a pointed knife used in embryotomy.

ancereaux's diabetes, treatment, etc. (lahnser-oz') [Étienne Lancereaux, physician in Paris, 1829-1910]. See diabetes, treatment, etc.

ncet (lan'set) [L. lan'cea lance]. A small pointed and two-edged surgical knife. abscess-1., a

wide-bladed lancet with one convex and one concave edge. acne-1., a form with a narrow blade for puncturing the papules of acne. gum-1., a knife for incising the gums. laryngeal 1., a delicate knife for operations within the larynx: it is operated through a cannula. spring-1., one the blade of which is held by a spring. thumb-1., one with a wide, two-edged blade.

Lancet coefficient (lan'set) [The Lancet, a British medical journal]. See under coefficient.

lancinating (lan'sin-a-ting) [L. lan'cinas]. ing, darting, or sharply cutting. See pain.

Lancisi's nerve or stria (lan-sis'ēz)[Giovanni Maria Lancisi, Italian physician, 1654-1720. See stria longitudinalis.

Landau's test (lahn'dowz) [Leopold Landau, German surgeon, 1848-1920]. See under tests.

Landerer's treatment (lahn'der-erz) [Albert Sigmund Landerer, German surgeon, 1854-1904]. See treatment.

Landolt's bodies (lahn-dolts') [Edmund Landolt, oculist in Paris, 1846-1926]. See under body.

Landouzy's disease (lan-doo'zez) [Louis Landouzy, French physician, 1845-1917]. Weil's disease.

Landouzy-Déjérine type (lan-doo-ze'-de-zherēn'). See under type.

Landouzy-Grasset law (lan-doo-ze'-gras-sā'). See under law.

Landry's paralysis (lan-drez') [Jean Baptiste Octave Landry, French physician, 1826-1865]. See paralysis.

land-scurvy (land'skur-ve). hæmorrhagica. Same as burbura

Landström's muscle (lahnd'stremz) [John Landstrom, Swedish surgeon, 1869-1910]. See under muscle.

Lane's disease, kink, operation, plates (lānz) [Sir W. Arbuthnot Lane, English surgeon]. See under disease, kink, operation, and plate.

lanesin (lan'es-in) A patented wool-fat prepara-

Lange's solution, test (lahng'ez) [Carl Lange, German physician, born 1883]. See under solution and tests.

Langenbeck's incision, operation (lahng'enbeks) [Bernard Rudolf Konrad von Langenbeck, German surgeon, 1810-1887] See under incision.

Langer's muscle (lang'erz) [Carl Ritter von Edenberg von Langer, German anatomist, 1819–1887]. See under muscle.

Langerhans's cells, islands (lahng'er-hanz)
[Robert Langerhans, German pathologist, 1849–1888]. See under cell and island.

Langhans's cells, layer (lahng'hahnz) [Theodor Langhans, German pathologist, 1839-1915]. See under cell and layer.

lanichol (lan'ik-ol). A proprietary preparation of refined wool-fat resembling lanolin.

laniol (la'ne-ol). A wool-fat preparation not unlike lanolin.

Lankesterel'la rana'rum. A sporozoan parasite of the red blood-cells of the frog.

lannainol (lan-a'in-ol). An iodocresol preparation used as a substitute for iodoform.

Lannelongue's operation (lan-el-ongs') [Odilon Marc Lannelongue, French surgeon, 1841-1911]. See under operation.

lanoform (lan'o-form). Lanolin mixed with 1 per cent. of formaldehyd: antiseptic.

lanoix (lahn-wah') A proprietary remedy for malaria and influenza.

lanolin (lan'o-lin) [L. lanoli'num; la'na wool + o'leum oil]. Adeps lanæ hydrosus, or rectified wool-fat: used as an excipient for remedies for external use. It is a mixture of the esters of cholesterol and isocholesterol with the higher fatty acids. Lantana (lan-ta'nah, lan-tah'nah) [L.]. A genus of verbenaceous shrubs, several species of which are actively medicinal.

lantanin (lan'tan-in). An alkaloid from Lanta'na brasilien'sis: antiperiodic and antipyretic. Dose, 15-30 gr. (1-2 gm.).

lanthanin (lan'than-in) [Gr λανθάνειν to conceal]. Same as oxychromatin

lanthanum (lan'than-um) [Gr. λανθάνειν to conceal]. A rare metallic element: symbol, La; atomic weight, 139.

lanthopin (lan'tho-pin). A white, crystalline alkaloid, C₂₃H₂₅NO₄, from opium.

lantol (lan'tol). Colloidal rhodium for use in cancer and septic diseases.

lanuginous (lan-u'jin-us) [L. lanugino'sus]. Covered with lanugo.

lanugo (lan-u'go) [L]. 1. The fine hair on the body of the fetus. 2. The fine downy hair found on nearly all parts of the body except the palms and soles.

lanum (la'num) [L la'na wool]. Hydrous woolfat (adeps lane hydrosus): a yellowish-white, unctuous mass, miscible with water.

Lanz's operation, point (lahnts) [Otto Lanz, contemporary surgeon in Amsterdam, born 1865]. See under operation and point.

lapactic (lap-ak'tik) [Gr. λαπακτικός; λαπάσσειν to discharge] Pertaining to or effecting a removal; purgative.

laparectomy (lap-ar-ek'to-me) [Gr. λαπάρα loin + ἐκτομή excision]. Excision of a portion or of portions of the abdominal wall: performed for the purpose of overcoming laxity of the walls and to gain support.

laparocholecystotomy (lap"ar-o-ko"le-sis-tot'-o-me) [Gr. $\lambda \alpha \pi \dot{\alpha} \rho a$ loin $+ \chi o \lambda \dot{\eta}$ bile $+ \kappa \dot{\nu} \sigma \tau \iota s$ bladder $+ \tau o \mu \dot{\eta}$ cut]. Incision of the gall-bladder through an abdominal section.

laparocolectomy (lap"ar-o-ko-lek'to-me) [Gr. λαπάρα loin + κόλον colon + ἐκτομή excision]. Same as colectomy

laparocolostomy (lap"ar-o-ko-los'to-me) [Gr. $\lambda \alpha \pi$ - $\dot{\alpha} \rho \alpha$ flank + colostomy]. The operation of forming a permanent opening into the colon by an incision in the anterior lateral wall of the abdomen.

laparocolotomy (lap"ar-o-ko-lot'o-me) [Gr. λαπάρα flank + κόλον colon + τομή cut]. Colotomy through the abdominal wall.

laparocolpohysterotomy (lap"ar-o-kol"po-hister-ot'o-me) [Gr. $\lambda a\pi \alpha \rho a$ loin $+ \kappa \delta \lambda \pi \sigma s$ vagina + hysterotomy]. Cesarcan section by a combined vaginal and abdominal method.

laparocolpotomy (lap"a-ro-kol-pot'o-me) [Gr. λαπάρα loin + κόλπος vagina + τομή cut]. Same as laparo-elytrotomy.

laparocystectomy (lap"ar-o-sis-tek'to-me) [Gr. λαπάρα loin + κύστις cyst + ἐκτομή excision]. Removal of a cyst, especially one produced by extra-uterine pregnancy, by an abdominal incision.

laparocystidotomy (lap"ar-o-sis-tid-ot'o-me) [Gr. λαπάρα loin + κύστις bladder + τομή cut]. Incision into the bladder through the abdominal wall just above the pubes

laparocystotomy (lap"ar-o-sis-tot'o-me) [Gr. λαπάρα loin + κύστις bladder + τέμνειν to cut].

1. The removal of an extra-uterine fetus, the sac being allowed to remain. 2. Laparotomy with removal of the contents of a cyst.

laparo-elytrotomy (lap"ar-o-el-it-rot'o-me) [Gr. λαπάρα loin + έλυτρον sheath + τομή cut]. Removal of a fetus through an incision of the abdominal wall and vagina.

laparo-enterostomy (lap"ar-o-en-ter-os'to-me)
[Gr. λαπάρα loin + ἔντερον intestine + στόμα mouth]. The creation of an artificial opening into the intestine through the abdominal wall. laparo-enterotomy (lap"ar-o-en"ter-ot'o-me)

[Gr. λαπάρα loin + ἔντερον intestine + τομή cut]. Laparotomy with incision into the intestine.

laparogastroscopy (lap"ar-o-gas-tros'ko-pe) [Gr. λαπάρα loin + gastroscopy]. Examination of the interior of the stomach through a gastrotomy incision.

laparogastrostomy (lap"ar-o-gas-tros'to-me) [Gr. $\lambda \alpha \pi \dot{\alpha} \rho a$ loin $+ \gamma \alpha \sigma \tau \dot{\eta} \rho$ stomach $+ \sigma \tau \dot{\sigma} \mu a$ mouth]. The creation of a permanent gastric fistula through the abdominal wall.

laparogastrotomy (lap"ar-o-gas-trot'o-me) [Gr. $\lambda \alpha \pi \delta \rho \alpha$ loin + $\gamma \alpha \sigma \tau \dot{\eta} \rho$ stomach + $\tau o \mu \dot{\eta}$ cut]. Incision into the stomach through the abdominal wall

laparohepatotomy (lap"ar-o-hep-at-ot'o-me) [Gr. λαπάρα loin + hepatotomy]. Incision of the liver through the abdominal wall.

laparohysterectomy (lap"ar-o-his-ter-ek'to-me) [Gr. λαπάρα loin + ὑστέρα womb + ἐκτομή excision]. Removal of the uterus through an opening in the abdominal walls.

laparohystero-oöphorectomy (lap"ar-o-his"ter-o-o"of-o-rek'to-me) [Gr. λαπάρα loin + ὑστέρα womb + oophorectomy]. Laparotomy with removal of the uterus and ovaries.

laparohysteropexy (lap"ar-o-his'ter-o-pek-se) [Gr. λαπάρα loin + ὑστέρα womb + πηξις fixation]. Same as ventrofixation.

laparohysterosalpingo-oöphorectomy (lap"a-ro-his"ter-o-sal-pin"go-o"of-o-rek'to-me). Removal of the uterus, oviducts, and ovaries by an abdominal cut.

laparohysterotomy (lap"ar-o-his-ter-ot'o-me) [Gr. λαπάρα flank + ὑστέρα womb + τομή cut]. Laparotomy with incision of the uterus.

laparo-ileotomy (lap"ar-o-il-e-ot'o-me) [Gr. λαπάρα loin + ileum + Gr. τομή cut]. Laparotomy with incision of the ileum.

laparokelyphotomy (lap"ar-o-kel-if-ot'o-me) [Gr. $\lambda \alpha \pi \dot{\alpha} \rho \alpha$ loin $+ \kappa \dot{\epsilon} \lambda \upsilon \varphi o s$ egg-shell $+ \tau o \mu \dot{\eta}$ cut]. Laparotomy with incision of the sac of an extrauterine gestation.

laparokolpotomy (lap"ar-o-kol-pot'o-me). See laparocolpotomy.

laparomonodidymus (lap"ar-o-mon-o-did'im-us) [Gr. λαπάρα loin + μόνος single + δίδυμος twin]. A monster fetus, double above but single below the pelvis.

laparomyitis (lap"ar-o-mi-i'tis) [Gr $\lambda \alpha \pi \dot{\alpha} \rho \alpha$ loin $+ \mu \hat{\nu}$ s muscle $+ -\iota \tau \iota s$ inflammation] Inflammation of the abdominal or lumbar muscles

laparomyomectomy (lap"ar-o-mi-o-mek'to-me) [Gr. $\lambda \alpha \pi \acute{a} \rho \alpha$ loin $+ \mu \mathring{u}$ s muscle $+ \acute{\epsilon} κ \tau o \mu \acute{\eta}$ excision]. The removal of a myoma by an abdominal incision.

laparomyomotomy (lap"ar-o-mi-o-mot'o-me) [Gr. $\lambda a\pi \acute{a} pa$ loin + myomotomy]. The incision or removal of a fibroid tumor of the uterus by abdominal section

laparonephrectomy (lap"ar-o-nef-rek'to-me) [Gr. λαπάρα loin + νεφρός kidney + ἐκτομή excision]. Removal of a kidney by an incision in the loin.

laparorrhaphy (lap-ar-or'af-c) [Gr. λαπάρα loin + ραφή suture]. Suturation of the abdominal wall.

laparosalpingectomy (lap"ar-o-sal-pin-jek'to-me) [Gr. λαπάρα loin + σάλπιγξ tube + ἐκτομή excision]. Removal of an oviduct by abdominal section.

laparosalpingo-oöphorectomy (lap"ar-o-salping"o-o"of-o-rek'to-me) The removal of the oviducts and ovaries by an abdominal incision.

laparosalpingotomy (lap"ar-o-sal-pin-got'o-me) [Gr. λαπάρα loin + σάλπιγξ tube + τέμνειν to cut]. The surgical incision of an oviduct through an abdominal cut.

laparoscope (lap'ar-o-skop). Peritoneoscope.

laparoscopy (lap-ar-os'ko-pe) [Gr. λαπάρα loin + σκοπεῖν to see]. Endoscopic examination of the interior of the abdomen.

laparosplenectomy (lap"ar-o-sple-nek'to-me) [Gr. $\lambda a \pi a \rho a$ loin $+ \sigma \pi \lambda \eta \nu$ spleen $+ \epsilon \kappa \tau \sigma \mu \eta$ excision]. Laparotomy with excision of the spleen.

laparosplenotomy (lap"ar-o-sple-not'o-me) [Gr. λαπάρα loin + splenotomy]. The operation of making an incision into the side to gain access to the spleen, usually for the purpose of draining a cyst or abscess of the spleen.

laparothoracoscopy (lap"ar-o-tho-rak-os'ko-pe) [Gr. $\lambda \alpha \pi \acute{\alpha} \rho \alpha$ loin $+ \theta \acute{\omega} \rho \alpha \xi$ chest $+ \sigma \kappa \sigma \pi \epsilon \hat{\iota} \nu$ to view]. The inspection of the peritoneal and pleural cavities through an instrument resembling a cystoscope pushed into them through the body wall.

laparotome (lap'ar-o-tōm). A knife used in laparotomy.

laparotomize (lap-ar-ot'om-iz). To perform lap-

laparotomy (lap-ar-ot'o-me) [Gr. λαπάρα loin + Surgical incision through the flank: τομή cutl less correctly, abdominal section at any point.

laparotrachelotomy (lap"ar-o-trak-el-ot'o-me) [Gr. $\lambda a\pi \dot{a}\rho a$ loin + $\tau \rho \dot{a}\chi \eta \lambda os$ neck + $\tau \dot{\epsilon}\mu \eta$ cutting]. Cesarean section done by incising the cervix and lower uterine segment with a minimum of encroachment on the peritoneum; low or cervical cesarean section.

 $\begin{array}{ll} \textbf{laparotyphlotomy} & (\text{lap''ar-o-tif-lot'o-me}) & [\textit{lap-arotomy} + \textit{typhlotomy}] \end{array}$ The process of exposing and cutting into the cecum.

laparo-uterotomy (lap"ar-o-u-ter-ot'o-me) [Gr λαπάρα loin + uterotomy]. Incision of the uterus through an abdominal incision.

lapathum (lap'ath-um) [L]. A plant called bitter dock; also its homeopathic preparation.

ppis (la'pis) Latin for stone. 1. al'bus, the native silicofluorid of calcium also its homeopathic preparation. 1. calamina/ris, calamine. 1. caus'ticus, fused potash. 1. divi'nus, 1. albahalimisus appropriated control in prelapis (la'pis) ophthal'micus, ammoniated copper. l. imperia/lis, l. inferna/lis, l. luna/ris, silver

Laportea (lah-por'te-ah) [L]. A genus of nettles. L. canaden'sis is North American; L. gu'gas, of Australia, is a tree sometimes one hundred and twenty feet high. Some of the species are exceedingly poisonous. L crenula'ta, a large, acrid nettle in Nepal the seed is used as an aromatic stimulant. L. moroi'des, a poisonous Australian tree the juice of the plant Coloca'sia macrorhi'za is said to be its antidote.

lappa (lap'ah) [L.]. The root of the burdock, Arc'tium lap'pa: diuretic, diaphoretic, and alterative. Dose of tincture, 10-60 min. (0.666-4 c.c.); of fluidextract, 30-60 min. (2-4 c.c.).

lappaconitin (lap-ak-on'it-in). A crystalline al-kaloid, C₃₂FI₄₄N₂O₈, from Aconitums eptentrionale, with the aconite action.

lapsus (lap'sus) [L. a " fall "]. A falling or dropping of a part; ptosis.

laqueus (lak'we-us). Same as lemniscus.

Larat's treatment (lar-az') [Jules Louis Francois Adrien Larat, French physician, born 1857]. See under treatment.

larbish (lar'bish) A creeping eruption occurring in Senegal; called also Œrbiss.

larch. See Larix.

lard (lard) [L lar'dum]. The fat of the swine; adeps suillus.

Amyloid substance; a lardacein (lar-da'se-in) protein found in tissues affected with amyloid degeneration. It is characterized by being insoluble in nearly all reagents, not acted upon by the gastric juice, and not readily subject to putrefaction. It gives a brown color with iodin and sulphuric acid.

lardaceous (lar-da'shus). r. Resembling lard. 2. Containing lardacein, or amyloid substance.

Lardennois's button (lar-den-wahz') Henri Lardennois, French surgeon, born 1872]. See

argin (lar'jin). A gray powder, being a com-pound of silver and protalbin, containing 11 per largin (lar'jin). cent. of silver, and soluble in water, glycerin, and peptones. It is used as a bactericide, especially in gonorrhea and in ulcers of the stomach and intestines. Dose, 5-8 gr. (0 333-0 5 gm.), in pill; in gonorrhea a 0.25-5 per cent. solution is used

laricis cor'tex (lar'is-is) [L. "larch-bark"]. The stimulant and astringent bark of the European larch-tree, La'rix europæ'a.

Larix (la'riks) [L]. A genus of coniferous trees, the larches. The astringent bark of *L europa'a* is useful in skin diseases and in pectoral complaints. Dose of tincture, 10-30 min. (0.66-2 c.c.).

larixin (la-rik'sin). See laru acid, under acid.

rkspur (lark'spur). A ranunculaceous plant, Delphin'ium consol'ıda: its seeds are diuretic, larkspur (lark'spur). emmenagogue, and poisonous. Dose of fluidextract, 1-10 min. (0.066-0.666 c.c.).

larosan (lar'o-san) A proprietary preparation of casein and calcium oxid used for addition to milk for children with digestive disturbance.

Laroyenne's operation (lar-oi-enz') [Lucien Laroyenne, French surgeon, born 1876]. See under operation.

Larrey's bandage, operation, etc. (lar-āz') [Domenique Jean Larrey, French surgeon, 1766-1842]. See bandage, operation, etc.

Larrey-Weil disease (lar-a-vil). Weil's disease.

Lartigue's pills (lar-te-guz'). See under pill. larva (lar'vah), pl lar'væ [L.]. An immature stage in the life-history of an animal in which it is unlike the parent, especially the first stage of insect development after leaving the egg. 1. mi'grans. See creeping eruption, under eruption. rat-tailed 1. See Eristalis tenax.

larvaceous, larval, larvate, larvated (lar-va'shus, lar'val, lar'vat, lar'va-ted) [L. lar'va mask]. Masked, concealed: said of a disease or a symptom of disease.

larvicide (lar'vis-Id) [larva + L. ca'dere to kill]. An agent destructive to insect larvæ. Panama 1., 150 gallons of crude carbolic acid, 200 pounds of rosin, and 30 pounds of caustic soda are mixed and heated to a uniform dark colored soap. One part to 10,000 parts of water kills Anopheles larvæ in one-half hour.

laryngalgia (lar-in-gal'je-ah) [Gr λάρυγξ larynx + ἄλγος pain] Pain in the larynx.

laryngeal (lar-in'je-al). Of or pertaining to the larynx.

laryngectomy (lar-in-jek'to-me) [Gr. λάρυγξ lar-ynx + ἐκτομή excision]. Extirpation of the larynx.

laryngemphraxis (lar-in-jem-frak'sis) [Gr. λάρυγξ larynx + ξμφραξις stoppage]. Obstruction or closure of the larynx.

laryngendoscope (lar-in-jen'do-skōp) [Gr. λάρυγξ larynx + $\xi\nu\delta\sigma\nu$ within + $\sigma\kappa\sigma\pi\epsilon\hat{\iota}\nu$ to view]. instrument for viewing the posterior wall of the larvnx.

laryngismal (lar-in-jiz'mal). Pertaining to larvngismus.

laryngismus (lar-in-jiz'mus) [L.; Gr. λαρυγγισμός a whooping! Spasm of the larynx. 1.

paralyt'icus. Same as roaring. 1. strid'ulus, a disease of children marked by sudden laryngeal spasm, with a crowing inspiration and the development of cyanosis. It occurs in laryngeal inflammations and as an independent disease, especially in connection with rickets.

laryngitic (lar-in-jit'ik). Pertaining to laryngitis. laryngitis (lar-in-ji'tis). Inflammation of the larynx, a condition attended with dryness and soreness of the throat, hoarseness, cough, and dysphagia. acute catarrhal 1., a form characterized by aphonia or hoarseness, pain and dryness of the throat, dyspnea, a wheezy cough, and more or less fever. atrophic 1. See chronic l. Chronic catarrhal 1., a form due to a recurring irritation, or oftener a sequel of the acute form, and leading to atrophy of the glands of the mucous membrane. diphtheric 1., that which is due to diphtheria: true or membranous croup. membranous 1., that which is attended with the formation of false membrane, diphtheric or other. phlegmonous 1., a usually fatal complication of erysipelas, small-pox, etc., attended with submucous suppuration and edema. 1. sic'ca, chronic laryngitis. 1. stridulo'sa. See laryngismus stridulus. subglottic 1., inflammation of the under surface of the vocal cords. syphilitic 1., a chronic form due to syphilitic involvement of the larynx. tuberculous 1., a chronic form due to tuberculous ulceration of the larynx.

laryngocele (lar-in'go-sēl) [Gr. λάρυγξ larynx + κήλη hernia]. Protrusion of the mucous membrane across the cricothyroid space.

laryngocentesis (lar-in"go-sen-te'sis) [Gr. λάρυγξ larynx + κέντησις puncture]. Surgical puncture of the larynx.

laryngofission (lar-in-go-fish'un). Laryngofissure. laryngofissure (lar-in'go-fish-ūr). The operation of opening the larynx by a median incision through the thyroid cartilage; median laryngotomy.

laryngograph (lar-in'go-graf) [Gr. λάρυγξ larynx + γράφειν to write]. A device for registering the laryngeal movements.

laryngography (lar-in-gog'raf-e) [Gr. λάρυγξ larynx + γράφειν to record]. The description of the larynx

laryngology (lar-in-gol'o-je) [Gr. λάρυγξ larynx + λόγος word]. The science or study of the larynx and its affections.

laryngometry (lar-in-gom'et-re) [larynx + Gr. μέτρον measure]. Measurement of the larynx.

laryngoparalysis (lar-in"go-pah-ral'is-is) [larynx + paralysis]. Paralysis of the larynx.

laryngopathy (lar-in-gop'ath-e) [Gr. λάρυγξ larynx + πάθος illness]. Any disorder of the larynx.

laryngophantom (lar-in-go-fan'tom) [Gr. λάρυγξ larynx + φάντασμα phantom]. An artificial model of the larynx.

laryngopharyngeal (lar-in"go-fa-rin'je-al). Pertaining to the larynx and pharynx.

laryngopharyngectomy (lar-in"go-far-in-jek'to-me). Excision of the larynx and pharynx.

laryngopharyngeus (lar-in"go-fa-rin'je-us). The inferior constrictor of the pharynx.

laryngopharyngitis (lar-in"go-far-in-ji'tis). Inflammation of the larynx and pharynx.

laryngopharynx (lar-in"go-far'inks) [larynx + pharynx]. The lower portion of the pharynx as distinguished from the oropharynx and the nasopharynx.

laryngophony (lar-in-gof'o-ne) [Gr. λάρυγξ larynx + φωνή voice]. The vocal sound as heard in auscultation of the larynx.

laryngophthisis (lar-in-gof'this-is) [Gr. λάρυγξ larynx + $\varphi\theta$ lσις phthisis]. Tuberculosis of the larynx,

laryngoplasty (lar-in'go-plas-te) [Gr. λάρυγξ larynx + πλάσσειν to mold]. Plastic surgery of the larynx.

laryngoplegia (lar"in-go-ple'je-ah) [Gr. λάρυγξ larynx + πληγή stroke]. Paralysis of the larynx.

laryngorhinology (lar-in"go-rin-ol'o-je) [Gr. λάρυγξ larynx + ρls nose + λόγοs treatise]. The sum of what is known regarding the larynx and nose and their diseases.

laryngorrhagia (lar-ing-o-ra'je-ah) [larynx + Gr. -ραγια break]. Hemorrhage from the larynx.

laryngorrhea (lar''in-gor-e'ah) [Gr. λάρυγξ larynx + hola flow]. Excessive secretion of mucus whenever the voice is used. laryngoscleroma (lar-in"go-skle-ro'mah) [Gr. λάρυγξ larynx + scleroma]. Scleroma of the larynx.

laryngoscope (lar-in'go-sköp) [Gr. λάρνγξ larynx + σκοπεῖν to view]. An apparatus for use in ocular examination of the larynx.

laryngoscopic (lar-in-go-skop'ik). Pertaining to laryngoscopy.

laryngoscopist (lar-in-gos'ko-pist). An expert in the use of the laryngoscope.

laryngoscopy (lar-in-gos'ko-pe) [Gr. λάρυγξ larynx + σκοπεῖν to view] Examination of the interior of the larynx by means of the laryngoscope. suspension 1., laryngoscopy performed with the head of the patient hanging over the edge of the examination table.

laryngospasm (lar-in'go-spazm) [Gr. λάρυγξ lar-ynx + σπασμός spasm]. Spasmodic closure of the larynx.

laryngostasis (lar-ing-os'tas-is) [larynx + Gr. στάσις stoppage]. Croup.

laryngostenosis (lar-in"go-sten-o'sis) [Gr. λάρυγξ larynx + στένωσις contracture]. Narrowing or stricture of the larynx.

laryngostomy (lar-in-gos'to-me) [Gr. λάρυγξ larynx + στόμα mouth]. The formation of a permanent opening into the larynx through the neck and trachea.

laryngostroboscope (lar''in-go-strob'o-skōp) [Gr. $\lambda d\rho \nu \gamma \xi$ larynx + $\sigma \tau \rho \delta \beta \sigma$ s whirl + $\sigma \kappa \sigma \pi \epsilon \hat{\nu}$ to view]. An apparatus for observing the intralaryngeal phenomena of phonation.

laryngotome (lar-ing'o-tōm). An instrument for performing laryngotomy.

laryngotomy (lar-in-got'o-me) [Gr. λάρυγξ larynx + τέμνειν to cut]. The operation of incising the larynx. complete 1., the longitudinal slitting of the entire larynx. inferior 1., incision through the cricothyroid membrane. median 1., incision of the thyroid cartilage; thyrotomy. subhyoid 1., the opening of the larynx by a cut through the thyrohyoid membrane. superior 1., thyrohyoid 1. Same as subhyoid 1

laryngotracheal (lar-in-go-tra'ke-al). Pertaining to the larynx and trachea.

laryngotracheitis (lar-in"go-tra-ke-i'tis). Inflammation of the larynx and trachea.

laryngotracheobronchoscopy (lar-ing"go-tra"-ke-o-bron-kos'ko-pe). Higher bronchoscopy; examination of the interior of the trachea and bronchi by means of a bronchoscope introduced through the mouth, larynx, and trachea into the main tube of a bronchus.

laryngotracheoscopy (lar-ing"go-tra-ke-os'ko-pe). Peroral tracheoscopy. See *tracheoscopy*.

laryngotracheotomy (lar-in"go-tra-ke-ot'o-me) [laryngotomy + tracheotomy]. Incision of the larynx and trachea

laryngotyphoid (lar-in-go-ti'foid). Typhoid fever with laryngeal complications.

laryngovestibulitis (lar-ing"go-ves-tib-u-li'tis).
Inflammation of the vestibule of the larynx.

laryngoxerosis (lar-in"go-ze-ro'sis) [Gr. λάρυγξ larynx + ξήρωσις dryness]. Dryness of the throat.

larynx (lar'inks) [Gr. λάρυγξ]. The musculocartilaginous structure, lined with mucous membrane, situated at the top of the trachea and below the root of the tongue and the hyoid bone. It is the organ of voice. The cartilages of the larynx are nine in number, and are named as follows: thyroid. cricoid, epiglottis, two arytenoid, two cornicula laryngis (cartilages of Santorini), and two cuneiform (cartilages of Wrisberg). These cartilages are connected by ligaments. The two superior thyro-arytenoid ligaments are the false vocal cords; and the two inferior thyro-arytenoid ligaments are the true vocal cords. The cricothyroid membrane connects the adjacent margins of the cricoid and thyroid cartilages.

lasanum (las'an-um). An obstetric chair.

lascivia (las-iv'e-ah). Satyriasis.

Lasègue's sign (lah-sāgz') [Ernest Charles Lasègue, French physician, 1816-1883]. See under sign. laser (la'ser). Asafetida.

lash. An eyelash.

Lassar's paste (las'arz) [Oskar Lassar, German dermatologist, 1849-1908]. See under paste.

lassitude (las'i-tūd). Weakness; exhaustion. lata, latah (lah'tah). A form of palmus, or jumping disease, endemic in Java.

Lat. dol. Abbreviation for L. lat'eri dolen'ti, to the painful side.

latent (la'tent, [L. la'tens hidden]. Concealed; not manifest; potential.

laterad (lat'er-ad). Toward a side or a lateral aspect.

lateral (lat'er-al) [L. latera'lis]. Pertaining to a

lateral-chain theory. See Ehrlich's side-chain theory, under theory

latericeous. lateritious (lat-er-ish'us) [L. laterit'ius; la'ter brick]. Resembling brick-dust.

latero-abdominal (lat"er-o-ab-dom'in-al). Pertaining to the side and the abdomen.

laterodeviation (lat"er-o-de-ve-a'shun). Deviation or slight displacement to one side.

lateroduction (lat"er-o-duk'shun) [L. la'tus side + du'cere to draw]. • Movement of an eye to either side.

lateroflection, lateroflexion (lat"er-o-flek'shun). Flexion to either side.

lateroposition (lat"er-o-po-zish'un). Displacement to one side.

lateropulsion (lat"er-o-pul'shun) [L. la'tus side + pel'lere to drive]. An involuntary tendency to go to one side while walking.

laterotorsion (lat"er-o-tor shun) [L. la'tus side + torque're to turn]. Twisting of the vertical meridian of the eye to the right or to the left.

lateroversion (lat"er-o-ver'shun) [L. la'tus side + version]. A turning to one side.

Latham's circle (la'thamz) [Peter More Latham, English physician, 1789-1875]. See circle.

lathyrism (lath'ir-izm). Poisoning by the chickpea (Lath'yrus cic'era) or by lupines; lupinosis.

latissimus co'li (lat-is'im-us) [L. "widest of the neck"]. See platysma myoides, in muscles, table of. 1. dor'si [L. "widest of the back"]. See muscles, table of.

latrine (lat'rin). A privy or water-closet, especially a public one.

Latrodectus (lat-ro-dek'tus). A genus of poisonous spiders. L mac'tans, a species found in the United States; it is commonly known as the "black widow. Its bite may cause severe symptoms or even death. L. er'ebus is found in Russia; L. geomet'ricus in California: L. hassel'tii in New Zealand; and L. malmigniat'tus in Europe.

laudable (law'dab-l) [L. laudab'ilis]. Commendable; healthy; of a kind thought to indicate an improving condition: used of pus.

laudanidin (law-dan'id-in). An alkaloid, C20H25-O₄N, from opium.

An alkaloid, C₂₀H₂₅NO₄, laudanin (law'dan-in). from opium in colorless hexagonal prisms.

laudanon (law'dan-on). A proprietary combination of various opium alkaloids.

laudanosin (law-dan'o-sin). A colorless alkaloid, in prismatic crystals, C₂₁H₂₇NO₄, derivable from

laudanum (law'dan-um). The tincture of opium. Sydenham's 1., the wine of opium.

laugh (laf). An act or paroxysm of laughter.

laughing-gas. Nitrogen monoxid.

laughter (laf'ter). A series of spasmodic and

partly involuntary expirations with inarticulate vocalization, normally indicative of merriment; often a hysteric manifestation or a reflex result of tickling.

Laugier's hernia (lo-zhe-āz') [Stanislaus Laugier, French surgeon, 1709-1872]. See hernia.

Laumonier's ganglion (lo-mon-e az') Baptiste Laumonier, French surgeon, 1749-1818]. The carotid ganglion.

lauranga (law-rang'ah). See bush disease, under disease.

laurel (law'rel). See Laurus and laurocerasus.

laurenol (law're-nol). A proprietary deodorizer and antiseptic.

urin (law'rin). The glycerid, $C_{22}H_{20}O_3$, of lauric acid, found in the oil of the seeds of Lau'rus nob'ilis; laurin (law'rin). also in many vegetable oils: it may be crystallized in white needles.

laurocerasus (law-ro-ser'as-us) [L. lau'rus laurel + cer'asus cherry]. The European cherry-laurel, an evergreen cherry-tree, Pru'nus laurocer'asus. See aqua laurocerasi.

laurotetanin (law-ro-tet'an-in). An alkaloid, C₁₉-H₂₁NO₄.H₂O, from *Lut'sea citra'ta*, a lauraceous shrub of southern Asia; it crystallizes in needles; its exhibition is liable to cause tetanic spasm.

Laurus (law'rus) [L. "laurel"]. A genus of lauraceous trees. L. nob'ilis is a native of southern Europe. The leaves and berries afford fragrant oils, that of the leaves being volatile, and that of the berries a fixed oil.

Lauth's canal, ligament (lowts) Lauth, German anatomist, 1758-1826]. See under canal and ligament.

Lauth's violet (lawths) [Charles Lauth, English chemist, 1836-1913]. See under violet.

lava (lah'vah) [Ital.]. The scoria ejected from volcanoes; a homeopathic remedy.

lavage (lah-vahzh') [Fr.]. The irrigation or washing out of an organ, such as the stomach or bowel.

1. of the blood, blood 1., the washing out of toxic matters from the blood by injecting serum into the veins. electric 1., injection of a saline enema that has been electrized by a continuous current. ether 1. See Souligoux-Morestin method, under method. systemic 1., lavage of the blood.

Lavandula (lav-an'du-lah) [L.]. A genus of labiate plants; lavenders. The true lavender, L. ve'ra, is carminative and stimulant. The volatile oil of the flowers is official. Dose, 1-5 min. (0.066-0.333 c.c.); of spirit (spiritus lavan'dulæ), and also of compound spirit, 30-60 min. (2-4 c.c.); of compound tincture, $\frac{1}{2}$ -2 fl.dr. (2-8 c.c.).

lavatio ori (la-va'she-o o'ri). The N. F. name for a mouth-wash containing granulated soap 60, glusid 2, basic fuchsin 0.02, oil of cinnamon 5, oil of peppermint 5, oil of clove 10, alcohol 750, and water to make 1000 c.c.

lavation (la-va'shun) [L. lava'tio]. Same as lavage. lavement (lav'ment). Same as lavage.

lavender (lav'en-der). See Lavandula.

laver (la'ver). An edible sea-weed, vulga'ris, recommended as a food for scrofulous patients.

Laveran's bodies, corpuscles (lav-ranz') [Charles Louis Alphons Laveran, French physician, 1845–1922]. See Laverania.

Laverania (lav-er-a'ne-ah). Malarial parasites which cause the estivo-autumnal form of malaria. They differ from the Plasmodia in that the gametocyte has the form of a crescent and schizogony occurs in the internal organs. L. falcip'ara produces estivo-autumnal malaria of the tertian type and is carried by Anopheles. L. falcip'arum quotidia'num produces estivo-autumnal malaria of the quotidian type.

laveur (lah-vur') [Fr.]. An instrument for performing lavage or irrigation.

aw (law). A uniform or constant fact or principle. all or none 1. See all or none. Allen's paradoxic 1., whereas in normal individuals the more sugar is given the more is utilized, the reverse is true in diabetes. Ambard's l's. 1. With the urinary urea concentration constant, the output of urea varies directly as the square of the concentration of the blood urea. 2. With the blood-urea concentration constant, the output of urea varies inversely as the square root of the urinary concentration. Ampère's 1., the force of an electric current on a movable magnet deviates the austral pole of the latter to the left. Angström's 1., the law that the wave-lengths of the light absorbed by a substance are the same as those given off by it when luminous. 1. of anticipation. See Mott's 1. Aran's 1., fractures of the base of the skull (except those by contrecoup) result from injuries to the vault, the fractures extending by irradiation along the line of shortest circle Arndt-Schulz 1., weak stimuli increase physiologic activity and very strong stimuli inhibit or abolish activity. 1. of avalanche, hypothetical law assumed by Ramón y Cajal, that multiple sensations may be aroused in the brain by a simple sensation at the periphery. 1. of average localization, visceral pain is most accurately localized in the least mobile viscus. Avogadro's 1., equal volumes of gases with the same pressure and temperature contain an equal number of molecules. **Babinski's 1.**, the law of voltaic vertigo that a normal subject inclines to the side of the positive pole; a pathologic subject falls to the side to which he tends to incline spontaneously. If the labyrinth is destroyed there is no reaction. Baer's 1., the more specialized forms and structures arise from the more general, and that by a gradual change **Baruch's 1.**, when the temperature of the water used in a bath is above or below that of the skin the effect is stimulating, when both temperatures are the same the effect is sedative. Bastian's 1., Bastian-Bruns 1., sedative. Bastian's 1., Bastian-Bruns 1., if there is a complete transverse lesion in the spinal cord cephalad to the lumbar enlargement, the tendon-reflexes of the lower extremities are abolished. **Baudin's 1.**, the alleged law or principle that an antagonism exists between tuberculosis and malarial disease. Baumè's 1. Same as Colles's 1. Behring's 1., the blood and serum of an immunized person, when transferred to another subject, will render the latter immune. Bell's 1., the anterior roots of the spinal nerves are motor and the posterior roots are sensory. Berthollet's 1., if two salts in solution by double decomposition can produce a salt less soluble than either, such a salt will be produced. **biogenetic 1**. See Muller's 1. Blagden's 1., in moderate concentrations the reduction of the freezing-point of a solution is proportional to the amount of matter in the solution. Bordet's 1., when blood-corpuscles are added to a hemolytic medium in bulk, they are more rapidly dissolved than when added in frac-Boudin's 1., there is antagonism be-malaria and tuberculosis. Bowditch's 1. 1. The law that any stimulus that will produce a contraction of the heart muscle will cause as powerful a pulsation as the most powerful as powerful a pulsation as the most powerful as stimulus. 2. Nerves cannot be tired out by stimulation. **Boyle's 1.**, at any stated temperature a given mass of gas varies in volume inversely as the pressure. **Buhl-Dittrich 1.**, the opinion or supposed principle that in every case of acute miliary tuberculosis there exists within the body at least one old focus of caseation. **Bunge's 1.**, the secreting cells of the mammary gland in the dog, cat, and rabbit take from the blood-plasma mineral salts in the exact proportion in which they are needed for developing and building up the offspring. Camerer's 1., children of the same weight have the same food requirements regardless of their ages. Charles's 1., the volume of a gas at a constant pressure varies directly with the temperature. Cohn's 1.. the specific forms

of bacteria have a fixed and unchanging basis. Colles's 1., a child that is affected with congenital syphilis, its mother showing no signs of the disease, will not infect its mother (1837). Colles-Beaumes 1. Same as Colles's l. 1. of contrary innervation. See Meltzer's l. Coppet's 1., the law that solutions which have the same freezing-point are equimolecular. Coulomb's 1., the force of attraction or repulsion between two electrified bodies is proportional directly to the quantities of electric charge, and inversely as the square of their distance apart. **Courvoisier's** 1.. when the common bile-duct is obstructed by a stone, dilatation of the gall-bladder is rare; when the duct is obstructed in some other way, dilatation is common. Currie's 1., the law that all substances may be rendered radio-active by the influence of the emanations of radium, and that substances thus influenced hold their radio-activity longer when inclosed in some material through which the emanations cannot pass. Cushing's 1., the law that increase of intracranial tension causes increase of blood-pressure to a point slightly above the pressure exerted against the medulla. **Dalton's 1.**, though the volume of a gas absorbed by a liquid remains constant, the weight of the absorbed gas rises and falls in proportion to the pressure **Dalton-Henry 1.**, when a fluid absorbs a mixture of gases, it will absorb as much of each gas as it would have absorbed of either gas separately **Dastre-Morat** 1., dilata-tion of the splanchnic vessels is usually accompanied by constriction of the surface vessels of the body, and vice versa. 1. of definite proportions, any compound always contains the same kind of elements in the same proportions; called also *Proust's l.* Descartes's 1., the sine of the angle of incidence bears a constant relation to the sine of the angle of refraction for two given media. of diffusion, any process set up in the nervecenters affects the organism throughout by a process of diffused motion. Donders's 1., the rotation of the eye around the line of sight is not voluntary; when attention is fixed upon a remote object, the amount of rotation is determined entirely by the angular distance of the object from the median plane and from the horizon. DuBois-Réymond 1., it is the variation of current density, and not the absolute value of current density at any given moment, that acts as a stimulus to a muscle or motor nerve Dulong and Petit's 1., that the atoms of all elements have exactly the same capacity for heat. Edinger's 1., a gradual increase in the function of the neuron causes at first increased growth, but if irregular and excessive, then it leads to atrophy and degeneration. Elliot's 1., the activity of adrenalin is due to a stimulation of the endings of the sympathetic nerve. 1. of excitation, a motor nerve responds by the contraction of its muscle to the alterations of the strength of an electric current and not to its absolute strength. 1. of facilitation, when an impulse has passed once through a certain set of neurons to the exclusion of others, it will tend to take the same course on a future occasion, and each time it traverses this path the resistance in the path will be smaller. Faget's 1., in yellow fever the pulse is at first accelerated, but, as the temperature rises, it shows a marked tendency to fall. Fajans's 1., the product left after the emission of alpha-rays has a valence less by two than that of the parent radio-active substance; the product left after the emission of beta-rays has a valence greater by one than that of the parent radio-active Faraday's 1., in electrolysis the substance. portional to the strength of the current. Farr's 1., "subsidence is a property of " "subsidence is a property of all zymotic dis-es"; the gradually decreasing increase of incidence in an epidemic disease, in virtue of which the epidemic curve first ascends rapidly, then more slowly to a maximum, with a descent more rapid than the ascent. 1. of fatigue (Houghton's).

when the same muscle or group of muscles is kept in work done, multiplied by the rate of work, is constant. **Fechner's** 1., the intensity of a sensation produced by a varying stimulus varies directly as the logarithm of that stimulus. Fitz's 1., the law that acute pancreatitis is to be suspected when a previously healthy person is suddenly affected with violent epigastric pain, vomiting, and collapse, followed inside of twentyfour hours by epigastric swelling, tympanites, or resistance, with slight elevation of temperature. Flatau's 1., the law that the greater the length of the fibers of the spinal cord, the closer are they situated to the periphery. Flechsig's myelo-genetic 1. See myelogenetic 1. Freund's 1., during growth ovarian tumors change their position; when pelvic, they tend to grow downward behind the uterus; when they have arisen out of the pelvis. they tend to fall forward toward the abdominal wall. Frorier's 1. the theory that the Froriep's 1., the theory that the skull is developed by the annexation of true vertebræ, the head growing at the expense of the neck. Galton's 1., a law of inheritance by which, in the composition of an individual, the two parents contribute one-half of the total, the four grand-parents one-quarter, and so on. Galton's 1. of regression, average parents tend to produce average children; minus parents tend to produce minus children, plus parents tend to produce plus children; but the offspring of extreme parents, whether plus or minus, inherit the parental peculiarities in a less marked degree than the latter were manifested in the parents themselves. Gay-Lussac 1. Same as Charles's 1. Gerhardt-Semon 1., various peripheral and central lesions affecting the recurrent laryngeal nerve cause the vocal cord to assume a position between abduction and adduction, the paralysis of the parts being incomplete **Giraud-Teulon 1.**, binocular retinal images are formed at the intersection of the primary and secondary axes of projection. Godélier's 1., tuberculosis of the peritoneum is invariably associated with tuberculosis of the pleura. Golgi's 1., the severity of a malarial attack depends upon the number of parasites in the blood. Goodell's 1., when the cervix is hard as one's nose, pregnancy does not exist; when it is as soft as one's lips, pregnancy is probable. **Graham's 1.**, the rate of diffusion of a gas through porous membranes is in inverse ratio to the square root of their density. Grasset's 1. Same as Landouzy-Grasset 1. 1. of gravitation, the law that all bodies attract each other with a force that is directly proportional to their masses and inversely proportional to the square of their distance apart. Called also Newton's 1. Gudden's 1., the degeneration of the proximal end of a divided nerve is cellulipetal. Guldberg and Waage 1., the velocity of a chemical reaction is proportional to the active masses of the reacting substances; called also l. of mass action, mass l, and l of chemical kinetics. Gullstrand's 1., if while the patient is made to turn the head while fixing a distant object the corneal reflex from either eye moves in the direction in which the head is turning, it moves toward the weaker muscle **Gull-Toynbee 1.**, in otitis media the lateral sinus and cerebellum are liable to involvement in mastoid disease, and the cerebrum may be attacked when the roof of the tympanum becomes carious. Haeckel's 1., an organism, in developing from the ovum, goes through the same changes as did the species in developing from the lower to the higher forms of animal life. Hallion's 1., extracts of an organ when injected into the body exert a stimulating influence on that same organ. Hamberger's 1., when the blood is rendered acid, albumins and phosphates pass from the red corpuscles to the serum, and chlorids pass from the serum to the cells; the reverse occurs when the blood is rendered alkaline. **Hecker's 1.**, in every successive child-birth the weight of the infant is greater than its

predecessor by from 150 to 200 grams. Heidenhain's 1., glandular secretion always involves change in the structure of the gland. Hellin's 1., one in 80 pregnancies are twins; one in 80×80 , or 6400, are triplets; one in $80 \times 80 \times 80$, or 512,000, are quadruplets. **Henry's 1.** Same as Dallon's l. **Hering's 1.**, the clearness or purity of any conception or sensation depends on the proportion existing between its intensity and the sum total of the intensities of all the simultaneous conceptions and sensations. Hilton's 1., a nerve-trunk which supplies the muscles of any given joint also supplies the muscles which move the joint and the skin over the insertions of such muscles. **Hofaker-Sadler 1.**, when the father is older than the mother the ratio of male births is increased (13 to 100); when the parents are of equal age the ratio of female births is increased (93.5 males to 100 females); when the mother is older than the father the ratio of female births is further increased (88.2 males to 100 females). Hoff's 1. See van't Hoff's 1. 1. of the intestines, the presence of a bolus in the intestine induces contraction above and inhibition below the stimulus, thereby producing a progression of the intestinal contents. 1. of isolated conduction, the wave of change or nervous impulse which passes through a neuron is never communicated to other neurons except at the terminals Jackson's 1., the law that the nerve functions that are latest developed are the earliest to be destroyed. Kahler's 1., the ascending branches of the posterior roots of the spinal nerves pass within the cord in succession from the root-zone toward the mesial plane Koch's 1., the specificity of a microorganism is not demonstrated without the fulfilment of the following conditions (1) The microorganism is present and discoverable in every case of the disease; (2) it is to be cultivated in a pure culture; (3) inoculation from such culture must reproduce the disease in susceptible animals, (4) it must be reobtained from such animals and again grown in a pure culture. **Küstner's 1.**, if an ovarian tumor is left-sided, torsion of its pedicle takes place toward the right; if right-sided, toward the left. Lancereaux's 1., marantic thrombosis always takes place at points where the tendency to stasis is greatest, and especially at points where the influence of thoracic aspiration and cardiac propulsion is smallest. Landouzy-Grasset 1., in lesion of one cerebral hemi-phere the head is turned to the side of the brain lesion if there is paralysis, and to that of the affected muscles if there is spasticity. Lasegue's 1., functional disorders or superficial lesions of an organ increase reflexes, while organic lesions diminish them. Leopold's 1., when the placenta is inserted upon the posterior wall of the uterus, the oviducts assume directions converging upon the anterior wall, but if the insertion be on the anterior wall during recumbency, the tubes turn backward and become parallel to the axis of the body. Levret's 1., the insertion of the cord is marginal in placenta prævia. Listing's 1., when the eyeball is moved from a resting position, the rotational angle in the second position is the same as if the eye were turned about a fixed axis perpendicular to the first and second position of the visual line. Louis's 1. 1. Pulmonary tuberculosis generally begins in the left lung. 2. Tuberculosis of any part is attended by localization in the lungs. Magendie's 1. Same as Bell's l. Marey's 1., a pulse of high tension is slow. Mariotte's 1. Same as Boyle's l. 1. of mass action, mass 1. See Guldberg and Waage l. Material (16) (contrary improving). Meltzer's 1. (of contrary innervation), "all living functions are continually controlled by two opposing forces: augmentation or action on the one hand, and inhibition on the other." Mendel's band, and himbition of the other.

**Mondelian 1., the law that the offspring is not intermediate in type between its parents, but the type of one or other parent is predominant. If two well-defined varieties of the same species

be cross-fertilized, the resulting hybrid offspring will show the distinguishing characteristics of one of the parents only, this inherited characteristic being termed dominant. The characteristic of the other parent, however, known as recessive, is latent and will appear in the next generation bred from the hybrid. The offspring of this second generation will be of two kinds, three-quarters of the offspring having the dominant characteristic and one-quarter of them the recessive characteristic. If two of these recessive members of the third generation are bred together, the subsequent generations will show constantly the recessive character. As regards the dominant members of the third generation, they divide themselves into two orders: one-third of these members produce purely dominant offspring; the other two-thirds are true hybrids showing a mixed character, and are true hybrids showing a mixed character, and each subsequent generation from them shows the same proportion of pure dominants, pure recessives, and hybrids. This law may be expressed by the following formula, n(DD + 2DR + RR), in which DD represents pure dominant offspring; RR, pure recessive offspring; DR, hybrid offspring, and n, the number of the generation.

Mendelejeff's 1. Same as periodic l. Metchnikoff's 1., whenever the body is attacked by bacteria, the polynuclear leukocytes and the large mononuclear leukocytes quickly become protec-tive phagocytes. Meyer's 1., the internal structure of fully developed normal bone represents the lines of greatest pressure or traction and affords the greatest possible resistance with the least possible amount of material. Mott's 1. of anticipation, when the children of the insane become insane they do so at a much earlier age than did their parents. Müller's 1. 1. The embryo and fetus in its development recapitulates that of the ancestral series to which it belongs. 2. Same as l. of specific irritability. 1. of multiple variants, any variation from the normal in the bones of the hand or foot is always multiple. myelogenetic 1. (of Flechsig), the myelination of the nerve-fibers of the developing brain takes place in a definite sequence so that fibers belonging to particular functional systems mature at the same time. Nageli's 1., a disease in which eosinophils are present in one-half normal, normal, or increased num-bers cannot be typhoid, and the appearance of even a few of such cells must incite caution in the diagnosis. Neumann's 1., the molecular heats in compounds of analogous constitution are always the same. Newland's 1. Same as periodic l. Newton's 1. Same as l. of gravitation. Nysten's 1., rigor mortis affects first the muscles of mastication, next those of the face and neck, then those of the upper trunk and arms, and last of all those of the legs and feet. **Ohm's 1.**, the strength of an electric current varies directly as the electromotive force, and inversely as the resistance. **Pascal's 1.**, the law that pressure applied to a liquid at any point is transmitted equally in all directions. periodic 1., the law that if the elements are arranged in the sequence of the weight of their atoms, and divided into groups of seven or eight, the corresponding members of each group show relationship in chemic properties: thus, elements having characters alike recur at regular intervals throughout the series. Called also *Mendelejef's 1*. **Peters's 1**., atheroma most commonly affects blood-vessels at their angles or turns. **Pfeiffer's 1.**, the law that the bloodserum of an animal immunized against a disease will, when introduced into the body of another animal, destroy the bacteria of that disease. Pflüger's I., the law that a nerve-tract is stimu-lated when catelectrotonus develops or anelectrotonus disappears, but not under the reverse conditions. Poiseuille's 1., the speed of currents in capillary tubes is proportional to the square of their diameter. **Prévost's 1.**, in a lateral cerebral lesion the head is turned to the side on which the lesion is. Profeta's 1., a non-syphilitic child born of syphilitic parents is immune.

Proust's 1., law of definite proportions. **psychophysical 1.** Same as Weber-Fechner 1. **Raoult's 1.**, the depression of the freezing-point of a solution is proportional to the molecular concentration of the solution, every molecule of substance per liter of solution depressing the freezing-point of water 1.85° C. 1. of reciprocal prepor-tions, two chemic elements that unite with a third element do so in proportions that are multiples of those in which they unite with each other. 1. of refraction, rays of light passing from a rarer to a denser medium are deflected toward a perpendicular to the surface of incidence; while rays passing from a denser to a rarer medium are deflected away from the perpendicular. 1. of refreshment, the refreshment of a laboring muscle depends on the rate of supply of arterial blood. 1. of regression. See Galton's 1. of regression. 1. of relativity, the law that simultaneous and successive sensa-tions modify each other. Ritter's 1., both the opening and the closing of an electric current produce stimulation in a nerve. Ritter-Valli 1, the primary increase and secondary loss of irritability in a nerve, produced by a section which separates from the nerve-center travel in a peripheral direction. Rommelaere's 1., in cases of carcinoma there is a constant diminution of the nitrogen in the urine. Rosenbach's 1., in lesions of the nervecenters and nerve-trunks paralysis appears in the extensor muscles before it does in flexor muscles. Roussel's 1., a French law initiated by Théophile Roussel (1874) for the protection of friendless children. Rubner's 1. 1. (Law of constant energy consumption.) The rapidity of growth is proportional to the intensity of the metabolic process. 2. (Law of constant growth quotient.) The same fractional part of the entire energy is utilized for growth. This fractional part is called the "growth quotient." Schroeder van der Kolk's 1., the sensory fibers of a mixed nerve are distributed to the parts moved by muscles which are stimulated by the motor fibers of the same nerve **Schütz's** 1., the law that the intensity of enzyme action is directly proportional to the square root of its concentration. 1. of segregation, in each generation the ratio of pure dominants, dominants giving descendants in the proportion of three dominants to one recessive, and pure recessives is 1:2:1. Semon's l., in progressive organic diseases of the motor laryngeal nerves the abductors of the vocal cords (posterior crico-arytenoids) are the first, and occasionally the only, muscles af-fected. **Sherrington's 1.**, every posterior spinal nerve-root supplies a special region of the skin, although fibers from adjacent spinal segments may invade such a region. 1. of similars. See homeopathy. 1. of sines, the sine of the angle of incidence is equal to the sine of the angle of reflection multiplied by a constant quantity. Snell's 1. Same as Descartes's 1. Spallanzani's 1., the law that regeneration is more complete in younger individuals than in older ones. 1. of specific irritability, every sensory nerve reacts to one form of stimulus and gives rise to one form of sensation only, though if under abnormal conditions it be excited by other forms of stimuli, the sensation evoked will still be the same. Called also Müller's 1. Stokes's 1., a muscle situated above an inflamed membrane is often affected with paralysis. Tait's 1., in every case of pelvic or abdominal disease in which life is endangered or the health ruined, exploration by celiotomy should be made, except when the disease is known to be malignant **Talbot's 1.**, when complete fusion occurs and the sensation is uniform, the intensity is the same as would occur were the same amount of light spread uniformly over the disk. **Teevan's** light spread uniformly over the disk. 1., fractures of bones occur in the line of extension, and not in the line of compression. Toynbee's 1., in cases of brain disease due to otitis the cere-bellum and lateral sinuses are affected from the mastoid, and the cerebrum from the tympanic roof. van der Kolk's 1. See Schroeder van der

Kolk's l. van't Hoff's 1. 1. Many substances in solution exert an osmotic pressure equal to the gas pressure that they would exert if their molecules were in a gaseous state and occupied a volume equal to that of the solution under the same conditions of temperature and pressure. Van't Hoff's rule. See under rule Virchow's 1. the cell elements of tumors are derived from normal and preexisting tissue-cells **Vulpian's 1.**, when a portion of the brain is destroyed the functions of that part are carried on by the remaining parts.

Waller's 1., wallerian 1., if the sensory fibers of the root of a spinal nerve be divided on the central side of the ganglion, the fibers on the peripheral side of the cut do not degenerate; while those that remain connected with the cord degenerate. Weber's I, the variation of stimulus which causes the smallest appreciable change in sensation maintains an approximately fixed ratio to the whole stimulus. Weber-Fechner 1., the law that for a sensation to increase, by equal amounts (arithmetic progression), the stimulus must increase by geometric progression. Called also psychophysical l. Wolff's 1., the law that all changes in the function of a bone are attended by definite alterations in their internal structure. Lamansky 1., the law that the line of vision in moving through a vertical plane parallel to the frontal plane moves in straight lines in the vertical and horizontal directions, but in curved paths in all other movements **Wyssakovitsch's 1.**, the cells covering any part of the body, so long as they preserve their integrity, protect the underlying tissues **Zeune's 1**, the law that the proportion of cases of blindness is less in the temperate than in the frigid zone, and increases in the torrid zone as the equator is approached.

lawn-tennis arm (lawn-ten'is). Displacement of the pronator radii teres muscle from excessive tennis-playing.

Lawson Tait. See Tait.

laxaphen (laks'af-en). A proprietary cathartic containing phenolphthalein and salicylic acid in a chocolate-flavored base.

laxase (laks'ās). A proprietary concentrated form of agar-agar for internal administration in constipation.

laxatin (laks'at-in). A proprietary preparation of phenolphthalein.

laxative (laks at-iv) [L. laxati'vus] 1. Aperient; mildly cathartic. 2. An aperient medicine.

laxator tym'pani (laks-a'tor) [L "relaxer of the tympanum"]. See muscles, table of.

laxiquinin (laks-ik-wın'ın). A proprietary laxative preparation of quinin.

laxoin (laks'o-in). Same as phenolphthalein.

laxol (laks'ol) Castor oil prepared with saccharin and oil of peppermint.

layer (la'er). A stratum of nearly uniform thickness adamantine 1., the enamel layer of the teeth. ambiguous 1., the second layer of the cerebral cortex, counting from without: named from the indefinite shapes of many of its cells. bacillary 1., the outermost but one of the retinal layers; the rod-and-cone layer; Jacob's membrane Baillarger's 1. See Baillarger's line, under line. basement 1., basement membrane. Bechterew's 1., a layer of fibers in the cerebral cortex between Baillarger's layer and the tangenital fibers. Bernard's glandular 1., a layer of cells which line the acini of the pancreas. blastodermic 1., any one of the germ-layers—the epiblast, mesoblast, or hypoblast. Bowman's 1., Bowman's membrane. See membrane Bruch's 1., the inner layer of the choroid coat of the eye: the vitreous lamina. claustral 1., the layer of gray matter between the external capsule and the insula. columnar 1., the rod-and-cone layer of the retina; also same as mantle 1. cortical 1., the superficial layer, especially of the brain and the ovary. dermic 1., the middle or connective-

tissue layer of the membrana tympani. Dobie's 1. Same as Krause's membrane. ependymal 1., the inner layer of cells next to the cavity of the medullary tube. epitrichial 1., the most superficial layer of the epidermis of the embryo. fillet 1., the stratum lemnisci. Floegel's 1., a granular layer in each transparent lateral disk of a muslayer in each transparent lateral disk of a mus-cular fibril. **ganglion-cell 1.**, a layer of the retina between the nerve-fiber layer and the inner molecular layer. **ganglionic 1.**, a stratum of angular cells in the cerebral cortex. **Gen-nari's 1.** Same as Baillarger's 1. **germ 1.**, one of the primary layers of cells (ectoderm, endoderm, or mesoderm) from which the tissues and organs of the adult develop. **granular 1.**, the stratum granulosum. **Henle's 1.**, the outer layer of cells of the inner root-sheath of a hair-follicle. horny 1., the outer layer of the skin; the stratum corneum. Huxley's 1., a layer of the rootsheaths of a hair-follicle within Henle's layer. Kölliker's fibrous 1., the mesiris; the substantia propria of the iris. Langerhans's 1., the deep cellular layer of chorionic villi. Langhans's 1., the stratum granulosum of the skin. latticed 1., a cortical cell-layer of the hippocampus. malpighian 1., the stratum mucosum of the skin. mantle 1., the columnar layer or zone of nuclei in the myelospongium. Meynert's 1., a layer of pyramidal cells in the cortex of the cerebrum. molecular 1. 1. The outer layer of the cerebral or cerebellar cortex 2. A designation of two of the layers of the retina. molecular 1., inner, the inner plexiform layer of the retina. molecular 1., outer, the outer plexiform layer of the retina. mucous 1., the innermost layer of the epidermis; the rete mucosum. nerve-fiber 1., the innermost layer of the retina, excepting the membrana limitans interna. neurodermal 1., the epiblast. Ohl's 1., the stratum lucidum of the skin. Ollier's 1., osteogenetic 1., the innermost layer of the periosteum. pali**sade 1.**, the basal layer of the stratum mucosum. papillary 1., the outer layer of the corium. peripheral 1., the outer portion of the molecular layer of the cerebral cortex pigmentary 1., the outermost of the ten layers of the retina, and the inner lining of the ciliary organ plexiform

l's, the two molecular layers of the retina.

prickle-cell l., the stratum malpighii. primary
blastodermic l., the germinal layers developed by the differentiation of the blastoderm, the epiblast, and hypoblast or mesoblast. Rauber's 1., the most external of the three layers of cells which form the young blastodisk of the embryo. Called also blastodermic ectoderm and primitive ectoderm. Renaut's 1., a thin hyaline membrane between the corium and the epidermis. reticular 1., the tunica propria or deeper layer of the corium. Sattler's elastic 1., a thin layer of elastic fibers lying between the large vessel layer and the choriocapillary layer of the choskeletogenous 1., the layer of roid of the eve mesoderm cells surrounding the notochord of the embryo and developing into the axial skeleton. sluggish 1., the layer of slow-moving leukocytes in the blood strewn along the walls of the vessel. still 1. Same as sluggish l subcallosal 1., the layer of nerve-fibers on the lower side of the callosum. subpapillary 1., the vascular layer of the corium. superpapillary 1., the rete mucosum. Tomes's granular 1., the outer layer of dentin next the cement. trophic 1., the hypoblast. Unna's 1., Langerhans's layer. vegeta-tive 1., the hypoblast. Waldeyer's 1., the vas-cular layer of the ovary. Weil's basal 1., a pale, transparent layer of cells just inside of the layer of odontoblasts of tooth-pulp. It is made up of delicate fibrils of connective tissue communicating with the processes of odontoblasts. **yellow 1.** See crusta phlogistica. **Zeissel's 1.**, a layer in the stomach wall between the muscularis mucosæ and the submucosa. zonular 1. See stratum zonale.

lazaretto (laz-ar-et'o). 1. A pest-house or hospital for contagious diseases. 2. A quarantine station.

Lb. An abbreviation for L. li'bra, pound.

L. Ch. Abbreviation for Licentiate in Surgery.

L. D. Abbreviation for perception of light difference.

L. D. A. Left dorso-anterior position of the fetus. L. D. P. Left dorso-posterior position of the fetus.

L. D. S. Abbreviation for Licentiate in Dental Surgery.

L. E. Abbreviation for lest eye.

leaching (le'tshing). Lixiviation.

lead (led) [L plum'bum]. A soft, grayish-blue metal with poisonous salts, symbol, Pb; atomic weight, 207.2. 1. acetate (L. plum'bi ace'tas), sugar of lead; a sweetish, white, basic salt, used in the preparation of lead-water, Goulard's extract, Goulard's cerate, etc. It is astringent, anodyne, and discutient. arsenate of 1. (as an insecticide) dissolve separately in wooden pails arsenate of soda (5 per cent. strength) 4 ounces in 2 quarts of water and acetate of lead 11 ounces in 2 quarts of water and acetate of lead 11 ounces in 4 quarts of water. Pour into 1 gallon of water. 1. bitannate. See lead tannate. black-1. See graphite. 1. carbonate (L. plum'bi carbo'nas), ceruse; a basic salt, (PbCO₃)₂.Pb(OH)₂: used as an application to burns and inflamed surfaces. 1. chlorid (L. plum'bi chlo'ridum), horn lead, PbCl₂: anodyne and astringent. 1. chromate, a lemonyellow powder. PbCrO₄. Called also chrome odyne and astringent. I. chromate, a lemon-yellow powder, PbCrO₄. Called also chrome yellow. I. iodid (L. plum'bi iod'idum), a yellow, crystalline powder, PbI₂; resolvent and astringent. 1. monoxid (L. plum'bi ox'idum), a binary compound, PbO, called litharge when crystalline and massicot when amorphous: much used in plasters, etc., and in the treatment of burns. 1. nitrate (L. plum'bi ni'tras), a sweetish, crystalline agent, Pb(NO₃)₂: astringent, detergent, and deodorant l. oleate, a white powder, 3Pb(C₁₈H₃₃O₂)₂: used in diachylon ointment, etc. 1. oxid. See l. monoxid and l. tetroxid. 1. phenoisulphonate, white needles, astringent and antiseptic, Pb(OH-C₆H₄,SO₂,O)₂ 5H₂O: used in skin diseases. 1. subacctate, a basic acetate of lead. 1. tannate (L. plum'bi tan'nas), a yellowish-gray powder; anodyne and astringent: used in ointments for bedsores, etc. tetra-ethyl 1. See tetra-ethyl. 1. tetroxid, red lead, or minium, Pb₃O₄ it may be used like the monoxid. white 1., a basic lead carbonate.

Any one of the records made by the electrocardiograph, varying with the part of the body from which the current is led off. It is right arm and left arm, in which the current is derived largely from the base of the heart; lead II, right arm and left leg, corresponding essentially to the long axis of the heart, lead III. left arm and left leg, representing chiefly the left side of the heart. A lead is also known as a derivation.

leading (led'ing). Lead-poison; plumbism.

leafcup. Polymnia.

leaping-ill (le'ping-il) See thorter-ill.

leash (lesh). A bundle of cord-like structures, as nerves, blood-vessels, fibers, etc.

leaves. Many drugs are extracted from leaves. Castanea. coltsfoot 1., Tussilago. deadly nightshade 1., belladonna. marshmallow 1., white mallow 1., Althra. thornapple 1., Stramonium. witchhazel 1., Hamamelidis.

leben (leb'en) [Arabic]. A ferment drink of Egypt made from the milk of cows, buffaloes, and goats.

Leber's disease (la-berz') [Theodor Leber, German ophthalmologist, 1840-1917] See disease.

Lebis'tes reticula'tus. A small fish valued because it devours mosquito larvæ.

Lecat's gulf (le-kats') [Claude Nicolas Lecat, French surgeon, 1700-1768]. See gulf.

lecibrin (les'ib-rin). A preparation of lecithin with nucleoprotein: used like lecithin.

lecipon (les'ip-on). A water-soluble preparation of lecithin in powdered form.

lecithalbumin (les-ith-al'bu-min). A compound of albumin and lecithin, found in the stomach, liver, kidney, lungs, and spleen.

lecithid (les'ith-id). A compound of lecithin with venom hemolysin. See cobra-lecithid. lecithin (les'ith-in) [Gr. λέκιθος yolk of egg]. A

monoaminomonophosphatid, C₄₄H₉₀NPO, found in animal tissues, especially nerve-tissue, semen, yolk of egg, and in smaller amount in bile and blood. It is a colorless, crystalline compound, soluble in alcohol, and is chemically the stearyl-oleylglycerophosphate of cholin. Other substances of similar constitution are grouped as lecithins. The lecithins, whether of animal or plant origin, are said to be antivenomous. Lecithins are said to have the therapeutic properties of phosphorus, and have been given in rickets, dyspepsia, neurasthenia, diabetes, anemia, and tuberculosis. culosis. 1.-albumin, the name of a series of compounds of lecithin with proteins developed in the stomach, kidney, liver, lungs, etc.

lecithinase (les'ith-in-as). An enzyme which produces disintegration of lecithin. cobra 1., one of the constituents of the hemolysin of cobra venom.

lecithinose (les-ith/in-os). A lecithin from the yolk of eggs: used as a nutrient.

lecithol (les'ith-ol). A proprietary emulsion-like solution of lecithin.

lecithoprotein (les"ith-o-pro'te-in). pound of the protein molecule with a lecithin.

Leclainche-Vallée serum. See under serum. Leclanché's cell (le-klan-shāz') [Georges Leclanché, French physicist, 1839-1882] See cell.

lectual (lck'tu-al) [L. lectua'lis; lec'tus bed]. Per-

taining to a bed or couch. lectulum (lek'tu-lum) [L. "a little bed"]. The nail-

Le Dentu's suture (leh-den-tez) [Le Dentu, Paris

surgeon, 1841-1926]. See under suture.

Ledran's suture (la-drahz') [Henri Francois Ledran, French surgeon, 1685-1770]. See suture. Leduc's current (led-ooks') [Stéphane Armand Nicolas Leduc, contemporary French physicist]. See current.

leech (lētsh) [L. hiru'do]. An aquatic platyhelmian, Hiru'do medicina'lis: used for drawing blood. An aqueous therapeutic extract of the heads of leeches is employed to prevent the formation of blood-clots, etc. Some species, chiefly tropical, may become semiparasitic upon man and animals. See also Placobdella American 1., the Sangui-su'ga deco'ra, a small species sometimes used in drawing blood artificial 1., an apparatus for drawing blood by artificial suction. horse 1. See Limnatis and Hamopis. Hungarian 1., the Sanguisu'ga officina'lis, a species locally used in drawing blood land 1. See Hamadipsa. Swedish 1., the Sanguisu'ga medicina'lis, or official leech

leeches, leeching (le'tshez, le'tshing). An infectious disease of horses in Florida and India, with local lesions on the skin, which begin with slight lumps, which grow in size until there is a large raw surface. Called also hyphomycosis destruens equi, and in India bursautee.

Lee's ganglion [Robert Lee, English physician, 1793-1877]. See ganglion.

1668 (lez). The dregs or sediment of wine.

Leeuwenhoek'ia australien'sis [Antonj van Leeuwenhoek, Dutch microscopist, 1632-1723]. A mite found at Sidney, New South Wales, which causes great irritation by burrowing in the skin of people who work in gardens

Le Fort's amputation, suture (la forz) [Léon Clément Le Fort, French surgeon, 1829-1893]. See amputation and suture.

left-handed (left-hand'ed). Using the left hand with more dexterity than the right.

with more dexterity than the right.

leg (leg). The lower extremity, especially the part between the knee and the ankle. Anglesey 1., a form of jointed artificial leg; named from a marquis of Anglesey. badger 1., inequality in the length of the legs. baker-1., genu valgum, or knock-knee. bandy-1. Same as bow-1. Barbados-1., elephantiasis of the leg bayonet-1., uncorrected backward displacement of the bones of the leg at the knee, followed by ankylosis at the joint. bird-1., reduction in size of the leg from atrophy of the muscles. black-1., symptomatic anthrax. boomerang 1., a bone disease occurring among Australian natives causdisease occurring among Australian natives causing the leg to assume a shape resembling a boomerang. bow-1., gend varum; an outward curvature of the legs at the knees 1.-holder, a device for holding the legs in surgical operations; especially for holding the legs apart and up in lawn-tennis l. See gynecologic operations. coup de jouet. milk-l., phlegmasia alba do-lens. scissor-l., cross-leg deformity; a result of double hip disease, in which the patient walks cross-legged. trench 1. See trench shin, under shin. 1.-type, progressive hereditary muscular atrophy. white 1., phlegmasia alba dolens.

Legal's disease, test (la-galz') [Emmo Legal, German physician, nineteenth centuryl. See under disease and tests.

Legg's disease (legz) [Arthur T. Legg, American surgeon, born 1874]. Osteochondritts deformans iuvenalis.

leg-ill (leg'il). Inflammation of the interdigital space of sheep, producing lameness.

legitimacy (le-jit'im-as-e) [L. legit'imus lawful]. The condition of having been born in wedlock.

legume (le'gum). The pod or fruit of a leguminous plant, such as peas and beans.

legumelin (leg-u-me'lin). A protein from lentils. **legumin** (leg'u-min) [L. legu'men pulse]. A protein from the seeds of various plants, chiefly of the order Legumino'sæ.

Leichtenstern's phenomenon or sign (lik'tensternz) [Michael Ludwig Leichtenstern, German physician, 1845–1900]. See under sign.

leinol (li'nol). A proprietary sedative medicine. leiodermia (li-o-der'me-ah) [Gr. \alpha \in los smooth δέρμα skin] Abnormal glossiness and smoothness of the skin.

leiomyoblastoma (li-o-mi-o-blas-to'mah). mvoma.

leiomyofibroma (li"o-mi-o-fi-bro'mah). A tumor with leiomatous, myomatous, and fibromatous elements

leiomyoma (li"o-mi-o'mah) [Gr. λείος smooth + $\mu \hat{v}s$ muscle + - $\omega \mu a$ tumor]. Myoma composed of unstriped muscle-fiber. 1. cu'tis, a disease characterized by numerous translucent nodules, the size of peas, on the extensor surfaces of the extremities, the nodules containing masses of smooth muscle-fibers.

leiomyosarcoma (li"o-mi-o-sar-ko'mah). coma containing large spindle-cells of unstriped muscle.

leiphemia (li-fe'me-ah) [Gr. λείπειν to fail + αΐμα

blood]. Thinness and poverty of the blood.

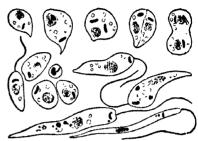

leipo-. For words beginning thus, see those beginning lipo -.

Leishman's cells, method, stain (lish'manz) [Sir William B. Leishman]. See cell, method, stains,

Leishman-Donovan body (lish'man-don'o-van) [Sir William B. Leishman; C. Donovan, surgeon in Indian Medical Service]. See under body.

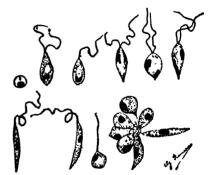

Leishmania (lish-man'e-ah) [named from Sir William Boog Leishman, English army surgeon, 1865-1926]. 1. A genus of flagellate protozoans parasitic in the human and animal bodies where they are found as small oval or round intracellular

organisms, chiefly in endothelium. In artificial cultures on blood-agar they develop into typical flagellate herpetomonads. Called also Piroplasm, Helcosoma, and Herpetomonas. 2. One of the developmental stages through which trypanosomes pass in their insect hosts. L. america'na. See L. brazilien'sis, a form morphologically identical with L. donovani and which causes leishmaniasis americana. L. donova'ni,

Leishmania donovani cultures (Leishman).

the organism causing kala-azar; a species occurring in the spleen, liver, and bone-marrow in the form of small oval or round bodies (Leishman-Donovan bodies). Called also L. in antum, Piroplasma donovani, and Herpetomonos donovani. See kalaazar. L. farcimino'sa. See Blastomyces far-

Leishmania furunculosa (Ch. Nicolle).

ciminosus. L. furunculo'sa, the parasite which causes furunculus orientalis or oriental sore. It is morphologically identical with L. donovani and has a similar life-history. L. infan'tum, the organism causing Mediterranean kala-azar or infantile splenomegaly. It is morphologically identical with L. donovani. L. mediterra'nea. See L. infantum. L. nilot'ica, Brumpt's name for the L. tropica found in the keloid form of oriental sore. L. trop'ica, the organism causing oriental sore

leishmaniasis (līsh-man-i'as-is). Same as leishmaniosis.

leishmaniosis (līsh-man-e-o'sis). Any disease due to infection with species of Leishmania. 1. america'na, a disease caused by Leishmania braziliensis. It is common in Brazil and is found also in Panama and in Yucatan It is characterized by ulceration of the mucous membranes of the nose and throat and is called forest yaws and bouba brasiliana. It may be the same as oriental sore. dermal 1., oriental sore. See furunculosis orientalis infantile 1. See infantile kala-azar, under kala-azar. naso-oral l., espundia. Visceral 1. See kala-azar.

Leistungskern (lis'toongs-kern) [Ger.]. The functional part or active center of a cell.

Leiter's coil (h'terz) [Joseph Leiter, Austrian instrument maker, died 1892]. See coil.

Leloir's disease (lel-warz') [Henri Camille Leloir, French dermatologist, 1855-1896]. Lupus vulgaris erythematoides.

lema (le'mah) [Gr. $\lambda \eta \mu \eta$ gum]. The meibomian secretion.

Lembert's suture (lah-bārs') [Antoine Lembert, French surgeon, 1802-1851]. See suture.

lemco (lem'ko). A proprietary meat-extract preparation.

lememia (le-me'me-ah) [Gr. λοιμός plague + αΐμα blood]. The presence of plague germs in the blood. lemic (le'mik) [Gr. λοιμός plague]. Pertaining to

an epidemic disease, as the plague.

lemmoblastic (lem-o-blas'tik). Forming or developing into neurilemma tissue.

lemmocyte (lem'o-sit) [Gr. λέμμα sheath + κύτος cell]. A cell derived from the neural crest and

developing into a neurilemma cell.

lemniscus (lem-nis'kus), pl. lemnis'ci [L.; Gr. λήμνισκος fillet] A band of longitudinal sensory fibers in the medulla and pons extending upward from the decussation, passing along the outer surface of the superior cerebellar peduncle, and terminating in the thalamus. Called also fillet and laqueus. acoustic 1. Same as lateral l. bulbar 1., ascending sensory fibers of the second order running from the medulla oblongata to the thalamus and including several different tracts. gustatory I. Same as visceral l. lateral l., a tract of longitudinal fibers extending upward through the lateral part of the tegmental substance of the pons. It is formed by fibers of the corpus trapezoideum and runs toward the quadrigeminal region. Called also lateral fillet. medial 1., a band of white fibers arising from the gracile and cuneate nuclei, crossing to the opposite side in the lower part of the medulla oblongata, and extending upward to enter the optic thalamus. Called also medial fillet and ribbon of Reil. optic 1., the optic tract. spinal 1., ascending fibers of touch, temperature. and pain sensibility extending from the spinal cord to the optic thalamus In the cord the fibers constitute two tracts, the dorsal and ventral spino-thalamic tracts 1. tempora'lis et occipita'lis, a cord-like bundle of nerve-fibers connecting the cortex of the temporal and occipital lobes of the brain. Called also *Hoeve's bundle*. trigeminal 1., ascending sensory fibers in the pons running from the sensory fifth nuclei to the thalamus. visceral 1., ascending sensory fibers running from the nucleus of the solitary fasciculus to the higher cerebral centers.

lemography (le-mog'raf-e) [Gr. λοιμός plague + γράφειν to write] A treatise on the plague or other epidemic disease.

lemology (le-mol'o-je) [Gr. λοιμός plague + λόγος treatise]. The science of contagious and epidemic diseases, especially the plague.

lemon (lem'un). The fruit of Cu'rus med'ica, var. limo'num, an aurantiaceous tree The rind or peel of the fruit (lemon peel) furnishes oil of 1. (o'leum limo'nis), an essential oil, C₁₀H₁₆, which is an aromatic stimulant and flavoring agent. Dose, 1-5 min (0.060-0.333 c.c.). Dose of spirit of lemon, 1-4 fl.dr. (4-16 c.c.); of tincture (U. S. P.), 1 dr. (4 c.c.)

lemon-balm (lem'un-bahm). See Melissa.

lemoparalysis, læmoparalysis (le"mo-par-al'is-is) [Gr. λαιμός gullet + paralysis]. Paralysis of the gullet.

length, dental (length). A line from the anterior surface of the first premolar to the posterior surface of the last molar sitting 1, the length from the crown of the head to the coccyx, called by Pirquet Si.

Lenhartz treatment (len'harts) [Hermann Albert Dietrich Lenhartz, physician in Hamburg, 1854-1910]. See treatment.

lenicet (len'is-et). A polymerized, finely divided acetate of aluminum preparation.

lenigallol (len-e-gal'ol). Pyrogallol triacetate, (CH₃.CO O₃C₆H₃, a white, non-poisonous, insoluble powder: used like pyrogallol in psoriasis and eczema.

leniol (len'e-ol). A proprietary medicated emulsion of cod-liver oil, for use in lung disorders.

lenirenin (len-ir-e'nin). A mixture of lenicet, aluminum hydroxid, and suprarenal substances used in catarrh of the upper air-passages.

lenirobin (len-e-ro'bin). Chrysarobin tetra-acetate: used in skin diseases.

lenitive (len'it-iv) [L. leni're to soothe]. 1. Demulcent or soothing. 2. A demulcent remedy.

lenitol (len'it-ol). A proprietary petroleum preparation for constipation.

Lennander's operation (len-an'derz) [Karl Gustav *Lennander*, Swedish surgeon, 1857~1908]. See operation.

Lennhoff's index, sign (len'hofs) [Rudolf Lennhoff, German physician, born 1866]. See index and sign.

lens (lenz) [L. "lentil"]. A piece of glass or other transparent substance so shaped as to converge or scatter the rays of light. achromatic 1., a lens corrected for chromatic aberration. aplanatic 1., one which serves to correct spheric aberration. apochromatic 1., one corrected for chromatic or spheric aberration. biconcave 1., concavoconcave 1., a lens concave on both faces. biconvex 1., a lens with two convex faces. bi-cylindric 1., one which has both surfaces cylindric **bifocal l.**, a lens with two foci **bi-spheric l**, a lens that is spheric on both sides. Brücke 1., a combination of a double convex and double concave lens arranged so as to give considerable working distance. cataract 1., a powerful lens for spectacles to be used after cataract operation. compound 1., one made up of two or more lenses. contact 1., a thin shell of glass bounded by concentric spheric surfaces: used in cases of corneal opacity or abnormal curvature of the cornea. converging 1., convex 1., one which brings light to a focus. convexoconcave 1., one which has one convex and one concave Coquille plano 1., a lens that is +8D on one side and -8D on the other. Crookes's 1., a lens made from glass rendered opaque to the ultra-violet and ultra-red rays and still transparent to light. crossed 1., a lens with front and back surfaces of different curvatures crystalline 1., eye-1., the transparent lenticular organ behind the cylindric 1., a lens which is a section of a pupil cylinder cut parallel to its axis, one which has one surface plane and another concave or convex decentered 1., one in which the visual line does not pass through the center. dispersing 1., concave 1., one which disperses light immersion 1., immersion objective. See objective. meter 1., a lens which will focus parallel rays at a distance of one meter. minus l., a concave lens. ortho**scopic 1.**, a form of lens which gives a very flat and undistorted field of vision. 1.-particles, fine brown points of pigment on the anterior capsule of the lens—the vestiges of the capsulopupillary membrane of the fetus. **periscopic 1.**, a concavoconvex or concavoconcave lens. **1.-pit**, a pit-like involution in the ectoderm of the fetal head where the lens is developed. planoconcave l., one having one plane and one concave side. **planocon- vex 1.**, one which has one plane and one convex side plus 1., a convex lens retroscopic 1., a lens that is tilted inward at the top. 1. rudiment, a thickening of the ectoderm of the sides of the embryonic head, from which the lens is developed. spheric 1., one which is the segment of a sphere. 1.-stars, star-like lines formed within the lens of the eye by fibers which pass from the anterior to the posterior surface. Stokes's 1., a combination of a concave cylindric and a convex cylindric lens, used in the diagnosis of astigmatism **toric** 1., a lens which is cut from a torus by a cut parallel to its axis of formation. Such a lens has power in all meridians, but dif-ferent amounts on the same side **trial-1**., any one of a set of lenses used in testing the vision,

1.-whorl, the peculiar bowed appearance presented by the marginal portion of the lens in mendional sections.

lenticel (len'tis-el). A lens-shaped gland, especially one of those at the base of the tongue.

lenticonus (len-tik-o'nus) [L. lens lens + co'nus cone]. An exaggerated curvation of the crystal-line lens, producing a conic bulging. It may be either anterior or posterior, according to the surface affected.

lenticula (len-tik'u-lah) [L.]. 1. The lenticular nucleus. 2. A freckle.

lenticular (len-tik'u-lar) [L. lenticula'ris]. Pertaining to or shaped like a lens.

lenticulo-optic (len-fik"u-lo-op'tik). Pertaining to the lenticular nucleus and the optic thalamus.

lenticulostriate (len-tik"u-lo-stri'āt). Pertaining to the lenticular nucleus and the corpus striatum.

lenticulothalamic (len-tik"u-lo-thal-am'ik). Relating to the lenticular nucleus and the optic thalamus.

lentiform (len'tif-orm). 1. Shaped like a lens.2. A lens-shaped medicinal tablet.

lentigo (len-ti'go), pl. lenti'gines [L. freckle]. 1. A freckle; a small local pigmentation of the skin. 2. A small nevus.

lentigomelanosis (len-ti"go-mel-an-o'sis) [lentigo + melanosis] A malignant disease of the skin of the face originating in freckles.

lentin (len'tin) Colorless crystalline powder, meta-diaminobenzene, $C_6H_4(NH_2)_2$ 2HCl: used as an intestinal antiseptic.

lentitis (len-ti'tis). Inflammation of the eye-lens; phakitis.

lentocalin (len-to-ka'lin). A preparation of the lens of the eye of animals. used in senile cataract.

Leo's test (la'oz) [Hans Leo, German physician, born 1854]. See under tests.

leonotis (le-o-no'tis). See dagga.

leontiasis (le-on-ti'as-is) [Gr. λέων lion]. τ. A bilateral and symmetric hypertrophy of the bones of the face and skull, leading to a lion-like facial expression. Called also *l. ossea* or *l. ossium.* 2. The facies leonina of leprosy.

leontodin (le-on'to-din) A concentration prepared from the root of the dandelion: tonic, cholagogue, aperient, and diuretic. Dose, 2-4 gr. (0.133-0.266 gm).

Leontodon (le-on'to-don) [Gr. λέων lion + δδούς tooth]. See Taraxacum.

Leopold's law (la'o-poldz) [Christian Gerhard Leopold, German physician, 1846–1911]. See law.

leotropic (le-o-trop'ik) [Gr. λalos left + τρόπος turning]. Running spirally from right to left. See deviotropic.

leper (lep'er). A person afflicted with leprosy.

lepidic (le-pid'ik) [Gr λεπίς scale]. Pertaining to scales A term applied by Adami to the lining membrane tissues of the embryo.

lepidoma (le-pid-o'mah) [Gr. λεπίς scale + -ωμα tumor]. A tumor derived from lepidic tissue.

lepidophyton (lep"id-o-fi'ton) [Gr. λεπίs scale + φυτόν plant]. A fungus said to be the cause of Tokelau ringworm.

Lepidoptera (le-pid-op'ter-ah). An order of insects including the butterflies and moths.

Lepidoselaga (lep-id-o-sel-ag'ah). A genus of the tabanid flies *L. lepido'ta* is the common "motuca fly" of Brazil.

lepidosis (lep-id-o'sis) [Gr. λεπίς scale]. Any scaly eruption.

lepine (le'pin). A proprietary mixture of nine antiseptics. lepocyte (lep'o-sit) [Gr. λέπος rind + κύτος cell]. Any nucleated cell having a cell wall.

lepothrix (lep'o-thriks) [Gr. λέπος scale + θρίξ hair]. A condition due to a microbe, in which the hairs and lanugo become covered with scales; often associated with red chromidrosis.

lepra (lep'rah) [Gr. λέπρα leprosy]. Leprosy; also psoriasis. See leprosy. 1. al'ba, leprosy with more or less leukopathy, or absence of pigment from the skin. 1. al'phos. See psoriasis. 1. anæsthet'ica, leprosy with anesthetic spots. 1. ar'abum, true leprosy. 1. conjuncti'νæ, leprosy with lesions of the conjunctiva. 1. græco'rum, a term vaguely applied to various diseases bearing more or less resemblance to true leprosy. 1. maculo'sa, leprosy characterized by spots of skin pigmentation. 1. mu'tilans, leprosy in its final stages, with mutilation of the extremities. 1. nervo'rum, leprosy with nervous complications. 1. tau'rica, Cossack or Crimean leprosy. tubercular 1., leprosy with the formation of nodules in the skin. Willan's 1., psoriasis.

lepraphobia (lep-rah-fo'be-ah) [Gr. $\lambda \epsilon \pi \rho \alpha$ leprosy + $\varphi \delta \beta \sigma$ fear]. Morbid dread of leprosy.

leprid (lep'rid). A leprous skin lesion.

leprolin (lep'ro-lin). A preparation of the toxin of the lepra bacillus, said to be curative of leprosy.

leprologist (lep-rol'o-jist). An expert in the study and treatment of leprosy.

leprology (lep-rol'o-je). The study of leprosy.

leproma (lep-ro'mah). A leprous tumor or swelling; one of the nodules of leprosy.

leprosarium (lep-ro-sa're-um). Same as leprosery.
leprosery (lep'ros-er-e) [L. leprosa'rium]. A hospital or colony for lepers.

leprosy (lep'ro-se) [L. le'pra]. A chronic, transmissible disease, due to a specific microbe, the Myobacterum le'præ It is a constitutional disorder, accompanied in its beginnings with fever, The lesions consist of either well-defined chills, etc oatches of macular erythema (macular l.) or blebs, followed by the development of anesthetic patches of cicatricial tissue (atrophic 1), with atrophy of the skin and loss of the hair; or else of nodules and tubercles (tubercular l), which may either become absorbed or ulcerate. In both varieties atrophy absorbed or ulcerate. In both varieties atrophy may be followed by deformity and mutilation of the digits Other parts than the skin may become involved, especially the larynx, conjunctiva, nerves, viscera, and bones. Called also lepra and elephantiasis gracorum. anesthetic 1., a variety of leprosy marked by hyperesthesia, followed by anesthesia, paralysis, ulceration, and gangrene. Asturian 1., pellagra. Italian 1., pellagra. **Kabyle 1.**, an hereditary disease of Kabyle, probably tertiary syphilis. **Lombardy 1.**, pellagra. **macular 1.** See under *leprosy*. **nodular 1.**, a form of leprosy marked by the development of masses of granulation tissue, called leproma, which may appear superficially, causing great distortion. rat 1., a leprosy-like disease affecting rats. trophoneurotic 1., anesthetic leprosy. white 1., macular leprosy.

leprotic (lep-rot'ik). Pertaining to leprosy; leprous.
 leprous (lep'rus) [L. lepro'sus]. Pertaining to or affected with leprosy.

leptandra (lep-tan'drah) [Gr. λεπτός thin + ἀνήρ anther]. Culver's root; the rhizome and rootlets of Veron'ica virgin'ica. It is aperient, cholagogue, and tonic, and is used like podophyllum in chronic constipation, indigestion, etc. Dose of extract, 1-3 gr. (0.066-0.2 gm.); of fluidextract, 20-60 min. (1.333-4 c.c.).

leptandrin (lep-tan'drin). A bitter glucosid from leptandra, whose active properties it possesses. Dose, \(\frac{1}{4}-4\) gr. (0.016-0.26 gm.).

leptinol (lep'tin-ol). A preparation of colloidal palladium hydrate: used for reducing obesity.

leptocephalus (lep-to-sef'al-us) [Gr. λεπτόs slender + κεφαλή head]. A person with an abnormally tall, narrow head.

leptochromatic (lep"to-kromat'ik) [Gr. λεπτός delicate + chromatin]. Having a fine chromatin network.

Lepto'dera pel'lio. Same as Rhabditis genitalis.

leptodermic (lep-to-der'mik)
[Gr. λεπτός slender + δέρμα
skin]. Thin skinned.

leptomeninges (lep"to-me-nin'jēs) [Gr. λεπτός slender + μῆνιγξ membrane]. The pia and arachnoid together.

Leptocephalus (Church and Peterson).

leptomeningitis (lep"to-men-in-ji'tis) [Gr. λεπτός thin + μῆνιγξ membrane + -ιτις inflammation]. Inflammation of the pia and arachnoid of the brain or spinal cord. Leptomeningitis is variously qualified as acute, basilar, cerebrospinal, chronic, epidemic, external, infantile, intracranial, purulent, non-purulent, serous, tubercular, etc. l. externa. Same as arachnitiss. l. inter'na, inflammation of the pia mater.

Leptomitus (lep-tom'it-us). A genus of mycetic fungi. L. epider'midis has been found in pustules on the hand. L. uroph'ilus has been found in the urine. L. vagt'næ causes a chronic vaginitis.

Leptomonas (lep-to-mo'nas). See Herpetomonas. leptonema (lep-to-ne'mah) [Gr. λέπτός thin + νημα thread]. A presynaptic stage of miosis in which the chromatin is in the form of fine spireme threads.

leptopellic (lep-to-pel'ik) [Gr. λεπτός narrow + πέλλα bowl]. Having a narrow pelvis.

leptophonia (lep-to-fo'ne-ah) [Gr. λεπτόs thin + φωνή voice]. Weakness or feebleness of the voice. leptoprosope (lep-top'ro-sōp) [Gr. λεπτόs thin + πρόσωπον face]. A person with slender features, round, open orbits, long nose, narrow nostrils, and

small mouth.

Leptopsyl'la mus'culi. A flea found on mice and rats.

leptorhine (lep'to-rin) [Gr. λεπτόs thin + βls nose]. Having a slender proboscis or nose.

Leptospira (lep-to-spi'rah) [Gr. λεπτός thin + σπείρα coil]. A genus of spirochetes characterized by minute elementary spirals running through the body, by the absence of flagella, and by great flexibility of the terminal portion of the organism. L. den'tium, an organism found in the dental deposits of normal persons L. hebdom'idis. Same as Spirochæta hebdomidis. L. ictero-hæmorrha'giæ, a species causing infectious jaundice (Weil's disease). The organism is now called Spironema icterohemorrhagiæ. L. icteroides, a species believed to be the cause of yellow fever. It is transmitted by the mosquito, Stegomyia calopus. L. inter'rogans, Spirochæta interrogans.

leptospirosis (lep"to-spi-ro'sis). The disease produced by Leptospira in the blood.

leptostaphyline (lep-to-staf'il-īn) [Gr. λεπτός slender + σταφυλή palate]. Having a high narrow palate.

leptothricosis (lep-to-thri-ko'sis). Infection with any leptothrix. l. conjuncti'væ, Parinaud's conjunctivitis.

Leptothrix (lep'to-thriks) [Gr. λεπτόs slender + θρίξ hair] A genus of Trichomycetes, consisting of simple slender threads without branching. L. asteroi'des, a species from a tumor near the ear and from a metastatic retropharyngeal abscess: polymorphous; made up of bundles of filamentous rods, often forming pseudothreads, strands, or continuous membranes. pathogenic. L. bucca'lis, a form from the tartar of the teeth, the mouth, etc.; from typhus stools, gangrene of the lung, etc. L.

cunic'uli, a species from an infectious disease of rabbits: pathogenic. L. flifor'mis, a species from the uterus, pericardium, and pleura of a diseased rabbit: in non-motile, thread-like bacilli with rounded ends: its injection causes pleurisy and pericarditis in rabbits. L. gigan'tea, a much larger species from the teeth of cattle and sheep. L. innomina'ta, a species from the mouth and from tartar of neglected teeth: said to cause caries of the teeth.

Leptotrichia (lep-to-trik'e-ah). A genus of bacterial organisms growing in long, thick unbranched threads which are often clubbed at one end and tapering at the other. The threads may fragment into bacillary forms. L. bucca'lis, a non-pathogenic species found in the healthy mouth. It produces a golden-yellow pigment on culture media. Called also Vignal's bacillus.

Leptotrombid'ium akamu'shi. Same as Trombicula akamushi.

leptuntic (lep-tun'tik) [Gr. λεπτύνειν to thin]. **A** medicine that thins the blood.

Leptus (lep'tus) [L]. A name for the larval form of mites of the genus Trombicula and Trombidium. L. akamu'shi. See Trombicula akamushi. L. america'nus, L. irri'lans, and L. autumna'lis sometimes burrow under the skin, causing irritation and pruritus. See chigger, 2d def.

Lerch's percussion [Otto Lerch, contemporary physician in New Orleans]. See percussion.

leresis (ler-e'sis) [Gr. λήρησις]. Insane or senile loquacity or garrulousness.

Leriche's operation (la-rcsh'ez) [René Leriche, contemporary French surgeon] See periarterial sympathectomy, under sympathectomy.

Lermoyez's syndrome (lehr-moi-yaz'). See under *syndrome*.

Leroux's method (ler-ooz') [Laurent Charles Pierre *Leroux*, French accoucheur, 1730–1792]. See under *method*.

Lesage's bacillus (les-azh') [Adolphe Auguste Lesage, physician in Paris, born 1862]. See bacillus.

lesbian love (les'be-an). Same as sapphism. lesbianism (les'be-an-izm). Same as sapphism.

Lesieur-Privey sign (leh'se-er-pre-va'e) [C. Lesieur and Paul Privey, French physicians.] Same as albuminoreaction.

lesion (le'zhun) [L $l\alpha'sio$; $l\alpha d'ere$ to hurt] hurt, wound, or local degeneration. coarse 1., molar 1. Same as macroscopic l degenerative 1., one which is caused by or characterized by degeneration depressive 1., one that causes diminution of functional activity. destructive 1., one which leads to the obliteration of an organ or the abolishment of its functions. diffuse 1., one that spreads widely and irregularly. discharging 1., a lesion attended with great and sudden liberation of energy. disseminated 1., one that involves a number of separate spots.

Ebstein's 1., hyaline degeneration and insular necrosis of epithelial cells of the renal tubercles in diabetes mellitus. focal 1., one that has a small area and definite limits. functional 1., one which leads to no obvious or discoverable change of structure, but which causes disturbances of func-tion. Ghon's primary 1., a bean-shaped shadow in the roentgenogram of the lung seen in pulmonary tuberculosis of children. gross 1., a lesion that is visible to the naked eye. histologic 1., microscopic 1., minute 1., one that is discoverable only by the microscope. impaction 1., an osteopathic term for a lesion of any spinal joint in which there is present abnormal thickening of the intervertebral disk with approximation of all the bony parts. indiscriminate 1., a lesion affecting distinct parts or systems of the body. initial syphilitic 1., true or hard chancre. irritative 1., one which stimulates the functions of the part where it is situated. local 1., one in the nervous system giving origin to distinctive local symptoms. macroscopic 1., one that is attended by changes obvious to the unaided eye. mixed 1. See indiscriminate 1. molecular 1., a lesion not visible even with the aid of a microscope. nervous 1., one which affects nervous tissue. organic 1. Same as structural 1. partial 1., one which involves a part only of an organ or of the diameter of a conducting tract. peripheral 1., a lesion of the nerve-endings. structural 1., one that produces an obvious change in a tissue. systemic 1., one limited to a system or set of organs with a common function. total 1., one involving the whole of an organ or of the diameter of a conducting tract. toxic 1., one due to a poison. traumatic 1., a wound or mjury. trophic 1., a pathologic change originating in the capillary system, and consisting originally in an excess or deficiency of the particles of blood in the processes of assimilation, absorption, and the like vascular 1., one which affects a vessel or vessels.

Lesshaft's space or **triangle** (les'hafts) [Pyotr Frantsovich *Lesshaft*, Russian physician, born 1839] See *space*

lethal (le'thal) [L. letha'lis, from le'thum death].
 r. Deadly, fatal 2. An alcohol, C₁₂H₂₅OH, from spermaceti.

lethality (le-thal'it-e). The ratio of deaths from a given disease to existing cases of that disease.

lethargus (le-thar'gus) [Gr λήθαργος drowsiness]. Nélavan, or African sleeping sickness; a disease associated with a form of filariasis.

lethargy (leth'ar-je) [Gr. ληθαργία, from λήθη forgetfulness] A condition of drowsiness of mental origin. **African 1**. See Congo trypanosomiasis, under trypanosomiasis. **induced 1**., hypnotic trance.

lethe (le'the) [Gr. $\lambda\dot{\eta}\theta\eta$ oblivion]. Amnesia; complete loss of memory.

lethin (le'thin). A proprietary mixture of alcohol, camphor, chloroform, and ethereal oil: anodyne.

lethologica (leth-o-loj'ik-ah) [Gr. λήθη forgetfulness + λόγος word]. Inability to remember the proper word.

lettuce (let'us). See Lactuca.

Leube's extract of beef (loy'bez) [Wilhelm O. von Leube, German physician, 1843–1912]. See under extract

leucein (lu-se'in). One of a series of compounds related to leucin, but having two atoms less of hydrogen in the molecule.

leucemia, leucæmia (lu-se'me-ah). See leukemia. leucin (lu'sin) [Gr. λευκός white]. A crystallizable amino-acid, C₆H₁₃NO₂ = (CH₃)₂CH.CH₂CHNH₂-COOH, or amino-isocaproic acid, formed by the digestion or hydrolytic cleavage of protein and found normally in the spleen and pancreas, in various tissues, and in the urine in disease, especially in cases of acute yellow atrophy of the liver (Proust, 1818; Braconnot, 1820). In the liver it is converted into urea.

leucinethylester (lu-sin-eth-il-es'ter). An oily liquid, (CH₃)₂.CH.CH₂ CH(NH₂) CO₂.C₂H₅.

leucinimid (lu-sin-im'id). The anhydrid of leucin, $C_{12}H_{22}N_2O_2$, a decomposition product of certain proteins.

leucinosis (lu-sin-o'sis). Any condition in which leucin appears in the urine.

leucinuria (lu-sin-u're-ah) [leucin + Gr. οὖρον urine]. The presence of leucin in the urine.

leucitis (lu-si'tis). Same as scleritis.

leuco-. For words thus beginning, see leuko-.

Leucoium (lu-ko'i-um) [L.; Gr. λευκόs white + Lov violet]. A genus of old-world amaryllidaceous plants. L. æsti'vum and L. ver'num (called snowflake) are common in garden culture: emetic and poisonous.

Leuconostoc (lu-ko-nos'tok) [L.; Gr. λευκός white

+ Nostoc a genus of fungoid plants]. A genus of Coccaceæ. L. mesenterioi'des converts canesugar into glucose and glucose into dextrin. It occurs in chains of hyaline cocci, in tough, whitish zoogleal masses in the juice of sugar beets.

leucosin (lu'ko-sin). An albumin found in the cereal grains.

leucotin (lu-ko'tin). An alkaloid, C₂₁H₂₀O₆, from paracoto.

leucotropin (lu-kot'ro-pin). The hexamethylentetraminate of cinchophen: used by intravenous injection in inflammatory processes.

Leudet's tinnitus (led-āz') [Théodor Emile Leudet, physician at Rouen, 1825-1887]. See tinnitus

leukanemia (lu-kan-e'me-ah) [leukemia + anemia]. A disease marked by the blood conditions of both lymphatic leukemia and pernicious anemia (Leube, 1900).

leukasmus (lu-kaz'mus) [Gr. λευκός white]. Albinism; also leukoderma.

leukemia, leukæmia (lu-ke'me-ah) [Gr. λευκός white + alua blood]. A fatal disease with a marked increase in the number of leukocytes in the blood, together with enlargement and pro-liferation of the lymphoid tissue of the spleen, lymphatic glands, and bone-marrow. The disease is attended with progressive anemia, internal hemorrhage (as into the retina, etc.), and increasing exhaustion. aleucemic 1., aleukecreasing exhaustion. aleucemic 1., aleuke-mic 1., pseudoleukemia. aleukocythemic 1., leukemia with no increase in the total white cells of the blood. amygdaline 1., a form associated with disease of the tonsils. aplastic leukemia with diminution of both red and white cells with an increase of the proportion of large atypic leukocytes. 1. cu'tis, a skin lesion occurring in leukemia and consisting of tumors composed of small round cells resembling leukocytes. Fränkel's 1., acute leukemia with long mononuclear lymphocytes. hepatic 1., a form due to disorder of the liver. intestinal 1., that which is associated with intestinal disease. lienomyelogenous 1., that which is due to disease of the spleen and bone-marrow. lymphatic 1., that which is associated with hyperplasia and overactivity of the lymphoid tissue. medullary 1., myelogenic 1., that which is due to disease of the bone-marrow. mixed 1., myelocytic leukemia. monocytic 1., leukemia in which the leukocytes are of the monocytic form (large mononuclears and transitionals). myelocytic 1., leukemia with the presence of leukocytes of both myeloid and lymphoid origin. **myeloid 1.**, leukemia in which the myeloid tissues of the body are affected. **polymorphocyte 1.**, a variety affecting the bonemarrow, especially with obliteration of many of the small blood-vessels. splenic 1., that which is associated with splenic enlargement. spleno-medullary 1., splenomyelogenous 1. Same as lienomyclogenous l. symptomatic 1., temporary 1., leukocytosis.

leukemic (lu-ke'mik). Pertaining to or affected with leukemia.

leukemoid (lu-ke'moid). Resembling leukemia.

leukexosis (lu-kek-so'sis). An aggregation of dead leukocytes in one of the eliminating channels of the body.

leukin (lu'kin). 1. An endocellular bactericidal substance which can be extracted from leukocytes. Called also leukocytic alexin and leukocytic endolysin. 2. See leucin.

leuko-agglutinin (lu"ko-ag-lu'tin-in). An agglutinin which acts upon a leukocyte.

leukoblast (lu'ko-blast) [Gr. λευκός white + βλασrós germ]. An immature leukocyte. granular 1. See promyelocyte.

leukocidin (lu-ko-si'din) [leukocyte + L. cæ'dere to kill]. A substance destructive to leukocytes.

leukocytal (lu-ko-si'tal). Pertaining to the leukocytes.

leukocyte (lu'ko-sit) [Gr. λευκός white + κυτος cell]. Any colorless, ameboid cell-mass, such as a white blood-corpuscle, pus-corpuscle, lymphcorpuscle, or wandering connective-tissue cell. A leukocyte consists of a colorless granular mass of protoplasm, having ameboid movements, and varying in size between 0.005 and 0.015 mm. in diameter. The following varieties of leukocytes are found in normal blood (1) Small mononuclear l's, or lymphocytes, possessing a relatively large nucleus; (2) large mononuclear l's, containing a large round or oval nucleus surrounded by a zone of protoplasm; (3) transitional mononuclear l's, differing from the large mononuclears only in having a horseshoe-shaped nucleus; varieties 2 and 3 have been classified together as endothelial leukocytes or endotheliocytes; (4) the polymorphonuclear or polynuclear neutrophil l's, finely granular oxyphil cells with an irregularly shaped nucleus; (5) cosmophil I's, coarsely granular eosinophil cells with a lobed nucleus; (6) basophil I's, or mast-cells, having their origin in lymphoid tissue and found only rarely in Other forms of leukocytes are found the blood in disease, among which are myelocytes, myelo-blasts, lymphoblasts, plasma cells, and various degenerated forms of cells. alpha-l., a leukocyte which undergoes dissolution during coagulation of the blood. beta-1., a leukocyte which does not undergo dissolution during coagulation of the blood. endothelial 1., Mallory's name for the large wandering cell of the circulating blood and the tissues which have notable phagocytic prop-See endotheliocyte. 1. extract. See tract hyaline 1., a large mononuclear erties. under extract cell of the blood found in small numbers in nor-mal blood, but increased in number in certain mal blood, but increased in number in certain diseases. **Türck's irritation 1.,** large monodiseases. Türck's irritation 1., large mone nuclear, non-granular cells, resembling plasma cells, with dense, opaque, strongly basophilic match often contains vacuoles. They cytoplasm which often contains vacuoles are of myeloid origin and are found in the blood in conditions associated with irritation of the bone-

leukocythemia (lu"ko-si-the'me-ah) [Gr. λευκός white + κύτος cell + αἶμα blood]. Leukemia.

leukocytic (lu-ko-sit'ık) Pertaining to leukocytes leukocytoblast (lu-ko-si'to-blast) [leukocyte + Gr. βλαστός germ]. A cell from which a leukocyte develops.

leukocytogenesis (lu"ko-si-to-jen'es-is) [leukocyte + Gr. γένεσις production]. The formation of leukocytes.

leukocytoid (lu'ko-si-toid) [leukocyte + Gr. είδος form]. Resembling a leukocyte.

leukocytology (lu"ko-si-tol'o-je). The study of leukocytes

leukocytolysin (lu"ko-si-tol'is-in). A lysin which causes dissolution of leukocytes. called also leukolysin.

leukocytolysis (lu"ko-si-tol'is-is) [leukocyte + Gr. λίσις solution]. The breaking down or destruction of leukocytes. venom l., destruction of leukocytes with snake-venom.

leukocytolytic (lu"ko-si-to-lit'ik). Destroying leukocytes.

leukocytoma (lu"ko-si-to'mah) [leukocyte + Gr. -ωμα tumor]. A tumor-like mass of leukocytes.

leukocytometer (lu"ko-si-tom'et-er) [leukocyte + Gr. μέτρον measure]. An instrument used in counting the leukocytes.

leukocytopenia (lu"ko-si-to-pe'ne-ah) [leukocyte + Gr. πενία poverty]. Decrease in the number of leukocytes in the blood.

leukocytoplania (lu"ko-si-to-pla'ne-ah) [leukocyte + Gr. πλάνη wandering]. The wandering of leukocytes or their passage through a membrane.

leukocytosis (lu"ko-si-to'sis). A temporary in-

crease in the number of leukocytes in the blood. It occurs normally during digestion and in pregnancy, and is seen as a pathologic condition in inflammation, traumatic anemia, various fevers, etc. absolute 1., increase in the total number of leukocytes in the blood. active 1., one in which the increased leukocytes are capable of spontaneous movement and of active emigration into the blood. agonal 1., leukocytosis occurring just before death. basophilic l., increase of the mastcells in the blood. digestive 1., leukocytosis occurring normally after eating. mononuclear 1., mononucleosis. passive 1., leukocytosis in which the increased leukocytes are not capable of motion and have been washed into the blood by mechanical forces. **pure 1.**, increase of the multinuclear leukocytes of the blood. **relative 1.**, increase in the proportion of any variety of leukocytes in the blood, without increase of the total number of leukocytes. **terminal 1.**, that which occurs in moribund states. **toxic 1.**, leukocytosis occurring in intoxication with blood poisons

leukocytotactic (lu"ko-si-to-tak'tik). Pertaining to or marked by leukotaxis.

leukocytotaxis (lu"ko-si-to-taks'is). Same as leukotaxis.

leukocytotherapy (lu"ko-si-to-ther'ap-e). Treatment by the administration of leukocytes.

leukocytotoxin (lu"ko-si-to-toks'in). A toxin which destroys leukocytes.

leukocytozoa (lu"ko-si-to-zo'ah) [Gr. λευκόs white + κύτοs cell + ζφον animal]. Amebæ said to infest the blood in leukemia.

Leukocytozoön (lu-ko-si-to-zo'on). A genus of sporozoan parasites found in the blood-cells of birds L. danilews'kyi, a species found in the little owl (Glaucidum noctuæ) and in the woodowl (Syrnium aluco). Its invertebrate host is the mosquito, Culex pipens L. maclean'i, a species found in the common pheasant (Phasianus colchicus). L. pal'lidum. See Ross's bodtes, under body L. Sakharot'fi is found in the crow (Corvus cornix). L. smit'hi is found in the domestic turkey (Meleagris gallopavo) L. syphil'idis, a sporogenic occidioial protozoon beleved by McDonough to be the cause of syphilis, the Spirochæta pallida being one stage of its life-cycle.

leukocyturia (lu"ko-si-tu're-ah) [leukocyte + Gr. οὐρον urine]. The discharge of leukocytes in the urine.

leuko-derivative (lu"ko-de-riv'at-iv) Any white derivative from a pigment or coloring-matter.

leukoderma, leukodermia (lu-ko-der'mah, lu-ko-der'me-ah) [Gr. λευκός white + δέρμα skin]. Abnormal whiteness, or albinism, in patches; a congenital lack of normal pigmentation of the skin, especially that which is partial. if acquired, the condition is called vitiligo.

leukodermic, leukodermatous (lu-ko-der'mik, lu-ko-der'mat-us). Pertaining to or exhibiting leukoderma

leukodextrin (lu-ko-deks'trin). A compound formed in the transformation of starch into sugar.

leukodiagnosis (lu"ko-di-ag-no'sis). Diagnosis based on the number, varieties, or specific sensitiveness of leukocytes

leuko-encephalitis (lu"ko-en-sef-al-i'tis) [Gr. λευκός white + ἐγκέφαλος brain]. Forage poisoning; a contagious disease of horses, the lesion of which is softening of the white matter of the brain. It is marked by drowsiness, dimmed vision, unsteady gait, and paralysis of the throat.

leukofermantin (lu-ko-fer-man'tin). A proprietary antiferment used in suppurative conditions to counteract the leukoferment of the pus.

leukoferment (lu-do-fer'ment). A ferment that digests or disintegrates leukocytes.

leukogen (lu'ko-jen). A proprietary vaccine consisting of an emulsion of dead staphylococci.

leukokeratosis (lu"ko-ker-at-o'sis) [Gr. λευκόs white + κέρας horn]. Same as leukoplakia.

leukol, leukolin (lu'kol, lu'ko-lin). Same as quinolin.

leukolysin (lu-kol'is-in). Same as leukocytolysin.

leukolysis (lu-kol'is-is). Same as leukocytolysis.

leukolytic (lu-ko-lit'ik). Pertaining to leukolysis or to a leukolysin.

leukoma (lu-ko'mah) [Gr. λεύκωμα white of egg].

1. Milky-white opacity of the cornea. 2. Leukoplakia buccalis. 1. adhæ'rens, a white tumor of the cornea inclosing a prolapsed adherent iris.

leukomain (lu-ko'ma-in) [Gr. λεύκωμα white of egg] Any one of a large group of basic substances or alkaloids normally present in the tissues which are products of metabolism and are probably excrementitious Some of them, at least, may become toxic, and many are physiologically active. The leukomains are divided into groups (1) the unic-acid group, including adenin, carnin, gerontin, guanin, heteroxanthin, hypoxanthin, paraxanthin, pseudoxanthin, spermin, and xanthin, (2) the creatin group, including amphicreatin, creatin, creatinin, chrysocreatinin, methyl-hydantoin, and xanthocreatinin; and (3) a miscellaneous group, including aromin and others.

leukomainemia (lu"ko-ma-in-e'me-ah) [leuko-main + Gr aἰμα blood]. Excess of leukomains in the blood

leukomainic (lu-ko-ma'ın-ik) Pertaining to, caused by, or characterized by, a leukomain.

leukomatous (lu-ko'mat-us). Affected with or of the nature of leukoma.

leukomonocyte (lu-ko-mo'no-sit) [Gr. λευκόs white + μόνοs single + κύτοs cell}. A lymphocyte

leukomyelitis (lu"ko-mi-el-i'tis) [Gr λευκός white + μυελός marrow + -ιτις inflammation] Inflammation of the white substance of the spinal cord.

leukomyelopathy (lu"ko-mi-el-op ath-e) [Gr. $\lambda \epsilon \nu \kappa \delta s$ white $+ \mu \nu \epsilon \lambda \delta s$ marrow $+ \pi \delta \theta os$ disease]. Any disease of the white substance of the spinal cord.

leukomyoma (lu"ko-mi-o'mah) Same as lipo-myoma

leukonecrosis (lu"ko-nek-ro'sis) [Gr. λευκόs white + νέκρωσις necrosis] Gangrene resulting in the formation of a white slough.

leukonuclein (lu-ko-nu'kle-in). An acid nucleoprotein derivable from nucleohiston when conjugated with histon, it again forms nucleohiston.

leukonychia (lu-ko-nik'e-ah) [Gr. λευκόs white + δυυξ nail] Α whitish discoloration of the nails.

leukopathia, leukopathy (lu-ko-path'e-ah, lu-kop'ath-e) [Gr. $\lambda \epsilon \nu \kappa \delta s$ white $+ \pi \delta \theta s$ illness]. I Same as leukoderma. 2 A disease of the leukocytes or a condition produced by aggregation of dead leukocytes. 1. un'guium. Same as leukonychia.

leukopedesis (lu"ko-pe-di'sis) [leukocyte + Gr. $\pi\eta\delta\hat{a}\nu$ to leap]. Diapedesis of leukocytes through the walls of blood-vessels.

leukopenia (lu-ko-pe'ne-ah) [Gr. λευκός white + πένης poor]. Deficiency in the number of the leukocytes, hypoleukocytosis. malignant l., agranulocytic angina. See under angina.

leukophlegmasia (lu"ko-fleg-ma'ze-ah) [Gr. λευκόs white + phlegmasia] A variety of white, non-dropsical edema. Phlegmasia alba dolens, or milk-leg, is an example of true leukophlegmasia.

leukoplakia (lu-ko-pla'ke-ah) [Gr. λευκός white + πλάξ plate]. A disease marked by the development upon the mucous membrane of the cheeks (l. buccalis), gums, or tongue (l. lingualis) of white, thickened patches which sometimes show a tendency to fissure. It is common in smokers and sometimes tends to malignancy. Called also

leukokeratosis, leukoma, smokers' tongue, smokers' patches, psoriasis buccalis, and psoriasis of the tongue.

leukoplasia (lu-ko-pla'ze-ah). See leukoplakia.

leukoplast (lu'ko-plast). Leukoplastid.

leukoplastid (lu-ko-plas'tid). [Gr. λευκός white + πλάσσειν to form] 'A colorless granule of the plant-cells whence the starch-producing elements are formed.

leukopoiesis (lu"ko-poi-e'sis). Production of leukocytes.

leukopoietic (lu"ko-poi-et'ik) [lcukocyle + Gr. ποιείν to make]. Forming or producing leukocytes.

leukoprecipitin (lu"ko-pre-sip'it-in) A precipipitin specific for leukocytes.

leukoprophylaxis (lu"ko-pro-fil-ak'sis). The increase by artificial means of the number of leukocytes in the blood in order to secure immunity to surgical infection.

leukoprotease (lu-ko-pro'te-ās) An enzyme found in the polynuclear leukocytes which splits up protein.

leukopsin (lu-kop'sin) [Gr λευκόs white + ωψ eye]. Visual white; the colorless matter into which rhodopsin is changed by exposure to white light. It is reconvertible into rhodopsin under proper conditions.

leukorrhagia (lu-ko-ra'je-ah) [Gr λευκός white + -ραγια a breaking out]. Profuse leukorrhea.

leukorrhea, leukorrhœa (lu-kor-c'ah) [Gr λευκόs white + ροία flow]. A whitish, viscid discharge from the vagina and uterine cavity It is symptomatic of congestion of these parts whites. menstrual 1., periodic 1., leukorrhea in place of or along with the menses.

leukorrheal (lu-ko-re'al) Pertaining to or marked by leukorrhea

leukosarcoma (lu"ko-sai-ko'mah) [Gr. λευκόs white + sarcoma] 1. A tumor composed of lymphoid cells which are eventually poured into the blood in such numbers as to constitute a true leukemia (Sternberg). 2. Any colorless or unpigmented sarcoma.

leukosarcomatosis (lu"ko-sar-ko-mat-o'sis). A condition marked by the development or multiple sarcomata composed of leukocytes.

leukoscope (lu'ko-skōp) [Gr. λευκός white + σκοπεῖν to see] An instrument of Helmholtz's, modified by A. Konig, for testing color-blindness.

leukosis (lu-ko'sis). 1 An aggregation of dead or dying leukocytes seeking to escape from the body.2. Leukemia.

leukotactic (lu-ko-tak'tik). Pertaining to leukotaxis, having the power of attracting leukocytes.

leukotaxis (lu-ko-taks'is) [Gr. λευκός white + τάξις arrangement]. The cytotaxis of leukocytes.

leukotherapy (lu-ko-ther'ap-e) [Gr. λευκός white + θεραπεία treatment]. Treatment by the administration of leukocytes.

leukothrombin (lu-ko-throm'bin) [leukocyte + thrombin]. A fibrin factor formed by the leukocytes and existing in the blood, which unites with hepatothrombin to form thrombin.

leukotoxic (lu-ko-tok'sik). Destructive to leukocytes.

leukotoxicity (lu"ko-tok-sis'it-e) Toxicity for leukocytes

leukotoxin (lu-ko-tok'sin) [leukocyte + toxin]. A cytotoxin destructive to the leukocytes.

leukotrichia (lu-ko-trik'e-ah) [Gr λευκός white + θρίξ hair]. Whiteness of the hair. 1. annula'ris, a condition in which the hair is ringed with white.

leukotropen (lu-ko-tro'pen) A combination of atophen and urotrophen used intravenously as an analgesic in inflammatory processes.

650

Buko-urobilin (lu"ko-u-ro-bi'lin) [Gr. λευκός white + urobilin. A product of the decomposition of urobilin said to occur in light-colored stools.

bukoson (lu'ko-zon). An antiseptic mixture of equal parts of calcium perborate and talc.

evaditi's stain (lev-ad-e'tēz) [Constantin Levaditi, contemporary Parisian physician]. See stains, table of.

wator (le-va'tor) [L. "lifter"]. Any raising or lifting muscle. See muscles, table of.

yver, Davy's (le'ver). A piece of wood placed in

the rectum for pressing on an artery and arresting hemorrhage.

pricellular (lev-is-el'u-lar) [L. le'vis smooth + cel'lula cell]. Smooth celled.

wigation (lev-ig-a'shun) [L. læniga're to render smooth]. The grinding to a powder of a hard or moistened substance.

evisticum (le-vis'tik-um). See lovage.

>vo-. A chemical prefix which denotes that the compound is an optical isomer and rotates the plane of polarization to the left.

svocardiogram (le"vo-kar'de-o-gram) [L. lævus left + cardiogram]. That part of the normal cardiogram which represents the action of the left ventricle.

woduction (le-vo-duk'shun). Movement of an eve to the left.

>vogyration (le"vo-ji-ra'shun). A turning toward the left.

Nogyric, levogyrous (le-vo-ji'rik, le-vo-ji'rus) [L. læ'vus left + gyra're to turn]. Rotating the rays of polarized light to the left.

vophobia (lev-o-fo'be-ah) [L. lævus, left + Gr. φόβοs fear]. Dread of objects on the left side of the body.

vorotation (le-vo-ro-ta'shun). A turning to the left.

evorotatory (le-vo-ro'ta-to-re) [L. læ'vus left + rota're to turn]. Rotating polarized light-rays to the left.

yotorsion (le-vo-tor'shun). A twisting to the left. evoversion (le-vo-ver'shun). An act of turning to the left.

evret's forceps, law, etc. (lev-raz') [André Levret, French accoucheur, 1703-1780]. See forceps, law, etc.

vulargyre (lev'u-lar-jIr). A mercurial nucleo-protein extracted from brewers' yeast grown in a mash containing bichlorid of mercury; used in the cutaneous eruptions of syphilis.

svulin (lev'u-lin). A starch-like compound, C₆H₁₀O₅, occurring in certain plant tubers.

evulinic acid (lev-u-lin'ik). See under acid.

svulosan (lev-u-lo'san). A carbohydrate, C₆H₁₀-O₅, obtained by heating levulose.

svulosazone (lev-u-lo'sa-zōn). A phenyl-osazone of levulose identical with glucosazone. methyl-phenyl-levulosazone, under methyl.

5vulose (lev'u-los) [L. la'vus left]. Fruit-sugar; a levogyrous ketchexose, CH₂OH (CHOH)₃CO.-CH₂OH, in the form of a colorless, syrupy liquid, from fruits and honey. It occurs also in the intestines, and is sometimes found in the urine. Ordinary cane-sugar is changed into dextrose and levulose by digestion. Called also fructose.

svulosemia (lev''u-lo-se'me-ah) [levulose + Gr. alµa blood]. The presence of levulose in blood. oυρον urine]. (lev"u-lo-su're-ah) [levulose + Gr.
The occurrence of levulose in urine svuretin (lev-u-re'tin). A preparation from beeryeast: used in skin diseases and in diabetes.

svurin (lev'u-rin). A proprietary extract of yeast: used in furunculosis. Daily dose, 1-2 dr. (4-8 gm.).

winin (lu'in-in) [after Lewin, its discoverer]. A resin from kava a local anesthetic. Called also alpha-kava-resin. Internal dose, 11 gr. (0.097 gm.). lewisite (lew'is-It). A lethal war gas, dichloro-beta-chloro-vinylarsine, ClCH CH AsCl₂.

Lewisohn's method (lew'is-onz) [Richard Lewisohn, contemporary New York surgeon]. See under method.

Lewisonella (lu-is-on-el'ah). A genus of trypanosomes

Lexer's operation (leks'erz) [Erich Lexer, contemporary German surgeon]. See operation.

Leyden jar (li'den). A jar covered with tin-foil for charging it with electricity.

Leyden's ataxia, crystals, disease, etc. (li'denz) [Ernst Victor von Leyden, German physician, 1832-1910]. See ataxia, crystals, disease, etc.

Leyden-Moebius type (li'den-me'be-us). under type.

Leydenia gemmip'ara (li-de'ne-ah). Cells occasionally found in the ascitic fluid in cases of peritoneal cancer which may be body cells rather than parasites.

Leydig's cells, cylinders, duct (li'digz) [Franz von Leydig, German anatomist, 1821-1908]. See under cell, cylinder, duct.

L. F. A. The left fronto-anterior position of the

fetus in utero.

L. F. D. Abbreviation for least fatal dose of a toxin. L. F. P. The left fronto-posterior position of the fetus in utero.

L. F. P. S. Licentiate of the Faculty of Physicians and Surgeons

Li. The symbol of lithium.

lianthral (li-an'thral). A proprietary ointmentbase containing a coal-tar extract and casein.

Lib. Abbreviation for L. li'bra, a pound

libanol (lib'an-ol). The oil of Ce'drus atlan'tica, or satin-wood used in gonorrhea and in bronchitis and tuberculosis along with cod-liver oil. Dose in gonorrhea, 10 c c. (0 6 gm.).

liberomotor (lib"er-o-mo'tor) [L. li'ber free + mo'tor mover]. Pertaining to voluntary and conscious movements or actions.

libidinous (lib-id'in-us) [L. libidino'sus]. Lustful or salacious.

libido (lib-i'do) [L.]. Plural libid'ines. Sexual

libidogen (lib-id'o-jen). A supposed erogenous substance secreted by the testicles.

LiBr. Lithium bromid.

libra (li'brah). Latin for pound and for balance.

libradol (lib'rad-ol). A proprietary non-narcotic anodyne used locally.

Lic. Med. Abbreviation for Licentiate in Medicine. See louse. lice (līs)

lichen (li'ken) [Gr. λειχήν lichen]. 1. Any species or plant of a group believed to be composed of symbiotic algæ and fungi. 2. A papular skin disease of many kinds, but usually synonymous with lichen planus. 1. acumina'tus, a grave form with a papulosquamous eruption. I. a'grius, a severe form of eczema. I. annula'ris, a disease marked by ring-shaped lesions on the fingers. I. circina'tus, tinea tonsurans. I. diabet'ious, xanthoma diabeticum. 1. dissemina'tus, a form with an irregularly placed eruption. 1. ecsemato'des, a papular form of eczema. l. hæmorrhag'icus, a papule at the mouth of a hair-follicle, due to hemorrhage into the skin. l. infan'tum, strophulus. l. i'ris, tinea tonsurans in which there are concentric rings of erythema. 1. liv'idus, acne scorbutica. 1. men'ti, sycosis barbæ. 1. nit'idus, a rare skin disease in which the lesions are small, usually flat, sharp margined papules scarcely raised above the level of the skin, pale red or yellowish brown in color. 1. obtu'sus, lichen planus in which the lesions are rounded. 1. pila'ris, a form which especially affects the hair-follicles; keratosis pilaris. 1. pla'nus, an inflammatory

skin disease with wide, flat papules, often very persistent, and occurring in circumscribed patches.

1. pla'nus ocreafor'mis, a form of lichen planus with a dense assemblage of papules surrounding each leg like a shin-guard (Lieberthal, 1015). 1. ru'ber, a papulosquamous disease with grave constitutional symptoms and sometimes fatal wasting: named from the red color of the eruption. 1. ruber acumina'tus, pityriasis rubra pilaris. 1. ruber monilifor'mis, an eruption of papules in long lines on the extremities. 1. scorbu'ticus, acne scorbutica. 1. scrofulo'sus, a form, consisting of reddish papules, peculiar to persons of a tuberculous diathesis. 1. sim'plex, papular eczema. 1. syphilit'icus, a secondary syphilitic eruption, consisting of a crop of small, pointed papules. 1. trop'-icus. See miliaria. 1. urtica'tus, a papular form of urticaria.

licheniasis (li-ken-i'as-is). The formation or development of lichen.

lichenification (li"ken-if-ik-a'shun). The conversion of an eruption, such as eczema, into a form resembling lichen.

lichenin (li'ken-in). A starchy demulcent polysac-charld, (C₆H₁₀O₆)n, which yields glucose on hydrolysis. It occurs abundantly in Iceland moss, Citraria islandica, and in Irish moss, Chondrus crispus. Called also lichen starch and moss

lichenization (li"ken-iz-a'shun). The development of patches of lichen.

lichenoid (li'ken-oid) [Gr. λειχήν lichen + είδος form]. 1. Resembling the disease called lichen. 2. A disease of the tongues of young children, consisting of whitish patches surrounded by yellow rings.

Lichtheim's sign (lisht'himz) [Ludwig Lichtheim, German physician, 1845-1915]. See sign.

Lichthei'mia corymbif'era. A genus of the Mucoraceæ. It is pathogenic for rabbits and has been found in man in mycosis of the lungs, ear, and

Li₂CO₃. Lithium carbonate.

licorice, liquorice (lik'or-is). See Glycyrrhiza. Russian I., Glycyrrhiza glabra glandulifera. Spanish I., Glycyrrhiza glabra typica.

Lieben's test (le'benz) [Adolf Lieben, Austrian chemist, 1836-1914]. See under tests.

lieberkühn (le'ber-ken) An apparatus attached to the microscope for the purpose of concentrating a ray of light upon a field.

Lieberkühn's crypts, etc. (le'ber-kēnz) [Johann Nathanael Lieberkuhn, German anatomist, 1711-1765]. See crypts, etc.

Liebermann's test (le'ber-mahnz) [Leo von Szentlorincz Liebermann, Hungarian physician, 1852–1926]. See under tests.

Liebermeister's rule (le'ber-mīs-terz) [Carl von Liebermeister, German physician, 1833-1901]. See rule.

Liebig's extract, test, theory (le'bigz) [Baron Justus von *Liebig*, German chemist, 1803–1873]. See under extract, tests, and theory.

lien (li'en). [B N A] Latin for spleen. 1. accesso'rius [B N A], an accessory spleen.

lienadin (li-en'ad-in) [L. li'en spleen + Gr. άδήν gland]. A proprietary remedy made from the spleen; linaden. used in leukemia.

lienal (li'en-al). Pertaining to the spleen.

lienculus (li-en'ku-lus). An accessory spleen.

lienitis (li-en-i'tis) [L. li'en spleen + -itis inflammation]. Inflammation of the spleen; splenitis.

lienocele (li-e'no-sēl) [L. li'en spleen + Gr. κήλη hernia]. Hernia of the spleen.

lienomalacia (li"en-o-mal-a'se-ah). Same as splenomalacia.

lienomedullary (li"en-o-med'u-la-re). Pertaining to the spleen and the bone-marrow.

lienomyelogenous (li"en-o-mi-el-oj'en-us) [L. li'en spleen + Gr. μυελός marrow + γεννῶν to produce]. Originating in the spleen and the bone-marrow.

enomyelomalacia (li"en-o-mi"el-o-mal-a'se-ah) [L. li'en spleen + Gr. μυελός marrow + μαλακία softness]. Softening of the spleen and lienomyelomalacia bone-marrow.

lienopancreatic (li"en-o-pan-kre-at'ik). necting the spleen and pancreas.

lienorenal (li"cn-o-re'nal). spleen and the kidney. Pertaining to the

lienotoxin (li"en-o-tok'sin) [L. li'en spleen + toxin]. Splenotoxin.

lienteric (li-en-ter'ik). Affected by or of the nature of a lientery.

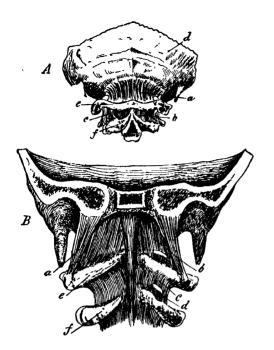

lientery (li'en-ter-e) [Gr. λειεντερία; λείος smooth + ἔντερον intestine]. Diarrhea in which the stools contain undigested food.

lienunculus (li-en-ung'ku-lus). A detached mass or exclave of splenic tissue.

Lieutaud's body, sinus, uvula, etc. (lu-toz')
[Joseph Lieutaud, French physician, 1703-1780].
See body, sinus, uvula, etc.

life (Iff) [L. vi'ta; Gr. βlos or ζωή]. The aggregate of vital phenomena; a certain peculiar stimulated condition of organized matter; that obscure principle whereby organized beings are peculiarly endowed with certain powers and functions not associated with morganic matter. animal 1., vegetative life conjoined with the employment of the senses and with spontaneous move-ments intellectual 1., mental 1., psychic 1., that which is attended by conscious exercise of feelings, impulses, and will, and by reason. vegetative 1., that which is manifested in automatic acts requisite for the maintenance of the existence of the individual and the propagation of the species.

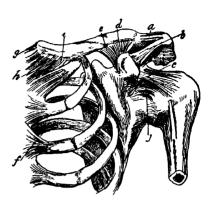

ligament (lig'am-ent) [L. ligamen'tum; lig'are to Any tough, fibrous band which connects bind]. bones or supports viscera. Some of the ligaments are distinct fibrous structures; others are folds of fascia or of indurated peritoneum, still others are the relics of disused fetal organs. cessory 1., any ligament which strengthens or supports another. acromicclavicular 1., a ligament extending from the clavicle to the acromial process of the scapula. acromiocoracoid l., a ligament from the acromion to the coracoid process, covering over the head of the humerus. adipose 1., a fatty and mucous fold of the synovial membrane of the knee-joint. alar l's. 1. Same as odontoid l's. 2. The two folds of synovial membrane on each side of the adipose ligament Barnes's 1. Same as Hey's 1. annular 1., any ring-shaped ligament, as of the wrist or ankle. anococcygeal 1., a fibrous band between the external anal sphincter and the tip of the coccyx. apical odontoid 1. See odontoid 1's. appendiculo-ovarian 1., a fold of mesentery extending between the appendix and the broad ligament. Arantius's 1., the remains of the ductus venosus of the fetus. arcuate 1. 1. One of the arched ligaments which connect the diaphragm with the lowest ribs and the first lumbar vertebra. inferior pubic ligament. arcuate popliteal 1. See popliteal l's. Arnold's 1., the suspensory ligament which connects the incus with the roof of the middle ear. arysantorinian l's, the bands of ligament joining the arytenoid cartilages and the cornicula laryngis. astra, localcaneal l's, the ligaments joining astragalus to the os calcis. astragalonavicu astragathe astragalus to the os calcis. astragalonavicular 1., a ligament joining the head of the astragalus to the upper surface of the scaphoid bone. atloaxoid 1., a band that connects the atlas and the axis. atlo-occipital 1., one that connects the atlas to the occipital bone. auricular l's, three ligaments which unite the external ear to the side of

THE CRANIOVERTEBRAL LIGAMENTS.

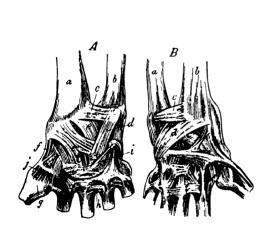

A, posterior view \cdot a, posterior occipito-atlantal ligament, δ , posterior atlanto-axial ligament, c, capsular ligament, d, posterior surface of occipital bone, e, posterior arch of atlas, f, lamina of axis

B, anterior view a, lateral occipito-atlantal ligament, b, anterior occipito-atlantal ligament, c, anterior atlanto-axial ligament; d, capsular ligament, e, atlas, f, axis.

LIGAMENTS OF THE SHOULDER.

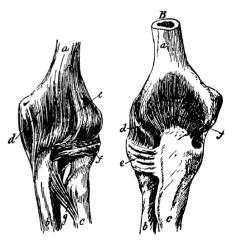

a, superior acromioclavicular ligament, b, coraco-acromial ligament, c, coraco-humeral ligament; d, transverse ligament, e, coraco-clavicular ligament, f, anterior costosternal ligament, g, interclavicular ligament, h, anterior sternoclavicular ligament, f, costoclavicular ligament, f, capsular l

LIGAMENTS OF THE WRIST-JOINT.

A, anterior aspect: a, radius. b, ulna, c, anterior radioulnar ligament: d, internal lateral ligament. e, anterior ligaments. f, external lateral ligaments. g, first metacarpal bone: b, palmar ligaments. f, palmar carpal ligaments, f, capsular ligament

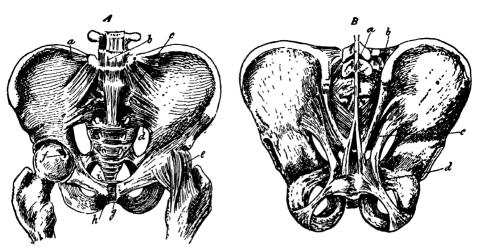

B, dorsal aspect. a, uina. b, radius. c, posterior radioulnar ligaments d, posterior ligament.

LIGAMENTS OF THE EIBOW-JOINT.

A, anterior aspect a, humerus, b, ulna, ϵ , radius; d, internal lateral ligament. ϵ , anterior ligament; f, orbicular ligament, g, oblique ligament.

B, posterior aspect a, humerus; b, radius; c, ulna, d, external lateral ligament . e, orbicular ligament, f, posterior ligament.

LIGAMENIS OF THE PELVIS.

A, anterior aspect a, lumbo-iliac ligament, b, anterior common ligament, c, lumbosacral ligament; d, anterior sacro-iliac; e, capsular ligament, f, ligamentum teres; g, subpubic ligament, h, anterior pubic ligament; t, superior pubic ligament.

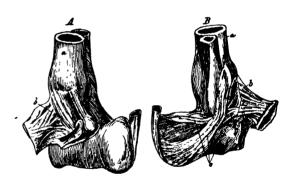

B, posterior aspect a, supraspinous ligament, b, posterior sacro-iliac ligament; ι, great sacrosciatic ligament, d, lesser sacrosciatic ligament

LIGAMENTS OF THE KNEE-JOINI

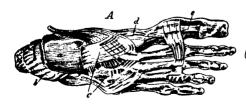

A, anterior aspect a, femur, b, ligamentum patellæ, c, internal lateral ligament, d, external lateral ligament.

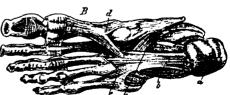

B, posterior aspect a, femur, b, posterior ligament, c, internal lateral ligament, d, external lateral ligament of peroneotibial articulation, f, interosseous ligament.

LIGAMENIS OF THE ANKIR-JOINT

A, internal aspect · a, tibia , b, internal lateral ligament. B, external aspect · a, tibia , b, anterior ligament; c, external lateral ligament.

LIGAMENTS OF THE FOOT.

A, dorsal aspect a, astragalus, b, calcaneo-astragaloid ligaments; c, dorsal ligaments of tarsus; d, tarsometatarsal ligaments, c, transverse ligaments.

B, plantar aspect a, os calcis, b, greater calcaneocuboid ligament; c, deep calcaneocuboid ligament; d, inferior tarsometatarsal ligament, c, tarsometatarsal ligaments.

the head. Bardinet's 1., the posterior portion of the internal lateral ligament of the elbow. kow's 1., the anterior and posterior ligaments of the elbow-joint. Bellini's 1., a band goon the endow-joint. Bestimis 1., a band going from the capsule of the hip-joint to the tro-chanter major. Béraud's 1., the suspensory liga-ment of the pericardium, extending to the third and fourth vertebræ. Bertin's 1., Bigelow's 1., the iliofemoral ligament. Bichat's 1., the ver bundle of the posterior sacro-iliac ligament. bifurcate 1., one of the dorsal tarsal ligaments connecting the antero-internal angle of the calcaneus with the dorsal surfaces of the cuboid bones. Borgery's 1., the oblique popliteal ligament. Botal's 1., the persistent remains of the ductus arteriosus. brachiocubital 1., the internal lateral ligament of the elbow-joint. the internal lateral ligament of the elbow-joint. brachioradial 1., the external lateral ligament of the elbow-joint. broad 1. 1. The peritoneal fold which supports the uterus on either side. 2. The suspensory ligament of the liver. 3 Same as ligamentum latum pulmonis. Brodie's 1., the transverse humeral ligament. Burns's 1., the falciform process of the fascia lata. calcaneo-astragaloid 1's (external, posterior, and interosseous), three ligaments which connect the calcaneum and astralagus. calcaneo-cuboid 1's (long, short, inferior, and superior), four ligaments which unite the calcaneum and cuboid bones to one another. calcaneofibular 1., connects the calcaneum to the fibula, the external lateral ligament of the ankle calcaneonaviculateral ligament of the ankle calcaneonavicu-lar 1., calcaneoscaphoid 1's (superior and inferior), two ligaments which connect the calcaneum and scaphoid bones. calcaneotibial 1., joins the calcaneum to the tibia; the deltoid ligament of the ankle. Caldani's 1., a band going from the inner border of the coracoid process to the lower border of the clavicle, the first rib, and the tendon of the subclavius. Camper's 1., the deep perineal fascia. canthal l's, the external and internal palpebral ligaments. capitular 1's, two ligaments reinforcing the tibiofibular articulation anteriorly and posteriorly. capsular 1., the tough fibrous sac that surrounds every joint. The inner surface is lined with synovial membrane. Carcassonne's 1., the triangular ligament of the urethra. cardinal 1., any one of a number of fibrous bands extending through the base of the broad ligament of the uterus. carpometacarpal l's, the ligaments joining the carpal and metacarpal bones. contral

1. Same as filum terminale. corvical 1's, two
ligaments—the anterior connecting the occipital
bone with the bodies of the cervical vertebræ; the posterior being the ligamentum nuchæ. checkl's, the odontoid ligaments. chondroxiphoid l's, fibrous bands extending upward and outward from the anterior and posterior surfaces of the xiphoid cartilage to the corresponding surfaces of the seventh costal cartilage. ciliary 1., the structure which joins the iris to the corneosclera. Clado's 1., the appendiculo-ovarian ligament. Cloquet's 1., Haller's habenula: the peristent relic of a fetal canal connecting the tunica vaginalis with the peritoneal cavity. Colles's 1., a portion of the aponeurosis of the external to the linea alba. conoid 1., the inner part of the coracoclavicular ligament. Cooper's 1. 1. A fold of the fascia transversalis attached to the iliopectineal eminence and spine of the pubis. 2. A set of arciform fibers connecting the base of the olecranon with the coronoid process on the inner aspect of the elbow-joint. Cooper's suspensory l's, fibrous processes connecting the external capsule of the mammary gland with the skin. coraco-acromial 1., a triangular ligament from the tip of the acromial process to the outer surface of the coracoid process of the scapula. coraco-clavicular 1., one connecting the clavicle to the coracoid process. coracohumeral 1., a ligament connecting the coracoid process of the scapula

and the upper posterior part of the capsule of the shoulder-joint and the upper part of the humerus. coracoid 1., a ligament extending from the coracoid process to the suprascapular notch, forming the scapular foramen. corniculopharyngeal 1. Same as jugal 1. coronary 1. 1. A peritoneal fold extending from the posterior border of the liver to the diaphragm. 2. Ligamentous fibers binding the semilunar cartilages to the head of the costocentral 1., the ligament of the radius. costocentral 1., the ligament fastening the head of a rib to the body of a vertebra. costoclavicular 1. Same as rhomboid 1. costocolic 1., a fold that attaches the spleen to the diaphragm. tocoracoid 1., a ligament that attaches the first rib to the coracoid process. **costopericardiac**1., a ligament joining the upper costosternal articulation with the pericardium. **costosternal**1., a ligament binding the edges of the cartilages of the true ribs to the sternum. costotransverse 1., one of the ligaments joining the ribs to the adjacent transverse processes of the dorsal vertebræ. costovertebral l's, the ligaments which bind the ribs to the adjacent vertebra costoxiphoid 1., a ligament joining the cartilages of the sixth and seventh ribs to the xiphoid cartilage cotyloid 1., a ring at the margin of the acetabulum. Cowper's 1., that part of the fascia lata which is attached to the crest of the pubes. **crico-santor-inian** 1. Same as jugal 1. **crucial l's**, two ligaments (anterior and posterior) of the knee, connecting the femur and tibia and crossing each other somewhat like the letter X cruciate 1. 1. A ligament of the atlanto-odontoid articulation. The anterior annular ligament of the foot cruciform 1., the transverse ligament of the atlantoaxoid joint crural 1. Same as Poupart's 1. Cruveilhier's 1's. Same as glenoid 1. (2d def) cuboideonavicular 1., a ligament connecting the cuboid and navicular bones cuneocuboid 1., a ligament connecting the external cuneiform and cuboid bones. cutaneophalan-geal l's, ligamentous fibers from the sides of the phalanges near the joints to the skin. cysticoduodenal 1., a fold of peritoneum extending between the gall-bladder and the duo-denum. It occurs as an anomaly. deltoid 1., the internal lateral ilgament of the ankle-joint. **Denonvillier's 1.,** the puboprostatic ligament. dentate 1. See ligamentum denticulatum. Denucé's 1., a short and wide band connecting the radius and ulna at the wrist. Douglas's l's, the peritoneal folds which limit Doug-las' culdesac. duodenorenal l., a fold of peri-toneum between the upper layer of the transverse mesocolon and the posterior parietal layer. Ellis's 1., that portion of the rectovesical fascia which extends to the sides of the rectum. epihyal 1., a ligament between the styloid process of the temporal bone and lesser horn of the hyoid bone. falciform 1., the broad ligament of the liver. fallopian 1., the round ligament of the uterus. false 1., any suspensory ligament that is a peritoneal fold and not of true ligamentous struc-Ferrein's 1., the thick external part of the capsule of the temporomaxillary joint. Flood's 1., one of the three glenohumeral ligaments. fundiform 1., a portion of the anterior annular ligament of the ankle, forming a loop around the extensor longus digitorum and the peroneus tertius. gastrocolic 1., the fold of great omentum attached to the stomach and the colon. gastrohepatic 1., the fold of great omentum attached to the stomach and the liver. gastrolienal 1., the gastrosplenic omentum. gastropancreatic 1., a fold of peritoneum extending from the pancreas to the pyloric end of the stomach gastrophrenic 1. a peritoneal fold connecting the cardiac end of the stomach to the diaphragm. gastrosplenic 1., a fold of peritoneum joining the culdesac of the stomach and the hilum of the spleen. Gerdy's 1., the suspensory ligament of the axilla, from the coracoid process to the skin around the axilla.

Gimbernat's 1., the triangular expanse of the aponeurosis of the external oblique muscle, anteriorly joined to Poupart's ligament and going to the iliopectineal line. glenohumeral l's, threeligaments that strengthen the capsule of the shoulder. glenoid 1. 1. A ring of fibrocartilage connected with the rim of the glenoid fossa. 2. The anterior ligament of the metacarpophalangeal joint. glosso-epiglottic 1., a band of ligament of the metacarpophalangeal joint. ment from the base of the tongue to the epiglottis. Guenz's 1., the upper and inner wall of the canal which transmits the obturator nerve and vessels. hamatometacarpal 1., a ligament connecting the hamulus of the uncoform bone with the base of the fifth metacarpal. **Helmholts's 1.**, that part of the anterior ligament of the malleus which is attached to the greater tympanic spine. Henle's 1., the inner portion of the conjoined tendon, attached mainly to the sheath of the rectus muscle. **Hensing's 1.**, a small serous fold from the upper end of the descending colon to the abdominal wall; the left superior colic ligament hepatic l's, folds of peritoneum extending from the liver to adjacent parts. hepatocolic l'a, folds of peritoneum from the liver to the colon. hepatoduodenal 1., the free edge of the gastrohepatic omentum on the right side. hepatorenal 1., a omentum on the right side. hepatorenal 1., a fold of peritoneum extending from the liver to the right kidney. Hesselbach's 1., the interfoveolar ligament. Hey's 1., the falciform process of the fascia lata. Hueck's 1., the pectinate ligament. Hunter's 1., the round ligament of the uterus. See round 1. (4). Huschke's 1., a fold of peritoneum from the upper part of the lesser curvature of the stomach to the anterior surface of the pancreas. iliofemoral 1., a strong ligament of the hip-joint, extending from the ilium to the lesser trochanter. iliolumbar 1., the thick the lesser trochanter. iliolumbar 1., the thick anterior border of the lumbar fascia running from the tip of the transverse process of the last lumbar vertebra to the inner edge of the iliac crest. iliopectineal 1., the line of attachment of the illac fascia to the iliopectineal eminence. iliopubic 1., Poupart's ligament. iliotrochanteric 1., a portion of the capsular ligament of the hip-joint. infundibulopelvic 1., the upper free edge of the broad ligament, with the attached fibrous tissue which carries the ovarian vessels to the ovary: called also suspensory 1. of ovary. inguinal 1., Poupart's ligament. interarticular 1., any ligament stirted within the capsula of init. ment situated within the capsule of a joint. interclavicular 1., joins the two clavicles to each other and to the sternum intercuneiform l's, fibrous bands joining the cuneiform bones of the tarsus interfoveolar 1., a part of the conjoined tendon, a thin band going from the posterior surface of the fascia transversalis to Gimbernat's ligament and the pubic bone interspinous l's, fibrous bands extending obliquely from the under surface of the spinous process of one vertebra downward and backward to the upper surface of the spinous process of the vertebra below. interureteral 1., a transverse band or fold of mucous membrane extending between the orifices of the ureters. ischiocapsular l., ischiofemoral l., a ligament of the hip-joint extending from the base a figament of the fip-joint extending from the base of the great trochanter on its posterior aspect to the tuberosity of the ischium. **ischioprostatic 1.**, the deep perineal fascia. **jugal 1.**, one of the ligaments that join the cartilages of Santorini and the cricoid cartilage. **Krause's 1.**, the transverse ligament of the pelvis. **laciniate 1.**, the internal annular ligament of the ankle; a band of ligament from the internal mallealing to the inte from the internal malleolus to the inner and upper edge of the os calcis. lacunal 1., Gimbernat's ligament. lambdoid 1. Same as fundiform 1. lateral 1., a peritoneal fold, one on either side of the liver, joining it to the diaphragm. lateral 1., external. 1. A ligament between the external malleolus and the calcaneum. 2. A ligament be-tween the scaphoid bone and the styloid process of the radius. 3. A ligament from the annular liga-ment of the radius to the external condyle of the

humerus. 4. A ligament from the lower edge of the zygoma to the outer surface of the neck of the inferior maxilla. 5. A ligament between the head of the fibula and the internal condyle of the tibia. lateral 1., internal. 1. A ligament between the internal malleolus, the astragalus, calcaneum, and scaphoid. 2. A ligament joining the styloid process of the ulna, the pisiform bone, and the anterior annular ligament. 3. A ligament from the coronoid process of the ulna and the inner edge of the sigmoid fossa to the internal condyle of the humerus. 4. A ligament between the internal condyle and shaft of the tibia. 5. A ligament from the internal condyle and shaft of the tibia. 5. A ligament from the inferior maxilla to the spinous process of the sphenoid bone. Lauth's 1., the transverse ligament of the atlas. Lisfranc's 1., a fibrous band running from the lower external surface of the first cuneiform bone to the internal surface of the base of the second metatarsal bone. Lockwood's 1., the suspensory ligament of the globe of the eye, connecting Tenon's capsule and the orbit on either side. longitudinal l's, two ligaments, an anterior, attached to the anterior surfaces of the bodies of the vertebræ, and a posterior, attached to the posterior surfaces of the vertebral bodies within the spinal canal. lumbocostal 1., the external arcuate ligament. Luschka's 1., a band extending between the anterior surface of the per cardium and the posterior surface of the sternum. Mackenrodt's 1's, the lateral cervicopelvic or uterosacral ligaments. Mauchart's l's, the lateral odontoid or cheek ligaments. Mayer's 1., the ligaments on the floor of the carpal canal connecting one of the bones of the carpus. Meckel's 1., Meckel's band. mesenteriomesocolic 1. See mesenteriomesocolic fold, under fold. metacarpal 1., a ligament joining the lower ends of the last four metacarpals. oblique popliteal 1. See popliteal l's. odontoid l's, three ligaments which connect the atlas to the skull. The middle one is the apical odontoid ligament, and runs from the tip of the odontoid process to the margin of the occipital bone. The two lateral ligaments, the alar odontoid ligaments, pass obliquely upward toward the inner margins of the condyles of the occipital bone. orbicular 1., the ligament which surrounds the neck of the radius. palpebral 1's, the two ligaments at the outer and inner angles of the eye, furnishing attachment for the orbicularis palpebrarum muscle. pancreaticosplenic I., a fold of peritoneum extending from the pancreas to the spleen. patellar I., the outward continuation of the tendon of the quadriceps cruris muscle, extending from the tip of the patella to the tuberosity of the tibia. pectinate l's, bands of elastic tissue connecting the cornea and the adjacent borders of the iris. **Petit's 1.**, the ligamentous back and sides of Douglas' culdesac. **phre**nocolic 1. Same as costocolic l. phrenogastric 1., a fold of peritoneum extending from the diaphragm to the fundus of the stomach. phrenosplenic 1., a fold of peritoneum extending from the diaphragm to the spleen. pisohamate 1., a ligament from the pisiform bone to the hamulus of the unciform bone. pisometacarpal 1., a ligament from the pisiform bone to the fifth metacarpal bone. popliteal l's, two ligaments at the posterior wall of the knee-joint. The oblique popliteal ligament runs obliquely from below upward, and from within outward on the posterior surface of the capsular ligament. The arcuate popliteal ligament passes in a curved manner above the tendon of the popliteus muscle, the concavity of the curve being directed upward. Poupart's 1., the lower border of the aponeurosis of the external oblique muscle, between the anterior spine of the ilium and the spine of the pubes. Called also ligamentum inguinale (B. N. A). pterygomaxillary 1., connects the apex of the internal pterygoid plate and the posterior end of the oblique line of the lower jaw. pterygospin656

ous 1., a ligament passing from the spine of the sphenoid bone to the upper end of the outer plate of the pterygoid process. **puble l's**, three ligaments (anterior, posterior, and superior) of the symphysis pubis. **pubocapsular l.**, a ligament of the hip-joint arising from the horizontal ramus of the pubis and passing across the inner and posterior portion of the articular capsule toward the lesser trochanter of the femur. puboprostatic 1., pubovesical 1., a ligament extending from the symphysis pubis to the neck of the bladder on either side. radiate 1. Same as stellate 1. radiocarpal l's, two ligaments, a dorsal and volar, from the lower end of the radius to the first row of carpal bones. reinforcing l's, ligaments which serve to reinforce joint capsules. Retzius's l., the fundiform ligament. rhomboid 1. Connects the cartilage of the first rib to the under surface of the clavicle. 2. A ligament from the lower end of the radius to the unciform and cuneiround 1. 1 See ligamentum teres. form bones 2. A fibrous cord which represents the umbilical vein and runs from the navel to the anterior border of the liver. 3. One of the ligaments of the radio-ulnar articulation. 4. Either one of two cords from the cornua of the uterus to the mons veneris. sacrococygeal l's, ligaments connecting the apex of the sacrum and the first coccy-geal vertebra. sacro-iliac 1., oblique, a fasciculus connecting the posterior superior spine of the ilium with the third transverse tubercle on the posterior surface of the sacrum. sacrosciatic 1., two ligaments (the great, or posterior, and lesser, or anterior) from the sacrum to the ischium. sacrospinous 1., the lesser sacrosciatic ligament.
sacrotuberous 1., the great sacrosciatic ligament.
Sappey's 1., the thicker posterior part of the capsule of the temporomandibular joint. Sommering's 1., the suspensory ligament of the lacrimal gland. sphenomandibular 1., the internal lateral ligament splenophrenic 1., sphenomandibular 1., the the peritoneal fold which suspends the spleen, connecting it with the diaphragm spring 1., the inferior calcaneoscaphoid ligament, so called bestapedial 1., the annular ligament of the stapes.

stellate 1., a radiate structure strengthening the costovertebral joints anteriorly.

sternoclavicular 1., the capsular ligament at the junction of the sternum and clavicle. sternocostal 1., any one of the ligaments connecting the rib cartilages and the sternum. sternopericardiac 1's, bands connecting the sternum and the pericardium. **stylohyoid 1**., a fibrous cord from the styloid process to the lesser cornu of the hyoid bone. stylomandibular 1., stylomaxillary 1., extends from the styloid process to the ramus of the lower jaw. subflavous 1., a yellowish ligament between the laminæ of a vertebra. supraspinous 1., the ligament connecting the apices of the spinous processes of the vertebræ suspensory 1. 1. The zonule of Zinn 2. Any peritoneal or other fold that serves to hold a viscus or ossicle in its place sutural 1., a band of fibrous tissue between the opposed bones of a suture or immovable joint. synovial 1., a large synovial fold. talocalcaneal 1's. Same as calcaneo-astragaloid 1's. talofibular 1's, fibers from the external lateral ligaments of the ankle, extending between the fibula and the astragalus. talotibial l's, two ligaments from the neck of the tibia (astragalus) forming part of the deltoid ligament of the anklejoint. tarsal 1., the fibrous membrane of the eyelids. tarsometatarsall's, ligaments connecting the tarsal and metatarsal bones. temporomandibular 1., the external lateral ligament of the jaw. tendinotrochanteric 1., a band from the upper margin of the capsule of the hip-point, binding down the tendon of the gluteus minimus. tensor 1., Toynbee's 1., the anterior ligament nalleus: the so-called tensor tympani Teutleben's l's, lateral folds joining of the malleus: muscle. the pericardium and diaphragm. tibionavicular 1., a ligament forming part of the deltoid ligament of the ankle-joint. transverse 1., the name of various ligaments, as of the atlas, knee, hip, and scapula. **trapezoid** 1., the forward and outward part of the coracoclavicular ligament. 1. of **Treitz**. See muscle of Treitz, under muscle. triangular 1., the name of various ligaments, as of the urethra, tympanic bones, uterus, and vertebræ. **Tuffler's inferior 1.**, that part of the mesentery which is connected with the wall of the iliac fossa. utero-ovarian l's, short round cords continuous with the external fibers of the uterus at the superior angle of that organ, and extending to the inner end and edge of each ovary. Called also *l's of the ovaries*. uteropelvic l's, expansions of muscular tissue in the broad ligament, radiating from the fascia over the obturator internus to the sides of the uterus and the vagina. uterorectosacral l's, peritoneal folds which reach from the posterior attachment of the vagina and cervix to the peritoneum which overlies the sacrum they surround the rectum vaginal 1. 1. A fibrous band which maintains a tendon-sheath in position. 2. A fibrous sheath sometimes occurring in the inguinal canal. Valsalva's 1., a ligament connecting the pinna of the ear to the temporal bone. ventricu thyro-arytenoid ligament. ventricular 1., the superior vertebropleural 1. See Sibson's aponeurosis, under aponeurosis.

Vesalius's 1., Poupart's ligament. vesicoumbilical 1. Same as urachus vesicouterine 1., extends from the anterior aspect of the uterus to the bladder. vocal 1., the inferior thyro-arytenoid ligament. Walther's oblique 1., the posterior astragalofibular ligament brecht's 1., a fibrous band connecting the outer portion of the coronoid process to the inner edge of the neck of the radius. Winslow's 1., the posterior ligament of the knee. Wrisberg's 1., the ligament of the lateral meniscus Y-1., the iliofemoral ligament. Zaglas's 1., the oblique sacro-iliac ligament. Zinn's 1., the annular ligament of origin common to the recti muscles of the eye, attached to the edge of the optic foramen and the inner part of the sphenoid fissure Called also annulus tendineus communis, annulus zinnu, and tendon of Zinn

ligamentopexis (lig-a-men-to-peks'is) [ligament + Gr. $\pi \hat{\eta} \xi_{is}$ fixation]. Ventrosuspension by suturing the round ligaments to the uterus.

ligamentopexy (lig-am-en-to-pek'se). Same as ligamento pexis.

ligamentous (lig-am-en'tus). Pertaining to or of the nature of a ligament.

ligamentum (lig-am-en'tum), pl. ligamen'ta [L.].
A ligament 1. ala'ria. 1 [B N A] Same as
odontord ligaments 2. Two wing-like fringes attached to the ligamentum mucosum of the kneejoint. 1. annula're, the upper band of the anterior annular ligament of the ankle 1. annula're ra'dii [B N A], the ligament encircling the head of the radius 1. a'picis den'tis [B N A], the apical odontoid ligament 1. arcua'tum exter'num, the thickened upper margin of the anterior lamella of the lumbar fascia. 1. arcua'tum inter'num, a tendinous arch across the upper part of the psoas magnus muscle on each side of the vertebral column. 1. arterio'sum [B N A]. the remains of the ductus arteriosus 1. car'pi dorsa'li, the annular ligament of the radius 1. collatera'le fibula're [B N A], the external lateral ligament of the knee-joint. 1. collatera'le radia'le [B N A], the external lateral ligament of the elbow 1. collatera'le tibia'le [B N A], the internal lateral ligament of the knee 1. collatera'le ulna're [B N A], the internal lateral ligament of the elbow 1. crucia'tum, 1. cru'cis, the lower, Y-shaped part of the anterior annular ligament of the ankle. 1. denticula'tum [B N A], a structure formed of processes of the pia crossing the subdural space on each side of the spinal cord 1. falcifor'me hep'atis [BNA],

the suspensory ligament of the liver. 1. fla'va IB N A]. See l. subflava. 1. inguina'le [B N A]. Same as Poupart's ligament. See ligament. 1. inguina'le reflex'um [B N A], the triangular fascia of the abdomen. 1. interfoveola're [B N A]. A], Hesselbach's ligament. 1. lacinia'tum [B N A], the internal annular ligament of the leg. 1. lacuna're [B N A], Gimbernat's ligament. 1. la'tum pulmo'nis, a vertical pleural fold on each side of the mediastinum, attaching the lower part of the lung to the vertebral column. 1. longitudina le [B N A], the longitudinal ligament. 1. muco'sum, a synovial fold in the knee-joint. See plica synovialis patellaris. 1. natato'rium, the transverse fibers of fascia in the webs of the fingers. 1. nu'chæ [B N A], a tough band at the fingers. nape of the neck, uniting the two trapezius muscles.

1. patel'lee [B N A], the ligament which connects the patella to the tibia. 1. pectina'tum i'ridis [B N A], a reticular structure that attaches the circumference of the iris to the cornea. 1. radia'tum, the palmar ligament of the intercarpal joint. 1. sacrospino'sum [B N A], sacro-cocygeal ligament.
1. sacrospino'sum [B N A], sacro-iliac ligaments.
1. sacrospino'sum [B N A], sacrospino'sum [B N A nous ligament. 1. sacrotubero'sum [B N A], the great sacrosciatic ligament. 1. spira'le, the outer attachment of the basilar membrane of the cochlea 1. subfla'va, ligamentous bands of yellow elastic tissue which connect the laminæ of contiguous vertebræ. 1. suspenso'rium, a strong fibrocartilaginous cord between the check-ligaments and the margin of the foramen magnum. 1. suspenso'rium mam'mæ, a fibrous process from the superficial fascia of the thorax to the nipple and integument of the mamma. 1. to'res, the cylindric ligament of the hip-joint See also ligament, round. 1. ve'næ ca'væ sinis'træ [B N A], the vestigial fold of Marshall. 1. veno'sum [B N A], ligament of Arantius. 1. ventricula're [B N A], the superior thyro-arytenoid ligament. 1. voca'le [B N Al, the inferior thyro-arytenoid ligament.

ligate (li'gāt). To tie or bind with a ligature.

ligatight (lig'at-it). A naprapathic term for a shrunken condition of the connective tissue of a ligament.

Ligat's test (lig'ats) [David *Ligat*, contemporary English surgeon]. See under *tests*.

ligation (li-ga'shun) [L liga'tio]. The application of a ligature. distal l., ligation of an artery on the side of an aneurysm farthest from the heart. immediate l., ligation of an artery directly around the artery without including any of the surrounding tissues mediate l., ligation of an artery, including also some of the surrounding tissue. pole l., ligation of both poles of the thyroid gland for the purpose of limiting the amount of blood to and from the gland. employed in Basedow's disease. proximal l., ligation of an artery on the side of an aneurysm nearest the heart.

ligator (li'ga-tor). An instrument used in ligating in parts that are not easily accessible.

ligature (lig'at-ūr) [L. ligatu'ra]. 1. A thread or wire for tying a vessel or strangulating a part. 2. The act of ligation. 3. In orthodontia, a string or wire used to fasten a tooth to an orthodontic appliance or to another tooth. chain-1., a kind of ligature used in tying an ovarian pedicle in several places. On making it a long thread is carried through the pedicle in one place, and is seized with a pressure forceps. Next the long end of the same thread is carried through in one or more places and loops secured in the same way. When all are in place, the loops are cut, one after another, near the forceps, and the halves crossed or tied, so that finally the whole mass to be ligated is inclosed in threads forming a chain. Désault's 1., ligation of the femoral artery as it passes through the adductor muscle done for popliteal aneurysm. double 1., the ligation of an artery at two places and division between them. elastic 1., a band of

caoutchouc used to strangulate hemorrhoids and pedunculated growths. Erichsen's 1., a double thread of white and black for ligating nevi. intermittent 1., a tourniquet applied to interrupt the blood-current, but occasionally relaxed to re-new the circulation. kangaroo 1., the prepared tendon of a kangaroo's tail: used as a ligature. lateral 1., a ligature so applied as to check, but not to interrupt, the blood-current. McGraw's elastic 1., a ligature used in performing intestinal anastomosis. occluding 1., a ligature which includes every blood-channel leading to the distal tissue. provisional 1., one applied at the beginning of an operation, but removed before its close. **solu-ble 1.**, a ligature of fresh animal membrane applied with a view to its ultimate absorption or incorporation with the tissues. 1. of Stannius (1852), a ligature tied around a frog's heart, between the sinus venosus and the auricle. It causes the auricle and ventricle to cease beating. suboccluding 1., a ligature which obstructs the main blood-supply, but leaves unobstructed a portion of tissue capable of establishing capillary anastomosis.

light (lit). The electromagnetic waves which specifically stimulate the retina of the eye and thus give rise to the sensation of light. These waves vary in length from 7700 Angstrom units for the red to 3000 for the violet. actinic 1., light capable of producing chemic effects. axial 1., central 1., light whose rays are parallel to each other and to the optic axis. 1.-chaos, the minute fluctuations of the intensity of intrinsic light of the retina. Called also light-dust. 1. difference, the difference between the two eyes in their sensitiveness to light: often abbreviated to L. D. diffused l., that which has been scattered by reflection and refrac-tion I.-dust. See *l*-chaos. Finsen I., light consisting principally of the violet and ultra-violet To obtain it sunlight is passed through a lens containing an ammoniacal solution of copper sulphate, which absorbs the yellow, red, and ultra-red rays. Such light is used in the treatment of lupus and similar diseases. intrinsic 1. (of the retina), the dim light always present in the visual field. Landeker-Steinberg 1., a light which emits a spectrum similar to that of the sun except that the ultraviolet waves are eliminated: used therapeutically. 1. minimum, the smallest degree of light perceived by the eye, often abbreviated to L. M Minin 1., a therapeutic lamp for the administration of violet and ultraviolet light. monochromatic 1., one of the colors of the spectrum into which light is divided by a prism. oblique 1., the light that falls obliquely on a surface. polarized 1., light the vibrations of which face. polarized 1., light the vibrations of which are made over one plane or in circles or ellipses. reflected 1., light turned back from an illuminated surface. refracted 1., light whose rays have been bent out of their original course by passing through a transparent membrane. 1. sense, the faculty by which varying degrees of light or brightness may be perceived. Simpson 1., an electric arc light in which the electrodes are made of tungstate of iron and manganese. The light emitted consists of rays of two kinds: visible rays and invisible rays. The latter consist of heat rays and ultraviolet rays. This light is used in the treatment of rodent ulcer, lupus, eczema, wounds, rhinitis, and sinusitis. transmitted 1., light which passes or has passed through an object. ultraviolet 1. See ultraviolet ray, under ray.

lightening (li'ten-ing). The sensation of decreased abdominal distention produced by the descent of the uterus into the pelvic cavity just previous to labor.

lignaloo, lignaloes (lig-nal'o, lig-nal'ōz, or linal'o, lin-al'ōz). r. The fragrant wood (called agallochum, or eaglewood) produced by Aquila'ria agal'lochum, a tree of the East Indies. 2. The resin of the above wood: used mainly as a perfume and in preparing incense. Lignières's test (lēn-yeārz') [J. Lignières, contemporary physician in Buenos Aires]. See tests. lignin (lig'nin). A substance like cellulose lining

woody vegetable cells.

lignoceric acid (lig-no-se'rik). See acid.

Lignognathoi'des monta'nus. The common sucking louse of the California ground squirrel, Citellus beecheyi.

lignosulfit (lig-no-sul'fit). A liquid obtained in the manufacture of cellulose its vapor, which contains sulphurous acid and various aromatic principles, is inhaled for pulmonary disorders.

lignosulphin (lig-no-sul'fin) [L. lig'num wood + sulphur]. A disinfectant by-product of the manufacture of sulphocellulose.

lignum (lig'num) [L gen. lig'ni]. Latin for wood. 1. rho'dium, the wood of Am'yris balsamif'era, a tree of tropical America. 1. sanc'tum, 1. vi'ta. See guaiacum.

ligroin, ligroine (lig'ro-in). A volatile inflammable liquid, used as a solvent in pharmacy and chemistry. It is the fraction that distills from petroleum between 90° and 120° C. and consists mostly of heptane and octane.

ligula (lig'u-lah) [L. "strap"]. A strip of white substance near the lateral border of the fourth

ventricle.

ligule (lig'ūl). Same as ligula.

Ligusticum (li-gus'tik-um). See lovage.

Lilienthal's probe (lil'e-en-talz) [Howard Lilienthal, surgeon in New York, born 1861]. See probe. lily-of-the-valley (li'le-). See Convallaria.

liman cure (li'man). See under cure.

limanol (li'man-ol) [Turkish and Russian liman bay, Gr λιμήν creek, harbor] A preparation of salt-marsh mud used for rheumatism.

limatura (li-mat-u'rah). Latin for filings. 1. fer'-

ri, iron filings.

limb (lim) [L. lim'bus border]. 1. An arm or a leg with its appendages an extremity. 2. Anything resembling an arm or a leg. anacrotic 1., the up-stroke of a sphygmographic record. pectoral 1., thoracic 1., an arm or its homologue. pelvic 1., a leg or lower extremity. phantom 1., a sensation as of the limb still existing in a patient in whom the limb has been amputated.

limberneck (lim'ber-nek). See limber neck, under

limbic (lim'bik). Pertaining to a limbus, or margin. limbus (lim'bus) [L "border"]. A border or hem
1. alveola'ris [B N A], the free lower edge of the alveolar process 1. angulo'sus, the oblique line of the thyroid cartilage 1. chorioi'deus, the innermost arch of the limbic lobe. 1. conjunti've, the edge of the conjunctiva that overlaps the mar ginof the cornea. 1. cor'ness [B N A], the edge of the cornea where it joins the sclerotic. 1. corticalis, the outermost arch of the limbic lobe 1. fos'sse ova'lis [B N A] Same as annulus ovalis.

1. lam'inse spira'lis, the periosteal border of the bony lamina spiralis, the crista spiralis. 1. lu'teus, the yellow spot of the retina; macula lutea. 1. medulla'ris, the middle arch of the limbic lobe. 1. sphenoida'lis, the posterior edge of that part of the body of the sphenoid which bears the ethmoid spine.

lime (lim) [L. calr]. 1 Calcium oxid; also calcium hydroxid See calcium. 2. The acid fruit of cium hydroxid See calcium. 2. The acid fruit of Cit'rus ac'ida: its juice is antiscorbutic and refrigerant. arsenate of 1. (as an insecticide), boil until dissolved 2 pounds of white arsenic and 8 pounds of sal-soda in 2 gallons of water. For use take 1 pint of this stock solution, 2 pounds of reshly slaked lime, and 45 gallons of water. chlorinated 1. See calv chlorata soda 1. See under soda. sulphurated 1. See calv sulphurata syrup of 1. (syru'pus cal'cis), a solution of lime sucrate: said to be useful in some cases of chronic rheumatism.

limen (li'men) [L.]. 1. Same as threshold. 2. The

portion of the brain lying between the base and the island of Reil. Called also l. in'sulæ [B N A] 1. na'si [B N A], the boundary-line between the bony and cartilaginous portions of the nasal cavity.

liminal (lim'in-al) [L. li'men threshold]. Barely appreciable to the senses pertaining to a threshold.

limit, Anstie's. See Anstie's rule, under rule assimilation 1., the amount of carbohydrate that the organism can metabolize without causing glycosuria. Called also saturation limit. 1. of perception, the limit of perception is reached when the object looked at has a visual angle of four or five minutes, thus making its image on the retina about the size of a retinal cone of from 3 3 to 3.6 microns in diameter.

limitans (lim'it-anz) [L. "limiting"]. Same as membrana limitans.

limitation, eccentric (lim-it-a'shun). A circumscribed condition of the visual field, more pronounced at some parts of the periphery than at others.

limitrophes (lim'it-rofs) [Fr. "frontier lands"]. The sympathetic ganglia and their connections.

limitrophic (lim-it-rof'ik). Controlling nutrition. **Limnæa** (lim'ne-ah). A genus of snails ,several species of which act as invertebrate host for the liver fluke (Fasciola hepatica).

Limnatis (lim-na'tis)
Some are very large.
L. granulo'sa and L. myso'melas occasionally are parasitic in the nasal passages. L. nilot'ica, an African species that

sometimes becomes lodged in the pharynx. It may be found in the normal cavities of animals limnemia, limnæmia (lim-ne'me-ah) [Gr. λίμνη marsh + alua blood]. Malarial cachexia.

limnemic (lim-ne'mik). Affected with malarial cachexia.

limo (li'mo), gen. limo'nis. Latin for lemon fruit of the lemon-tree, Cu'rus limo'num. The Sec lemon.

limonene (lim'o-nën). An essential oil found in the peel of oranges and lemons. It is a terpene, C3H5 C6H8 CH3.

limo'nis cor'tex [L.] The U.S. P. name for lemon

limo'nis suc'cus [L]. Lemon juice.

limophthisis (lim-of'this-is) [Gr. $\lambda l \mu os$ hunger + $\varphi \theta l \sigma \iota s$ wasting]. Wasting from lack of food or starvation.

limosis (li-mo'sis) [Gr. λίμος hunger]. Abnormal or morbid hunger.

limotherapy (li-mo-ther'ap-e) [Gr. $\lambda l\mu$ os hunger + $\theta \epsilon \rho a\pi \epsilon la$ cure] Hunger-cure, the treatment of disease by fasting or by a meager diet. used in dyspepsia, aneurysm, syphilis, and cancer.

limping (lim'ping). See claudication.

Linacre (lin'ak-er), Thomas A noted English physician and classic scholar, 1460-1524. He was physician to Henry VIII. He was the first president of the College of Physicians, London, and translated Galen from Greek into Latin.

linadin (lin'ad-in). A patented dry extract of the spleen of animals, combined with iodin and iron: used for malarial cachexia, splenomegaly, and leukemia.

linalool (lin-al'o-ol). The olefinic terpene alcohol, (CH₃)₂C CH CH₂ CH₂ C(CH₃)(OH)CH CH₂, of oil of light aloe; found also in oil of coriander and various other volatile oils

linalyl acetate (lin'al-il). The fragrant ester in oil of bergamot.

lincture, linctus (lingk'tūr, lingk'tus) [L. linc'tus a licking]. An electuary; a thick, syrupy medicament to be taken by licking. Lindemann's cannula, method (lin'de-manz).

See under cannula and method.

linden (lin'den). See Tilia.

line (lin) [L lin'ea]. 1. Any stripe, streak, mark, or narrow ridge. 2. A measure equal to one-twelfth of an inch. abdominal 1., any line upon the abdomen indicating the boundary of a muscle. absorption l's, dark lines in the spectrum due to the absorption of light by the substance (usually an incandescent gas or vapor) through which the light has passed. Cf. absorption bands, under band. accretion l's, microscopic lines seen in sections of enamel marking successive layers of calcification. Called also Retzius's lines. adrenal 1. See Scrgent's 1. alveobasilar 1., a line from the basion to the alveolar point. alveolar 1., a line from the nasion to the alveolar point. alveolonasal 1., a line from the alveolar to the nasal point Amberg's 1., a line dividing into two halves the angle formed by the anterior border of the mastoid process and the temporal line. It indicates the most easily accessible part of the lateral sinus for a mastoid operation. Called also lateral smus line. 1. of Amici. Same as Krause's membrane, under membrane. arcuate 1., the ihopectineal line. atropic 1., a line normal to the plane of the axes of rotation of the eye. auriculobregmatic 1., a line from the auricular point to the bregma. axillary l's (anterior and posterior), lines from the axillary margin downward. Bail-larger's 1., two bands of white fibers seen on section of the cerebral cortex, running parallel to the surface of the cortex. These lines are distinguished as inner and outer. In the area striata of the cortex only one of these lines (the outer) is visible and here at is known as the l. of Gennari. base-1., a line from the infra-orbital ridge to the external auditory meatus and the middle line of the occiput. base-apex 1., a line perpendicular to the edge of a prism and bisecting the refracting angle of the prism basinasal 1., a line from the basion to the nasion. basiobregmatic 1., a line from the basion to the bregma. Baudelocque's 1., the external conjugate diameter of the pelvis Beau's l's, transverse lines on the finger-nails seen after wasting diseases. bi-auricular 1., a line from one auditory meatus over the vertex to the other. bi-iliac 1., a straight line joining the most prominent points of the two iliac crests **blood** 1., a particular inherited character transmitted through several generations blue 1., the characteristic line on the gums showing chronic lead-poisoning Borsier's 1., a white mark made upon the skin by the finger-nail in the early stages of scarlet fever. Brödel's white 1., a longitudinal white line on the anterior surface of the kidney near the convex border **Bruecke's 1's**, broad bands alternating with Krause's membranes in the fibrils of the striated muscles ant's 1. r The vertical side of the iliofemoral triangle 2 A test-line for detecting shortening of the femur Burton's 1. Same as blue 1. calcification l's, accretion lines Camper's 1., a line from the external auditory meatus to a point just below the nasal spine Chaussier's 1., the median raphs of the " 1., the median raphé of the callosum Chiene's 1's, a set of lines established to aid in localizing the cerebral centers. Clapton's 1., a green line on the gums in copper-poisoning. clavicular 1., a line following the course of the clavicles. 1. of communications, in military medicine, the zone between the service of the interior and the zone of the advance. Conrad's 1., a line from the base of the xiphoid process to the point of the apex-beat, indicating the upper limit of percussion-dulness of the left lobe of the liver. Corrigan's 1., a purplish line on the gums in copper-poisoning. costo-articular 1., a line from the sternoclavicular joint to a point on the eleventh rib. costoclavicular 1., parasternal 1., a line midway from the nipple-line and the border of the sternum. Cramparate of the sternum corrections of the sternum c ton's 1., a line on the abdomen to indicate the position of the common iliac artery. It extends from the apex of the cartilage of the last rib nearly to the crest of the ilium, then forward

to a point just below the anterior superior spine. cricoclavicular 1., a line drawn from the cricoid cartilage of the larynx to the point upon the clavicle crossed by the upward projection of the anterior axillary line. curved l's of the ilium (superior, middle, and inferior), three prominent lines on the outer surface of the ala of the ilium. The areas limited by these lines give attachment to the glutei muscles. curved l's of the occipital bone, two lines (superior and inferior) on the outer surface of each half of the occipital bone.

Daubenton's 1., a line from the opisthion to the basion. 1. of demarcation, the boundary between gangrenous and healthy tissue. De Salle's L, a line starting at the upper margin of the ala nasi and curving around the angle of the mouth; Jadelot's nasal line. **Dobie's 1.** See Krause's membrane, under membrane. **Douglas's 1.**, the curved lower edge of the inner layer of the aponeurosis of the internal oblique muscle said to indicate some abdominal disorder. Eberth's l's, microscopic broken or scalariform lines at the junction of the cardiac muscle-cells. ectental 1., the line of junction between the ectoderm and entoderm. Ellis's 1., an S-shaped line on the chest, showing the upper border of pleuritic effusions. embryonic 1., the primitive tract in the center of the germinal area. facial 1., a straight line touching the glabella and a point at the lower border of the face said to indicate some abdominal disorder. Farré's white 1., the boundary of the insertion of the mesovarium at the hilum of the ovary. Feiss's 1., a line from the internal malleolus to the plantar surface of the first metatarsophalangeal joint. 1. of fixation, a straight line extending through the center of rotation of the eye to the object of vision. focal 1., anterior, a line whose direction is perpendicular to the meridian of greatest curvature of a re-fracting surface. **focal 1., posterior,** a line whose direction is perpendicular to that of the meridian of least curvature of a refracting surface. Fraunhofer's l's, dark lines of the solar spectrum. Frommann's l's, transverse marks on the axis-cylinder of a medullated nerve-fiber, rendered visible by silver nitrate. gamma l's, lines of very high frequency in the x-ray spectrum of an element which are related to its atomic number. Gant's 1., an assumed line on the femur below the trochanter major, for service as a guide low the trochanter major, for service as a guide in surgical operations. **genal 1.**, one of Jadelot s lines, extending from the nasal line near the mouth toward the malar bone. **1. of Gennari.** See *l. of Baillarger.* **gingival 1.** I. A reddish streak on the edge of the gum. 2. The line where the cementum and enamel of a tooth join, and where the gum is attached to the neck of the tooth.
gluteal 1's, the curved lines of the ilium Gottinger's 1., a line along the upper border of the zygomatic arch. **Granger 1.**, a curved line seen in radiographs of skulls produced by that portion of the upper surface of the sphenoid bone called the optic groove. Gubler's 1., a line connecting the apparent origins of the roots of the fifth nerve. Haller's 1., the linea splendens. Helmholtz's 1., a line perpendicular to the plane of the axis of rotation of the eyes. **Hensen's 1.**, the light line in the middle of the dark band of a sarcomere. Hilton's 1., a white line which marks the junction of the skin of the perineum with the anal mucosa.

Holden's 1., a sulcus below the inguinal fold, crossing the capsule of the hip Hunter's 1., the linea alba. lilopectineal 1., a ridge on the ilium and pubes showing the brim of the true pelvis.

incremental l's, lines that are supposed to show the laminar structure of dentin. infracostal 1., a line connecting the lower borders of the tenth costal cartilages. infrascapular 1., a horizontal line at the level of the inferior angles of the scapulæ. intercondylar l., intercondyloid 1., a line on the posterior surface of the femur uniting the condyles and giving attachment to the posterior part of the capsule of the knee.

interspinal 1., a line on the abdomen connecting the two anterior superior iliac spines. trochanteric l's, two lines (anterior and posterior) on the anterior and posterior surfaces of the femur, between the trochanters. intertuberal 1. a line drawn between the prominences of the frontal bone. intertubercular 1., an imaginary line drawn transversely across the abdomen at the level of the iliac crests. isothermal l's, imaginary lines drawn through places that have the same averlines drawn through places that have the same average temperature at a given time. Jadelot's l's, lines of the face in young children, supposed to be indicative of disease: the genal, nasal, labial, and oculozygomatic lines (q. v.). Called also Jadelot's furrows or traits. Kl's, Ll's, Ml's, Nl's, Ol's, Pl's, groups of lines in a spectrum. They are arranged according to certain mathematical relations and are determined by the stability level to which the radiating electron falls; the K lines come from the level present the nucleus of the come from the level nearest the nucleus of the atom. 1. of Kaes, a thin zone or strip of fibers in the supraradiary zone of white matter of the cerebral cortex. Kilian's 1., the linea prominens of the promontory of the sacrum **Krause's**1. See Krause's membrane, under membrane.

L 1's. See under K lines. labial 1., one of Jadelot's lines, from the angle of the mouth outward. said to indicate disease of the lungs lateral sinus 1. See Amberg's l. lead 1., a bluish line at the edge of the gums in lead-poisoning. Ligar's 1. I An imaginary line from the posterior superior spine of the ilium to the midpoint between the tuberosity of the ischium and the great trochanter; the emergence of the gluteal artery is at the point of the upper trisection of this line. 2 A line from the posterior superior spine of the ilium to the tuberosity of the ischium at its lower trisection the sciatic and pubic arteries emerge. M 1's. See under K lines. mammary 1., a line from one nipple to the other. mammillary 1., a vertical line through the center of the nipple. **McKee's 1.**, a guide to the common iliac artery, being a line drawn from the tip of the cartilage of the eleventh rib to a point an inch and a half to the inner side of the anterior superior spine, then curving downward and forward and inward to a point just above the abdominal ring Meyer's 1., the axial line of the big toe which if extended passes through the center of the heel if shoes have never been worn. midaxillary 1., a perpendicular line from the middle of the axilla clavicular 1., a perpendicular line let fall from the center of the clavicle. Called also mammillary l. midspinal l., a perpendicular line down the middle of the spinal cord. midsternal 1., a topographic line passing through the middle of the sternum from the cricoid cartilage to the xiphoid. milk 1., the line of thickened epithelium in the embryo along which the mammary glands are developed. Monro's 1., a straight line from the umbilicus to the anterior superior spine of the ilium. Monro-Richter 1., a line from the umbilicus to the left anterior superior iliac spine. Moyer's 1., a line from the middle of the body of the third sacral vertebra to a point midway between the anterior superior iliac spines. mylohyoidean 1., a ridge on the inner surface of the lower jaw. nasal 1., one of Jadelot's lines extending from the ala nasi in a semicircle around the mouth. nasobasilar 1., a line through the basion and nasal point. nasolabial 1., the furrow extending from the ala nasi to the angle of the mouth. Nélaton's 1., a line from the anterior superior process of the ilium to the most prominent part of the tuberosity of the ischium. **nigra 1**. See *linea nigra*. **nipple-1**. Same as *mammillary l*. **nuchal l's** (inferior, median, and superior), three lines on the outer surface of the occiput. oblique 1., a name applied to many lines, as of the fibula, radius, thyroid cartilage, tibia, etc. 1. of occlusion, Angle's term for "the line with which, in form and position according to type, the teeth must be in harmony if in normal occlusion."

ocular 1., oculozygomatic 1., one of Jadelot's lines, extending outward from the inner canthus toward the zygoma: said to be a sign of some disorder of the nervous system. Ogston's 1., a line from the tubercle of the femur to the intercondylar notch. omphalospinous 1., a line on the abdomen connecting the umbilicus and the superior spine of the ilium; on it is situated McBurney's point. parasternal 1., the costoclavicular line. pectineal 1., the portion of the iliopectineal line that lies on the pubic bone. Pickerill's imbrication 1's, the horizontal lines on the surface of tooth enamel. Poirier's 1., a line running from the nasofrontal angle to a point just above the lambda. popliteal 1., an oblique line on the posterior surface of the tibia for the attachment of the popliteus muscle. Poupart's 1., an imaginary line on the surface of the abdomen passing perpendicularly through the center of Poupart's ligament precentral 1., a line on the head, extending from a point midway between the inion and glabella downward and forward. **primitive** 1., the primitive streak. **profile** 1. Same as Camper's l. **pure** 1., a group of individuals traceable through self-fertilized lines to a single homozygous ancestor. quadrate 1., a line on the posterior surface of the femur. respiratory 1., a line that connects the bases of the upstrokes in a sphygmogram. Retzius's l's, accretion lines. Robson's 1., an imaginary accretion lines. **kodson's 1.**, an imaginary straight line drawn from the nipple to the umbilicus. **Rolando's 1.**, a line on the head marking the position of the fissure of Rolando beneath. **Roser's 1.** Same as Nélaton's 1. **Salter's 1.**, the incremental line of dentin. **scapular 1.** a vertical downward line form the scapular 1., a vertical downward line from the lower angle of the scapula. Schreger's l's, lines in dentin, probably due to an optic illusion, and ascribed to the primary curvatures of the dentinal tubules. semicircular 1. Same as Douglas's l. semilunar 1. See linea semilunar is Sergent's white adrenal 1., a white line on the abdomen which follows drawing of the fingernail across it seen in cases of defective adrenal nail across it seen in cases of defective adrenal activity. **Shenton's** 1., a curved line seen in the radiogram of the normal hip joint, formed by the top of the obturator foramen. **side-sternal** 1., a line along the border of the sternum on either side. 1. of sight, a straight line from the center of the pupil to the chiest vicined. Spiraling's 1. a grayents line object viewed. Spigelius's 1., a crescentic line at the insertion of the transversalis abdominis muscle into its tendon. sternal 1., a line paralleling the lateral border of the sternum sternomastoid 1., a line from the heads of the sternomastoid to the mastoid process subcostal 1., an imaginary transverse line on the surface of the abdomen at the level of the lower edge of the tenth costal cartilage supra-orbital I., a line across the forehead, just above the root of the external angular process of the frontal bone. sylvian I., a line upon the head indicating the direction of the fissure of Sylvius. It extends from the external angular process of the frontal bone to a point three-fourths of an inch below the most prominent point of the parietal bone. **Thomp**son's 1., a red line upon the gums in pulmonary tuberculosis. **thyroid red l.**, an erythematous line produced by irritating the skin on the front of the neck and upper part of the chest in patients with hyperthyroidism. **Topinard's 1.**, a line between the glabella and the mental point. trapezoid 1., the mark of the attachment of the trapezoid ligament to the clavicle. umbilico-iliac 1., a line joining the umbilicus and the anterior superior spine of the ilium. 1. of Venus, the principal virchow's 1., a line from the root of the wrist.
Virchow's 1., a line from the root of the nose to the lambda. visual 1., a line from the object seen, through the nodal point of the eye, to the macula lutea. Voigt's boundary-1's, lines which delimit the distribution of peripheral nerves. Wagner's 1., a thin, whitish line at the junction of

the epiphysis and diaphysis of a bone formed by preliminary calcification. Waldeyer's 1. Same as Farre's white 1. White 1. I. The linea alba. 2. A whitish band in the pelvic fascia, from the lower part of the symphysis pubis to the lower part of the symphysis pubis to the lower part of the spine of the ischium. 3. A pale line seen after scratching the skin and considered to be a sign of decreased arterial tension. white adrenal 1. See Sergent's 1 Wrisberg's 1's, a set of filaments connecting the motor and sensory roots of the trigeminus nerve. 1's of Zahn, corrugations on the free surface of a thrombus formed by the projecting edges of the lamellæ of bloodplatelets. Zöllner's 1's, a set of lines of peculiar arrangement designed to be used as an ocular test.

linea (lin'e-ah), pl. lin'eæ. Latin for line. l. al'ba [L. "white line"] [B N A], the tendinous mesial line down the front of the abdomen, giving attachment to the oblique and transverse abdominal muscles. 1. al'ba cervica'lis, the middle line of the neck where the fascial sheaths of the sternothyroid and sternohyoid muscles blend. 1. albican'tes, the white abdominal lines seen after pregnancy. 1. arcua/ta [B N A], the iliopectineal line 1. as'pera [B N A], a rough longitudinal line on the dorsum of the femur. 1. hepat'ica, a palmar line which takes a vertical course across the linea cephalica and linea neuralis. 1. mensa'lis, the lines on the palm of the hand caused by the flexion of the middle, ring-, and little fingers. 1. ni'gra, the pigmented line which frequently forms during pregnancy on the abdomen, extending upward from the pubes in the median line. 1. quadra'ti, a line on the femur which marks the insertion of the quadratus femoris 1. semicircula'ris [B N A], Douglas's semilunar fold See under fold. 1. semiluna'res [B N A], a pair of curved lines, one on either side of the linea alba 1. spige'lii, the outer border of the aponeurosis of the transversalis muscle 1. splen'dens, a fibrous band down the anterior surface of the pia mater of the spinal cord. 1. tempora'lis, a line on the temporal bone marking the boundary that separates the squamous from the mastoid portion. 1. transver'sse, the transverse tendinous lines on the abdomen connecting the linea alba and the lineae semilunares 1. vita'lis, the line of life a palmar line curving around the base of the thumb.

linear (lin'e-ar) [L. linea'ris]. Pertaining to or resembling a line

lingism (ling'izm) [after Peter II. Ling, Swedish poet and gymnast, 1776–1839]. The movement cure; kinesitherapy.

lingua (ling'wah). Latin for longue. 1. fræna'ta, tongue-tie. 1. geograph'ica, the geographic tongue; the presence on the tongue of map-like denudations bordered by thickened epithelium 1. ni'gra, black tongue 1. plica'ta, furrowed tongue. 1. villo'sa ni'gra, black tongue. See under longue

lingual (ling'wal) [L lingua'lis]. Pertaining to the tongue

linguale (ling-wa'le) The point at the upper end of the symphysis of the lower jaw on its lingual surface.

lingualis (ling-wa'lis) [L.]. See muscles, table of.

lingually (ling'wal-e). Toward the tongue.

Linguatula (ling-wat'u-lah). A genus of arthropods which, in the adult form, inhabit the frontal, nasal, and maxillary sinuses of animals and sometimes of man. Their larval form (known as Pentastoma and Porocephalus) infests the digestive organs and lungs Called also longue worms. L. rhina'ria

also longue worms. L. rhina'ria
(serra'ta), the species found in man; both the
larval and the adult forms have been found.

linguatuliasis (ling-wat-u-li'as-is). Invasion of the body by Linguatula.

lingula (lin'gu-lah) [L. "little tongue"]. A tongue-like structure, especially the lingula cerebelli. 1. cerebel'li [B N A], a small eminence on the ventral surface of the cerebellum where the anterior medullary velum joins the vermis. 1. mandib'ulæ [B N A], the sharp anterior border of the inferior dental foramen 1. pulmo'nis, a projection from the lower portion of the upper lobe of the left lung, just beneath the incisura cardiaca. 1. of the sphenoid, a ridge between the body and greater wing of the sphenoid. 1. wrisber'gii, fibers joining the motor and sensory roots of the trifacial nerve.

linguodistal (lin"gwo-dis'tal). Distally and toward the tongue.

linguogingival (lin"gwo-jin'jiv-al). Relating to the tongue and the gums.

linguopapillitis (lin"gwo-pap-il-i'tis) [L. lin'gua tongue + papillitis]. Small painful ulcers around the papillæ of the edges of the tongue.

linguotrite (lin'gwo-trit). An instrument for seizing the tongue and drawing it forward.

linguoversion (lin-gwo-ver'shun). The state of being displaced lingually to the line of occlusion: said of a tooth.

Linim. Abbreviation for liniment.

liniment (lin'im-ent) [L. linimen'lum; lin'ere to smear] An only liquid preparation to be rubbed upon the skin. Among the more important liniments are the ammonia liniment (linimen'tum ammo'nue), belladonna liniment (l. belladon'nue), lime liniment (l. cal'cis, carron oil), camphor liniment (l. cam'phora, camphorated oil), chloroform liniment (l. chlorofor'mi), compound opium liniment (l. o'pii compos'ulum), liniment of lead subacetate (l plum'bi subaceta'tis), camphorated soap liniment (l sapo'nis), soft-soap liniment (l sapo'nis mol'lis), compound mustard liniment (l sina'-pis compos'ulum), turpentine liniment (l terebin'-thinue), acetic turpentine liniment (l terebin'-thinue), acetic turpentine liniment (l. terebin'-thinue acet'icum), and croton oil liniment (l. tig'lii).

A.B.C. 1., a liniment composed of equal parts of the liniments of aconite, belladonna, and chloroform. anodyne 1., opium liniment. camphor 1. [L. l. cam'phora, U S. P], camphor, 20 parts, cotton-seed oil, 80 parts. camphor 1., compound [L. l. cam'phora compos'ulum], contains camphor, ammonia, oil of lavender, and alcohol. chloroform 1. (U. S. P), chloroform, 30 parts, soap liniment, 70 parts drying 1., a solution of a drug in some mucilaginous liquid which on drying leaves a permanent film kentish 1., linimentum terebinthinæ. lime 1. See carron oil, under oil. mercurial 1., a liniment containing 1 ounce of ointment of mercury, 160 minims of strong solution of ammonia, and liniment of camphor enough to make 1\frac{1}{2} fl oz Pick's 1., a preparation of 7\frac{2}{2} gr. gum tragacanth, 30 min. of glycerin, and 25\frac{1}{2} fl.dr. of water used in dry eczema. soap 1. (U S. P), soap, dried and granulated, 60 gm; camphor, 45 gm, oil of rosemary, 10 c c; alcohol, 700 c.c., water to make 1000 c. St. John Long's 1., linimentum terebinthinæ aceticum. Stokes's 1., an acetic turpentine liniment

linimentum (lin-im-en'tum) [L.]. See liniment.
1. cal'cis. See carron oil, under oil. 1. campho'ræ (U S P) See camphor liniment, under liniment.
l. chlorofor'mi (U. S P.). See chloroform
liniment, under liniment.
See soap liniment, under liniment
mol'lis (U. S. P.), liniment of soft soap.
volat'ile, ammonia liniment.

linin (li'nin) [L. li'num thread]. The faintly staining substance composing the fine, net-like threads found in the nucleus of a cell, where it bears the chromatin in the form of granules. Cf. achromatin.

linitis (lin-i'tis) [Gr. λίνον web + -ιτις inflammation]. Inflammation of the gastric cellular tissue.

(Mitchell).

1. plas'tica, diffuse hypertrophy of the submucous connective tissue of the stomach, rendering the walls of the stomach rigid, thick, and hard, like a leather bag. Called also Brinton's disease, hypertrophic gustritis, gastric sclerosis, cirrhosis of the stomach, and leather-bottle stomach.

linkage, linking (ling'āi, ling'king). 1. The bond used in constitutional chemical formulas to represent one valency. 2. In genetics, the hanging together of neighboring genes of the same chromosome throughout the processes of heredity.

linked (linkt). United so as to be inherited together; as linked characters.

Linognathus (lin-og'na-thus). A genus of sucking lice, L. peda'lis, infests sheep, L. pili'erus, the dog; L. sten'opis, the goat, and L. vilu'li is the longnosed louse of the ox

linolein (lin-o'le-in) [L. li'num flax + o'leum oil].
A neutral fat from linseed oil; the glycerid of linoleic acid.

linonine (lin-o'nin). A proprietary expectorant and cough remedy and substitute for cod-liver oil.

linoval (li'no-val). A proprietary ointment-base.

linoxanthin (li-no-zan'thin) [L li'num flax + Gr. ξανθός yellow] An orange-yellow pigment produced by Sarci'na auranti'aca; it is the coloring-matter of orange pus.

linseed (lin'sēd). The seeds of flax, Li'num usitatis'simum: demulcent and emollient. The seed affords a fixed drying-oil (o'leum li'ni), and the residue left after the removal of the oil is used in preparing poultices The freshly ground seed is used as a demulcent in irritations of the pharynx and of the respiratory and urinary passages. Dose of oil, 1-2 floz (30-60 c c).

lint (lint) [L. lint/leum, from li'num flax]. An absorbent dressing-material made by scraping or picking apart old woven linen, also a specially finished woven fabric for surgical dressing cotton 1., a lint of inferior quality prepared from cotton fabrics patent 1. Same as sheet-l. picked 1. [L. lint/leum carp/tum], charpie, lint prepared by hand scraped 1., lint prepared by scraping. sheet-l., a form of lint in sheets, prepared by machinery

Lint. Abbreviation for L. lin't.um, lint

lintin (lin'tin). A loose fabric of prepared absorbent cotton used in dressing wounds.

lintine (lin'ten). A cotton lint from which the oil has been removed.

linum (h'num). Latin for flax and for linseed. See linseed

Li₂O. Lithium oxid.

liodermia (li-o-der'me-ah). See leiodermia. LiOH. Lithium hydroxid.

liomyofibroma (li"o-mi-o-fi-bro'mah). Leiomyofibroma

liomyoma (li"o-mi-o'mah). See leiomyoma.

liomyosarcoma (li"o-mi-o-sar-ko'mah). See leio-myosarcoma.

Liouville's icterus (le-oo'vēlz) [Henri *Liouville*, French physician, 1837–1887]. Icterus neonatorum

lip (lip). r. Either of the fleshy folds at the orifice of the mouth. 2. Any labium or marginal part. double 1., redundancy of the submucous tissue and mucous membrane of the lip on either side of the median line hare-1. See harelip rhombic 1., the lateral boundary of the rhombencephalon during embryonic life

lipacidemia (lip"as-id-e'me-ah) [Gr. λlπος fat + L. ac'idus acid + Gr alμa blood]. The presence of any fatty acid in the blood.

lipaciduria (lip"as-id-u're-ah) [Gr λίπος fat + L. ac'idus acid + Gr οὖρον urine]. The presence of any fatty acid in the urine.

lipæmia (lip-e'me-ah). See lipemia.

lipamin (lip'am-in). A compound isolated from the

corpus luteum, said to have a stimulating effect on the menstrual flow.

lipanin (lip'an-in). Olive oil (100 parts) and oleic acid (6 parts) used as a substitute for cod-liver oil. Dose, 1-4 fl dr. (4-16 c.c.).

Liparis (lip'ar-is). Same as Euproctis.

liparocele (lip-ar'o-sēl) [Gr. λιπαρός fat + κήλη tumor] A fatty scrotal tumor, also a hernia containing fatty material.

liparomphalus (lip-ar-om'fal-us) [Gr. $\lambda l\pi os$ fat $+ \delta \mu \varphi \alpha \lambda \delta s$ navel]. A fatty tumor of the navel.

lipase (lip'ās) [Gr λίπος fat + asc] A fat-splitting ferment occurring in the liver, pancreas, stomach, and other digestive organs and also in certain plants. Called also steapsin and pialyn.

lipasuria (lip-ās-u're-ah). The presence of lipase in the urine.

lipectomy (lip-ek'to-me) [Gr. λίπος fat + ἐκτομή excision] Excision of fatty tissue.

lipemia, lipæmia (lip-e'me-ah) [Gr. λίπος fat + αΙμα blood] The presence of fat or oil in the blood. 1. retina'lis, an alteration in the appearance of the retinal blood-vessels seen in certain cases of lipemia.

lipese (hp'ēs). An enzyme which brings about the synthesis of fats.

liphemia (li-fe'me-ah). Lipemia.

lipid, lipide (lip'id) One of a group of substances which includes the fats and esters having analogous properties.

lipidtemns (lip'id-temz). A collective name for the products produced by the digestion of fats, namely, glycerol and fatty acids.

lipin (lip'in) [Gr λlπος fat] A general term for the fats and fat like substances, a class of organic substances which are insoluble in water, soluble in alcohol, ether, chloroform, and other fat solvents, and which have a greasy feel. The lipins include the fats and fatty acids, the fatty oils, essential oils, waxes, sterols, phospholipins, glycolipins, sulpholipins, and aminolipins amino 1., a lipin containing amino nitrogen.

lipiodin (lip-i'o-din) [Gr $\lambda l\pi os$ fat |-lodin|. Iodipin in solid form.

lipiodol (lip-i'o-dol). A solution of iodin in poppyseed oil, used as an opaque medium in radiography

lipoblast (lip'o-blast) [Gr. $\lambda l\pi os$ fat $+\beta \lambda a\sigma r bs$ germ] A specialized connective-tissue cell which develops into a fat cell

lipoblastoma (hp"o-blas-to'mah) [Gr λίπος fat + βλαστος germ + -ωμα tumor]. Same as lipoma.

lipocardiac (lip-o-kar'de-ak) [Gr. λίπος fat + καρδία heart]. Relating to a fatty heart

lipocele (lip'o-sēl) [Gr. $\lambda l\pi os$ fat $+ \kappa \dot{\eta} \lambda \eta$ tumor]. Adipocele.

lipoceratous (lip-o-ser'at-us). Same as adipoceratorus

lipocere (lip'o-sër) [Gr. $\lambda l\pi os$ fat + L. ce'ra wax]. Same as adspocere.

lipochondroma (lip"o-kon-dro'mah) [Gr. λίπος fat + χόνδρος cartilage + -ωμα tumor]. A chondroma containing fatty elements.

lipochrin (lip'ok-rin) [Gr. λίπος fat + ώχρός sallow] A pigment from the retinal fat-globules

lipochrome (lip'ok-rōm) [Gr $\lambda l\pi os$ fat $+ \chi \rho \hat{\omega} \mu \alpha$ pigment]. Any one of a special group of animal fat-pigments; a pigment which is either a fat, a compound of fat, or a solution of a substance in fat $(l\nu \rho ojuchsin)$ The lipochromes include the pigments of fat, butter, and egg-yolk, serum, lutein, the chromophanes, and several bacterial pigments.

lipocithin (lip-os'ith-in). A combination of lectthin and cholesterol in olive oil used as a restorative.

lipoclasis (lip-ok'las-is) [Gr. λίπος fat + κλάσις breaking]. The splitting up of fat.

663

lipoclastic (lip-o-klas'tik) [Gr λίπος fat + κλαστικός breaking up]. Lipolytic, fat-splitting.

lipocyanin (lip-o-si'an-in) [Gr. $\lambda l\pi os$ fat $+ \kappa ba\nu os$ blue]. A blue pigment resulting from the action of strong sulphuric acid on lipochrome.

lipodieresis (hp''o-di er'es-is) [Gr λίπος fat + dieresis]. The splitting or destruction of fat.

lipodysentery vaccine (lip-o-dis'en-ter-e). A lipovaccine for dysentery.

lipodystrophia (lip"o-dis-tro'fe-ah). Lipodystrophy. 1. intestina'lis, intestinal lipodystrophy. 1. progressi'va, a disease of women characterized by the progressive disappearance of subcutaneous fat from the parts above the pelvis, facial emaciation, and abnormal accumulation of fat about the thighs and buttocks (A. Simons, 1911)

lipodystrophy (lip-o-dis'tro-fe) [Gr. λlπος fat + δυστροφία dystrophy]. Any disturbance of fat metabolism. intestinal I., a disease marked by diarrhea with fatty stools, arthritis, emaciation, and loss of strength It is attended with deposit of fat in the intestinal lymphatic tissue.

lipoferous (lip-of'cr-us) [Gr. λίπος fat + I. fer're to carry]. I. Carrying fat. 2. Same as sudono phil.

lipofibroma (lip"o-fi-bro'mah). A lipoma containing fibrous elements.

lipofuscin (lip-o-fus'sin) Any one of a class of fatty pigments formed by the solution of a pigment in fat. Cf lipochrome.

lipogenesis (hp-o-jen'es-is) [Gr. $\lambda i\pi os$ fat + genesis]. The formation of fat.

lipogenetic, lipogenic (lip''o-jen-et'ik, lip-o-jen'-ik) Forming or producing fat.

lipogenin (hp-oj'en-in). A mixture of fatty acids used as an ointment-base.

lipogenous (lip-oj'en-us) [Gr λlπos fat + γεννᾶν to produce]. Producing fatness

lipohemia (lip-o-he'me-ah) Lipemia.

lipoid (lip'oid) [Gr $\lambda l\pi os$ fat $+ \epsilon l\delta os$ form] Any one of a class of cell components, other than liquid fats, which can be extracted with organic solvents like alcohol and ether. They include the phospholipins (phosphatids), glycolipins (cerebrosids), sterols, glycolipins, sulpholipins, and aminolipins acetone-insoluble 1's, the lipoids, consisting largely of leicthins, precipitated from an ethereal extract of dried ox-heart by adding an excess of acetone. They are used as an antigen in the Wassermann test after being brought into solution in a mixture of 1 part of ether and 9 parts of methanol. anistropic 1., a lipoid having doubly refractive properties. brain 1., an impure cephalin extracted from brain substance and used in checking hemorrhage by accelerating the coagulation of the blood. Frossmann's 1. See Frossmann's antigen, under antigen.

lipoidase (lip'oi-dās). An enzyme which splits up lipoids

lipoidemia (lip-oi-de'me-ah) [lipoid + Gr. alμa blood]. The presence of lipoids in the blood.

lipoidosis (lip-oi-do'sis). The presence of lipoids in the cells.

lipoiodin (lip-o-i'o-din) The ethyl ester of diiodized erucic acid, CH₃.(CH₂)₇.CI CI (CH₂)₁₁.CO O.-C₂H₅· used like the iodids. Dose, 5-20 gr. (0.3-15 gm).

lipolipoidosis (lip"o-lip-oi-do'sis) The presence of lipoids and neutral fats in the cells.

lipolysis (lip-ol'is-is) [Gr. $\lambda l \pi o s$ fat $+ \lambda b \sigma \iota s$ dissolution]. The decomposition or splitting up of fat.

lipolytic (lip-o-lit'ik). Having the power of producing lipolysis, fat-splitting.

lipoma (lip-o'mah) [Gr λlπos fat + -ωμα tumor]. A fatty tumor; a tumor made up of fat-cells. Lipomata are painless and benign, but may become the seats of gangrene or fat-necrosis 1. annula're col'li, diffuse lipomatosis in the neck producing a collar-like enlargement in the region.

1. arbores'cens, a lipoma within a joint having a tree-like form. 1. capsula're, a fatty tumor due to increase of the fat adjacent to the mamma. 1. caverno'sum, a lipoma containing blood spaces. 1. du'rum, steatoma 1. fibro'sum, a fatty tumor with framework of fibrous tissue. 1. myxomato'des, a myxolipoma. nevoid 1., a lipoma containing many blood-vessels. 1. ossif'icans, a lipoma containing bony tissue. 1. petrif'icans, a calcified lipoma. 1. petrif'icum ossif'icans, an ossified lipoma. 1. sarcomato'des, liposarcoma. telangiectatic 1., a lipoma containing dilated blood-vessels.

lipomatoid (lip-o'mat-oid). Resembling a lipoma. lipomatosis (lip-o-ma-to'sis). An excessive proportion of fat in the tissues; obesity; also fatty degeneration. diffuse symmetric 1., abnormal increase of subcutaneous fat in the parts above the pelvis, usually in males. nodular circumscribed or encapsulated lipomas of multiple circumscribed or encapsulated lipomas of the parts are often accompanied by local tenderness and constitutional symptoms.

lipomatous (lip-o'mat-us). Affected with or of the nature of lipoma.

lipomeria (li-po-me're-ah) [Gr. λείπειν to leave + μέρος a part] Monstrosity consisting of the congenital absence of a limb.

lipometabolic (lip"o-met-ab-ol'ik) Pertaining to metabolism of fat.

lipometabolism (lip"o-met-ab'o-lizm) [Gr. $\lambda l\pi os$ fat + metabolism]. The metabolism of fat.

lipomyoma (lip"o-mi-o'mah). A myoma containing fatty tissue.

Lipomys'sus baco'ti. Λ mite commonly found on rats, but which may also greatly annoy man.

lipomyxoma (lip"o-miks-o'mah) [lipoma + myx-oma]. A lipoma with myxomatous elements.

lipopectic (hp-o-pek'tik). Characterized by lipopexia

lipopeptid (lip-o-pep'tid). A compound of aminoacids and fatty acids.

lipopexia (hp-o-pek'se-ah) [Gr $\lambda l\pi os$ fat $+\pi \hat{\eta}\xi us$ fixation]. The accumulation of fat in the tissues.

lipophagic (lip-o-fa'jik) [Gr $\lambda l\pi os$ fat $+ \varphi a \gamma \epsilon \hat{\iota} \nu$ to eat]. Consuming or absorbing fat.

lipophagy (lip-of'aj-e) [lipophagic] 1 The destruction of fat, lipolysis 2 Fat eating

lipophil (hp'o-fil) [Gr. $\lambda l\pi os$ fat $+ \varphi \iota \lambda \epsilon \hat{\iota} \nu$ to love]. Having an affinity for fat, absorbing fat

lipophrenia (li-po-fre'ne-ah) [Gr λείπειν to fail + φρήν mind]. Failure of the mental powers.

lipoprotein (hp-o-pro'te-in) A compound of protein with a lipin.

liporhodin (lip-o-ro'din) [Gr. λίπος fat + ῥόδον rose]. A red lipochrome.

liposarcoma (lip"o-sar-ko'mah) [lipoma + sarcoma] Sarcoma containing fatty elements.

lipose, liposin (hp'ōs, lip-o'sin) [Gr λlπος fat]. A lipase occurring in the blood.

liposis (lip-o'sis) [Gr λίπος fat] Lipomatosis.

liposome (lip'o-som) [Gr. $\lambda l\pi os$ fat $+ \sigma \hat{\omega} \mu a$ body]. One of the particles of lipoidal material held emulsionized in tissues in the form of "invisible fat."

lipostomy (li-pos'to-me) [Gr. λείπειν to leave + στόμα mouth]. Atrophy of the mouth

lipothymia (li-po-thi'me-ah) [Gr λείπειν to leave + θυμός mind]. Faintness or swooning; a swoon or faint.

lipotrophic (lip-o-trof'ik) Increasing bodily fat.

lipotrophy (lip-ot'ro-fe) [Gr. λίπος fat + τροφή nutrition]. Increase of bodily fat.

lipotropic (lip-o-trop'ik). Having an affinity for fats or oils.

lipotropy (lip-ot'ro-pe) [Gr. λίπος fat + τροπή a turning]. Affinity for oils and fats or for fatty tissue.

lipotuberculin (lip-o-tu-ber'ku-lin). A lipovaccine for tuberculosis.

lipovaccine (lip-o-vak'sin) [Gr. λίπος fat + vaccine].

A vaccine prepared with a vegetable oil as the menstruum.

lipoxanthin (lip-o-zan'thin) [Gr. $\lambda l\pi os$ fat + $\xi a\nu \theta \delta s$ yellow]. A yellow lipochrome.

lipoxeny (li-pok'sen-e) [Gr. λείπειν to leave + ξένος host]. The desertion of the host by a parasite.

lipoxidemia (lip-oks-id-e'me-ah) [Gr λίπος fat + δξυς acid + αίμα blood]. Same as lipacidemia.

lipoxysm (lip-oks'izm) [Gr. λίπος fat + όξυς sharp, acid]. Poisoning by oleic acid.

lipping (liping). The development of a bony lip in osteoarthrosis.

lippitude (lip'it-ūd) [L. lippilu'do; lip' pus bleareyed]. Marginal blepharitis or blear-eye.

Lippmann's electrometer [Gabriel Lippmann, French physicist, born 1845]. See clectrometer.

lipuria (lip-u're-ah) [Gr. $\lambda l \pi o s$ fat $+ o \tilde{\nu} \rho o \nu$ urine]. The presence of oil or fat in the urine.

Liq. Abbreviation for liquor.

liqual (li'kwal). A solution of aluminum acetate and hydrogen dioxid. used as a wound dressing.

liquefacient (lik-we-fa'shent) [L. liquefa'ciens]. Having the quality to convert a solid material into a liquid, producing liquefaction.

liquefaction (lik-we-fak'shun) [L. liquefac'tio; lique're to flow + fa'cere to make]. Change into a liquid form.

liquefactive (lik-we-fak'tiv). Causing, pertaining to, or characterized by, liquefaction.

liquescent (lik-wes'ent) [L. liques'cere to become liquid]. Tending to become liquid; becoming liquid.

liqueur (li-ker') [Fr.]. An aromatized alcoholic drink; a cordial.

liquid (lik'wid) [L. liq'uidus; lique're to flow].

1. A substance that flows readily without being melted. 2. Flowing readily; neither solid nor gaseous. 1. air, air condensed by cold and pressure into a liquid: a most powerful refrigerant. Bonain's 1., an anesthetic for operations on the ear, consisting of phenol, 15 gr; menthol, 15 gr.; and cocain hydrochlorid, 15 gr. Cohn's 1., a culture liquid for bacteria, consisting of a mixture of 1 part each of ashes of yeast and ammonium tartrate in 100 parts of distilled water. Declat's 1., a solution of carbolate of ammonia for external and internal use in cholera. Dutch 1. See ethylene diamine. Edner's 1., a decalcifying liquid for microscopic objects consisting of hydrochloric acid, 7 c c; distilled water, 100 c.c.; cold saturated solution of sodium chlorid, 100 c c.

Liquidambar (lik-wid-am'bar) [L.]. 1. A genus of hamamelidaceous trees. L. orienta'lis and L. altin'gia afford storax, and L. styracif'lua (sweet-gum tree), of North America, yields a fragrant, gummy balsam which is stimulant in diarrhea, coughs, etc. 2. The balsam afforded by L. styracif'lua.

liquiform (lik'wif-orm). Resembling a liquid.

liquor (Eng. lik'er, Lat. li'kwor), pl. liquo'res [L. "a liquid"]. A liquid; an aqueous solution; a solution not obtained by distillation. 1. ac'idi arsenio'si (U. S. P.), 1. arsen'ici hydrochlor'-ici, a solution of arsenic trioxid in hydrochloric acid and water. Dose, 2-5 min. (0.133-0333 c.c). 1. adhæ'sivus, a solution of nitrated cellulose in acetone, which, when applied to the skin, forms a film like collodion. alcoholic 1., a beverage containing alcohol, whether distilled or fermented. 1. ammo'nii aceta'tis (U. S. P.), spirit of Mindererus; an aqueous solution containing 7 per cent. of ammonium acetate. Dose, 4 fl.dr. (15 c.c). 1. am'nii, the fluid contained in the amnion. 1. arse'ni brom'idi, Clemens's solution; a 1 per cent. solution of the bromid of arsenic. Dose, 1-5

min. (0.066-0.333 c.c.). l. arse'ni et hydrar'-gyri iodi'di (U. S. P.), Donovan's solution of the iodids of arsenic and mercury: used in syphilis and in skin diseases. Dose, 2-10 min (0.133-0 666 c c.).

1. of Batavia, for cholera: laudanum, 6 c.c.; ether, 2½ cc; orange-flower water, 6 c.c. l. bellos'tii, a solution of mercury nitrate in water slightly acidified with nitric acid: used in testing the urine for paresis; 10 to 15 drops are added to a few cubic centimeters of urine. In negative cases a white or yellowish precipitate is formed; in positive cases the precipitate is gray or blackish, and the supernatant fluid is yellowish. l. cal'cii hydrox'idi (U. S. P), f. cal'cis, lime-water, a saturated solution of calcium hydroxid in water. 1. cho'rii, the false waters, a liquid which separates the amnion from the chorion in the early stages of gestation. 1. cor'ness, the liquid occupying the lymph-spaces of the cornea 1. cotun'nii, the perilymph of the internal ear. 1. cre'solis compos'itus (U. S. P), a 50 per cent. solution of cresol in soap It is used as a disinfectant. 1. di'astos, a digestant containing pepsin, diastase, trypsin, nux vomica, nitrohydrodistilled 1., any alcoholic by distillation. 1. entericus, chloric acid, etc. the intestinal juice 1. epinephri'næ hydro-chlo'ridi (U. S. P), a solution of epinephrin hydròchlorid. 1. epipas'ticus, a 50 per cent. acetic acid tincture of cantharides used as a blistering liquid. fermented 1., a beverage prepared by fermentation 1. fer'ri chlo'ridi (U. S. P.), a solution of ferric chlorid 1. fer'ri et ammo'nii aceta'tis (U. S. P.), solution of iron and ammonium acetate, Basham's mixture Dose, 4 fl dr (15 c.c.). 1. fer'ri subsulpha'tis, Monsel's solution. 1. fer'ri tersulpha'tis (U. S. P.), a chlotic former former parts of parents of the substitute of the solution of normal ferric sulphate, Fe₂(SO₄)₃, about 10 per cent. 1. follic'uli, the fluid that fills the follicle or space around the developing ovum within the ovary 1. formaldehyd'i (U S P), an aqueous solution containing about 37 per cent. by weight of formaldehyd, HCHO. 1. hydrogen'il diox'idi (U. S. P), an aqueous solution of hydrogen peroxid, about 3 per cent by weight: used as an antiseptic. 1. hypoph'ysis. Same as l. pituitarii 1. i'odi compos'itus (U S P.), Lugol's solution 1. magne'sii citra'tis (U. S. P), a solution of magnesium citrate sweetened and flavored. malt 1., ale, beer, or other fermented beverage having malt as its basis Morgagni's 1., the fluid between the eye-lens and its capsule. 1. morphi'næ aceta'tis, solution of acetate of morphin. Dose, 20-40 min (1 333-2 066 cc) 1. morphi'næ hydrochlora'tis, solution of the hydrochlorid of morphin. Dose, 15-30 min (1-2 c.c). 1. morphi'næ hypoder'micus, Magendie's solution of the sulphate of morphin morphi' næ sulpha' tis, solution of sulphate of morphin Dose, 10-40 min (0.666-2.5 c.c.) l. pancreat'icus, the pancreatic juice l. pericardii, the pericardial fluid. l. pi'cis alkali'nus, a liquid consisting of 2 parts of pine tar, I part of potassium hydroxid, and 5 parts of water: used externally for eczema. 1. pituita'rii (U. S. P.), solution of the fresh posterior lobe of the pituitary body of cattle. 1. plum'bi sub-aceta'tis (U. S. P.), Goulard's extract; an aqueous solution of the subacetate of lead, (CH₃ COO)₂-Pb₂O, about 18 per cent. 1. plum'bi subaceta'tis dilu'tus, lead-water; liquor plumbi sub-acetatis diluted with 25 volumes of distilled water. 1. potas'sii arseni'tis (U. S. P.), 1. arsenica'lis, Fowler's solution of potassium arsenite much used in chronic malarial disorders. Dose, 2-10 min. (0.133-0.666 cc). 1. potas'sii citra'tis (U. S. P.), an 8 per cent. solution of potassium citrate. 1. potas'sii hydrox'idi (U. S. P.), a 4.5 per cent. solution of potassium hydroxid. 1. l. san'guinis, the plasma or serum of the blood.
l. scar'pæ, the endolymph.
l. se'dans, a proprietary remedy containing black-haw, golden665

seal, and Jamaica dogwood. It is a uterine sedative. 1. sem'inis, the fluid portion of the semen. 1. so'dæ chlorina'tæ (U. S. P.), Labarraque's solution. 1. so'dæ chlorina'tæ chirurgica'lis (U. S. P.), modified Dakin's solution. 1. so'dii arsena'tis, a r per cent. solution of disodium arsenate, Na₂HAsO₄. 1. so'dii chloridi physiolog'icus (U. S. P.), physiological salt solution (0.85 per cent.). 1. so'dii glycerophos'phatis, a 50 per cent. solution of the salt, CH₂OH.CHOH.CH₂O.PO(ONa)₂. 1. so'dii hydrox'idi (U. S. P.), a 4.5 per cent. solution of sodium hydroxid. Villate's 1. See Villate's solution, under solution. 1. zin'ci chloridi (U. S. P.), a 50 per cent. solution of zinc chloridi.

liquorice (lik'er-is). See Glycyrrhiza.

Lisfranc's amputation, joint, ligament, tubercle (lis-franks') [Jacques Lisfranc, French surgeon, 1700-1847]. See amputation, joint, ligament, tubercle.

lisping (lisp'ing). The substitution of the th sounds for s and z.

Lissauer's tract (lis'ow-erz) [Heinrich Lissauer, German neurologist, 1861-1891]. See tract.

lissencephalic (lis-en-sef-al'ik) [Gr. λίσσος smooth + ἐγκέφαλον brain] Having a smooth brain; having a brain without convolutions.

Lissoflagellata (lis"o-flag-el-a'tah) [Gr. λίσσος smooth + flagellum]. A class of flagellate organisms having no protoplasmic collar at the base of the flagellum.

Lister's antiseptic, dressing, etc. (lis'terz) [see listerism] See antiseptic and dressing.

listerine (lis'ter-ēn). A proprietary antiseptic and detergent compound containing boric and benzoic acids, thymol, and principles derived from eucalyptus, baptisia, gaultheria, etc.

listerism (lis'ter-izm) [from Lord Joseph Lister, an English physician, 1827-1912, who introduced it]. The principles and practice of antiseptic and aseptic surgery.

Listing's law (lis'tingz) [Johann Benedict Listing, German physiologist 1808-1882]. See law.

listol (lis'tol). An Argentine mange remedy and antiseptic containing thymol and iodin. It is a heavy reddish-brown liquid soluble in water, alcohol, and glycerol.

Liston's forceps, knives, operation, etc. (lis'tonz) [Robert Liston, Scottish surgeon in London, 1794-1847]. See forceps, knife, operation, etc.

liter (le'ter, li'ter) [Fr. h'tre]. The unit of capacity in the metric system; it is 1000 cubic centimeters, or 1 056 quarts wine measure

lithæmia (lith-e'me-ah). See lithemia.

lithagogue (lith'ag og) [Gr. λίθος stone + ἀγώγειν to lead]. τ. Expelling calculi. 2. A remedy that expels calculi.

lithangiuria (lith-an-je-u're-ah) [Gr. λίθος stone + άγγειον vessel + οὖρον urine]. Calculous disease of the urinary tract.

litharge (lith'arj) [Gr. λιθάργυρος; λίθος stone + άργυρος silver]. Fused lead protoxid, PbO.

lithate (lith'āt). A urate.

lithectasy (lith-ek'tas-e) [Gr. λίθος stone + ἔκτασις extension]. The extraction of calculi through the mechanically dilated urethra.

lithectomy (lith-ek'to-me). Same as lithotomy.

lithemia (lith-e'me-ah) [lithic acid + Gr. alua blood]. Excess of lithic or uric acid and the urates in the blood. It is due to imperfect metabolism of the nitrogenous elements.

lithemic (lith-e'mik). Pertaining to, affected with or of the nature of, lithemia.

lithia (lith'e-ah). Lithium oxid, Li₂O· an alkali.

lithiasis (lith-i'as-is) [Gr. \(\lambda \lambda \text{for} \) stone]. The formation of calculi and concretions; also the gouty diathesis. appendicular 1., a condition

in which the lumen of the vermiform appendix becomes obstructed with calculi. The condition is said to run in families, and to be akin to gout and rheumatism. I. conjuncti've, a condition marked by the formation of white, calcareous concretions in the acini of the meibomian glands. pancreatic 1., the presence of concretions in the pancreas. It is attended with colic, fat-diarrhea, diabetes, and emaciation.

lithic acid (lith'ik). Same as uric acid. See acid.

lithicosis (lith-ik-o'sis) [Gr. λιθικός made of stone]. Pneumonokoniosis.

lithiopiperazin (lith"e-o-pip-er'az-in). A proprietary lithium and piperazin compound: antiarthritic. Daily dose, 15-45 gr. (1-3 gm.).

lithium (lith'e-um) [Gr. \(\lambda \lambda \text{os}\) stone]. A white metal, atomic weight, 6 94; symbol, Li; its oxid, lithia, Li₂O, is alkaline; its salts are solvents of uric acid, and are therefore used in gouty and rheumatic affections 1. benzoate, a salt. CoH5.-CO.O.Li, in a white powder or in scales. Dose, 5-15 gr. (0.333-1 gm.). 1. bitartrate. See tartarlithin.

1. bromid, a white, deliquescent, granular substance, LiBr, used in epilepsy, etc., like the other bromids. Dose, 5-20 gr (0.333-1.333 gm.). 1. cacodylate, a salt, (CH₃)₂AsOLi used like sodium cacodylate. 1.-caffein sulphonate, a salt used in gout and rheumatism: strongly commended as a diuretic. 1. carbonate, a white, powdery salt, Li₂CO₃; normal lithium carbonate: useful in urinary and calculous disorders. Dose, 2-10 gr. (0.133-0.666 gm.). 1. citrate, a white, crystalline powder, C₆H₅O₇Li₃ + 4H₂O: is used like the carbonate Dose, 2-5 gr. (0.133-0.333 gm.). 1. citrate, effervescent, effervescent citrate of lithium. the ordinary citrate, 10 parts; common sugar, milk-sugar, and tartaric acid, each, 20 parts; sodium bicarbonate, 20 parts. Dose, I dr. (4 gm.).

1. dithiosalicylate. I. An amorphous salt, used in the treatment of gout and rheumatism. 2. A yellow salt of one of the nine dithiosalicylic acids. 1 .- diuretin, diuretin in which the sodium is replaced by lithium, double salicylate of theobromin and lithium diuretic. Dose, 10-15 gr. 0.660-1 gm.) 1. formate, a salt in colorless needles, HCOOLi + H₂O used in gout and rheumatism. Dose, 3 gr. (0.2 gm.). 1. glycerophosphate, a white powder, C₃H₅(OH)₂,PO₂(OLi)₂: a nerve tonic and antilithic. Dose, 8-15 gr. (0.5-1 gm.). 1. hippurate, a gout remedy. Dose, 5-20 gr. (0.333-1.333 gm.). 1. iodate, a salt, LiIO₃, used in gouty and renal disorders. Dose, 1\(\frac{1}{2}\)-3 gr. (0.1-0.2 gm.) 1. iodid, a white, crystalline gr. (0.1-02 gm) 1. iodid, a white, crystalline body, LiI, in deliquescent prisms. 1. phenol-sulphonate, white crystals of lithium sulphocarbolate, OH C₆H₄ SO₂ OLi used in gonorchea. carbolate, OH C₆H₄ SO₂ OL1 used in gonorrnea.

1. salicylate [L. lith'n saluc'ylas], a white, crystalline powder, OH.C₆H₄ COOLi: used in rheumatism. Dose, 8-15 gr. (o 5-1 gm.).

1. salolophosphite, the lithium salt of salol-orthophosphorous acid, C₆H₅.CO.O.C₆H₄.O.PO(OH)

OLi. It is a white, crystalline compound, used in influenza and gout, in doses of 4-5 gr. (o.26-o.32). 1. sozoiodolate, an antiseptic agent, lithium diiodoparaphenolsulphonic acid, OH C₆H₂I₂.SO₂-OLi, in glancing white or yellowish plates. 1. sulphocyanate, a white, crystalline powder, LiCNS. Dose, 3-5 gr. (0.2-0.3 gm). 1. sulphoichthyolate, a tarry substance antirheumatic. Dose, 8 gr. (0 5 gm.). 1.-theobromin salicylate, a white, diuretic salt. Dose, 15 gr. (1 gm) l. valerate, a white powder used in rheumatism with nervous symptoms. Dose, 5-15 gr. (0.3-1 gm.). l. vanadate, a yellow powder used in rheumatism. Dose, 15 gr. (0.004 gm.) every other day.

lithizit (lith'i-zit). A salt of lithium and sodium combined with citric acid: used in the treatment of diabetes.

lithocenosis (lith"o-sen-o'sis) [Gr. λίθος stone + κένωσις evacuation]. The removal from the

- bladder of the fragments of calculi that have been crushed.
- lithoclast (lith'o-klast) [Gr. λίθος stone + κλᾶν to crush]. A lithotrite, or stone-crushing forceps, of various forms.
- lithoclysmia (lith-o-kliz'me-ah) [Gr. λίθος stone + κλύσμα clyster]. Treatment of calculus by injecting solvent liquids into the bladder.
- **lithocystotomy** (lith"o-sis-tot'o-me) [Gr. $\lambda l\theta os$ stone $+ \kappa \nu \sigma \tau s$ bladder $+ \tau o\mu \dot{\eta}$ cut]. A cutting operation for removing a stone from the bladder.
- lithodialysis (lith"o-di-al'is-is) [Gr. λίθος stone + διαλύειν to dissolve]. 1. The solution of calculi in the bladder by injected solvents. 2. The crushing of a calculus in the bladder.
- lithogenesis, lithogeny (lith-o-jen'es-is, lith-oj'-en-e) [Gr λίθος stone + γεννῶν to produce]. The formation of calculi.
- lithokelyphopedion (lith"o-kel-if-o-pe'de-on) [Gr. $\lambda l \theta o s$ stone $+ \kappa \dot{\epsilon} \lambda \nu \varphi o s$ sheath $+ \pi \alpha \iota \delta l o \nu$ child]. A lithopedion in which both the fetus and the membranes are petrified.
- lithokelyphos (lith-o-kel'if-os) [Gr. λίθος stone + κέλυφος sheath]. A lithopedion in which the calcification is limited to the fetal membranes.
- lithokonion (lith-o-ko'ne-on) [Gr. λίθος stone + κονιᾶν to pulverize] An instrument for pulverizing calculi in the bladder.
- **litholapaxy** (lith-ol'ap-aks-e) [Gr. $\lambda i\theta os$ stone + $\lambda \delta \pi \alpha \xi_{15}$ removal]. The crushing of a calculus in the bladder, followed at once by the washing out of the fragments **Bigelow's 1.**, the crushing of a stone by a special kind of lithotrite and the removal of the fragments by another apparatus.
- litholein (lith-o'le-in). A yellow antiseptic and parasiticide liquid; an oily derivative from petroleum for external use in skin diseases.
- lithology (lith-ol'o-je) [Gr $\lambda l \theta o s$ stone + $\lambda \delta \gamma o s$ treatise] The sum of what is known regarding calculi and their treatment.
- litholysis (lith-ol'15-15) [Gr. λίθος stone + λύσις solution]. The solution of calculi in the bladder.
- **litholyte** (lith'o-lit) [Gr λίθος stone + λύσις solution] An instrument used in injecting solvents of calculi into the bladder
- lithometer (hth-om'et-er) [Gr. λίθος stone + μέτρον measure]. An instrument for measuring calculi
- lithometra (lith-o-me'trah) [Gr λίθος stone + μήτρα womb]. Ossification of the uterus.
- lithomoscus (lith-o-mos'kus) [Gr. λίθος stone + μόσχος calf] Lithopedion in cattle.
- **lithomyl** (lith'o-mil) [Gr. $\lambda l\theta os$ stone $+ \mu b \lambda \eta$ mill]. An instrument for crushing a stone in the bladder.
- An instrument for crusning a stone in the bladder.

 lithona (lith-o'nah). A preparation of lithia with saline laxatives.
- **lithonephria** (lith-o-nef're-ah) [Gr. $\lambda l\theta$ os stone + $\nu \epsilon \varphi \rho \delta s$ kidney]. Any diseased condition due to the presence of calculi in the kidney.
- lithonephritis (lith"o-nef-ri'tis) [Gr. λίθος stone + nephritis]. Inflammation of the kidney due to irritation of calculi.
- **lithonephrotomy** (lith"o-nef-rot'o-me) [Gr. $\lambda l\theta$ os stone $+\nu\epsilon\varphi\rho b$ s kidney $+\tau \sigma\mu\dot{\eta}$ cut]. The operative removal of a renal calculus.
- lithontriptic (lith-on-trip'tik). See lithotriptic.
- lithopedion, lithopedion (lith-o-pe'de-on) [L. lithope'dium; from Gr. λίθος stone + παιδίον child]. A dead fetus that has become stony or petrified.
- lithophone (lith'o-fōn) [Gr. $\lambda l\theta$ os stone + $\varphi\omega\nu\dot{\eta}$ sound]. A device for indicating the presence of a calculus by the sound which the latter emits when struck.
- lithopiperazin (lith"o-pip-er-a'zin). See lithio-piperazin.
- lithos (lith'os). A proprietary preparation of lithium bitartrate and sodium salicylate.

- **lithoscope** (lith'o-skōp) [Gr $\lambda l\theta os$ stone $+ \sigma \kappa \sigma \pi \epsilon \hat{\iota} \nu$ to view]. An instrument for examining calculi in the bladder.
- lithosis (lith-o'sis) [Gr. λίθος stone]. A diseased condition of the lung due to the inhalation of fine particles of stone; grinders' disease.
- lithotome (lith'o-tōm) [Gr. λίθος stone + τέμνειν to cut]. A knife for performing lithotomy.
- **lithotomist** (lith-ot'o-mist). One who performs a lithotomy.
- lithotomy (lith-ot'o-me) [Gr λίθος stone + τέμνειν to cut]. The removal of a stone by cutting into the bladder; cystotomy. bilateral 1., one performed by a transverse incision across the perineum. lateral 1., one in which the cut is before the rectum and to one side of the raphe marian 1., median 1., one made on the raphé of the perineum before the anus. mediolateral 1., a combination of the median and lateral operations. perineal 1., that in which the incision is made in the perineum. prerectal 1. See marian 1. rectal 1., rectovesical 1., one performed within the dilated rectum suprapubic 1., one done with a cut above the pubes. vaginal 1., vesicovaginal 1., one performed by an incision within the vagina.
- **lithotony** (lith-ot'o-ne) [Gr. λίθος stone + τείνειν to stretch]. The creation of an artificial vesical fistula which is dilated to allow the extraction of a stone.
- **lithotresis** (lith-o-tre'sis) [Gr. $\lambda l\theta$ os stone $+ \tau \rho \hat{\eta} \sigma ts$ a boring]. The drilling or boring of holes in a calculus.
- **lithotripsy** (lith'o-trip-se) [Gr. $\lambda l\theta$ os stone + $\tau \rho i \beta \epsilon \iota \nu$ to rub]. The crushing of a calculus within the bladder.
- lithotriptic (lith-o-trip'tik) [Gr. λίθος stone + τρίβειν to rub]. An agent that dissolves calculi.
- **lithotriptor** (lith'o-trip-tor) [Gr. $\lambda l \theta os$ stone + $\tau \rho l \beta \epsilon \iota \nu$ to rub] An instrument for crushing calculi in the bladder.
- lithotrite (lith'o-trit) [Gr. $\lambda l \theta$ os stone $+ \tau \rho l \beta \epsilon \iota \nu$ to rub]. An instrument for crushing a stone in the bladder.
- lithotrity (lith-ot'rit-e). The crushing of a vesical calculus within the bladder by means of the lithotrite.
- lithous (lith'us) [Gr λίθος stone]. Pertaining to or of the nature of a calculus.
- lithoxiduria (lith"oks-e-du're-ah) [Gr λίθος stone + oxid + Gr οὖρον urine]. The existence of xanthic oxid in the urine.
- lithuresis (hth-u-re'sis) [Gr. λίθος stone + οὔρησις urnation] The passage of gravel through the urethra with the urine.
- lithureteria (lith"u-re-te're-ah) [Gr λίθος stone + οὐρητήρ ureter]. Calculous disease of the ureter.
- lithuria (lith-u're-ah) [Gr. λίθος stone + οὖρον urine]. Excess of uric acid or of urates in the urine.
- litmus (lit'mus). A blue pigment prepared from Roccel'la tincto'ria and other lichens used as a test for the presence of free acids and alkalis. See azolitmin 1.-milk, milk stained with litmus used as a culturemedium 1.-paper, paper impregnated with litmus used as a test for alkalis and acids.
- litolein (lit-o'le-in). A yellow fluid distilled from petroleum used as an antiseptic and antiparasitic in skin diseases.
- litre (le'ter) [Fr]. See liter.
- Litten's sign (lit'enz) [Moritz Litten, German physician, 1845–1907]. See sign.
- litter (lit'er) A movable couch for transporting the sick or wounded.
- Little's disease (lit'elz) [William John Little, English physician, 1810–1894]. See disease.

Littré's colotomy, glands, hernia, etc. (litraz') [Alexis Littré, French surgeon, 1658-1726]. See colotomy, gland, hernia, etc.

littritis (lit-ri'tis). Inflammation of Littré's glands. Litzmann's obliquity (litz'manz) [Karl Konrad Theodor Litzmann, German gynecologist, 1815–1800]. See obliquity.

live-blood. Twitching of the eyelids.

livedo (liv-e'do) [L.]. A discolored spot or patch on the skin, commonly due to passive congestion. I. reticula'ris idiopath'ica, a permanent mottling of the skin occurring on exposure of the skin to cold. I. reticula'ris symptomat'ica, a mottling of the skin due to some demonstrable cause. I. telangiectat'ica, permanent mottling of the skin due to amomaly of the capillaries of the skin.

liver (liv'er) [L. jec'ur, hep'ar]. The glandular viscus that secretes bile. It measures from ten to twelve inches transversely, and from six to seven anteroposteriorly, it is three inches thick at its thickest part, and it weighs from three to four pounds. It is in the upper part of the abdominal cavity, occupying the right hypochondriac, the epigastric, and part of the left hypochondriac regions. The liver has five fissures, five lobes, five ligaments, and five sets of vessels, it is inclosed in a fibrous coat, and is covered with peritoneum, except at the attachment of the cor-onary ligament. The lobes are Right lobe, left lobe, lobus quadratus, lobus spigelii, lobus caudatus The fissures are: The longitudinal fissure, the fissure for the ductus venosus, the transverse fissure, the fissure for the gall-bladder, the fissure The ligaments are The for the vena cava longitudinal ligament, the two lateral ligaments, the coronary ligament, the round ligament. The five sets of vessels are Hepatic artery, portal vein, hepatic veins, hepatic ducts, lymphatics In structure the liver is made up of lobes, the lobes of lobules, and the lobules of cells The cells are surrounded by a capillary network derived from the hepatic artery and portal vein, and giving origin to the hepatic vein and hepatic duct. The function of the liver is to secrete bile, which is stored in the gall-bladder, and goes from this point into the intestine by means of the cystic duct and the ductus communis choledochus It also forms glycogen from the maltose brought by the portal vein, storing it in the liver-cells, it converts nitrogenous matters that accumulate in the alimentary canal into urea, and it takes part in the formation and destruction of blood-corpuscles albuminoid 1., amyloid 1., a liver which is the seat of an albuminoid or amyloid degeneration. beavertail 1., one having a peculiar deformity of the left lobe. biliary cirrhotic 1., one wherein the bile-ducts are clogged and distended, the substance of the organ being inflamed. brimstone 1., an enlarged liver of a deep yellow color, seen in some cases of congenital syphilis **bronze** 1., the bronze-colored liver of malarial poisoning. car-1. See stasis curhosis, under cirrhosis. cirrhotic 1., one that is the seat of a chronic inflammation, the bile-ducts being distended. degraded 1., a human liver divided into many lobes, like that of the gorilla fatty 1., one affected with fatty degeneration and infiltration. Feuerstein's 1., smooth cirrhosis of the liver due to congenital syphilis. floating 1. Same as foamy 1., a condition of the liver wandering l seen postmortem and marked by the presence of numerous gas bubbles. frosted 1., a liver in which the hepatic peritoneum is thickened, giving the organ a frosted appearance See perihepatitis drinkers' 1. Same as hobnail-1. hobnail-1., a liver whose surface is marked with nail-like points from atrophic cirrhosis. icing-1, a liver covered by a thick coat, like icing. See perihepatitis. infantile 1. See biliary cirrhosis of children, under cirrhosis. infectious 1., a liver characterized by the presence of degenerative foci which have resulted from an infectious disease. iron-l. See siderosis, hepatic. lardaceous 1., amyloid liver. nutmeg-l., a liver presenting a mottled appearance when cut. pigmented 1., a liver stained with blood-pigments usually a result of malaria and melanemia sago 1., a liver affected with amyloid degeneration, the acm resembling boiled sago grains. stasis 1. See slasis cirrhosis, under cirrhosis 1. of sulphur. See potasia sulphurata tight-lace 1., one which is deformed by the use of tight corsets. tropical 1., a condition of the unacclimated natives of the temperate zone residing in the tropics, marked by acute congestion of the liver and due to the effect of heat, excess of food and alcohol, and lack of exercise. wandering 1., a displaced and movable liver. waxy 1. See albuminoid 1.

liver-fluke. See Fasciola and Opisthorchis.

liver-rot. A disease of sheep due to the liver-fluke. liver-spot. See chloasma, Fasciola hepatica, morphea, and tinea versicolor.

liverwort (liv'er-wort) 1. Any plant of the ranunculaceous old genus Hepat'ica (now Anemo'ne), formerly esteemed as remedies for liver disorders.
2. Any cryptogamous plant of the order Hepat'ica: several species were formerly employed in diseases of the liver.

livetin (h've-tin) A protein found along with lecithin in yolk of egg.

livid (liv'id) [L. liv'idus]. Discolored, as from the effects of contusion or congestion, black and blue.

lividity (liv-id'1t-e) [L. *livid'itas*]. The quality of being livid, discoloration, as of dependent parts, by the gravitation of the blood.

Livierato's sign, test (le-ve-er at'ōz) [P E Luverato, Italian physician, born 1860]. See under sign and tests.

livor (li'vor), pl. li'vorcs [L.]. 1. Lividity. 2. A livid spot seen upon the dependent parts of a cadaver and due to capillary stasis

lixiviation (liks"iv-e-a'shun) [L. lixiv'1a lye]. The process of separating soluble from insoluble matter by dissolving out the soluble matter and drawing off the solution.

lixivium (lıks-iv'e-um) [L.]. Any alkaline filtrate obtained by leaching ashes or other similar powdered substance, lye.

Lizars's operation (li'zarz) [John Lizars, Edinburgh surgeon, 1808-1860]. See operation

Ilareta (lyah-ra'tah) A composite-flowered plant, Haplopap'pus llare'ta, of Chili its fluidextract is used as an internal remedy in gonorrhea.

L. M. Abbreviation for Licentrate in Midwifery.

L. M. A. Abbreviation for *left mento-anterior* position of the fetus in utero.

L. M. P. Abbreviation for left mentoposterior position of the fetus in utero.

L. O. A. Abbreviation for *left occipito-anterior* position of the fetus in utero.

Loa (lo'ah) A genus of filarial round worms. L. lo'a is a thread-like worm of West Africa from I to 2 inches long, which inhabits the subcutaneous connective tissue of the body which it traverses freely. It is seen especially about the orbit and even under the conjunctiva It causes itching and occasionally edematous swellings (Calabar swellings). Flies of the genus Chrysops are probably the intermediate hosts It was formerly known as Filaria loa.

loasis (lo'as-is). Infestation with Fila'ria lo'a.

lobar (lo'bar). Of or pertaining to a lobe. I. pneumonia. See pneumonia.

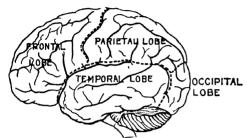

Lobaria islandica (lo-ba're-ah is-land'e-kah). A variety of lichen, Lichen islandicus.

lobate (lo'bāt) [L. loba'tus]. Provided with lobes or disposed in lobes.

lobe (löb) [L. lo'bus; Gr. λοβός]. 1. A part of an organ or viscus demarcated by fissures or divisions.

2. One of the main divisions of the crown of a tooth. 2. One of the main divisions of the crown of a tooth.

anterior 1., that portion of the cerebellum which lies rostral to the fissura prima. appendicular 1., an abnormal tongue-shaped downward depression of a portion of the right lobe of the liver. Called also floating l., linguiform l., and Riedel's l. cacuminal 1., the superior semilunar lobe of the cerebellum. caudate 1. I. The tail-like process of the liver. like process of the liver. 2. A part of the median lobe of the cerebellum. central 1., the island of Reil. crescentic l's, two lobes (anterior and posterior) on the upper surface of each hemisphere of the cerebellum, separated

The lobes of the cerebral cortex.

by the preclival fissure. cuneate 1., one of the convolutions on the internal surface of the cerebral hemisphere above the calcarine fissure. digastric 1., one of the lobes of the lower surface of the cerebellum. frontal 1., a cerebral lobe corresponding in position to the frontal bone. Home's 1., a third lobe of the prostate, sometimes seen as a small, glandular structure be-tween the sphincter of the bladder and the caput gallinaginis: in old age it may become much enlarged. lacing 1., a lobe of the liver produced by long-continued tight lacing limbic 1. See gyrus fornicatus. linguiform 1. Same as gyrus fornicatus. linguiform 1. Same as Riedel's 1. marginal 1., the first frontal convolution of the cerebrum median 1., the superior vermiform process of the cerebellum occipital 1., a cerebral lobe corresponding in position to the occipital bone. olfactory 1., a lobe of each hemisphere of the cerebrum composed of the olfactory bulb, its crus, and the anterior part of the olfactory area optic l's, one of the upper pair of corpora quadrigemina; called also colliculus superior, optic tectum, and nates. orbital 1., the under surface of the frontal lobe resting on the orbital bone. parietal 1., a cerebral lobe corresponding in position to the parietal bone. pneumogastric 1., subpeduncular 1., one of the lobes of the under surface of the cerebellum prefrontal 1., the part of the frontal lobe of the brain anterior to the ascending convolu-tion. **pyriform 1.**, the lateral exposed por-tion of the olfactory cerebral cortex in lower mammals quadrangular l., quadrate l. See square l. Riedel's 1., an abnormality of the liver consisting of a tongue-shaped portion of liver sub-stance attached to the right lobe. rolandic 1., the operculum of the insula. **semilunar 1.**, the posterior lobe of the upper surface of either hemisphere of the cerebellum. slender 1., the fourth of the five lobes on the under surface of the cerebellar hemisphere. square 1. 1. The anterior lobe on the superior surface of the cerebellum. 2. The precuneus. Called also quadrate 1. supplemental 1., a tooth lobe which is additional to the regular lobes of a tooth. temporal 1., a lobe on the outer side and under surface of each cerebral hemisphere. temporosphenoid 1., a cerebral lobe corresponding in position to the bones indicated by its name. uncinate 1., the internal part of the occipitotemporal convolu-tion. vagal 1. Same as visceral 1. visceral 1., the visceral sensory area of fishes; called also vagal l. and lobus vagi.

lobectomy (lo-bek'to-me) [L. lo'bus lobe + Gr. εκτομή excision]. Excision of a lobe of a gland, as the thyroid or of the lung.

Lobelia (lo-be'le-ah) [after M. de Lobel]. A genus of lobeliaceous plants. The leaves and tops of L. infla'ta, an herb of North America, are acronarcotic, emetic, sedative, expectorant, and depressant. They are used in asthma, croup, and whooping-cough. Dose of vinegar (ace'tum lobe'-Whooping-cough. Dose of vinegal (acc sum work)

lia), 5-30 min. (0.333-2 c.c.); of fluidextract, 1-5
min. (0.666-0.333 c.c.). Emetic dose, 10-60 min.
(0.6-4 c.c.); of infusion, 1-4 fl.dr. (4-16 c.c.); of tincture (U. S. P.), 5-30 min. (0.333-2 c.c.); of extract, 1\frac{1}{2}-2 gr. (0.090-0.13 gm); of fluidextract of the seed, 1-10 min (0.066-0.666 c.c).

lobelidin (lo-be'lid-in). A crystalline alkaloid, C20-H25NO2, from Lobelia inflata.

lobelin (lob'e-lin). Before the isolation of the three pure crystalline alkaloids the name lobelin was given to a raw liquid mixture of the then unknown alkaloids of Lobelia inflata, contaminated with resins. A sulphate has been prepared from this raw liquid and used in asthma, croup, and whooping-cough with uncertain action Recently Heinrich Wieland and Hermann Wieland discovered the three pure crystalline alkaloids of Lobelia inflata. Alpha-lobelin, C₂₀II₂₀O₂N, is a specific stimulant to the respiratory center. It is used as a powerful resuscitant in respiratory failure, collapse, or shock. Among the principal indications are. asphyxia neonatorum, anesthesia accidents, asphyxiations by exogenous or endogenous poisons. Especially in carbon monoxid asphyxiation the drug has been used with good results, when artificial respiration and oxygen inhalation failed. hydrochlorate of lobelin-alpha is marketed in doses of $\frac{1}{8}$ gr. (0.01 gm.) for adults and $\frac{1}{20}$ gr (0.003 gm.) for children. Beta-lobelin, $C_{22}H_{27}O_2N$, and lobelidin, $C_{22}H_{27}O_2N$, are alkaloids having about the same properties but only half the strength of the alphalobelin and therefore are not in the market.

lobelism (lo-be'lizm). Poisoning by lobelia.

lobengulism (lo-ben'gu-lizm). A disorder characterized by development of subcutaneous fat and with decrease of the sexual function.

lobinol (lo'bin-ol). The active and poisonous principle of poison oak (Rhus diversiloba)

lobopodium (lo-bo-po'de-um), pl. lobopo'dia. A pseudopodium consisting of a more or less fluid extrusion of the body of the organism See filopodium.

Lobstein's cancer, ganglion, etc. (lob'stīnz) [Johann Georg Lobstein, surgeon in Strassburg, 1777-1835]. See cancer, ganglion, etc.

lobular (lob'u-lar) [L. lobula'ris]. Of or pertaining to a lobule.

lobulated (lob'u-la-ted). Made up of or divided into lobules.

lobule (lob'yūl) [L. lob'ulus, dim. of lo'bus lobe]. A little lobe or one of the primary divisions of a lobe. crescentic 1., the square lobe of the cerebellum. fusiform 1., a convolution on the median aspect of the brain, below the collateral fissure. **petrosal 1.** Same as flocculus.

lobulette (lob-u-let') [Fr.]. 1. A minute lobule. 2. Any one of the primary divisions of a lobule.

lobulose, lobulous (lob'u-los, lob'u-lus). Having lobules.

lobulus (lob'u-lus), pl. lob'uli [L.] A lobe. lob'uli tes'tis, the bodies which make up the testicle, consisting of convoluted seminiferous tubules.

lobus (lo'bus) [L.; Gr. λοβόs] A lobe. 1. ante'rior cerebel'li. See anterior lobe, under lobe. 1. biventra'lis, the cuneiform lobe of the cerebellum. 1. cacu'minis, the presemilunar lobe of the cerebellum. 1. centra'lis. See island of Reil. 1. cli'vis, the quadrangular lobe of the cerebellum. 1. cul'minis. Same as culmen. 1. cuneifor'mis. Same as l. biventra'lis. 1. gra'- cilis poste'rior, the posterior slender lobe of the cerebellum. 1. olfacto'rius [B N A]. See olfactory lobe, under lobe. 1. poste'ro-infe'rior, 1. infe'rior semiluna'ris, 1. post-semiluna'ris, one of the lobes of the cerebellum. 1. quadra'tus [B N A]. Same as square lobe. 1. spige'lii, the smallest of the lobes of the liver. 1. tu'beris, the postsemilunar lobe of the cerebellum.

local (lo'kal) [L. loca'lis]. Restricted to or pertaining to one spot or part; not general.

localization (lo"kal-iz-a'shun).
r. The determination of the site or place of any process or lesion.
2. Restriction to a circumscribed or limited area.
cerebral 1., the determination of the situation of the various centers of the brain; also the limitation of the various cerebral faculties to a particular center or organ of the brain.

localized (lo'kal-īzd). Not general; restricted to a limited region or to one or more spots.

localizer (lo'kal-i-zer). An instrument for locating solid particles in the eyeball by means of the x-ray.

Loc. dol. Abbreviation for L. lo'co dolen'ti, to the painful spot.

lochia (lo'ke-ah) [Gr. λόχια]. The vaginal discharge that takes place during the first week or two after childbirth 1. al'ba, the whitish discharge normal after about the first six days after childbirth. 1. cru'enta, 1. ru'bra, the reddish, sanguineous flow of the first week after delivery. 1. sero'sa, a serous or ichorous lochial discharge.

lochial (lo'ke-al). Pertaining to the lochia.

lochiocolpos (lo"ke-o-kol'pos) [lochia + Gr. κόλπος vagina]. Distention of the vagina by retained lochia

lochiocyte (lo'ke-o-sit) [lochia + Gr κύτος cell].

Any one of the characteristic decidual cells of the lochia

lochiometra (lo"ke-o-me'trah) [Gr. λόχια lochia $+ \mu \dot{\eta} \tau \rho \alpha$ uterus] The retention or non-discharge of the lochia

lochiometritis (lo"ke-o-me-tri'tis) [lochia + metritis]. Puerperal metritis.

lochiopyra (lo-ke-op'ir-ah) [Gr. λόχια lochia + πῦρ fever]. Puerperal fever.

lochiorrhagia (lo''ke-or-a'je-ah) [Gr λόχια lochia + ἡηγνύναι to burst forth]. Same as lochiorrhea.

lochiorrhea, lochiorrhea (lo"ke-or-e'ah) [lo-chia + Gr. pola flow]. An abnormally free lochial discharge.

lochioschesis (lo-ke-os'ke-sis) [lochia + Gr. σχέσις retention]. Retention of the lochia.

lochometritis (lo''ko-me-tri'tis) [Gr. λόχος child-birth + metritis]. Puerperal metritis.

lochoperitonitis (lo"ko-per-e-to-ni'tis) [Gr. λόχος childbirth + peritonitis]. Puerperal peritonitis.

Locke's solution (loks). See under solution.

lock-finger (lok'fing-er). See finger.

lockjaw (lok'jaw). Tetanus or trismus.

Lockwood's ligament (lok'woodz) [Charles Barrett *Lockwood*, English surgeon, 1858–1914]. See *ligament*.

loco (lo'ko) [Sp. "insane"]. I. A name of various leguminous plants of the genera Astrag'alus, Ilosack'aa, Sopho'ra, and Oxyl'ropis: poisonous to horses, cattle, and sheep 2 Same as locoism. 3. An animal affected with locoism.

locoism (lo'ko-izm). A disease of horses, cattle, and sheep ascribed to poisoning by loco. Called also loco-disease and loco-poisoning.

locomotion (lo-ko-mo'shun) [L. lo'cus place + move're to move]. Movement from one place to another. quadruped 1., walking upon all fours: the only mode possible in certain extreme cases of tuberculosis of the spinal column.

locomotive (lo-ko-mo'tiv). Pertaining to locomotion

locomotor (lo-ko-mo'tor). Of or pertaining to locomotion. 1. ataxia. See ataxia.

locomotorial (lo"ko-mo-to're-al). Pertaining to the locomotorium.

locomotorium (lo"ko-mo-to're-um). The motive apparatus of the body.

locomotory (lo-ko-mo'tor-e). Pertaining to locomotion.

locular (lok'u-lar). Pertaining to a loculus.

loculate (lok'u-lāt). Divided into loculi.

loculus (lok'u-lus), pl. loc'uli [L.]. A small space or cavity.

locum, 1. tenens, 1. tenent (lo'kum, lo'kum ten'enz, lo'kum ten'ent). A practitioner who temporarily takes the place of another.

locus (lo'kus). L. for place. l. cæru'leus [B N A], l. cine'reus, l. ferrugin'eus, a pigmented eminence in the superior angle of the floor of the fourth ventricle. l. mino'ris resisten'tiæ, a spot of lessened resistance; that organ or part which is most liable to take on a diseased condition in consequence of exposure to any morbific influence l. ni'ger, a dark spot in the section of the crus cerebri between the tegmentum and crusta. l. perfora'tus ante'rior, a space on the inside of the fissure of Sylvius l. perfora'tus poste'rior, a similar space just in front of the pons. l. ru'ber. See red nucleus, under nucleus.

lodal (lo'dal). A preparation made by oxidizing laudanosin used in uterine hemorrhage.

lodua (lo-du'ah). The fruit of a plant. used as a remedy for tapeworm.

Loeffle'ria neverman'ni. An organism isolated by Frosch and considered by him to be the cause of foot-and-mouth disease.

læmology, loimology (le-mol'o-je, loi-mol'o-je) [Gr. λοιμός plague + λόγος word]. Same as lemology.

loempe (lem'pe). Beriberi.

Loeschia (lēsh-c-ah) The name given by Chatton and Lalung-Bonnaire in 1912 to the parasitic amebæ having no contractile vacuoles See Entamæba. L. coli. Same as Entamæba coli L. gingiva'lis, Entamæba gingivalis. L. histolyt'ica, Entamæba histolytica.

loeschiasis (lēsh-i'as-is). The diseased condition due to infection with parasites of the genus *Loeschia*; amebiasis.

Löffler's bacillus, serum, stain, etc (lef'lerz)
[Friederich A J Löffler, German bacteriologist, 1852-1915]. See bacillus, serum, stain, etc.

löffleria (lef-le're-ah) [after Löffler]. A disease in which the diphtheria (Klebs-Löffler) bacillus is present without the ordinary symptoms of diphtheria.

lofotol (lof'o-tol). A preparation of cod-liver oil containing carbon dioxid.

logadectomy (log-ad-ek'to-me) [Gr. λογάδες conjunctiva: + ἐκτομή excision]. Excision of a portion of the conjunctiva.

logaditis (log-ad-i'tis) [Gr. λογάδες conjunctive + -ιτις inflammation]. Inflammation of the sclera.

logadoblennorrhea (log"ad-o-blen-o-re'ah) [Gr. λογάδες conjunctivæ]. Egyptian conjunctivitis (C. Graefe).

logagnosia (log-ag-no'ze-ah) [Gr. λόγοs word + α priv. + γνώσις knowledge]. Aphasia, alogia, or other central word defect.

logagraphia (log-ag-raf'e-ah) [Gr. λόγος word + a neg. + γράφειν to write]. Inability to express ideas in writing.

logamnesia (log-am-ne'ze-ah) [Gr. λόγος word + άμνεσια forgetfulness]. Word-deafness or word-blindness.

logaphasia (log-af-a'ze-ah) [Gr. λόγος word + aphasia]. Inability to express ideas in speech, due to brain disease.

logasthenia (log-as-the'ne-ah) [Gr. λόγος word + asthenia]. Disturbance of that faculty of the mind which deals with speech comprehension.

logokophosis (log"o-kof-o'sis) [Gr. λόγοs word + κώφωσις deafness]. Word-deafness; mability to comprehend spoken language.

logomania (log-o-ma'ne-ah) [Gr. λόγος word + μανία madness]. 1. Talkative insanity. 2. Aphasia.

logoneurosis (log"o-nu-ro'sis) [Gr λόγοs word + neurosis]. Any neurosis with disorder of the speech.

logopathy (log-op'ath-e) [Gr $\lambda \delta \gamma \sigma s$ word $+ \pi \delta \theta \sigma s$ illness]. Any disorder of speech of central origin.

logopedia, logopedics (log-o-pe'de-ah, log-o-pe'diks) [Gr. λόγος word + orthopedics] The study and treatment of speech defects.

logoplegia (log-o-ple'je-ah) [Gr. λόγος word + πληγή stroke]. 1. Any paralysis of the speech organs 2 Inability to speak, while words are remembered.

logorrhea, logorrhea (log-or-e'ah) [Gr. λόγος word + βοία flow]. Excessive or abnormal volubility.

logospasm (log'o-spazm) [Gr. $\lambda \delta \gamma \sigma_s$ word $+ \sigma \pi \delta \sigma_{\mu \sigma_s}$ spasm] The spasmodic utterance of words.

logwood (log'wood). See Hamatoxylon.

Lohnstein's saccharimeter (lon'stinz) [Theodor Lohnstein, German physician, 1866-1918]. See saccharimeter.

loiasis (lo-i'as-is) Infestation with Filaria loa.

loimic (loi'mik) [Gr. λοιμός plague]. Pertaining to the plague.

loimographia (loi-mo-gra'fe-ah) [Gr. λοιμός plague + γράφειν to write]. A description of the plague.

loimology (loi-mol'o-je). See lemology.

loin (loin) [L. lum'bus]. The part of the back between the thorax and the pelvis.

loliism (lo'le-izm). Lolism

lolism (lo'lizm). Poisoning by seeds of Lo'lium temulen'tum, or poisonous darnel.

lomadera (lo-mad-e'rah) A variety of Texas cattle fever seen in Venezuela

Lombardi's sign (lom-bar'dēz) [Antonio Lombardi, physician in Naples] See under sign

lomi-lomi (lo"me-lo'me). A shampooing process practised in Polynesia

London paste (lun'dun). See paste.

Long's coefficient [John Harper Long, American physician, born 1850]. See coefficient

longevity (lon-jev'it-e) [L lon'gus long + a'vum age]. Long life, the condition or quality of being long-lived.

longiradiate (lon-ji-ra'de-āt). Having long radiations; a term applied to certain neuroglia cells.

longissimus dor'si (lon-jis'im-us) [L. "longest of the back"]. See muscles, table of.

longitudinal (lon-jit-u'din-al) [L. longitu'do length]. Lengthwise; parallel to the long axis of the body.

longsightedness (long-sit'ed-nes). See hyperopia longus cap'itis (long'us) [L. "long (muscle) of the neck"] See rectus capitis anticus major, in muscles, table of. 1. col'li. See muscles, table of.

Loomis's mixture (loo'mis) [Alfred L. Loomis, physician in New York, 1831-1895]. See mixture.

loop (loop). 1. A turn or sharp curve in a cord-like structure. 2. Any one of a set of corneal nerve end-organs somewhat resembling the hooks of the same structure. archoplasmic 1. Same as pseudochromosome. Gerdy's interauricular 1., a small muscular bundle in the interauricular septum of the heart. Henle's 1., a U-shaped turn in a uriniferous tubule of the kidney. Hyrtl's 1., an occasional loop-like anastomosis between the right and left hypoglossal nerves in the genio-

hyoid muscle. **lenticular 1.**, nerve-fibers extending between the lemniscus and the lenticular nucleus.

loopful (loop'ful). The quantity of liquid that can be held within the loop of platinum wire used in transferring bacterial cultures.

L. O. P. Abbreviation for *left occipitoposterior* position of the fetus in utero.

lophius (lo'fe-us) [Gr. λόφος a ridge] A ridge between two furrows on the ventricular surface of the cerebrum.

lophodont (lof'o-dont) [Gr. $\lambda\delta\varphi$ os ridge + $\delta\delta\omega$ is tooth]. Having the crown of the molar teeth in the form of ridges or crests.

lophophorin (lo-fof'o-rin) A poisonous alkaloid C₁₃H₁₇NO₃, from *Anhalo'nium lewin'ii*, having effects similar to those of mezcalin

Lophophy'ton gallina'rum. A variety of achorion which causes comb disease in fowls

lophophytosis (lo-fof-i-to'sis). See comb disease, under disease.

Lophotrichea (lo-fo-trik'e-ah) [see *lophotrichous*]. A group of bacteria, including those forms which have a tuft of cilia at one pole.

lophotrichous (lo-fot'rik-us) [Gr $\lambda \delta \varphi os$ tuft $+ \theta \rho l \xi$ hair] Having a tuft of flagella said of microorganisms.

lordoma (lor-do'mah). See lordosis.

lordoscoliosis (lor"do-sko-le-o'sis) [lordosis = scoliosis]. Lordosis complicated with scoliosis.

lordosis (lor-do'sis) [Gr λορδοῦν to bend]. Curvature of the spinal column with a forward convexity.

lordotic (lor-dot'ik). Relating to or affected with lordosis.

lorenit (lo'ren-it). A substance, OH C₆HI (CH)₃-N SO₂ OH, in yellow plates or needles, isomeric with loretin—it is used as a wound dressing.

Lorenz's operation, sign (lo'rentz) [Adolf Lorenz, Austrian surgeon, born 1854]. See operation and sign.

Loreta's operation (lor-e'tahz) [Pietro Loreta, Italian surgeon, 1831-1880] See operation.

loretin (lo-re'tin) [after Loreta, a surgeon] A yellow, crystalline, antiseptic powder, OII C₆III - (CH)₃ N SO₂ OII, or meta-iodo-ortho oxyquinolinsulphonic acid — It is sparingly soluble in water and alcohol, and insoluble in ether and oils, though it forms emulsions with oily fluids—It is used externally like iodoform. 1. bismuth is used in 10 per cent—ointment and in powder in various skin troubles

lorgnette, lorgnon (lorn-yet', lorn-yon') [Fr.]. A double eye-glass which can be shut into a frame that serves as a handle; also an opera glass.

Loring's ophthalmoscope (lor'ingz) [Edward Greely *Loring*, American oculist, 1837–1888]. See ophthalmoscope.

losophan (los'o-fan) Metacresol tri-iodid, CH₃C₆-IH₃ OH, a crystalline substance, insoluble in water, and used in eczema and syphilis in 10 per cent. solution and in ointment

Lot. Abbreviation for L lo'tio, lotion.

lotahiston (lo-tah-his'ton). A histon found in the spermatozoa of the frog

lotase (lo'tās). An enzyme from Lo'tus arab'icus: it splits lotusin into lotoflavin, hydrocyanic acid, and dextrose

lotio (lo'she-o). Latin for lotion. l. adstrin'-gens, Warren's styptic a mixture of sulphuric acid, 5 parts; alcohol, 4 parts; and oil of turpentine, 4 parts. l. hydrar'gyri fla'va, yellow mercurial lotion or yellow wash. l. hydrar'-gyri ni'gra, black mercurial lotion or black wash.

lotion (lo'shun) [L. lo'tio]. A liquid preparation used for washing; a wash. Granville's 1., a lotion composed of stronger water of ammonia,

spirit of camphor, and spirit of rosemary. **Hardy's 1.**, a lotion for removing freckles containing 1 part of corrosive sublimate dissolved in alcohol, 4 parts each of zinc sulphate and lead acetate, and 250 parts of water.

lotsil (lot'sil). A proprietary antipyretic, analgesic, and anodyne mixture.

louchettes (loo-shets') [Fr.]. A kind of goggles worn for the correction of strabismus.

Louis's angle (loo-ēz') [Antoine Louis, French surgeon, 1723-1702]. See angle.

Louis's law (loo-ēz') [Pierre Charles Alexander Louis, French physician, 1787-1872]. See law.

loupe (loop) [Fr]. A convex lens for magnifying or for concentrating light upon an object. corneal 1., a magnifying lens, properly mounted, for examining the cornea of the eye.

louping-ill. See thorter-ill.

louse (lows) [L. pedic'ulus]. A general name for various degraded parasitic insects; the true lice, which infest mammals, belong to the suborder Anoplu'ra. Those which are parasitic upon man are Pedic'ulus cap'itis, or head-louse; P cor'ports, the body- or clothes-louse, and P. pu'bis, or crablouse, which lives in the hair upon the pubes and in the cyclashes and eyebrows. The causal organisms of typhus fever, relapsing fever, trench fever, and plague are transmitted by the bite of lice. biting 1., Mallophaga. body 1., Pediculus corporis chicken 1. See Dermanyssus. crab 1., Phthirius pubis. goat 1. See Linognathus stenopsis horse 1. See Trichodectes pilosus.

lousewort (lows'wert). See Staphisagria.

lousiness (low'ze-nes). Infestation with lice; pediculosis or phthirasis.

loutrotherapy (lu-tro-ther'ap-e) [Gr. $\lambda o \nu \tau \rho \delta \nu$ bath $+ \theta \epsilon \rho \alpha \pi \epsilon i \alpha$ treatment]. The therapeutic use of baths, especially carbonated baths.

lovage (luv'āj). The umbelliferous plant, Levis'-ticum officina'le, and its aromatic, carminative, and emmenagogue root. Dose of fluidextract, 30-120 min. (2-8 c.c.).

Löwe's ring, test. See under ring and tests.

Löwenberg's canal (la'wen-bergz) [Benjamin Benno Lowenberg, German surgeon, born 1836]. See under canal.

Löwenthal's reaction, tract (le'ven-talz) [Wilhelm *Lowenthal*, German physician, born 1850]. See reaction, tract.

Lower's rings, tubercle (lo'erz) [Richard Lower, F.R.S., English anatomist, 1630-1691]. See ring and tubercle.

loxa-bark (loks'ah). Pale cinchona bark.

loxarthron (loks-ar'thron) [Gr. λοξός oblique + ἄρθρον joint] An oblique deformity of a joint without luxation.

loxophthalmus (loks-of-thal'mus) [Gr. $\lambda o \xi \delta s$ oblique $+ \delta \varphi \theta a \lambda \mu \delta s$ eye]. Strabismus.

loxopterygin (loks-op-ter'ij-in). A white, amorphous alkaloid, $C_{20}H_{34}N_2O_2$, from Loxopteryg'ium lorent'zii.

Loxopterygium (loks"op-ter-ij'e-um) [Gr. λοξός oblique $+ \pi \tau \epsilon \rho b \gamma \iota o \nu$ wing]. See quebracho.

loxotic (lok-sot'ik) [Gr. λοξός oblique]. Slanting. **loxotomy** (loks-ot'o-me) [Gr. λοξός oblique + τομή cutting] Oblique amputation.

Loxotre'ma ova'tum. See Metagonimus yokagawai.

lozenge (loz'enj) [Fr.] A form of medicated troche.L. R. C. P. Abbreviation for Licentiate of the Royal College of Physicians.

L. R. C. S. Abbreviation for Licentiate of the Royal College of Surgeons.

L. R. C. S. E. Abbreviation for Licentiate of the Royal College of Surgeons, Edinburgh.

L. R. C. V. S. Abbreviation for Licentiate of the Royal College of Veterinary Surgeons. L. S. A. 1. Abbreviation for left sacro-anterior position of the fetus in utero. 2. Licentiate of Society of Apothecaries.

L. S. P. Abbreviation for left sacroposterior position of the fetus in utero.

Lu. Chemic symbol for lutecium.

luargol (lu-ar'gol) [lues + argol]. An orange-colored powder, bromo-argento-ammoniated arseno-benzol: used like salvarsan in the treatment of syphilis and trypanosomiasis. Called also 102.

luatol (lu'a-tol). Tartrobismuthate of potassium and sodium in 10 per cent. aqueous glucose solution containing 40 per cent. of metallic bismuthused for the treatment of syphilis Dose by intramu-cular injection, 0 1 gm

Lubarsch's crystals (loo'barshs) [Otto Lubarsch, German pathologist, born 1860]. See crystal.

lubraseptic (lu-brah-sep'tik). A disinfectant jelly prepared from chondrus and containing boric acid and formaldehyd

lubrichondrin (lu-brik-on'drin). A proprietary surgical and obstetric lubricant made from Chon'drus cris'pus, eucalyptol, and formaldehyd

Luc's operation (lics) [Henri *Luc*, French laryngologist, 1855–1925] Caldwell-Luc operation. See *operation*.

Lucae's probe (loo'kāz) [Johann C. A Lucae, otologist in Berlin, 1835-1911] See under probe.

Lucena glau'ca (lu-se'nah) A South American plant its seed is said to destroy the hair of animals that eat it, to abolish completely the sexual appetite, and to cause remarkable fatness. The bark and root are used as emmenagogues. It is known as wild tamarind and jambul.

Lucas's sign (loo'kas) [Richard Clement *Lucas*, English physician, 1846–1915]. Enlargement of the abdomen in rickets.

Lucas-Championnière's disease (le-kah'-shaw-pe-on-e-airz') [Just Marie Marcellin *Lucas-Cham-pionnière*, French surgeon, 1843-1913]. Pseudomembranous bronchitis.

Luciani's triad (loo-se-an'ēz) [Luigi *Luciani*, Italian Physiologist, 1840–1919]. See *triad*

lucid (lu'sid) [L. lu'cidus clear]. Clear, not obscure; as, lucid interval.

lucidification (lu-sid"if-ik-a'shun) [L *lu'cidus* clear + fa'cere to make]. The clearing up of the protoplasm of cells.

lucidity (lu-sid'it-e). The quality or state of having a clear mind; clearness of the mind.

luciferase (lu-sif'er-ās) An enzyme produced by *Pho'las dac'tylus*, a luminiferous marine mollusk. When its aqueous solution is mixed with the alcoholic solution of luciferin, light is produced.

luciferin (lu-sif'er-in). A principle produced by *Pho'las dac'tylus*, a luminiferous marine mollusk. Combined with luciferase it emits light.

Lucilia (lu-sil'e-ah). A genus of flies which have a blue or green metallic iridescence. L. cæ'sar is the common "gold-fly" or "sheep maggot"

or "sheep maggot" which infests sheep; its larvæ have been found in the intestine and in myiasis of the skin. L. no'bilis has been found in the external meatus. L. regi'na has been found in wounds and in myiasis. L. serica'-

Lucilia cæsar and its larva.

ta, a sheep maggot fly which lays its eggs in wounds of sheep and in soiled wool

lucium (lu'se-um). A chemic element discovered in 1806. Liicke's test (lek'ēz) [Georg Albert Liicke, German surgeon, 1829-1894]. See under tests.

lucotherapy (lu-ko-ther'ap-e) [L. lux light + therapy]. The treatment of disease by rays of light.

Ludloff's sign (lood'lawfs) [Karl Ludloff, surgeon in Breslau, born 1864]. See under sign.

Ludwig's angina (lood'vigz) [Wilhelm Friedrich von Ludwig, German surgeon, 1790-1865]. See angina.

Ludwig's angle (lood'vigz) [Daniel Ludwig, German anatomist, 1625-1680]. See under angle.

Ludwig's ganglion (lood'vigz) [Karl Friedrich Wilhelm *Ludwig*, German physiologist, 1816–1895]. See ganglion.

ludyl (lu'dil). A proprietary organic arsenical preparation used like galyl in the treatment of syphilis and protozoal diseases

lues (lu'ez) [L]. The plague: more frequently, syphilis.
 1. nervo'sa, syphilis with marked nervous lesions.
 1. vene'rea, syphilis.

luesan (lu'es-an). A compound of mercury and glidin: used in syphilis.

luetic (lu-et'ik). Pertaining to or affected with syphilis.

luetin (lu'et-in) [L. lu'es syphilis]. An extract of a killed culture of several strains of Treponema pallidum: used in the skin test for syphilis. See Noguchi's luetin reaction, under reaction.

luetism (lu'et-izm). An attenuated form of syphilis not reactive to tests

Lugol's caustic, solution (lu'golz) [J. G. A. Lugol, physician in Paris, 1786–1851]. See caustic and solution.

lumbago (lum-ba'go) [L. lum'bus loin]. Pain in the lumbar region; backache. ischemic l., pain in the back due to vascular causes.

lumbar (lum'bar). Pertaining to the loins.

lumbarization (lum-bar-iz-a'shun). A condition in which the first sacral vertebra is coalesced with the transverse processes of the fifth lumbar vertebra

lumbo-abdominal (lum"bo-ab-dom'in-al). Pertaining to the loins and abdomen.

lumbocolostomy (lum"bo-ko-los'to-me) [L. lum'bus loin + colostomy]. The operation of forming a permanent opening into the colon by an incision through the lumbar region

lumbocolotomy (lum"bo-ko-lot'o-me) [L. lum'bus loin + colotomy]. An incision into the colon through the loin.

lumbocostal (lum-bo-kos'tal) [L. lum'bus loin + cos'ta rib]. Pertaining to the loin and ribs.

lumbodorsal (lum-bo-dor'sal). Pertaining to the lumbar and dorsal regions.

lumbodynia (lum-bo-din'e-ah) [L. lum'bus loin + Gr. δδύνη pain]. Lumbago.

lumbo-iliac (lum-bo-il'e-ak). Pertaining to the loin and ilium

lumbo-ovarian (lum"bo-o-va're-an). Connecting the loins and the ovary.

lumbosacral (lum-bo-sa'kral). Pertaining to the loins and sacrum.

lumbricalis (lum-brik-a'lis) [L. lum'bus loin]. See muscles, table of.

lumbricide (lum'bris-īd) [L. lum'bricus earthworm + ca'dere to kill]. Destroying lumbricoid worms: also a drug so acting.

lumbricin (lum'bris-in). A hemolytic substance extracted from earth-worms.

lumbricoid (lum'brik-oid) [L. lumbri'cus earthworm + Gr. είδος form]. Resembling the earthworm.

lumbricosis (lum-brik-o'sis). The condition of being infected with lumbrici.

Lumbricus (lum-bri'kus), pl. lumbri'ci [L.]. 1. A

genus of annelids, including the earthworm. 2 The ascaris (q. v.) or round intestinal worm.

lumbus (lum'bus). Latin for loin.

lumen (lu'men), pl. lu'mina [L. "light"]. 1. A transverse section of the clear space within a tube. 2. The unit of light flux. residual 1., the remains of the original lumen in the pituitary pouch.

luminal (lu'min-al). 1. Pertaining to the lumen of a tubular structure. 2. See phenobarbital. 1. 80-dium, the monosodium salt of luminal: used as a hypnotic in doses of 1-2 gr. (0.06-0 12 gm).

luminescence (lu-min-es'ens). The property of giving off light without showing a corresponding degree of heat.

luminiferous (lu-min-if'er-us) [L. lu'men light + fer're to bear]. Conveying light or propagating those vibrations which constitute light.

luminophore (lu'min-o-fōr) [L. lu'men light + Gr. φόροs bearing] A chemical group which gives the property of luminescence to organic compounds.

lumpy-jaw (lum'pe-jaw). See actinomycosis.

lunacy (lu'nas-e) [L. *lu'na* moon]. Insanity; formerly supposed to be sometimes due to or affected by the influence of the moon.

lunar (lu'nar) [L. *luna'ris*; *lu'na* moon, also silver]. Pertaining to or containing silver.

lunare (lu-na're). The semilunar bone

lunargen (lu-nar'jen). A proprietary astringent and antiseptic, a combination of silver with a vegetable protein.

lunatic (lu'nat-ik) [L. lunat'ıcus; from lu'na moon].I. Insane; moonstruck.2. An insane person.

lunatism (lu'nat-izm) [L. lu'na moon].
1. A disease varying with the lunar changes.
2. Sleepwalking during moonlight.

Lundvall's blood crisis (loond'valz) [Halvar Lundvall, Swedish neurologist] See under crisis.

lung (lung) [L. pul'mo; pl. pulmo'nes]. The organ of respiration; either one of a pair of respiratory organs which effect the aeration of the blood. The lungs occupy the lateral cavities of the chest, and are separated from each other by the heart and mediastinal structures. The right lung has three lobes and the left two. The lung consists of an external serous coat (the visceral layer of the pleura), subserous areolar tissue, and the lung parenchyma The latter is made up of lobules, which are bound together by connective tissue. primary lobule consists of a bronchiole and infundibulum, or air-passage, communicating with many air-cells, each air-cell being surrounded by a network of capillary blood-vessels. 1. fever, pneu-monia. fibroid 1., a lung affected with chronic interstitial pneumonia. 1.-fluke. See Distoma ringeri. honeycomb 1., a lung containing numerous small pus-filled cavities. masons' a lung affected with pneumonokoniosis due to the inhalation of lime, gypsum, etc. miners' 1., anthracosis. 1.-plague. See pleuropneumonia (2d def.). trench 1., a condition observed in the trenches in the World War characterized by attacks of rapid breathing.

lungmotor (lung'mo-tor). An apparatus for forcing air or air and oxygen into the lungs in cases of asphyxia.

lunosol (lu'no-sol). A preparation of colloidal silver chlorid: used as an antiseptic and germicide in the eye, ear, nose, throat, and genito-urinary tract.

lunula (lu'nu-lah) [L. dim. of lu'na moon]. r. The whitish crescent at the root of the nail. 2. Semilunar ulcer of the cornea (Hirschberg), a depressed area on the frons of a dipterous insect just above the antennæ. 1. val'vula semiluna'ris, the free edge of the semilunar valve at each side of the corpus arantii.

lupanin (lu'pan-in). A poisonous alkaloid, C₁₅H₂₄-N₂O, from Lupi'nus angustifo'lius and other species of Lupinus. lupeose (lu'pe-ōs). A tetrasaccharid from the seeds of lupines.

lupetazin (lu-pet'a-zin). Dimethylpiperazin; a white, crystalline powder, HN(CH₂.CHCH₃)₂NH: used in gout and rheumatism. Dose, 15 gr. (1 gm.). lupia (lu'pe-ah) An old term for encysted tumor

of the eyelids (Himley).

lupiform (lu'pif-orm) [L. lu'pus + for'ma form].
 r. Resembling lupus.
 2. Resembling a wen.

lupine (lu'pin) [L. lupi'nus]. Any leguminous plant of the genus Lupi'nus: many species are cultivated as forage plants, and the seeds of some are used as pulse for food, but several species are actively poisonous.

lupinidin (lu-pin'id-in) Same as spartein.

lupinin (lu'pin-in). A poisonous alkaloid, C₁₀H₁₉-NO, from lupines.

lupinosis (lu-pin-o'sis). A disease, often fatal, ascribed to poisoning by lupines or by the chickpea; lathyrism.

lupinotoxin (lu"pin-o-toks'in). A poisonous aromatic principle from diseased lupines believed to be the product of a parasitic microphyte.

lupoid (lu'poid) 7. Same as lupiform. 2. A lupiform disease of the skin, described by Boeck, and ascribed to an acid-fast bacillus. Called also tuberculosis cutis typus Boeck.

lupoma (lu-po'mah) [lupus + Gr. $-\omega\mu a$ tumor]. The nodosity whence lupus is developed.

lupous (lu'pus) [L lupo'sus]. Pertaining to or of the nature of lupus.

lupulin (lu'pu-lin) [L. *lupuli'num; lu'pulus* hop]. A yellow, resinous powder from hops: sedative and stomachic. Dose, 5-10 gr. (0.333-0.666 gm); of fluidextract, 30-120 min. (2-8 c.c.); of oleoresin, 10-40 min. (0.666-2 666 c c.).

lupulus (lu'pu-lus) [L] Hops. See hops.

lupus (lu'pus) [L. "wolf"]. Lupus vulgaris; a tu-bercular disease of the skin and mucous membrane, marked by the formation of brownish nodules in the corium. The lesions appear in various forms, and, according to their character, different varieties of the affection are named.

1. annula'ris, lupus occurring in a circle which heals at the center while spreading at the circumbutterfly 1., lupus of the skin of the cheeks. Cazenave's 1. Same as l. ference. nose and cheeks. Cazenave's 1. Same as l. erythematosus. 1. discre'tus, lupus disseminatus. disseminated follicular 1., lupus of the face expressed in large and small papules. 1. dissemina'tus, lupus manifested in a growth of scattered nodules. 1. erythemato'sus, a chronic, non-tuberculous disease of the skin marked by disk-like patches with raised reddish edges and d centers, and covered with scales or These fall off, leaving dull-white cica-Called also *l* erythematodes, *l*. sebaceus, trices. and Cazenave's l. 1. ex'edens, true or typical tuberculous lupus. See lupus. 1. exfoliati'vus, lupus with desquamation Hilliard's 1., lupus lupus with desquamation marginatus. 1. hypertrophic'us, a kind marked by the formation of vegetations. Called also *l. vegetans*. 1. impetigino'sus, a form with tubercles (but not due to Bacil·lus tuberculo'sis) covered with persistent dark crusts. Called also pustular l. 1. liv'ido, persistent livid lesions on the extremities, allied to Raynaud's disease. 1. maculo'sus, a variety of true lupus in which the skin lesions have the form of macules. 1. margina'tus, lupus verrucosus on the hands and arms. 1. non-ex'edens, a variety without ulcerations. 1. papillomato'sus, lupus verrucosus. 1. per'nio, lupus beginning as a chilblain. pustular 1. See 1. impeliginosus. 1. sclero'sus, a form in which the lesions have a hard center and a hard, elevated border. 1. seba'ceus, See l. erythematosus. 1. serpigino'sus, a variety that spreads by serpiginous growth. 1. tuberculo'sus, a variety characterized by the formation of more or less typic tubercles. 1. tu'-

midus, a form marked by subcutaneous infiltration and doughy swelling. 1. veg'etans. See l. hypertrophicus. 1. verruco'sus, 1. vo'rax, true lupus. 1. vulga'ris. See lupus. Willard's 1., tuberculous lupus.

lura (lu'ra) [L. "mouth of a bag"]. The orifice of the infundibulum of the brain.

lural (lu'ral). Pertaining to the lura.

Luschka's gland, tonsil, etc. (lush'kahz) [Herbert von Luschka, German anatomist, 1820-1875]. See gland, tonsil, etc.

Lusk's ring (lusks) [William Thompson Lusk, New York physician, 1838-1897]. Bandl's ring.

Lustgarten's bacillus (loost'gar-tenz) [Sigmund Lustgarten, Austrian physician in New York, 1857-1911]. See bacillus.

Lustig's serum (loos'tigz) [Alessandro Lustig, contemporary Italian physician]. See serum.

lusus naturæ (lu'sus na-tu're) [L.]. A teratism or freak of nature.

lute (lūt) [L. lu'lum mud]. A paste for covering the joints of vessels.

lutecium (lu-te'she-um). A rare element having atomic weight 175 and the symbol Lu.

lutein (lu'te-in) [L. lu'teus yellow]. 1. A yellow pigment, or lipochrome, from the corpus luteum, from fat-cells, and from the yolk of eggs 2. Any lipochrome serum-l., a lipochrome found in

blood-serum. **luteolipoid** (lu"te-o-li'poid). A compound isolated from the corpus luteum—said to have a hemostatic influence on menstruation—Cf lipamin.

lutidin (lu'tid-in). A liquid compound, C₅H₃N-(CH₃)₂, or dimethylpyridin, formed by the distillation of coal-tar. **beta-1.**, **b-1.**, a colorless liquid, C₇H₉N, with narcotic and antispasmodic properties: used as an antidote to strychnin.

luxatio (luks-a'she-o) [L.]. A dislocation. l. erec'ta, dislocation of the shoulder so that the arm stands straight up above the head. l. imperfec'ta, a sprain. l. perinea'lis, a form of dislocation of the hip in which the head of the femur lies in the perineum.

luxation (luks-a'shun) [L. luxa'tio]. Same as dislocation.

luxuriant (luk-su're-ant). Growing freely or excessively.

luxus (luks'us). Latin for excess. See under consumption and heart.

Luys's body (lu-ēz') [Jules Bernard Luys, French physician, 1828-1898]. The subthalamus.

Luys's segregator or separator (lu-ēz') [Georges Luys, contemporary French physician] See segregator.

luz (looz) [Hebrew] A mythical bone of the Talmudists, from which the body was supposed to be restored at the resurrection, located in the lower part of the spinal column.

lycaconitin (li-kah-kon'it-in) [Gr. λόκος wolf + aconite]. A highly poisonous alkaloid, C₃₆H₄₆N₂O₁₀, from Aconi'tum lycoc'tonum

lycanthropy (li-kan'thro-pe) [Gr. λύκος wolf + ἄνθρωπος man]. A delusion in which the patient believes himself a wolf.

lycetol (li'se-tol). Dimethylpiperazin tartrate, a white powder, soluble in water, NH(CH₂CHCH₃)₃-NH.CHOH.COO)₂: a patented remedy for gout and rheumatism. Dose, 4-10 gr. (0.26-0.66 gm.) daily.

lychnin (lik'nin). A poisonous glucosid or saponin from species of *Lych'nis*.

lycin (li'sin). Same as betain.

lycoctonin (li-kok'to-nin). An alkaloid from Aconi'tum lycoc'tonum.

lycomania (li-ko-ma'ne-ah). Same as lycanthropy. Lycoperdon (li-ko-per'don) [Gr. λύκος wolf + περδεσθαι to break wind]. A genus of fungi; puffballs. L. bovis'ta, L. gigan'teum, and other species are said to be anodyne, anesthetic, and styptic, and have a limited use in medicine.

Lycopin (li'ko-pin). 1. A resinoid preparation from Lycopus virgin'icus: used as a tonic and stimulant in diseases of the mucous membranes. Dose, 1-4 gr. (0 060-0.26 gm.). 2. A lipochrome pigment found in certain chromogenic bacteria.

lycopodin (li-ko-po'din). A crystalline alkaloid, C₂₂H₃₂N₂O₃, from Lycopodium complanatum.

Lycopodium (li-ko-po'de-um) [Gr. λύκος wolf + πούς foot]. A genus of club-mosses. The yellow, inflammable sporules of L clava'tum form a light, dry powder, used as a dusting- and absorbent powder, and as a coating for pills. It is much used in homeopathy as a remedy. Several spectes are actively poisonous. L. sauru'rus yields piliganin

Lycopus europæ'us (li'ko-pus). The bitter bugleweed of Europe tonic and alterative. Dose of fluidextract, 30-60 min. (2-4 c.c.).

lycorexia (li-ko-reks'e-ah) [Gr. λύκος wolf + δρεξις appetite]. Ravenous, wolfish hunger.

lycorin (lik'o-rin) Same as narcissin.

lycosin-quinin (li-ko-sin-kwin'in). A combination of quinin and di-o-oxydibenzol acetone: used as a dusting-powder.

lye (li). An alkaline percolate from wood-ashes; lixivium.

lygosin (li'go-sin). A greenish, crystalline substance, sodium lygosinate, CO(CH·CH.C₆H₄.-ONa)_{2.7}H₂O: used like silver in gonorrhea.

lying-in (li-ing-in'). 1. Puerperal. 2. The puerperium.

lymph (limf) [L. lym'pha water]. 1. Λ transparent, slightly yellow liquid of alkaline reaction which fills the lymphatic vessels. It is occasionally of a light rose color from the presence of red blood-corpuscles, and is often opalescent from particles of fat. Under the microscope lymph is particles of lat. Under the microscope lymph is seen to consist of a liquid portion ($liquor\ lymph\alpha$) and of corpuscles. These lymph-corpuscles are about 2500 of an inch in diameter, are granular, and are not to be distinguished from white blood-cells. Lymph coagulates when drawn from Lymph liquor differs chemically from the body. the blood liquor, rather in quantity than in constituents, both fluids consisting of water, albumin, fibrin, and salts The lymph contains as much fibrin as the blood, but less albumin; more water, but an equal quantity of salts. 2. Any clear, watery fluid resembling true lymph. animal 1., vaccine or other lymph from an animal. aplastic 1., lymph that contains an excess of leukocytes and does not tend to become organized. Called also corpuscular l blood-1., lymph derived from the blood by transudation. bovine 1., vaccine lymph from the cow. calf-1., lymph for vaccination obtained from calves. corpuscular 1. See a plastic 1. croupous 1., inflammatory lymph that tends to the formation of a false memeuplastic 1., fibrinous 1., that which brane. tends to coagulate and become organized. glycerinated 1., vaccine virus mixed with glycerin in order to destroy any bacteria. humanized 1., vaccine virus from the human subject. inflammatory 1., the lymph produced by inflammation, as in a wound. Koch's 1. See tuberculin. 1.-node, any one of the numerous nodules composed of lymphoid tissue occurring along the course of the lymphatic vessels. plastic 1. from which embryonic tissue is formed. from which emoryonic tissue is formed. 2. Inflammatory lymph that has a tendency to become organized. 1.-space, any cistern, cavity, or receptacle for lymph. 1.-spaces, epidural, a system of lymph-clefts and slits on the outer surface of the dura. tissue-1., lymph derived from the tissues and not from the blood. vaccine 1., the serous exudate from the vesicles of cow-pox.

lymphaden (lim'fad-en) [L. lym'pha lymph + Gr. . άδην gland]. A lymphatic gland.

lymphadenectasis (lim"fad-en-ek'tas-is) {L. lym'-pha lymph + Gr. άδην gland + ἔκτασις distention}. Dilatation of a lymphatic gland.

lymphadenhypertrophy (lim-fad"en-hi-per'trofe) [lymphaden + hypertrophy]. Hypertrophy of lymphatic glands.

lymphadenia (lim-fad-e'ne-ah). [See lymphaden.] Hypertrophy of lymphatic tissue. 1. os'sea. See multiple myeloma, under myeloma.

lymphadenism (lim-fad'en-izm). The diseased condition that accompanies lymphadenoma.

lymphadenitis (lim"fad-en-i'tis) [L. lym'pha water + Gr. άδην gland + -ιτις inflammation]. Inflammation of lymph-glands It may be tuberculous or syphilitic. paratuberculous 1., inflammation of the lymph-nodes associated with tuberculosis of some other part, but showing no tubercle bacilli in the lymphatics.

lymphadenoid (lim-fad'en-oid) [L. lym'pha lymph + Gr άδήν gland + είδος form]. Resembling a lymphatic gland or lymphatic tissue. Lymphadenoid tissue includes the lymph-glands, spleen, bone-marrow, tonsils, and the lymphatic tissue of the organs and mucous membranes.

lymphadenoleukopoiesis (lim-fad"en-o-lu-kopoi-e'sis). The production of leukocytes by the lymphadenoid tissue.

lymphadenoma (lim"fad-en-o'mah). Hyperplasia of the lymphadenoid tissue; lymphoma malignant 1., lymphosarcoma. multiple 1., Hodgkin's disease.

lymphadenomatosis (lim-fad"en-o-mat-o'sis).
Lymphomatosis. general 1. of bones, Kahler's disease.

lymphadenopathy (lim-fad-en-op'ath-e) [lym-phaden + Gr. πάθος disease]. Disease of the lymph-glands.

lymphadenosis (lim-fad-en-o'sis). [See lymphad-en] Hypertrophy of lymphatic tissue. aleuke-mic l., a disease marked by diffuse generalized hyperplasia of the lymphadenoid system (lymphglands, spleen, bone-marrow, tonsils, and other lymphatic tissues), but without leukemia leukemic a., lymphatic leukemia.

lymphæmia (lim-fe'me-ah). See lymphemia.

lymphagogue (lim'fag-og). An agent which promotes the production of lymph.

lymphangeitis, lymphangiitis (lim"fan-je-i'tis). See lymphangiits.

lymphangial (hm-fan'je-al). Pertaining to a lymphatic vessel.

lymphangiectasis (lim"fan-je-ek'tas-is) [L. lym'-pha lymph + Gr. ἀγγεῖον vessel + ἔκτασις dilatation]. Dilatation of the lymphatic vessels.

lymphangiectodes (lim-fan"je-ek-to'dēz). Lymphangioma circumscriptum.

lymphangiitis (lim-fan-je i'tis). Lymphangitis

lymphangio-endothelioblastoma (lim-fan"-je-o-en-do-the"le-o-blas-to'mah). A tumor composed of endothelial cells which tend to form lymph-yessels.

lymphangio-endothelioma (lim-fan"je-o-en"dothe-le-o'mah). Endothelioma arising from lymphvessels or lymph-spaces—the ordinary variety of endothelioma. Called also lymphendothelioma.

lymphangiofibroma (lim-fan''je-o-fi-bro'mah). Fibroma with lymphangiomatous tissue.

lymphangioi'tis farcimino'sa bo'vis. See cattle farcy, under farcy.

lymphangiology (lim"fan-je-ol'o-je) [L. lym'pha lymph + Gr. $\lambda\gamma$ escov vessel + $\lambda\delta\gamma$ es discourse]. The branch of anatomy relating to the lymphatics.

lymphangioma (lim"fan-je-o'mah). A tumor composed of new-formed lymph-spaces and channels. 1. capsula're varico'sum, lymphangioma circumscriptum. 1. caverno'sum, dilatation of the lymphatic vessels resulting in cavities filled with lymph. 1. circumscriptum, a skin disease

of early life marked by the development of yellow vesicles connected with the lymphatic vessels. L. cys'ticum, the formation of multiple cysts filled with lymph. l. sim'plex, dilatation of a lymph-vessel over a circumscribed area. l. tubero'sum mul'tiplex, a skin disease marked by the development of groups of papules or tubercles resembling and believed to be lymphangiomata. l. xanthelasmoi'deum, lymphangiomaticumscriptum marked by formation on the skin of yellow or brownish patches.

lymphangiophlebitis (lim-fan"je-o-fleb-i'tis). Inflammation of lymph-vessels and veins.

lymphangioplasty (lim-fan'je-o-plas-te) [L. lym'-pha lymph + Gr. ἀγγεῖον vessel + πλάσσειν to form]. Operative restoration or replacement of lymph-vessels that have been destroyed. It is done by making artificial lymph-channels by the subcutaneous introduction of long threads of tubular woven silk.

lymphangiosarcoma (lim-fan''je-o-sar-ko'mah). Lymphangioma blended with sarcoma.

lymphangiotomy (lim-fan"je-ot'o-me) [L. lym' pha lymph + Gr. ἀγγεῖον vessel + τομή cutting]. Dissection of the lymphatic vessels.

lymphangitis (lim-fan-ji'tis). Inflammation of a lymphatic vessel or vessels. 1. carcinomato'sa, proliferating inflammation of the lymphatics of the peritoneum associated with peritoneal tumors 1. epizoöt'ica, a chronic contagious disease of horses caused by a yeast fungus, Cryptococcus (Blastomyces) farcimino'sus, and marked by purulent inflammation of the subcutaneous lymphatic vessels and of the regional lymph-glands. Called also pseudofarcy, blastomycosis farciminosus, saccharomycosis, Cryptococcus farcy, lymphosporidiosis, African glanders, Japanese glanders. 1. ulcero'sa pseudofarcino'sa, a disease of horses resembling glanders, and due to a bacillus very much like the glanders bacillus. Called also pseudoglanders.

lymphatic (lim-fat'ik) [L lymphat'icus]. 1. Pertaining to or containing lymph 2. A vessel conveying lymph. 3 Of a sluggish or phlegmatic temperament. afferent 1., a lymphatic vessel which enters a gland

lymphaticostomy (lim-fat-ik-os'to-me) [lymphatic + Gr $\sigma \tau \delta \mu a$ mouth] The operation of making a permanent opening into a lymphatic duct, such as the thoracic duct—done for peritonitis

lymphatism (lim'fat-izm). 1 The lymphatic temperament; a slow or sluggish habit. 2. A morbid state due to excessive production or growth of lymphoid tissues, such as the thymus and thyroid glands It results in impaired development, lowered vitality, and sometimes death. Called also lymphotoxemia, lymphoidotoxemia, status lymphaticus. and status thymicus

lymphatitis (lim-fat-i'tis) Inflammation of some part of the lymphatic system.

lymphatolysin (lim-fat-ol'is-in). A toxin which acts on lymphatic tissue.

lymphatolysis (lim-fat-ol'is-is) [lymphatic + Gr. λύσις dissolution]. The destruction or solution of lymphatic tissue.

lymphatolytic (lim-fat-o-lit'ik) [lymphatic + Gr. λόσις dissolution]. Destroying lymphatic tissue. lymphatome (lim'fat-ōm). Lymphotome.

lymphectasia (lim-fek-ta'ze-ah) [L. lym'pha lymph + Gr. ξκτασιs distention]. Distention with

lymphedema (lim-fe-de'mah) [lymph + edema]. Edema due to the clogging of an efferent lymphatic vessel.

lymphemia (lim-fe'me-ah) [lymph + Gr. alμa blood]. The presence of an undue number of lymphocytes or their forerunners in the blood; lymphatic leukemia.

lymphendothelioma (lim"fen-do-the-le-o'mah). Same as lymphangio-endothelioma. lymphenteritis (lim"fen-ter-i'tis). Enteritis with serous infiltration.

lympherythrocyte (limf-er'ith-ro-sit). Anerythrocyte.

lymphization (lim-fi-za'shun). The formation of lymph.

lymphnoditis (limf-no-di'tis). Inflammation of a lymph-node.

lympho-adenoma (lim"fo-ad-en-o'mah). A benign neoplasm of the uterus, involving the interstitial lymph-tissue and the glandular structures.

lymphoblast (lim'fo-blast) [lymph + Gr. βλαστός germ] A lymphocyte in its germinative stage; a developing lymphocyte Such cells are found in the blood in acute lymphatic leukemia.

lymphoblasthemia (lim-fo-blas-the'me-ah). Lymphoblastosis.

lymphoblastic (lim-fo-blas'tik). Pertaining to a lymphoblast; producing lymphocytes.

lymphoblastoma (lim"fo-blas-to'mah). A tumor composed of cells of the lymphocyte series. The term includes lymphocytoma, lymphoma, lymphosarcoma, and pseudoleukemia.

lymphoblastosis (hm-fo-blas-to'sis). Excess of lymphoblasts in the blood.

lymphocele (lim'fo-sēl) [lymph + Gr. κήλη tumor]. A tumor containing lymph.

lymphocerastism (lim"fo-se-ras'tizm) [lymph + Gr κεράστος mixed] The formation of lymphoid cells.

lymphococcus (lim-fo-kok'us). A diplococcus isolated from diseases of elephantiasis.

lymphocyst (lim'fo-sist). Lymphocele.

lymphocystosis (lim"fo-sis-to'sis). The formation of cysts containing lymph.

lymphocyte (lim'fo-sīt) [lymph + Gr. κότος cell].

1. A variety of white blood-corpuscle which arises in the reticular tissue of the lymph-glands and lymph-nodes. The nucleus is single and is surrounded by protoplasm which is generally described as non-granular. Two varieties are described (a) the small lymphocytes (small mononuclear leukocytes or microlymphocytes), which are about the size of a red corpuscle and constitute from 22 to 25 per cent of the white corpuscles, (b) the large lymphocytes (macrolymphocytes or lymphoblasts), which are probably lymphocytes in their developing stage, are two or three times larger than the small lymphocytes and contain a larger proportion of protoplasm. They form about 1 per cent. of the white corpuscles. 2 Alymph-corpuscle. Rieder's 1., alymphocyte having a nucleus which is lobed and twisted: seen in chronic lymphemia.

lymphocythemia (lim"fo-si-the'me-ah) [lymphocyte + Gr αίμα blood] Excess of lymph-corpuscles in the blood.

lymphocytic (lim-fo-sit'ik). Pertaining to lymphocytes.

lymphocytoma (lim"fo-si-to'mah) [lymphocyte + Gr.-ωμα tumor]. A tumor of the lymphatic system in which lymphocytes are the predominating elements.

lymphocytosis (lim"fo-si-to'sis). Excess of normal lymphocytes in the blood or in any effusion.

lymphocytotic (lim-fo-si-tot'ik). Pertaining to lymphocytosis.

lymphocytotoxin (lim-fo-si-to-toks'in). A toxin that has a specific destructive action on lymphocytes.

Lymphocytozoön (lim"fo-si-to-zo'on) [lymphocyte + Gr ζφον animal] A genus of ameboid bodies, species of which are found in leukocytes.
 L. coba'yæ. Same as Kurlof's bodies. See body.
 L. pal'lidum, Ross's bodies. See body.

lymphodermia (lim-fo-der'me-ah) [lymph + Gr. $\delta \ell \rho \mu a$ skin]. Any disease of the lymphatics of the skin particularly enlargement of the glands due to leukocythemia (l. pernicio'sa).

lymphoduct (lim'fo-dukt). A lymphatic vessel.

lymphoganglin (lim-fo-gan'glin). A hypothetical hormone from lymph-glands.

lymphogenous (lim-foj'en-us) [lymph + Gr. γεννᾶν to produce]. 1. Producing lymph. 2.
 Produced from lymph or in the lymphatics.

lymphoglandula (lim-fo-glan'du-lah) [B N A] A lymph-node

lymphogonia (lim-fo-go'ne-ah) [lymph + Gr. $\gamma \dot{o} \nu o s$ offspring]. Large lymphocytes with a large nucleus, little chromatin, and non-granular protoplasm. They are the mother-cells of small lymphocytes and are seen in lymphatic leukemia.

lymphogranuloma (lim"fo-gran-u-lo'mah). Hodgkin's disease.

lymphogranulomatosis (lim"fo-gran-u-lo-mato'sis) Infectious granuloma of the lymphatic system used by continental writers as a synonym for multiple lymphoma (Hodgkin's disease).

lymphoid (lim'foid) [lymph + Gr. είδος form]. Resembling lymph.

lymphoidectomy (lim-foi-dek'to-me). Excision of lymphoid tissue, such as adenoids and tonsils.

lymphoididity (lim-foi-did'ıt-e). The condition of exhibiting lymphoid characteristics.

lymphoidocyte (lim-foi'do-sīt). An embryonic cell, the primordial mother cell of all the types of blood-cells.

lymphoidotoxemia (lim-foi"do-tok-se'me-ah). See lymphatism (2d def.)

lymphoids (lim'foids) A preparation of testicular extract, zinc phosphid, iron, nux vomica, aloin, etc.

lympholeukocyte (lim-fo-lu'ko-sīt). A large mononuclear leukocyte.

lymphology (lim-fol'o-je) [L. lym'pha lymph + Gr. λόγος treatise]. The study or science of the lymphatics.

lymphoma (lim-fo'mah). Any tumor made up of lymphoid tissue atypic 1., lymphosarcoma. malignant 1., multiple 1., Hodgkin's disease. typic 1., lymphomatosis

lymphomatosis (lim"fo-mat-o'sis) The development of multiple lymphomata in various parts of the body 1. granulomato'sa. See Hodgkin's disease, under disease

lymphomatous (lim-fo'mat-us). Pertaining to or of the nature of lymphoma.

lymphomegaloblast (lim-fo-meg'al-o-blast). megaloblast without hemoglobin

lymphomonocyte (lim-fo-mo'no-sīt). A large uninuclear leukocyte.

lymphomyelocyte (lim-fo-mi'el-o-sīt). A myelo-

lymphomyeloma (lim"fo-mi-el-o'mah). A sarcoma containing small round cells.

lymphomyxoma (lim"fo-mik-so'mah). Any benign growth consisting of adenoid tissue.

lymphopathy (lim-fop'ath-e) [L. lym'pha lymph + Gr. πάθος disease]. Any disease of the lymphatics. ataxic 1., a sudden swelling of the lymphatic glands sometimes accompanying the pain crises of locomotor ataxia.

lymphopenia, lymphopænia (lim-fo-pe'ne-ah) [lymphocyte + Gr. $\pi \epsilon \nu la$ poverty] Decrease in the proportion of lymphocytes in the blood.

lymphoplasm (lim'fo-plazm). Same as spongio-plasm.

lymphoplasmia (lim-fo-plaz'me-ah). A condition of the red blood-corpuscles in which they contain no hemoglobin.

lymphopoiesis (lim"fo-poi-e'sis). [See *lympho-poietic.*] The development of lymphocytes or of lymphatic tissues.

lymphopoietic (lim"fo-poi-et'ik) [lymph + Gr. ποιεῖν to make]. Forming lymphocytes or lymphatic tissue.

lymphoprotease (lim-fo-pro'te-ās). A protein-splitting ferment existing in the lymphocytes.

lymphorrhagia (lim-for-a'je-ah) [lymph + Gr. ρηγνύναι to break out]. Same as lymphorrhea.

lymphorrhea (lim-for-e'ah) [lymph + Gr. bola flow] A flow of lymph from cut or ruptured lymph-vessels.

lymphosarcoleukemia (lim-fo-sar-ko-lu-ke'meah). Leukemia with lymphosarcomatous degeneration of bone-marrow and lymphatics.

lymphosarcoma (lim''fo-sar-ko'mah). A malignant neoplasm arising in lymphatic tissue from proliferation of atypical lymphocytes. **Kundrat's 1.**, a form of lymphosarcoma which rapidly extends to adjacent glands, but shows no tendency to invade neighboring organs. The blood shows anemia with neutrophil leukocytosis and decrease of lymphocytes.

lymphosarcomatosis (lim"fo-sar-ko-mat-o'sis).
A diseased condition associated with and due to lymphosarcoma.

lymphosporidiosis (lim"fo-spo-rid-e-o'sis) See lymphangitis epizootica.

lymphostasis (lim-fos'tas-is) [lymph + Gr. στάσις standing] Stoppage of the lymph flow.

lymphotaxis (lim-fo-taks'is) [lymphocyte + Gr. τάξις arrangement]. The property of attracting or repulsing lymphocytes.

lymphotism (lim'fo-tizm). A disordered state associated with the development of so-called adenoids.

lymphotome (lim'fo-tōm) [lymph + Gr τέμνειν to cut]. An instrument for excising adenoid growths on the tonsils.

lymphotomy (lim-fot'o-me) [L. lym'pha lymph + Gr. $\tau o \mu \dot{\eta}$ cut]. The anatomy of the lymphatic system.

lymphotoxemia (lim"fo-tok-se'me-ah). Toxemia due to excess of lymphoid matters or lymphoid tissue, as in rickets, exophthalmic goiter, enlarged thymus, etc.

lymphotoxin (lim-fo-tok'sin). The toxin or lysin contained in lymph-glands

lymphotrophy (lim-fot'ro-fe) [lymph + Gr. $\tau \rho \dot{\epsilon} \varphi \epsilon \iota \nu$ to nourish]. The attractive energy of cells for lymph

lymphous (lim'fus). Pertaining to or containing lymph.

lymph-scrotum. See under scrotum

lymphuria (lim-fu're-ah). The presence of lymph in the urine.

lymph-vascular (limf-vas'ku-lar) Pertaining to or containing lymphatic vessels.

Lyn'chia mau'ra, L. livido'color. A biting hippoboscid fly of louse-like habits, which lives in the nest and in the plumage of the dove and which is the invertebrate host of Hemoproteus columbæ.

lyogen (li'o-jen). A proprietary form of colloidal silver.

Lyon method or **test** (li'on) [B B Vincent Lyon, Philadelphia physician]. See Meltzer-Lyon test, under tests.

lyophil, lyophile (li'o-fil) [Gr. $\lambda b \epsilon \iota \nu$ to dissolve $+ \varphi i \lambda \epsilon \iota \nu$ to love] Having an affinity for solution; a term applied to colloidal systems in which there is strong affinity between the disperse phase and the dispersion medium

lyophobe (li'o-fōb) [Gr. $\lambda b \epsilon \iota \nu$ to dissolve $+ \varphi \delta \beta \sigma$ fear] Not inclined to solution, a term applied to colloidal systems in which there is a tendency of the disperse phase to separate from the dispersion medium.

lyotropic (li-o-trop'ik) [Gr. λύειν to dissolve + τρόπος a turning]. Having an affinity for entering into solution; readily soluble.

Lyozo'ön atroph'icans. An organism occurring in the lesions of epitheliosis atrophicans.

lypemania (li-pe-ma'ne-ah) [Gr. λύπη sadness μανία madness]. depression. Melancholia; insanity with

lyperophrenia (li"per-o-fre'ne-ah) [Gr. λυπηρός distressing $+\varphi\rho\dot{\eta}\nu$ mind]. Melancholia.

Lypero'sia ir'ritans. See Hematobium serrata.

Lyponyssus (li-po-nis'us). A genus of mites which sometimes attack man. L. baco'ti live normally on rats and L. bur'sæ on birds.

lypothymia (li-po-thi'me-ah) [Gr. $\lambda b\pi\eta$ distress + $\theta v\mu \delta v$ mind]. Morbid or insane despondency. lyptol (lip'tol). A proprietary antiseptic ointment.

lyra (li'rah) [L.; Gr. λύρα lyre] The posterior part of the body of the fornix including the commissura hippocampi Called also lyre of David, lyra Davids, lyre of the fornix, and psalterium 1. uteri'na, 1. of uterus, the arbor vitæ uteri. 1. of vagina, the vaginal rugæ

lysargin (li-sar'jin). Colloidal silver containing 52 per cent. of silver used as an antiseptic.

lysatin (li-'at-in). A basic principle or leukomain, C₆H₁₂N₃O₂, derivable from casein.

lysatinin (lis-at'in-in) A mixture of lysin and arginin.

lysemia (li-se'me-ah) [Gr. λύσις solution + alμa blood] Disintegration of the blood.

lysidin (lis'id-in) A red, crystalline body methylglyovalidin CH2 NH C(CH3) N CH2, also its yellowish or pinkish, soapy, 50 per cent solution used as a solvent for uric acid. Daily dose of the first-named form, 15-75 gr (1-5 gm) l. bitartrate, a soluble, white, crystalline powder, of onethird the solvent power of pure lysidin

lysimeter (li-sim'et-er) [Gr λύσις solution + μέτρον measure] An apparatus for determining the solubilities of substances.

lysin (li'sın) [Gr. λύειν to dissolve] body which has the power of causing dissolution of cells. The term includes hemolysin, bacteriolysin, cytolysin, etc. See hemolysin 2 An aminoacid, CH₂NH₂CH₂CH₂CH₂CHNH₂COOH (Ellinger, 1900), or α - ϵ -diaminocaproic acid, first isolated from casein (Drechsel, 1889). It is a hydrolytic cleavage product of protein either by digestion or by boiling with hydrochloric acid

lysinogen (li-sin'o-jen) [lysin + Gr. $\gamma \epsilon \nu$ - producing]. A substance having the power of producing lysins. lysinosis (lis-in-o'sis) [Gr λύσις a raveled fiber]. Lung disease due to inhaling cotton fibers, as in mills

(li'sis) [Gr λύειν to dissolve]. 1. gradual abatement of the symptoms of a disease. 2. The action of a lysin; the destruction of cells by a specific lysin.

lysitol (li'sit-ol). A germicide resembling lysol.

lysoform (li'so-form). An oily, soapy, liquid disinfectant containing lysol and formol: used for the sterilization of surgical instruments and in the treatment of various skin diseases.

lysogen (li'so-jen) [lysin + Gr. γεννᾶν to produce]. A substance or body which develops into a lysin.

lysogenesis (li-so-jen'es-is). The production of lysins.

lysogenic (li-so-jen'ik) [lysin + Gr. γεννάν to produce]. Producing lysins or causing lysis.

lysol (li'sol). **sol** (li'sol). A brown, syrupy, fluid product of the fractionation of coal-tar oil, which, after the distillation, is mixed with fat or rosin and saponified it is a strong antiseptic, and is used in surgical practice in 1-3 per cent. aqueous solution.

lvsopast (li'so-past). A lysol-soap preparation containing 70 per cent of lysol

lysosolveol (li-so-sol've-ol). An antiseptic and disinfectant mixture of tricresol (44 5 per cent.), potassium linoleate (38 per cent.), and water.

lysozym, lysozyme (li'so-zīm) [Gr λύσις solution + ζύμε leaven] A stable bacteriolytic substance present in most animal (and human) and some vegetable secretions and tissues.

lyssa (lis'ah) [Gr. λύσσα frenzy]. Rabies. See hydrophobia.

lyssic (lis'ik). Pertaining to hydrophobia.

lyssin (lis'in). The specific virus of hydrophobia. lyssodexis (lis-o-dek'sis) [Gr. λύσσα rables + δήξις The bite of a rabid dog.

lyssoid (lis'oid) [Gr. $\lambda \dot{\nu} \sigma \sigma \alpha$ rables $+ \epsilon i \delta \sigma \sigma$ form]. Resembling rabies.

lyssophobia (lis-o-fo'be-ah) [Gr. $\lambda b\sigma\sigma\alpha$ madness $+ \varphi \delta \beta$ os fear]. Morbid dread of rabies, with symptoms simulating those of that disease.

lysulphol (h-sul'fol). A black, liquid preparation of lysol and sulphur used in treatment of skin diseases.

lyterian (li-te're-an). Indicative of the approach of lysis.

lythol (li'thol). A proprietary antiseptic and germicide adapted especially for catarrhal conditions of mucous membranes.

lytic (lit'ık). Pertaining to lysis or to a lysin; producing lysis.

TOSE (lix'ōs) A pentose 1-omeric with ribose, CH₂OH (CHOH)₃ CHO lyxose (lix'os)

lyze (līz). To cause or produce lysis.

M. An abbreviation for mille, thousand; misce, mix; mistura, mixture, macera're, macerate; meter, minim, molar, muscle, myopia, and manipulus, handful, also symbol for strength of pole.

Abbreviation for meta-.

Abbreviation for Gr. micron.

M. A. Abbreviation for meter angle.

M + Am. Compound myopic astigmatism.

Ma., ma. Abbreviation for milliampere.

Mac. Abbreviation for L. ma'cera, macerate.

macabuhay (mak-ah-boo-hi'). A plant of the Philippines, Menisper'mum cris' pum: used as a febrifuge and emetic, and externally in the treatment of rabies

macaco worm (mah-kah'ko). The larva of the fly, Dermato'bia noxia'lis, of South America, which burrows under the skin of man and animals.

macallin (mak-al'in). An alkaloid from macallo, a tree of Yucatan: used like quinin.

MacBurney, etc. See under McBurney, etc.

mace (mas) [L ma'cts]. The dried aril or envelop of the fruit of the nutmeg-tree, Myris'tica fra-The volatile oil contains macene, and is used as a flavoring agent.

macene (mas'ēn) An essential oil, C10H16, from nutmeg flowers and from the oil of mace.

maceration (mas-er-a'shun) [L. macera'tio]. The softening of a solid by soaking.

Characterized by macerative (mas'er-at-iv). maceration.

Macewen's operation, triangle, etc. (mak-ew'enz) [Sir William Macewen, surgeon in Glasgow, 1848-1924] See operation, triangle, etc.

maché unit (mash-a'). See under unit.

macho (mah'tsho). The tubercle type of dermal leishmaniasis.

machonnement (mash-shōn-maw') [Fr.]. A chewing motion of the jaws.

machromin (mak-ro'min). A yellow substance formed by reducing maclurin with zinc and sulphuric acid. It turns blue when oxidized.

macies (ma'she-ēz). Latin for wasting.

macintosh (mak'in-tosh) [Charles Macintosh, Scotch chemist, 1766-1843, the inventor]. Cloth made waterproof by treating with a solution of india-rubber: used for surgical dressings

macis (ma'sis). See mace.

Mackenrodt's operation (mahk'en-röts) [Alwin Karl Mackenrodt, German gynecologist, 1859–1926]. See operation.

Mackenzie's disease (mak-en'zēz) [Sir James Mackenzie, English physician, 1854-1925]. See x-disease, under disease.

mackenzol (mak-en'zol). A proprietary oleobalsamic preparation used as an antiseptic in diseases of the nose, throat, and air-passages.

maclayin (mak-la'in). A glucosid, $C_{17}H_{32}O_{11}$, from *Illi' pe maclaya'na*: a strong local irritant.

MacLean-Maxwell disease [Charles Murray MacLean, physician in West Africa; James Laidlaw Maxwell, English physician in Formosa]. See under disease.

MacLeod's rheumatism [Roderick MacLeod, Scotch physician, 1795–1852]. See rheumatism.

maclurin (mak-loo'rin). A yellow, crystalline substance, pentahydroxy-benzophenone, (OH)₃C₆H₂.-CO.C₆H₃(OH)₂, occurring in the wood of *Mo'rus tincto'ria*, or yellow-wood

macrencephalia, macrencephaly (mak-rensef-a'le-ah, -sef'al-e) [Gr. μακρόs long + ἐγκέφ-αλος brain]. Hypertrophy of the brain.

macrobacterium (mak"ro-bak-te're-um). A large bacterium.

Macrobdel'la deco'ra. A leech widely distributed in the United States and Canada.

macrobiosis (mak"ro-bi-o'sis) [Gr. μακρόs long + βlos life]. Longevity; long life.

macrobiotia (mak"ro-bi-o'she-ah). Same as macrobiosis.

macroblast (mak'ro-blast) [Gr. μακρός large + βλαστός germ]. An abnormally large red blood-cell, a large young normoblast, a megaloblast.

macrobrachia (mak-ro-bra'ke-ah) [Gr. μακρός long + βραχίων arm]. Abnormal size or length of arms.

Macrocanthorhyn'chus hirudina'ceus. A parasitic worm very common in swine and said to occur in man in Russia. It is transmitted by certain insects.

macrocardius (mak-ro-kar'de-us) [Gr. μακρός large + καρδία heart]. A monster-fetus with an extremely large heart.

macrocephalia, macrocephaly (mak"ro-sef-a'le-ah, mak-ro-sef'al-e) [Gr. μακρός large + κεφαλή head]. Excessive size of the head.

macrocephalic (mak"ro-sef-al'ik). Macrocephalous.

macrocephalous (mak-ro-sef'al-us). Having an excessively large head.

macrocheilia (mak-ro-ki'le-ah) [Gr. μακρός large + χείλος lip]. Abnormal or excessive size of the lips, as in some cases of lymphangioma and cretinism.

macrocheiria (mak-ro-ki're-ah) [Gr. $\mu\alpha\kappa\rho\delta$; large $+\chi\epsilon l\rho$ hand]. Excessive size of the hands.

macrochemical (mak-ro-kem'ik-al). Pertaining to macrochemistry.

macrochemistry (mak-ro-kem'is-trē) [Gr. μακρόs large + chemistry]. Chemistry in which the reactions may be seen with the naked eye.

macrochilia (mak-ro-ki'le-ah) [Gr. μακρόs large + χείλος lip]. Same as macrocheilia.

macrochiria (mak-ro-ki're-ah) [Gr. μακρός large + χείρ hand]. Excessive size of the hands.

macrocnemia (mak-rok-ne'me-ah) [Gr. μακρός large + κνήμη shin]. Abnormal size of the legs below the knee.

macrococcus (mak-ro-kok'us) [Gr. μακρός large + κόκκος berry]. A bacterial coccus of the largest recognized type.

macrocolon, macrocoly (mak-ro-ko'lon, mak'ro-ko-le). Abnormal length of the sigmoid flexure and descending colon.

macroconidium (mak"ro-ko-nid'e-um). A largesized condium.

macrocornea (mak-ro-kor'ne-ah) [Gr. μακρόs large + cornea]. Unusually large size of the cornea.

macrocyst (mak'ro-sist) [Gr. μακρός large + κύστις cyst]. A large cyst.

macrocytase (mak-ro-si'tās). A cytase formed by the macrocytes, and capable of causing destruction of animal cells. Cf. microcytase.

macrocyte (mak'ro-sit) [Gr $\mu\alpha\kappa\rho\delta$ s large + $\kappa\nu\tau$ os cell]. 1. An abnormally large erythrocyte, t. e., one from 10 to 12 μ in diameter. 2. A large lymphocyte.

macrocythemia (mak"ro-si-the'me-ah) [macrocyte + Gr. alμα blood] The occurrence of macrocytes in the blood. hyperchromatic m., macrocythemia in which the macrocytes are abnormally rich in hemoglobin, called also macrocytar hyperchromatism.

macrocytosis (mak"ro-si-to'sis). The formation of macrocytes.

macrodactyly, macrodactylia (mak-ro-dak-til'e, mak"ro-dak-til'e-ah) [Gr. μακρός large + δάκτυλος

Macrodactyly Localized hypertrophy of a single finger (Ridlon).

finger]. Abnormal largeness of the fingers and toes.

macrodont (mak'ro-dont). Possessing large teeth. macrodontia, macrodontism (mak-ro-don'she-ah, mak'ro-don-tizm) [Gr μακρός large + δδούς tooth]. Excessive size of the teeth.

macro-erythroblast (mak-ro-er'ith-ro-blast) A very large nucleated red blood-corpuscle.

macro-esthesia (mak"ro-es-the'ze-ah) [Gr μακρός great + αἴσθησις feeling] A sensation as if all things were larger than they really are.

macrogamete (mak-ro-gam'ēt) [Gr. μακρόs large + γαμέτη wife]. The female form of the malarial parasite which, fertilized by a flagellum in the mosquito, becomes a zygote and goes through the exogenous cycle of development.

macrogametocyte (mak"ro-gam-e'to-sīt) [Gr. μακρόs long + γαμέτηs spouse + κότοs cell] The female form of the malarial parasite which transferred from man to the mosquito becomes a macrogamete.

macrogamy (mak-rog'am-e). Conjugation or fusion between adult protozoan individuals.

macrogastria (mak-ro-gas'tre-ah) [Gr μακρόs large + γαστήρ stomach]. Dilatation of the stomach.

macrogenesy (mak-ro-jen'is-e) [Gr. μακρός large + γένεσις production] Gigantism.

macrogenitosomia (mak"ro-jen"it-o-so'me-ah)
[Gr. μακρόs large + genital + Gr. σῶμα body].
General precocious bodily development with unusual size of the genital organs.

macroglossia (mak-ro-glos'e-ah) [Gr. μακρόs large + γλῶσσα tongue]. Hypertrophy of the tongue. macrognathia (mak-ro-na'the-ah) [Gr. μακρόs large + γνάθοs jaw]. Enlargement of the jaw.

macrographia (mak-ro-gra'fe-ah). Macrography. macrography (mak-rog raf-e) [Gr. μακρός large + γράφειν to write]. The formation in writing of letters that are larger than the normal writing of the individual.

macrolabia (mak-ro-la'be-ah) [Gr. μακρόs large + L. la'bium lip]. Same as macrocheilia.

macroleukoblast (mak-ro-lu'ko-blast). A very large leukoblast.

macromania (mak-ro-ma'ne-ah) [Gr. μακρός large + µavla madness]. 1. Delusive belief that external objects or one's own members are larger than they really are. 2. Megalomania; delirium of grandeur.

macromastia (mak-ro-mas'te-ah) [Gr. μακρός large Oversize of the breasts or + μαστός breast]. mammæ.

macromazia (mak-ro-ma'ze-ah) [Gr. μακρός large + μαζός breast]. Same as macromastia

macromelia (mak-ro-me'le-ah). Enlargement of one or more members, due to occlusion of the lymph-channels.

macromelus (mak-rom'el-us) [Gr. μακρός long + μέλος limbl. A fetus with abnormally large or long limbs.

macromere (mak'ro-mēr) [Gr. μακρός large + μέρος part]. A large blastomere.

macromerozoite (mak"ro-mer-o-zo'ît). A large merozoite.

macromonocyte (mak-ro-mon'o-sit). A very large monocyte

macronormoblast (mak-ro-nor'mo-blast). A very large nucleated red blood-corpuscle.

macronormochromoblast (mak"ro-nor-mo-kro'mo-blast). A macronormoblast.

macronucleus (mak-ro-nu'kle-us) [Gr. μακρός large + nucleus]. The principal nucleus of a cell, distinguished from the micronucleus or accessory nucleus. Called also trophonucleus.

macronychia (mak-ro-nik'e-ah) [Gr. μακρόs long + δνυξ nail]. Abnormal length of the fingernails.

macropathology (mak"ro-path-ol'o-je) [Gr. μακρός large + pathology]. The non-microscopic pathologic account of any disease or organ.

macrophage, macrophagus (mak'ro-fāj, mak-rof'a-gus) [Gr. μακρόs large + φαγεῦν to eat] Metchnikoff's name for a large mononuclear wandering phagocytic cell which originates in the tissues. Cf. endotheliocyte.

macrophagocyte (mak-ro-fag'o-sit). cyte of relatively large size. A phago-

macrophallus (mak-ro-fal'us) [Gr. μακρός large $+ \varphi \alpha \lambda \lambda \delta s$ penis]. Abnormal largeness of the penis.

macrophotograph (mak-ro-fo'to-graf) [Gr. μακρός large + photograph]. An enlarged photograph.

macrophthalmous (mak-rof-thal'mus) [Gr. μ ακρός large + $\delta \varphi \theta$ αλ μ ός eye]. Having abnormally large eyes.

macropia (mak-ro'pe-ah) [Gr. μακρός large + ωψ eye]. Same as macropsia.

macroplasia (mak-ro-pla'ze-ah) [Gr. μακρόs large + πλάσις forming]. Excessive growth of a part or tissue.

macroplastia (mak-ro-plas'te-ah). Macroplasia. macropodia (mak-ro-po'de-ah) [Gr. μακρός large + πούs foot]. Excessive size of the feet.

macropromyelocyte (mak"ro-pro-mi'el-o-sīt). A very large promyelocyte.

macroprosopia (mak"ro-pro-so'pe-ah) [Gr. μακρός large + πρόσωπον face]. Excessive size of the face.

macropsia (mak-rop'se-ah) [Gr. μακρός large + δψις vision]. A condition in which objects seen appear to be larger than they really are; called also macropia and megalopsia.

macrorhinia (mak-ro-rin'e-ah) [Gr. μακρός large +

bls nosel. Hypertrophy and enlargement of the nose

macroscelia (mak-ro-se'le-ah) [Gr. μακρός large + σκέλος leg]. Excessive size of the legs.

macroscopic (mak-ro-skop'ik) [Gr. μακρός large + σκοπεῖν to view]. Visible with the unaided eye or without the microscope.

macroscopy (mak-ros'ko-pe). Examination with the naked eye.

macrosis (mak-ro'sis) [Gr. μακρός large]. Increase in size.

macrosmatic (mak-ros-mat'ik) [Gr. μακρός large δσμάειν to smell]. Having the sense of smell strongly or acutely developed.

macrosomatia, macrosomia (mak"ro-so-ma'sheah, mak-ro-so'me-ah) [Gr. μακρός large + σωμα body]. Great bodily size.

macrosome (mak'ro-sōm) [Gr. μακρός large + σωμα body]. One of the larger granules seen in the nuclei of certain cells.

macrospore (mak'ro-spōr) [Gr μακρόs large + σπορόs seed]. An unusually large spore.

Macros'toma mesni'li. as Chilomastix Same

mesnili. macrostomia (mak-rosto'me-ah) [Gr. μακρός large + στόμα mouth]. Abnormal largeness of the mouth.

macrostructural (makro-struk'tur-al). taining to gross structure.

macrotia (mak-ro'sheah) [Gr. μακρός large + ous ear]. Excessive size of the ears.

macrotin (mak'ro-tin). A proprietary resin or concentration derived from cimicifuga. Dose,

⅓-2 gr. (0.033-0.133 gm). macrotome (mak'ro-tōm) [Gr. μακρός large + τομή

cut]. An apparatus for cutting large sections of tissue for anatomic study.

macrotys (mak-ro'tis). Cimicifuga.

macula (mak'u-lah), pl. mac'ula [L]. A stain or spot; a discolored spot on the skin not elevated above the surface. maculæ acusticæ (mak'u-le a-kus'tis-e), the terminations of the acoustic nerve in the utricle or saccule. mac'ulse al'bidse, white spots sometimes seen after death on the serous layer of the peritoneum. mac'ulse atroph'icse, white patches resembling scars formed on the skin by atrophy mac'ulse cseru'less, bluish patches on the skin sometimes seen in pediculosis cerebral m. See tache cere-brale. m. cor'ness, a corneal opacity m. cribro'sa [B N A], an area on the wall of the vestibule perforated for the passage of filaments of the auditory nerve. It includes the m. cribro'sa infe'rior, for branches to the posterior semicircular canal, the m. cribro'sa me'dia, for branches to the sacculus; the m. cribro'sa supe'rior, for branches to the utricle and superior semicircular canals; and the m. cribro'sa quar'ta, for the cochlear nerve. m. fla'va [B N A], a part of the anterior end of the vocal cord at which a yellowish nodule is visible. m. follic'uli, the point in a graafian follicle where rupture occurs. m. germinati'va, the germinal area. See area. m. gonorrho'ica, a red spot at the orifice of the vulvovaginal gland in gonorrheal vulvitis. Called also Sänger's m. mac'u-les lac'tess. Same as maculæ albidæ. m. lu'tea [B N A], the point of clearest vision at the center of the retina. Mongolian m., Mongolian spots. Robert's m., a mass of coloring-matter seen in the red corpuscles when blood is treated with dilute tannic acid solution. m. sac'culi, a

Macrostoma (Gould and Pyle).

patch of sensory epithelium in the saccule. Sanger's m. See m. gonorrhoica. m. sola'ris, a freckle; lentigo. m. utric'uli, a patch of sensory epithelium in the utricle. mac'ulæ tendin'ese. Same as maculæ albidæ.

maculanin (mak-u-lan'in). Potassium amylate: it is caustic, like potassium hydroxid, but milder in

macular (mak'u-lar). Characterized by maculæ.

maculate (mak'u-lāt) [L. macula'tus spotted]. Spotted or blotched.

maculation (mak-u-la'shun) [L. mac'ula spot]. The condition of being spotted; the formation of spots or macules.

macule (mak'ūl). See macula.

maculocerebral (mak"u-lo-ser'e-bral). Affecting the macula lutea and the brain.

maculopapular (mak"u-lo-pap'u-lar). Both macular and papular.

maculopapule (mak"u-lo-pap'ūl). A lesion resembling both a macule and a papule.

MacWilliam's test [John Alexander MacWilliam, English physician, born 1857]. See under tests.

mad (mad). 1. Insane: affected with madness. 2. Affected with rabies; rabid.

madarosis (mad-ar-o'sis) [Gr. μαδαρός bald]. Loss of the eyelashes or eyebrows (Galen).

madder (mad'er). The root of Ru'bia tincto'ria, affording a red dve.

Maddox prism, rod (mad'ox) [Ernest Edmund Maddox, contemporary English ophthalmologist]. See prism and rod.

madefaction (mad-e-fak'shun) [L. madefac'ere to moisten]. The act of moistening or making wet.

Madelung's deformity and neck [Otto Wilhelm Madelung, surgeon in Strassburg, 1846-1926 See deformity and neck.

madescent (mad-es'ent) [L. mades'cere to become moist] Slightly moist.

madidans (mad'id-ans). Moist, wet.

Madura foot (ma-du'rah). See mycctoma.

Madurella (mad-u-rel'ah) The type of organisms found in mycetoma which have septate mycelia. M. myceto'mi. See Actinomyces madura.

maduromycosis (mad-u-ro-m1-ko'sis). Mycetoma. Mag. Abbreviation for L. mag'nus, large

mageiric (maj-i'rik) [Gr. μαγειρικός relating to cookery]. Pertaining to cookery or dietetics.

Magendie's foramen, solution (ma-jen'dez) [François Magendie, French physiologist, 1783-1855]. See foramen and solution.

magenta (mah-jen'tah). Same as basic fuchsin. acid m., acid fuchsin

magisal (mag'is-al). Magnesium acetosalicylate used in place of aspirin.

magistery (maj'is-ter-e) [L. magiste'rium: magis'ter master]. A precipitate; any subtle or masterly preparation.

magistral (maj'is-tral) [L. magis'ter master]. Pertaining to a master a term used to denote medi-cines that are prepared in accordance with a physician's prescription.

Magitot's disease (mazh-it-ōz') [Emile Magitot, French dentist, 1833-1897] See disease.

magma (mag'mah) [Gr. μάσσειν to knead]. An bismu'thi, milk of bismuth m. magne'size (U. S. P), milk of magnesia. Dose as antacid, 1 fl.dr. (4 c.c.); as laxative, 4 fl.dr. (15 c.c.).

Magnan's movement, sign (mag'nanz) [Valentin, Jacques Joseph Marnan, alienist in Paris, 1835-1916]. See movement and sign

magnesia (mag-ne'ze-ah) [the name of a district in ancient Lydial. Magnesium oxid, MgO, a white and light powder: aperient and antacid. Dose, 15-60 gr. (1-4 gm.). m. al'ba, a hydrated

magnesium carbonate. calcined m., light m., the ordinary form of magnesia. heavy m., m. pondero'sa, a fine, white, dense, and heavy powder, identical with ordinary or light magnesia, except in its physical properties. Henry's m., a proprietary preparation of heavy magnesia. **Husband's m.**, a proprietary preparation of heavy magnesia. **m. lev'is, m. us'ta,** light or ordinary magnesia. **milk of m.**, a milky magnesium hydroxid, Mg₂H₂O₂, mixed with water: aperient. Dose, ½-4 fl dr (2-15 c.c.) for infants.

magnesic (mag-ne'sik). Relating to or containing magnesium or one of its compounds.

magnesite (mag-ne'sīt). Native magnesium carbonate, MgCO₃ used like plaster of Paris in splints and dressings.

magnesium (mag-ne'ze-um), gen magne'sii [L]. A white, metallic element; symbol, Mg, atomic weight, 24.32; specific gravity, 1.75 m. ben**zoate**, a white, crystalline powder, (C₆H₅ CO₂)₂-Mg. used in gout and urinary calculus. Dose, 2½-15 gr. (0.15-1 gm) m. borate. See antifungin. m. borocitrate, the borocitrate of magnesium. Dose, 2-4 dr (8-16 gm.). m. bromid, colorless deliquescent crystals, MgBr₂ 6H₂O: used as a nervine in doses of 5-15 gr (0 32-1 gm). m. carbo'nas efferves'cens, an effervescent preparation of magnesium carbonate Dose, oz. (7.8–30 gm.). **m. carbonate**, a mildly aperient antacid, $(MgCO_3)_4 Mg(OH)_2 + 5H_2O$. Dose, 15-60 gr (1-4 gm). It is prepared in two forms, m c. lev'is (light magnesium carbonate), in friable masses or in a fine white powder, or in a much heavier form, $m \in pondero'sa$, but the two are identical, except in physical properties. chlorid, transparent crystals of MgCl₂ 6H₂O· used as a laxative m. ci'tras granula'tus, a granulated preparation of the citrate of magnesium. Dose, 2-8 dr. (8-32 gm). m. fluorid, a white, antiseptic powder. m. glycerinophosphate, a soluble white, crystalline powder. C3H7O3PO3Mg a nerve tonic. Dose, 2-5 gr. (0.13-0.333 gm).

m. gynocardate, a white powder used for leprosy Dose, 15-60 gr. (1.4 gm).

m. ichthyolate, calcined magnesia. 100 parts, combined with ichthyol, 775 parts, an antiseptic powder.

m. lactate, a salt in colorless crystals, (CH₃.-CHOH.CO₂)₂Mg + ₃H₂O aperient Dose, 15-45 gr. (1-3 gm). m. loretinate, basic, a salt in yellow crystals, MgI O.C₂H₄N SO₃ 5H₂O an an input for avternal use. m. loretinate, neutiseptic for external use tral, a salt in salmon-yellow prisms, Mg(I OH.C9-H₄N SO₃)₂ 7H₂O. m. oxid, a compound, MgO, formed by calcining magnesium carbonate permanganate, an antiseptic salt, Mg(Mn()₄)₂. 6H₂O, in bluish-black crystals m. peroxid, MgO₂; a white powder, insoluble in water, but gradually decomposed with the liberation of oxygen. m. phenolsulphonate, a white, bitter, crystalline salt, (OH.C₀H₄SO₂O)₂Mg 7H₂O antiseptic and purgative. Dose, 15-30 gr. (1-2 gm) **m**. and purgative. Dose, 15-30 gr. (1-2 gm) m. salicylate, a salt, (OH C₀H₄.CO₂)₂Mg + 4H₂O, in colorless crystals, antiseptic used in typhoid, etc. Dose, 15-30 gr. (1-2 gm). m. silicate, 3Mg-SiO₂ 5H₂O used in diarrhea m. sozoiodolate, an antiseptic salt, $(C_0H_2I_2(OH)SO_3)_2Mg + 8H_2O$, in colorless needles m. sulphate, Epsom salt, a white, crystalline salt, MgSO₄ + 7H₂O₂, a refrigerant hydragogue cathartic used in dysentery, colic, and the early stages of febrile diseases Dose, 1-8 dr. (4-32 gm). m. sulphate, dried, is used like the ordinary sulphate, from which it differs in the expulsion of five-sevenths of its water of crystallization by heat itseptic, MgSO₃ + 6H₂O a useful application to gangrenous and sanious sores, and as a remedy for fermentative dyspepsia. It has also been used subcutaneously and intravenously in tetanus. Dose, 5-30 gr. (0.333-2 gm.).

magnet (mag'net) [L. mag'nes; Gr. μάγνης magnet]. A lodestone; native iron oxid that attracts iron; also a bar of steel or iron that attracts iron and has magnetic polarity. **electro-m.**, a piece of soft iron rendered temporarily magnetic by an electric current passing in a helix around the iron. **Grün-ing's m.**, a magnet made up of a number of steel rods: used in removing particles of iron and steel from the eye. **Haab's m.**, a powerful magnet for extracting foreign metallic bodies from the eye. **horseshoe-m.**, a magnet-shaped like the letter **U. permanent m.**, one with permanent magnetic qualities. **temporary m.**, a substance that possesses magnetic properties only during the passage of an electric current or when a fixed magnet is near it.

magnetic (mag-net'ik). Pertaining to, derived from, or having the properties of, a magnet.

magnetism (mag'net-izm). Magnetic attraction or repulsion. animal m., mesmerism.

magnetization (mag''net-iz-a'shun). The act or process of rendering an object or substance magnetic.

magneto-electricity (mag'net-o-e-lek-tris'it-e). Electricity induced by means of a magnet.

magneto-induction (mag"/net-o-in-duk'shun). See induction, magnetic.

magnetology (mag-net-ol'o-je). That branch of physics which treats of magnetics.

magnetometer (magnet-om'et-er) [magnetic + Gr. μέτρον measure]. An apparatus for measuring magnetic forces.

magneton (mag'net-on). An ultimate elemental magnetic particle

magnetotherapy (mag"net-o-ther'ap-e). The treatment of disease by magnets or by magnetism.

magnetropism (mag-net'ro-pizm) [magnet + Gr. $\tau p \phi \pi o s$ turning]. The turning of the direction of growth of an organism under the influence of a magnet.

magniductor (mag-nid-uk'tor). The adductor femoris magnus.

magnification (mag''nif-ik-a'shun) [I.. magnifica'-tio, mag'nus great + fa'cere to make]. Apparent increase in size under the microscope.

magnify (mag'nif-i) [L. mag'nus great + fa'cere to make]. To cause to appear larger than is natural by the use of lenses or suitable mirrors.

magniscope (mag'nis-kōp). A variety of chromo-photograph.

magnodat (mag'no-dat) Magnesium peroxid

Magnolia (mag-no'le-ah) [after Pierre Magnol, 1638–1715]. 1. Λ genus of magnoliaceous trees. 2. The bitter aromatic bark of M. acumina'ta, M. glau'ca, and M. tripet'ala: diaphoretic and antifebrile. Dose, 20-00 gr. (2-4 gm.).

magnum, os magnum (mag'num) [L. "great bone"]. The largest of the bones in the distal row of the carpus.

magolan (mag'o-lan). A proprietary organic phosphorus compound used in diabetes.

mahamari (mah-hah-mah're). The native name for a form of plague occurring in the southern slopes of the Himalayas.

Mahler's sign (mah'lerz) [Richard A. Mahler, contemporary German obstetrician]. See sign.

ma huang (mah-hoo-ang'). The native name for a Chinese variety of *Ephedra vulgaris*. See *Ephedra*.

maidalokri (mi-dal-ok're). The bark of Tetranthe'ra laurifo'lia, of India: used in dysentery and diarrhea.

maidenhead (ma'dn-hed). 1. Virginity. 2. The hymen.

maidism, maidismus (ma'id-izm, ma-id-iz'mus) [L ma'is maize]. Pellagra, poisoning by damaged maize.

Maier's sinus (mi'erz) [Rudolf Maier, German physician, 1824–1888]. See under sinus.

maieusiomania (mi-u"se-o-ma'ne-ah) [Gr. μαίευσις childbirth + mania]. Puerperal mania.

maieusiophobia (mi-u"se-o-fo'be-ah) [Gr. μ alev σ s childbirth $+ \varphi b \beta$ os fear]. Morbid dread of childbirth,

maieutic (mi-u'tik). 1. Obstetric. 2. A rubber bag for dilating the uterine cervix.

maieutics (mi-u'tiks). Obstetrics.

maim (mām). 1. To disable by a wound; to dismember by violence. 2. A dismemberment or disablement effected by violence.

main d'accoucheur (mān dak-oo-shuhr') [Fr.]. Obstetrician's hand. See under hand

main en crochet (ma nong kro-shā'). A permanently flexed condition of the third and fourth fingers.

main en griffe (ma nong grif') [Fr.]. Same as claw-hand.

main en singe (ma-nong-sēnzh'). See monkeyhand, under hand.

main en squelette (ma-nong-skel-et'). See skele-ton-hand, under hand.

main succulente (man suk-u-lent') [Fr.]. Edema of the hands.

maiosis (mi-o'sis). Same as miosis (2).

maiotic (mi-ot'ik). Same as miotic (4).

maisin (ma'zin). A protein found in the seeds of maize.

maisonneuve (ma-zo-nev') See Maisonneuve's urethrotome, under urethrotome.

Maisonneuve's bandage (ma-zo-nevz') [Jules Germain François Maisonneuve, French surgeon, 1800-1807]. See under bandage.

1809-1897]. See under bandage.

Maissiat's band (ma-se-az') [Jacques Henri Maissiat, French anatomist, 1805-1878]. See under band.

maizavena (ma-zah-ven'ah). A proprietary urinary antiseptic and diuretic.

maize (māz) [L mays maize] Indian corn; a cereal grain, the seed of Zea mays. See Zea.

maizenate (ma'zen-āt). Any salt of maizenic acid. maizole (ma'zōl) A proprietary emulsion of corn oil used as a food remedy

maizolithium (ma-zo-lith'e-um). A solution of lithium maizenate diuretic and genito-urinary sedative. Dose, 1-2 fl.dr. (4-8 c.c.).

Majocchi's disease (mah-jok'ēz) [Domenico Majocchi, contemporary Italian physician]. See disease.

make (māk). The closure and completion of an electric current.

Makins's murmur (ma'kins) [Sir George Henry Makins, British surgeon, born 1853]. See under murmur.

makro-. For words thus beginning, see macro-.

mal (mahl) [Fr.; L. ma'lum, ill]. Disease. m. de abajo, Peruvian name for uterine cancer or syphilis. m. d'Aviateur. See aviators' disease, under disease. m. de Caderas, a disease of horses, mules, and dogs in South America which is characterized by weakness especially of the hind quarters and a staggering, swinging gate It is caused by Trypanosoma equinum which is probably transmitted by flies (Musca brava?). Dogs may get it by eating infected meat. m. de Cayenne, elephantiasis. m. de coit. Same as dourine. m. comitial, epilepsy. m. d'estomac, ankylostomiasis. m. de los pintos (da los pin'tos). See pinta. m. de Melada, symmetric keratodermia of the extremities, occurring endemically in the island of Melada. m. de mer (deh mar'), sea-sickness. m. perforant, perforating ulcer of the foot. m. perforant palatin, perforaing ulcer of the roof of the mouth. petit m., a mild attack of epilepsy.
m. de siete dias, seven-day discase.
m. de Zousfana, a disease of horses in Algeria; probably a form of surra.

mala (ma'lah) [L.]. The cheek or cheek-bone. malabar itch (mal'ab-ar). See under itch.

malabathrum (mal-ab-ath'rum) [L.]. The leaf of Cinnamo'mum tam'ala: formerly used in medicine.

Malacarne's pyramid, space (mal-ah-kar'nāz) [Michele Vincenzo Giacintos Malacarne, Italian surgeon, 1744-1816]. See pyramid and space.

malachite green (mal'ak-īt). See under green.

malacia (mal-a'se-ah) [Gr. μαλακία]. 1. The morbid softening or softness of a part or tissue. 2. Craving for highly spiced food and dishes, pickles, salads, mustard, etc. myeloplastic m. Same as osteogenesis imperfecta.

malacin (mal'as-in). See malakin.

malacoma (mal-ak-o'mah). Morbid softening: also a morbidly soft part or spot.

malacoplakia (mal"ak-o-pla'ke-ah) [Gr. μαλακόs soft + πλάξ plaque]. The formation of soft patches on the mucous membrane of a hollow organ. m. vesi'œs, a soft, yellowish, fungus-like growth on the mucous membrane of the bladder and ureters.

malacosarcosis (mal"ak-o-sar-ko'sis) [Gr. μαλακός soft $+\sigma \hat{a} \rho \xi$ flesh]. Softness of muscular tissue.

malacosis (mal-ak-o'sis). Same as malacia.

malacosteon (mal-ak-os'te-on) [Gr. μαλακός soft + όστέον bone]. Morbid softness of the bones; osteomalacia.

malacotic (mal-ak-ot'ik). Inclined to malacia, soft: said of teeth

malacotomy (mal-ak-ot'o-me) [Gr. μαλακός soft + τέμνειν to cut]. Incision of the abdominal wall.

malactic (mal-ak'tik) [Gr. μαλακός soft]. 1. Softening, emollient. 2. An emollient medicine.

maladie (mal-ad-e') [Fr.]. A disease m. bronzée (braw-za'), epidemic hemoglobinuria. m. cystique (sis-tek '), cystic degeneration of the breast. m. de Woillez (du woy-ya'). See Woillez's disease, under disease. m. du coit (du ko-e'). See dourine.

malady (mal'ad-e) [Fr. maladie]. Any disease or illness.

malagma (mal-ag'mah) [Gr.]. An emollient or cataplasm.

malaise (mal-āz') [Fr]. Any uneasiness or indisposition, discomfort, or distress.

malaka (mal'ak-ah). Salicylid-paraphenetidin: antirheumatic and antipyretic.

malakin (mal'ak-in). Salicyl-paraphenetidin, C₆-H₄(OC₂H₅).N.CH.C₆H₄(OH) + H₂O, a patented antipyretic and antirheumatic, in yellow needles. It is insoluble in cold water, slightly soluble in alcohol, and soluble in hot alcohol and solutions of alkaline carbonates. Dose, 15 gr. (1 gm.).

malakoplakia. See malacoplakia

malalignment, malalinement (mal-al-īn'ment). A condition in which the teeth are displaced from their normal relation to the line of the dental arch. malanders (mal'an-derz). See mallanders.

malandrin (mal-an'drin). A homeopathic remedy from grease (equine small-pox) used as a preventive of variola.

malar (ma'lar) [L. ma'la cheek]. Pertaining to the cheek.

malaria (mah-la're-ah) [It. mal'aria, bad air]. febrile disease, formerly supposed to be due to poisonous emanations from damp ground, but now known to be caused by a blood parasite; more correctly, the emanations themselves. Tertian m. is caused by Plasmodium vivax: quartan m. by P. malariæ; estivo-autumnal, tropical, quotidian, subtertian, and mulignant tertian m. by P. falciparum. see fever, malarial, and plasmodium. bovine m., bovine m., malaria modified by being associated with another disease.

malarial (mal-a're-al). Pertaining or due to malaria

malarialize (mal-a're-al-Iz). To infect with malarial poison.

malariated (mal-a're-a-ted). Affected with malaria

malarin (mal'ar-in). Λ crystalline powder, C₆H₆-C(CH₃): N.C₆H₄.OC₂H₅, acetophenonephenetidin: antipyretic and antineuralgic, but dangerous. Dose, 8-15 gr. (0.6-1 gm); patented.

malariology (mal-a-re-ol'o-je) [malaria + Gr. λόγος treatise]. The study of malaria.

malariosis (mal-a-re-o'sis). A condition seen in soldiers who have recovered from malaria, in which they consider that they are permanently disabled thereby, and are entitled to care and a pension.

malariotherapy (mal-a"re-o-ther ap-e). Treatment of general paralysis or paresis by infecting the patient with the parasite of tertian malaria.

malarious (mal-a're-us). Pertaining to or marked by the presence of malaria.

Malassez's disease, rests, method (mal-as- $\bar{a}z'$) [Louis Charles Malassez, physiologist in Paris, 1842-1909]. See under disease, rest, and staining.

Malassezia (malas-e'ze-ah) [Louis Charles Malassezl. A genus of fungi. M. fur'fur causes versicolor; M. trop'ica causes tinea flava.

682

malassimilation (mal"as-im-il-a'shun) [L. ma'lus ill + assimila'tio a rendering likel. Imperfect assimilation.

malate (ma'lāt). Any salt of malic acid.

Malassezia (Rivas).

malaxation (mal-aks-a'shun) [L. malaxa'tıo]. An act of kneading: kneading movement in massage.

malcour (mal-ker'). Ankylostomiasis.

maldigestion (mal-di-jes'tshun). Impaired digestion

male (mal). I. A person or animal of the sex that begets young or that produces spermatozoa. Masculine.

malemission (mal-e-mish'un) The failure of the semen to be discharged from the meatus in coition.

maleness (māl'nes). The catabolic diathesis in the embryo.

Malerba's test (mah-ler'bahz) [Pasquale Malerba, Italian physician, died 1917]. See under tests

maleruption (mal-e-rup'shun) The eruption of a tooth so as to be out of its normal position.

malformation (mal-for-ma'shun) [L. ma'lus evil + forma'tio a forming]. Defective or abnormal formation: deformity.

Malgaigne's amputation, fossa, hernia. hook, pads (mal-ganz') [Joseph François Malgaigne, French surgeon, 1806-1865]. See amputation, fossa, hernia, hook, pad, etc

maliasmus (mal-e-as'mus). Glanders, or farcy. malic acid (mal'ik) See acid.

malicor (mal'ik-or) [L. malico'rium apple-skin]. The strongly astringent, coriaceous rind of pomegranate fruit.

malignancy (mal-ig'nan-se) [L. maligna're to act maliciously]. A tendency to progress in viru-A tendency to progress in virulence.

malignant (mal-ig'nant) [L malig'nans acting maliciously]. Virulent, and tending to go from bad to worse.

malignin (mal-ig'nin). A ferment supposed to exist in cancer cells and giving them their malignant character.

malignometer (mal-ig-nom'et-er) [malignant + Gr. μέτρον measure]. An apparatus for detecting the existence of malignancy by observing the color reaction of the urine.

mali-mali (mah''le-mah'le). A form of palmus, or jumping disease, endemic in the Philippines.

malingerer (mal-in'ger-er) [Fr. malingre sickly]. One who feigns illness.

malingering (mal-ing'er-ing). The feigning of illness, pathomimesis.

malingeroscope (mal-in'ger-o-skōp). An apparatus for detecting malingering with regard to alleged defects of vision.

malinterdigitation (mal-in-ter-dij-it-a'shun).
Abnormal interdigitation of the teeth.

Mall's formula, ovum [Franklin Paine Mall, Baltimore anatomist, 1862-1917]. See formula and ovum.

mallanders (mal'an-derz). A scab variety of eczema above the forefoot and about the knee of a horse. Called also mallenders and callenders.

malleability (mal"c-ab-il'it-c). The quality of being malleable.

malleable (mal'e-ab-l) [L. mallea're to hammer]. Susceptible of being beaten out into a thin plate.

mallease (mal'e-ās). A neutralized and filtered solution of glanders bacilli in 8 per cent. antiform: used in testing for glanders. See Konew's test, under tests

malleation (mal-e-a'shun) [L. mallea're to hammer]. Sharp and swift muscular twitching of the hands.

mallein (mal'e-in) [L mal'leus glanders]. The endotoxin of Pfeiferella mallei. It consists of the germfree bouillon in which the organism has grown and is used in the diagnosis of glanders, since, when injected into an animal affected with glanders, it causes a rise of temperature

malleinization (mal"e-in-is-a'shun). Inoculation with mallein.

mallenders (mal'en-derz). See mallanders.

malleoidosis (mal-e-oi-do'sis). Same as melioidosis.
malleo-incudal (mal"e-o-ink'u-dal). Pertaining
to the malleus and incus.

malleolar (mal-e'o-lar). Pertaining to a malle-

malleolus (mal-e'o-lus), pl. malle'oli [L. "little hammer"]. A hammer-headed process of bone. external m., lateral m., outer m., the lowest point of the fibula. inner m., medial m., the lowest point of the tibia.

malleotomy (mal-c-ot'o-me) [malleus + Gr. τομή a cut]. 1. The operation of dividing the malleus in cases of ankylosis of the ossicles of the middle ear. 2. The operation of separating the malleoli by dividing the ligaments which hold them together.

malleus (mal'e-us) [L. "hammer"]. 1. The mallet-shaped ossicle of the middle ear 2. Glanders.

mallochorion (mal-o-ko're-on) [Gr. μαλλός wool + chorion]. The primitive mammalian chorion: so called from its villi.

Mallophaga (mal-of'ag-ah) [Gr μαλλός wool + φαγεῖν to eat] A group of biting lice feeding on the feathers and hair of birds.

Mallory's bodies, stain (mal'or-ēz) [Frank Burr Mallory, pathologist in Boston, born 1863]. See under body and stain.

mallotoxin (mal-o-toks'in). See rottlerin.

mallotus (mal'o-tus). See Kamala.

mallow (mal'o) [L. mal'va]. Any plant of the genus Mal'va. The flowers and leaves of M. sylves'tris and M rotundifo'lia are demulcent high m., M. sylvestris. low m., M. rotundifolia. marshm. See Althaa.

malnutrition (mal-nu-trish'un). Imperfect assimilation and nutrition.

malocclusion (mal-ok-lu'shun). Such malposi-

tion of the teeth as will interfere with the highest efficiency during the excessive movements of the jaw which are essential to the function of mastication (A. D. A.). close-bite m., malocclusion in which the labial teeth pass their proper occlusal planes so that the lower incisiors strike the gum behind the upper incisors open-bite m., malocclusion in which the labial teeth are prevented from coming together by occlusion of the buccal teeth.

malonal (mal'o-nal). Same as barbital.

malonyl (mal'o-nil). The divalent radical, OCCH₂-CO. m. urea. See barbituric acid, under acid.

maloplasty (ma'lo-plas-te) [L. ma'la cheek + Gr. πλάσσειν to form]. Plastic surgery upon the cheek.

malpighian (mal-pig'e-an). Of, pertaining to, or described by, the Italian anatomist, Marcello Malpighi (1628-1694). See body and corpuscle.

malposed (mal-posd'). Not in the normal position.

malposition (mal-po-zish'un) [L. ma'lus bad + posit'io placement]. Abnormal or anomalous position.

malpractice (mal-prak'tis) [L. mal bad + practice]. Improper or injurious practice; unskilful and faulty medical or surgical treatment.

malpraxis (mal-prax'ıs). Malpractice.

malpresentation (mal"prez-en-ta'shun). A faulty, abnormal, or untoward fetal presentation.

malrotation (mal-ro-ta'shun). Abnormal or pathologic rotation, as of the spinal column.

malt (mawlt) [L. mal'tum]. Grain, for the most part barley, which has been soaked, made to germinate, and then dried it contains dextrin, maltose, and diastase. It is nutritive and digestant, aiding in the digestion of starchy foods, and is used in tuberculosis, cholera infantum, and other wasting diseases. Dose of extract (U. S. P.), 1-2½ dr. (4-10 gm.), of fluidextract, 1-2 floz. (15-60 c.c.). m. liquors, alcoholic beverages derived from fermented infusions of malt: they include beer, ale, and porter.

Malta fever (mawl'tah). See fever.

maltase (mawl'tās). A ferment which converts maltose into dextrose. It is found widely distributed in the animal and vegetable world.

maltaven (mawl'tav-en). A proprietary vitamin preparation.

malthusianism (mal-thu'se-an-izm) [Rev. T. R. Malthus, English economist, 1766–1834]. The doctrine that at the normal rate of increase the population tends to increase faster than the means of sustenance can; and that, therefore, society should check the growth of population by late marriages and sexual continence.

maltine (mawl-tēn'). A proprietary food preparation of malt.

maltobiose (mawl-to-bi'os). Same as maltose.

malto-dextrin (mawl-to-deks'trin). A dextrin convertible into maltose.

maltol (mawl'tol) A proprietary food prepared from predigested cereals and nuts.

maltopepsin (mawl-to-pep'sin). A proprietary digestant remedy.

maltopetral (mawl-to-pet'ral). A proprietary malt extract with tasteless petroleum and hypophosphites.

maltosazone (mawl-to-sa'zōn). The phenylosazone of maltose. It is a yellow crystalline substance formed by treating maltose with phenylhydrazin and acetic acid. The crystals melt at 205° C. and may be used in identifying maltose.

maltose (mawl'tōs). Malt-sugar, C₁₂H₂₂O₁₁ + H₂O, a white crystalline disaccharid formed when starch is hydrolyzed by certain enzymes. It is a glucosealpha-glucoside and on hydrolysis by maltase yields glucose.

maltosid (mawl'to-sid). A compound homologous with a glucosid, but in which the sugar is maltose instead of glucose.

MALTOSID

maltosuria (mawl-to-su're-ah). The presence of maltose in the urine.

malto-yerbine (mawl-to-yer'bin). An expectorant preparation of malt and yerba santa. used in pulmonary diseases.

maltrogen (mawl'tro-jen). A proprietary nutrient preparation of malt extract, olive oil, and glycerin.

maltropon (mawl-trop'on). A combination of tropon and lecithin, used as a galactagogue.

maltsanta (mawlt-san'tah). A preparation of maltzyme and yerba santa usually employed as a sedative and tonic for respiratory mucous membranes

malt-sugar. Maltose.

maltum (mal'tum). Latin for malt.

malturned (mal-ternd') Turned abnormally: said of teeth twisted on their central axes.

A proprietary food and maltzyme (mawlt'zīm): therapeutic preparation.

malum (ma'lum) [L for evil or disease]. m. cox'80, hip disease. m. per'forans pe'dis, perforating ulcer of the foot. m. seni'le, a variety of arthritis deformans peculiar to aged persons. See morbus coxæ sendis. m. vene'reum, syphilis. m. vertebra'le suboccipita'les, tuberculosis of the atlas and axis

malunion (mal-u'nyon). Union of the fragments of a fractured bone in a faulty position.

Malva (mal'vah) [L.]. See mallow.

mal'væ fo'lia. Mallow leaves

Maly's test (mah'lēz) [Richard Leo Maly, Austrian chemist, 1839–1894]. See under tests.

mamaliga (mah-mal-e'geh) A solid cornmeal mush made from coarsely ground meal used by the peasants of Roumania

mamanpian (mah-mahn"pe-ahn') [Fr. maman mother + pian yaw] Mother-yaw. See yaw.

mamelonated (mam'el-on-a-ted). Having nipplelike elevations on the surface.

mamelonation (mam-el-o-na'shun). The development of nipple-like, rounded prominences on a part.

mamilla, etc (mam-il'ah). See mammilla, etc.

mamma (mam'ah), pl. mam'mæ [L] mary gland; the breast accessory m., supernumerary m., mammary glands in excess of the normal number m. viri'lis [B N A], male breast, the mammary gland in the male.

mammagen (mam'aj-en) A proprietary preparation of extracts from the pituitary, corpus luteum, placenta, and mammary gland used to increase lactation

mammal (mam'al). An individual belonging to the Mammalia

mammala (mam'al-ah). A proprietary milk food preparation in dried form.

mammalgia (mam-al'je-ah) [L. mam'ma breast Pain in a mamma; mas-+ Gr. αλγος pain]. talgia.

Mammalia (mam-a'le-ah) [L mam'ma breast]. division of vertebrate animals, including all that suckle their young.

mammalogy (mam-al'o-je) [mammal + Gr. λόγος The study of mammals treatise]

mammary (mam'ar-e) [L. mamma'rius]. Pertaining to the mamma.

mammectomy (mam-ek'to-me) [L. mam'ma breast + Gr ἐκτομή excision] Excision of the breast

mammiform (mam'if-orm) [L. mam'ma breast + for'ma form]. Shaped like the mamma.

mammilla, mamilla (mam-il'ah) [L.]. The nipple, also any nipple-like structure.

Mammillaria (mam-il-a're-ah). Same as Anhalonium.

mammillary (mam'il-a-re). Like or pertaining to a nipple.

mammillate, mammillated (mam'il-āt, mam'il-a-ted) [L. mammilla'tus]. Having nipple-like projections.

mammillation (mam-il-a'shun) [L. mammilla'tio]. 1. The condition of being mammillated. 2. A mammilliform protuberance.

mammilliform (mam-il'ıf-orm) [L. mammil'la nipple + for'ma form]. Shaped like a nipple.

mammilliplasty (mam-il'ip-las-te) [L. mammil'la nipple + Gr. πλάσσειν to shape. Plastic surgery of the nipple, thelyplasty.

mammillitis (mam-il-i'tis) [L mammilla nipple + -itisl. Inflammation of the nipple

mammin (mam'in) [L. mam'ma breast]. A preparation of mammary glands, used as a hemostatic in uterine hemorrhage

mammitis (mam-i'tis). Same as mastitis.

mammose (mam-os') [L. mammo'sus]. I Having large breasts, or mammæ. 2. Mammillated.

mammotomy (mam-ot'o-me) See mastotomy.

Man. Abbreviation for I. manip'ulus, a handful.

manaca (man'ak-ah). The Brazilian plant, Brunfel'sia (Franciscea) hopea'na: used in the treatment of gout and rheumatism. Dose of fluidextract, 10-60 min (0.66-4 c c)

manacaline (man'ak-al-in). An antirheumatic combination of manaca, cimicifuga, and colchicin.

manchineel (man-kin-el'). The Hippom'ane man-cinel'la, a tree of tropical America. It abounds in a caustic poisonous sap or juice.

mancinism (man'sin-izm) [L. man'cus crippled]. Left-handedness.

Mandel's test (man'delz) [John Alfred Mandel, physiologic chemist in New York, born 1865]. See under tests

Mandelbaum's reaction (man'del-bawma) [M. Mandelbaum, contemporary German physician]. See reaction.

mandible (man'dib-l) [L. mandib'ulum]. The bone of the lower jaw.

mandibula (man dib'u-lah). [B N A] The mandible

mandibular (man-dib'u-lar). Pertaining to the lower jaw-bone.

mandibulopharyngeal (man-dib"u-lo-far-in'ieal). Pertaining to the mandible and the pharynx.

Mandragora (man-drag'or-ah) [L]. A genus of solanaceous plants. M officina'lis, the true or oriental mandrake, has the general properties of belladonna, and was formerly used as a narcotic and sedative

mandragorin (man-drag'or-in). A poisonous alkaloid, C15H19NO2, from mandragora its properties are much like those of atropin

mandrake (man'drak). See Mandragora and podophyllum.

mandram (man'dram). A West Indian stomachic and stimulant mixture.

mandrel, mandril (man'drel, man'dril). A shaft in which a tool is held for rotation.

mandrin (man'drin). A stilet or guide for a catheter.

manducation (man-du-ka'shun) [L. manduca'tio]. The mastication or chewing of food.

manducatory (man du'ka-to-re). Pertaining to, or adapted to, chewing.

maneuver (man-oo'ver) Any dexterous proceeding. Deutsch's m., the maneuver of pushing up and rotating the fetus when in internal version it has become wedged at the internal strait. Jendrassik's m., a procedure for emphasizing the patellar reflex the patient hooks his hands together by the flexed fingers and pulls apart as hard as he can. Naegeli's m., pushing upward of the patient's head with one hand under the occiput and the other

under the jaw, for cure of nosebleed. **Prague m.**, a method in breech presentation of engaging the head by bringing down the breech and making traction on the head with the finger which is hooked over the nape of the neck.

manganese (man-gan-ēs') [L. man'ganum, mangane'sium]. 1. A metal resembling iron; symbol, Mn, atomic weight, 54 93; specific gravity, 7.2. 2. The trade name for manganous dioxid. m. albuminate, a salt in yellow-white scales used in chlorosis and anemia m. butyrate has been used by intramuscular injection in the treatment of dermatoses due to salvarsan m. citrate, Mn₁-(C₆H₅O₇)₂: used in making solution of iron peptonate and manganese m. dioxid, the black oxid of manganese, MnO₂ It is a strong oxidizing agent and is used in amehorrhea, anemia, and irritable stomach. Dose, 2-5 gr (0 133-0.333 gm.). m. hypophosphite, Mn[P(OH)₂]₂.H₂O. m. iodid. Dose of syrup, 10-30 min (0 666-2 c.c) m. peptonate, a preparation used for chlorosis and anemia m. saccharate, a brown powder used for chlorosis and anemia m. sulphate, a salt, MnSO₄ + 4H₂O used as a cholagogue and cathartic in nervous disorders, and locally as a counterirritant Dose, 2-5 gr (0 133-0 333 gm.)

manganum (man'gan-um). Latin for manganese. mangasol (man'gas-ol). Chlorphenolsulphonate of magnesium, a brown, antiseptic powder. Dose, 10-30 gr. (0.6-2 gm).

mange (mānj). A communicable disease of domestic animals, due to itch mites of the family Sarcoptide.

Mangifera (man-gif'er-ah). See mango.

mango (man'go). The fruit of Mangif'era in'dica.

The root and bark of this tree are used as an astringent and tonic for mucous membranes

mangosteen (man'gos-ten). The fruit of Garcin'ia mangosta'na its rind is astringent.

mangostin (man'gos-tin) A yellow, crystalline compound from mangosteen rind

mania (ma'ne-ah) [Gr. µavla madness]. A variety of insanity characterized by an expansive emo-tional state, such as wild excitement, hallucinations, delusions, and violent tendencies; insanity with evaltation, as distinguished from melancholia, or insanity with depression. acute hallucinatory m. See Ganser's synalcoholic under syndrome. m., drome. insanity due to the misuse of alcoholic stimulants. m. à po'tu, delirium tremens. Bell's m., acute See choromania. acute periencephalitis. dancing doubting m., doubting insee choromania. United In., doubting in., do mania as one of the concomitants of a hysteric condition. m. mi'tis, the mildest form of mania. periodic m., a condition in which maniacal attacks of varying duration follow one another at more or less regular intervals puerperal m., the insanity which sometimes follows childbirth. Ray's m., moral insanity. reasoning m., simple mania with active but perverted ideation. religious m., mania with abnormal or perverted religious impulses. m. secan'di, undue haste to perform unnecessary surgical operations. transitory m., severe frenzied mania, the attacks of which are of short duration.

maniac (ma'ne-ak) [L. mani'acus]. One who is affected with mania

maniacal (man-i'ak-al). Affected with mania.

manic (ma'nik). Pertaining to or affected with mania

manic-depressive insanity. See under insanity.

manicure (man'ik-ūr) [L. ma'nus hand + cu'ra care]. I A process or method of caring for and embellishing the hand. 2. One who professionally cares for the hands and nails.

manifold (man'if-old). See omasum.

manigraphy (ma-nig'raf-e) [Gr. μανία madness + γράφειν to write]. Description of insanity in its various forms.

manihot (man'e-hot). See cassava and Jatropha.

manikin (man'ik-in). A model of the body, with movable members and parts, used to illustrate anatomy.

Manip. Abbreviation for L. manip'ulus, a handful. maniphalanx (man-if-a'lanks) [L. ma'nus hand + phalanx]. A phalanx of the hand Cf. pedibhalanx.

manipulation (man-ip-u-la'shun) [L. manipula're to handle]. Skilful or dexterous treatment by the hand. conjoined m., manipulation with both hands

manipulus (man-ip'u-lus). Latin for handful.

Mann's sign [John Dixon Mann, English physician, 1840-1912]. See sign.

manna (man'ah) [L]. A sweet, concrete, aperient exudation containing mannite, from Fraxi'nus or'nus. It is a mild aperient and cholagogue. Dose, \(\frac{1}{2}\to 1\) fl oz. (15-30 c c.). Armenian m., a variety growing upon the oak, and containing glucose Australian m., a manna from various species of Eucalyp'tus, containing melitose. Briancon m., a manna from larch boughs, containing melezitose. fat-m., impure commercial manna in soft, brown masses. m. se'ri, lactose. tamarisk m., a variety from Tum'arux mannuf'era, a tamarisk of Arabia containing saccharose, glucose, and dextrin trehalam, a manna from Persia containing trehalose. This manna is from Alh'iops per'sica, and contains the cocoons of an insect, Lar'inus macula'tus. In Asia varieties of manna are obtained from Alha'gi camelo'rum, Astrag'alus adnes'cens, A florulen'tus, and other trees and shrubs.

Mannaberg's sign (man'ab-ergz) [Julius Mannaberg, physician in Vienna, born 1860]. See under sign.

mannan (man'an). A hard white insoluble polysaccharid which yields mannose on hydrolysis—It is found in the vegetable ivory nut, *Phytelephas* macrocarpa.

mannitan (man'it-an). A syrupy liquid, C₆H₁₂O₅, obtainable from mannite.

mannite (man'īt). Same as mannitol.

mannitol (man'it-ol). An unfermentable hexatomic alcohol, CH₂OH(CHOH)₄CH₂OH, the principal constituent of ordinary manna m. hexanitrate, C₆H₈(O NO₂)₈, an effective vasodilator.

mannitose (man'it-os). Same as levulose.

Mannkopf's sign (man'kopfs) [Emil Wilhelm Mannkopf, German physician, 1836-1918]. See under sign.

manno-hydrazone (man"o-hi'dra-zōn). The phenyl-hydrazone of mannose It consists of colorless plate-like crystals which melt at 195° C and may be used in identifying mannose.

mannose (man'ōs). A monosaccharid, CH₂OH - (CHOH)₄ CHO, an aldehyd sugar produced by the oxidation of mannitol It is very similar to glucose in its general properties and is conveniently prepared by hydrolyzing the vegetable ivory nut

mannosocellulose (man-o-so-sel'u-lōs). A variety of cellulose from coffee; it is changed by hydrolysis into mannose and glucose.

manol (ma'nol). A proprietary antiseptic syrup: used for whooping-cough.

manola (man-o'lah). A tonic preparation of codliver oil, coca, china, mano-nut, and phosphates.

manolymph glands (man'o-limf). See hemo-lymph glands, under gland.

manometer (man-om'et-er) [Gr. μανός thin + μέτρον measure]. An instrument for measuring the pressure or tension of liquids or gases, as the blood, etc. König's m., an apparatus by which

the notes of a musical instrument connected with it produce variations in the appearance of a flame, and thus indicate the character of the vibrations

manometric (man-o-met'rik). 1. Pertaining to or ascertained by the manometer. 2. Varying with the pressure, as, a manometric cicatrix.

manoscopy (man-os'ko-pe). The measurement of the density of gases.

Man. pr. Abbreviation for L. ma'ne pri'mo, early in the morning.

manquea (mahn-ka'ah). An infectious disease of young cattle in South America, caused by a minute oval bacillus. It is marked by the formation of abscesses upon the legs.

mansa (man'sah). The root or rhizome of *Hout-tuyn'ia califor'nica*: used as a tonic in dysentery and malaria; yerba mansa.

Manson's pyosis (man'sonz) [Sir Patrick Manson, British physician, 1844-1922]. See pyosis.

mantle (man'tl). The cortex of the cerebrum. See pallium

manual (man'u-al) [L. manua'lis; ma'nus hand].

Of or pertaining to the hand; performed by the hand or hands.

manubrium (man-u'bre-um) [L. "handle"]. I. The uppermost piece of the sternum (m. ster'ni). 2. The inferior process of the malleus (m. mal'lei).

manudynamometer (man"u-di-nam-om'et-er) [L. ma'nus hand + Gr. δύναμις force + μέτρον measure] An apparatus for measuring the force of the thrust of an instrument.

manus (ma'nus) [L. "the hand"]. The hand.
m. ca'va, a hand deformed by a deep hollowing of
the palm. m. exten'sa, backward deviation of
the hand. m. flax'a, forward deviation of the
hand. m. pla'na, flattening of the arch formed
normally by the proximal row of the carpal bones,
flat hand. m. superexten'sa, manus extensa
m. val'ga, club-hand marked by deflection
of the hand toward the ulnar side. m. va'ra,
club-hand marked by deflection of the hand to
the radial side.

manustupration (man"u-stu-pra'shun) [L. manustupra'tio]. Masturbation, or self-pollution.

manyplies (men'ip-liz) See omasum

Manz's glands (manz) [Wilhelm Manz, German ophthalmologist, 1833-1911] See under gland.

manzanilla (man-zah-nil'ah) [Sp.]. A variety or brand of sherry wine.

manzanita (man-zah-ne'ta) [Sp., dim of manzana apple] A small shrub or tree of the genus Arcto-staphylos, found in the western part of the United States.

M. A. O. Abbreviation for Master of Obstetric Art.

maqui (mah'kwē). A liliaceous shrub of South
America its berries afford an antifebrile wine.

Maragliano's serum (mah-ral-yan'ōz) [D. Maragliano, Italian physician, born 1849]. See under serum.

Maranon's sign (mar-ohn'yonz) [Gregorio Maranon, contemporary Spanish physician] See under sign.

Maranta (mah-ran'tah) L. after B. Maranta]. A genus of tropical herbs. the roots of several species afford arrowroot.

marantic (mah-ran'tik) [Gr. μαραίνειν to waste]. Pertaining to or of the nature of marasmus

maraschino (mar-as-ke'no) [Ital]. A liqueur prepared in Italy and Dalmatia from cherries.

marasmatic, marasmic (mar-az-mat'ik, mar-az'-mik). Affected with or of the nature of marasmus.

marasmoid (mar-az'moid) [Gr. μαρασμός a wasting + είδος form]. Resembling marasmus.

marasmus (mar-az/mus) [Gr. μαρασμός a wasting]. Progressive wasting and emaciation, especially such a wasting in infants when there is no obvious or ascertainable cause. It is also called

infantile atrophy, m. infanti'lis, and m. lactan'-tium.

maratrik (mar-at'rik). A mixture of 1 cgm. of morphin hydrochlorate, 2 mgm. of neutral atropin sulphate, and 1 5 cgm. of sedasina gualdoni: used as a local and regional algesic.

marble (mar'bl) [L mar'mor]. Native crystalline calcium carbonate occurring as a rock. m. bones. See Albers-Schoenberg marble bones, under bone.

marbleization (mar-bel-iz-a'shun). The state of being veined like marble.

marc (mark) [Fr.]. The residue left after the pressing of grapes for wine or olives for their oil.

Marchand's adrenals (mar'shandz) [Felix Marchand, German pathologist, born 1846]. Accessory adrenals in the broad ligament.

Marchi's bundle, reaction, tract, etc. (markēz) [Vittorio Marchi, contemporary Italian physician]. See bundle, reaction, tract, etc.

marcid (mar'sid) [L. mar'cere to waste away]. Wasting away.

Marckwald's operation (mark'valts) [Max Marckwald, German surgeon, born 1844]. See operation.

marcov (mar'kov) [L. marcere to wither]. Marasmus

Maréchal's test (mar-a-shalz') [Louis Eugène Maréchal, contemporary French physician]. See under tests.

marennin (mar-en'in) A green pigment from the oysters of Marennes, in France; derived from the chlorophyl of a microorganism that infests them.

mareo (mar-a'o) [Sp.]. Sea-sickness. m. de la Cordillera, mountain sickness

mare's tail. See erigeron

maretin (mar-e'tin). A white, colorless, tasteless powder, methylated acetanilid or carbamic acid-metatolylhydrazid, CH₃ C₆H₄ (NH)₂ CO NH₂. It is used as an antipyretic. Dose, 2-7½ gr. (o 13-0 5 gm)

Marey's law (mar-ēz') [Étienne Jules Marey, French physiologist, 1830-1904]. See law.

Marfan's disease, method of puncture (marfahnz') [Bernard-Jean Antonin Marfan, pediatrist in Paris, born 1858]. See under disease and method.

margaric acid (mar-gar'ik). See acid.

margarin (mar'gar-in) [Gr. μάργαρον pearl]. 1. The (theoretic) trimargarate of propenyl. 2. An artificial butter made from natural fats, oils, and butter.

margavid (mar'gav-id). Pearl-like.

margarone (mar'gar-ōn). See palmitone.

Margar'opus annula'tus. A species of tick common in the southern United States, Africa, and South America. It transmits Piroplasma bigeminum, the cause of Texas fever in cattle.

margin (mar'jin). A bounding line; an edge. gingival m., the border of the gingiva surrounding, but unattached to, the necks of the teeth. gum m., the edge of the gums at the necks of the teeth.

marginal (mar'jin-al) [L. mar'ginalis; mar'go margin]. Pertaining to a margin or border.

margination (mar-jin-a'shun). Adhesion of leukocytes to the blood-vessel walls in the early stages of inflammation.

marginoplasty (mar-jin'o-plas-te) [L. mar'go margin + Gr. πλάσσειν to mold]. Surgical renewal of a border, as of the eyelid.

margo (mar'go) [L.]. An edge or border.

margosa oil (mar-go'sah). See under oil.

margosate (mar'go-sāt). A salt of margosic acid.
The margosates have antiprotozoal action and are used in syphilis.

margosic acid (mar-go'sik). See under acid.

mariahuana (mah-re-ah-wah'nah). An extremely poisonous weed found in Mexico, probably cannabis indica.

Marie's disease, sign (mar-ēz) [Pierre Marie, French physician, born 1853]. See under disease and sign.

marigold (mar'ig-old). See Anthemis, Calendula, Matricaria, Tagetes.

Marinesco's succulent hand (mar-in-is'kōz) [Georges Marinesco, Roumanian physician]. See under hand.

Mariotte's experiment, law, spot (mar-e-ots')
[Edme Mariotte, French physicist, 1620-1684].
See experiment, law, spot.

marisca (mar-is'kah), pl. maris'ca [L. maris'ca a pile].
A hemorrhoid

mariscal (mar-is'kal). Hemorrhoidal.

maritonucleus (mar"it-o-nu'kle-us) [L. mar"itus married + nucleus]. The nucleus of the ovum after the sperm-cell has entered it.

Marjolin's ulcer (mar-zho-lanz') [Jean Nicolas Marjolin, 1780-1850]. See under ulcer.

marjoram (mar'jo-ram). See Origanum.

markasol (mar'kas-ol). Bismuth borophenate, Bi₂O₃B(C₆H₅)(CO₃)₃ H₂O a white powder used as an antiseptic for wound-dressing.

markings, Fontana's (mar'kingz) The minute transverse folds seen on a divided nerve-trunk.

marmoration (mar-mo-ra'shun) [L. mar'mor marble]. Marbleization.

Marmo's method (mar'mōz) [Serafino Marmo, contemporary Italian obstetrician]. See under method.

Marmorek's serum (mar'mo-reks) [Alexander Marmorek, Austrian physician living in Paris, born 1865]. See under serum.

marmorekin (mar-mor'ek-in). Marmorek's antistreptococcus serum, antistreptococcin: a serum for use in erysipelas.

marmot (mar'mot). The tarbagan; a large furbearing rodent, Arctomys bobac; it is a natural reservoir for the plague which is transmitted by a flea, Ceratophyllus silantiew'i small m. See Spermophilus

Marriott's method (mar'e-ots) [Williams McKim Marriott, American physician, born 1885]. See under method.

Marris's atropin test (mar'is). See under tests.

marrol (mar'ol). A dietetic preparation of oxmarrow, malt extract, and calcium phosphate.

marrow (mar'o). The soft material that fills most of the cavities and cancelli of the bones. It is made up of a meshwork of connective tissue containing branching connective-tissue corpuscles, the meshes of the meshwork being filled with marrow-cells, which consist variously of fat-cells, large nucleated cells or myelocytes, and multinucleated giant-cells called myeloplaxes black m., a pigmented marrow seen in the melanosis of old horses. fat-m., yellow bone-marrow. red m., marrow of developing bone, of the ribs, vertebra, and many of the smaller bones. This variety of marrow is regarded as having an important hematopoietic function. spinal m., the spinal cord, or myelon. m. spoon, gouge for removing marrow from bones. yellow m., ordinary bone-marrow of the kind in which the fat-cells predominate.

Marrubium (mar-u'be-um) [L.]. See horehound. mars (marz) [L.]. An old name for iron.

Marsden's paste (marz'denz) [Alexander Marsden, London surgeon, 1832-1902]. See paste.

Marsdenia (mars-de'ne-ah). See condurango.

Marsh's disease (marsh-ez) [Sir Henry Marsh, Irish physician, 1790-1860]. Exophthalmic goiter.

Marsh's test (marshez) [James Marsh, English chemist, 1789-1846]. See under tests.

Marshall's fold (mar'shalz) [John Marshall, English anatomist, 1818-1891]. See under fold, vestigial.

Marshall Hall's disease, facies, etc. [English physician, 1790-1857]. See disease, facies, etc.

marsh-fever (marsh-fe'ver). See fever.

marsh-gas (marsh-gas'). See methane.

marshmallow (marsh'mal-o). See Althaa.

marsupial (mar-su'pe-al) [L. marsu'pium a pouch].

One of a class of mammals characterized by the possession of an abdominal pouch in which the young are carried for some time after birth.

marsupialization (mar-su"pe-al-iz-a'shun) [L. marsu'pium pouch]. The operation of stitching the edges of an ovarian tumor to the edges of the abdominal wound so as to leave a pouch. The sac suppurates, fills with granulations, and shrinks.

marsupia patella'ria (mar-su'pe-ah). The alar ligaments of the knee.

marsyle (mar'sil). A preparation of organic arsenic and iron, being the cacodylate of iron. Called also iron cacodylate.

martial (mar'shal) [L. martia'lis; mars iron]. Containing iron ferruginous.

Martin's bandage, disease, operation, etc. (mar'tinz) [Henry Austin Martin, American surgeon, 1824-1884]. See under bandage, disease, and operation.

Martin's tube (mar'tinz) [August Martin, gynecologist in Berlin, born 1847]. See tube

Martinotti's cell, vaccine (mar-tin-ot'ēz) [Giovanni Martinotti, Professor of Pathologic Anatomy, University of Bologna] See under cell and vaccine.

martol (mar'tol). A semifluid preparation from the shells of cacao, containing theobromin, phosphates, iron tannate, etc.

martonite (mar'to-nit) A war gas mixture composed of 80 per cent of bromo-acetone and 20 per cent. of chloro-acetone

Maruta (mah-ru'tah) [L.] A genus of composite-flowered herbs M. cot'ula, mayweed or dog-fennel, is used like chamomile.

maschaladenitis (mas-kal-ad-en-i'tis) [Gr μασχάλη armpit + ἀδήν gland + -ιτις inflammation]. Inflammation of the glands of the axilla.

maschalephidrosis (mas"kal-ef-id-ro'sis) [Gr. μασχάλη armpit + ἐφίδρωσιs excessive sweating]. Excessive sweating in the armpits.

maschaliatry (mas-kal-e-at're) [Gr. μασχάλη armpit + lατρεία treatment]. Medication by inunction into the armpit.

masculation (mas-ku-la'shun). The development of male characteristics

masculine (mas'ku-lin) [L. masculi'nus]. Pertaining to the male sex; male.

masculinity (mas-ku-lin'it-e) The possession of normal masculine qualities.

masculonucleus (mas"ku-lo-nu'kle-us). See arsenoblast.

Masini's sign (mah-ze'nēz) [contemporary Italian physician]. See sign.

mask (mask) [Fr. masque]. An appliance for shading, protecting, or medicating the face. ecchymotic m., traumatic asphyxia. See asphyxia. Esmarch's m., a frame of metal over which strips of gauze are stretched. used for administering ether or chloroform by inhalation. Fontana's m., a transverse fold occurring on a nerve trunk at the point where it has been cut. Hutchinson's m., a sensation as if the skin of the face were compressed by a mask; often a symptom of tabes dorsalis. Kuhn's m., a mask to be worn over the nose and mouth, which, by obstructing the respiration, produces artificial hyperemia of the pulmonary tissues. It is used in treating pulmonary tuberculosis. luetic m., a brownish, blotchy pigmentation over the forehead, temples, and cheeks,

sometimes seen in persons with tertiary syphilis. **Mikulicz's m.**, a mask for covering the surgeon's nose and mouth while operating It consists of a wire frame covered with gauze. **tropical m.**, chloasma bronzinum. **Tuttle's m.**, a wire frame covered with gauze to go over the face of a surgeon while operating. **uterine m.**, chloasma occurring during pregnancy or uterine disease.

masked (maskt) [L. larva'tus] Hidden or concealed; not obvious.

masochism (mas'o-kizm) [Leopold von Sacher-Masoch, an Austrian novelist]. Sexual perversion with enjoyment of being cruelly treated.

masochist (mas'o-kist). One who is given to masochism.

Mas. pil. Abbreviation for L. mas'sa pilula'rum, pill-mass.

masrium (mas're-um). A very rare metallic element; symbol, Ms, obsolete.

18.88 (mas) [L. mas'sa] 1. A body made up of cohering particles. 2. A cohesive mixture suitmass (mas) [L. mas'sa] 3 That charable for being made up into pills acteristic of matter which gives it inertia mass of a hypothetic atom of atomic weight 1.000 (a dalton) is 1.618×10^{-24} gm., and the mass of any other atom may be found by multiplying this number by the atomic weight of the atom. achromatic m., the non-staining portion of the karyokinetic figure **blue m.** (mas'sa hydrar'gyri), metallic mercury rubbed up with honey of rose, etc, for making blue pill **electronic m.**, the mass of a negative electron when moving at moderate velocity It is 8 999 × 10⁻²⁸ gm filar m. See spongioplasm and retuular structure, under structure intermediate m. See massa intermedia pill m., pilular m., a drug mass of the proper consistency for being made into pills. Priestley's m., a green or brownish sub-stance sometimes seen upon the canine and incisor teeth, chiefly in quite young persons; it is caused by a chromogenic microorganism. Schultze's granular m's, granular masses, consisting largely of broken-down blood-plaques, formed in the blood **Stent's m.**, a compound used in making dental impressions and molds for surgical work. tigroid m's. Same as Nissl's bodies. See under body. Vallet's m., mass of ferrous carbonate (mas'sa fer'ri carbona'tis) in pills, 3-5 gr (0.3-0.333 gm). ventrolateral m., that portion of the primitive lateral mass of the embryo from which are developed the abdominal, thoracic, and anterior cervical muscles.

massa (mas'ah). Latin for mass (q v). m. car'nea jaco'bi syl'vii, the accessorius muscle of the foot. m. copa'ibæ, copaiba, 94 parts, solidified by the addition of 6 parts of magnesia; solidified copaiba m. fer'ri carbona'tis (U.S. P), Vallet's mass containing 35 per cent. of ferrous carbonate, FeCO₂. m. hydrar'gyri (U.S. P), blue mass, containing 33 per cent. of finely divided mercury. m. innomina'ta. See paradidymis. m. interme'dia, a band of gray matter connecting the medial surfaces of the two thalami across the third ventricle Called also intermediate mass, commissura mollis, soft commissure, and middle commissure.

massage (mas-azh') [Fr.; Gr. μάσσειν to knead]. The systematic therapeutic friction, stroking, and kneading of the body. auditory m., massage of the drum membrane. Cederschiöld's m., massage by making rhythmic pressure over the parts. douche-m., massage combined with the application of a douche electrovibratory m., massage by means of an electric vibrator. hydropneumatic m., massage by means of air forced through a tube at the end of which is a chamber containing water, the water chamber being applied to the part to be massaged. tremolo m., a variety of mechanic massage. vaporm.. treatment of a cavity by a medicated and

nebulized vapor under interrupted pressure. **Vibratory m.**, massage by rapidly repeated light percussion with a vibrating hammer or sound.

Masselon's spectacles (mas-el-awz') [Michel Julien Masselon, French physician, born 1844]. See spectacles.

massering, masseuring (mas-e'ring). Performing massage: used in the performance of massage.

Masset's test (mas-āz') [Alfred Auguste Masset, French physician, born 1870]. See under tests.

masseter (mas-e'ter) [Gr. μασητήρ chewer]. See muscles, table of.

masseteric (mas-et-er'ik). Pertaining to the masseter muscle.

masseur (mahs-ser') [Fr]. I. A man who performs massage. 2. An instrument for performing massage.

masseuse (mahs-uhz') [Fr.]. A woman who performs massage.

massicot (mas'ık-ot). Lead monoxid, PbO.

massogran (mas'o-gran). A proprietary milk-curdling compound in granular form.

massol (mas'ol). A pill excipient made of gelatin, 40 gr, glycerin, 2 fl dr, powdered sugar, 3 dr; and distilled water to make 1 oz

Massol's bacillus (mas-olz') [Léon Massol, Swiss bacteriologist, 1837-1909]. Bacullus bulgarus.

massolin (mas'o-lin) [Léon Massol, bacteriologist at Geneva, 1837-1900]. A pure culture of Bacillus bulgaricus in a medium adapted for introduction into the nose, throat, and other body cavities: used in chronic inflammatory conditions of the nose, throat, and sinuses.

massor (mas'or). Same as masseur

massotherapy (mas-o-ther'ap-e) [Gr. μάσσειν to knead + therapy]. The treatment of disease by massage.

massoy (mas-oi') The bark of Massov'a aromat'ica, of Japan used in diarrhea, colic, and spasms.

mastadenitis (mas"tad-en-i'tis) [Gr μαστός breast + ἀδήν gland + -ιτις inflammation]. Inflammation of the mammary gland.

mastadenoma (mas"tad-en-o'mah) [Gr. $\mu a \sigma \tau \delta s$ breast $+ \delta \delta \dot{\eta} \nu$ gland $+ -\omega \mu a$ tumor]. Tumor of the breast.

mastalgia (mas-tal'je-ah) [Gr. μαστός breast + άλγος pain]. Pain in the mammary gland.

mastatrophia, mastatrophy (mas-tat-ro'fe-ah, mas-tat'ro-fe) [Gr $\mu\alpha\sigma\tau\dot{o}s$ breast + atrophy]. Atrophy of the mammary gland.

mastauxe (mas-tawk'se) [Gr. $\mu a \sigma \tau \delta s$ breast $+ \alpha b \xi \eta$ increase]. Enlargement of the breast.

mast-cell (mast'sel) [Ger. "food-cell"] See cell.

mastectomy (mas-tek'to-me) [Gr μαστός breast + ἐκτομή excision]. Excision of the breast, mammectomy.

masthelcosis (mas-thel-ko'sis) [Gr. μαστός breast + ξλκωσις ulceration]. Ulceration of the breast or mammary gland.

mastic (mas'tik) [L. mas'tiche; Gr. μαστίχη]. A resin obtained from Pista'cia lentis'cus, a tree of the Mediterranean region. It is styptic, stimulant, and stomachic, and is used in microscopy and in dentistry. m. test. See under tests

mastication (mas-tik-a'shun) [L. mastica're to chew]. The chewing of food.

masticatory (mas'tik-a-to-re). r. Subserving or pertaining to mastication; affecting the muscles of mastication. 2. A remedy to be chewed but not swallowed.

mastiche (mas'tik-e). See mastic.

Mastigophora (mas-tig-of'o-rah) [Gr. μάστιξ whip + φέρειν to bear]. A class of protozoan organisms comprising those which have from one to four flagella. It has two important orders, the Flagellata and the Choano-flagellata. Several species are occasionally found as parasites within the hollow organs of the body.

mastigote (mas'tig-ōt). A member of the class Mastigophora.

mastisol (mas'tis-ol). A proprietary antiseptic varnish for surgical use.

mastitis (mas-ti'tis) [Gr. µaoros breast + -iris inflammation]. Inflammation of the breast; particularly inflammation of the mammary gland. m.
carcino'sa. See carcinoma mastitoides. interstitial m., inflammation of the stroma of the
mammary gland. m. neonato'rum, inflammation of the breasts of new-born Infants. parenchymatous m., inflammation of the glandular
substance of the breast. phlegmonous m.,
abscess of the breast. retromammary m.,
submammary m., paramastitis. stagnation
m., a local engorgement affecting one or more
lobules of the breast and forming a painful lump
on the organ. It occurs during early lactation.
Called also caked breast.

mastocarcinoma (mas"to-kar-sin-o'mah)[Gr. μαστόs breast + carcinoma]. Carcinoma of the breast. mastoccipital (mas-tok-sip'et-al). Same as

masto-occipital.

mastochondroma, mastochondrosis (mas"tokon-dro'mah, mas"to-kon-dro'sis) [Gr. μαστόs breast + chondroma]. A chondroma, or cartilaginous tumor, of the breast.

mastodynia (mas-to-din'e-ah) [Gr. μαστός breast + δδύνη pain]. Pain in the breast.

mastoid (mas'toid) [Gr. μαστός breast + είδος form]. 1. Nipple-shaped. 2. The mastoid process of the temporal bone, sometimes called the mastoid bone 3. Pertaining to the mastoid process.

mastoidal (mas-toi'dal). Pertaining to the mastoid process of the temporal bone.

mastoidale (mas-toi-da'le). The lowest point of the mastoid process

mastoidalgia (mas-toi-dal'je-ah) [mastoid + Gr. άλγος pain] Pain in the mastoid region.

mastoidea (mas-toi'de-ah). The mastoid portion of the temporal bone.

mastoidectomy (mas-toi-dek'to-me) [mastoid + Gr. ἐκτομή excision]. Excision of the mastoid cells or antrum of the mastoid bone; total mastoid operation.

mastoideocentesis (mas-toi"de-o-sen-te'sis) [mas-toid + Gr. κέντησις puncture]. Paracentesis of the mastoid cells.

mastoideum (mas-toi'de-um). The mastoid portion of the temporal bone.

mastoiditis (mas-toid-i'tis). Inflammation of the mastoid antrum and cells. Bezold's m., a form in which the pus has escaped into the digastric groove and the head of the sternomastoid muscle. m. exter'na, inflammation of the periosteum of the mastoid process. m. inter'na, inflammation of the cells of the mastoid. sclerosing m., mastoiditis attended with hardening and condensation of the bone.

mastoidotomy (mas-toid-ot'o-me) [mastoid + Gr. τέμνειν to cut]. Surgical opening of the antrum or cells of the mastoid bone.

mastologist (mas-tol'o-jist). An expert in mas-

mastology (mas-tol'o-je) [Gr. μαστός breast + λόγος treatise]. The science or study of the mammary apparatus.

mastomenia (mas-to-me'ne-ah) [Gr. μαστός breast + μῆνες menses]. Vicarious menstruation from the breast.

mastoncus (mas-tong'kus) [Gr. μαστός breast + δγκος tumor]. A tumor of the breast or mammary gland.

masto-occipital (mas"to-ok-sip'it-al). Pertaining to the mastoid process and the occipital bone.

mastoparietal (mas"to-par-i'et-al) [mastoid + parietal]. Pertaining to the mastoid process and the parietal bone.

A member of the class mastopathy (mas-top'ath-e) [Gr. $\mu a \sigma \tau \delta s$ breast + $\pi \delta \theta \sigma s$ disease]. Disease of the mammary gland.

mastopexy (mas'to-peks-e) [Gr. μαστός breast + πῆξις fixation]. The surgical fixation of a pendulous mamma.

mastoplastia (mas-to-plas'te-ah) [Gr. μαστός breast + πλάσσειν to form]. Hyperplasia of breast tissue.

mastorrhagia (mas-to-ra'je-ah) [Gr. μαστός breast + ἡηγνύναι to burst forth]. Sudden hemorrhage from the mammary gland.

mastoscirrhus (mas-to-skir'us) [Gr. μαστός breast + σκίρρος hardness]. Hardening, or scirrhus, of the mammary gland.

mastosquamous (mas-to-skwa'mus). Pertaining to or affecting the mastoid and squama.

mastotomy (mas-tot'o-me) [Gr. μαστός breast + τέμνειν to cut]. Surgical incision of a mamma.

masturbation (mas-tur-ba'shun) [L. ma'nus hand + slupra're to rape]. Self-pollution; the causation of an orgasm by the hand or by any mechanical friction of the genitals.

masurium (mas-u're-um). A chemical element of atomic number 43 discovered in 1926 in platinum ores and certain other minerals.

Matas's band, operation (mat'as) [Rudolph Matas, surgeon in New Orleans, born 1860]. See band and endo-aneurysmorrhaphy.

mate (mah'ta) [Spanish American]. The dried leaves of I'lex paraguayen'sis. They are used like tea, and are diuretic, diaphoretic, and nutritive.

materia medica (mat-e're-ah med'ik-ah) [L. "medical material"]. That branch of medical study which deals with drugs, their sources, preparations, and uses.

Mate'ria Med'ica Pu'ra. Hahnemann's work giving the result of his provings of sixty-one drugs. It forms the basis of the homeopathic materia medica.

materies morbi (mat-e're-ēz mor'bi) [L. "substance of disease"]. The substance, virus, or principle which causes a disease. m. pec'cans, the offending substance.

materna (mat-er'nah). A proprietary phosphorus preparation used in the treatment of tuberculosis.

maternal (mat-er'nal) [L. mater'nus; ma'ter mother].

Pertaining to the mother.

maternity (mat-er'nit-e) [L. ma'ter mother]. 1. Motherhood. 2. A lying-in hospital.

maternology (mat-er-nol'o-je) [L. ma'ter + Gr. λόγοs treatise]. The study of scientific mother-hood; the art of motherhood and child rearing.

Mathieu's disease, serum (mat-e-ūz') [Albert Mathieu, physician in Paris, 1855-1917]. See disease and serum.

matico (mah-te'ko) [Sp.; a nickname for Matthew]. The leaves of Ps'per angustifo'lium, a shrub of South and Central America. They are stimulant and hemostatic, and are used in diarrhea, leukorrhea, cystitis, and internal hemorrhages. Dose, in powder, 30-60 gr. (2-4 gm.); of fluidextract, 30-60 min. (2-4 c.c.); of tincture, \frac{1}{2}-2 fl.dr. (2-8 c.c.).

matlazahuatl (mat-lahz-ah-what'l). A form of typhus endemic in Mexico.

matrass (mat'ras). A glass vessel with a long neck used for treating dry substances in chemical operations.

matrical (mat'rik-al). Of or relating to a matrix.

Matricaria (mat-rik-a're-ah) [L.]. A genus of composite-flowered plants. The flowering tops of M. chamomil'la, or German chamomile, are mildly tonic and febrifuge, and are used like the English chamomile. Dose of fluidextract, 8-30 min. (0.533-2 c.c.).

matricial (ma-trish'al). Matrical.

matriclinous (mat-rik'lin-us). See matroclinous.

matriculation (mat-rik-u-la'shun) [L. matric'ula register]. Enrolment as a student in a college.

matridin (ma'trid-in). A crystalline alkaloid, C₁₆-H₂₆N, from Sophora angustifolia.

matrilineal (ma-tri-lin'e-al) [L. ma'ter mother + lin'ea line]. Descended through the female line.

matrin (ma'trin). A crystalline alkaloid, C₁₅H₂₄-N₂O, from Sophora angustifolia.

matrix (ma'triks) [L.]. 1. The uterus, or womb.
 The groundwork in which anything is cast; a socket, as of a tooth; the intercellular substance. hair-m., the epidermic root of the hairfollicle. nail-m., the proximal end of the nailbed.

matrixitis (ma-triks-i'tis). Inflammation of the nail-matrix.

matroclinous (mat-ro-kli'nus) [Gr. μάτηρ mother + κλίνειν to incline]. Possessing characters inherited from the mother.

matter (mat'er). 1. Substance; anything that occupies space. 2. Pus. gray m., gray nervous tissue composed chiefly of nerve-cells and myelinated nerve-fibers. Called also substantia grisea. white m., white nervous tissue composed chiefly of myelinated nerve-fibers; called also substantia alba.

mattoid (mat'oid) [L. mat'tus drunken]. A person who, though perfectly sane, is mentally unbalanced in some way.

mattress-suture (mat'res). See under suture.

matura (mat-u'rah). An East Indian plant, Callicar'pa inca'na: used in menorrhagia.

maturation (mat-u-ra'shun) [L. matura'tio; maturrus ripe]. 1. The stage or process of becoming mature. In biology, a process of cell division during which the number of chromosomes in the germ cells is reduced to one-half the number characteristic of the species 2. The formation of pus.

mature (mat-ūr') [L. matu'rus]. Ripe; fully developed.

maturin (mat-u'rin) A compound of phlorizin (o ∞2 gm) and beta-eucain (o ∞1 gm) employed for the glycosuria test for early diagnosis of pregnancy.

Matut. Abbreviation for L. matuti'nus, in the morning

matutinal (mat-u'tin-al) [L. matutina'lis]. Pertaining to or occurring in the morning.

matzol (mat'zol). A proprietary preparation of matzoon and cod-liver oil.

matzoon (mat-zūn') [Armenian]. A drink, originally prepared in Asia Minor, from fermented milk used like koumiss

Mauchart's ligament (mow'sharts) [Burkhard David Mauchart, German anatomist, 1696-1751]. See ligament

Maul-und-Klauenseuche (mowl-oont-klow'ensoo'ke). Foot-and-mouth disease.

Maumené's test (mōm'nāz') [Edme Jules Maumené, French chemist, born 1818]. See under tests.

Maunoir's hydrocele (mo'nwarz) [Jean Pierre Maunoir, French surgeon, 1768-1861]. Cervical hydrocele.

Maurer's dots (maw'rerz). See under dot.

Mauriceau's lance (mo'ris-ōz) [François Mauriceau, French obstetrician, 1637-1709]. See under lance.

Mauthner's sheath (mouth'nerz) [Ludwig Mauthner, Austrian ophthalmologist, 1840-1894]. See under sheath

mauvein (mo've-in). Anilin purple, a violet dye, $C_{7}H_{24}N_{4}$. It is used as an indicator and has a PH range of —o.1 to 2.9, being yellow at —o.1 and crimson at 2.9.

mavi (mah've) [Puerto Rico; from Carib mabi potato]. An intoxicating West Indian drink.

maxilla (maks-il'ah), pl. maxil'la [L.]. A jaw-bone;

especially the upper (superior maxilla). **inferior** m., the lower jaw-bone, or mandible.

maxillary (mak'sil-a-re) [L. maxilla'ris]. Pertaining to a jaw or to a jaw-bone.

maxillitis (mak-sil-i'tis). Inflammation of the maxillary gland or of the jaw.

maxillodental (mak-sil''o-den'tal). Pertaining to the jaws and teeth.

maxillofacial (mak-sil-o-fa'shal). Pertaining to the jaws and the face.

maxillojugal (mak-sil"o-ju'gal). Pertaining to the maxilla and the cheek.

maxillolabial (mak-sil"o-la'be-al). Pertaining to the maxilla and the labium.

maxillomandibular (mak-sil"o-man-dib'u-lar). Pertaining to the maxilla and the mandible.

maxillopalatine (mak-sil"o-pal'at-In). Pertaining to the maxilla and the palate bone.

maxillopharyngeal (mak-sil"o-far-in'je-al). Pertaining to the maxilla and the pharynx

maxilloturbinal (mak-sil"o-tur'bin-al). The inferior turbinated bone.

maximal (mak'sim-al) The greatest possible, allowable, or appreciable; the reverse of minimal and of limited

maximum (mak'sim-um) [L "greatest"], 1. The greatest possible or actual effect or quantity. 2. The acme of a disease or process. 3. Largest; utmost. 4. Pirquet's term for the maximum amount of food which the organism can digest.

May-apple (ma'ap-l) See Podophyllum.

Maydl's operation (ma'delz) [Karl Maydl, Bohemian surgeon]. See under operation.

mayer (ma'er). A unit of heat capacity, it is the capacity that is warmed one degree centigrade by one joule. It is abbreviated my.

Mayer's fluid, reagent, test (ma'erz) [Ferdinand F. Mayer, American pharmaceutical chemist of the 19th century]. See fluid, reagent, tests.

mayhem (ma'hem). See maim.

mayidismus (ma-id-iz'mus). Same as pellagra.

mayo (mah'yo). A catarrhal diarrhea of Caraccas.mayol (ma'yol). May's meat-preservative, a proprietary mixture of antiseptics.

Mayo's operation, sign (ma'ōz) [William James (born 1861) and Charles Horace (born 1865) Mayo, American surgeons]. See under operation and sign.

Mayo-Robson's point, position (ma"o-rōb'-sonz) [A W Mayo-Robson, contemporary surgeon in London] See point and position.

maypop (ma'pop) See Passiflora.

mayweed (ma'wēd). See Maruta.

maza (maz'ah) [Gr. μᾶζα a barley cake]. The placenta.

mazamorra (maz-am-o'rah). Ground-itch. See under itch.

mazic (ma'zik) Relating to the placenta, placental. mazocacothesis (ma''zo-kak-oth'es-is) [Gr. μᾶζα placenta + κακόs bad + θέσις placement]. Malposition of the placenta.

mazodynia (ma-zo-din'e-ah) [Gr. μαζός breast + δδύνη pain]. Pain in the breast.

mazologist (ma-zol'o-jist). Same as mastologist.

mazology (ma-zol'o-je) [Gr. μαζός breast + λόγος word]. Same as mastology.

mazolysis (ma-zol'is-is) [Gr. $\mu \hat{a} \zeta a$ placenta $+ \lambda b \sigma \iota s$ loosening]. Detachment of the placenta.

mazomorria (ma-zo-mor'e-ah). Ground-itch. See under itch.

mazopathia, mazopathy (maz-o-path'e-ah, mazop'ath-e) [Gr $\mu \hat{a} \zeta a$ placenta $+ \pi \hat{a} \theta o s$ disease]. Any disease of the placenta.

mazopexy (ma'zo-peks-e) [Gr. μαζός breast + πηξις fixation]. Surgical fixation of a pendulous mamma.

mazoplasia (ma-zo-pla'se-ah) [Gr. μαζος breast + πλάσσειν to form] Hyperplasia of breast tissue.

Mazzoni's corpuscle (mad-zo'nēz) [Vittorio Mazzoni, contemporary Italian physician]. See corpuscle.

M. B. Abbreviation for Medici'næ Baccalau'reus,
Bachelor of Medicine.

mbori. A disease of camels, probably a mild form of surra.

mbundu (em-boon'doo). A West African ordeal poison.

M. C. Abbreviation for Magis'ter Chirur'giæ, Master of Surgery; also for medical corps.

McArthur's method [Louis Linn McArthur Chicago surgeon, born 1858]. See under method.

McBurney's incision, point (mak-ber'nēz) [Charles McBurney, New York surgeon, 1845—1913]. See incision and point.

McCarthy's reflex. [David J. McCarthy, Philadelphia neurologist]. See under reflex.

McClintock's sign [Alfred Henry McClintock, Irish physician, 1822-1881]. See under sign.

McDonald's solution (mak-don'ald.) [Ellice McDonald, New York gynecologist, born 1876]. See solution.

McDowell's operation (mak-dow'elz) [Ephraim McDowell, American surgeon, 1771-1830]. See operation.

McGraw's ligature (mak-grawz') [Theodore A. McGraw, surgeon in Detroit, Michigan] See under ligature.

McKee's line. See under line.

McLean's formula (mak-lānz') [Franklin C. Mc-Lean, American physician, born 1888]. See formula.

M. D. Abbreviation for Medici'næ Doc'tor, Doctor of Medicine

Md. Symbol for molybdenum.

M. D. S. Abbreviation for Master of Dental Surgery.

Me. A chemic symbol for methyl.

meable (me'ab-l) [L meab'ulis]. Susceptible of being passed through.

meadow-saffron (med'o-). See Colchicum.

mean (mēn) An average; a numerical value intermediate between two extremes. In statistical methods, the abscissa of the center of gravity of the variables or of the frequency polygon.

measles (me'zelz) [L morbil'li] 1. A contagious eruptive fever with coryza and catarrhal symptoms. The period of incubation is about weeks, and the disease begins with fever, chills, conjunctivitis, severe coryza, and frequently bronchitis, causing cough and frontal headache. The eruption appears on the fourth day on the forehead, cheeks, and back of the neck, spreading thence over the body. It consists of small, darkpink macules in crescentic groups, which frequently become confluent. After two or three days the eruption begins to fade, and is followed in one or two weeks by desquamation. symptoms increase with the eruption and decrease with the disappearance of it, convalescence beginning in the second week. The disease is extremely contagious and affects chiefly the young, one attack usually conferring immunity. Measles is prone to lead to complications, the chief of which are pneumonia, bronchitis, phthisis, and otitis media. See exanthemata, table of. 2. Cysticercal disease of domestic animals bastard m., rubella. black m., a severe form in which the eruption is very dark and petechial. confluent m., measles in which the lesions of the eruption coalesce. German m. See rubella. hemorrhagic m. Same as black m. pork m., a condition in which pork is infected with the Cysticer cus cellulo'sæ.

measly (me'zlē). Containing cysticerci. meatal (me-a'tal). Pertaining to a meatus. meatome (me'at-om). Same as meatotome.

meatometer (me-at-om'et-er) [L. mea'tus passage + me'trum measure]. An instrument for measuring a meatus.

meatorrhaphy (me-at-or'af-e) [L. mea'tus meatus + Gr. βαφή suture]. Suture of the cut end of the urethra to the glans penis after incision for enlarging the meatus.

meatoscope (me-at'o-skōp) [L. mea'tus meatus + Gr. σκοπείν to examine]. A speculum for examining the urinary meatus.

meatoscopy (me-at-os'ko-pe). The inspection of any meatus, especially the urinary meatus or the vesical orifice of a ureter ureteral m., cystoscopic inspection of the vesical orifice of a ureter.

meatotome (me-at'o-tōm). An instrument for performing meatotomy.

meatotomy (me-at-ot'o-me) [L. mea'tus passage + Gr. τέμνειν to cut]. The cutting of the urinary meatus in order to enlarge it.

meatox (mēt'oks) A proprietary preparation of beef in powder form.

meatus (me-a'tus), pl mea'tus [L for "passage"]. A passage or opening. m. acus'ticus [audito'-rius] exter'nus [B N A], the passage through the temporal bone from the base of the zygomatic process to the cavity of the tympanum; the external auditory canal. m. acus'ticus exter'nus cartilagin'eus, the cartilaginous portion of the preceding m. acus'ticus [audito'rius] inter'nus [B N A], the passage in the petrous part of the temporal bone for the facial and auditory nerves and vessels m. audito'rius, the passage of the ear in two parts (internal and external meatus) fish-mouth m., a red, swollen. and everted condition of the urinary meatus seen in the first stage of acute gonorrhea. m. na'si commu'nis, the anterior space on either side of the nasal septum into which the three meatus open. m. na'si infe'rior, the inferior meatus of of the nose. m. na'si me'dius, the middle meatus of the nose. m. na'si supe'rior, the superior meatus of the nose. m. nasopharyn'geus [B N A], that part of the nasal cavity that opens into the nasopharynx. m. of the nose, the three passages of the nostril (inferior, middle, and superior meatus). m.-tube, a fetal structure containing the tympanic bone, the tympanic bulla, and the cartilage lining the custachian tube. urina'rius, the orificial part of the urethra (especially used of the male urethra)

Mecca balsam (mek'ah). See balsam.

mechanic, mechanical (mek-an'ik, mek-an'ik-al)
[Gr. μηχανικόs] 1. Pertaining to or accomplished
by mechanic or physical forces. 2. Performed
by means of some artificial mechanism.

mechanicoreceptor (mek-an"ik-o-re-sep'tor). A receptor which is excited by mechanical pressures; such as those for sound, touch, and for the effects of muscular contractions

mechanicotherapeutics, mechanicotherapy (mek-an''ik-o-ther-ap-u'tiks, mek-an''ik-o-ther'ap-e). Same as mechanotherapy

mechanics (mek-an'iks). The science of matter and force; statics and dynamics. animal m., that branch of physiology which studies the laws of motion in animal bodies.

mechanism (mek'an-izm) [Gr. μηχανή machine].

1. A machine or machine-like structure. 2. The manner of combination of parts which subserve a common function 3. The theory that the phenomena of life are based on the same physical and chemical laws which operate in the inorganic world; opposed to vitalism. oculogyric m., the series of nerve centers concerned in movements of the eye, outgoing m., the apparatus by which words are uttered or ideas expressed, as in speech, writing, or in the use of expressive gestures. somatic m., the structures and organs through which the somatic activities of the body are performed.

splanelinic m., the structures and organs through which the visceral activities of the body are performed.

mechanist (mek'an-ist). One who believes that all phenomena relating to life are based on physical and chemical properties only.

mechanogram (mek'an-o-gram) [Gr. mechanism + Gr. γράμμα mark]. An instrumental tracing representing the mechanical movements of the muscles of some organ, as the stomach or heart.

mechanogymnastics (mek"an-o-jim-nas'tiks).

Gymnastics carried out by means of mechanic apparatus, such as the Zander apparatus.

mechanology (mek-an-ol'o-je) [Gr μηχανή machine + λόγος treatise]. The science of mechanics.

mechanotherapy (mek"an-o-ther'ap-e) [Gr. μηχανή machine + θεραπεία treatment]. Treatment of disease by mechanic means, especially by massage and Swedish movements.

meche (māsh) [Fr.]. A surgical tent.

mecism (me'sizm) [Gr. μῆκος length]. Abnormal lengthening of a part.

mecistocephalic, mecistocephalous (me-sis"-to-sef-al'ik, me-sis-to-sef'al-us) [Gr. μήκιστος tallest $+ \kappa \epsilon \varphi a \lambda \dot{\eta}$ head]. Having a cephalic index less than 71.

Mecistocirrhus (me-sis-to-sir'us). A genus of nematode parasites found in the fourth stomach of ruminants.

Meckel's band, cavity, diverticulum, ganglion (mek'elz) [Johann Friedrich Meckel, German anatomist, 1714-1777]. See band, cavity, diverticulum, ganglion

meckelectomy (mek-el-ek'to-me) [Meckel's ganglion + Gr. εκτομή excision]. Surgical removal of Meckel's ganglion.

mecocephalic (me-ko-sef-al'ik) [Gr. μῆκος length + κεφαλή head]. Same as dolichocephalic.

mecometer (me-kom'et-er) [Gr. μῆκος length + μέτρον measure]. An instrument for measuring the length of a fetus or an infant.

meconarcein (mek-o-nar'se-in) [Gr. μήκων poppy + νάρκη stupor] A preparation of the active alkaloids of opium other than morphin sedative and narcotic. Dose, $\frac{1}{6}$ - $\frac{1}{2}$ gr. (0.011-0033 gm.).

meconate (mek'on-āt) [Gr. μήκων poppy]. Any salt of meconic acid.

meconic acid (me-kon'ik). See acid.

meconidin (me-kon'id-in). An amorphous base, $C_{21}H_{23}NO_4$, from opium.

meconin (mek'on-in). A crystalline substance, $C_{10}H_{10}O_4$, obtainable from narcotin. it is used as a hypnotic by subcutaneous injection in doses of 1 gr. (0.06 gm)

meconiorrhea (me-ko-ne-or-e'ah) [meconium + Gr. ρεῖν to flow]. Excessive discharge of meconium.

meconism (mek'on-izm) [Gr. μήκων poppy]. The

opium-habit; opium-poisoning.

meconium (me-ko'ne-um) [L.; Gr μηκώνων]. r.

The fecal matter discharged by the newborn. It is a dark green substance, consisting of mucus.

is a dark green substance, consisting of mucus, bile, and epithelial threads 2. Opium.

nedia (me'de-ah) [L. "middle"]. 1. The tunica

media (me'de-ah) [L. "middle"]. 1. The tunica media, or middle coat of an artery. 2 Plural of medium. culture-m., nutrient m., a variety of materials and combinations of materials used for the cultivation of microörganisms. See culture-medium.

mediad (me'de-ad) [L. me'dia middle + ad toward].
Toward a median line or plane.

medial (me'de-al) [L. media'lis]. Pertaining to the middle; in anatomy, nearer the median plane.

median (me'de-an) [L. media'nus]. 1. Situated in the middle; mesial. 2. The perpendicular line which divides the area of a frequency curve into two equal halves.

mediaometer (me-de-ah-om'et-er) [media + Gr. µérpov measure]. An instrument for detecting and measuring refractive errors of the dioptric media.

mediastinal (me"de-as-ti'nal) [L. mediastina'lis]. Of or pertaining to the mediastinum.

mediastinitis (me"de-as-tin-i'tis). Inflammation of the mediastinum. indurative m. Same as mediastinopericarditis.

mediastinopericarditis (me"de-as"tin-o-per"ikar-dı'tis). Inflammation of the mediastinum and the pericardium.

mediastinotomy (me"de-as-tin-ot'o-me) [mediastinum + Gr. τομή a cutting]. The operation of cutting into the mediastinum. When done from the front, it is anlerior or cervical m., when from behind, posterior or dorsal m.

mediastinum (me"de-as-ti'num) [L.]. A median septum or partition; especially the septum formed in the middle line by the approximation of the two reflected pleuræ, which divides the chest into two pulmonary cavities. The two pleuræ are not, however, in contact with each other at the middle line, but have a space between them, which contains all the chest viscera except the lungs. mediastinum is divided into the anterior, mid-dle, and posterior. The anterior mediastinum is bounded in front by the sternum, and on each side by the pleura. It contains loose areolar tissue, lymphatic vessels, the remains of the thymus gland, the internal mammary vessels of the left side, and the origins of the sternohyoid, sternothyroid, and triangularis sterni muscles. middle mediastinum contains the heart inclosed in its pericardium, the ascending aorta, the superior vena cava, the bifurcation of the trachea, the pulmonary arteries and veins, and the phrenic nerves The *posterior* mediastinum is bounded behind by the vertebral column, in front by the pericardium, and on each side by the pleura. It contains the descending aorta, the greater and lesser azygos veins, the superior intercostal vein, the thoracic duct, the esophagus, the pneumogastric nerves, and the great splanchme nerves m. cerebel'li. Same as falx cerebell. m. cere'bri. Same as falx cerebri. superior m., that part of the mediastinum which extends from the manubrium to the vertebral column m. tes'tis [B N A], the partial septum of the testicle; the corpus highmorianum.

mediastinus (me"de-as-ti'nus) [L] An obsolete designation for an assistant physician or surgeon.

mediate (me'de-āt). Indirect; accomplished by the aid of a medium.

mediators (me'de-a-tors). The cells or neural connections of the nervous system by which the receptors and effectors are maintained in their proper relation.

medic (med'ik) [L. med'ica medical]. Any plant of the genus Medica'go, including lucerne, none-such, shamrock, and others.

medicable (med'ik-ab-l). Subject to treatment with reasonable expectation of cure.

medical (med'ik-al) Pertaining to medicine or to the treatment of diseases

medicament (med'ik-am-ent) [L. medicamen'tum]. A medicinal substance or agent.

medicamentarius (med"ik-a-men-ta're-us). Latin for a pothecary.

medicamentosus (med''ik-am-en-to'sus) [L.]. Pertaining to or caused by a drug.

medicated (med'ik-āt-ed) [L. medica'tus]. Inbued with a medicinal substance.

medication (med-ik-a'shun) [L. medica'tio]. I. Impregnation with a medicine. 2. The administration of remedies. conservative m., treatment aimed to build up the vital powers of the patient. dialytic m., treatment by the internal use of artificial mineral waters, i. e., dilute aqueous solutions of salts. hypodermatic m., the introduction of remedial agents beneath the skin. ionic m., the application of medicines by cataphoresis, the ions of the drugs passing from one pole of the battery to the other through

the body. **sublingual m.**, the administration of medicine in powdered form by placing it beneath the tongue. **substitutive m.**, medication for the purpose of causing an acute non-specific inflammation to overcome a specific one. **transduodenal m.**, the administration of medicine through a duodenal tube into the intestines without soiling the stomach.

medicator (med'ik-a-tor). An instrument for carrying medicines into a cavity of the body; an applicator.

medicephalic (me-de-sef-al'ik). Median cephalic. See vein.

medicerebellar (me-de-ser-e-bel'ar). Middle cerebellar.

medicerebral (med-eser'e-bral). Middle cerebral.

medicinal (med-is'in-al) [L. medicina'lis]. 1.

Having healing qualities. 2. Pertaining to a medicine or to healing.

medicine (med'is-in) [L. medici'na]. 1. Any drug or remedy. 2. The art or science of healing diseases; especially the healing of diseases by administration of internal remedies. clinical m., the study of disease at the bedside by demonstrations on the living patient. compound m., a medicine containing a mixture of several drugs. domestic m., the home treatment of disorders without the advice of a physician. dosimetric m., the practice of administering medicines by an exact and determinate system of doses. forensic m., the application of medical knowledge to questions of law; medical jurisprudence. Called also legal m. galenic m., an absolute system of practice based upon the teachings of Galen. group m., the practice of medicine by a group of physicians who are associated together for the co-operative diagnosis and treatment of patients. hermetic m., spagiric medicine. Indian m., a North American form of quackery alleged to be derived from the aboriginals. internal m., that department of medicine which deals with diseases that cannot be treated surgically; medicine as distinguished from legal m. See forensic m. patent m., a medicine whose manufacture is protected by letters patent. preclinical m., medical practice devoted to keeping the well well and preventing or postponing the development of clinical conditions in the near sick. **preventive m.**, that branch of study and practice which aims at the prevention of disease **proprietary m.**, a remedy whose formula is private property. **psychologic m.**, medicine in its relation to mental diseases. **ra**tional m., practice of medicine based upon actual knowledge. opposed to empiricism. spagiric m., the obsolete, semi-alchemistic system of practice established by Paracelsus (1493-1541). **state** m. 1. That branch of medicine which deals with questions of public health, with registration, statistics, and the like. 2 The control and direction of the practice of medicine by the government. static m., practice of medicine based upon the varying relations of administration of food, excretion, and body weight. suggestive m., treatment of disease by hypnotic suggestion. veterinary m., the treatment of the diseases of animals.

medicinerea (med'is-in-e're-ah) [L. me'dius middle + cine'rea ashen]. The gray matter of the lenticula and the claustrum.

medicisterna (med-e-sis-ter'nah). The cisterna venæ magnæ cerebri.

medicochirurgic (med"ik-o-ki-rur'jik), Pertaining to medicine and surgery.

medicodental (med''ik-o-den'tal). Pertaining to medicine and dentistry; both medical and dental.

medicolegal (med"ik-o-le'gal). Pertaining to medicine and law, or to forensic medicine.

medicomechanic, medicomechanical (med"-ik-o-me-kan'ik, med"ik-o-me-kan'ik-al). Both therapeutic and mechanical.

medicommissure, medicommissure (me"-de-kom'is-ūr, me"de-o-kom'is-ūr). The middle commissure, or commissure media.

medicophysical (med"ik-o-fiz'ik-al). Both medical and physical.

medicopsychologic (med"ik-o-si-ko-loj"ik). Pertaining to medicopsychology.

medicopsychology (med''ik-o-si-kol'o-je). The science of medicine in its relations with the mind or with mental diseases.

medicornu (me-di-kor'nu). The middle horn of the lateral ventricle.

medicotopographic (med"ik-o-to-pog-raf'ik).

Pertaining to topography in its relation to disease.

medicozoólogic (med"ik-o-zo-o-loj'ik). Pertaining to zoology in its relation to medicine.

medicus (med'ik-us). Latin for physician.

medidural (me-di-du'ral). Pertaining to the central part of the dura mater.

medifrontal (me-dif-ron'tal). Median and also frontal, pertaining to the middle of the forehead.

mediglycin (med-ig-li'sin). A liquid glycerin soap used as a vehicle for remedies in skin diseases.

Medina worm (med-e'nah). See Dracunculus medinensis.

medinal (med'in-al). The monosodium salt of diethylbarbituric acid. It is used as a hypnotic, like veronal, but is said to be much more soluble. Dose, 5-15 gr. (0 333-1 gm.). It is also used subcutaneously and per rectum.

mediocarpal (me"de-o-kar'pal). Same as mid-carpal.

medioccipital (me"de-ok-sip'it-al). Midoccipital. mediolateral (me"de-o-lat'er-al) [L. me'dius middle + latera'lis lateral]. Pertaining to the middle and to one side.

mediopontine (me"de-o-pon'tin) [L. me'dius middle + pons bridge]. Pertaining to the center of the pons.

mediotarsal (me"de-o-tar'sal) [I. me'dius middle + tarsus]. Pertaining to the middle of the tarsus. medipeduncle (me-de-pe'dunk-el) The middle peduncle of the cerebellum. See brachium pontis.

mediscalenus (me-de-skal-e'nus). The saclenus medius muscle.

medisect (med'is-ekt) [L. me'dius middle + seca're to cut]. To divide or dissect medially,

medisylvian (me-dis-il've-an). Pertaining to the middle portion of the fissure of Sylvius.

meditemporal (me-dit-em'po-ral) Pertaining to the middle portion of the temporal lobe of the brain.

Mediterranean fever (med-it-er-a'ne-an). See fever

meditrina (med-it-ri'nah). A proprietary germicide for use in leukorrhea, etc.

meditul'lium profun'dum [L. "deep midland"].

A portion of the tectum of the midbrain, the colliculus inferior.

medium (me'de-um), pl. me'dia [1. "middle"].

1. Means. 2. A substance which transmits impulses. 3. A substance used in the culture of bacteria. See culture-medium. Abe's m. (for gonococci), mix 500 gm. of fat-free meat, finely hashed, with 1000 c.c. of water. Allow to stand in ice-chest for from eighteen to twenty-five hours, then filter through paper and a Chamberland filter into sterile containers for use it is mixed with fluid or solid peptone media in the proportion of 1 to 5 Besredka and Jufille's m., a culture-medium containing incoagulable egg albumin, incoagulable egg yolk, and beef broth in the proportion of 4 1 5 Bruns's glucose m., a medium for mounting fresh tissue specimens made by mixing distilled water, 140 cc, glucose, 40 gm, and glycerin, 10 cc., then adding camphorated spirit, 10 c.c., and filtering. clearing m., a medium for

rendering histologic specimens transparent. Dieudonné's m., a culture-medium composed of 30 parts of ox-blood, 30 of potassium hydroxid, and 140 of cholera agar. disperse, dispersive, or dispersion m., the continuous or external portion of a colloid system in which the particles of the disperse phase are distributed. It is analogous to the solvent in a true solution. Drigalski-Conradi m., a culture-medium made by adding nutrose and crystal violet to lactose litmus agar, using 3 per cent. of agar. The crystal violet inhibits the growth of many bacteria other than the typhoid bacillus. It is used in detecting typhoid bacilli in the blood. Called also Con-Elsner's m., a culture-medium m. made by adding a sterilized potassium iodid solution of 10 per cent. strength to Holz's potato-gelatin m. of Endo, a culture-medium for typhoid bacilli to I liter of water are added 500 gm. of ground beef, 10 gm. of peptone, 5 gm. of sodium chlorid, and 30 gm of agar. The mixture is boiled, filtered, neutralized, and then made alkaline by 10 c.c. of a 10 per cent. solution of sodium carbonate, then 10 gm. of pure lactose are added, then 5 c.c. of alcoholic solution of fuchsin, then 25 c c. of 10 per cent. solution of sodium sulesculin m., a medium for the isolation of the colon bacillus, containing esculin and iron citrate, in which the colon bacillus produces a black colony. Holz's m., potato-gelatin. Löffler's m., a culture-medium for diphtheria bacillus, containing 1 part bouillon, 3 parts blood-serum, and 1 per cent of glucose N. N. M. m., a culturemedium for Leishmania donovani, consisting of agar 14, salt 6, water 900, which is sterilized and then has added to it one-third rabbit's blood passive m., a medium which does not alter the structure of tissues that are placed in it. Piorkowski's m., a medium consisting of 100 parts of urine that has undergone ammoniacal fermentation, 05 part of peptone, and 33 parts of gelatin **Vedder's m.**, a culture-medium consisting of beef infusion agar to which I per cent of starch has been added. Wickersheimer's m. See under fluid.

medius (me'de-us). Intermediate between two other parts.

medol (me'dol). A creolin liniment used for skin diseases and in veterinary practice, containing o.8 per cent of iodin.

medorrhea (med-o-re'ah) [Gr. μῆδος penis + ροία flow]. A urethral discharge.

medorrhinum (med-o-ri'num) [Gr. μῆδος penis + bola flow]. A homeopathic trituration of the gonorrheal secretion used in gonorrhea and chronic rheumatism.

medulla (med-ul'ah) [L.]. r. Marrow. 2. The medulla oblongata. 3. Any substance resembling marrow in appearance or structure. m. dorsa/lis, the spinal cord. m. neph'rica, the pyramids of the kidney collectively. m. oblonga'ta [B N A], an organ or ganglion of the brain which connects the spinal cord with the pons m. os'sium [B N A], the bone-marrow m. os'sium ru'brum, red bone-marrow m. spina'lis [B N A], the spinal cord or myelon.

medulladen (med-ul-a'den) [L. medul'la inarrow + Gr. άδην gland]. A red-brown powder prepared from red bone-marrow of cattle. It is a hematinic, and is used in anemia, leukemia, neurasthenia, and gout. Dose, 30-45 gr. (2-3 gm.).

medullar, medullary (med-ul'ar, med'ul-a-re) [L. medulla'ris]. Pertaining to the marrow or to any medulla; resembling marrow.

medullated (med'u-lā-ted). Containing or covered by a medullary substance. **m. nerve-fiber**. See *medullated fiber*, under *fiber*.

medullation (med-u-la'shun). The formation of a medulla or marrow.

medulliadrenal (med-ul"e-ad-re"nal). Pertaining to the medullary portion of the adrenal.

medulline (med-ul'in). A proprietary extract of the spinal cord of the ox: used in nervous and spinal diseases.

medullispinal (med-ul-is-pi'nal) [L. medul'la marrow + spina'lis spinal]. Pertaining to the spinal cord.

medullitis (med-ul-i'tis). 1. Osteomyelitis. 2. Myclitis.

medullization (med-ul-iz-a'shun). The enlargement of the haversian canals in rarefying osteitis, followed by their conversion into marrow-channels; also the replacement of bone by marrow-cells.

medullo-arthritis (me-dul"o-ar-thri'tis) [L. med-ul'la marrow + arthritis]. Inflammation of the marrow-spaces of the articular extremities of bones.

medulloblastoma (med-ul"o-blas-to'mah). A cerebellar tumor composed of undifferentiated preneurogliar cells.

medullocell (me-dul'o-sel) [L. medul'la marrow + cell]. Same as myelocyte.

Medusa (me-du'sah). A genus of motile microorganisms. One species, *M san'gunis hom'inis*, occurs in the blood in a form of remittent fever in China.

medusocongestin (me-du"so-kon-jes'tin). A poisonous substance obtained from jellyfish.

mega-, megalo- [Gr. μέγας large]. Λ prefix signifying great.

megabacterium (meg"ah-bak-te're-um) [Gr μέγας large + bacterium]. Λ bacterium of large size.

megacaryocyte, megakaryocyte (meg-ak-ar'e-o-sīt). See megakaryocyte.

megacecum (meg-ah-se'kum) [Gr μέγας large + cecum] A ce cum which is abnormally large.

megacephalic, megacephalous (meg''ah-sef-al'-ik, meg-ah-sef'al-us) [Gr. μέγας large + κεφαλή head] Having a large head.

megacephaly (meg-ah-sef'al-e). Abnormal largeness of the head

megacoccus (meg-ah-kok'us) [Gr. μέγας large + κόκκος berry]. A coccus of a very large type

megacolon (meg-ak-o'lon). Same as guant-colon. Abnormally large size of the colon, due to dilatation and hypertrophy The condition is usually one of childhood. Called also guant colon, convenital idiopathic dilatation of colon, and Hirschsprung's disease. m. congen'itum, congenital dilatation of the colon.

megacoly (meg-ak'o-le). Increase in the caliber of the colon

megadont (meg'ad-ont) [Gr. μέγας large + δδούς tooth]. Having large teeth.

megaduodenum (meg-ah-du-o-de'num). Abnormally large size of the duodenum.

megadyne (meg'ad-in) [Gr. $\mu \epsilon \gamma \alpha s$ great + dyne]. A million dynes.

mega-esophagus (meg"ah-e-sof'ag-us). A greatly enlarged esophagus.

megagamete (meg-ag-am'ēt). Same as macro-gamete.

megakaryocyte (meg-ah-kar'e-o-sīt) [Gr. μέγαs large + κάρνον nucleus + κύτος cell]. A cell with a large nucleus, as the giant-cells of bone-marrow.

megalakria (meg-al-ak're-ah) [Gr. μέγαs large + ἄκρος extremity]. Acromegaly.

megalerythema (meg-al-er-ith-e'mah). Erythema with swelling of the part.

megalgia (meg-al'je-ah) [Gr. μέγας large + ἄλγος pain]. Severe pain, as in muscular rheumatism.

megaloblast (meg'al-o-blast) [Gr. μέγαs + large βλαστόs germ]. An erythroblast or primitive red blood-corpuscle of large size, i. e., more than 11 μ in diameter. It consists of a homogeneous cytoplasm with a relatively large nucleus with granular chromatin. Megaloblasts are found in the blood in

pernicious anemia. They have been called *ichthy-oid cells*, because they are just like the red blood-cells of fishes Cf. *erythroblast*.

megalocardia (meg-al-o-kar'de-ah) [Gr. μέγας large + καρδία heart]. Hypertrophy of the heart.

megalocephalia, megalocephaly (meg"al-o-sef-a'le-ah, meg"al-o-sef'al-e) [Gr. μέγας large + κεωαλή head]. τ. Unusually large size of the head. 2. Progressive enlargement of the bones of the head, face, and neck; leontiasis ossea.

megalocephalic (meg"al-o-sef-al'ik). Same as megacephalic.

megalocoly (meg-al-ok'o-le). Same as megacoly.

megalocornea (meg''al-o-kor'ne-ah) [Gr. μέγας large + cornea]. An enlarged or bulging cornea.

megalocyte (meg'àl-o-sit) [Gr. μέγαs large + κυτος cell]. An extremely large erythrocyte, i. e., one over 12 μ in diameter.

megalocytosis (meg''al-o-si-to'sis). Same as macrocytosis.

megalodactylia, megalodactylism (meg"al-o-dak-til'e-ah, meg"al-o-dak'tıl-izm). Abnormal largeness of fingers or toes.

megalodactylous (meg''al-o-dak'til-us) [Gr. μέγαs great + δάκτυλος digit]. Having unusually large fingers and toes.

megalodontia (meg"al-o-don'she-ah). Macro-dontia.

megalo-enteron (meg"al-o-en'ter-on) [Gr. μέγας large + ἔντερον intestine] An abnormally large intestine, enteromegaly.

megalogastria (meg"al-o-gas'tre-ah) [Gr. μέγας great + γαστήρ stomach]. Enlargement or abnormally large size of the stomach.

megaloglossia (meg''al-o-glos'e-ah) [Gr. μέγας large + γλῶσσα tongue]. See macroglossia.

megalographia (meg"al-o-gra'fe-ah). Same as macrographia

megalohepatia (meg''al-o-hep-at'e-ah) [Gr. μέγας large $+ \tilde{\eta} \pi a \rho$ liver]. Enlargement of the liver.

megalokaryocyte (meg''al-o-kar'e-o-sit) [Gr. μέγas large + κάρνον nucleus + κύτos cell]. The giant-cells of the bone-marrow, having a large lobulated nucleus (Howell).

megalomania (meg''al-o-ma'ne-ah) [Gr. μέγαs great + μανία madness] Delirium of grandeur; insane belief in one's own extreme greatness, goodness, or power.

megalomaniac (meg"al-o-ma'ne-ak). A person affected with megalomania.

megalomelia (meg''al-o-me'le-ah) [Gr. μέγας large + μέλος limb]. Abnormal largeness of the limbs.

megalonychosis (meg''al-o-nik-o'sis) [Gr. μέγας great + ὄνυξ nail]. Hypertrophy of the nails and their matrices.

megalopenis (meg"al-o-pe'nis). Excessive size of the penis.

megalophthalmus (meg-al-of-thal'mus) [Gr. μέγαs large + i φθαλμόs eye]. Abnormally large size of the eyes

megalopia (meg-al-o'pe-ah) [Gr. μέγας great + ωψ eye]. Macropsia.

megaloplastocyte (meg"al-o-plas'to-sīt) [Gr. μέγαs great + plastocyte]. A blood-platelet larger than normal.

megalopsia (meg-al-op'se-ah) [Gr. μέγαs great + δψις vision]. Same as macropsia.

megaloscope (meg'al-o-skōp) [Gr. μέγαs large + σκοπεῖν to view]. A large magnifying lens; a magnifying speculum or mirror.

megalosplenia (meg"al-o-sple'ne-ah) [Gr. μέγας large $+ \sigma \pi \lambda \dot{\eta} \nu$ spleen]. Enlargement of the spleen.

megalospore (meg'al-o-spōr). Megalosporon.

Megalosporon (meg-al-os'po-ron), pl. megalos'pora [Gr. $\mu\epsilon\gamma$ as great $+\sigma\pi\delta\rho$ os seed]. The large-spored division of the trichophyton fungi. **M. ec'to-**

thrix, the form found outside or on the surface of the hair shaft. M. en'dothrix, the form found inside of the hair shaft

megalosyndactyly (meg''al-o-sin-dak'til-e) [Gr. μέγας great + syndactylia]. A condition in which the digits are very large and more or less blended together.

megalo-ureter (meg"al-o-u-re'ter) [Gr. μέγας large + ureter]. Enlargement of the caliber of the ureter.

megamerozoite (meg-am-er-o-zo'īt). A large merozoite.

meganucleus (meg-an-u'kle-us). Same as macronucleus.

megaprosopous (meg-ah-pros-o'pus) [Gr. μέγας great + πρόσωπον face]. Having a large face.

megarectosigmoid (meg"ah-rek"to-sig'moid). Enormous dilatation of the rectum and sigmoid.

megarectum (meg-ah-rek'tum) [Gr. μέγαs large + rectum]. A greatly dilated rectum.

Megarhinus (meg-ah-ri'nus). A genus of large, showy, but harmless mosquitos of tropical and subtropical countries.

megaseme (meg'as-ēm) [Gr. μέγαs great + σημα sign]. Having an orbital index exceeding 89°.

megasigmoid (meg-ah-sig'moid) [Gr. μέγαs large + sigmoid]. An enormously dilated sigmoid flexure.

megasoma (meg-as-o'mah) [Gr. μέγαs great + σωμα body]. Great size and stature, not amounting to gigantism.

megasome (meg'ah-sōm). Same as macrosome.

megaspore (meg'as-pōr). A macrospore.

Megastoma (meg-as'to-mah) [Gr. μέγαs great + στόμα mouth] See Grardia intestrnalis.

megastria (meg-as'tre-ah). See megalogastria.

megavolt (meg'ah-võlt) [Gr. μέγας large + volt].

A million volts.

Méglin's point (ma-glaz') [J. A. Méglin, French physician, 1756-1824]. See point.

megohm (meg'ōm) [Gr. μέγας great + ohm]. A million ohms.

megophthalmus (meg-of-thal'mus) [Gr. μέγας great $+ \delta \varphi \theta a \lambda \mu \dot{\phi} s$ eye]. See buphthalmus.

megoxycyte (meg-oks'e-sīt) [Gr. μέγας large + oxyphul + Gr. κύτος cell]. A large oxyphul cell; a coarsely granular eosinophil leukocyte.

megoxyphil (meg-ok'se-fil) [Gr. μέγαs great + δξ bs acid + φιλεῖν to love]. An eosinophil leukocyte containing large granules.

megrim (me'grim). See migraine.

meibomian (mi-bo'me-an) Named for or described by Henrich Meibom, German anatomist, 1638–1700 See under gland and cyst.

Meige's disease (mchghz) [Henri Meige, French physician, born 1866]. See Milroy's disease, under disease.

Meigs's capillaries (megz) [Arthur V. Meigs, Philadelphia physician, 1850–1912]. See capillary.

meio-. For words thus beginning, see under mio-. Meissner's corpuscles, plexus, etc. (mis'nerz) [Georg Meissner, German physiologist, 1829-1903].

See corpuscle, plexus, etc.

mekonal (me'ko-nal). A preparation containing aspirin, veronal, and morphin muriate: used as a hypnotic.

mel (mel) [L.]. I. Honey; a saccharine substance deposited by the honey-bee, A'pis mellif'ica. Clarified honey is chiefly a mixture of levulose and glucose it is used as a food, as an excipient, and as an application to aphthæ. 2 A compound of honey with some medicinal agent. m. bo'racis, the honey of borax: used mainly in aphthous affections of the mouth. m. depura'tum, m. despuma'tum, clarified honey. m. ro'sse (U.

S. P.), honey of rose, a preparation of 120 c.c. of fluidextract of rose with sufficient honey to make $\beta \lambda a \sigma \tau \delta s$ germ]. An epithelial cell which generates 1000 gm. Dose, 1 fl.dr. (4 c.c.)

melachol (mel'ak-ol). A proprietary solution of sodium citrophosphate. It is a laxative for use in liver diseases, and also has anodyne properties.

melæna (mel-e'nah). See melena.

melagra (mel-ag'rah) [Gr. μέλος limb + ἄγρα seizure]. Muscular pain in the extremities.

Melaleuca (mel-al-u'kah). See cajuput. melalgia (mel-al'je-ah) [Gr. μέλος limb + ἄλγος pain]. Neuralgic pain in the limbs.

melan (mel'an) A brown, oily preparation from the leaves, flowers, and stems of Melilo'tus caru'leus: used as a stimulant for wounds and ulcers.

melancholia (mel-an-ko'le-ah) [Gr. μέλας black + χολή bile]. A form of insanity marked by a depressed and painful emotional state with abnormal inhibition of mental and bodily activity. acute m., an acute form of melancholia marked, in addition to the usual symptoms, by loss of appetite, emaciation, insomnia, and subnormal temperature. agitated m., m. agita'ta, melancholia with constant motion and signs of great emotional excitement. m. atton'ita, a form in which the patient lies motionless and silent. m. with delirium, a form in which there are distressing delusions and hallucinations. flatuous m., that which is characterized by gases in the alimentary canal. m. hy-pochondri aca, extreme hypochondriasis. invo-lution m., melancholia developing in advanced life during senile involution recurrent m., a condition in which attacks of melancholia follow one another at more or less regular intervals. m. religio'sa, the delusion of one's own personal damnation. m. sim'plex, a mild form with neither delusions nor great excitement. stuporous m., melancholia attonita a form in which the patient lies motionless and silent, with fixed eyes and indifference to surrroundings; there are sometimes hallucinations.

melancholiac (mel-an-ko'le-ak). Affected with melancholia; also a person affected with melan-

melanedema (mel-an-e-de'mah) [Gr. μέλας black + οίδημα swelling]. See anthracosis.

melanemia (mel-an-e'me-ah) [Gr. μέλας black + atµa blood. The presence of black, pigmentary masses in the blood; hemachromatosis. The condition is seen chiefly in pernicious anemia.

melanephidrosis (mel"an-ef-id-ro'sis) [Gr. μέλας black + έφίδρωσις excessive sweating]. The discharge of black sweat.

mélangeur (ma-lan-zher'). An instrument for drawing and diluting specimens of blood for examination. It consists of a capillary tube, one end of which is blown into a bulb having a capacity of 100 c.mm.

melanidrosis (mel"an-id-ro'sis) [Gr. μέλας black + iδρώs sweat]. Black sweat.

melaniferous (mel-an-if'er-us) [melanin + L. fer're to bear]. Containing melanin or other black pigment.

melanin (mel'an-in) [Gr. μέλας black]. A dark pigment from the choroid, hair, and other dark tissues, and from melanotic tumors. It is a product of cell activity, contains sulphur and iron, and is probably a derivative of hematin. artificial m., factitious m., a compound resembling melanin, formed when a protein is heated in strong hydrochloric acid. Called also melanoid.

melanism (mel'an-izm) [Gr. μέλας black]. Excessive pigmentation or blackening of the integuments or tissues; melanosis.

melanistic (mel-an-is'tik). Characterized by melanism.

melano- [Gr. μέλας black]. A prefix signifying black.

pigment.

melanoblastoma (mel"an-o-blas-to'mah). tumor made up of melanoblasts.

(mel"an-o-kang'kroid). melanocancroid strongly pigmented epithelial tumor.

melanocarcinoma (mel"an-o-kar-sin-o'mah) [Gr. μέλας black + carcinoma]. A carcinoma pigmented with melanin.

melanochomous (mel-an-ok'o-mus) [Gr. μέλας black + κομή hair]. Having black hair.

melanochrous, melanochrous (mel-an-ok'rous, -ok'rus) [Gr. μ é λ as black + $\chi \rho \omega$ á color]. Having a dark complexion.

melanocyte (mel'an-o-sīt) [Gr. μέλας black + κῦτος cell] A cell like a leukocyte, but pigmented.

melanoderm (mel'an-o-derm) [See melanoderma]. A person belonging to one of the black races.

melanoderma (mel"an-o-der'mah) [Gr μέλας black + δέρμα skin]. An abnormal deposit of melanin in the skin. m. cachectico rum, a form seen in certain systemic disorders, as malarial fever, syphilis, cancer, tuberculosis, etc. parasitic m., vagabonds' disease. See disease senile m., pigmentation of the skin in the aged.

melanodermic (mel"an-o-der'mik). dark skin.

melano-epithelioma (mel"an-o-ep-e-the-le-o'mah). An epithelioma containing melanin

melanogen (mel-an'o-jen) [melanin + Gr γενναν to produce]. A colorless chromogen of the urine, convertible into melanin.

melanoglossia (mel"an-o-glos'e-ah) [Gr. μέλαs black + γλῶσσα tongue]. Black tongue. See glossophytia.

melanoid (mel'an-oid) [Gr. μέλας black + είδος form]. I Resembling melanism, of a dark color.
2. Artificial melanin See melani.

melanoidin (mel-an-oi'din). A melanin obtained from the albumins.

Melanoles'tes pic'ipes. The "black corsair" or "kissing bug"; its bite much resembles the sting of a wasp, though often much more serious.

melanoleukoderma (mel"an-o-lu-ko-der mah) [Gr μέλας black + λεύκός white + δέρμα skin]. A mottled appearance of the skin m. col'li, a mottled appearance of the skin of the neck and adjacent regions, seen as a rare manifestation of syphilis. Called also venereal collar and collar of Venus.

melanoma (mel-an-o'mah). A melanotic tumor.

melanonychia (mel"an-o-nik'e-ah) [Gr. μέλας black + ovu nail]. Blackening of the nail.

melanopathy (mel-an-op'ath-e) [Gr μέλας black + $\pi \dot{a} \theta os$ illness]. Any disease characterized by abnormal pigmentation of the skin or tissues.

melanophore (mel'an-o-for) [Gr. μέλας black + φορός bearing]. A pigment-carrying cell.

melanoplakia (mel"an-o-pla'ke-ah) [Gr. μέλας black $+\pi\lambda d\xi$ plate]. The formation of pigmented patches on the mucous membrane of the mouth in certain diseases, as stomatitis, jaundice, etc.

melanorrhagia (mel"an-o-ra'je-ah) [Gr. μέλας black + ἡηγυύναι to burst forth]. The free and frequent discharge of feces darkened with bloodpigments.

melanorrhea (mel"an-or-e'ah) [Gr. μέλας black + pola flow]. Same as melanorrhagia.

melanosarcoma (mel"an-o-sar-ko'mah) [Gr. μέλας black + sarcoma]. Sarcoma with pigmentary elements.

melanosarcomatosis (mel"an-o-sar-ko-mah-to'sis). The development of melanosarcomata.

melanoscirrhus (mel"an-o-skir'us) [Gr. μέλαs black + scirrhus]. Same as melanocarcinoma.

melanosed (mel'an-osd). Affected with melanosis.

melanosis (mel-an-o'sis) [Gr. μέλας black]. I. Melanism; a condition characterized by abnormal pigmentary deposits. 2. Disorder of function caused by a pigment. m. lenticula'ris progressi'va, xeroderma pigmentosum. m. sole'res, congenital violet flecks in the sclera (Schmidt-Rimpler).

melanosity (mel-an-os'it-e). Swarthiness of complexion.

melanotic (mel-an-ot'ik). Affected with or of the nature of melanosis.

melanotrich'ia lin'guæ. Black tongue. See under tongue

melanous (mel'an-us) [Gr. μέλας black]. Having a dark or swarthy complexion.

melanthin (mel-an'thin). An amorphous and poisonous glucosid, or saponin, C₂₀H₃₃O₇, from the seeds of Nigel'la sati'va.

melanuresis (mel"an-u-re'sis). Melanuria.

melanuria (mel-an-u're-ah) [Gr μέλας black + οῦρον urine]. The discharge of darkly stained urine.

melanuric (mel-an-u'rik). Pertaining to or marked by melanuria.

melanurin (mel-an-u'rin). A black substance from morbid urine in certain rare cases.

melasma (mel-az'mah) [Gr. μέλας black]. A disease characterized by dark pigmentation of the skin. m. addiso'nii, Addison's disease. m. gravida'rum, discoloration of the skin in pregnant women. m. suprarena'le, Addison's disease. m. universa'le, discoloration of nearly the entire surface of the body.

melena, melena (mel-e'nah) [Gr. μέλαινα black, black bile]. I. The passage of dark, pitchy, and grumous stools stained with blood-pigments or with altered blood. 2. Black vomit. m. neonato'rum, melena of the new-born, due to the extravasation of blood into the alimentary canal. m. spu'ria, melena in nurslings in which the blood comes from the fissured nipple of the nurse. m. ve'ra, true melena.

melenemesis (mel-e-nem'es-is) [Gr. μέλας black + ξμεσις vomiting]. Black vomit.

melenic (mel-e'nik). Marked by melena.

melezitose (mel-ez'it-ōs). A sugar from larch manna, $C_{18}H_{32}O_{16}+2H_2O$.

melibiose (mel-ib-i'ōs). A disaccharid obtained from molasses and from Australian manna. On hydrolysis it yields galactose and dextrose.

melicera, meliceris (mel-is-e'rah, mel-is-e'ris)
[Gr. μέλι honey + κηρός wax]. 1. A cyst filled with a honey-like substance. 2. Viscid, syrupy.

melicitose (mel-is'it-os). See melizitose.

meligrin (mel'ig-rin). A condensation-product of dimethyloxyquinin and methylphenylacetamid: used in migraine.

melilot (mel'il-ot). See Melilotus.

Melilotus (mel·il-o'tus) [Gr. μέλι honey + λωτόs lotus]. A genus of leguminous herbs. M. officina'-lis (sweet clover, melilot) contains coumarin, coumaric acid, and melilotic acid. It is a fragrant and very mild anodyne, used in plaster or ointment.

melioidosis (mc-le-oi-do'sis) [Gr μελις Greek name for a glanders-like disease + είδος resemblance]. A glanders-like disease of rodents, transmissible to man, occurring in Rangoon, and caused by Bacterium whitmori Formerly called Whitmore's disease

Melissa (mel-is'ah) [L. "bee"]. A genus of lablate plants. The tops and leaves of M. officina'lis, lemon-balm, containing tannin and an essential oil, are a cooling stimulant and diaphoretic. Dose of compound spirit (spir'ilus melis'sæ compos'ilus). In floz. (15 c.c.).

melissophobia (mel-is-o-fo'be-ah) [Gr. μελίσσα bee + φόβος fear]. An insane dread of bees and wasps.

melitagra (mel-it-ag'rah, mel-it'ag-rah) [Gr. μέλι honey + ἄγρα seizure]. Eczema with honeycomb crusts.

melitemia (mel-it-e'me-ah) [Gr. μέλι honey + alμa blood]. An excess of sugar in the blood.

melitis (me-li'tis) [Gr. μῆλον cheek + -ιτις inflammation]. Inflammation of the cheek.

melitococcosis (mel'"it-o-kok-o'sis). Malta fever. melitococcus (mel-it-o-kok'us). Bacterium (Micrococcus) melitensis.

melitoptyalism (mel"it-o-ti'al-izm) [Gr. μέλι honey + πτύαλον saliva]. The secretion of saliva containing glucose.

melitoptyalon (mel"it-o-ti'al-on). Glucose occurring in the saliva,

melitose (mel'it-ōs) [Gr. μέλι honey]. A crystalline sugar from Australian manna, sugar-beets, and other sources It is a trisaccharid, C₁₈H₂₂O₁₆ + 5H₂O, and yields on hydrolysis glucose, fructose, and galactose. Called also raffinose and melitriose.

melitriose (mel-it'ri-ōs). Same as melitose.

melituria (mel-it-u're-ah) [Gr. μέλι honey + οὖρον urine]. The presence of any sugar in the urine; diabetes mellitus. m. inosi'ta, inosituria.

melituric (mel-it-u'rik). Pertaining to or affected with melituria.

melizitose (mel·iz-i'tōs). A trisaccharid, C₁₈H₃₂O₁₆, obtained from Pinus larix On hydrolysis it yields levulose, dextrose, and galactose.

mellite (mel'It) [L melli'tum]. Any medicated or pharmaceutic preparation of honey.

mellithemia, mellithuria. See melitemia, meli-

melmaroba (mel-mar-o'bah). A liquid preparation of manaca, stillingia, caroba, and potassium iodid: for use in syphilis, rheumatism, and skin diseases. Dose, 1-2 fl.dr. (3.75-7.5 c c).

melol (mel'ol). A proprietary castor-oil mixture.

melomania (mel-o-ma'ne-ah) [Gr. μέλος song + μανία madness]. Insane fondness for music.

melomaniae (mel-o-ma'ne-ak) Λ person affected with melomania

melomelus (mel-om'el-us) [Gr μ é λ os limb + μ é λ os limb | A monster-fetus with both normal and supernumerary limbs, the latter rudimentary.

meloncus (mel-ong'kus) [Gr μῆλον cheek + ὄγκος tumor]. Tumor of the cheek.

melonemetin, melonenemetin (mel-on-em'etin, mel''on-en-em'et-in). A bitter emetic and purgative substance from the root of muskmelon, Cucu'mis mello. Dosc, \(\frac{1}{2}\)-2 gr. (0.033-0.13 gm.).

melonoplasty (me-lon'o-plas-te). Same as meloplasty, 1st def.

melon-seed bodies (mel'un-sēd). See body.

Melophagus (mel-of'ag-us) A genus of parasitic dipterous insects of the family Hippoboscidæ.
M ovi'nus, the common louse tick of sheep.

meloplasty (mel'o-plas-te) 1. [Gr. μῆλον cheek + πλάσσειν to form] Plastic surgery of the cheek. 2. [Gr. μέλος limb + πλάσσειν to form.] Plastic surgery of the extremities.

melosalgia (mel-o-sal'je-ah) [Gr. μέλος limb + άλγος pain]. Pain in the lower limbs.

melting-point (mel'ting). The temperature at which a substance changes from solid to liquid.

Meltzer's law, method (melt'serz) [Samuel J. Meltzer, American physiologist, 1851-1920]. See law and method.

Meltzer-Lyon method or test. See under tests. melubrin (mel-u'brin). The sodium salt of phenyldimethyl-pyrazolon-amido-methane-sulphonic acid, C₀H₄N₂O(CH₃)₂ NH CH₂.SO₂.ONa, a white, crystalline powder. used as an antipyretic and analgesic in doses of 15-30 gr. (1-2 gm.).

member (mem'ber) [L. mem'brum]. 1. A part of the body distinct from the rest in function or position. 2. An outlying part or limb.

memberment (mem'ber-ment). The manner of arrangement of parts in a body.

membrana (mem-bra'nah), pl. membra'næ. Latin for membrane. m. abdom'inis, the peritoneum. m. adventi'tia. 1. The adventitia, or outer coat of an artery. See artery. 2. The decidua reflexa. m. ag'nina, the amnion. m. at-lanto-occipita'lis, the occipito-atloid ligament m. basila'ris, the lower boundary of the scala media of the ear. m. cadu'ca, the decidua. m. capsula'ris, a capsular ligament. m. choriocapilla'ris, the innermost vascular layer of the choroid. m. decid'ua [B N A]. See decidua. m. eb'oris, the investing membrane of the toothpulp, made up of relics of the odontoblasts m. elas'tica laryn'gis [B N A], the submucous layer of the larynx m. flac'cida. See Shrapnell's membrane, under membrane m. fus'ca, the pigmented layer which connects the choroid and sclera. m. germinati'va, the blastoderm. m. granulo'sa, the cell-layer that lines the inner surface of the graafian follicle m. granulo'sa exter'na and m. granulo'sa inter'na, the two granular layers of the retina. m. interos'sea antibra'chii, a membrane extending between the radius and ulna at the elbow-joint. m. interos'sea. cru'ris, a ligament uniting the shafts of the tibia and fibula. m. lim'itans, the limiting membrane of the retina. See retina. m. nic'titans. See membrane, nictualing m. obtura'trix, a membrane which in early fetal life closes in the upper part of the fourth ventricle. m. orbita'lis musculo'sa, a system of smooth muscles deep in the orbit. m. pituito'sa, the schneiderian membrane. m. pro'pria, the basementmembrane of mucous membranes. m. quadrangula/ris, a membrane from the epiglottis to the arytenoid cartilages. m. reticula/ta, the net-like membrane covering the organ of Corti in the ear. m. ruyschia'na, the capillary layer of the choroid, the entochoroidea. m. sacci-for'mis, the synovial membrane of the inferior radio-ulnar articulation. m. sero'sa. 1. See serous membrane, under membrane 2. The false amnion See amnion. m. seroti'na, that part of the decidua which takes part in the formation of the placenta m. ster'ni [B N A], the layer of membrane inclosing the sternum m. succin'gens, the pleura
membrane of Corti m. tecto'ria [B N A], the
membrane of Corti m. ten'sa, m. vi'brans, the membrana tympani proper, exclusive of Shrapnell's membrane m. tym'pani [B N A], the drumhead or membrane that separates the middle from the external ear It is made up of a large lower part (m. vi'brans, m ten'sa) and a small upper portion (m flac'cida, Shrapnell's membrane). m. tym'pani secunda'ria, the membrane that closes in the fenestra rotunda westibula'ris, a delicate layer between the periosteum of the cochlea and the lamina spiralis; it separates the cochlear canal from the scala vestibuli. m. vi'brans. See m. tympani.

membranaceous (mem-bran-a'shus) [L. membrana'ceus]. Of the nature of a membrane.

membranate (mem'bra-nāt). Having the character of a membrane.

membrane (mem'brān) [L. membra'na]. layer of tissue which covers a surface or divides a space or organ. accidental m., a pseudomembrane adventitious m., a membrane not normal to the part, as the membrane of a cicatrix. alveolodental m. See pericementum. anal m., the membrane that closes the anal end of the embryonic gut. anhistous m., the decidua. animal m., a thin membranous diaphragm, as of bladder used as a dialyzer. arachnoid m. See arachnoid. Ascherson's m., the covering of casein inclosing the milk-globules. **Baer's**m., chromicized pig's bladder, used as a dressing over cut bone surfaces. **basement-m.**, the delicate, transparent layer underlying the epithelium of mucous membranes and secreting glands. basilar m. See membrana basilaris. Bichat's m. See Henle's fenestrated m. Bowman's m., the uppermost layer of the corneal stroma. Bruch's m., the inner layer of the choroid coat of the eye. Brunn's m., the epithelium of the olfactory region of the nose. sulopupillary m., the membrane inclosing the capsule of the lens of the eye of the early embryo Cargile m., prepared ox peritoneum used for covering surfaces from which the peritoneum has been removed, in order to prevent the formation of adhesions. cell-m., the condensed protoplasm which forms the enveloping capsule of a cell. cloacal m., the central wall of the cloaca formed by the outer and inner germ-layers. cobalt aurate m., gold-beaters' skin saturated with cobalt chlorid and gold chlorid and water, with oil of cassia: used as an application for causing granulation in wounds. complex m., any membrane made up of several layers differing in structure. compound m., a membrane, like that of the tympanum, made up of two distinct layers Corti's m., the membrane over the organ of Corti costocoracoid m., the fascia between the pectoralis minor and the subclavius muscles. cricothyroid m., the membrane which connects the thyroid and cricoid cartilages. croupous m., the false membrane of true croup. Débove's m., the delicate layer between the epithelium and the tunica propria of the bronchial, tracheal, and intestinal mucous membranes. **Demours' m.** Same as Descemet's m. **Desce** met's m., the posterior lining membrane of the cornea diphtheric m., the variety of false membrane characteristic of diphtheria and resulting from coagulation necrosis See false m. **Driddell's m.** Same as Descemet's m drumm., the membrana tympanı Duddell's m. Same as Descemei's m. dysmenorrheal m., the membrane discharged in membranous dysmenorrhea elastic m., a variety of membrane composed largely of elastic fibers enamelm. 1. The cuticula dentis. 2 The inner layer of cells within the enamel-organ of the dental germ in the fetus. falso m., a morb d pellicle or skin-like layer resembling an organized and living membrane, but made up of coagulated fibrin with bacteria and leukocytes Called also diphtheric m fenestrated m., the thickest and outermost layer of the arterial intima m's, the chorion, amnion, and allantois fibrous m., a membrane made up of fibrous tissue. Fielding's m., the tapetum. germinal m., the blastoderm Hannover's intermediate m., the enamel-membrane haptogen m., the membrane of protein matter formerly believed to inclose milk-globules Henle's elastic m., a thin, fenestrated layer between the outer and middle tunics of certain arteries. Hen-le's fenestrated m., a subendothelial fibroelastic layer in the intima of an artery. Henle's m. See Bruch's m. homogeneous m., a membrane covering the placental villi Hovius's m., the entochoroidea. Huxley's m., the cellular membrane of the root-sheath and proximal end of a hair. hyaline m. 1. The membrane between the outer root-sheath and the inner fibrous layer of a hair-follicle. 2 The basement-membrane. hyaloid m., a delicate membrane investing the vitreous humor of the eye. hyothyroid m. Same as thyrohyoid m. interosseous m. See membrana interossea. intersutural m., the pericranium that lies between the cerebral sutures. ivory m., membrana eboris. Jack-son's m., a delicate curtain or web of adhesions (by some regarded as a sheet of peritoneum) sometimes seen covering the cecum and producing obstruction of the bowel and a series of definite symptoms. Called also membranous pericolitis.

Jacob's m., the layer of rods and cones of the retina. keratogenous m., the nail matrix. Kölliker's m., the membrana reticulata.

Krause's m., a membrane, seen as a dark line on longitudinal section, serving to limit the sarcomes of striated muscle. Called also *Dobie's line* and telophragma. limiting m., the membrana limitans of the retina. See retina. meconic m., a layer within the fetal rectum. medullary m., the endosteum. mucocutaneous m., a membrane that is partly mucous and partly cutaneous, like that of the tympanum. mucous m., a membrane composed of epithelium upon a basementmembrane with a subcutaneous tissue, lining those canals and cavities of the body which communicate with external air, such as the alimentary canal and its branches, the respiratory tract and its connections, and the genito-urinary tract Nasmyth's m., a membrane covering the enamel of an unworn tooth. **nictitating m**., the so-called third eyeld of various animals, as the horse. **nuclear m**., the outer layer of the nucleoplasm. obturator m., the tough layer that closes the obturator foramen. olfactory m., the schneiderian membrane. ovular m., the vitelline membrane palatine m., the membrane covering the roof of the mouth. pericolonic m., a membrane passing from the serosa of the abdominal wall to the colon. Cf. Jackson's membrane, Treves's fold, etc. peridental m., periodontal m. See pericementum. perior-bital m., the periosteum of the orbit. pharyngeal m., the membrane that closes the oral end of the embryonic gut plasma m., the end of the embryonic gut plasma m., the hypothetic membrane surrounding or enveloping a cell, the superficial layer of the protoplasm of a cell Sec ectoplasm. pleuropericardial m., the membrane which separates the heart and the lung-sac in the embryo proligerous m., the discus proligerus prophylactic m., pyoprophylactic membrane pseudoserous m., a membrane which looks like a serous membrane, but differs from it in structure pupillary m., a delicate membrane closing in the fetal pupil and disappearing about the seventh or eighth month of fetal life. purpurogenous m., the pigment epithelium of the eye. pyogenic m., a membrane which produces pus. pyophylactic m., a fibrinous membrane lining a pus-cavity and tending to prevent the reabsorption of injurious materials Ranvier's m., Rénaut's layer. See layer. Reichert's m. See Bowman's m. Reissner's m., a thin membrane between the cochlear canal and the scala vestibuli reticular m., reticulated m., the net-like covering of the organ of Corti. ruyschian m., the entochoroidea Scarpa's m., the membrana tympani secundaria schneiderian m., the mucous membrane which lines the nose. semipermeable m., a membrane which permits the passage of a solvent, such as water, but prevents the diffusion of molecules of the dissolved substance. **serous m.**, the lining membrane of any one of the great splanchnic or lymph-cavities. **Shrapnell's m.**, the thin upper part of the membrana tympani. spore-m. See sporocyst. striated m., the zona radiata. subenamel m., a membrane said to exist be-tween the enamel pulp and the enamel of a tooth. subspithelial m., the basement-membrane. subzonal m., the outer layer of the amnion. synovial m., a membrane that secretes synovia. Synovial membranes are of three kinds: articular synovial m's, or those that line the cavities of a joint, forming the synovial capsule; bursal synovial m's, or those that line bursa mucosæ; and vaginal synovial m's, or those that line tendonsheaths, forming synovial sheaths. tarsal m., the palpebral cartilage. **tectorial m.**, a delicate gelatinous mass resting on the organ of Corti and connected with the hairs of the hair cells. **Tenon's** m. See Tenon's capsule. thyrohyoid m., the membrane which connects the thyroid cartilage and the hyoid bone. Traube's m., an artificial chemical membrane when a solution of potassium ferrocyanid is brought into contact with a solution of a copper salt, a film of potassium is formed at the plane of contact of the two liquids. tympanic m., the membrana tympani. undulating m., a protoplasmic membrane running like a fin along the body of certain protozoa utero-epichorial m., the decidua vera vestibular m. Same as Reissner's m. virginal m., the hymen. vitelline m., the external envelope of the ovum. vitreous m. Same as Bruch's m. Volkmann's m., a thin, yellowish membrane studded with miliary tubercles which lines the fibrous wall of a tubercular abscess. Wachendorf's m. 1. The pupillary membrane. 2. The membrane which invests a cell yolk-m., the vitelline membrane. Zinn's m., the ectiris, or anterior layer of the iris.

membranelle (mem-bra-nel'). A small membrane composed of cilia, seen in ciliate organisms.

membraniform (mem-bra'nif-orm). Resembling a membrane.

membranin (mem'bra-nin) 1. A protein making up the lens-capsule and Descemet's membrane. 2. The cellulose of yeast-cells.

membranocartilaginous (mem"bran-o-kar-tilaj'ın-us) 1 Developed in both membrane and cartilage. 2. Partly cartilaginous and partly membranous.

membranoid (mem'bra-noid). Resembling a membrane.

membranous (mem'bran-us) [L. membrano'sus]. Pertaining to or of the nature of a membrane.

membroid (mem'broid) A capsule of animal membrane for the administration of medicines in order that they may not be absorbed until they reach the intestine.

membrum (mem'brum). Latin for member. m. mulie'bre, the clitoris m. viri'le, the penis

memory (mem'o-re) [L. memo'ria]. That mental faculty by which sensations, impressions, and ideas are recalled. affect m., the memory of a psychic trauma. anterograde m., a memory serviceable for events long past, but not able to acquire new recollections. coast m. See tropical amnesia, under amnesia. kinesthetic m., the memory of movements in the limbs and other parts of the body.

menacme (men-ak'me) [Gr. μήν month + ἀκμή top]. That period of a woman's life which is marked by menstrual activity.

menarche (men-ar'ke) [Gr. μήν month + ἀρχή beginning] The establishment or beginning of the menstrual function.

Mendel's reflex (men'delz) [Karl Mendel, contemporary German neurologist]. See reflex.

Mendeléeff's law (men-de-la'efs) [Dimitri Ivanovich Mendeléeff, Russian chemist, 1834-1907]. See periodic law, under law.

mendelian (men-de'le-an). Relating to Gregor Johann Mendel, 1822-1884, an Austrian monk and naturalist. See Mendel's law, under law.

mendelism (men'del-izm). See Mendel's law, under law.

mendelize (men'del-īz). To conform to Mendel's law. See under law.

menelkosis (men-el-ko'sis) [Gr. μῆνες menses + ἔλκωσις ulceration]. Vicarious menstruation from an ulcer.

menhidrosis, menidrosis (men-hid-ro'sis, menid-ro'sis) [Gr. μήν month + lδρώs sweat]. The discharge of bloody sweat in place of the menstrual flow

Ménière's disease (men-e-ārz') [Prosper Ménière, French physician, 1799-1862]. See disease.

meningeal (men-in'je-al). Of or pertaining to the meninges.

meningematoma, meningematoma (men-injem-at-o'mah). Hematoma of the dura mater.

meningeocortical (men-in"je-o-kor'tik-al). Of or pertaining to the meninges and cortex of the brain.

meningeorrhaphy (men-in-je-or'af-e) [Gr. μῆνιγξ membrane + ῥαφή suture]. Suture of mem-

branes: especially suture of the spinal cord, in which the sutures pass through the membranes only.

meninges (men-in'jēz) [pl. of Gr. μῆνιγξ membrane]. The three membranes that envelop the brain and spinal cord, including the dura, pia, and arachnoid.

meningina (men-in-ji'nah). The pia mater and cerebral layer of the arachnoid considered as a single membrane.

meninginitis (men-in-jin-i'tis). Inflammation of the meningina; leptomeningitis.

meningioma (men-in-je-o'mah) [meninges + Gr. -ομα tumor] A tumor of the meninges; a tumor of the dura mater.

meningism (men-in'jizm). 1. A condition due to pain in the meningeocortical region of the brain, marked by excitation, followed by depression of the cortex, with vomiting, constipation, and thermic disorders. 2. A hysteric simulation of meningitis.

meningitic (men-in-jit'ik). Pertaining to or of the nature of meningitis.

meningitis (men-in-ji'tis) [Gr. μῆνιγξ membrane].
Inflammation of the meninges When it affects the dura mater, the disease is termed pachymeningitis: when the arachnoid and pia mater are involved, it is called leptomeningitis, or meningitis proper. African m., sleeping-sickness. alcoholic m., a form associated with the excessive use of alcoholic drinks. m. of the base, basilar m., that which affects the meninges at the base of the brain. cerebral m., inflammation of the meninges of the brain, acute or chronic. In acute cerebral m, which may be due to traumatism, tuberculosis, or to extension of inflammation from neighboring structures, sion of innammation from neighboring structures, the symptoms are chills, fever with slow pulse, headache, vomiting, delirium, and symptoms that indicate irritation of the nerves at the base and vertex of the brain, as ptosis, squint, optic neuritis, facial paralysis, spasm of the muscles at the back of the neck, etc In chronic cerebral m., which is usually due to alcoholism or to syphilis, the symptoms are headache, with mental degeneration in the alcoholic, and pressure-symptoms in the syphilitic, variety. cerebrospinal m., an inflammation of the membranes of the brain and spinal cord. It may be caused by many different organisms. Mycobacterium tuberthe culosis, pneumococcus, streptococcus, gonococcus, Hemophylus influenza, Pasteurella pestis, Pfeisserella malles, Bacterium typhosum, B. coli, etc. epidemic cerebrospinal m., an acute infectious disease attended by seropurulent inflammation of the membranes of the brain and spinal cord, and due to infection by the Newsse'ria meningit'-(Diplococ'cus intracellula'ris meningi'tidis). The disease appears usually in epidemics, and the symptoms are those of acute cerebral and spinal meningitis, in addition to which there is usually an eruption of erythematous, herpetic, or hemorrhagic spots upon the skin. Called also cerebrospinal fever and spotted fever. episoötic cerebrospinal m., a disease of horses, frequently occurring in epidemics, and characterized by dysphagia, unsteady gait, delirium, and muscular contractions. external m., pachymeningitis externa. internal m., pachymeningitis interna. metastatic m., that which is due to the transmission of the affection from a remote part. Occlusive m., leptomeningitis of children which leads to the closure of the foramen of Magendie. otitic m., a form that sometimes complicates an attack of otitis. parameningococcus m., meningitis caused by the parameningococcus. posterior m., meningitis of the cerebellar region. purulent m., that which is suppurative. septicemic m., that which is due to septic bloodm. sero'sa. See serous m. m. sero'sa circumscrip'ta, meningitis giving rise to cystic accumulations of serous fluid which cause

symptoms of tumors. **m. sero'sa circum-**scrip'ta cys'tica, chronic meningitis with cyst formation. **serous m.**, meningitis with serous exudation into the ventricles and subarachnoid spaces. **simple m.**, that in which there is an exudate of fibrin and serum. **spinal m.**, inflammation of the meninges of the spinal cord. Acute spinal m. is attended with fever, pain in the back and limbs, radiating along the peripheral nerves, rigidity of the muscles, dyspnea, retention of urine, and paralyses. In chronic spinal m. there are pains in the back and along the courses of nerves, hyperesthesia, paralysis, and atrophy of muscles. **m. sympath'ica**, a condition of the cerebrospinal fluid caused by inflammation in the nieghborhood of the meninges. It is marked by increase in the pressure of the fluid and increase in its albumin and cellular content. The fluid is sterile and there may be symptoms of meningitis (Plant and Schottmiller). **traumatic m.**, that which is due to traumatism or injury. **tuber-**cular m., tuberculous m., acute hydrocephalus.

meningitophobia (men"in-jit"o-fo'be-ah) [meningitis + Gr. φόβοs fear]. A condition simulating meningitis, but due to fear of that disease.

meningobacterin (men-in"go-bak'ter-in) A propiletary name for meningococcus vaccine for immunization against cerebrospinal meningitis.

meningocele (men-in'go-sēl) [Gr. μηνιγξ membrane + κηλη hernia]. Hernial protrusion of the meninges.

meningocephalitis (men-in"go-sef al-i'tis). Same as meningo-encephalitis.

meningocerebritis (men-in"go-ser-e-bri'tis) [meninguts + cerebritis]. Meningo-encephalitis; inflammation of the meninges and the brain,

meningococcemia (me-ning"-o-kok-se'me-ah).
The presence of meningococci in the blood.

meningococcidal (me-nlng"o-kok-si'dal) [meningoccus + L cædere to kill]. Destroying meningococci.

meningoeoccin (me-nin-go-kok'sin) An antigenic material precipitated from saline suspensions of the meningoeoccus by means of alcohol. It is applied as a skin test (Intradermal) in the detection of meningoeoccus carriers

meningococcus (men-in"go-kok'us) [Gr. μῆνιγξ membrane + κόκκος berry]. Same as Neisseria meningitidis. Jager's m. See Diplococcus crassus.

meningocortical (men-in''go-kor'tik-al). Affecting the meninges and cortex.

meningo-encephalitis (men-in"go-en-sef-al-i'tis) [Gr. μῆνιγξ membrane + ἐγκέφαλος brain + -ιτις inflammation]. Inflammation of the brain and meninges. chronic m., general paresis See baresis.

meningo-encephalocele (men-in"go-en-seí'al-o-sél) [Gr μῆνιγξ membrane + ἐγκέφαλος brain + κήλη hernia] Hernial protrusion of the brain and meninges.

meningo-encephalomyelitis (men-in"go-en-sef" al-o-mi-el-i'tis) [Gr. μῆνιγξ membrane + ἐγκέρα-λος brain + μνελός marrow + -ιτις inflammation]. Inflammation of the meninges, brain, and spinal cord.

meningomalacia (men-ln''go-mal-a'se-ah) [Gr. μῆνιγξ membrane + μαλακία softness]. Softening of a membrane.

meningomyelitis (men-in"go-mi-el-i'tis) [Gr. μῆνιγξ membrane + μυελός marrow + -ιτις inflammation]. Inflammation of the spinal cord and its membranes.

meningomyelocele (men-in"go-mi-el'o-sēl) [Gr. μῆνιγξ membrane + μυελός marrow + κήλη hernia]. Hernial protrusion of a part of the spinal cord and its membranes.

meningomyelorrhaphy (me-nin"go-mi-el-or'af-e)
[Gr, μῆνιγξ membrane + μυελός marrow +

 $\beta a \varphi h$ suture]. Suture of the spinal cord, with sutures passing through both cord and membranes.

meningo-osteophlebitis (men-in"go-os"teofleb-i'tis) [Gr. μῆνιγξ membrane + δοτξον bone + ψλέψ vein + -ιτις inflammation]. Periostitis with inflammation of the veins of a bone.

meningorachidian (men-in"go-rah-kid'e-an) [Gr. μβριγξ membrane + βάχις spine]. Pertaining to the spinal cord and its membranes.

meningoradicular (men-in''go-rad-ik'u-lar) [Gr. μῆνιγξ membrane + L. ra'dix root]. Pertaining to the meninges and the roots of the cranial and spinal nerves.

meningorrhagia (men-in"go-ra'je-ah) [Gr. μῆνιγξ membrane + -paγιa break]. Hemorrhage from the cerebral or spinal membranes.

meningorrhea, meningorrhea (men-in"gor-e'-ah) [Gr. $\mu \hat{\eta} \nu_i \gamma \xi$ membrane $+ \dot{\rho} o l \alpha$ flow]. Effusion of blood between or upon the meninges.

meningosis (men-in-go'sis) [Gr. μῆνιγξ membrane].

The membranous attachment of bones to each other.

meningotyphoid (me-nin"go-ti'foid). Typhoid in which meningeal symptoms are very prominent.

meninguria (men-in-gu're-ah) [Gr. μῆνιγξ membrane + οὖρον urine]. The occurrence of membranous shreds in the urine.

meninx (me'ninks), pl. menin'ges [Gr. μῆριγξ membrane]. A membrane; especially one of the three envelopes of the brain and spinal cord. m. fibro'sa, the dura mater. m. sero'sa, the arachnoid. m. ten'uis, the arachnopia. m. vasoulo'sa, the pia mater.

menischesis (men-is'ke-sis) [Gr. μῆνες menses + σχέσις retention]. Retention of the menses.

meniscitis (men-is-ki'tis). Inflammation of semilunar cartilage of the knee-joint.

meniscus (men-is kus) [Gr. μηνίσκος crescent]. A crescentic interarticular fibrocartilage. converging m. Same as positive m. diverging m., a concavoconvex lens having its concave surface of greater radius than its convex surface. m. laters/lis [B N A], the external semilunar cartilage. media/lis [B N A], the internal semilunar cartilage. negative m., a convexoconcave lens. positive m., a concavoconvex lens. slip m., dislocation of the internal semilunar cartilage of the knee-joint. tactile m., a disk-like expansion of the axis-cylinder of a sensory nerve in the epidermis.

menispermin (men-is-per'min). A crystalline alkaloid, C₁₈H₂₄N₂O₂, from Anamirta paniculata.

Menispermum (men-is-per'mum) [Gr. $\mu \eta \nu \eta$ moon $+ \sigma \pi \ell \rho \mu a$ seed]. A genus of plants. The rhizome and roots of M. canaden'se, moonseed or yellow parilla, are used like sarsaparilla, as a tonic and alterative. Dose of fluidextract, 30-60 min. (2-4 c.c.).

menocelis (men-os-e'lis) [Gr. $\mu \dot{\eta} \nu$ month + $\kappa \eta \lambda is$ spot]. A spotted condition of the skin due to stoppage of the menses.

menolipsis (men-o-lip'sis) [Gr. μήν month + λεῦψις failing]. Temporary cessation of menstruation.

menopause (men'o-pawz) [Gr. μήν month + παῦσις cessation]. The period when menstruation normally ceases; the change of life.

menophania (men-o-fa'ne-ah) [Gr. μήν month + φάνια appearance]. The appearance of the menses at puberty.

menoplania (men-o-pla'ne-ah) [Gr. $\mu\eta\nu$ month + $\pi\lambda\dot{a}\nu\eta$ deviation]. Metastasis or aberration of the menses; vicarious menstruation.

menorrhagia (men-or-a'je-ah) [Gr. μήν month + ἡηγνύναι to burst forth]. Abnormally profuse menstruation.

menorrhalgia (men-or-al'je-ah) [menorrhea + Gr. ἄλγος pain]. Painful menstruation.

menorrhes (men-or-e'ah) [Gr. μήν month + jola flow]. I. The normal discharge of the menses.

2. Too free or profuse menstruation.

menosal (men'o-sal). A proprietary preparation, menthyl salicylic methyl ester, used internally as an analgesic.

menoschesis (men-os'kes-is) [Gr. μήν month + σχέσις retention]. Suppression of the menses.

menosepsis (men-o-sep'sis) [Gr. $\mu\dot{\eta}\nu$ month $+\sigma\dot{\eta}\psi\iota$ s decay]. Septic poisoning from retained menses.

menostasia, menostasis (men-o-sta'ze-ah, menos'tas-is) [Gr. μήν month + στάσις halt]. Suppression of the menses.

menostaxis (men-o-stak'sis) [Gr μήν month + στάξις dripping]. A prolonged period of menstruation due to necrosis of the endometrium.

menotoxin (men-o-tok'sin) A toxic substance in the blood and body fluids of women during the menstrual period.

menoxenia (men-ok-se'ne-ah) [Gr. μήν month + ξένος strange]. Abnormal menstruation.

mensalin (men'sal-in). A proprietary powder used as a nervine and sedative in gastric and intestinal disorders and in menstrual disturbance.

mensan (men'san). A preparation from the hazelnut, used as a hemostatic.

menses (men'sēz) [L. pl. of men'sis month]. The monthly flow of blood from the genital tract of women, attended with congestion of the genital tract and hypertrophy of the uterine mucous membrane. It attends the discharge of ova from the ovary.

menstrual (men'stru-al) [L. menstrua'lis]. Pertaining to the menses.

menstruate (men'stru-āt) [L. menstrua're]. To have the monthly courses; to discharge the menses.

menstruation (men-stru-a'shun). The monthly sanguineous discharge peculiar to women; the recurrence of the menses. It begins at the age of puberty (twelve to seventeen years) and extends to the menopause. climacteric m., the time or epoch of the first menstruation. regurgitant m., a back-flow through the tubes by which epithelial cells and other materials may be discharged through the ostium and deposited on the ovary and adjacent organs, as in endometrioma. vicarious m., a menstrual flow from some part or organ other than the vagina.

menstruous (men'stru-us). Pertaining to menstruation.

menstruum (men'stru-um) [L men'struus menstruous it was long believed that the menstrual fluid had a peculiar solvent quality]. A solvent medium.

mensual (men'su-al) [L. men'sis month]. Monthly.

mensuration (men-su-ra'shun) [L. mensura'tio;

mensu'ra measure]. The act or process of measuring.

mentagra (men-tah'grah) [L. men'tum chin + Gr. äγρα seizure]. Same as sycosis.

mentagrophyton (men-tag-rof'it-on) [L. menta'gra sycosis + Gr. φυτόν plant]. The fungus Micros'-poron mentagroph'ytes, the cause of sycosis.

mental (men'tal). r. [L. mens mind.] Pertaining to the mind. 2. [L. men'tum chin.] Pertaining to the chin.

mentalia (men-ta'le-ah). See psychalia.

mentalis muscle (men-ta'lis). Same as levator labii inferioris. See muscles, table of.

mentality (men-tal'it-e). The mental power or activity.

Mentha (men'thah) [L.]. A genus of labiate plants: the mints.
 M. piperi'ta. See peppermint.
 M. pule'gium, true pennyroyal. See pennyroyal.
 M. vir'idis, spearmint: a carminative and aromatic stimulant. Dose of volatile oil, 2-5 min.

2 666 c.c.).

menthalcal (men-thal'kal). A proprietary combination of menthol and a salt from the mineral springs of Ems, in Germany.

menthene (men-then'). A fragrant liquid hydrocarbon, $C_{10}H_{18}$, derivable from menthol. **m.** carbonate, a white, tasteless powder, $(C_{10}H_{18})$ CO₃.

menthenone (men'the-non). A colorless ketone, C₁₀H₁₆O, contained in peppermint oil.

mentheolate (men'the-o-lat). A solution of 200 grains of menthol in \frac{1}{2} fluidounce of oleic acid.

menthiodol (men-thi'o-dol). A preparation of 4 parts of menthol with I part of iodin: used locally in neuralgia.

menthoform (men'tho-form). A preparation of menthol, formic aldehyd, and glycerin.

menthol (men'thol). Mint-camphor, a monacid menthane alcohol, (CH₃)₂CH.C₆H₉(CH₃)OII, a crystalline stearopten from oil of peppermint or other mint oils. It is anodyne, and is used, for the most part, externally in neuralgia, skin diseases, and rhinitis. Dose, ½-2 gr (0 033-0.133 gm.). m. valerianate. See validal

mentholin (men'tho-lin). A proprietary remedy for coryza, containing menthol, I part; boric acid and coffee (roasted and finely powdered), each, 10 parts.

mentholyptine (men-tho-lip'tin). A proprietary antiseptic compound of menthol and eucalyptol: for external use.

menthone (men'thōn). A volatile oil, a ketone, $(CH_3)_2CH.C_0H_8O$ CH_3 , from oil of peppermint

menthophenol (men-tho-fe'nol). A liquid preparation of menthol (3 parts) and phenol (1 part): an antiseptic and local anesthetic.

menthorol (men'tho-rol). A mixture of para-chlorphenol and menthol used locally in laryngeal phthisis

menthospirin (men-tho-spi'rin). The acetylsalicylic-acid ester of menthol used like aspirin.

menthoxol (men-thoks'ol). A solution of menthol and hydrogen dioxid in alcohol: a deodorant antiseptic for external use.

menthyl (men'thil). The monovalent radical. C10H19.

mentimeter (men-tim'et-er) [L. mens mind + Gr. μέτρον measure]. A method or means of measuring mental capacity.

mento-anterior (men"to-an-te're-or) [L. men'tum chin + ante'rior before]. Having the chin directed forward.

mentolabial (men-to-la'be-al). Pertaining to the cheek and lip

mentolabialis (men"to-la-be-a'lis). The levator labii inferioris and the quadratus menti regarded as one muscle.

mentoposterior (men"to-pos-te're-or) [L. men'tum chin + poste'rior after]. Having the chin directed toward the back, or turned sacrad (used of the fetus at delivery).

mentulagra (men-tu-lag'rah) [L. men'tula penis + Gr. άγρα seizure] 1 Priapism. 2. Chordee.

mentulate (men'tu-lat). Having a large penis.

mentulomania (men"tu-lo-ma'ne-ah) [L. men'tula penis + mania]. Masturbation.

mentum (men'tum) [L.]. The chin.

Menyanthes (men-e-an'thēz) [Gr. μήν month + M. trifolia'ta, or buckbean, is a bitter tonic, useful in rheumatism, sick headache, jaundice etc. Dose of powdered leaves, 20-30 gr. (1.3-2 gm.).

menyanthin (men-e-an'thin). Inulin.

Menzer's serum (ment'zerz) [Arthur August Ludwig Menzer, German bacteriologist, born 1872]. See serum.

(0.133-0.333 c.c.); of spirit, 10-40 min. (0.666- mephitic (me-fit'ik) [L. mephit'icus; mephitis foul exhalation]. Emitting a foul odor.

meralgia (me-ral'je-ah) [Gr. μηρός thigh + άλγος pain]. Pain in the thigh. m. paræsthet'ica, a disease marked by paresthesia and disturbance of sensation in the outer surface of the thigh, in the region supplied by the external cutaneous femoral nerve. The paresthesia consists of burning, tingling, stabbing pains of considerable severity, or possibly only of a feeling of numbness. The sensory disturbances vary from slight hyperesthesia to total anesthesia. Called also Bernhardi's disturbance of sensation.

merbaphen (mer'baf-en). Novasurol.

mercaptan (mer-kap'tan) [L. mercu'rium cap'tans seizing or combining with mercury]. Any alcohol in which hydroxyl oxygen is replaced by sulphur; a thioalcohol.

mercaptol (mer-kap'tol). A compound formed from a ketone by introducing two thio-alkyl groups in place of the bivalent oxygen.

mercauro (mer-kaw'ro) [mercury + L. au'rum gold]. A proprietary solution of bromids of gold, arsenic, and mercury, each, 10 min, containing $\frac{1}{32}$ gr. of each of the bromids.

merchochinol (mer-ko-kin'ol) Mercury oxyquinolin sulphonate, a yellow powder, used for the administration of mercury internally, externally, and hypodermically.

Mercier's bar, valve, etc. (mer-se-āz') [Louis Auguste Mercier, French urologist, 1811-1882]. See bar, valve, etc.

mercodel (mer'ko-del). A fine trituration of mercury with glucose suggested for intravenous treatment of syphilis.

mercolint (mer'ko-lint). A cloth impregnated with metallic mercury and worn over the chest in the treatment of syphilis.

mercupressin (mer-ku-pres'in). A proprietary preparation essentially the same as spirocide.

mercuramin (mer-ku'ram-in). A germicide, mercury ethylene-diamin-citrate.

mercurammonium (mer-ku-ram-o'ne-um). precipitate produced when ammonium hydroxid is added to a solution of a mercuric salt m. chlorid, infusible white precipitate, HgNH₂Cl, the essential constituent of hydrargyrum ammoniatum.

mercuran (mer'ku-ran). A 50 per cent. mercurial ointment prepared with goose-fat stearin.

mercurette (mer-ku-ret'). A proprietary preparation of mercury in cocoa-butter.

mercurial (mer-ku're-al) [L. mercuria'lis]. 1. Pertaining to mercury. 2. Any preparation of mercury.

Mercurialis (mer-ku-re-a'lis). A genus of plants of Europe, M. an'nua and M. peren'nis, have alterative properties, and are used in scrofula, syphilis, dysmenorrhea, etc. Dose of fluidextract, 5-30 min. (0 3-2 c.c.).

mercurialism (mer-ku're-al-izm). Chronic poisoning from misuse of mercury; hydrargyrism.

mercurialization (mer-ku"re-al-iz-a'shun). The act or process of putting under the influence of mercury.

mercurialized (mer-ku're-al-īzd). Treated with mercury; containing mercury. m. serum. See under serum.

mercuric (mer-ku'rik). Pertaining to mercury as a bivalent element. m. benzoate, a white, crystalline, tasteless salt, $(C_0H_3-CO\ O)_2Hg + H_2O$, for intramuscular injection in the treatment of syphilis. m. cacodylate, a white, crystalline powder of mercuric methyl-arsenate, [(CH₃)₂ AsO.-Ol2Hg: used in the treatment of syphilis m. chlorid, mercury bichlorid, a crystalline salt, HgCl₂ used externally in syphilis, and internally in doses of $\frac{1}{60}$ gr. (0 001-0.003 gm.), as an antiseptic, alterative, and antisyphilitic. Called also

corrosive sublimate, bichlorid of mercury, and hydrargyri chloridum corrosivum (U. S. P.). m. drargyri chloridum corrosvum (U. S. P.). m. chlorid glutinopentonate, an antisyphilitic double salt. Subcutaneous dose, ½ gr. (0.01 gm.). m. chlorid-urea, a solution of 1 gm. of mercuric chlorid and ½ c c. of urea in 100 c.c. of water: for subcutaneous injection in syphilis. m. cyanid, a very poisonous salt, Hg(CN)₂; is colorless: to be used subcutaneously, with great caution, in the treatment of syphilis. m. diiodosalicylate, a yellow, amorphous powder, (OH.C₆H₂I₂.CO.O)₂Hg: used in the treatment of syphilis. m. formamidate, a solution, (NH2 CO O)2Hg: used subcutane-Daily dose, 1 gr. (o o6 gm) ously in syphilis guaiacol-sulphonate, brown crystals of [CH3-O.C₆H₃(OII)SO₂O]₂Hg. used by intramuscular injections in syphilis in doses of ½ gr. (0032 gm) gradually increased. **m. iodate**, a salt of mercury, $Hg(IO_3)_2$. antisyphilitic. **m. iodid red**, a salt of mercury. $Hg(IO_3)_2$. antisyphilitic. **m. iodid red**, a salt of mercury. $Hg(IO_3)_2$. It scarlet red insoluble amorphous powder, HgI2. is used as a germicide in solution with potassium iodid. m. lactate, white crystalline powder, (CH₃ CHOH.COO)₂Hg. m. ortho-guaiacolsulphonate, brown, soluble crystals of (OH.C_g-H₃(CH₃O)SO₂O)₂Hg. It has been used in the treatment of syphilis. m. oxid, red, red precipitate; a heavy orange-red crystalline powder, HgO used in the dressing of syphilitic sores. m. oxid, yellow, a light orange-yellow amorphous powder, HgO, obtained by precipitation from mercuric chlorid. It is used in ointments. m. oxidasparagin, ar antiseptic and antisyphilitic agent, (NH₂.C₂H₃(CONH₂)CO₂)₂Hg. m. oxy-cyanid, a white, crystalline powder, Hg(CN)₂.-HgO used as antiseptic and antisyphilitic. m. peptonate, an antisyphilitic agent to be used subcutaneously. m. phenate, phenylate. See mercury carbolate m. resorcinate, a dark yellow, crystalline powder: used therapeutically in minute subcutaneous doses. m. salicylate, a white, tasteless powder, (OH C₆H₄ CO₂)₂Hg, insoluble in water and alcohol: used as an internal and external antisyphilitic, antigonorrheic, etc. Dose, ${}_{16}^{3}$ -1 $\frac{1}{4}$ gr. (0.01-0.08 gm.); locally, in 1 per cent. powder or ointment. m. subsulphate, yellow, a heavy lemon-yellow powder, HgSO4-2H₂O. used as an emetic. m. succinimid. See under mercury. m. sulphid, a brilliant scarlet powder, HgS. Called also vermilion or cinnabar. It may be used for fumigation in syphilis.

mercuricide (mer-ku'ris-id). Lemon-yellow crystals of the iodid of lithium and mercury, HgI₂₋₃LiI. It is actively germicidal.

Mercurio's position (mer-koo're-ōz) [Geronimo Scipione Mercurio, Italian accoucheur, 1550-1595]. See position.

mercurivanillin (mer-ku-ri-van-il'in). A proprietary remedy for syphilis, said to contain 40 per cent. of mercury.

mercurochrome (mer-ku'ro-krōm). A red powder, dibrom-oxymercury-fluorescein or its sodium salt, $C_6H_2B_7(C)_2C(C_6H_4\ COONa)\,C_6HBr(ONa)HgOH$, which is a green crystalline powder. The acid is obtained by substituting one atom of mercury in the molecule of dibromfluorescein and contains about 26 per cent. of mercury: used as a germicide for the genito-urinary tract.

mercuro-iodohemol (mer"ku-ro-i"o-do-he'mol).

A brown powder, insoluble in water, containing hemol, mercury, and iodin: an alterative and hematinic.

mercurol (mer'ku-rol). A cream-colored, soluble powder, mercury nucleide: it is used in irrigations for gonorrhea and as an antisyphilitic.

mercurophen (mer-ku'ro-fen). Sodium oxymercury orthonitrophenolate. a powerful antiseptic, NO₂.C₆H₃(HgOH) ONa, and germicide: used in the treatment of gonorrhea, pneumococcic infections of the eye, and pyogenic skin infections.

mercurosal (mer-ku'ro-sal). An organic mercury compound, disodium hydroxy mercuri-salicyl-

oxyacetate, COONa.C₆H₃(HgOH).O.CH₂.COONa It contains about 43 per cent. of mercury and is used for the treatment of syphilis.

mercurous (mer'ku-rus). Pertaining to mercury as a univalent element. m. acetate, a salt in white or gray scales, (CH₃COO)₂Hg₂: antisyphilitic Dose, \(\frac{1}{2} - \text{if} \) gr. (0 or -0 of gm). m. chlorid. See calomel. m. iodid, yellow, a bright yellow insoluble amorphous powder, HgI: it has been used in syphilis.

mercury (mer'ku-re) [L. mercu'rius, or hydrar'-gyrum]. A metallic element, liquid at ordinary temperatures, quicksilver. Its symbol is Hg; atomic weight, 200 6; specific gravity, 13 50 atomic weight, 2000, specific gravity, 1, 3, 4 is insoluble in ordinary solvents, being only partially soluble in boiling hydrochloric acid It may be dissolved, however, in nitric acid Mercury forms two sets or classes of compounds--mercurous, in which a single atom of mercury combines with a monovalent radical, and mercuric, in which a single atom of mercury combines with a bivalent radicle. Mercury and its salts are used in medicine as purgatives and cholagogues; as alteratives in chronic inflammations, as antisyphilitics, intestinal antiseptics, disinfectants, and astringents They are absorbed by the skin and mucous membranes, causing chronic mercurial poisoning, or hydrargyrism. The mercuric salts are more soluble and irritant than the mercur-See also under mercuric and mercurous. m. alanate, m. aminoproprionate, a white, crystalline powder. Subcutaneous dose, $\frac{1}{12}$ - $\frac{1}{6}$ gr. (0.005-0.01 gm.). **m. albuminate**, a salt whose triturate with sugar of milk is employed as an antiseptic dusting-powder. ammoniated m. See hydrargyrum ammonialum. m. arsenite, a brownish powder, Hg3AsO3 used in syphilis and intestinal disorders m. asparaginate, m. imidosuccinate, a bright, crystalline powder, $(C_2H_4((C))_2N)_2Hg$ Dose, ξ_0 gr. $(\infty \cos 3 \text{ gm})$. m. atoxylate, the mercury salt of paramidophenyl arsenic acid, $[NH_2C_0H_4AsO(OH)O]_2Hg$ used in spirochetal disease m. bichlorid. See mercuric chlorid. m. biniodid. See mercuric iodid. m. cacodylate. See mercuric cacodylate. m. carbolate, a salt in nearly colorless needles, $(C_0H_5O)_2Hg + H_2O$. Dose, $\frac{1}{4}$ - $\frac{1}{2}$ gr. (0.016-0.032) gm.). colloidal m. See hyrgol m. dimethylate. See asquirrol. m. ethylchlorid, a substance, $Hg(C_2H_5)Cl$, in shining scales and of an offensive odor. used subcutaneously. m. ethyl-enediamin, a combination of mercury and ethylenediamin used in aqueous solution, 1 50 or 1: 200, for disinfecting the hands. **French m.**, *Mercurialis annua*. **m. fulminate**, a white, crystalline body, (C N O)₂Hg ½H₂O used in detonating caps for exploding dynamite, etc **m**. **gallate**, a salt, $(C_6H_2(OII)_4COO)_2Hg$, in a greenish-black powder: antisyphilitic. Dose, $\frac{1}{2}$ - $\frac{4}{6}$ gr. (0.03-0.05 gm). m. iodocacodylate antisyphilitic solution of mercury cacoo and sodium iodid. m. oleobrassidate, a compound resulting from the treatment of mercuric oxid with erucic acid and oleic acid. It contains 30 per cent. of mercury and is used like mercurial ointment. m. oxycyanid, a white, crystalline compound, HgO Hg(CN)₂: used as an antiseptic in diphtheria, erysipelas, wounds, etc. m. per-chlorid. See mercuric chlorid. m. peroxid, a red powder, HgO₂, which is decomposed by water, liberating oxygen and forming hydrogen dioxid and mercuric oxid. m. and potassium hyposulphite, a crystalline salt, 2HgS₂O₃ + 5K₂S₂O₃: used subcutaneously. m. and potassium iodid. See under potassium. m. and potassium sulphite, a salt in colorless crystals to be used hypodermically. m. protochlorid. See calomel. m. protoiodid. See mercurous iodid. m. pyroborate, a brown insoluble powder, HgB₄O₇· used in ointments. red iodid of m. See mercuric iodid. m. silicofluorid, a substance in crystalline prisms, Hg₂SiF₆ + 2H₂O: used as a surgical antiseptic like mercuric chlorid

in 1:1000 aqueous solution or 1:2000 ointment. m. sozoiodolate, a fine, yellow powder, $(C_0H_2|_2-(OH)SO_2)_2H_B$: antisyphilitic. Subcutaneous dose, 1 gr. (0.06 gm.). m. subchlorid. See calomel. m. succinimid, a white powder, $[(CH_2CO)_2N]_2-H_B$: used like other mercury salts. Dose by mouth, $\frac{1}{6}-\frac{1}{6}$ gr. (0.01-0.015 gm.); hypodermically, 8-16 m. (0.5-1 cc) of a 2.5 per cent solution. m. tannate, a greenish-brown powder, used in syphilis. Dose, 1-2 gr. (0.06-0.12 gm.). m. thymolacetate, a crystalline powder, $(CH_3COO)_2-H_B+CH_3COO)_2-H_B+CH_3COO$ HB. Dose, $\frac{1}{12}-\frac{1}{6}$ gr. (0.005-0.01 gm.). m. thymolate, an unstable, violet-green salt, $C_{10}H_{13}OH_BOH$. m. thymolnitrate, a salt in colorless crystals, $C_{10}H_{13}OH_BH_BNO_3$: used subcutaneously. m. tribromphenolacetate, a salt in yellow crystals: antisyphilitic. m. with chalk, metallic mercury rubbed up with chalk and honey until the particles are very small. yellow iodid of m. See mercurous iodid.

mercutin (mer'ku-tin). A preparation of finely divided mercury in talcum,

mere (mēr) [Gr. μέρος part]. Any one of the parts into which the substance of a zygote of a cell sometimes divides. Meres give rise to blasts.

mergal (mer'gal). A mixture of albumin tannate with mercuric cholate used for bringing the liver under the action of mercury.

mergandol (mer-gan'dol). Mercury sodium glycerate. used in syphilis by injection. Dose, 30 min. (2 c.c.) every other day.

meriatchenje (mehr''e-aht-chen'ge). See miry-

meridian (mer-id'e-an) [L. meridia'nus, from me'-dius middle + di'es day]. A great circle surrounding a sphere and passing through its poles. m. of the cornea, a curve formed on the surface of the cornea by an anteroposterior plane passing through the apex of the cornea. m. of the eye, a line passing around the eyeball.

meridional (mer-id'e-o-nal). Pertaining to a meridian or made along a meridian; as, meridional section.

meriodin (me-ri'o-din). Mercury diiodoparaphenolsulphonate: used in treatment of syphilis.

merism (mer'izm) [Gr. μέρος a part]. The repetition of parts in an organism so as to form a regular pattern.

Merismopedia (mer"is-mo-pe'de-ah) [Gr. μέρισμα division + πεδίον plain]. A genus of bacteria characterized by division into plates: some of the species are supposed to be pathogenic.

meriapore (mer'is-pōr) [Gr. μέρος part + σπόρος seed]. A spore produced by the division of another spore.

Merista (me-ris'tah). A genus or form of bacterial cocci growing in two dimensions and exhibiting a division at right angles.

meristem (mer'is-tem) [Gr. μερίζειν to divide]. The undifferentiated embryonic tissue of plants.

meristematic (mer-is-tem-at'ik). Pertaining to or composed of meristem.

meristic (mer-is'tik). Pertaining to or possessing merism; symmetrical; having symmetrically arranged parts.

meristiform (me-ris'tif-orm) [Gr. μεριστός divided + L. for'ma form]. A tetrad of cocci. See tetrad.

Merizomyria (mer'iz-o-mir'e-ah). A genus of schizomycetes with cylindric, phycochromous filaments in chaplets.

merjodin (mer-i'o-din). See meriodin.

Merkel's corpusoles, ganglia, or touch cells (mer'kelz) [Friedrich Siegismund Merkel, German anatomist, 1845–1919]. See under corpuscle and ganglion.

Merkel's filtrum, muscle (mer'kelz) [Karl Ludwig Merkel, German anatomist, 1812-1876]. See

meriusan (mer'lu-san). A proprietary mercury (tyrosin-mercury) preparation: used locally in the treatment of acute gonorrhea, ophthalmia, syphills, and cystitis.

Mermithida (mer-mith'id-e). A family of Nema-toda; the land hair-worms

meroacrania (mer'o-ak-ra'ne-ah) [Gr. μέρος part + a neg. + kρανίον skull]. Partial congenital absence of the cranium.

meroblastic (mer-o-blas'tik) [Gr. μέρος part + βλαστός germ]. Undergoing segmentation in only one part.

merocele (me'ro-sēl) [Gr. μηρός thigh + κήλη hernia]. Femoral hernia.

merocoxalgia (me"ro-kok-sal'je-ah) [Gr. μηρός thigh + L. cox'a hip + Gr. άλγος pain]. Pain in the thigh and hip.

merocrine (mer'ok-rīn) [Gr. μέρος part + κρινεῖν to separate]. Partly secreting. A term applied to glands in which only parts of the secretory cells disintegrate to form the secretion, as, for example, the sweat glands and the milk glands. See holocrine.

merocyte (mer'o-sīt) [Gr. μέρος part + κύτος cell]. Supernumerary sperm nucleus in the ovum in cases of polyspermy.

merodiastolic (mer"o-di-as-tol'ik) [Gr. μέρος part + diastole]. Pertaining to a part of the diastole.

merogamy (mer-og'am-e). Same as microgamy. merogastrula (mer-o-gas'tru-lah). The gastrula

of a meroblastic ovum.

merogenesis (mer-o-jen'es-is) [Gr. μέρος part + γένεσις formation]. Segmentation.

merogenetic, merogenic (mer-o-jen-et'ik, -jen'ik). Pertaining to segmentation.

merogony (me-rog'o-ne) [Gr. μέροs part + γονοs born]. The development of an organism from a portion of an egg, especially from a non-nucleated portion of an egg after fertilization by a sperm.

merology (mer-ol'o-je) [Gr. μέρος part + λόγος treatise]. That part of anatomy which deals with elementary tissues.

meromicrosomia (mer"o-mi-kro-so'me-ah) [Gr. μέρος part + microsomia]. Unusual smallness of some part of the body.

meromorphosis (mer-o-mor-fo'sis) [Gr. μέροs part + μόρφωσιs formation]. Incomplete restoration or regeneration of a lost part.

meromyerial (mer-o-mi-e're-al). A type of arrangement of the muscular system in the Nematoda. There are only two or three broad flat muscle-cells between the pillars.

meroparesthesia (me"ro-par-es-the'ze-ah) [Gr. μέρος limb + paresthesia]. Alteration of the tactile sense in the extremities.

meropia (mer-o'pe-ah) [Gr. μέρος part + ὤψ vision]. Partial blindness.

merorachischisis (me"ro-rak-is'kis-is) [Gr. μέρος part + βάχις spine + σχίσις fissure]. Fissure of a part of the spinal cord.

merosystolic (me"ro-sis-tol'ik) [Gr. μέρος share + συστολή systole]. Pertaining to a part of the systole.

merotomy (me-rot'o-me) [Gr. μέρος part + τέμνειν to cut]. Division into segments.

meroxyl (mer-ok'sil). A mixture containing about 50 per cent. of the sodium salt of 2.4-dihydroxy-3.5-dihydroxymercuribenzophenon-2-sulphonic acid. Used as a local antiseptic and germicide in 0.1-0 5 per cent. solution.

merozoite (me-ro-zo'īt) [Gr. μέρος part + ζῶρν animal]. One of the spores formed by the splitting up of the schizont in schizogenous reproduction of protozoa. Cf. sporozoite. See also under Plasmodium malariæ.

merpotide (mer'po-tid). A proprietary preparation of potassium iodid and mercury protiodid: used in

- mersalv (mer'salv). A proprietary ointment containing to per cent. metallic mercury with an oily basis.
- merulan (mer'u-lan). A combination of mercury and tyrosin, recommended for syphilis.
- Merulius lac'rymans (me-ru'le-us) The fungus of the dry-rot of wood. Inhaled in dust, it becomes parasitic, causing a persistent and sometimes fatal catarrh and bronchits.
- Méry's glands (ma-rēz') [Jean Méry, anatomist in Paris, 1645–1722]. Cowper's glands.
- merycism (mer'is-izm) [Gr. μηρυκισμός chewing]. The regurgitation of food from the stomach and chewing it again, rumination.
- merycismus (mer-is-iz'mus). Merycism.
- mesad (me'sad). Toward the median line or plane. mesal (me'sal) [Gr. μέσος middle]. Pertaining to the median line or plane
- mesameboid (mes-am-e'boid) [Gr. μέσος middle + άμοιβή change + είδος shape]. Minot's name for a primitive blood-cell or hemoblast. See hemoblast.
- mesaortitis (mes"a-or-ti'tis) [Gr. μέσος middle + aortitis]. Inflammation of the middle coat of the aorti
- mesaraic, mesareic, mesarœic (mes-ar-a'ik) [Gr. μέσος middle + ἀραιά belly] Mesenteric.
- mesarteritis (mes"ar-ter-i'tis) [Gr. μέσος middle + άρτερία artery + -ιτις inflammation]. Inflammation of the middle coat of an artery.
- mesaticephalic (mesat"is-ef-al'ik) [Gr. μεσάτος medium + κεφαλή head]. Neither brachycephalic nor dolichocephalic.
- mesatipellic, mesatipelvic (mes-at-ip-el'ik, -el'vik) [Gr μεσάτος medium + πελλίς pelvis].
 Having a pelvic index between 90° and 95°.
- mescal (mes-kahl') [Mex]. The fermented juice of Aga've america'na and other Mexican species of that genus m.-buttons, the flowering tops of Anhalo'nnum leven'n: nerve stimulant and antispasmodic. Its administration leads to color hallucinations and pleasant visions. See Anhalo'nium leven'ii.
- mescalin (mes'ka-lin). An alkaloid from Anhalo'-nium lewin'ii. See mezcalin.
- mescalism (mes'kal-izm). The habitual use of mescal-buttons.
- mesectic (mes-ek'tik). Taking up a medium or average amount of oxygen If at an oxygen pressure of 40 mm the blood will take up oxygen to the extent of 70-70 per cent, it is said to be mesectic Cf. mionectic and pleonectic.
- mesectoblast (mes-ek'to-blast). Same as ectomesoblast.
- mesembrin (mes-em'brin). An alkaloid, C₁₆H₁₉-NO₄, from Mesembryanthemum expansum with a cocain-like action
- Mesembryanthemum (mes-em-bre-an'the-mum) [L.]. A 'genus of mostly suffruticose plants. M. crystalli'num is diuretic M. acinacifor'me is anti-dysenteric. M. lortuo'sum is narcotic.
- mesencephal (mes-en'sef-al). Same as mesencephalon.
- mesencephalic (mes-en-sef-al'ik). Pertaining to the mesencephalon.
- mesencephalon (mes-en-set'al-on) [Gr. μέσος middle + ἐγκέφαλος brain]. The midbrain; the middle cerebral vesicle of the embryonic brain from which are developed the middle cerebral ganglia, including the corpora quadrigemina and crura cerebri.
- mesenchyma (mes-en'kim-ah) [Gr. μέσος middle + ἔγχυμα infusion]. The embryonic connective tissue; that part of the mesoderm whence are formed the connective tissues of the body, and also the blood-vessels and lymphatic vessels.
- mesenchymal (mes-en'kim-al). Pertaining to the mesenchyma.

- mesenchyme (mes'en-kim). Same as mesenchyma. mesenteric (mes-en-ter'ik) [Gr. μεσεντερικόs]. Pertaining to the mesentery.
- mesenteriolum (mes-en-ter-i'o-lum). A small mesentery: especially the mesentery of the intestinal diverticulum.
- mesenteritis (mes-en-ter-i'tis). Inflammation of the mesentery.
- mesenterium (mes-en-te're-um) [B N A] Mesentery. m. commu'ne, the mesentery proper.
- mesenteroblast (mes-en'ter-o-blast). Same as mesenteron.
- mesenteron (mes-en'ter-on) [Gr. μέσος middle + ἔντερον intestine]. The middle part of the embryonic body cavity, whence are derived the alimentary canal, lungs, liver, and pancreas.
- mesentery (mes'en-ter-e) [Gr. μέσος middle + ἔντερον bowel]. The fold of peritoneum which attaches the intestine to the posterior abdominal wall. It consists of the mesentery proper, a membrane connecting the small intestine with the spinal column, and the mesentery of the cecum, colon, and rectum, called respectively mesocolon, mesocecum, and mesorectum.
- mesentoderm (mes-en'to-derm). A cell-layer of the early embryo not yet differentiated into mesoderm and entoderm.
- mesentomere (mes-en'to-mēr). A blastomere not yet divided into mesomeres and entomeres.
- mesepithelium (mes-ep-e-the'le-um). Same as mesothelium.
- mesiad (me'se-ad). Toward the middle; mesad.
- mesial (me'se-al) [Gr. μέσος middle]. Situated in the middle; median; toward the middle line of the body or toward the center line of the dental arch.
- mesien (me'se-en). Pertaining to the mesion.
 mesin (mes'in). Hexamethylenetetramin lithium
- mesin (mesin). Hexamethylenetetramin lithium citrate; a urinary antiseptic.
- mesiobuccal (me"se-o-buk'al). Pertaining to surfaces between the mesial and buccal aspects of a tooth.
- mesiobucco-occlusal angle (me"se-o-buk"o-ok-lu'zal). See under angle.
- mesioclusion (me-se-o-klu'zhun). Malocclusion in which the mandibular arch has an anterior relation to the maxillary arch; anteroclusion
- mesiodistal (me"se-o-dis'tal). Pertaining to the mesial and distal aspects of a tooth.
- mesiolingual (me"sc-o-ling'wal). Pertaining to the surfaces between the mesial and lingual aspects of a tooth
- mesion (me'se-on) [Gr. μέσος middle]. The plane that divides the body into right and left symmetric halves.
- mesio-occlusal angle (me"se-o-ok-lu'zal) See under angle.
- mesio-occlusion (me"se-o-ok-lu'zhun). Same as mesioclusion.
- mesioversion (me"se-o-ver'shun). The condition of a tooth which is nearer than normal to the median line of the face.
- mesiris (mes-i'ris) [Gr. μέσος middle + iris]. The middle layer of the iris.
- **mesitylene** (mes-it'il-ēn). Symmetric trimethylbenzene, $C_0H_3(CH_3)_3$, from coal-tar.
- mesitylenic acid. C₆H₃(CH₃)₂.COOH, an oxidized form of mesitylene.
- mesityluric acid. The form in which mesilylene is excreted in the urine. A compound of mesitylenic acid and glycocoll, C₆H₃(CH₃)₂.CO.NH.CH₂.-COOH.
- mesmerism (mes'mer-izm) [after Friedrich A. Mesmer, 1733-1815]. Hypnotism, or animal magnetism.
- mesmeromania (mes"mer-o-ma'ne-ah) [mesmerism + Gr. μανία madness]. Insane devotion to mesmerism.

- meso- [Gr. μέσος middle]. 1. A prefix signifying "middle," either situated in the middle or moderate.
 2. In chemistry, a prefix signifying inactive or without effect on polarized light.
- meso-appendicitis (mes''o-ap-en-di-si'tis). In flammation of the meso-appendix.
- meso-appendix (mes"o-ap-en'diks) [Gr. μέσος middle + appendix]. The mesentery of the appendix; the peritoneal fold which connects the appendix to the ileum.
- mesoarial (mes-o-a're-al). Pertaining to the mesoarium
- mesoarium (mcs-o-a're-um). See mesovarium.
- mesobacteria (mes"o-bak-te're-ah). Bacteria of a medium size.
- **mesoblast** (mes'o-blast) [Gr. μ é σ os middle $+\beta\lambda\alpha\sigma$ - τ 6s germ]. The middle of the three layers of the primitive embryo. It is derived from the ectoderm and entoderm, and develops into the skin and connective-tissue structures, the bones, muscles, organs of excretion, and internal genitals. **paraxial m.**, the mesoblast surrounding the neuraxis
- mesoblastema (mcs"o-blas-te'mah). The cells composing the mesoblast.
- mesoblastic (mes-o-blas'tık). Pertaining to or derived from the mesoblast.
- mesobronchitis (mes"o-brong-ki'tis) [Gr. μέσος middle + bronchitis]. Inflammation of the middle coat of the bronchi.
- mesocardia (mes-o-kar'de-ah) [Gr. μέσος middle + καρδία heart] Location of the heart in the middle line of the thorax.
- **mesocardium** (mes-o-kar'de-um) [Gr. $\mu \ell \sigma \sigma s$ middle $+ \kappa \alpha \rho \delta \ell \alpha$ heart]. A membrane connecting the embryonic heart with the body-wall in front and the intestine behind, also that part of the pericardium which is attached around the great arteries and veins of the heart and connects them with the surrounding parts.
- mesocarpal (mes-o-kar'pal). Same as midcarpal.
 mesocecal (mes-o-se'kal). Pertaining to the mesocecum
- mesocecum, mesocæcum (mes-o-se'kum) [Gr. μέσος middle + cecum]. The peritoneal fold which gives attachment to the cecum.
- mesocele, mesocœlia (mes'o-sēl, mes-o-se'le-ah)
 [Gr. μέσσς middle + κοιλία hollow]. The aqueduct of Sylvius.
- mesocephalic (mes"o-sef-al'ik). 1. Pertaining to the mesocephalon. 2. Same as mesaticephalic.
- mesocephalon (mes-o-sef'al-on). 1. See mesen-cephalon. 2. The pons varolii.
- mesochondrium (mes-o-kon'dre-um) [Gr. μέσος middle + χόνδρος cartilage]. The matrix in which are embedded the cellular elements of hyaline cartilage.
- mesococcus (mes-o-kok'us). A bacterial granule larger than a micrococcus and smaller than a megacoccus.
- mesocœlia (mes-o-se'le-ah). The cavity of the mesencephalon.
- mesocolic (mes-o-kol'ik). Pertaining to the meso-colon.
- mesocolon (mes-o-ko'lon, mes-ok'o-lon) [Gr. μέσος middle + κόλον, κῶλον colon]. The process of peritoneum by which the colon is attached to the posterior abdominal wall. It is divided into an ascending, transverse, descending, and sigmoid section, according to the portion of the colon to which it is attached.
- mesocolopexy (mes-o-ko'lo-peks-e) [mesocolon + Gr. $\pi \hat{\eta} \xi_{1s}$ fixation]. Same as mesocoloptication.
- mesocoloplication (mes-o-ko''lo-pli-ka'shun) [mesocolon + plica'ion] The operation of folding and suturing the mesocolon to limit the mobility of the bowel.

- mesocord (mes'o-kord). An umbilical cord adherent to the placenta by a connecting fold of the amnion: more correctly, the connecting fold itself.
- mesocuneiform (mes-o-ku'ne-if-orm). The middle cuneiform bone.
- **mesocyst** (mes'o-sist) [Gr. $\mu \& \sigma$ os middle $+ \kappa b \sigma \tau \iota$ s bladder]. The layer of peritoneum attaching the gall-bladder to the liver.
- **mesocyte** (mes'o-sīt) [Gr. μέσος middle + κυτος cell]. Same as mesolymphocyte.
- **mesocytoma** (mes-o-si-to'mah) [Gr. μέσος middle + κύτος cell + -ωμα tumor]. A connective-tissue tumor; a sarcoma.
- **mesoderm** (mes'o-derm) [Gr. μέσος middle + δέρμα skin]. See mesoblast.
- mesodermic (mes-o-der'mik). Pertaining to the mesoderm.
- **mesodermopath** (mes-o-der'mo-path) [mesoderm + Gr. $\pi \alpha \theta_{0s}$ disease] A person who is constitutionally susceptible to diseases of the tissues derived from embryonic mesoderm, such as heart and kidneys, arteries and veins, joints and muscles
- mesodiastolic (mes"o-di-as-tol'ik) [Gr. μέσος middle + diastole]. Pertaining to the middle of the diastole.
- mesodmitis (mes-od-mi'tis) [Gr μεσόδμη partition]. Inflammation of the mediastinum
- mesodont (mes'o-dont) [Gr μέσος middle + δδούς tooth]. Having medium-sized teeth.
- mesoduodenal (mes-o-du-o-de'nal). Pertaining to the mesoduodenum
- mesoduodenum (mes"o-du-o-de'num) [Gr μέσος middle + duodenum]. The fold which in early or fetal life, and sometimes persistently, connects the duodenum to the abdominal wall
- meso-epididymis (mes-o-ep-e-did'im-is) A fold of tunica vaginalis that sometimes connects the epididymis with the testicle
- mesogaster (mes-o-gas'ter) [Gr μέσος middle + γαστήρ belly]. Same as midgut.
- mesogastric (mes-o-gas'trik). Pertaining to the mesogastrium.
- **mesogastrium** (mes-o-gas'tre-um) [Gr $\mu \epsilon \sigma \sigma s$ middle $+ \gamma a \sigma \tau \dot{\eta} \rho$ belly] The mesentery of the embryonic stomach, whence the great omentum is developed.
- mesoglia (mes-og'le ah) Same as oligodendroglia mesoglutæus (mes-o-glu te'us). The gluteus medius muscie.
- mesognathic, mesognathous (mes-og-na'thik, mes-og'nath-us). I Pertaining to the mesognathion. 2. Having a gnathic index of from 98 to 103.
- mesognathion (mes-og-na'the-on) [Gr. μέσος middle + γνάθος jaw] The lateral center of ossification in the os incisivum for the lateral incisor tooth.
- **Mesogonimus** (mes-o-gon'im-us). A genus of flukes. See *Paragonimus*
- mesohyloma (mes-o-hi-lo'mah) [Gr μέσος middle + $\upbeta \upbeta$ matter + - $\upbeta \upbeta$ tumor]. A tissue developed from the mesothelium
- mesohypoblast (mes-o-hi'po-blast). Same as mes-entoderm.
- meso-ileum (mes-o-il'e-um). The mesentery of the ileum.
- mesojejunum (mes"o-je-ju'num). The mesentery of the jejunum
- mesolepidoma (mes"o-lep-id-o'mah) [Gr. μέσοs middle + λεπίs scale + -ωμα tumor]. A tumor made up of tissue derived from the persistent embryonic mesothelium. **atypic m.**, carcinoma of a genito-urinary organ or of a serous membrane. **typic m.**, adenoma of a genito-urinary organ or of a serous membrane
- mesolobus (mes-ol'o-bus) [Gr. μέσος middle + λοβός lobe]. The corpus callosum.

- mesolymphocyte (mes-o-lim'fo-sit) [Gr. μέσος middle + lymphocyte]. A medium-sized lympho-
- mesomere (mes'o-mēr) [Gr. μέσος middle + μέρος part]. 1. A mesoblastic somite or protovertebra. 2. A blastomere.
- mesometritis (mes"o-met-ri'tis) [Gr. μέσος middle + μήτρα uterus + -ιτις inflammation Inflammation of the middle or muscular layer of the uterus.
- mesometrium (mes-o-me'tre-um) [Gr. μέσος middle + μήτρα uterus]. 1. The middle layer of the uterus; the myometrium. 2. [B N A] The broad ligaments.
- mesomorph (mes'o-morf) [Gr μέσος middle μόριση form]. A person of medium stature with broad and bulky limbs and features. Cf. hyper-
- mesomula (mes-om'u-lah) [Gr. $\mu \epsilon \sigma \sigma$ middle + $\sigma \hat{\omega} \mu a$ body]. An early stage of the embryo, when it consists of an epithelial mesoderm and entoderm inclosing a mass of mesenchyma.
- meson (mes'on) [Gr. μέσος middle]. mesion.
- mesonasal (mes-o-na'zal). Situated in the middle of the nose.
- mesonephric (mes-o-nef'rik). Pertaining to the mesonephron.
- mesonephron, mesonephros (mes-o-nef'ron, mes-o-nef'ros) [Gr $\mu \dot{\epsilon} \sigma$ os middle $+ \nu \epsilon \varphi \rho \dot{\delta}$ s kidney]. The wolffian body. See under body.
- mesoneuritis (mes"o-nu-ri'tis) [Gr. μέσος middle + νεθρον nerve]. 1. Inflammation of the substance of a nerve. 2. Inflammation of the lymphatics of a nerve. nodular m., inflammatory hyperplasia of the connective tissue of a nerve, resulting in nodular thickenings upon its surface.
- meso-omentum (mes"o-o-men'tum). The fold by which the omentum is attached to the abdominal wall.
- **meso-ontomorph** (mes-o-on'to-morf) [Gr. μέσος middle $+\hat{\omega}_{\nu}$ being + μόρ φ_{η} shape]. A person of stocky build having a tendency toward hypothy-
- mesopexy (mes'o-peks-e). The operation of taking
- a tuck in an elongated mesentery to shorten it. **lesopharynx** (mes-o-far'inks). The oval portion mesopharynx (mes-o-far'inks). of the pharynx.
- mesophilic (mes-o-fil'ik) [Gr. μέσοs middle, moderate + φιλεῖν to love]. Fond of moderate temperature said of bacteria which develop best at the temperature of the body-37° C. See also psychrophilic and thermophilic.
- **mesophryon** (mes-of're-on) [Gr. $\mu\acute{e}\sigma$ os middle + $\acute{o}\varphi\rho\acute{b}s$ eyebrow]. The glabella or its central
- mesopneumon (mes-o-nu'mon) [Gr. μέσος middle + πνεύμων lung]. The fold of pleura which attaches the lung.
- mesoporphyrin (mes-o-por'fir-in). A crystalline iron-free derivative from hematin obtained by a process of reduction.
- mesoprosopic (mes-o-pros-o'pik) [Gr. μέσος middle $+\pi\rho\delta\sigma\omega\pi\sigma\nu$ face]. Having a face of moderate width.
- mesopsychic (mes-o-si'kik). Pertaining to the middle period of mental development.
- mesorachischisis (mes"o-rak-is'kis-is) [Gr. μέσος middle + rachischisis]. Partial rachischisis; partial fissure of the spinal cord.
- mesorchial (mes-or'ke-al). Pertaining to the mesorchium.
- mesorchium (mes-or/ke-um) [Gr. μέσος middle + ὅρχις testis]. The peritoneal fold which holds the fetal testicle in place.
- mesorectum (mes-o-rek'tum) [Gr. μέσος middle + rectum]. [B N A] The mesentery of the rectum; the fold of peritoneum connecting the upper portion of the rectum with the sacrum.

- mesoretina (mes-o-ret'in-ah) [Gr. μέσος middle + retina]. The middle layer of the retina.
- mesorhine (mes'or-īn) [Gr. μέσος middle + μίς nose], Having a nasal index between 47° and 51°.
- mesoropter (mes-o-rop'ter) [Gr μέσος middle + $\delta \rho os$ boundary + $\delta \pi \tau \dot{\eta} \rho$ observer] The normal position of the eyes with their muscles at rest
- mesosalpinx (mes-o-sal'pinks) [Gr. μέσος middle σάλπιγξ tube]. [B N A] The peritoneal fold that suspends the oviduct.
- mesoscapula (mes-o-skap'u-lah). The spine of the scapula.
- **mesoseme** (mes'o-sēm) [Gr. $\mu \dot{\epsilon} \sigma o s$ middle $+ \sigma \hat{\eta} \mu a$ sign]. Having an orbital index between 83° and 000
- mesosigmoid (mcs-o-sig'moid). The fold by which the sigmoid flexure is attached.
- mesosigmoiditis (mes"o-sig-moi-di'tis). mation of the mesosigmoid.
- (mes"o-sig-moi'do-pek-se) mesosigmoidopexy [mesosigmoid + Gr. $\pi \hat{\eta} \xi_{1s}$ fixation] The operation of shortening or fixing the mesosigmoid in cases of prolapse of the rectum.
- mesosoma (mes-o-so'mah) [Gr μέσος middle + σωμα body]. Medium stature.
- mesosomatous (mes-o-so'mat-us). Having medium stature.
- mesostate (mes'o-stāt) [Gr. μέσος middle + στâν Any product of metabolism which rep to stand] resents an intermediate stage in the formation of another product.
- mesosternum (mes-o-ster'num) [Gr. μέσος middle + στέρνον sternum]. The body of the sternum; the gladiolus.
- mesosyphilis (mes-o-sif'ıl-is) Secondary syphilis. mesosystolic (mes"o-sis-tol'ik) [Gr. μέσος middle + συστολή systole]. Pertaining to the middle of the systole.
- mesotan (mes'o-tan). A dark yellowish fluid, the methyloxymethyl ester of salicylic acid, C₆H₄-(OH) CO₂ (CH₂ O CH₃). used locally, as a counteriritant, in the treatment of gout and rheumatism; diluted with I to 4 parts of olive oil or cottonseed oil and painted over the affected part
- mesotarsal (mes-o-tar'sal). Same as midtarsal.
- mesotendon (mes-o-ten'don). The delicate connective tissue membrane attaching a tendon to its fibrous sheath.
- mesotenon (mes-o-ten'on). Mesotendon.
- mesothelial (mes-o-the'le-al). Pertaining to the mesothelium.
- mesothelioma (mes"o-the-le-o'mah). A tumor developed from mesothelial tissue.
- mesothelium (mes-o-the'le-um) [Gr. μέσος middle + epithelium]. That part of the mesoblast whence the serous cavities and muscles are developed. It is formed by the development of sacs from the archenteron, which become separated by constriction to form closed cavities (somites) between the epiblast and hypoblast.
- mesothenar (mes-oth'en-ar) [Gr μέσος middle + θέναρ palm] The adductor pollicis muscle.
- mesothorium (mes-o-tho're-um). A disintegration product of thorium, intermediate between thorium and radiothorium and isotopic with radium. It has radio-active properties and has been used in the treatment of cancer.
- mesotropic (mes-o-trop'ik). Situated in the middle of a cavity, as the abdomen.
- mesoturbinal, mesoturbinate (mes-o-ter'binal, mes-o-ter'bin-āt). The middle turbinal bone.
- meso-uranic (mes"o-u-ran'ik) [Gr. μέσος middle + οὐρανός palate]. Having a palate index between 110° and 115°.
- mesovarium (mes-o-va're-um). [B N A] The peritoneal fold which holds the ovary in place.
- mesoxalyl urea. See alloxan.

mesurol (mes'u-rol). A 20 per cent. emulsion in olive oil of the basic bismuth salt of the monomethyl ether of dihydroxybenzoic acid. It is used in the treatment of syphilis in 1 c c. doses.

meta- [Gr. μετά beyond, over]. A prefix indicating—(1) Change, transformation, or exchange; (2) after or next; (3) the 1.3 position in derivatives of benzene.

meta-amidophenylparamethoxychinolin. An antiperiodic and antipyretic agent. Dose, 4-8 gr. (0.2-0 5 gm.).

meta-arthritic (met-ah-ar-thrit'ik). Occurring as a consequence or result of arthritis.

metabasis (met-ab'as-is) [Gr. μετά beyond + βαίνειν to go].
1. A change from one disease to another.
2. Metastasis, or a change in the seat of a disease.

metabiosis (met"ah-bi-o'sis) [Gr. $\mu\epsilon\tau\dot{\alpha}$ with + $\beta\iota\omega\sigma_i$ s way of life]. The dependence of one organism upon another for its existence.

metabolic (met-ah-bol'ik). Pertaining to or of the nature of a metabolism

metabolimeter (met-ah-bo-lim'et-er) [metabolism + Gr μέτρον measure]. An apparatus for measuring basal metabolism.

metabolimetry (met-ah-bo-lim'et-re). The measurement of basal metabolism

metabolin (met-ab'o-lin). Any product of metabolism.

metabolism (met-ab'o-lizm) [Gr. μεταβολή change]. Tissue change, the sum of all the physical and chemical processes by which living organized substance is produced and maintained (substance metabolism or anabolism), and also the transformation by which energy is made available for the uses of the organism (energy metabolism, katabolic m., or catabolism). basal m., the minimal heat produced by an individual measured from fourteen to eighteen hours after eating and when the individual is at rest, but not asleep. It represents the energy expended to maintain respiration, circulation, peristalsis, muscle tonus, body temperature, glandular activity, and the other vegetative func-The measurement of basal metabolism is made by means of a calorimeter, and is expressed in calories per hour per square meter of body surface Called also basal metabolic rate constructive m., anabolism; the change of matter from a lower to a higher state of organization; especially conversion of matter into protopalsm. destructive m., catabolism, the conversion of matter, especially protoplasm, into a lower state of organization, and ultimately into waste-products. See metabolism. substance m. energy m. See metabolism

metabolite (met-ab'o-līt). Any substance produced by metabolism.

metabolizable (met-ab'o-li-zab-l). Capable of being transformed by metabolism.

metabolodispersion (met-ab"ol-o-dis-per'zhun).

The degree of dispersion of the colloids of the body.

m. shock. See under shock.

metabology (met-ab-ol'o-je). The study of metabolism and metabolic processes.

metabolon (met-ab'o-lon). A form of matter having only a temporary existence, formed by the disintegration of radio-active substances.

metabolor (met-a-bo'lor) An instrument for measuring the basal metabolic rate.

metacarpal (met-ah-kar'pal). Pertaining to the metacarpus.

metacarpophalangeal (met-ah-kar"po-fal-an'jeal). Pertaining to the metacarpus and phalanges

metacarpus (met-ah-kar'pus) [Gr. $\mu\epsilon\tau\dot{\alpha}$ after + $\kappa a\rho\pi\dot{\alpha}$ s wrist]. The group of five cylindric bones extending from the carpus to the fingers; also that part of the hand in which these bones are placed.

metacasein (met-ah-ka'se-in). An intermediate product formed in the conversion of caseinogen into casein by the action of pancreatic juice.

metacele, metacele (met'ah-sēl, met-ah-se'le) [Gr. μετά beyond + κοιλία hollow]. That space which, with the epicœle, makes up the fourth ventricle of the brain.

metacetin (met-as'et-in). Para-acetanisidin: an antiseptic and antipyretic.

metacetone (met-as'et-ōn). Diethylketone, CO-(C₂H₅)₂

metachemic, metachemical (met"ah-kem'ik, met"ah-kem'ik-al). Beyond the bounds of chemistry.

metachloral (met-ah-klo'ral). Insoluble chloral, a strong antiseptic used externally and in suppositories.

metachromasia, metachromatism (met"ah-kro-ma'ze-ah, met-ah-kro'mat-12m) [Gr μ erá change + $\chi \rho \hat{\omega} \mu \alpha$ color]. I. Staming in which the same stain colors different tissues in different tints. 2. The change of color produced by staining.

metachromatic bodies (met-ah-kro-mat'ik). See under body.

metachromatin (met-ah-kro'mat-in). The basophil element in chromatin.

metachromic (met-ah-kro'mik). Staining in a tint different from that of the stain employed.

metachromisin (met-ah-kro'mis-in) [Gr. $\mu\epsilon\tau\dot{\alpha}$ beyond $+\chi\rho\hat{\omega}\mu\alpha$ color] The condition in which a stain colors the various elements of the same tissue differently.

metachromophil, metachromophile (met-ah-kro'mo-fil, -fīl) [Gr. $\mu\epsilon r\dot{\alpha}$ beyond $+\chi\rho\hat{\omega}\mu\alpha$ color $+\varphi\iota\lambda\epsilon\hat{\iota}\nu$ to love]. Stanning in an abnormal manner with a given stain.

metachrosis (met-ak-ro'sis) [Gr μετά over + χρῶσις coloring]. Change of color.

metachysis (met-ak'is-is) [Gr. μετά beyond + χbσιs effusion]. The transfusion of blood.

metacinesis (met"ah-sin-e'sis) [Gr μετά beyond + κίνησις motion] The separation of daughter-stars from each other.

metacœloma (met"ah-se-lo'mah). That part of the embryonic ccelom which develops into the pleuroperitoneal cavity

metacone (met'ak-ōn) [Gr. μετά behind + κῶνοs cone]. The distobuccal cusp of an upper molar tooth.

metaconid (met-ak-on'id). The mesiolingual cusp of a lower molar tooth.

metaconule (met-ak-on'ūl). The distal intermediate cusp of an upper molar tooth.

metacresalol (met-ah-kre'sal-ol). See under cre-salol.

metacresol (met-ah-kre'sol). One of the three isomeric forms of cresol, and the most strongly antiseptic of the group m. oxalate, kresosteril.

metacresol-anitol (met"ah-kres-ol-an'it-ol). An insoluble compound of metacresol (40 per cent.) and anitin (60 per cent.) an effective bactericide.

metacresol-cinnamic acid ester. A crystalline agent: recommended for use in tuberculosis.

metadromic progression (met-ad-ro'mik). See under progression.

metagaster (met-ah-gas'ter) [Gr. $\mu\epsilon\tau\dot{\alpha}$ after + $\gamma\alpha\sigma\tau\dot{\eta}\rho$ belly]. The permanent intestinal canal of the embryo.

metagastrula (met-ah-gas'tru-lah) [Gr. μετά beyond + gastrula] A gastrula with a cleavage differing from that of the standard type.

metagelatin (met-ah-jel'at-in). A substance produced by treating gelatin with oxalic acid.

metagen (met'aj-en). A proprietary preparation of vitamins A, B, and C.

metagenesis (met-ah-jen'es-is) [Gr. μετά after + genesis]. Alternation of generation.

metagglutinin (met-ag-lu'tin-in). An agglutinin present in an agglutinative serum which acts on organisms that are closely related to the specific antigen and in a lower dilution. Called also partial agglutinin and minor agglutinin.

metaglobulin (met-ah-glob'u-lin). A fibrogenous substance occurring in cell-protoplasm; fibrinogen.

Metagon'imus yokogaw'ai. An intestinal nematode found in man and in mammals in Japan. It resembles Heterophyes

metagrippal (met-ah-grip'al). Occurring as an after-result of influenza.

meta-icteric (met"ah-ik-ter'ik). Occurring after jaundice.

meta-infective (met-ah-in-fek'tiv). Occurring after an infection; a term applied to a febrile state occurring during convalescence from an infectious disease.

meta - iodo - ortho - oxyquinolin - sulphonic acid. (CH)₈N(OH).C₆HI.SO₂OH. Same as lore-tin.

metakinesis (met"ah-kin-e'sis). 1. Same as metacinesis. 2. Lloyd Morgan's term for the hypothetical property possessed by all types of life of being endowed with something which is not consciousness, but which has the potentiality of developing into consciousness. 3 Metaphase

metal (met'al) [L. metal'lum; Gr. μέταλλον]. Any element marked by luster, malleability, ductility, and conductivity of electricity and heat. alkali m., any one of the sodium group of basylous elements colloidal m., a colloidal solution of a metal See electrosol. d'Arcet's m., an alloy of lead, bismuth, and tin: used in dentistry. Wood's m., a metal used in making casts of blood-vessels bismuth, 50 per cent, lead, 25 per cent, tin, 12 5 per cent; cadmium, 12.5 per cent.

metalbumin (met-al-bu'min) [meta- + albumin]. Same as pseudomucin.

metaldehyd (met-al'de-hid) A crystalline body, a polymer of acetaldehyd, (CH₃.CHO)₃. antiseptic. Dose, 2-8 gr (o 133-o 533 gm).

metallesthesia (met-al-es-the ze-ah) [metal + Gr. aισθησις sensation]. The recognition of metals by the sense of touch.

metallic (met-al'ik). Pertaining to or made of metal

metallocyanid (met-al-o-si'an-id). A compound of cyanogen with a metal.

metalloid (met'al-oid) [Gr. μέταλλον metal + είδοs form] 1. Any non-metallic element 2. Any metallic element that has not all the characters of a typical metal. 3 Resembling a metal.

metallophobia (met-al-o-fo'be-ah) [Gr. μέταλλον metal + φόβος fear]. Insane fear of metals and metal objects.

metalloplastic (met''al-o-plas'tik). Pertaining to the plastic use of metals.

metalloscopy (met-al-os'ko-pe) [Gr. μέταλλον metal + σκοπείν to view]. Observation of the effects of applying metal to the body.

metallothérapy (met"al-o-ther ap-e) [Gr. μέταλλον metal + θεραπεύειν to heal] The treatment of disease by applying metals to the integument.

metallurgy (met-al-ur'je) [L. metallum + Gr. ἔργον work]. The science and art of using metals.

metal-sol. A colloidal solution of a metal. Such solutions have properties similar to those of enzymes, and are therefore sometimes called *inorganic enzymes*.

metamere (met'am-ēr) [Gr. μετά across + μέρος part]. A primitive segment or protovertebra.

metameric (met-ah-mer'ik). Characterized by metamerism.

metamerid (met-am'er-id). Any metameric substance.

metamerism (met-am'er-izm). I. Isomerism in which the component elements are identical, while the structural arrangement is not the same. 2. Arrangement in metameres or 'segments.

metamorphopsia (met"ah-mor-fop'se-ah)[Gr. μετά across + μορφή form + δψις sight]. A state of the eye in which objects looked at seem to be distorted. m. va'rians, metamorphopsia in which the distorted outline of the object looked at seems to change.

metamorphosis (met-ah-mor'fo-sis) [Gr. μετά across + μορφή form]. Change of shape or structure; particularly a transition from one developmental stage to another, as in insects. fatty m., fatty degeneration. See degeneration. ovulational m., the developmental changes which occur during ovulation. retrograssive m., retrograde m., a degeneration. more often a retrograde metabolic change. revisionary m. See cataplasia. viscous m., the massing of bloodplaques in thrombosis.

metamorphotic (met-ah-mor-fot'ik). Pertaining to or characterized by metamorphosis.

metamyelocyte (met"ah-mi'el o-sit) [Gr. μετά beyond + myelocyte] Λ transitional form of myelocyte intermediate between the myelocyte and the granular leukocyte.

metanephron, metanephros (met-ah-nel'ron, met-ah-nel'ros) [Gr. μετά after + νεφρός kidney]. The permanent embryonic kidney, which develops after and behind the mesonephros, from the mesonephric duct and nephrogenic cord.

metaneutrophil (met-ah-nu'tro-fil) [Gr. μετά beyond + neutrophil]. Staining abnormally with neutral stains.

metanilin yellow (extra) (met-an'il-in). A dye, metasulphobenzeneazodiphenylamin. It is used as an indicator and has a P_{II} range of 1.2 to 2.3, being red at 1.2 and yellow at 2 3.

metanucleus (met-ah-nu'kle-us) [meta- + nucleus]. The egg-nucleus after its extrusion from the germinal vesicle.

metapeptone (met-ah-pep'tōn) [meta- + peptone].

A digestive product between dyspeptone and parapeptone.

metaphase (met'af-āz) [Gr. μετά after + phase].

The middle stage of mitosis during which the lengthwise splitting of the chromosomes in the equatorial plate occurs. See mitosis.

metaphen (met'af-en). A heavy brownish-yellow powder, 4-nitro-3, 5-bisacetoxy-mercuri-2-cresol, (CH₃COOHg)₂C₆H(NO₃)(OH)CH₃, which contains about 60 per cent. of mercury. It is insoluble in water, but soluble in dilute aqueous solution of sodium hydroxid. It is used as a germicide in a dilution of 1 1000 in gonorrhea, eye infections, skin sterilization, and sterilization of instruments.

metaphosphoric acid (met"ah-fos-for'ik). See under acid.

metaphrenia (met-ah-fre'ne-ah) [Gr μετά between φρήν mind]. A wide-spread neurotic phenomenon commonly called civilization.

metaphrenon (met-af-re'non) [Gr. μετά beyond + φρήν diaphragm]. The space or area between the shoulders

metaphyseal (met-ah-fiz'e-al). Pertaining to a metaphysis.

metaphysis (met-af'is-is) [Gr. μετά after + φίσις nature]. 1. The end of the diaphysis of a long bone where it joins the epiphysis. Cf. diaphysis and epiphysis. 2. Metamorphosis.

metaplasia (met-ah-pla'ze-ah) [Gr. μετά after + πλάσσειν to form]. The change of one kind of tissue into another; also the production of tissue by cells which normally produce tissue of another sort.

metaplasis (met-ap'las-is). The stage in which the organism has attained completed growth.

metaplasm (met'ah-plazm) [Gr. μετά after + πλάσμα something formed]. Same as deutoplasm.

metaplastic (met-ah-plas'tik). Formed by or of the nature of metaplasm.

metaplex (met'ap-lex). Metaplexus.

metaplexus (met-ah-pleks'us). The choroid plexus of the fourth ventricle.

metapneumonic (met"ah-nu-mon'ik) [Gr. μετά after + pneumonia]. Succeeding or following pneumonia.

metapodalia (met-ah-po-da'le-ah) [Gr. $\mu\epsilon\tau\delta$ behind $+\pi\sigma bs$ foot]. A collective term for the bones of the metacarpus and metatarsus.

metapophysis (met-ah-pof'is-is) [Gr. $\mu\epsilon\tau\dot{a}$ after + apophysis]. The mammillary process on the superior articular or prearticular processes of certain vertebræ.

metapore (met'ah-pōr). The foramen of Magendie.

metaprotein (met-ah-pro'te-in). Λ product of the action of an acid or alkali on a protein, resulting in a compound soluble in very weak acids and alkalis, but insoluble in neutral fluids.

metapsyche (met-ah-si'ke) [Gr. μετά after + ψυχή soul] The metencephalon.

metapsychics (met-ah-si'kiks) [Gr. μετά across + ψυχή mind] The science which deals with psychic phenomena that are beyond the realm of consciousness.

metaptosis (met-ah-to'sis) [Gr. $\mu\epsilon\tau\dot{\alpha}$ beyond + $\pi\tau\dot{\omega}\sigma\iota_s$ falling] Metastasis

metapyretic (met"ah-pi-ret'ik) [Gr. μετά after + πυρετός fever]. Performed or occurring after the advent (otherwise after the decline) of septic fever.

metargon (met-ar'gon). A name given to a gaseous element which exists in a very small proportion in the atmosphere. Not now used

metasol (met'as-ol). A proprietary solution (1 and 2 per cent.) of metacresol-anitol used as a germicide and disinfectant.

metasomatome (met-as-o'mat-ōm). One of the constrictions between successive protovertebræ.

metastable (met'ah-sta-bl). Not entirely stable; changing from one condition to another under the proper stimulus.

metastasis (met-as'tas-is) [Gr. μετά after + στάσις stand]. The transfer of disease from one organ or part to another not directly connected with it. calcareous m., the formation of bone salts in the kidneys in softening of bone. crossed m., passage of material from the venous to the arterial circulation without going through the lungs. direct m., metastasis in the direction of the blood or lymph-stream. implantation m., metastasis along a free surface. paradoxic m., retrograde m., metastasis taking place in a direction opposite to that of the blood-stream. transplantation m., metastasis from one tissue to another.

metastasize (met-as'tas-īz). To form new foci of disease in a distant part by metastasis.

metastatic (met-ah-stat'ik). Pertaining to or of the nature of metastasis.

metasternum (met-ah-ster'num) [Gr. μετά after + στέρνον sternum]. The ensiform cartilage.

Metastrongylus (met-ah-stron'gil-us). A genus of nematodes of the family Strongylidæ. M. a'prı, a species found in the lungs of hogs and occasionally in man.

metasynapsis (met"ah-sin-ap'sis). End-to-end union of the chromosomes in synapsis.

metasyncrisis (met-ah-sin'kris-is). The elimination of waste or morbid matter, as by the pores.

metasyndesis (met"ah-sin-de'sis) Same as metasynapsis.

metasyphilis (met-ah-sif'il-is) [Gr. μετά after + syphilis]. Congenital syphilis with general degeneration and with no appreciable local lesions.

metasyphilitic (met"ah-sif-il-it'ik). 1. Following or resulting from syphilis. 2. Pertaining to hereditary syphilis.

metatarsalgia (met"ah-tar-sal'je-ah) [Gr. μετά

after + ταρσός tarsus + ἄλγος pain]. Pain in the metatarsus.

metatarsophalangeal (met-ah-tar"so-fal-an'je-al). Pertaining to the metatarsus and phalanges.

metatarsus (met-ah-tar'sus) [Gr. μετά beyond + ταρσός tarsus]. The part of the foot between the tarsus and the toes.

metatela (met-ah-tel'ah). The tela choroidea of the fourth ventricle.

metathalamus (met-ah-thal'am-us). [B N A] The posterior portion of the thalamus, comprising the internal and external geniculate bodies.

metathesis (met-ath'es-is) [Gr. μετά beyond + θέσις placement]. 1. The artificial transfer of a morbid process 2. A chemical reaction in which an element or radical in one compound exchanges places with another element or radical in another compound

metathrombin (met-ah-throm'bin) [Gr. μετά change + thrombin] A hypothetical substance into which thrombin changes on standing, and which may be again activated into thrombin by the action of alkalies or acids.

metatroph (met'at-rof). A saprophyte.

metatrophia, metatrophy (met-at-ro'fe-ah, metat'ro-fe). Atrophy from malnutrition.

metatrophic (met-at-rol'ik) [Gr. μετά beyond + τροφή nutrition]. Utilizing organic matter for food

metatypic (met-ah-tip'ik). Composed of the elements of the tissue on which it develops, but having those elements arranged in an atypic manner said of tumors.

metavanadate (met-ah-van'ad-āt) Any salt of metavanadic acid sodium m., a highly poisonous salt. In doses of $\frac{1}{200}$ or it stimulates nutrition and improves various cachectic states,

metaxeny (met-ak'sen-e) Metoxeny.

Metazoa (met-ah-zo'ah) [Gr μετά beyond + ζων animal]. That division of the animal kingdom the members of which are characterized by segmentation of the ovum. It includes all animals except the protozoa.

metazonal (met-ah-zo'nal). Situated after or below a sclerozone.

Metchnikof. See Metschnikoff.

metecious, metecious (met-e'shus) [Gr. μετά beyond + οίκος house] Heterecious.

meteloidin (met-el-or'din) An alkaloid, C₁₃H₂₁-O₁N, from *Datura metaloides*

metencephal (met-en'sef-al). The metencephalon, metencephalic (met-en-sef-al'ik). Pertaining to the metencephalon.

metencephalon (met-en-sef'al-on) [Gr. μετά after + ἐγκέφαλος brain] ι. [B N A] The hindbrain: that part of the embryonic brain whence the pons and the cerebellum are developed. It is the anterior part of the rhombencephalon or posterior cerebral vesicle. 2. The cerebellum.

metencephalospinal (met-en-sef"al-o-spi'nal).

Pertaining to the metencephalon (cerebellum) and the spinal cord.

meteorism (me'te-or-izm) [Gr. μετεωρίζειν to raise up]. Tympanites; gas in the abdomen or intestine.

meteorology (me-te-or-ol'o-je) [Gr. μετέωρος high in the air + λόγος treatise]. The science of the atmosphere and its phenomena.

metepencephalon (met''ep-en-sef'al-on) [Gr. μετά after + ϵπί upon + ϵγκϵφαλος brain]. Same as myelencephalon

meter (me'ter) [Gr. μέτρον measure; Fr. mètre]. A measure of length, 39,371 inches. m.-angle, the angle of visual axes when viewing a point one meter distant.

metergasis (met-er-ga'sis) [Gr. μετά change + ἔργον work]. Change of function.

methacetin (meth-as'et-in). C₆H₄ OCH₃.NH.-CH₃CO, in colorless or reddish, tasteless, scaly crystals, sparingly soluble in water, easily soluble in alcohol. It is used chiefly in children's diseases. Dose, ½-8 gr. (0.03-0.5 gm.).

methaform (meth'af-orm). A proprietary preparation identical with chloretone. See chloretone.

methal (meth'al). Myristic alcohol, a compound existing in spermaceti, but not yet isolated.

methanal (meth'an-al). Same as formaldehyd.

methane (meth'ān). Marsh-gas, CH₄, a colorless, odorless, inflammable gas, produced by the decomposition of organic matter.

methanol (meth'an-ol). Methyl alcohol.

methanolysis (meth-an-ol'is-is). Alcoholysis of methyl alcohol.

Methanomonas (meth-an-om'o-nas) A genus of bacterial organisms capable of growing in the absence of organic matter. They obtain their energy for growth from the oxidation of methane to carbon dioxid and water.

methemoglobin, metahemoglobin (met"hemo-glo'bin, met"ah-hem"o-glo'bin). 1. A modified form of oxyhemoglobin found in the blood after large doses of acetaniid It has the same composition as oxyhemoglobin, but it is chocolate-brown in color and oxygen is so firmly held that it cannot be pumped off in a vacuum nor does it function in respiration. It may be formed from oxyhemoglobin by treating the latter with potassium chlorate, sodium-citrate, and other oxidizing agents. 2 A therapeutic product of the oxidation of hemoglobin.

methemoglobinemia (met"hem-o-glo-bin-e'meah) [methemoglobin + Gr. alμa blood]. The presence of methemoglobin in the blood

methemoglobinuria (met''hem-o-glo-bin-u're-ah) [methemoglobin + Gr οδρον urine]. The occurrence of methemoglobin in the urine.

methenamin (meth-ēn-am'in). The U.S.P. name for urotropin.

methene (meth'en). Same as methylene. methenyl (meth'en-il). Same as formyl.

methethyl (meth-eth'il). A local anesthetic mixture of methyl and ethyl chlorids and chloroform.

method (meth'ud) [Gr. μέθοδος]. The manner of performing any act or operation. For various methods of treatment, see treatment; for methods of staining, see under stains, table of; for methods of making qualitative tests, see under tests bott's m., treatment of scoliosis by lateral pulling and counterpulling on the spinal column by means of wide bandages and pads until the deformity is overcorrected, and then applying a plaster jacket to produce pressure, counterpressure, and fixation of the spine in its corrected position. A. B. C. (alum, blood, clay) m., a method of deodorizing and precipitating sludge by the addition of alum, charcoal (or some other material), and clay to the raw sewage. absorption m., the separate addition to agglutinative sera of the various bacteria in the group to remove separately the partial agglutinins. aceto-acetic acid, m. for. diwetic acid, m's for, under method. acetone, m. for. See Folin's m. (1), Folin and Hart's m., Messenger and Huppert's m., Shaffer and Marriott's m., Scott and Wilson's m., under method. Achard-Castaigne m., the methylene-blue test. **hematin m.** (for hemoglobin). Dilute the blood in N/10 HCl and compare the color with a standard hematin solution or glass standards adrenalin, m. for. See Folin, Cannon, and Denis's m., under method. m. of agglutination. See absorption m. Bass-Watkins's test, Bordon's m., Dreyer's m., Ficker's m., and Kolle and Pfeiffer's m. albumen in urine, m. for. See Esbach's m., Folin's m., Folin's m., Folin's gravimetric m., Kwilecki's m, life insurance m., Scherer's m., and turbidity m., under method. alkali reserve, m.

See Fridericia's m., Marriott's m., van Slyke and Cullen's m., and van Slyke and Fitt's m. allantoin, m. for. See Folin's m. (9), Plummer and Skelton's m., Wiechowski's m., under method. amino-acid nitrogen, m. for. See nitrogen, m. for, under method. ammonia nitrogen, m. for. See nitrogen, ammonia, m's for, under method. Amoss and Wollstein's m., for the rapid production of antimeningococcus serum by the intravenous injection alternately of living germs and autolysed products of them. anaërobic m. See Buchner's m, Esbach's m, Hauser's m., Liborious's m., McIntosh and Fildes's m., Roux's m., Wright's m. m. for (testing) antiseptics. See garnet m, Ridcal-Walker m, thread m m. for (producing) antisera. See Amoss and Woll-Jobling's m, Kraus and Doerr's m, Kruse and Shiga's m. Arnold and Gunning's m. (for total nitrogen): A modified form of the Kjeldahl process for urine **Aronson's m.**, volatilizing formaldehyd gas from the solid polymer, trioxymethylene, by heat. **Askenstedt's m.** (Parker's modification) (for indican) Precipitate the urine with solid mercuric chlorid; oxidize the indican to indigo with Obermeyer's reagent; shake out with chloroform and compare the blue color with a standard solution of indigo. Austin and van Slyke's m. (for chlorids in whole blood): Lake the blood with distilled water, precipitate the proteins with picric acid, and then proceed as in McLean and van Slyke's method for chlorids in oxalated plasma. Autenrieth and Funk's m. (for cholesterol): Boil the blood or serum to saponify the fats Extract with chloroform and evaporate the chloroform. Make a Liebermann-Burchard's test on the residue and compare it with a standard solution of cholesterol. auto-clave m. See Clark-Collip m. Baccelli's m. 1. Treatment of tetanus by injections of carbolic acid 2. Treatment of aneurysm by introduction of a watch-spring into the sac by means of Baer's m., prevention of the reforma trocar. ing of adhesions by the injection of sterilized oil into an ankylosed joint. Bang's m. 1. (Ivar Bang) Estimation of the quantities of the sugar, albumin, urea, etc., in the blood by examination of a few drops only collected on blotting-paper.
2. (for glucose) To an excess of the boiling reagent (an alkaline solution of copper thiocyanate) add the urine and titrate the excess of copper thiocyanate with hydroxylamin sulphate. (B L. F. Bang) Prevention of the spread of bovine tuberculosis by isolation of the affected cows, and by removal of the calves of affected cows as soon as they are born and feeding them with milk of healthy cows. Bang's micro-m. (for glucose): Boil the urine with an excess of the reagent (KHCO₃, 160 gm, K₂CO₃, 100 gm.; KCl, 66 gm.; CuSO_{4.5}H₂O, 4 4 gm.; and water to 1 liter) and titrate excess of CuCl with a solution of iodin, using starch as an indicator. Barber's m., a method for the direct isolation of a single microorganism. The organism is drawn into a mechanically operated pipet while under observation in the field of microscope. **Baréty's m.**, an extension method for treating hip disease and fracture of the thigh. **Bastianelli's m.**, sterilization of the skin of the patient previous to operation with a 1 · 1000 benzin solution of iodin, followed by a 50 per cent. tincture of iodin. Behring's m., a method producing active immunity in the patient by the injection of mixtures of diphtheria toxin and antitoxin that are almost neutral, and, therefore, no toxic effect. Bence-Jones protein, m. for. See Folin and Denis's m. Benedict's m. 1. (for glucose). Titrate the sugar in the urine with the following reagent: CuSO₄ (crystals), 18 gm.; Na₂-CO3 (crystals), 200 gm.; sodium citrate, 200 gm, potassium thiocyanate, 125 gm; potassium ferrocyanid, 5 per cent. solution, 5 c.c.; water to make I liter. 2. (for total sulphur): Add the reagent (crystallized copper nitrate, 200 gm.; sodium

chlorate, 50 gm.; water to make I liter) to the urine and evaporate to dryness, ignite, take up in dilute hydrochloric acid, precipitate with BaCl₂, filter, dry, and weigh. 3. (for urea): The urea is hydrolysed to ammonium carbonate by heating with KHSO4 and ZnSO4, made alkaline, distilled into standard sulphuric acid, and the excess acid titrated. 4. (for uric acid in blood): The same as Benedict and Franke's m. for uric acid in urine. Benedict and Denis's m. (for total sulphur): Mix the urine with the reagent [Cu(NO₃)₂, 25 gm.; NaCl, 25 gm.; NH₄NO₃, 10 gm; and water 100 c.c.] and evaporate to dryness, ignite, dissolve in 10 per cent. hydrochloric acid, and test for inorganic sulphates by Folin's method (6) q v. Benedict and Franke's m. (for uric acid in urine):
To the diluted urine is added sodium cyanid and
the arseno-phosphotungstic acid reagent. The blue color produced is compared with a standard uric acid solution. Benedict and Hitchcock's m. (for uric acid). Precipitate the uric acid with an ammoniacal silver-magnesium solution (3 per cent. silver lactate solution, 70 c.c.; magnesia mixture, 30 c.c.; concentrated ammonium hydroxid, 100 c.c.). Dissolve the precipitate with potassium cyanid, add the uric acid reagent (boil 100 gm. of sodium tungstate and 80 c.c. of 85 per cent. phosphoric acid in 750 c c. of water for two hours and make up to 1 liter) and sodium carbonate solution. Compare in colorimeter with a known uric acid standard. **Benedict and Leche's m.** (for inorganic phosphate in blood) The method is the same as that of Fiske and Subbarow except that the reducing agent is a hydroquinone-sulphite mixture instead of amino-naphthol-sulphonic acid. **Benedict and Murlin's m**. (for amino-acid nitrogen by formal titration). Add phosphotungstic acid to the urine to precipitate ammonia and other basic substances, neutralize to litmus, add formalin, and titrate with N/10 sodium hydroxid. Benedict and Osterberg's m. (for sugar in normal urine): Treat the urine with picric acid, sodium carbonate, and acetone. Compare the red color produced with a standard solution of sugar. Benedict and Theis's m. 1 (for lipoid phosphorus): Oxidize the lipoid phosphorus to phosphoric acid with a mixture of concentrated nitric and sulphuric acids and then proceed as with in-organic phosphates. 2. (for phenols in blood): To 10 c.c. of blood filtrate add 1 c.c. of 1 per cent. gum acacia solution, 1 c.c. of 50 per cent. sodium acetate solution, 1 c.c. of the diazotized nitroanilin reagent, mix, and after one minute add 2 c.c. of a 20 per cent. sodium carbonate solution. Compare the orange color with a standard phenol solution containing 0.025 mg. of phenol in 10 c.c. Berger's m., suture of transverse fracture of the patella. Bergeim's m. (for indole in feces):
Make the feces alkaline and distil off phenols. Make distillate acid with H₂SO₄ and redistil to leave NH₃ in residue. To the second distillate add beta-naphtha-quinone sodium monosulphonate and alkali. Extract the blue color with chloroform and compare it with that of a standard solution of indole similarly treated. Bergonie's m., reduction of fat by the use of general faradiza-Bertrand's m. (for glucose): Boil the urine with alkaline copper sulphate solution, filter, dissolve the precipitate in an acid solution of ferric sulphate, and titrate with potassium permanganate. Besredka's m., vaccination with living micro-See sensitized vaccine, under vaccine. organisms. beta-hydroxy-butyric acid, m. for. See Black's m, van Slyke and Palmer's m., under method. Beuttner's m., removal of the adnexa uteri, but with preservation of a portion of the ovaries and transverse cuneiform excision of the fundus uteri. **bile pigments, m's for.** See Meulengracht's m., Wallace and Diamond's m. Bivine's m., treatment of strychnin-poisoning by administration of chloral hydrate. Black's m. (for beta-hydroxy-butyric acid): Evaporate the urine to a small volume, acidify, add plaster of

Paris to form a coarse meal, extract the betahydroxy-butyric acid with ether in a Soxhlet apparatus, evaporate to dryness, take up in water, and determine the amount by a polariscepe.

Bloor's m. (for lipoid phosphorus). See Benedict
and Theis's m. Bloor, Pelkan, and Allen's
m. (for fatty acids and cholesterol): Extract the lipoids by an alcohol-ether mixture, saponify, extract the cholesterol with chloroform and the soaps with hot alcohol. The cholesterol is then determined colorimetrically and the fatty acids nephelometrically. **Bock and Benedict's m**. (for total nitrogen): It is similar to Folin and Farmer's method, except that the ammonia is distilled instead of aerated over into the acid. Bonnaire's m., induction of labor by digital dilatation of the cervix. Bordon's m. (of agglutination). Similar to Ficker's method, but the menstruum used is phenol 2.5 parts, glycerin 50 parts, and physiologic salt solution 450 parts. **Bouchon's m.**, treatment of wounds by the application of formaldehyd Brandt's m., deep massage of the fallopian tubes for expression of the pus in pyosalpinx.

Brauer's m., production of artificial pneumothorax by the injection of nitrogen for the treatment of tuberculosis of the lung. Brazilian m., treatment of aneurysms by continuous electric current. **Breslau's m.**, volatilizing formaldehyd from dilute (8 per cent) solutions to prevent polymerization. **Brunn's m.** See *Breslau's m*. Buchner's m., a method for the anaerobic cultivation of bacteria in which an alkaline solution of pyrogallol is placed in the container and this removes the oxygen by absorption. Bülav's m., treatment of purulent pleurisy by continuous drainage with a special apparatus

Byrd-Dew m., a method of starting artificial respiration in asphyxia of the newborn calcium, m's for. See Clark and Collip's m., Corley and Denis's m, Lyman's m, McCrudden's m, and Shohl and Pedley's m., under method carbon dioxid, m. for. See van Slyke and Cullen's m. (1), under method. Carrel's m.

1. A method of end-to-end suture of blood-vessels. 2. See Dakin-Carrel m. 3. A method of determining when to make secondary closure of wounds. A loop of material is taken from the wound, spread on a slide, stained, and the number of bacteria counted. casein, m. for. Saturate the milk with magnesium sulphate, filter, wash, determine the nitrogen by the Kjeldahl method, and multiply the result by 6 37. See also *Hart's m*. **cathartic m**., a method of treating psychoneuroses by enabling the patient, through properly directed questions of the second of the tions, to bring to full consciousness the vague and unformed dread from which he has been suffering. Cathelin's m., introduction of anesthetics into the epidural space through the sacrococcygeal ligament. Chaput's m., treatment of osteomyelitis by scraping the cavity and inserting fat taken from the thigh or abdomen. chlorids, m. for. See Austin and van Slyke's m, Dehn and Clarb's m McLean and van Slyke's m, Mohr's m., for. See Austin and van Slyke's m, Dehn and Clark's m., McLean and van Slyke's m, Mohr's m., Volhard and Arnold's m., Volhard and Harvey's m., Whitehorn's m., under method cholesterol, m's for. See Bloor's m, Pelkam and Allen's m, Myers and Wardell's m. Christiansen's m. (for Mett tubes): Thin-walled glass tubes of 1 to 2 mm internal diameter are filled with egg-white, placed in water at 85° C, and allowed to stay until cool. Ciaccio's m., treatment of tissue for the purpose of rendering visible the intracellular lipoids. They are fixed with acid chromate solution and stained with sudan III. Ciniselli's m., galvanostained with sudan III. Ciniselli's m., galvanopuncture of aneurysms. Clark-Collip m. 1. (for calcium in serum): Dilute the serum and add ammonium oxalate. Wash the precipitate, dissolve with sulphuric acid, and titrate with potassium permanganate. 2. (for urea in blood): To 5 c.c. of blood filtrate add 1 c.c. of N HCl and heat in autoclave at 150° C. for ten minutes. Make alkaline, distil into acid, and titrate, using methyl red as indicator. Claudius's m., sterilization of

catgut by placing in a 1 per cent. solution of iodinpotassium iodid solution for a week. Clausen's m. 1. (for lactic acid in blood): Remove the glucose by adding copper sulphate and calcium hydroxid, filter, and proceed with filtrate as in Clausen's method for lactic acid in urine. 2. (for lactic acid in urine): Extract the lactic acid from the urine with ether, convert it into acetaldehyd by treatment with sulphuric acid, add sodium bisulphite, and titrate with standard iodin solution. cold iron m. See Percy cautery, under cautery. Cori's m. (for lactic acid in tissues): Precipitate the filtrate with HgCl₂, remove the mercury from the filtrate with HgS, and determine the lactic acid by Clausen's method. **Corley and Denis's m.** (for calcium in tissues): If there is only a small amount of organic material it may be removed by washing, aided by nitric acid. If there is much organic material add 5 volumes of o.1 N sodium hydroxid and heat in autoclave at 180° C. for two hours. Precipitate as oxalate, dissolve in sulphuric acid, and titrate with potassium permanganate. **creatin, m. for.** See Folin's m. (4), Folin, Benedict, and Myers' m., Folin and Wu's m. (1), and Meyer's m., under method. **creating** method. inin, m. for. See Folin's m., Folin and Wu's m., and Shaffer's m., under method Credé's m. 1. method of expressing the placenta by resting the hand on the fundus uteri and gently rubbing until the placenta is loosened, then expelling it by firmly squeezing the fundus 2 The placing of a drop of 2 per cent solution of silver nitrate in each eye of a newborn child for the prevention of ophthalmia neonatorum. cubicle m., the treatment of paneonatorum. Cubicie m., the treatment of patients with contagious disease by placing each patient in one of the cubicle-like compartments into which the ward is divided. **Dakin-Carrel** m., treatment of wounds by irrigation with Dakin's fluid. See Carrel treatment, under treatment **Defer's m.**, treatment of hydrocele by evacuation and cauterization of the sac with silver Degkwitz's m., the injection of the nitrate serum of patients convalescing from uncompli-cated measles for the purpose of prophylaxis. Dehn and Clark's m. (for chlorids) Oxidize any interfering organic matter with sodium peroxid and then proceed with Volhard and Arnold's method **Delbastaille's m.**, injection of tumors with osmic acid. **Delore's m.**, manual osteoclasis for correcting genu valgum. Demme's m., treatment of hydrocele by injection of iodin. Denis's m. (for magnesium in serum): Remove the calcium by the Clark-Collip method, precipitate as magnesium ammonium phosphate, dissolve the precipitate in o 1 normal HCl, reduce it with amino-naphthol-sulphonic acid, and compare the blue color with a standard solution of ammonium magnesium phosphate in 0.1 per cent. HCl. Denis and Leche's m. (for total sulphate). Add acid and autoclave to decompose protein, then precipitate with barium chlorid, dry, and weigh. **Deventer's m.**, treatment of pelvic presentation in labor by developing the shoulders without previously freeing the arms diacetic acid, m's for. See Folin and Hart's m, Scott and Wilson's m, van Slyke and Palmer's m, under method. direct m., in ophthalmoscopy, that in which the ophthalmoscope is held close to the eye examined and an erect virtual image is obtained of the fundus. direct aëration m. (for urea in blood). See Myer's m., under method. Dreyer's m. (of agglutination): He uses killed (formalized) stock suspensions of typhoid, paratyphoid, dysentery, and other intestinal organisms instead of twenty-four-hour live cultures. Duncan's m., autotherapy. Eggle-ston's m., administration of digitalis in large doses frequently repeated producing rapid digitalization. Ellinger's m. (for indican): Precipitate the urine with basic lead acetate and filter. To the filtrate add Obermayer's reagent. Shake out the indigo with chloroform, evaporate off the chloroform, and titrate the residue with potassium permanganate. Epstein's m. (for glucose): A

modification of the Lewis and Benedict method, making it possible to make the test with very little blood. **Esbach's m.** r. A method for the anaérobic cultivation of bacteria in which inoculated roll-tubes are set in cold water and then filled with melted gelatin. 2. (for albumen in urine): Precipitate the protein with picric acid, let precipitate settle in a graduated tube, and read the result. ethereal sulphates, m's for. See sulphates, ethereal, m's for. Fichera's m. See Fichera treatment, under treatment.

Ficker's m. (of agglutination). Cultures of Bacterium typhosum killed with formaldehyd or phenol are agglutinated in test-tubes by adding some of the patient's serum. Fiske's m. (for total fixed base). Remove the phosphates with ferric chlorid, convert the fixed bases into sulphates by heating in H₂SO₄, ignite, take up in water, precipitate the sulphates as benzidin sulphate, and titrate with alkalı Fiske and Subbarow's m. 1. (for acid-soluble phosphorus in blood): Destroy organic matter by heating with sulphuric and nitric acids, precipitate the phosphates as magnesium ammonium phosphate, and reduce the precipitate with amino-naphthol-sulphonic acid. Compare the blue color with a standard phosphate solution. 2. (for inorganic phosphates): The phosphates are precipitated as ammonium phosphomolybdate. This is then reduced by a mine parallel. This is then reduced by amino-naphthol-sulphonic acid and the blue color compared colorimetrically with a standard solution. fixed base, m. for. See Fiske's m flash m., a method of pasteurizing milk whereby the milk is brought up to a temperature of 178° F. and chilled at once. Cf holding m.

Flexner and Amoss's m., the rapid production of antidysenteric serum by the intravenous injection of living cultures or toxin at intervals of seven days. Flexner and Jobling's m. (for the preparation of antimeningococcus serum). under serum. Folin's m. 1. (for acetone): Aerate the acetone from the urine over into an alkaline hypoiodite solution of known strength. The acetone is thus changed to iodoform and the excess of iodin is titrated with a standard thiosulphate solution, using starch as an indicator. 2. (for accione). Micromethod Acrate the acetone over into a solution of sodium bisulphite and then determine the amount by nephelometric com-parison with a standard acetone solution using Scott and Wilson's reagent. 3 (for amino-acids in blood). Make 10 cc of protein-free blood filtrate slightly alkaline to phenolphthalein Add 2 cc. of beta-naphtha-quinone solution and place in the dark. The next day add 2 c c of acetic acid-acetate solution and 2 c.c. of 4 per cent. thiosulphate solution. Dilute to 25 cc and compare the blue color with a standard amino-acid solution similarly treated 4. (for amino-acid nitrogen in blood): Treat the urine with permutit to remove the ammonia and then with beta-naphtha-quinene sul-phonic acid. The red color is compared with a standard amino-acid solution. 5. (for ammonia nitrogen) Sodium carbonate is added to the urine to free the ammonia, which is aerated into standard acid and titrated. 6. (for blood sugar). To 2 c c. of neutral protein-free blood filtrate add 2 c.c. of the Folin copper solution and heat in boiling waterbath ten minutes. Cool and add 2 c.c. of acid molybdate reagent. Dilute to 25-c.c. mark and compare the blue color with a standard glucose solution similarly treated. 7. (for creatin) Precipitate the proteins of the blood with picric acid and filter. To the filtrate add sodium hydroxid and compare color with a standard solution of creatin. 8 (for creatin in urine): Change creatin into creatinin by heating at 90° C. for three hours in the presence of N/3 HCl. Determine creating the presence of N/3 HCl. tinin by picric acid and alkali and deduct the preformed creatinin. 9. (for creatininin urine): To the urine add picric acid and sodium hydroxid and compare the red color with a N/2 solution of potassium bichromate. 10. (for ethereal sul phates): Remove the inorganic sulphates with barium chlorid

and then the conjugated sulphates after hydrolysing with boiling dilute hydrochloric acid. 11. (for inorganic sulphates): Acidify the urine with hydrochloric acid, precipitate with barium chlorid, filter, dry, ignite, and weigh. 12. (for protein in urine):
Add acetic acid and heat, wash, dry, and weigh the
precipitate. 13. (for total acidity): Add potassium oxalate to the urine to precipitate the calcium which would otherwise precipitate at the neutral point, and titrate with N/10 sodium hydroxid, using phenolphthalein as an indicator. 14. (for total sulphates): Boil the urine for thirty minutes with dilute hydrochloric acid, precipitate with barium chlorid, filter, dry, ignite, and weigh. 15. (for urea and allantoin): Decompose the urea by heating with magnesium chlorid and hydrochloric acid, distil off the ammonia, and titrate. Folin's gravimetric m. (for protein in urine): Precipitate the protein by heat and acetic acid; centrifugalize, wash, dry, and weigh the precipitate. Folin and Bell's m. (for ammonia in urine). See permutit m. Folin-Benedict and Myer's m. (for creatin in urine): To 20 c.c. of urine add 20 c c of N/1 HCl and autoclave at 120° C. for onehalf hour. Neutralize, add picric acid and alkali, and compare the color with a standard solution of potassium bichromate. Folin and Berglund's m. (for sugar in normal urine): Remove interfering substances by shaking the urine with Lloyd's alkaloidal reagent and then proceed as in the Folin-Wu method. Folin, Cannon, and Denis's m. (for adrenalin). Add Folin's uric acid phosphotungstic reagent and sodium carbonate to the unknown and estimate amount by comparison of blue color with a standard uric acid solution similarly treated. Folin and Denis's m. 1. (for albumin) Precipitate the albumin with sulphosalicylic acid and compare the turbidity with that of a standard protein solution. 2. (for Bence-Jones protein Coagulate the Bence-Jones protein at 60° C., centrifugalize, wash precipitate with 50 per cent alcohol, dry, and weigh. 3. (for nitrogen in urine) Destroy the organic matter in the diluted urine with the phosphoric-sulphuric acid-copper sulphate mixture, add Nessler's reagent, and compare it with a standard ammonia solution. 4. (for non-protein nitrogen) It is much the same as Folin and Wu's method except that the proteins are removed with methyl alcohol and zinc chlorid The alcohol is boiled off and the nitrogen changed into ammonia and nesslerized in the usual way. 5. (for phenols): Precipitate interfering substances by adding acid silver lactate solution and colloidal iron. To 20 c.c of the filtrate add 5 c ϵ of the phosphotungstic phosphomolybdic acid reagent and 15 c.c. of a saturated solution of sodium carbonate and compare the blue color, etc. 6. (for urea): The same as the method of Folin and Pettibone except that the urine is diluted twenty to one hundred times to prevent sugar from interfering with the test. 7. (for uric acid in blood): Remove the proteins by boiling acetic acid and then proceed with Benedict and Hitchcock's method. Folin and Farmer's m. (for total nitrogen). A modified microchemic Kjeldahl method for urine. Decompose the nitrogenous bodies with sulphuric acid as usual, add alkali, aerate the ammonia over into standard acid, nesslerize, and compare with a standard solution of ammonium sulphate. Folin and Flander's m. (for hippuric acid): 100 c.c. of the urine is evaporated to dryness with 10 c.c. of 5 per cent. sodium hydroxid. Hydrolyze the residue with nitric acid, shake out the benzoic acid with chloroform, and titrate it with N/10 sodium alcoholate, using phenolphthalein as indicator. Folin and Hart's m. (for acetone and diacetic acid): Determine the acetone by Folin's method, then heat the urine with hydrochloric acid to change diacetic acid to acetone, and determine again. Folin and Macallum's m. (for ammonia nitrogen): To the urine add potassium carbonate and potassium oxalate, aerate the ammonia over into standard acid, nesslerize, and

compare with a standard solution of ammonium sulphate. Folin, McEllroy, and Peck's m. (for glucose in urine): Mix 5 c.c. of an acidified 5.9 per cent. copper sulphate solution, 1 c.c. of 20 per cent. sodium carbonate solution and then add 4 to 5 gm. of phosphate-thiocyanate mixture. Heat and add enough urine to produce a sudden turbidity after not more than five seconds of boiling; 25 mg. of glucose will reduce the 5 c c. of copper solution. Folin and Peck's m. (for glucose): To the boiling copper solution of Folin and McEllroy run in urine until the color changes from green to yellow. Folin and Pettibone's m. (for urea): Microchemic. The urea is decomposed by heating with potassium acetate and acetic acid, the ammonia is liberated by sodium hydroxid, acrated over into standard acid, and nesslerized. Folin and Shaffer's m. (for uric acid) Phosphates and certain organic substances and first precipitated by an acetic acid solution of ammonium sulphate and uranium acetate. The uric acid is then precipitated as ammonium urate and the amount determined by titration with potassium permanganate. Folin and Wright's m. (for nitrogen in urine). A simplified macro-Kjeldahl method in which the digestion is brought about by a mixture of phosphoric and sulphuric acids aided by ferric chlorid. and the liberated ammonia is distilled without the use of a condenser. Folin and Wu's m. 1. (for creatinin) The color produced by the unknown (protein-free blood filtrate or urine) in an alkaline solution of picric acid is compared in a colorimeter with the color produced by a known solution of creatinin or with a standard solution of potassium bichromate. 2. (for creatin plus creatinan) The creatin of a protein-free blood filtrate is changed to creatinin by heating with dilute HCl in an autoclave and the creatinin thus produced together with the preformed is determined colorimetrically after adding an alkaline picrate solution 3 (for glucose). The protein-free blood filtrate is boiled with a dilute alkaline copper tartrate solution, the cuprous oxid is dissolved by adding a phosphomolybdic-phosphoric acid solution, and the blue color produced in converse with the color produced is compared with the color from sugar solutions of known strength. 4. (non-protein nitrogen). The total non-protein nitrogen in the protein-free blood filtrate is determined by setting free the nitrogen as ammonia by the Kjeldahl process, nesslerizing this ammonia, and comparing with a standard. 5. (for protein-free blood filtrate). Lake the blood with distilled water, add sodium tungstate and sulphuric acid, and filter 6. (for urea) Change the urea to ammonia by means of urease and nesslerize. 7 (for uric acid). Uric acid is precipitated from the protein-free blood filtrate or from urine by silver lactate, treated with phosphotungstic acid and the blue color compared with the color produced by known amounts of uric acid **Folin and Young-burg's m**. (for urea in urine) The ammonia is removed from the urine by permutit, the urea is changed to ammonium carbonate by urease, and nesslerized directly. **Forlanini-Morelli m.**, treatment of empyema by systematic induction of pneumothorax, continuous aspiration drainage combined with irrigation, and the use of an airtight pneumatic jacket drainage-tube. m. for (volatizing) formaldehyd gas. See Aronson's (Volatizing) formaldehyd gas. See Aronson's m., Breslau's m., Brunn's m., lime m., Schlossom, Trillau's m., formol titration, m's of. See Benedict and Murlin's m., Henriques and Sorensen's m., Malfatti's m., and Sorensen's m., under method. Freiburg m. Same as twilight sleep. See under sleep. Frey and Gigon's m. (for amino-acid nitrogen): A modified form of Sorenson's method in that the ammenia is aspirated off after adding the barium budrovid. ated off after adding the barium hydroxid. Fridericia's m. (for alveolar carbon dioxid tension): The carbon dioxid is absorbed into a solution of potassium hydroxid and the decrease in volume read in percentage in a special apparatus. Gabaston's hydraulic m., treatment of retention of

the placenta by filling it up with saline solution injected through the umbilical cord. garnet m. (for standardizing disinsectants): The test objects (spores of Bacillus anthracis) are dried on garnets. These are then immersed in the disinfectant for stated periods, washed, and the organisms on them plated for growth. **gasometric m**. (for urea): See Stehle's m. **Gerota's m**., injection of the lymphatics with a dye, such as Prussian blue, which is soluble in chloroform or ether, but not in water. Gilbert's m., autoserotherapy. Given's m. (for peptic activity): Varying amounts of diluted gastric juice are added to a series of tubes containing pea globulin, the mixtures are incubated, and the amount of digestion noted. glucose, m's for. See Bang's m., Benedict's m., Benedict and Osterberg's m., Bertrand's m., Folin's m., Folin and Berglund's m, Folin, McEllroy, and Peck's m., Folin and Peck's m., Folin and Wu's m., Hagedorn and Jensen's m, its unsurance m., Peter's m., Power and Wilder's m,. and Sumner's m. gold number m. See Lange's test, under tests. Gram's m. See under staining. Greenwald's m. (for non-protein nitrogen). The proteins are precipitated by trichlor-acetic acid; the filtrate is decomposed by sulphuric acid as in the Kjeldahl method; the ammonia is distilled off and the amount titrated with N/10 sodium hydroxid. **Greenwald and Lewman's m.** (for titratable alkali of blood): The protein of the blood is precipitated with an excess of picric acid. Both the free and the total picric acid in the filtrate are then determined. The difference represents the picric acid which is combined with the bases of the blood. Griffith's m. (for hippuric acid): Extract the hippuric acid with ether. Distil off the ether and destroy urea in the residue with sodium hypobromite solution. Determine the nitrogen in the residue by the Kjeldahl method. Gross's m. (for tryptic activity): Add increasing amounts of a trypsin solution to a series of tubes of pure, fat-free casein which have been heated to 40° C. Incubate at 40° C. for fifteen minutes. Test by adding a few drops of acetic acid (dilute) to each tube. A precipitate on acidification indicates that digestion is not complete or lacking; no precipitate indicates digestion. Grossich's m., the use of tincture of iodin as an antiseptic in surgical operations. Hagedorn and Jensen's m. (for sugar in blood): Precipitate the protein with zinc hydroxid. Heat the filtrate with potassium ferricyanid solution and determine the amount of ferricyanid reduced by adding an iodid solution and titrating the iodin set free with sodium thiosulphate. Hall's m. (for total purin nitrogen): Remove phosphates by means of magnesia mix-ture and precipitate the purin bodies in a specially graduated tube by means of silver nitrate and ammonium hydroxid. After twenty-four hours read the volume of the purin precipitate. **Hammerschlag's m.** (for specific gravity of blood): Prepare a mixture of benzene and chloroform of about 1050 specific gravity. Into this let fall a drop of blood and add benzene or chloroform until the drop neither rises nor sinks. Then take the specific gravity of the mixture. **Harris's m.** (for preparing rabies vaccine). The spinal cord from a rabbit killed by infection with fixed virus is removed aseptically, quickly frozen, and dried in a vacuum without allowing it to thaw. **Harr's** m. (for casein in milk): Precipitate the casein from the diluted milk, filter, wash, redissolve in excess of N/10 potassium hydroxid, and titrate remaining alkali with N/10 HCl. The difference is casein. Hauser's m., a method for the an-aerobic cultivation of bacteria in which hydrogen gas is passed through the container until the air is removed. **Heintz's m.** (for uric acid): Precipitate the urine by adding hydrochloric acid, filter off the crystals, wash, dry, and weigh. **hemoglobin**, m. for. See acid hematin m. Henderson and Palmer's m. (for hydrogen-ion concentration) The reaction of the urine is estimated by matching colors produced by certain

indicators in the urine and in solutions of known hydrogen-ion concentration. Henriques and Sorenzon's m. (for amino-acid nitrogen by formol tilration). See Sorenson's m. Herter-Foster m. (for indol in feces modified by Bergeim): Make the feces alkaline and distil. Make the distillate acid and distil again. To the second distillate add beta-naphthaquinone sodium monosulphonate and alkali. Extract the blue color with chloroform and compare it with a standard solution of indol containing o.1 mg. of indol per cubic centimeter. hippuric acid, m's for. See Folin and Flander's m. Griffith's m., and Roaf's m., under method. Hirschberg's m., measurement of the deviation of the distribution of the deviation of the distribution of the deviation of the distribution of the reflection. tion of a strabismic eye by observing the reflection of a candle from the cornea. **Hodgen's m.**, treatment of traumatic tetanus by large doses of Fowler's solution. **holding m.**, a method of Fowler's solution. **holding m.**, a method of pasteurizing milk whereby the milk is heated to 65°C. and kept at that temperature for from thirty to forty-five minutes. Cf. flash m. **Hunt's m.** (for the activity of thyroid products). Mice on a cracker diet are fed varying amounts of the thyroid product for ten days. They are then injected with 0.4 mg. of acetonitril per gram of body weight. If the product is active the treated mice usually live whereas untreated mice are killed in usually live, whereas untreated mice are killed in two hours by 1.2 mg per gram of body weight.

Hunter and Given's m. (for uric acid and purin bases) Precipitate and decompose the precipitate as in the Krueger-Schmidt method. Decipitate as in the Krueger-Schmidt method. termine the uric acid in an aliquot part and in the remainder destroy the uric acid by oxidation and determine the purin bases as in the Krueger-Schmidt method. Hydrogen-ion concentration, m. for. See Henderson and Palmer's m. and Levy, Rowntree, and Marrott's m., under method. indican, m. for. See Askenstedt's m., Ellinger's m., under method. indol, m's for. See Bergeim's m, Herter and Foster's m inor-ganic sulphates, m's for. See sulphates, in-organic, m's for, under method. iron, m. for. See Walker's m and Wolter's m, under method. Issayoff's m., intraperitoneal injection of saline solution twenty-four hours previous to an ab-dominal operation done to promote local leukocytosis. Karr's m. (for urea in blood) Change the urea to ammonium carbonate by means of urease, nesslerize directly, and compare the color with that of a standard urea solution similarly treated. Kendall's m. (for iodin in thyroid treated. **Kendall's m.** (for iodin in thyroid tissue). Oxidize the organic matter by fusion in KNO₃ and strong KOII. Acidify, oxidize with bromin, add an excess of KI, and titrate the liberated iodin with sodium thiosulphate. Kirstein's m., direct inspection of the larynx by pushing the head far back and depressing the tongue. Kjeldahl's m. (1883), a method of determining the amount of nitrogen in an organic compound. It consists in heating the material to be analyzed with strong sulphuric acid. The nitrogen is thereby converted to ammonia, which is distilled off and caught in N/10 solution of sulphuric acid By titration the amount of ammonia is determined, and from this the amount of nitrogen is estimated. Kluge's m., induction of premature labor by dilatation of the cervix by specially pre-pared sponges. Koch and McMeekin's m. (for total nitrogen): Destroy organic matter with sulphuric acid and hydrogen peroxid and nesslerize the resulting solution directly. Kolle's m., a method of inoculation or vaccination in which the skin is shaved and the culture material rubbed vigorously into the shaved area. It is used especially in the diagnosis of plague. Kolle and Pfeister's m., the same as the Gruber-Widal Kolle and reaction except that the serum dilutions remain as made (are not doubled) and the bacteria are added by means of a platinum wire loop. **Korotkow's** m., the auscultatory method of determining bloodpressure. **Kramer and Gittleman's m**. (for sodium in serum): Dry and ash the serum. Take sodium in serum): Dry and ash the serum. Take it up in 0.1 per cent. HCl and make slightly al-

kaline with KOH. Precipitate with the pyroantimonate reagent and alcohol, dissolve precipitate in strong HCl, add potassium iodid, and titrate with sodium thiosulphate. Kramer and Tisdall's m. (for polassium in serum): Precipitate with sodium cobaltinitrite reagent, treat precipitate with acid permanganate solution, then with sodium oxalate, and titrate with standard permanganate. Kraus and Doerr's m., for the production of dysentery antitoxin by th jection of sterile dysentery toxin. Kristeller's m., a method of expressing the fetus in labor. The head should be in the vulva and the abdomen must be sufficiently relaxed so that the assistant may grasp the fundus. The grip on the fundus is made by the fingers of the two hands parallel behind and the thumb in front, the line of force being in the direction of the axis of the inlet. The expression should be done in one or two sustained efforts. **Krogh's m.** (for wrea): The urea is oxidized by sodium hypobromite to carbon dioxid and nitrogen in an alkaline solution which absorbs the carbon dioxid. The remaining nitrogen is then measured. **Krönig's m.**, sterilization of catgut by heating for an hour in cumol at 165° C. **Krueger and Schmidt's m.** (for uric acid and purin bases): Precipitate the uric acid with copper sulphate, decompose the precipitate with sodium sulphite, acidify, concentrate, and let uric acid crystals separate. Determine the nitrogen in them by the Kieldahl method. Reprecipitate the purin bases with copper sulphate, filter, wash, and determine the nitrogen in the precipitate by the Kjeldahl method. Kruse and Shiga's m., for the production of antidysenteric serum by the subcutaneous injection of whole bacteria. **Kwil-ecki's m.** (for albumin) 10 drops of a 10 per cent. solution of ferric chlorid are added to the urine before proceeding with the regular method of Esbach Laborde's m., the making of rhythmic traction movements on the tongue in order to stimulate the respiratory center in asphyxiation. lactalbumin, m. for, remove casein from the milk with magnesium sulphate, add Almen's reagent to the filtrate, determine the nitrogen in the precipitate with the Kjeldahl method, and multiply the result by 6 37. lactic acid, m's for. See Clausen's m., and Cori's m. Leishman's m., a method for determining the phagocytic index by adding the hacteria to a laukewije creem from adding the bacteria to a leukocytic cream from the patient's blood, and, after incubation, counting the number of bacteria within the phagocytes. Leroux's m., treatment of placenta pravia by tamponade of the vagina. Levy, Rowntree, and Marriott's m. (for hydrogen-ion concentration of blood): Dialyze the blood through a collision. lodion tube against neutral physiologic salt solution; then match the color produced by phenol-sulphonephthalein in the dialysate and in solution known hydrogen-ion concentration. Lewis and Benedict's m. (for glucose): The proteins of the blood are precipitated by means of picric acid, sodium carbonate is added, and the color of the picramic acid solution is compared with that from a standard glucose solution. Lewisohn's m., a method of indirect transfusion by adding sodium citrate to the blood. Liborious's m., a method for the anaerobic cultivation of bacteria in which the bacteria are placed in deeply filled tubes of agar or gelatin from which the oxygen has been removed by boiling. life insurance m.

1. (for albumin in urine). The clarified urine is treated with sulphosalicylic acid and the turbidity is compared with permanent turbidity standards 2. (for glucose in urine): Add picric acid and alkali and compare the red color with permanent sugar standards made by mixing varying amounts of ferric chlorid and cobalt chlorid in dilute HCl. lime m., a method of generating or volatilizing formaldehyd gas. Forty per cent. formaldehyd, containing to per cent. of sulphuric acid, is poured over quick-lime in a suitable container. One and a half to 2 pounds of lime should be used for each

pint of the solution. Lindemann's m. (for transfusion): One needle-cannula is placed in the arm of the donor and one in the arm of the pa-Syringes are filled from the donor and tent. Syringes are filled from the donor and emptied into the recipient through the cannulas. Lorthiore's m., radical cure of hernia by dissection and extirpation of the sac without opening the inguinal canal. Lyman's m. (for calcium): Precipitate the calcium from the proteinfree blood filtrate or from urine as calcium ox-alate, redissolve in dilute acid and reprecipitate as calcium ricinate, and determine amount nephelometrically. Lyon's m. See Meltzer-Lyon test, under tests. Maclachlan m., a method of con ditioning liquid sludge by the application of sul phur dioxid gas. magnesium, m's for. Denis's m. and McCrudden's m., under method Malfatti's m. (for ammonia nitrogen by formol native of the pericardium in which the trocar is passed just below the xiphoid cartilage in the middle line, directed obliquely from below upward, passing for 2 cm. along the posterior surface of the backward, passing into the gap in the sternal insertion of the diaphragm, entering the pericardium at its base. **Marmo's m.**, a method of producing artificial respiration in asphyxiated infants: the surgeon holds the infant suspended with his hands in its axillæ, raises it, and then suddenly lets it drop a foot or two, which will produce inspiration; expiration is then produced by pressure of the hands against the chest wall. Marriott's m. (for alkali reserve): The patient rebreathes the air in a bag until its carbon dioxid tension is virtually that of venous blood. This air is then bubbled through a standard bicarbonate solution until the solution is saturated and the color produced is compared with standard color tubes. Marshall's m. (for urea). The urea is changed into ammonium carbonate by the enzyme urease and the ammonia titrated with N/10 hydrochloric acid, using methyl-orange as indicator. Mc-Arthur's m., enteroclysis through a catheter placed in the common duct after operations on the gall-bladder. McCrudden's m. (for calcium and magnesium): Make 200 c.c. of urine faintly acid to litmus, add 10 c.c. of concentrated hydrochloric acid, precipitate with oxalic acid, filter, ignite, and weigh as calcium oxid, or filter and titrate the precipitate with potassium permanganate. This gives the calcium. For the magnesium, add to the filtrate from the calcium, nitric acid, evaporate to dryness, and heat until residue fuses. Take up in water, add sodium acid phosphate and ammonia, filter, wash, ignite, and weigh as the pyrophosphate.

McIntosh and Fildes's m., a portion of platinized or palladinized asbestos is placed in the anaerobic jar and hydrogen gas passed in until no oxygen remains. The oxygen is removed by uniting with the hydrogen under the catalytic influence of the platinum black. McLean and van Slyke's m. (for chlorids) Precipitate the chlorids from oxalated plasma with an excess of silver nitrate and titrate the excess with potassium iodid and starch. Meltzer's m., intratracheal insufflation of air containing an anesthetic vapor; employed in thoracic surgery. Meltzer-Lyon m. See Meltzer-Lyon test, under tests. Mercière's m., embalming treatment of infected wounds designed to fill the wound with a soothing antiseptic which shall inhibit infection until proper treatment shall be given. The formula is 10 gm. each of guaiacol, eucalyptol, and balsam of Peru; 10 gm. of iodoform, 100 gm. of alcohol, and enough ether to make I liter. Messinger and Huppert's m. (for acetone): The same as the method of Folin and Hart except that the action is distilled instead of aspirated. Mett's m. (for peptic activity). See Nirenstein and Schiff's m. Meulengracht's m.

(for bile pigment in serum): The serum is diluted until the yellow color corresponds to that of a standard potassium bichromate solution. Meyer's m. (for creatin): A modification of Folin and Benedict's method in that the creatin is changed into creatinin after adding hydrochloric acid by digesting in an autoclave. Miles's acid m., a method of treating sewage by the fumes of burning sulphur. Milne's m., a method of prophylaxis against the spread of infectious diseases. The patient's head and chest are veiled with a gauze curtain which is sprayed with a tincture of eucalyptus and an antiseptic three times a day. Every three hours the patient's throat and nasopharynx are painted with iodized glycerin and an antiseptic oil is instilled into the nasal passages **Minkow**-**Mohr's m.** Same as Naunyn-Minkowski m. **Mohr's m.** (for chlorids): Oxidize interfering organic matter by igniting with potassium nitrate. To the solution of the ash add potassium chromate and titrate with standard silver nitrate until the red silver chromate appears. **Mojon's m.**, injection of cold water to which acids have been added through the umbilical vein into the placenta with a view to facilitating its detachment from the uterus after birth. Morelli m. See Forlanini-Morelli m Morison's (Rutherford) m., a method of treating wounds which consists of a thorough opening up and mechanical cleansing of the wound, sponging of it with alcohol, and the application to the raw surface of a thin layer of a paste consisting of 1 part of bismuth subnitrate, 2 parts of iodoform, and enough paraffin to make a soft paste. This paste is known as bipp or B. I. The wound is then sutured without drainage. Müller's m. Same as Deventer's m. Murphy m. 1. Suture of an artery by invaginating the ends over a cylinder in two pieces which can be removed. 2. Continuous proctoclysis; the continuous administration per rectum of salt solution, drop by drop, with the patient in the Fowler posi-tion. used in infections of the peritoneum. Called also Murphy drip. 3 See Murphy treatment, under treatment. Myer's m. (for urea in blood) Change the urea to ammonium carbonate by the action of urease, aerate off the ammonia into an acid solution, and nesslerize. Myers and Wardell's m. (for cholesterol). Dry the blood on plaster of Paris and extract the cholesterol with chloroform. Add acetic anhydrid and sulphuric acid and compare the color with that of a standard solution of cholesterol similarly treated. Nageli's m. See Nageli's treatment, under treatment. Naunyn-Minkowski m., palpation of the kidney after first dilating the colon with gas. Neisser and Wachsharg's m. (for tother the latest of the lat Wechsberg's m. (for testing the bactericidal power of blood) The patient's serum is inactivated and diluted as desired. To each dilution is added a constant amount of the culture to be tested and some non-specific complement. The mixtures are some non-specific complement. The mixtures are incubated and then plated. Nikiforoff's m., a method of fixing blood-films by placing them for from five to fifteen minutes in absolute alcohol, pure ether, or equal parts of alcohol and ether. Niren-stein and Schiff's m. (for peptic activity): Mett's tubes are placed in the solution to be tested and incubated for twenty-four hours. The length of the column digested at each end is then deteror the column digested at each end is then determined. nitrogen, amino-acid, m's for. See Benedict and Murlin's m., Frey and Gigon's m., Henriques and Sorenson's m., Sorenson's m., and van Slyke's m., under method. nitrogen, ammonia, m's for. See Folin's m. (3), Folin and Bell's m., Folin and Macallum's m., Maljati's m., and permutit m. nitrogen, non-protein, m's for. See Folin and Denis's m. (2), Folin and Wu's m. (3), and Greenwald's m, under method. nitrogen, purin, m. for. See Hall's m, under method. nitrogen, total, m's for. See Arnold and Gunning's m., Bock and Benedict's m., Folin and Denis's m., Folin and Farmer's m., Folin and Wright's m., Koch and McMeekin's m., Taylor and Hullon's m. Noguchi's m. (for growing Treponema pallida): Place in deep tubes blood-serum 1 part. distilled water 3 parts, and a small piece of fresh sterile tissue (kidney or testicle). Cover with paraffin oil, inoculate, and incubate in anaërobic jar. Or simply add the piece of sterile tissue to a deep tube of serum agar or ascitic agar and cover with oil. Nolf-Depage m., treatment of rebellious streptococcal septic pyemia by injection of peptones. non-protein nitrogen, m's for. See nitrogen, non-protein, m's for, under method.

Oberst's m., local anesthesia produced by injecting saline solution or distilled water into the subcutaneous connective tissue.

Olshausen's m., a method of operating for umbilical hernia by reduction without opening the sac, and then suturing the skin. Orsi-Grocco m., palpatory percussion of the heart. Osborne and Folin's m. (for total sulphur in urine) Destroy the organic matter in the concentrated urine and oxidize the sulphur by fusing with sodium peroxid. Precipitate with barium chlorid, wash, dry, ignite, and weigh. oxalic acid, m's for. See Autenreith and Barth's m. and Salkowski's m., under method. Pachon's m. and Saircouser's m., under memou.
Pachon's m., cardiography with the patient lying on his left side panoptic m. See Giemso's staining method. Parker's m. (for indican): See Askenstedt's m. Pasteur's m., a method of attenuating bacteria by growing them at a temperature higher than body temperature, usually 42° to 43° C. for Bacillus anthracis. Pawlow's m. study of the changes in the saliyary reflex prom., study of the changes in the salivary reflex produced by psychic influence. Payr's m. 1. use of absorbable cylinders of magnesium for per-forming suture of blood-vessels. 2. Transplanta-tion of blood-vessels so that they hang free in the ventricle of the brain in order to absorb the fluid in hydrocele. peptic activity, m's for. See Given's m, Melt's m., and Nirenstein and Schiff's m. Percy m. See Percy cautery, under cautery. permutit m. (for ammonia in urine). Add permitties the mine ammonia in urine. mutit to the urine and shake for five minutes. Wash the permutit ammonia compound several times, add sodium hydroxid, and nesslerize. Compare the color with a standard solution of ammonium sulphate **Peter's m.** (for glucose) Boil the unknown in an excess of the reagent, filter off the reduced copper, and titrate the filtrate with potassium iodid and standard thiosulphate solution. **Petroff's m.**, a method of isolating the Bacillus tuberculosis from the sputum Digest the sputum in sodium hydroxid solution at 37.5° C. for twenty to thirty minutes Neutralize with hydrochloric acid and centrifugalize. Spread several loops of the sediment on beef-infusion-glycerin-egg medium to which has been added grycern-egg meatum to which has been added gentian violet in the strength of 1:10,000. **Petruschky's m.**, percutaneous tuberculin treatment by inunction with an ointment containing decomposed tubercle bacilli. **Pfeiffer's m.** (for testing the bactericidal activity of blood). See Pfeifer's phenomenon, under phenomenon. **phenols, m. for.** See Benedut and Theis's m. Folin and Davie's m. ord Triedd's m. under method. Denis's m., and Tisdall's m, under method. phosphatos, m's for. See Benedict and Leche's m. Benedict and Theis's m, Bloor's m., Fiske and Subbarow's m. Plimmer and Skelton's m. Subbarow's m. Plimmer and Skelton's m. (for allantoin) Determine the urea and allantoin by Folin's method (15), and the urea alone by Marshall's urease method The difference is allantoin. Ponndorf's m., treatment of tuberculosis by rubbing old tuberculin or Ponndorf's vaccine into cutaneous scarifications. potassium, m. for. See Kramer's m. and Tisdall's m., under method. Power and Wilder's m. (for glucose in urine): Remove interfering substances with mer-curic sulphate. To the filtrate add alkaline ferricyanid; heat for ten minutes, cool, and add KI and an acid zinc sulphate solution. Titrate the liberated iodin with standard thiosulphate solution.

protein in urine, m's for. See albumin in urine, m's for protein-free blood filtrate;
m's for. See Folin's m. (4), Folin and Denis's m. (5), and Folin and Wu's m. (4), under method.

'urdy's m., the use of the centrifuge for the etermination of the quantity of albumin, chlorids, ulphates, etc. purin bodies, m's for. lunier and Given's m., Kruger and Schmidi's m., 'alkowski's m., Salkowski and Arnstein's m., and Velker's m., under method. purin nitrogen, n's for. See nutrogen, purin, m. for, under method. 'uzos's m., early rupture of the membranes in ases of placenta prævia. rabies vaccine, m. or. See Harris's m., Pasteur's m, and Terrell's m. laiziss and Dubin's m. (for ethereal and norganic sulphates). Oxidize the urine by Benelict's method, precipitate the sulphate with enzidin hydrochlorid, as in the method of Rosenneim and Drummond, and titrate with N/100 totassium permanganate. **Reclus's m.**, the nduction of local anesthesia by cocain. **Reh**uss's m., after an Ewald test-meal a tube is passed into the stomach and small quantities of he stomach contents are removed at fifteenninute intervals and examined for crystallizing oryhemoglobin Add to the blood defibrinated, laked, or whole) 1 to 5 per cent. of amnonium oxalate crystals and examine under the nicroscope. Rendu's m., treatment of tuberulous peritonitis by smearing the peritoneum with camphor naphthol. **Ribera's m.**, the inluction of anemia in the legs by compressing the vaist with an elastic spica. Rideal-Walker m. for determining the carbolic coefficient of disinectants) A method for determining the dilution it which a disinfectant kills the test organism in he same time as a control solution of phenol loes **Roaf's m.** (for the preparation of hippuric ucud). Add 125 gm. of ammonium sulphate and 7.5 m. of concentrated sulphuric acid to 500 c c. of trine of a horse. Hippuric acid will crystallize out Rosenheim and Drummond's m. (for thereal and inorganic sulphates): Precipitate the sulphates with benzidin hydrochlorid and titrate he acid in the benzidin sulphate with N/10 poassium hydroxid Roux's m., the inoculated assimily agar or gelatin is aspirated into narrow sterile tubes which are then sealed off at each end. Ruhemann's uricometer m. (for uric acid): Urine is added in a specially graduated tube to a nixture of carbon bisulphid and iodin solution intil the carbon bisulphid is decolorized. **Sal- kowski's m.** (for purin bodies and uric acid):
Precipitate as silver magnesium salts, decompose he precipitate with hydrogen sulphid, precipitate aric acid by means of sulphuric acid, and the purin podies as silver salts Salkowski and Arnstein's m. (for purns) Precipitate the urine with magnesia mixture and to the filtrate add 3 per cent ammoniacal silver nitrate solution. Wash the precipitate and determine the nitrogen in it by the Kjeldahl method. The uric acid nitrogen is separately determined and deducted. Salkowski-Autenrieth and Barth's m (for oxalic icid): Precipitate the oxalic acid by means of salcium chlorid. Dissolve the precipitate in hyirochloric acid, extract the oxalic acid with ether, and reprecipitate it as calcium oxalate. **Scherer's** m. (for proteins). Precipitate the protein by boiling with dilute acetic acid, wash, dry, and weigh. Schlösser's m. See Schlösser's treatment, under realment. Schlossmann's m., to prevent polymerization, 10 per cent. of glycerol is added to formaldehyd before it is volatilized by heat. Schüller's m., a method of performing artificial respiration by rhythmic raisings of the thorax by means of the fingers hooked under the ribs. Schultze's m., treatment of asphyxia neonatorum by swinging the inverted infant. Scott and Wilson's m. (for acetone and diacetic acid): Distil the acetone into an alkaline solution of basic nercuric cyanid, filter, and titrate the precipitate with potassium thiocyanate. **Shaffer's m**. (for realinin): Folin's method adapted to very dilute solutions. Shaffer and Marriott's m. (for acetone bodies): Precipitate the urine with basic

(acetone and diacetic acid) Oxidize the residue with potassium bichromate and distil again (beta hydroxybutyric acid). Titrate the distillates witl standard iodin and thiosulphate solutions. Shoh and Pedley's m. (for calcium in urine): Oxidiz the urine with ammonium persulphate, precipitat the calcium as oxalate, add H_2SO_4 to the pre cipitate, and titrate with potassium permanganate **Sjoqvist's m.**, quantitative estimation of the urea in the urine by means of a baryta mixture. **So** dium, m. for. See Kramer and Gittleman's m. under method. Sorenson's m. (for amino-acid by formol titration) Titrate the urine for tota acidity using phenolphthalein as indicator, ade fresh formalin mixture (15 c.c. of formalin, 30 c.c of water, and sufficient sodium hydroxid to make it faintly alkaline to phenolphthalein), and titrat again **Souligoux-Morestin m.**, the use o ether lavage of the peritoncal cavity in acute in specific gravity, m. for. See Hammerschlag' m. Spengler's m., a method of examining th sputum for tubercle bacilli by treating it with a equal quantity of weak sodium carbonate solution then with pancreatin, and then with crystallize carbolic acid. **Stammer's m.** (for glucose i. blood) Precipitate blood proteins by boiling wit. acid sodium sulphate and treatment with dialize iron. In a test-tube place 20 c c of blood filtrate 2 drops of a 20 per cent. solution of sodium hy droxid, and 1 c c. of a 0 0075 per cent. solution of methylene-blue Boil until the blue color i discharged. The length of time required indicate the amount of sugar present. Time is countefrom the beginning of vigorous boiling: thirty seven seconds indicates o ; per cent sugar, sixt seconds, 0.225 per cent, one minute, twenty-fiv seconds, o 175 per cent, one minute, fifty-fiv seconds, o 125 per cent, and two minutes, forty five seconds, 0 075 per cent. Stehle's m. (fc urea) Decompose the urea in a van Slyke pipet b sodium hypobromite and measure the nitroger Steinach's m. See Steinach's operation, unde operation. Stockholm and Koch's m. (for total sulphur in biological material). The materia is disintegrated by heating in strong sodium by droxid, then oxidized with 30 per cent H2O2, an then with nitric acid and bromin. Precipitate th sulphuric acid with barium, wash, dry, ignite, an weigh. sulphates, ethereal, m's for. So Folin's m (5), Raiziss and Dubin's m, and Roser herm and Drummond's m, under method sul them and Drummond's m, under mema by the phates, inorganic, m's for. See Folin's n (6), Raiziss and Dubin's m, and Rosenheim an Drummond's m, under method. sulphur, total m's for. See Benedict's m (2), Benedict an Denis's m, Denis and Leche's m, Folin's m Osborne and Folin's m , and Stockholm and Koch's m under method. Sumner's m. (for sugar in urine Heat 1 c c of urine and 3 c c of Sumner's dinitre salicylic acid reagent, dilute to 25 cc, an compare the color with that of a standard suga solution similarly treated. **Taylor and Hulton's m.** (for total nitrogen): Similar to Folin an Farmer's method except that small amounts of sulphuric acid are used and the ammonia is nest lerized in the original tube without being aerate over into acid. Terrell's m. (for preparing rabic vaccine). The spinal cord from a rabbit killed b infection with fixed virus is removed aseptically ground to a fine suspension, and killed with carbol acid (2 per cent). **Thézac-Porsmeur m.**, helic therapy of suppurating wounds by concentratin the sun's rays on the part by means of a larg double convex lens mounted on a three-foot-lon cylinder of canvas. thread m. (for standardizin disinfectants): Pieces of thread are immersed in culture of the test organism, dried, exposed to th action of the disinfectant, washed, then placed o suitable culture-medium, and incubated for growth thyroid activity, m. for. See Hunt's m Tisdall's m. (for phenols in urine) Extract th

then shake them from the ether with 10 per cent. NaOH. Neutralize and proceed as in the Folin and Denis method. total acidity, m. for. See Folin's m., under method. total fixed base, m. for. See Fiske's m. total nitrogen, m. for. See nitrogen, total, m. for, under method. total sulphur, m. for. See sulphur, total, m. for, under method. toxin-antitoxin m. See Behring's m. Tracy and Welker's m. (for deproteizing urine): A method depending on the use of aluminium hydroxid cream. Trillat's m., volatilization of formaldehyd in an autoclave under pressure to prevent polymerization. tryptic activity, m. for. See Gross's m. Tuffer's m., Corning's spinal anesthesia. See under anesthesia. turbidity m. (for albumin): See Folin and Denis's m uranium acetate m. (for phosphorus): Add sodium acetate and acetic acid to the urine, heat to boiling, and titrate with a special uranium acetate solution. urea, m's for. See autoclave m., Benedict's m., Clark and Collip's m., direct aeration m, Folin and Denis's m, Folin and Pettibone's m., Folin and Wu's m., Folin and Poungburg's m., Kar's m., Krogh's m., Marshall's m., Myers' m., Stehle's m., and van Slyke and Cullen's m, under method. urease m. See Marshall's m. and van Slyke and Cullen's m. (2), under method. uric acid, m's for. See Benedict's m., Beneuric acid, m's for. See Benedict's m., Benedict and Franke's m, Benedict and Hitchcock's m., Folin and Denis's m. (5), Folin and Shaffer's m, Folin and Wa's m (6), Heinte's m, Hunter and Gwen's m, Krueger and Schmidt's m, Ruhemann's m., and Salkowski's m., under method. van Gehuchten's m., fixing of a histologic tissue in a mixture of glacial acetic acid 10 parts, chloroform 30 parts, and alcohol 60 parts. van Slyke's m. (for amino-nitrogen) The unknown is treated with nitrous acid in a special apparatus and the nitrogen nitrous acid in a special apparatus and the nitrogen liberated is measured. van Slyke and Cullen's m. 1. (for the carbon dioxid in blood, or for the alkali reserve of blood). Freshly prepared oxalated plasma is brought into equilibrium with the carbon dioxid of expired air, acid is then added to a measured amount of the blood, the carbon dioxid is pumped out, and measured 2 (for urea). The urea is changed into ammonium carbonate by means of the enzyme urease, the ammonia is aerated over into standard acid, and the excess titrated van Slyke and Fitz's m. (for alkali reserve). Collect the urine for a two-hour period between meals and note amount and determine the ammonia and the titratable acid by Folin's methods. The plasma carbon dioxid capacity (C) may be calculated from the formula $C = 80 - 5\sqrt{\frac{D}{W}}$ where D = rate of excretion per twenty-four hours, W = body weight in kilograms. van Slyke and Meyer's m. (for ammo-acid nitrogen). Precipitate the proteins of the blood by means of alcohol and then proceed by van Slyke's nitrous acid method van Slyke and Palmer's m. (for organic acids in urine). Remove carbonates and phosphates and titrate with acid from the turning point for phenolphthalein to the turning point for tropaeolin OO. Volhard and Arnold's m. (for chlorids) Acidify the urine with nitric acid and add a known amount of silver nitrate. Titrate excess of silver nitrate with ammonium sulpho-cyanate, using ferric thiocyanate as indicator. Volhard and Harvey's m. (for chlorids): This differs from the method of Volhard and Arnold in that the silver chlorid is not filtered out, but the excess of silver nitrate is titrated in the original mixture Walker's m. (for iron in foods): Ignite sample, cool, and dissolve in dilute HNO₃. Filter, oxidize filtrate with H₂O₂, add potassium thiocyanate, and compare color with standard iron solu-tion, similarly treated. **Wallace and Diamond's m**. (for urobilinogen): Add Ehrlich's aldehyd reagent to a series of dilutions of the urine, note the highest dilution which shows a faint pink colora-tion, and express the result in terms of this dilu-tion. **Wardrop's m.**, treatment of erectile

tumors by the application of potassa fusa. Welcher's m., determination of the total blood volume by bleeding and then washing out the blood-vessels. Welker's m. (for purin bodies): Remove the phosphates with magnesia mixture, then precipitate the purin bodies with silver nitrate and ammonium hydroxid. Determine nitrogen in the precipitate by Kjeldahl's method Welker and Marsh's m. (for clarifying milk). A method using aluminium hydroxid. Whitehorn's m. (for chlorids in blood). To the protein-free blood filtrate add nitric acid, then heat, and add an excess of silver nitrate. Titrate excess silver with thiocyanate, using ferric ammonium sulphate as indicator. Wiechowski and Handorsky's m. (for allantoin): Precipitate the urine with phosphotungstic acid, with lead acetate, and with silver acetate to remove chlorids, ammonia, and basic substances. Then add sodium acetate and o 5 per cent mercuric acetate to precipitate the allantoin which may be weighed, submitted to a Kjeldahl, or titrated with ammonium thiocyanate. Wolter's m. (for iron): Add nitric acid to urine, evaporate to dryness, ignite, oxidize the iron with hydrogen peroxid, add potassium iodid and starch, and titrate excess of iodin with N/100 thiosulphate. Wright's m. I. Treatment of wounds by irrigating first with hypertonic salt solution and then with isotonic salt solution. Vaccines may be used as adjuvants. Finally the wound is closed. 2 A method for the anaerobic cultivation of bacteria in which the inoculated bouillon is drawn into a glass tube provided at each end with rubber tubes and retained there by kinking the tubes. 3. (for determining the bactericidal power of blood). To fixed amounts of the patient's serum is added decreasing amounts of the culture to be tested, incubated for twenty-four hours and then planted in nutrient bouillon. The largest number of bacteria that a constant quantity of serum is able to kill measures its bactericidal power. Wright's modification of Buchner's m., the alkaline solution of pyrogallol is absorbed into the absorbent cotton stopper of the test-tube, which is then pushed down far enough to permit the insertion of a rubber stopper. Wyeth's m., treatment of angiomata by the injection of boiling water. Ziehl-Neelsen's m. See under stains, table of. Zsigmondy's gold number m. Same as Lange's test See under tests

methodism (meth'od-izm). The system or school of the Methodists

Methodists (meth'od-ists) An ancient sect or school of medicine who based the practice of the art on exact rules and theories as contrasted with experience This school followed that of the Empirics and Dogmatists, and was founded by Themison about 50 B. C. The Methodists concentrated their attention on the pores; an acute disease being a state of contraction (status strictus), while chronic disease was a state of relaxation (status laxus) of the pores.

methodology (meth-od-ol'o-je). The science of method; the science which deals with the principles of procedure in research and study.

methomania (meth-o-ma'ne-ah) [Gr. μϵθη drunkenness + μανία madness]. Insanity caused by the habitual misuse of alcoholic drinks.

methonal (meth'o-nal). A hypnotic agent resembling sulphonal, acetone dimethyl sulphone, (CH₃)₂-C(SO₂CH₃)₂. Dose, 15-30 gr. (1-2 gm.).

methoxycaffein (meth"oks-e-kaf'e-in). A white, amorphous or crystalline agent, C₈H₉(OCH₃)N₄O₃: a local anesthetic and antineuralgic. Hypodermatic dose, 4 gr. (0.25 gm.)

methoxyl (meth-ok'sil). The chemical group, CH₃ O—.

methozin (meth-o'zin). Same as antipyrin.

methyl (meth'il) [Gr. μέθυ wine + ὕλη substance].

An atom group, CH₃, from wood-spirit. m. acetanilid. See exalgin. m. acetyl-salicylate. See methyl aspirin, under aspirin. m.

alcohol, wood-spirit, methanol, CH3OH, distilled from wood: sedative, narcotic, and poisonous. m. aldehyd, formaldehyd. m. amylketone, a volatile oil, C_bH₁₁.CO.CH₃, found in oil of cloves. m. anthranilate, a volatile oil, methyl ortho-amino-benzoate, NH₂.C₆H₄.CO O. CH₃, the odoriferous constituent of neroli oil m. atropin, two salts are used as mydriatics, the nitrate and the bromid. See *eumydrin* and *atropin* methyl-bromid, under atropin. m. chlorid, the hydrochloric acid ester of methyl alcohol, CH₃Cl. It is a gas which converted into a liquid by pressure is a valuable local anesthetic when used as a spray. m. chlor-sulphonate, an extremely irritant war gas, CH₃.SO₂ Cl. m. cocain, an alkaloid sometimes found in commercial cocain. It is ethyl benzoyl ecgonin, C18H23NO4. m. cyanid, m. acetonitril. m. ditannin, tannoform. ether, a colorless, anesthetic gas, (CH₃)₂O. ethyl-maleic-imid, a substituted pyrrol, C₂II₅-(C.CO)₂(NH)CII₃, obtained from hemoglobin and from chlorophyll. m. ethyl-pyrrol, a substituted pyrrol, CH₃(C.CH)₂(NH)C₂H_b, obtained from. and probably a constituent of, bilirubin. from, and probably a constituent of, bilirubin. **m. eugenol**, a volatile oil, C₃H₅ C₆H₃(OCH₃)₂, found in oil of bay. **m. furfurane**. See sylvan. m. glucose, a glucosid, CH₂OH.-(CHOH)₄CO(CH₃), produced by the interaction of glucose and methyl alcohol. m. green, a green anilin dye formed by treating rosanilin with methyl derivatives. It is used in microscopy.

m.-guanidin, a colorless, narcotic agent, NH.C-(NH₂).NH(CH₃). m. heptenone, a volatile oil, CH₃.CO(CH₂)₄CH₃, found in lemon-grass oil. m. hydrate, methyl alcohol. m. hydrid, methane. m. hydroxy-furfurol, the furfural, CH₃-C:CH.C(OH)·C.CHO, produced from the hexose in Molisch's test and which produces the color. m. iodid, a colorless or brownish liquid, CH₃I a local anesthetic. m. kairolin, a compound, C₉-H₁₀N(CH₃)H₂SO₄: a slow and uncertain antipyretic. m. loretin, an antiseptic agent, metaiodo - orthohydroxy - quinolin - alphasulphonic acid, OH.C₉H₃N(I)(CH₃)SO₂OH, in glossy yellow needles or scales. m. mercaptan, a thio-alcohol, CH₃-SH. It has a vile odor and is produced during the putrefaction of proteins. m. nitrate, CH₃O NO₂, has been used as a vasodilator. m. nonyl-ketone, a volatile oil, CH₃ CO(CH₂)₈CH₃, found in oil of rue. m. orange. See helianthin. m. oxid. oll of the. m. orange. See neutumm. m. Datu. See methyl ether. m. phenacetin, a substance in colorless crystals, CiH₄(OC₂H₅)N(CH₃)CH₃CO-hypnotic. m. red, a dye, para-dimethyl-amino-azo-benzene-orthocarboxylic acid, (CH₃)2N C₆H₄. N:N.C₆H₄.COOH. It is used as an indicator in the determination of hydrogen-ion concentration and has a P_B range of 4.4 to 6, being red at 4.4 and yellow at 6. m. salicylate, the artificial oil of gaultheria, OH.C₆H₄.CO₂.CH₃, found also in natural oil of wintergreen. See oil of wintergreen. m. sulphonate, a crystalline, non-caustic, and non-poisonous antiseptic. m. tellurid, a gas, (CH₃)₂-Te, of penetrating odor found in excreta of animals after feeding with telluric and tellurious acids. m. tyrosin, surinamin. m. violet, blue pyoktanin. See pyoktanin

methylacetanilid (meth"il-as-et-an'il-id). See exalgin.

methylaceto-acetate (meth"il-as-et-o-as'et-āt).
A crystalline compound, CH₃.CO.CH₂CO.O.CH₃.
It is a respiratory paralyzant and germicide.

methylal (meth'il-al). Same as formal.

methylamin (meth-il-am'in). A gaseous ptomain, CH₃.NH₂, from decaying fish and from commabacillus cultures.

methylantipyrin (meth"il-an-te-pi'rin). Same as tolypyrin.

methylarsinate (meth-il-ar'sin-āt). A salt of methylarsinic acid.

methylate (meth'il-āt). A compound of methyl alcohol and a base.

methylated (meth'il-a-ted). Containing or combined with methyl alcohol.

methylation (meth-il-a'shun). Treatment with methyl. The act of methylating.

methylatropin bromid (meth-il-at'ro-pin). A white, crystalline compound, soluble in water: used like atropin in night-sweats of phthisis. Dose, $\frac{1}{10} - \frac{1}{6}$ gr. (0.006-0.013 gm.).

methylaurin (meth-il-aw'rin). A substance, C₂₀-H₁₀O₃, derivable from rosalic acid.

methylbenzaconin (meth"il-ben-zak'o-nin). An aconitin derivative with physiologic properties like those of curare.

methylcephaëlin (meth-il-sef-a'el-in). A substance probably identical with emetin.

methylcodein bromid (meth-il-ko'de-in). See codein methyl bromin, under codein.

methylcreosol (meth-il-kre'os-ol). A phenol, C_{θ} - $H_{12}O_2$, obtainable from wood-tar creasote.

methyldichlorarsin (meth''il-di-klo-rar'sin). A lethal and vesicating war gas, CH₃AsCl₂.

methylene (meth'il-en). The bivalent hydrocarbon radical, CH2. m. blue. See under blue. m. blue, Kühne's, methylene blue, 1.5; absolute alcohol, 10, 5 per cent solution of phenol, 100. m. blue, polychrome. See under stains, table of. m. chlorid, m. bichlorid. 1. See m. dichlorid. 2. A mixture of methyl alcohol (1 part) and chloroform (4 parts) anesthetic. m. creosote. See pneumin. m. dichlorid, a volatile anesthetic liquid, CH2Cl2, resembling chloroform and used in the same way Dose, 10-30 min. (0 666-2 c.c.). m. digualacol. See guaiaform. m. diodid, a yellow liquid, CH2l2, having hypnotic and anesthetic properties m. dimethylate. See formal.

methylenophil, methylenophilous (meth-ilen'o-fil, meth'il-en-of'il-us) [methylene + Gr. φιλεῖν to love]. Stainable with methylene-blue.

methylglyoxalidin
Same as lysidin. (meth''il-gli-oks-al'id-in).

methylguanidin (meth-il-gwan'id-in). A poisonous ptomain, NH.C(NH)₂NH.CH₃, from spoiled fish. etc.

methylhydantoin (meth"il-hi-dan'to-in). A crystalline compound, CO NH.CH₂ CO N CH₃, found in fresh meat, and formed by the decomposition of creatin

methylhydrocuprein (meth"il-hi-dro-ku-pre'in). See hydroquinin.

methylic (meth-il'ik). Containing methyl.

methylil (meth'il-il). A proprietary local anesthetic; ethyl chlorid with small proportions of chloroform and methyl chlorid.

methylindol (meth-il-in'dol). Same as skatol.

methylmercaptan (meth"il-mer-kap'tan) A gas, methyl hydrosulphid, CH₃.SH, formed in the intestines by the decomposition of proteins; said to impart to the urine the odor noticed after eating asparagus.

methylmydriatin (meth''il-mid-ri'at-in). A patented racemic mixture of synthetic ephedrin.

methylnornarcotin (meth"il-nor-nar'ko-tin). An active principle said to exist in opium.

methylphenacetin (meth"il-fe-nas'et-in). A hypnotic compound formed by treating phenacetin with methyl iodid.

methylphenmorpholin (meth"il-fen-mor'fo-lin).

A patented artificial alkaloid, forming a clear, oily liquid, which, like its crystalline hydrochlorid, is narcotic.

methylphenyl fructosazone (meth"il-fen"il-fruk-to'sa-zōn). Methyl-phenyl levulosazone.

methylphenylhydrasin (meth"il-fe"nil-hi'drazin). A reagent, C₈H₅N(CH₂)NH₂, by which ketoses can be distinguished from aldoses, as the former yield osazones, the latter, hydrazones.

METROCYSTOSIS

- **methylphenyl** levulosazone (meth"il-fen-il-lev-u-lo'sa-zōn). The methyl-phenyl-osazone of levulose, $CH_2OH(CHOH)_4C[.N.N(CH_3).C_6H_6)$. CH-CH.NHN(CH₃). C_6H_6 . It is homologous with glucosazone.
- methylphosphin (meth-il-fos'fin). An agent, P(CH₂)H₂, useful in malarious disorders and destructive to animal microorganisms.
- methylprotocatechuic acid (meth''il-pro-tokat-e-ku'ik). See vanillic acid, under acid.
- methylpurin (meth-il-pu'rin). See under purin.
- methylpyridin (meth-il-pi'rid-in). A basic substance, C₈H₄(CH₃)N, oxidized in the body to pyridin-carboxylic acid. m. sulphocyanate, a crystalline, non-caustic, and non-poisonous antiseptic.
- methylpyrocatechin (meth"il-pi-ro-kat'e-kin). Guaiacol.
- methylquinolin (meth-il-kwin'o-lin). An oily basic substance, C₆H₄(CH)₂.N.C.CH₃, from the secretion of the skunk.
- **methylsalicylate** (meth"il-sal-is'il- $\bar{a}t$). Oil of wintergreen, OH.C₀H₄.CO.O.CH₃.
- methylsalol (meth-il-sa'lol) An antirheumatic crystalline agent, OH.C₆H₄ CO₂.C₆H₅.CH₃.
- methylthionin chlorid (meth-il-thi'o-nin).
 Methylene-blue.
- methyltyrosin (meth-il-ti'ro-sin). Surinamin.
- methyluramin (meth"il-u-ram'in). Methylguanidin.
- methylurethan (meth-il-u'reth-ān). Urethylan: a hypnotic and diuretic agent, C₂H₅.O.CO.NH.-CH₃, in colorless plates.
- methylxanthin (meth-il-zan'thin). Heteroxanthin. methysticum (meth-is'tik-um). Same as kava.
- metodontiasis (met-o-don-ti'as-is). Imperfect development of the teeth.
- metol (me'tol). A proprietary photographic developer, methyl-amino-cresol-sulphate, CH₃ C₆H₃-(OH) NH CH₃ H₂SO₄, which sometimes causes a dermatitis in those who use it.
- **metopagus** (met-op'ag-us) [Gr. μέτωπον forehead + πάγοs joined]. Twin fetuses united at the forehead.
- metopantralgia (met"o-pan-tral'je-ah) [L. meto-pan'trum frontal sinus + Gr. άλγος pain]. Pain in the frontal sinuses.
- metopantritis (met"o-pan-tri'tis). Inflammation of the frontal sinuses.
- metopic (met-op'ik). Pertaining to the forehead; frontal
- metopion (met-o'pe-on) [Gr. μέτωπον forehead]. A point in the median line of the forehead, between the frontal eminences.
- metopism (met'o-pizm). The persistence of the frontal suture
- metopodýnia (met"o-po-din'e-ah) [Gr. μέτωπον forehead + ὀδύνη pain]. Frontal headache.
- metopon (met-o'pon) [Gr μέτωπον forehead]. The anterior metopic lobule of the brain.
- **metopoplasty** (met-op'o-plas-te) [Gr. μ έτωπον fore-head $+ \pi \lambda$ άσσειν to form]. Plastic surgery of the forehead.
- **metoposcopy** (met-o-pos'ko-pe) [Gr. μέτωπον forehead + σκοπείν to examine]. The study of physiognomy.
- Metorchis (met-or'kis). A genus of flukes. M. trunca'tus is found in seals, deer, and cats
- metoxenous (met-oks-e'nus) [Gr. μετά across + ξένος a stranger]. Requiring two hosts for the full cycle of existence said of certain parasites.
- metoxeny (met-ok'sen-e). The condition of being metoxenous.
- metra (me'trah) [Gr. μήτρα womb]. The uterus, or womb.

- metraderm (me'trah-derm) [Gr. μήτρα uterus + δέρμα skin]. The external opening of the uterus in some tape worms (Dibothriocephalidæ).
- metralgia (me-tral'je-ah) [Gr. μήτρα uterus + άλγος pain]. Pain in the uterus.
- metranemia (me-tran-e'me-ah) [Gr. μήτρα uterus + anemia]. Uterine anemia.
- metranoikter (met-ran-o-ik'ter). An instrument for dilating the uterine cervix, consisting of two blades which are forcibly spread by the action of a spring.
- metrapectic (met-rap-ek'tik) [Gr μήτρα womb + ἀπέχειν to avoid]. Transmitted by the mother, who herself remains unaffected.
- metratome (me'trah-tōm) [Gr μήτρα uterus + τομή cutting]. An instrument for cutting the uterus.
- metratomy (met-rat'o-me). Hysterotomy.
- metratonia (met-rat-o'ne-ah) [Gr. μήτρα uterus + άτονία atony]. Uterine atony.
- metratrophia (met-rat-ro'fe-ah) [Gr. μήτρα uterus + άτροφία atrophy]. Uterine atrophy.
- metrauxe (me-trawk'se) [Gr. μήτρα uterus + αὐξή increase]. Hypertrophy of the uterus.
- metre (me'ter). Same as meter.
- metrechoscopy (met-rek-os'ko-pe) [Gr. μέτρον measure + ηχω sound + σκοπείν to inspect] Combined mensuration, auscultation, and inspection.
- metrectasia (met-rek-ta'se-ah) [Gr. μήτρα uterus + ξκτασις extension]. Dilatation of the non-pregnant uterus.
- metrectomy (me-trek'to-me) [Gr. μήτρα womb + ἐκ out + τομή cut]. The surgical removal of the uterus.
- metrectopia, metrectopy (me-trek-to'pe-ah, metrek'to-pe) [Gr. μήτρα uterus + ἔκτοπος displaced]. Uterine displacement.
- metrelcosis (met-rel-ko'sis) [Gr. μήτρα uterus + ξλκωσις ulceration]. Ulceration of the uterus.
- **metreurynter** (met-ru-rin'ter) [Gr μήτρα uterus + εθρύνειν to stretch]. An inflatable bag for dilating the cervical canal of the uterus.
- metreurysis (me-tru'ri-sis). Dilatation of the uterine cervix with the metreurynter.
- metria (me'tre-ah) [Gr. μήτρα womb]. Any inflammatory condition during the puerperium.
- metric (met'rik) [Gr. μέτρον measure]. 1. Pertaining to measures or measurement. 2. Having the meter as a basis. m. system. See weights and measures.
- metritis (me-tri'tis) [Gr μήτρα uteru-]. Inflammation of the uterus Several varieties are named, according to the part of the organ affected—cervical, corporeal, interstitial, and parenchymatous. diphtheric m., a variety of metritis in which there is a yellow exudation in and on the endometrium. dissecting m., diphtheric metritis in which the infiltration extends in a layer from the endometrium to the neighborhood of the pertoneum, cutting off a large part of the muscular tissue, which later on is expelled as a pear-shaped body.
- metrocace (met rok'as-e) [Gr. μήτρα uterus + κάκη badness]. Uterine gangrene.
- metrocampsis (met-ro-kamp'sis) [Gr. μήτρα uterus + κάμψις bending]. Uterine flexion.
- metrocarcinoma (met"ro-kar-sin-o'mah). Carcinoma of the uterus.
- metrocele (me'tro-sēl) [Gr. μήτρα womb + κήλη hernia]. Hernia of the uterus.
- metroclyst (me'tro-klist) [Gr. μήτρα womb + κλύζειν to wash]. A device for irrigating the uterus. metrocolpocele (me-tro-kol'po-sēl) [Gr. μήτρα
- metrocolpocele (me-tro-kol'po-sēl) [Gr. μήτρα womb + κόλπος vagina + κήλη hernia]. Hernia of the uterus into the vagina.
- of the uterus into the vagina.

 metrocystosis (me"tro-sis-to'sis) [Gr. μήτρα womb + κίστις cyst]. The formation of cysts in the womb.

metrocyte (me'tro-sit) [Gr. μήτηρ mother + κύτος cell]. 1. A mother-cell. See cell. 2. A large uninuclear cell containing hemoglobin: it is supposed to be the mother-cell of the red corpuscles of the blood.

metrodynia (me-tro-din'e-ah) [Gr. μήτρα uterus + όδύνη pain]. Pain in the uterus.

etro-endometritis (me"tro-en"do-me-tri'tis).
Combined inflammation of the uterus and its metro-endometritis mucous membranes.

metrofibroma (me"tro-fi-bro'mah) [Gr. μήτρα uterus + fibroma]. Fibroma of the uterus.

metrolymphangitis (me"tro-lim-fan-ji'tis). flammation of the lymphatic vessels of the uterus.

metromalacia (me"tro-mal-a'se-ah). Metromalacosis.

metromalacoma, metromalacosis (me"tromal-ak-o'mah, me"tro-mal-ak-o'sis) [Gr. $\mu \dot{\eta} \tau \rho a$ uterus $+ \mu a \lambda a \kappa \dot{\phi} s$ soft]. Morbid softening of the

metromania (me-tro-ma'ne-ah) [Gr μήτρα uterus + μανία madness] 1. Nymphomania. 2. [Gr. μέτρον measure + μανία madness.] A mania for writing verse.

metroneuria (me-tro-nu're-ah) [Gr. μήτρα uterus + νεῦρον nerve]. A nervous affection of the uterus.

metronome (met'ro-nom) [Gr. μέτρον measure + νόμος law]. An apparatus for recording periods of time.

metroparalysis (me"tro-par-al'is-is) [Gr. μήτρα uterus + paralysis]. Paralysis of the uterus

metropath'ia hæmorrha'gica. See essential uterine hemorrhage, under hemorrhage.

metropathic (me-tro-path'ik). Pertaining to or caused by uterine disorder.

metropathy (me-trop'ath-e) [Gr. μήτρα womb + πάθος suffering] Any uterine disorder.

metroperitonitis (me"tro-per-it-o-ni'tis) [metrilis + peritonitis]. 1. Inflammation of the uterus and peritoneum. 2. Inflammation of the peritoneum about the uterus, or peritonitis resulting from infection after metritis.

metrophlebitis (me"tro-fle-bi'tis) [Gr. womb + φλέψ vein + -ιτις inflammation]. Inflammation of the veins of the womb.

metroptosia (me-trop-to'se-ah). Metroptosis.

metroptosis (me-trop-to'sis) [Gr μήτρα uterus + πτωσις falling]. Prolapse of the uterus.

metrorrhagia (me-tror-a'je-ah) [Gr. μήτρα uterus + byyvbvai to burst out]. An abnormal uterine hemorrhage. m. myopath'ica, uterine hemorrhage due to insufficient contraction of uterine muscles after childbirth.

metrorrhea (met-ror-e'ah) [Gr. μήτρα womb + βοία flow]. A free or abnormal uterine discharge.

metrorrhexis (met-ror-eks'is) [Gr. μήτρα womb + βήξις rupture]. Rupture of the uterus.

metrorthosis (met-ror-tho'sis) [Gr. μήτρα womb + The rectification of a uterine δρθός straight]. displacement.

metrosalpingitis (me"tro-sal-pin-ji'tis) [Gr. μήτρα womb + σάλπιγξ tube]. Inflammation of the uterus and oviducts.

metroscirrhus (me-tro-skir'us) [Gr. μήτρα uterus + orlippos hardness]. Scirrhus of the uterus.

metroscope (me'tro-skop) [Gr. μήτρα womb + σκοπείν to view]. An instrument for examining the uterus.

metrostaxis (me-tro-stak'sis) [Gr. μήτρα womb + στάξις a dripping]. A slight but persistent escape of blood from the uterus.

metrostenosis (me"tro-sten-o'sis) [Gr. uterus + στήνωσις contraction]. Contraction or stenosis of the cavity of the uterus.

metrosteresis (me"tro-ste-re'sis) [Gr. μήτρα womb + στέρησις deprival]. Surgical removal of the uterus.

metrosynizesis (me"tro-sin-iz-e'sis) [Gr. μήτρα

MHO uterus + συνίζησις shrinking]. Adhesion of the uterus to nearby structures.

metrotherapy (met-ro-ther ap-e) [Gr. μετρον measure + θεραπε $\hat{ι}$ α treatment]. Treatment by measurement, i. e., by demonstrating to the patient his improvement by means of accurate measurements of the increase in the voluntary movements of an impaired joint.

metrotome (me'tro-tōm) [Gr. μήτρα womb + τέμνειν to cut]. See hysterotome.

metrotomy (me-trot'o-me). Same as hysterotomy.

metrotoxin (me-tro-tok'sin). A substance from the pregnant uterus which is thought to exert an inhibitory action on the ovarian function.

metro-urethrotome (me"tro-u-re'thro-tom) [Gr. μέτρον measure + urethrotome]. A urethrotome with a device which regulates the amount of cutting.

metrypercinesis (me-tri-per-sin-e'sis) [Gr. μήτρα uterus + $\dot{v}\pi\dot{\epsilon}\rho$ over + $\kappa l\nu\eta\sigma\iota$ s movement]. Excessive severity of labor-pains.

metryperemia (me"tri-per-e'me-ah) [Gr. μήτρα uterus + hyperemia]. Congestion of the uterus.

metryperesthesia (me-tri-per-es-the'ze-ah) [Gr. μήτρα uterus + hyperesthesia]. Hyperesthesia of the uterus.

metryperkinesis. Same as metry percinesis.

metrypertrophia (me-tri-per-tro'fe-ah) [Gr. μήτρα uterus + hypertrophia]. Hypertrophy of the uterus.

Metschnikoff, Metchnikof theory (metsh'nikof) [Elie Metschnikoff, a Russian physiologist in Paris, the discoverer of phagocytes and phagocytosis, born 1845]. The theory of phagocytosis.

Mette's test (met'ēz) [Emil Ludwig Paul Mette, German physician of the nineteenth centuryl. See under tests.

Meyer's disease (mi'erz) [Hans Wilhelm Meyer. German physician, 1825-1896]. See disease.

Meyer's line, organ (mi'erz) [Georg Hermann v. anatomist in Zurich, 1815-1892]. Meyer, line and organ

Meyer's theory (mi'erz) [Adolf Meyer, psychiatrist in Baltimore, born 1866]. See theory.

Meynert's bundle, commissure, fasciculus (mi'nerts) [Theodore Meynert, French physician, 1831-1892]. See bundle, commissure, fasciculus.

Meynet's nodes (ma-nāz') [Paul Claude Hyacinthe Meynet, French physician, 1831-1892]. See under node.

mezcalin (mez'ka-lin). A poisonous alkaloid, C11-H₁₇NO₃, in the form of a colorless alkaline oil from Anhaloniun lewinii. It produces an intoxication with delusions of color and music.

mezereon, mezereum (me-ze're-on, me-ze're-um) [L]. The plant Daph'ne meze'reum, a shrub of Europe. Its bark is diaphoretic, diuretic, and stimulant, and is used in rheumatism, syphilis, scrofula, and skin diseases, and as a stimulant to chronic ulcers. Dose, in substance, 5-15 gr. (0.333-1 gm.); of fluidextract, 2-5 min. (0.133-0.333 c c.).

M. F. D. Abbreviation for minimum lethal dose of a toxin.

M. flac. Abbreviation for L. membra'na flac'cida, Shrapnell's membrane.

M. ft. Abbreviation for L. mistu'ra fi'at, let a mixture be made.

Mg. The symbol of magnesium; also abbreviation for milligram.

MgCl₂. Magnesium chlorid.

MgO. Calcined magnesia.

MgSO₄. Magnesium sulphate.

M. H. D. Abbreviation for minimum hemolytic dose.

Mho (mo). The unit of electric conductivity.

miasm, miasma (mi'azm, mi-az'mah) [Gr. μlασμα stain]. A noxious effluvium or exhalation.

miasmatic (mi-az-mat'ik). Pertaining to miasma.
miasmatic-contagious (mi-az-mat"ik-kon-ta'jus). Exhibiting both miasmatic and contagious
characteristics, as yellow fever and cholera.

Mibelli's disease (me-bel'ēz) [Vittorio Mibelli, Italian dermatologist, 1860–1010]. Porokeratosis.

Mic. pan. Abbreviation for L. mi'ca pa'nis, bread crumb.

mica panis (mi'kah pa'nis). Latin for bread crumb. micella (mi-sel'ah). See micelle.

micelle (mis-el'). A hypothetical vital unit of living matter, visible or invisible, made up of one or more molecules, and having the power of growth and division. See also biophore Similar terms which have been used in various theories are bioplast, bioblast chondria, gemma, gemmule, idioblast, ideosome, microzyme, pangen, physiological unit, plastidule, protomere, somacule, tagmata.

Michaelis-Gutmann bodies. See under body.

micracoustic (mi-krah-koos'tik) [Gr. μικρόs small + ἀκουστικόs acoustic]. 1. Rendering very faint sounds audible. 2 An instrument which renders faint sounds audible.

micranatomy (mi-kran-at'o-me) [Gr. μικρός small + anatomy]. Microscopic anatomy.

micranthin (mi-kran'thin). A crystalline alkaloid, $C_{36}H_{32}N_2O_{6}$, from Daphnandra micrantha.

micrazotol (mi-kra'zo-tol). An antiseptic preparation of boric acid, menthol, eucalyptol, etc.

micrencephalia (mi"kren-sef-a'le-ah) [Gr. μικρόs small + ἐγκέφαλος brain]. Abnormal smallness of the brain.

micrencephalon (mi-kren-set'al-on) [Gr. μικρός small + ἐγκέφαλος brain]. 1. Smallness of the brain; cretinism. 2. The cerebellum.

micrencephalous (mi-kren-sef'al-us). Having a small brain.

micro- [Gr. μικρόs small]. A prefix signifying in general "small," and more specifically 1/106

micro-aërophile, micro-aërophilic, micro-aërophilous (mi"kro-a'er-o-fil, -a-er-o-fil'ik, -a-er-ofil-us) [Gr. μικρός small + aerophilous]. Requiring only a small amount of free oxygen: said of bacteria.

microbacillary (mi"kro-bas'il-a-re). Same as bacterial.

microbacteria (mi-kro-bak-te're-ah). A class of bacteria practically the same as bacterium.

microbe (mi'krōb) [Gr. μικρόs small + βlos life].

Any individual microorganism; a microphyte or microzoon chiefly used as a synonym of vegetable microorganism.

microbemia (mi-kro-be'me-ah). Same as micro-hemia.

microbial (mi-kro'be-al). Pertaining to or caused by microbes.

microbian (mi-kro'be-an). 1. Pertaining to or of the nature of a microbe. 2. A microbe.

microbic (mi-kro'bik). Of or pertaining to microbes. microbicidal (mi"kro-bis-i'dal) [microbe + L. ca'dere to kill]. Destructive to microbes.

microbicide (mi-kro'bis-īd) [microbe + L. ca'dere to kill]. 1. An agent that destroys microbes. 2. Destructive to microbes.

microbicidin (mi"kro-bis-i'din). See microcidin.

microbiohemia (mi"kro-bi-o-he'me-ah) [Gr. $\mu \kappa \rho \delta s$ small $+ \beta los$ life $+ a l \mu a$ blood]. A diseased condition resulting from the presence of microbes in the blood.

microbiologic (mi''kro-bi-o-loj'ik). Pertaining to microbiology.

microbiologist (mi"kro-bi-ol'o-jist). One expert and learned in the study of microbes.

microbiology (mi''kro-bi-ol'o-je) [Gr. μικρόs small + βlos life + λόγοs science]. The science which

deals with the study of microörganisms, including bacteria, molds, and pathogenic protozoa. As generally employed the term is synonymous with bacteriology.

microbion (mi-kro'be-on). Microbe.

microbionation (mi"kro-be-o-na'shun). Same as bacterination.

microbiophobia (mi"kro-be-o-fo'be-ah) [microbe + Gr. φόβος fear]. A morbid dread of microbes.

microbioscope (mi-kro-bi'o-skōp) [Gr. μικρός small + βlos life + σκοπεῖν to see] A microscope for examining microbes or for studying living tissue

microbiosis (mi"kro-bi-o'sis). Infection by a microbe.

microbiotic (mi-kro-bi-ot'ik). 1. Microbic. 2
Having a short life.

microbism (mi'kro-bizm). Infestation with microbes latent m., the presence in the body of inactive organisms which only await favorable conditions to become active.

microblast (mi'kro-blast) [Gr. μικρόs small + βλαστός germ] An erythroblast of small size, i. e., 5 μ or less in diameter. Cf erythroblast.

microblepharia, microblepharism, microblepharon, microblephary (mi''kro-blef-a'-re-ah, mi-kro-blef'ar-izm, mi''kro-blef'ar-on, mi'-kro-blef'ar-e) [Gr. μικρόs small + βλέφαρον eyelid]. Abnormal smallness of the eyelids.

microbrachia (mi-kro-bra'ke-ah) [Gr. μικρός small + βραχίων arm]. Abnormal smallness of the arms.

microbrachius (mi-kro-bra'ke-us) [Gr. μικρός small + βραχίων arm]. A fetus with preternaturally small arms.

microbrenner (mi-kro-bren'er) [Gr. μικρόs small + Ger. Brenner burner]. A needle-pointed electric cautery.

microby (mi'kro-be). Same as microbiology.

microcalorie, microcalory (mi-kro-kal'o-re).
The heat required to raise I c c. of distilled water from o° to 1° C.

microcardia (mi-kro-kar'de-ah) [Gr. μικρός small + καρδία heart]. Smallness of the heart.

microcaulia (mi-kro-kaw'le-ah) [Gr. μικρός small + καυλός penis]. Abnormal smallness of the penis.

microcentrum (mi-kro-sen'trum) [Gr. μικρός small + κέντρον center]. The dynamic center of a cell; the center of the astral system.

microcephalia, microcephalism, microcephaly (mi"kro-sef-a'le-ah, mi-kro-sef'al-izm, mi"kro-sef'al-e) [Gr μικρός small + κεφαλή head]. Abnormal smallness of the head.

microcephalic, microcephalous (mi"kro-sef-al'-ik, mi-kro-sef'al-us) [Gr. μικρός small + κεφαλή head]. Having a small head.

microcephalus (mi-kro-sef'al-us) [Gr. μικρόs small + κεφαλή head]. An idiot or fetus with a very small head.

microcheilia (mi-kro-ki'le-ah) [Gr. μικρός small + χείλος lip]. Abnormal smallness of the lips.

microchemical (mi-kro-kem'ik-al). Pertaining to microchemistry.

microchemistry (mi-kro-kem'is-tre) [Gr. μικρόs small + chemistry]. Minute chemical investigation; chemistry which necessitates the use of the microscope.

microchiria (mi-kro-ki're-ah) [Gr. μικρός small + χείρ hand]. Abnormal smallness of the hands.

microcidin (mi-kro-si'din) [microbe + L. ca'dere to kill]. A substance, $C_{10}H_7ONa$; sodium betanaphtholate: an external antiseptic; internally an antiseptic and antipyretic; administered in a 3 per cent. solution.

microclyster (mi'kro-klis-ter) [Gr. μικρός small + clyster]. A rectal injection of a small amount of substance.

microcnemia (mi-krok-ne'me-ah) [Gr. μικρός small + κνήμη tibia]. Abnormal shortness of the leg below the knee.

Micrococcus (mi-kro-kok'us) [Gr. μικρός small + κόκκος kernel]. 1. A minute bacterial coccus or cell form. 2. A genus of the Coccaceæ. The cells are arranged in irregular masses, are Grampositive, and generally produce a yellow or orange pigment. M. ac'idi lac'tici, a coccus of fresh milk causing lactic-acid fermentation and a red color. It occurs in the form of large non-motile cocci. M. ac'idi lac'tici liquefa'ciens, a variety from che sy butter, in oval, immotile cocci, often seen in pairs or tetrads. M. aëro'genes, a species from the alimentary canal, it occurs in oval, non-motile cocci. M. ag'ilis. Same as Rhodococcus agilis. M. al'bus liquefa'ciens, a species from the healthy nasal passages. Its cocci are oblong or spheric and non-motile. M. amylov'orus, a coccus which causes apple- and pear-blight it produces a fermentation in saccharine solutions. The cocci are solitary and elongated. M. aquat'ilis, a species found in fresh water; the cocci are very minute and form irregular groups. M. ascofor'mans, a species found in the diseased pelvic tissues of the horse; it causes septicemia and inflammatory edema. See bothryomycosis The cocci are non-motile and see bothryomycosis The cocci are non-motile and paired. M. auranti'acus, a non-pathogenic micrococcus, in round or oval cocci, arranged in groups It produces yellow, slimy, knob-shaped cultures. M. au'reus, Same as Staphylococcus pyogenes aureus M. billro'thii, a species found in decaying bouillon. Its cultures give off a cheesy odor: it produces mucous fermentation in beetjuice. M. bis'kra, capsulated diplococci from pus of Biskra button, produces oriental sore in animals M. botryog'enus. Same as M. asco-formans. M. can'dicans. See Staphylococcus candicans. M. capillo'rum, a species from the scalp which changes the color of the hair The cocci are reddish yellow and form a zooglea. M. capri'nus, a species said to be the cause of a disease of goats called takosis. See takosis. M. car'neus, a kind from flowing water: it produces a red pigment. The cocci are non-motile and are arranged in clusters. M. catarrha'lis. See Neisseria catarrhalis. M. ceras'inus sic'cus, a variety from water, producing a dull-red pigment: in single or paired, immotile cocci. M. ce'reus. Same as Staphylococcus cereus. M. chlori'nus, a species which produces a yellowchlori'nus, a species which produces a yellowish-green pigment. The cocci are spheric. M. cinnaba'reus, a species from air and water: forms a brick-red pigment. M. cit'reus, a species found in water and in osteomyelitis, in rounded, non-motile cocci, single, paired, or in chains. It produces a dingy yellowish pigment. M. concen'tricus, a species from water forming irregular masses of non-motile cocci. M. cremoi'regular masses of non-motile cocci. M. cremoi'regular masses of non-motile cocci. des, a species found in water, named from its creamy pigment; in clusters of non-motile cocci. M. crepus'culum, a form from putrefying liquids. The cocci are spheric or ovoid, sometimes forming a zoöglea. M. cumula'tus ten'uis, a nonpathogenic variety from healthy nasal mucus. It is seen in spheric masses of oblong, immotile cocci. M. cya'neus, a species found in the air: it forms a blue pigment on potato. The cocci are ellipsoid. M. diffluens, a saprophytic form found in air, dust, and feces. The cocci are elliptic. M. endocardit/idis ruga/tus, a pathogenic species found on the valvular vegetations of ulcerative endocarditis: in round cocci, single, paired, or in tetrads. M. fervido'sus, a species found in water: not pathogenic. The cocci are round, non-motile, and form pairs or small groups. M. floc'cii, a species found in the conjunctival sac: cocci spheric. M. fla'vus conjuncti'væ, a specocci spheric. Mr. havus conjunctives, a species from the human conjunctiva: pathogenic in rabbits. The cocci are spheric, immotile, single, paired, or in chains. Mr. flavus de'sidens, a species from air and water producing a brownish pigment. Mr. flavus liquefactens, a species from air, water, and the air-passages, forming a yellow pigment. The cocci are non-

motile, often in pairs or masses. M. fla'vus tardigra'dus, a species from air and water, producing a yellow pigment and forming masses of immotile spheric cocci. M. fost'idus, an ill-smelling form from the nasopharynx and from rotting teeth. In cocci, sometimes paired or in chains. M. fus'cus, a species from water, forming non-motile cocci or short rods, and producing a dark brown pigment. m. gazo'genes, a minute, Gram-negative, non-sporulating coccus which is obligately anaerobic and is found abundantly in the mouths of many people. M. gelatino'sus, a species from milk, which it coagulates. The cocci are oval and hyaline. M. ghidial'lii, a species said to be destructive to the enteric fever germ. M. gingi'væ pyo'genes, a pathogenic species from the buccal cavity and alveolar abscesses. The cocci are single or paired, irregular, and non-motile. **M. gonorrhæ**. See Neisseria gonorrhææ. **M. hæmato'des**, a form from the hair of persons with red sweat, and also from the sweat of the armpit. It produces a red pigment. M. intertri'ginis (of Rossbach), a species said to be the cause of erythema intertrigo. M. intracellula is meningit'idis. See Neisseria meningilidis. M. lanceola tus. See Diplococcus lanceolatus. M. leucochromagenes, a species from the intestines of persons resident in the tropics. M. liquefa'ciens conjuncti'væ, a form from the normal human conjunctiva pathogenic to rabbits. The cocci are non-motile and are generally single. M. loewenber'gii, a species from the nose in ozena. actively pathogenic; in short, motile rods, often in pairs or chains. M. lysodeik'ticus, an organism found in the nasal cavity. It resembles a sarcine and is very susceptible to the lytic action of lysozyme. m. mastit'idis, a species which produces mastitis in cows, found in the milk and pus of inflamed udders of cows. It sours milk, but is not pathogenic to man. Its cocci are single or in pairs. M. masto'bius, a species from the milk of sheep with gangrenous mastitis pathogenic to sheep and rabbits. Its cocci are minute and non-motile, usually paired or in groups M. meliten'sis. See Bacterium melitensis. M. meningit'idis. Neisseria intracellularis meningitidis. mich'eli, a species found in the follicles of tra-choma. M. nasa'lis, a non pathogenic form from the nasopharynx: highly motile and forming diplo-cocci or streptococci. M. neofor'mans, a pathogenic species from cancer, in the form of minute cocci, single, in pairs, or in short chains. M. nitrif'icans, a species from the soil, in spheric cocci: it changes various nitrogen compounds into nitrates. Nocard's m. See M. mastobius Nuzum's m., an organism obtained from cancer of the breast which on animal inoculation causes the formation of a growth resembling alveolar carcinoma. M. ochroleu'cus, a motile species found in urine. Cultures produce a yellow pigment and give off a sulphurous odor. m. of osteomyelitis, a pathogenic form from osteomyelitis, believed to be the same as Staphylococ'cus pyo'genes au'reus: its cocci are immotile and single or in groups. M. O'vis, an organism resembling Staphylococ'cus pyo' genes al'bus, from gangrenous mastitis in sheep. M. parameliten'sis, a distinct variety of Micrococ'cus meliten'sis, differing from it in its agglutinating reactions. M. paratetra'genus, a species found in the nasal cavities, and believed to cause acute coryza. M. pasteu'ri, a form from saliva, resembling the bacillus of Friedländer. M. patity geria a species from decaying flesh and pflü'geri, a species from decaying flesh and potatoes: seen as minute cocci, often forming a zooglea. M. pharyn'gis sic'cus, a Gramnegative organism often found in the normal pharynx and recognized by its dry aërated colonies on simple culture-media. M. plumo'sus, a species from water, the cocci often forming a zoöglea. M. pneumo'niss. See pneumococcus. M. porcello'rum, a pathogenic species from swine with hepatitis. m. of progressive

lymphoma, a highly pathogenic species from the sputum of pneumonia after measles and from the progressive lymphoma of animals. The cocci are non-mottle, single or paired. M. pyo'genes ten'uis, a form from large abscesses. M. radia'tus, a species from air and water, in slightly motile cocci. M. restit'uens, a species that changes peptones into albumin. M. rheumat'icus. See Streptococcus rheumaticus. M. rosenbach'ii, a species from the pus of abscesses, resembling Staphylococ'cus pyo'genes al'bus. M. roseta'ceus, a species from aqueduct water, forming clusters of irregular, non-motile cocci. M. ro'-See Rhodococcus roseus. M. saliva'rius sep'ticus, a form from the sputum of puerperal Schütz's septicemia in round or ovoid cocci. m., the organism which causes strangles in the horse. M. tetra/genus. See Staphylococcus tetragenus. M. tetra/genus mob'ilis ventric'uli, a variety from the stomach, in tetrads of motile encapsulated coci. M. tetra/genus subflav'us, a form from nasal mucus, in flat, dirty white colonies of round or ovoid, non-motile cocci, grouped in fours. M. u'ræ, ure'æ. Staphylococcus ureæ. M. uri'næ al'bus, uri'næ fla'vus, M. uri'næ ma'jor, three forms from the urine of cystitis, etc. M. urinal'bus, a form from the urme of cystitis and pyelonephritis. M. versat'ilis, a species found in the healthy skin and in the viscera after death from yellow fever. M. versic'olor, a species from air and water, in pairs or masses of small cocci It produces an iridescent, yellowish-green pigment. M. iper'da, a species found in spoiled wine M. vinvir'dis flaves'cens, a species from the lymph of varicella. M. visco'sus, a streptococcus from diseased wine. M. viticulo'sus, a species from air and water. The cocci are ovoid and form a dense zooglea. M. weichselbaum'ii. See Neisseria M. xanthogen'icus, a form from yellow-fever patients. M. zymo'genes. Streptococcus zymogenes

microcolon (mi-kro-ko'lon). An abnormally small colon.

microcolony (mi'kro-kol-o-ne). A microscopic colony of bacteria

microcolorimeter (mi"kro-kol"o-rim'et-er) A colorimeter for use with small quantities of blood.

microconidium (mi-kro-ko-nid'e-um). The smaller form of condium or exospore of certain of the higher parasitic fungi.

microcoria (mi-kro-ko're-ah) [Gr. μικρόs small + κόρη pupil] Smallness of the pupil.

microcornea (mi-kro-kor'ne-ah) [Gr. μικρός small + cornea]. Unusual smallness of the cornea.

microcosmic (mi-kro-koz'mik) [Gr. μικρόs little + κόσμος world]. Pertaining to or derived from the human body (man was formerly spoken of as the microcosm, or little world; that is, as an epitome of the universe). m. salt. See under valt.

microcoulomb (mi-kro-koo'lom). The one-millionth part of a coulomb.

microcoustic (mi-kro-koo'stik) [Gr. μικρός small + ἀκούειν to hear]. 1. Rendering feeble sounds audible. 2. An apparatus for such purpose.

microcrith (mi'kro-krith) [Gr. μικρός little + crith]. The weight of one atom of hydrogen.

microcrystalline (mi-kro-kris'tal-īn) [Gr. μικρόs small + crystalline]. Made up of minute crystals. microcurie (mi-kro-ku're). One-millionth of a

curie. microcyst (mi'kro-sist) [Gr. μικρός small + κύστις

cyst]. A very small cyst.

microcytase (mi-kro-si'tās). A cytase formed by microphages and capable of dissolving bacteria. See macrocytase.

microcyte (mi'kro-sīt) [Gr. μικρός small + κύτος cell]. 1. An undersized red blood-corpuscle. 2. A polymorphonuclear leukocyte.

microcythemia (mi"kro-si-the'me-ah) [microcyte + Gr. alµa blood]. A condition in which the red blood-corpuscles are undersized.

microcytosis (mi"kro-si-to'sis). Increase in the number of microcytes. Same as microcythemia.

microdactylia (mi''kro-dak-til'e-ah) [Gr. μικρόs small + δάκτυλος finger]. Unusual smallness of the fingers and toes.

microdentism (mi-kro-den'tizm). The state of having teeth smaller than normal.

microdetermination (mi"kro-de-ter-min-a'shun). A chemical examination in which minute quantities of the substance to be examined are used.

microdissection (mi"kro-dis-ek'shun). Dissection of tissue or cells under the microscope.

microdont (mi'kro-dont) [Gr. μικρός small + δδούς tooth]. Having very small teeth.

microdontism (mi-kro-don'tizm) [See microdont]. Abnormal smallness of the teeth.

micro-dose (mi'kro-dos). A very small dose.

micro-estimation (mi"kro-es-tim-a'shun). See microdetermination.

microfarad (mi-kro-far'ad). One-millionth of a farad.

microfilaria (mi"kro-fil-a're-ah). The larval state of filaria in the blood.

microgamete (mi-kro-gam'ēt) [Gr. μικρόs small + γαμέτηs spouse]. A "flagellum"; the conjugating male element of the plasmodium of malaria which fertilizes the macrogamete in the mosquito.

microgametocyte (mi"kro-gam-e'to-sit) [Gr. $\mu\nu\kappa\rho\delta$ s small + $\gamma\alpha\mu\ell\tau\eta$ s spouse + $\kappa\ell\tau\sigma$ s cell]. A "crescent"; the male form of the malarial parasite which is transferred from man to the mosquito.

microgamy (mi-krog'am-e). Conjugation or fusion when the gametes are smaller than the somatic cells.

microgastria (mi-kro-gas'tre-ah) [Gr. μικρόs small + γαστήρ stomach]. Congenital smallness of the stomach.

microgenesis (mi-kro-jen'es-is) [Gr. μικρός small + γένεσις generation]. Abnormally small development of a part.

microgenia (mi-kro-je'ne-ah) [Gr. μικρός small + γένειον chin]. Abnormal smallness of the chin.

microglia (mi-krog'le-ah). Non-neural cells of mesodermal origin, forming part of the adventitial structure of the central nervous system. In pathologic conditions they are recognizable as Nissi's bodies in general paralysis and as gitter cells. Cf. oligodendroglia.

microglossia (mi-kro-glos'e-ah) [Gr. μικρόs small + γλῶσσα tongue]. Undersize of the tongue.

micrognathia (mi-krog-na'the-ah) [Gr. $\mu \kappa \rho \delta s$ small $+ \gamma \nu \dot{\alpha} \theta \sigma s$ jaw]. Unusual or undue smallness of the jaws.

microgram (mi'kro-gram) [Gr. μικρός small + Fr. gramme]. 1. A thousandth part of a milligram, or a millionth part of a gram, usually written μg. 2. A photograph of a microscopic object.

micrograph (mi'kro-graf) [see micrography]. 1. An instrument for recording extremely minute movements It acts by making a greatly magnified record on a photographic film of the minute motions of a diaphragm. 2. Same as microgram.

micrographia (mi-kro-gra'fe-ah) [Gr. μlκροs small + γράφειν to write]. A reduction in the size of the lettering of the writer in comparison with his normal writing.

micrography (mi-krog'raf-e) [Gr. μικρός small + γράφειν to write]. 1. An account of microscopic objects. 2. The writing of very small letters. 3. Examination with the microscope.

microgyria (mi-kro-jir'e-ah) [Gr. μικρός small + γῦρος circle]. Abnormal smallness of the convolutions of the brain.

microhepatia (mi-kro-hep-at'e-ah) [Gr. μικρός small + ήπαρ liver]. Smallness of the liver.

microhm (mi'krōm) [Gr. $\mu \kappa \rho \delta s$ small + ohm]. One-millionth part of an ohm.

microkinematography (mi"kro-kin-e-mat-og'-raf-e) [Gr. μικρός small + κίνημα movement + γράφειν to write]. The making of moving pictures of microscopic objects.

microlentia (mi-kro-len'she-ah). Microphakia.

microleukoblast (mi-kro-lu'ko-blast). Same as myeloblast.

microliter (mi'kro-le-ter) [Fr. microlitre; Gr. μικρόs small + liter]. A thousandth part of a cubic centimeter or a millionth part of a liter, usually written μl.

microlithiasis (mi''kro-lith-i'as-is) [Gr. μίκρος small + lithiasis]. The formation of minute concretions in an organ.

micrology (mi-krol'o-je) [Gr. μικρός small + λόγος treatise]. A scientific account of microscopic objects.

micromania (mi-kro-ma'ne-ah) [Gr. μικρός small + μανία madness]. An insane belief that one's own body has become reduced in size.

micromazia (mi-kro-ma'ze-ah) [Gr. μικρός small + μαζός breast]. Abnormal smallness of the mamma.

micromegalopsia (mi"kro-meg-al-op'se-ah) [Gr. μικρός small + μέγας large + δψις vision]. The condition in which objects appear too small or too large or too small and too large by turns.

micromegaly (mi-kro-meg'al-e) [Gr. μικρός small + μέγας great]. Same as progeria.

micromelia (mi-kro-me'le-ah) [Gr. μικρός small + μέλος limb]. Abnormal smallness of the limbs.

micromelus (mi-krom'el-us) [Gr. μικρός small + μέλος limb]. A monster-fetus with undersized limbs.

Micromeria (mi-kro-me're-ah). See yerba buena.

micrometer (mi-krom'et-er) [Gr. μικρός small + μέτρον measure]. An instrument for measuring objects seen through the microscope. eye-piece m., ocular m., a micrometer to be used in connection with the eye-piece of a microscope. stagem., a micrometer fastened to the stage of a microscope.

micrometer (mi'kro-me-ter). Same as micron. micromethod (mi-kro-meth'od). See microdetermination.

micrometry (mi-krom'et-re). The measurement of microscopic objects.

micromicro.. A prefix denoting 1/1012.

micromicron (mi-kro-mi'kron). The millionth part of a micron or 10⁻¹⁰ cm., represented by the symbol $\mu\mu$.

micromillimeter (mik-ro-mil'im-e-ter). See mi-

micromotoscope (mi-kro-mo'to-skōp) [Gr. μικρόs small + L. mo'tio motion + Gr. σκοπεῖν to view]. A device for photographing microscopic objects and showing their movements.

Micromyces (mi-krom'is-ēz) [Gr. μικρόs small + μύκης fungus]. See Streptothrix.

micromyelia (mi"kro-mi-e'le-ah) [Gr. μικρόs small + μυελόs marrow]. Abnormal smallness of the spinal cord.

micromyeloblast (mi-kro-mi'el-o-blast). Same as myeloblast.

micromyelolymphocyte (mi"kro-mi"el-o-lim'-fo-sit). Same as myeloblast.

micron (mi'kron) [Gr. $\mu \iota \kappa \rho \delta s$ small]. One-millionth part of a meter or one-thousandth part of a millimeter; a micromillimeter. It is usually represented by the Greek letter μ .

microne (mi'krōn) [Gr. μικρός small]. Colloid particles varying in size from 10⁻⁸ to 10⁻⁵ cm. They are visible with a microscope. Compare amicrone and submicrone.

micronucleus (mi-kro-nu'kle-us) [Gr. μικρός small + nucleus]. A small nucleus.

microörchidia (mi-kro-or-kid'e-ah). See micror-chidia.

microörganic (mi-kro-or-gan'ik). Pertaining to a microörganism.

microörganism (mi-kro-or'gan-izm) [Gr. μικρόs small + organism]. Any minute animal or plant; a bacterium or protozoön.

microorganismal (mi-kro-or-gan-iz'mal). Pertaining to microorganisms.

microparasite (mi-kro-par'as-īt). A parasitic microorganism.

micropathology (mi"kro-path-ol'o-je) [Gr. μικρός small + pathology]. I. The sum of what is known regarding minute pathologic changes. 2. The pathology of diseases caused by microörganisms.

micropenis (mi-kro-pe'nis). Abnormal smallness of the penis.

microphage, microphagus (mi'kro-fāj, mi-krof'ag-us) [Gr. $\mu\kappa\rho\delta$ s small + $\varphi\alpha\gamma\epsilon\hat{\imath}\nu$ to eat]. A phagocyte of small size; a small, actively motile, polynuclear leukocyte which causes phagocytosis of the bacteria of acute affections.

microphagocyte (mi-kro-fag'o-sīt) [Gr. μικρόs small + phagocyte]. A phagocyte of the smaller type.

microphakia (mi-kro-fa'ke-ah) [Gr. μικρόs small + φακόs lens]. Abnormal smallness of the crystalline

microphallus (mi-kro-fal'us) [Gr. μικρός small + φαλλός penis]. Abnormal smallness of the penis.

microphobia (mi-kro-fo'be-ah) [microbe + Gr. φόβος fear]. Insane dread of microbes.

microphone (mi'kro-fōn) [Gr. μικρόs small + φωνή sound]. A device for rendering feeble sounds audible.

microphonia (mi-kro-fo'ne-ah) [see microphone].

Marked weakness of the voice.

microphonograph (mi-kro-fo'no-graf) [Gr. μικρόs small + φωνή voice + γράφειν to record]. An instrument which magnifies and records delicate sounds it is used in training the deaf to speak.

microphonoscope (mi-kro-fo'no-skōp) [Gr. μικρόs small + φωνή voice + σκοπεῖν to view]. A binaural stethoscope having a membrane in the chestpiece which accentuates the sound.

microphotograph (mi-kro-fo'to-graf) [Gr. μικρός small + photograph]. 1. A photomicrograph. 2. A photograph of microscopic size.

microphthalmia (mi-krof-thal'me-ah) [Gr. μ ικρbs small + bφ θ α λ μ δ s eye]. Abnormal smallness of the eyes.

microphthalmus (mi-krof-thal'mus). 1. Same as microphthalmia. 2. A person with abnormally small eyes.

microphysics (mi-kro-fiz'iks) [Gr. μικρός small + physics]. The science which deals with the ultimate structure of matter, i. e., with molecules, atoms, and electrons

microphyte (mi'kro-fit) [Gr. μικρός small + φυτόν plant]. Any microscopic plant.

microphytic (mi-kro-fit'ik). Pertaining to or caused by microphytes.

micropia (mi-kro'pe-ah). Same as micropsia.

microplasia (mi-kro-pla'ze-ah) [Gr. μικρός small + πλάσσειν to form]. Dwarfism.

microplastocyte (mi-kro-plas'to-sīt) [Gr. μικρός small + plastocyte]. An undersized blood-plate.

micropodia (mi-kro-po'de-ah) [Gr. μικρός small + ποῦς foot]. Abnormal smallness of the feet.

micropolariscope (mi"kro-po-lar'is-kōp). A microscope with a polariscope attached.

microprosopus (mi"kro-pros-o'pus) [Gr. μικρός small + πρόσωπον face]. A fetus with a small or undeveloped face.

microprotein (mi-kro-pro'te-in). The albuminous element of a bacillus.

micropsia (mi-krop'se-ah) [Gr. μικρός small + δψις vision]. A condition in which objects seen seem to be smaller than they really are.

micropsychia (mi-krop-si'ke-ah) [Gr. μικρόs small + ψυχή soul]. Feebleness of mind.

micropus (mik'ro-pus) [Gr. $\mu\kappa\rho\delta s$ small + $\pi\sigma\delta s$ foot]. A person with abnormally small feet.

micropyle (mik'ro-pil) [Gr. μ ικρός small $+ \pi$ ύλη gate]. An opening through which the spermatozoön may enter the ovum.

microrchidia (mi-kror-kid'e-ah) [Gr. μικρόs small + δρχίs testicle]. Abnormal smallness of the testicle.

microrefractometer (mi''kro-re-frak-tom'et-er).

A refractometer for the discovery of variations in the minute structure of blood-corpuscles.

microrrhinia (mi-kro-rin'e-ah) [Gr. μικρός small + βίς nose]. Abnormal smallness of the nose.

microscleous (mi-kros'kle-us) [Gr. μικρός small + σκέλος leg]. Short legged.

Microsco'lex modes'tus. An anilid worm found in a fistula in Switzerland.

microscope (mi'kro-skōp) [Gr. μικρόs small + σκοπεῖν to view]. An instrument which magnifies minute objects for visual inspection. binocular m., a microscope to be used with both eyes together. compound m., one that contains two or more lenses. corneal m., a specially prepared lens of high magnifying power for studying minute changes in the cornea and iris. simple m., one which consists of a single lens, or of several lenses which act as one.

microscopic, microscopical (mi-kro-skop'ik, mi-kro-skop'ik-al). Pertaining to or visible only by the aid of the microscope.

microscopy (mi-kros'ko-pe) [Gr. μικρόs small + σκοπεῖν to view]. Observation by means of the microscope. clinical m., employment of the microscope in making clinical diagnoses.

microsection (mi-kro-sek'shun). An extremely thin section for examination with the microscope.

microseme (mi'kro-sēm) [Gr. μικρόs small + σ fμα sign]. Having an orbital index of less than 83°.

Microsiphonales (mi"kro-si-fo-na'lez). Trichomycetes.

microslide (mi'kro-slid). The slide on which objects for microscopic examination are mounted.

microsmatic (mi-kros-mat'ik) [Gr. μικρόs small + δσμάειν to smell] Having the sense of smell, but of relatively feeble development.

microsol (mi'kro-sol). A disinfectant mixture of copper sulphocarbolate, copper sulphate, sulphuric acid, and water: used in a 2 or 3 per cent. solution.

microsoma (mi-kro-so'mah) [Gr. μικρόs small + σωμα body]. A very low but not dwarfish stature. microsomatia (mi-kro-so-ma'she-ah). Microsomia.

microsome (mi'kro-sōm) [Gr. μικρόs small + σωμα body]. One of the finely granular elements of protoplasm.

microsomia (mi-kro-so'me-ah) [Gr. μικρός small + σῶμα body]. An undersized state of the body.

microspectroscope (mi-kro-spek'tro-skop) [Gr. μικρός small + spectroscope]. A spectroscope to be used in connection with a microscope for the examination of the spectra of microscopic objects.

microsphere (mi'kro-sfēr). Same as centrosome. microsphygmia (mi-kro-sfig'me-ah) [Gr. $\mu\kappa\rho\delta$ s small + $\sigma\rho\nu\gamma\mu\delta$ s pulse]. That condition of the pulse in which it is perceived with difficulty by the finger.

microsphyxia (mi-kro-sfiks'e-ah). Same as microsphygmia.

Microspira (mi-kros'pir-ah). A genus of bacteria of the family Spirillaceæ; the cells are rigid and have one, two, or three wavy polar flagella.

Microspirone'ma pal'lidum. Same as Spicechæta pallida.

microsplenia (mi-kro-sple'ne-ah) [Gr. μκρός small $+ \sigma \pi \lambda \hat{\eta} \nu$ spleen]. Smallness of the spleen.

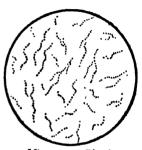

microsplenic (mi-kro-sple'nik). Not marked by splenic enlargement.

microsporia (mi-kro-spo're-ah). Same as Gruby's disease; see under disease.

Microsporidium (mi"kro-spo-rid'e-um) [Gr. μικρός small + sporidium]. A genus or form of micro-organisms, probably animals. Microsporidia infest the marsh-tortoise, and are found in silkworms diseased with pébrine.

Microsporon (mi-kros'po-ron) [Gr. $\mu\kappa\rho\delta$ s small + $\sigma\pi\delta\rho\sigma$ s seed]. A genus of small-spored ringworm fungi which cause various diseases of the skin and hair. **M. audoui'ni**, one of the trichophyton fungi. It is the chief of the small-spored group and causes a form of

tinea tonsurans. feli'neum M. and M. lano'sum (M. ca'nis) are of animal origin, but cause some infections in man. M. flaves'cens. a. Brazilian organism found in the tinea of children by Parreiras Horta (1911). M. fur'fur is the cause of tinea versicolor. It appears in the form of large

Microsporon (Rivas).

conidia, in regular masses of thirty or more, together with short, branched mycelia connecting the masses of conidia. M. mentagroph'ytes, a species found in the hair-follicles in sycosis. M. minutis'simum, the fungus which causes erythrasma. M. tar'dum is of human origin.

microsporosis (mi"kro-spo-ro'sis). A trichophytosis caused by one or more of the "small-spored" trichophyton fungi. M. cap'itis. See tinea tonsuraus.

Microsporum (mi-kros'po-rum). Microsporon.

microstat (mi'kro-stat). The stage and finder of a microscope.

microstethophone (mi-kro-steth'o-fōn) [Gr. μικρόs small $+ \sigma \tau \hat{\eta} \theta$ os chest $+ \varphi \omega \nu \hat{\eta}$ voice]. A proprietary form of stethoscope.

microstethoscope (mi-kro-steth'o-skop) [Gr. μι-κρόs small + stethoscope]. A form of stethoscope said to be constructed upon the principles of a telephone.

microsthenic (mi-kro-sthen'ik) [Gr. μικρόs small + σθέμος strength]. Having feeble muscular power.

microstomia (mi-kro-sto'me-ah) [Gr. μικρός small + στόμα mouth]. Undue smallness of the mouth.

microsyringe (mi-kro-sēr'inj). A syringe fitted with a screw-thread micrometer head for the accurate control of minute syringe measurements.

microtechnic (mi-kro-tek'nik). The construction and manipulation of the microscope.

microtia (mi-kro'she-ah) [Gr. μκρός small + οὖς ear]. Undersize of the external ear.

microtome (mik'ro-tōm) [Gr. μικρόs small + τέμνειν to cut]. An instrument for cutting thin slips for microscopic study. **freezing m.**, a microtome for cutting frozen sections. **rocking m.**, a microtome in which the specimen is held in the end of a lever which passes up and down over a stationary knife.

microtomy (mi-krot'o-me) [Gr. μικρός small + τέμνειν to cut]. The cutting of thin sections.

Microtrobid'ium akamu'shi. Same as Trombicula akamushi. micro-unit (mi-kro-u'nit). A unit of small measurements.

microvivisection (mi"kro-viv-is-ek'shun). Microdissection.

microvolt (mi'kro-volt) [Gr. μικρός small + volt]. One-millionth part of a volt.

microvolumetry (mi''kro-vol-u'met-re). Vier-ordt's term for the counting of the cells of any body fluid.

microxycyte (mi-krok'se-sīt) [Gr. μικρός small + όξυς sharp, acid + κύτος cell]. Any finely granular oxyphil cell.

microxyphil (mi-kroks'e-fil). Same as microxycvte.

microzoaria (mi-kro-zo-a're-ah) [Gr. μικρός small + ζφον animal]. A general term for all microorganisms

microzoön (mi-kro-zo'on), pl. microzo'a [Gr. μικρόs small + ζφον animal]. Any microscopic animal organism.

microzyme (mi'kro-zim) [Gr. μικρός small + ζύμη leaven]. See micelle

micturition (mik-tu-rish'un) [L. micturi're to urinatel. The passage of urine.

The center of the axmidaxilla (mid-aks-il'ah).

midbody (mid'bod-e). A body or a mass of granules developed in the equatorial region of the spindle during the anaphase of mitosis.

midbrain (mid'bran). The mesencephalon.

midcarpal (mid-kar'pal). Between the two rows of bones of the carpus.

middlepiece (mid'el-pes). 1. The part of a horse between the fore- and hind-quarters. 2. The portion of a spermatozoon between its head and flagel-

midfrontal (mid-fron'tal). Pertaining to the middle of the forehead.

midge (mij). A small dipterous insect. See also mite. owl m. See Phlebotomus.

midgracile (mid-gras'Il). Median and gracile: noting the median gracile sulcus.

The mesogaster; an embryonic midgut (mid'gut) structure whence the jejunum and ileum are de-

midoccipital (mid-ok-sip'it-al). Pertaining to the middle of the occiput.

midpain. Pain occurring between the menstrual periods

midperiphery (mid-per-if'er-e). The middle zone of the retina.

midpiece (mid'pēs). The precipitated globulin fraction in complement splitting.

midriff (mid'rif). The diaphragm. midrol (mid'rol). A mydriatic in the form of white crystals, the iodomethylate of phenylpyrazon.

midsection (mid-sek'shun). A cut through the middle of any organ.

midsternum (mid-ster'num). See mesosternum.

midtarsal (mid-tar'sal). Between the two rows of bones of the tarsus.

midtegmentum (mid-teg-men'tum). The median or central part of the tegmentum.

midventricle (mid-ven'trik-el). The cavity of the midbrain or mesencephalon.

midwife (mid'wif). A woman who delivers par-

midwifery (mid'wi-fer-e). See obstetrics.

turient women.

Mierzejewski effect (mēr-ze-jew'ske). See under effect.

Miescher's tubes (me'sherz) [Johann Friedrich Miescher, Swiss pathologist, 1811-1887]. See under

Miescheria (me-she're-ah) [after Miescher]. A genus of sarcosporidia. M. mu'ris infests the muscles and livers of domestic and other animals, and has been found in human subjects, producing what are called Miescher's tubules. See under tuhule

migrainator (mig-ran-a'tor). An instrument for the relief of migraine by compressing the head.

migraine (me-grān') [Gr.]. A nervous affection marked by a periodic headache, often one-sided, and accompanied by nausea, vomiting, and various sensory disturbances. fulgurating m., violent migrane developing abruptly. ophthalmic m., migraine accompanied by amblyopia or other visual disturbance. ophthalmoplegic m., periodic migraine followed by ophthalmoplegia.

migrainin (mig-ran'in). A patented headache remedy, phenazone-caffein-citrate, said to contain antipyrin (85 per cent.), caffein (9 per cent), and citric acid (5 per cent). Dose, 15 gr. (1 gm.).

migrating (mi'grat-ing) [L. mi'grans]. Moving from place to place; occupying successively different parts of the same organ.

migration (mi-gra'shun) [L. migra'tio]. 1. apparently spontaneous change of place. movement of leukocytes through the walls of the vessels. external m., the passage of an ovum from the ovary to the oviduct of the opposite side without passing through the uterus. internal m., the passing of an ovum from an ovary into the uterus in the normal way, followed by its entry into the opposite oviduct. m. of leukocytes, the passage of white corpuscles through the wall of a vessel. m. of the ovum, the passage of the ovum from the ovary.

migrol (mig'rol). A proprietary headache remedy composed of caffein, guaiacetin, and sodium bicarbonate.

migrophen (mig'ro-fen). A proprietary combination of quinin and lecithin for headache.

migrosine (mig'ro-sin). A proprietary remedy for migraine: menthol dissolved in acet c ether.

mikro-. For words thus beginning, see micro-. mikron (mi'kron), p. mi'kra. Same as micron.

Mikulicz's cells, disease, drain, operation, etc (mik'u-litsh) [Johann von Mikulicz-Radechi, Polish surgeon, 1850–1905]. See under the nouns.

il. (mil). A contraction for milliliter, the one-thousandth part of a liter. This term is used in the mil. (mil). U. S. P. as equivalent to cubic centimeter

milammeter (mil-am'et-er). Same as milliam-

milanol (mil'an-ol). Trade name for trichlorbutylmalonate of bismuth.

milchlin (miltsh'lin). A preparation of skimmed milk approaching whole milk in composition.

mildew (mil'du). A parasitic fungus of many species; also a plant disease caused by it.

mildiol (mil'de-ol). A disinfectant containing creosote and a petroleum derivative.

milfoil (mil'foil). Yarrow. See Achillea.

Milian's sign (meel-yaz') [Milian, contemporary French physician]. See sign.

miliaria (mil-e-a're-ah) [L. mil'ium millet]. An acute inflammation of the sweat-glands, characterized by the formation of patches of small red papules and vesicles, with intense itching and burning of the skin. The disease is due to excessive sweating, and occurs in hot weather. Called also m. ru'bra and prickly-heat. m. al'ba, m. crystalli'na, miliaria in which the contents of the vesicles are opaque and white. Called also sudamina crystallina. m. ru'bra. See miliaria.

miliary (mil'e-a-re) [L. milia'ris like a millet-seed].

1. Resembling a millet-seed. 2. Characterized by the formation of lesions resembling millet-seeds.

milieu (měl-yew') [Fr.]. Surroundings; environment.

milium (mil'e-um), pl. mil'ia [L. "millet-seed"]. small whitish nodule in the skin, especially of the face. Milia are usually retention-cysts of sebaceous glands or hair-follicles. colloid m., a

small yellowish papule in the corium of the skin which is the seat of a colloid degeneration.

milk (milk) [L. lac]. The fluid secretion of the mammary gland forming the natural food of young mammals acidophilus m., milk fermented with cultures of Lactobacillus acidophilus: used in gastro-intestinal disorders to modify the bacterial flora of the intestinal tract. adapted m., milk specially modified so as to adapt it to the child's digestive capacity. after-m., the stripping, or last milk taken at any one milking. albumin m., Finkelstein's specially prepared milk poor in lactose and salts and rich in casein and fat. m. of asafetida, emulsion of asafetida. cillary m., a proprietary milk fermented with a pure culture of Lactobacullus bulgaricus. m. of m. of bismuth, a 6 per cent. suspension of basic bismuth carbonate. bitter m., milk may be bitter in taste when first drawn because of bitter herbs in the feed or it may become bitter later from the growth of certain microorganisms. blue m., milk made blue in color by the action of bacteria, usually Pseudomonas cyanogenes Budd m., buddeized m., milk sterilized by adding hy-drogen dioxid and heating, so as to decompose the dioxid and liberate the oxygen. butter-m. 1. The milk that is left after churning cream and rebutter-m. 1. moving the butter. 2. Milk that has been curdled by inoculating it with certain cultures of microorganisms. If properly done it looks and tastes like true buttermilk. cancer m., a viscid opaque granular fluid which may be scraped from the surface of a carcinoma which has undergone fatty degeneration casein m., a prepared milk containing very little salts and sugars and a large amount of fat and casein. certified m., milk whose purity is certified by a committee of physicians or a medical milk commission. condensed m., milk which has been partly evaporated and sweetened with sugar. m. crust. See crusta lactea. m.-cure, the treatment of diseases by a diet of milk or of preparations of milk diabetic m., milk containing a small per-centage of lactose dialyzed m., milk from which the sugar has been abstracted by being passed by dialysis through a parchment membrane fore-m. 1. The first milk that is taken at any milking. 2. Same as colostrum. fortified m., milk made more nutritious by the addition of cream or white of egg homogenized m., milk so treated that the fats become intimately combined with the general body of the milk the emulsified particles of fat are made so minute that the cream does not separate. m. of iron, water which contains freshly precipitated ferric phosphate. laboratory **m.**, milk prepared according to a special formula. m. leg, phlegmasia alba dolens. m. of magnesia, magnesium hydroxid held in permanent suspension in a liquid used as an antacid. modified m., the cream of cow's milk mixed with water and lactose in the proper proportions: used for infant feeding. perhydrase m., milk to which hydrogen dioxid has been added. protein m., a modified milk preparation having a relatively low content of carbohydrate and fat and a relatively high protein content. red m. may be due to blood, to eating madder root, or to the growth of Erythrobacillus prodigiosus or other microorganisms. ropy m., milk which has become viscid so that it can be drawn out into threads. It is usually caused by the growth of Bacillus lactis viscosi and is eaten as a delicacy in Norway. salvarsan m., the milk from a goat that has received injections of salvarsan: used in treating syphilis in children. **Schloss m.**, a modified milk containing the same proportion of salts and fat as human milk. The formula is: 20 per cent. cream, 140 c.c.; full milk, 140 c.c.; water, 700 c.c.; potassium chlorid, 0.2 gm.; dextrin and maltose, 50-70 gm.; nutrose, 5 gm. skimmed m., milk from which the cream has been reskimmed moved. **sour m.**, milk containing lactic acid, produced by the action of lactic-acid bacteria.

m. of sulphur, precipitated sulphur. uterine m., a white milky substance between the villi of the placenta of the gravid uterus. uviol m., milk sterilized by the action of ultraviolet rays. virgins' m. See lac virginale. Walker-Gordon m., a proprietary form of modified milk. yoghurt m., a form of sour milk used in Bulgaria and containing lactic-acid bacilli, the most important of which is the Lactobacillus bulgaricus. It is used in fermentative conditions of the digestive tract.

milkine (milk'ēn). A yellow powder prepared from cow's milk, malted cereals, beef, calcium hydroxid, and sodium chlorid.

milking (mil'king). The pressing out of the contents of a tubular part; such as the urethra, by running the finger along it.

milk-leg. Phlegmasia alba dolens.

milkpox (milk'poks). See amaas.

milk sick. Poisoning by white snakeroot, Eupatorium urticæfolium.

milk-sickness. See trembles.

milk-spot (milk'spot). 1. A white spot sometimes observed on serous membrane. 2. A white mucous patch of secondary syphilis.

milk-tooth. A deciduous tooth. See under tooth. milkweed (milk'wēd). Any plant of the genus Asclepias.

milkwort (milk'wert). See Polygala.

Mill's disease (milz) [Charles K. Mills, neurologist in Philadelphia, born 1845]. See disease.

Millar's asthma (mil'arz) [John Millar, British physician, 1735–1801]. See under asthma.

Millard's test (mil'ards) [Henry B. Millard, American physician, 1832-1893] See under tests.

Millard-Gubler syndrome (me-yar-gēb'ler) [August L. J. Millard, French physician, 1830–1915; see Gubler]. Hemiplegia alternans.

millefolium (mil-e-fo'le-um). A homeopathic preparation of Achil'lea millefo'lium.

milli-. A prefix denoting 1/1000.

milliampere (mil"e-am-pār') [Fr.]. One-thousandth part of an ampere.

milliamperemeter (mil"e-am-pār'mē-ter). An instrument for measuring the strength of an electric current in milliamperes.

millibar (mil'ib-ar). One-thousandth part of a bar. millicurie (mil-ik-u're). A unit of radio-activity which is the amount of radium emanation equal to that of a milligram of radium.

milligram (mil'ig-ram) [L. mil'le thousand + gram]. One-thousandth part of a gram. m.-hour, the amount of radium exposure produced by the application of 1 milligram of radium for one hour. The American unit is based on 1 mg. of radium element, the English unit on 1 mg. of radium bromid (containing about 50 per cent. of the element); the latter is therefore about half the strength of the American unit. Called also milligramage.

milligramage (mil'ig-ram-aj). Same as milligram-hour.

milliliter (mil'e-le-ter) [Fr. millilitre + L. mil'le + liter] One-thousandth part of a liter, usually abbreviated mil.

millimeter (mil'im-e-ter) [L. mil'le thousand + meter]. One-thousandth part of a meter.

millimicro-. A prefix denoting 1/109.

millimicron (mil-im-i'kron). A thousandth part of a micron, a millionth part of a millimeter or 10^{-7} cm. It is usually abbreviated $m\mu$.

millimol (mil'im-ol). One-thousandth part of a gram-molecule.

millimu (mil'e-mu). Same as millimicron.

milling (mil'ing). In dentistry, the securing of a proper occlusion of artificial dentures by having the patient grind the teeth.

- millinormal (mil-in-or'mal) [L. mil'le thousand + normal]. Having one-thousandth part of what is normal.
- millions (mil'yunz). A name applied to various small fish that devour mosquito larvæ. Acanthophacetus, Girardinus, Lebistes.
- milliphot (mil'if-ot). The practical unit of illumination being o.oor phot and approximately one foot-candle.
- Millon's reagent, test (mil'onz) [Auguste N. E. Millon, French chemist, 1812-1867]. See under reagent and tests.
- Mills-Reincke phenomenon (milz-rink'e) [Hiram F. Mills, American engineer; J. J. Reincke, German physician]. See phenomenon.
- milossin (mi-los'in). A crystalline substance from the leaves of Tax'us bacca'ta, or yew tree.
- milphæ (mil'fe). Loss of eyebrows or eyelashes.
- milphosis (mil-fo'sis). Milphæ. Milroy's disease (mil'roys) [W. F. Milroy, American physician, born 1855]. See under disease.
- milt-sickness (milt'sik-nes). Splenic disease in cattle.
- Milzbrand (milts'brahnt) [Ger.]. Anthrax.
- mimesis (mim-e'sis). The simulation of one disease by another.
- mimetic (mi-met'ik) [Gr. μιμητικόs]. Marked by simulation of another disease.
- mimic (mim'ik). Same as mimetic.
- mimmation (mim-a'shun). The habitual insertion of the "m" sound in speech in places where it does not belong.
- mimosis (mim-o'sis). Mimesis.
- min. An abbreviation for L. min'imum, a minim.
- mind-blindness. See blindness.
- mind-cure. Treatment of disease by impression or influences directed toward the mind of the patient, without the use of medicine.
- mind-deafness. See deafness.
- Mindererus, spirit of (min-der-e'rus) [Raimond Minderer, German physician, 1570 (?)-1621]. Solution of ammonium acetate.
- mind-pain (mīnd'pān). Same as psychalgia.
- mineral (min'er-al) [L. minera'le]. A non-organic homogeneous substance. **crystal m.**, fused potassium nitrate. **kermes m.**, antimony oxysulphid. **turpeth m.**, yellow subsulphate of mercury.
- miners' elbow. See elbow. m. phthisis. See phthisis.
- mingin (min'jin). A nitrogenous compound, C13-H₁₈N₂O₂, found in small amounts in the urine.
- minify (min'if-i) [L. mi'nus less]. To render less; to diminish. The opposite of magnify.
- minim (min'im) [L. min'imum least]. One-sixtieth part of a fluidram; often used as a synonym of drop.
- minimal (min'im-al) [L. min'imus least]. smallest or least; the smallest possible.
- minimum (min'im-um) [L. "smallest" The smallest amount or lowest limit. m. audib'ile, the auditory threshold. See under threshold. m. sensib'ile, the threshold of consciousness. See under threshold.
- Minin light (min'in) [A. V. Minin, contemporary Russian surgeon]. See light.
- minium (min'e-um) [L.]. Lead tetroxid, Pb₃O₄: red lead.
- Minkowski's figure, method (min-kov'skez) [Oskar Minkowski, Russian physician, born 1858]. See figure and method.
- Minkowski-Chauffard syndrome (min-kow'ske-sho-far'). See hemolytic jaundice, under jaun-
- minstra (min-strah') [Ital.]. A liqueur, or cordial, prepared at Soresina, Italy.

- MISCEGENATION mint (mint). See Mentha. horse m. See Monarda.
- psychophysical sensitivity of a sense organ due to stimulation of that organ; fatigue. minuthesis (min-u'thes-is).
- miocardia (mi-o-kar'de-ah) [Gr. μείων less + καρδία heart]. The contraction of the heart; systole.
- miodidymus, miodymus (mi-o-did'im-us, mi-od'im-us) [Gr. μείων less + δίδυμος twin]. A fetus with two heads joined at the occiputs.
- mionectic (mi-o-nek'tik) [Gr. μειονεκτικόs disposed to take too little]. Taking up less than the average amount of oxygen, i. e., less than 70 per cent. Cf mesectic and pleonectic.
- **miophone** (mi'o-fōn) [Gr. $\mu e l\omega \nu$ less + φ sound]. A microphone for testing the muscles.
- mioplasmia (mi-o-plaz'me-ah) [Gr. μείων less + πλάσμα plasmal. Abnormal decrease in the amount of plasma in the blood.
- miopragia (mi-o-pra'je-ah) [Gr. μείων less + πράσσειν to perform]. Decreased functional ac-
- miopus (mi'o-pus) [Gr. μείων less + ων face]. fetal monster with two fused heads, one face being rudimentary.
- miosis (mi-o'sis) [Gr. μείωσις]. 1. Excessive contraction of the pupil. 2. The process in the maturation of the germ cells by which the chromosome number is reduced from diploid to haploid irritative m. Same as spastic m paralytic m., miosis due to paralysis of the dilator of the iris. spastic m., miosis due to spasm of the sphincter pupillæ. spinal m., miosis occurring in spinal diseases.
- miostagmin (mi-o-stag'min) [Gr. μείων less στάγμα drop]. A specific substance in the blood-serum of infected animals which will combine with antigen to lower the surface tension of the mixture. m. reaction. See reaction.
- miotic (mi-ot'ik). 1. Causing the pupil to contract. 2. An agent that causes the pupil to con-The chief miotics are arecolin, eserin, morphin, muscarin, nicotin, physostigmin, and pilocarpin. 3. Affected with miosis. 4. Marked by miosis (2d del.).
- miracidium (mi-ras-id'e-um), pl. miracid'ia [Gr. "a little boy"]. The ciliated, free swimming larva of a fluke.
- mire (mēr) [Fr.; L. mira're to look at]. A reflector for use in an ophthalmometer.
- mirion (mir'e-on). A proprietary yellow fluid, containing 1.7 per cent. of iodin: used in the treatment of syphilis.
- mirmol (mir'mol). A mixture of phenol and formaldehyd: used as an application to ulcers and cancerous growths.
- mirror (mir'or) [Fr. miroir]. A polished surface that reflects light or creates visible images of ob-A polished surface jects in front of it. concave m., one with a concave reflecting surface. convex m., one with a convex reflecting surface. frontal m., headm., a circular mirror strapped to the head: used especially in connection with the laryngoscope or rhinoscope. plane-m., one with a flat reflecting surface. m.-speech, speech in which words are spoken backward. m.-writing, the writing of letters and words in reversed form, as if they were seen in a mirror.
- miryachit (mir-e'ah-shit) [Russ.]. palmus, or jumping disease, prevalent in Russia.
- miscarriage (mis-kar'ij). Abortion; premature expulsion of the fetus; birth of the fetus before the twenty-eighth week.
- miscarry (mis-kar'e). To give birth to a fetus before it is viable.
- misce (mis'e). Latin for mix.
- miscegenation (mis"e-jen-a'shun) [L. misce're to mix + ge'nus race]. The intermarriage or union of persons of different races, or the procreation of persons of mixed race.

miscible (mis'i-bl). Susceptible of being mixed.

miserere mei (miz-er-e're me'i) [L. "have mercy on me"]. An old name for volvulus or intestinal colic.

misocainia (mi-so-ki'ne-ah) [Gr. μισεῖν to hate + καίνος new]. Hatred of new ideas.

misogamy (mi-sog'am-e) [Gr. μισεῖν to hate + γάμος marriage]. Morbid aversion to marriage.

misogyny (mi-soj'in-e) [Gr. μισεῖν to hate + γυνή woman]. Insane dislike of women.

misoneism (mi-so-ne'izm) [Gr. $u\sigma \epsilon \hat{\nu}$ to hate $+\nu kos$ new]. Morbid dislike of new things or new ideas.

misopedia, misopedy (mi-so-pe'de-ah, mis-op'-e-de) [Gr. μισεῖν to hate + παῖς child]. Morbid dislike of children.

Mist., mist. An abbreviation for L. mis'tura, a mixture.

mistletoe (mis'el-to). A parasitic plant, Vis'cum al'bum, with nervine leaves. Dose, 10-60 gr. (0.6-4 gm.). An American species, Phoraden'-dron flaves'cens, is aperient and antispasmodic, and is said to be a better oxytocic than ergot.

mistura (mis-tu'rah). Latin for mixture. m. ammoni'aci, mixture or milk of ammoniac. Dose, 4-8 fl.dr. (16-32 c.c.). m. amyg'dalæ, mixture or milk of almonds. Dose, 2-4 fl.dr. (8-16 c.c.). m. asafæt'idæ, mixture or milk of asafetida. Dose, 4-8 fl.dr. (16-32 c.c.). m. chlorofor'mi, chloroform mixture: anodyne and stimulant. Dose, 1-2 fl.dr. (4-8 c.c.). m. copa'ibæ compos'ita, the compound mixture of copaiba. Dose, 1-2 fl.dr. (4-16 c.c.). m. cre'tæ (U. S. P.), chalk mixture antacid. Dose, 2-4 fl.dr. (8-16 c.c.). m. fer'ri aromat'ica, aromatic iron mixture. Dose, ½-1 fl.oz. (16-32 c.c.). m. fer'ri compos'ita, compound mixture of iron. Dose, 1-2 fl.oz. (32-64 c.c.). m. fer'ri et ammo'niæ aceta'tis. See liquor ferri, etc. m. glycyrrhi'zæ compos'ita (U. S. P.), compound mixture of licorice; brown mixture. Dose, 1-2 fl.oz. (32-64 c.c.). m. gual'aci, mixture or emulsion of the resin of guaiacum. Dose, ½-2 fl.oz. (16-64 c.c.). m. magne'siæ et asafæt'idæ, milk of magnesia and asafetida. Dose, ½-4 fl.dr. (2-16 c.c.). m. oflei ric'ini, castor-oil mixture. Dose, ½-2 fl.oz. (16-32 c.c.). m. potas'sii citra'tis, mixture of the citrate of potassium. Dose, ½-1 fl.oz. (16-32 c.c.). m. rhe'i et so'dæ, mixture of rhubarb and soda. Dose for children, 30-60 min. (2-4 c.c.). m. scammo'nii, mixture of scammony. Dose, 1-2 fl.oz. (32-64 c.c.). m. sen'næ compos'ita, compound mixture of senna. m. spir'itus vi'ni gal'lici, mixture of senna. m. spir'itus vi'ni gal'lici, mixture of brandy. Dose, 1-2 fl.oz. (32-64 c.c.). m. splenet'ica, Gadberry's mixture quinin sulphate, 4.2; potassium nitrate and ferrous sulphate, each, 1.4; nitric acid, 1 4; water to make 100 It is tonic and antiperiodic. Dose, 1 dr. (4 gm.).

Mit. Abbreviation for L. mit'te, send.

mitagglutinin (mit-ag-lu'tin-in). Same as coagglutinin.

mitapsis (mit-ap'sis) [Gr. μίτος thread + ἀψίς joining]. The fusion of the chromatin granules in the final stage of cell conjugation

Mitchell's disease, treatment [S. Weir Mitchell, Philadelphia neurologist, 1830-1914]. See under disease and treatment.

Mitchell's solution (mitsh'elz) [James F. Mitchell, American surgeon, born 1871]. See solution.

mite (mit). Any member of the order Acarina except the ticks (Ixodidæ). The mites are minute animals, related to the spiders, and are parasitic on man and domestic animals, producing various irritations of the skin (acariasis). Mites important in medicine are Sarcoptes, Psoroptes, Dermodex, Leptus, Trombidium, Trombicula, Dermanyssus, Peaiculoides, Tyroglyphus, Chorioptes, Otodectes, and Cnemidocoptes. auricular m. See Otodectes. bird m., chicken m. See Dermanyssus, depluming m. See Cnemidocoptes gallina.

flour m. See Tyroglyphus. follicle m. See Demodex. fowl m. See Dermanyssus. harvestm. See Leptus. itch-m. See Sarcoptes. kedani m. See Trombicula akamushi. louse m. See Pediculoides. mange m. See Sarcoptes. meal m. See Tyroglyphus. mower's m. See Leptus. poultry m. See Dermanyssus. red m. See bête rouge. scab m. See Psoroptes. snout m., Bdella cardinalis. spinning m., Bryobia prætiosa. straw m. See Pediculoides.

mithradatism, mithridatism (mith-rad'ahtizm, mith-rid'at-izm) [after Mithridates, king of Persia, who took poisons so as to become immunized against them]. Immunity against the effects of poisons procured by the administration of gradually increasing doses of the poison itself.

mitigate (mit'ig-āt) [L. mitiga're to soften]. To moderate; to render milder.

mitin (mi'tin). A liquid emulsion of fats to which additional unemulsified fat has been added: used in skin diseases.

mitis (mi'tis). Latin for mild.

mitochondria (mit-o-kon'dre-ah) [Gr. $\mu l \tau os$ thread $+ \chi \delta \nu \delta \rho os$ cartilage]. Small granules or rod-shaped structures found in differential staining in the cytoplasm of cells. The granular forms are called chondriosomes; the rod-shaped or filamentous forms are chondriocontes or chondriomites. Similar terms are: plastochondria, plastoconts, plastomeres, plastosomes, thread granules.

mitokinetic (mit"o-kin-et'ik) [Gr. μίτος thread + κίνησις motion]. A term applied to the force existing in the kinoplasm of a cell which produces the achromatic spindle in karyokinesis.

mitoma, mitome (mit-o'mah, mi'tōm) [Gr μίτος thread]. A thready network of the protoplasm of a cell; the more solid portion of cell protoplasm.

mitoplasm (mit'o-plazm) [Grr $\mu l \tau os$ thread + $\pi \lambda \dot{a} \sigma \sigma \epsilon \iota v$ to form]. The chromatic substance of a cell nucleus.

mitoschisis (mit-os'kis-is) [Gr. μ lros thread + $\sigma \chi l \sigma \iota s$ split]. Same as karyokinesis.

mitosis (mit-o'sis) [Gr. µlros thread]. Indirect cell division, or karyokinesis; the typical mode of division of active somatic cells and germ cells. Mitosis is divided into four phases: 1. Prophase: Formation of spirem; disappearance of nuclear membranc (a); breaking up of spirem into chromosomes; appearance of centrosome and achromatic spindle (b); formation of polar bodies; arrangement of chromosomes in equatorial plane of central spindle to form the monaster (c): 2. Metaphase: Chromosomes split longitudinally into exactly similar halves. 3. Anaphase: The two groups of daughter chromosomes separate (a) and move along the fibers of the central spindle, each toward one of the asters, forming the diaster (b). 4. Telephase: The daughter chromosomes resolve themselves into a reticulum and the daughter nuclei are formed; the cytoplasm divides, forming two complete daughter cells. (See page 732.)

mitosome (mit'o-sōm) [Gr. $\mu l ros$ thread $+ \sigma \hat{\omega} \mu a$ body]. A body formed from the spindle-fibers of the secondary spermatocytes, giving rise to the middle piece of the spermatozoön.

mitotic (mit-ot'ik). Pertaining to mitosis, or kary-okinesis.

mitral (mi'tral). 1. Shaped somewhat like a miter.
2. Pertaining to the mitral valve.

mitralism (mi'tral-izm). A tendency toward the development of mitral lesions in the heart.

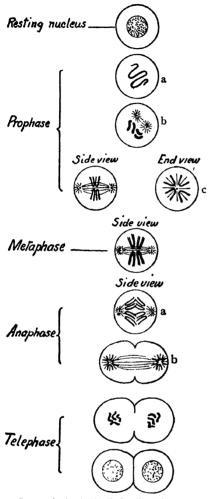

mitro-arterial (mi"tro-ar-te're-al). Pertaining to or affecting the mitral valve and the arteries.

Mittel-schmerz (mit'el-shmārts) [Ger.]. Intermenstrual pain.

mittor (mit or) [L. mil'ere to rend]. Any one of the terminals of a neuron which give off the impulse or stimulus to the ceptors of the adjoining neuron. See neuromittor.

Mitt. sang. Abbreviation for L. mit'te san'guinem, bleed.

mixed (mixt). Affecting various parts at once; showing two or more different characteristics. m. chancre, a syphilitic chancre resulting from a double infection with syphilitic virus and that from a chancroid, the chancroid being first developed, and changing in course of time to the syphilitic chancre. See chancre.

Stages of mitosis (McFarland's Biology).

mixer (miks'er). A receptacle for diluting a drop of blood preparatory to counting the corpuscles.

mixoscopia (miks-o-sko'pe-ah) [Gr. μίξος mixed + σκοπείν to view]. Sexual perversion in which gratification is obtained by the sight of others engaged in sexual intercourse.

mixoscopy (miks-os'ko pe). Mixoscopia.

mixture (miks'chur) [L. mixtu'ra, mistu'ra]. See under mistura. A. C. E. m., an anesthetic mixture of 1 part alcohol, 2 parts chloroform, and 3 parts ether antifoaming m., saponify spermaceti in an alcoholic solution of sodium hydroxid (2 per cent), and recrystallize the acetyl alcohol from ethyl alcohol. Baccelli's m., a mixture containing quinin sulphate, 3 gm.; tartaric acid, 3 gm.; sodium arsenate, 5 cgm.; water, 300 c.c.: used in malarial fevers. Bagot's m., a local anesthetic mixture of cocain hydrochlorid, 0.04 gm., and spartein sulphate, 0.05 gm., in 1 or 2 c.c. of boiled water. baryta m., one volume of a saturated solution of barium nitrate and two volumes of a saturated solution of barium hydroxid mixed.

Basham's m., liquor ferri et ammonii acetatis. Bestucheff's m., ethereal tincture of iron chlorid. Biedert's cream-m., a food for young infants: cream, 4 fl oz.; water, 10 fl.oz.; milk-sugar, 1 oz. Billroth's m., chloroform, 3 parts; alcohol and ether, each, I part. anesthetic. Bonain's m., a mixture of equal parts of carbolic acid, cocain, and menthol for anesthetizing the tympanic membrane in paracentesis brown m., mistura glycyrrhizæ composita. Carrel's m., brown m., mistura glycyrrhizæ composita. Carrel's m., a preparation for holding in place grafts on an ulcerated surface, consisting of 18 parts of paraffin melting at 52° C., 6 parts of paraffin melting at 20° C., 2 parts of beeswax, and 1 part of castor oil. Castellani's m., a mixture for treating frambesia: 0.065 gm. of tartar emetic, 065 gm. of sodium salicylate, 4 gm. of potassium iodid, 1 gm. of sodium bicarbonate as gm. of water. This is of sodium bicarbonate, 30 gm. of water. This is given in one dose, diluted in 4 ounces of water, thrice daily. C.-E.m. See E.-C. m. chalk-m., mistura cretæ an antacid and mild astringent Chapman's m., a preparation for gonorrhea containing copaiba and spirit of nitrous ether, containing copains and spirit of introus etner, each, 25; tincture of opium, 3 2; compound tincture of lavender, 6.5; mucilage of acacia, 12 5, and water to make 100 parts. **Coley's m.** See *Coley's fluid*, under *fluid* **Cowgill's salt m.**, sodium chlorid, 38; magnesium citrate, 32 5, KH₂PO₄, 12.2, CaHPO₄·2H₂O₄, 7 8; potassium chlorid, 7; ferric citrate, 18, potassium iodid, 05 diabolic m., mistura diabolica a nauseous preparation formerly given as a punishment and cure to supposed malingerers **E.-C. m.**, ether modified by chloroform, usually in the proportion of 16 parts of ether to 1 of chlcroform it secures some of the advantages of chloroform and yet possesses the safety of pure ether. Called also mitigated ether. Elzholz's m., a solution of eosin in glycerin and water used in leukocyte estimation **Erlen-meyer's m.**, a mixture of equal parts of the bromids of sodium, potassium, and ammonium. **freezing-m.**, a mixture for producing artificial Gadberry's m., mistura splenetica. Griffith's m., compound mixture of iron Gunning's m., a mixture used in estimating the nitrogen in the urine. consisting of 15 c c of concentrated sulphuric acid, 10 gm. of potassium sulphate, and 05 gm of copper sulphate. Hermann's m., 3 cc of chloroform, 2 cc of oil of eucalyptus, and 40 cc of castor oil. This is divided into two doses and given at hour intervals for intestinal parasites. **Hope's m.**, mistura camphoræ acida, N. F.: an antidysenteric preparation **Karr's salt m.**, sodium chlorid, 10; calcium lactate, 4; magnesium citrate, 4, ferric citrate, 1; Lugol's solution, a few drops **Lafa**. yette m., a gonorrheal medicine containing spirit of nitrous ether, copaiba, compound tincture of lavender, potassium hydroxid, syrup, and mucilage of acacia. Loomis's m., a diarrhea mixture containing oil of sassafras 1, tincture of opium 12, tincture of rhubarb 8, tincture of gambir 40, compound tincture of lavender to make 100 Dose, 30 min. (2 c.c.). magnesia m., dissolve 175 gm. of magnesium sulphate and 350 gm. of ammonium chlorid in 1400 c.c. of distilled water and add 700 gm. of concentrated ammonium hydroxid Mencière's m., a mixture of iodoform, guaiacol, eucalyptol, and Peruvian balsam in alcohol and used as a wound dressing M. S. m., an anesthetic mixture containing 57 parts of ether and 43 parts of chloroform. N. C. I. m. See N. C. I. powder, under powder. neutral m., liquor potassii citratis. oleobalsamic m., balsam of Peru dissolved in a mixture of oils and alcohol: nervine cussoived in a mixture of oils and alcohol: nervine. Dose, 20–30 min. (0.66-2 c.c.). Osborne and Mendel's salt m., $CaCO_3$, 134.8; $MgCO_3$, 24 2; Na_2CO_3 , 34.2; KI, 0.02; K_2CO_3 , 141.3; H_3PO_4 , 103.2; HCl, 53.4; $MnSO_4$, 0.079; H_2SO_4 , 0.2; citric acid + H_2O , 111.1; iron citrate + $1\frac{1}{2}H_2O$, 6 34; sodium fluorid, 0.248; $KAl(SO_4)_2$, 0.0245. Parrish's camber. phor m., mistura camphore aromatica, N. F.: aromatic camphor mixture. phosphate-carbonate-thiocyanate m., powder in a mortar 200 gm. Na₂HPO_{4.12}H₂O, sprinkle over it 50 gm. of sodium thiocyanate (or 60 gm. of potassium thiocyanate), and stir to a uniform semiliquid paste. Add 120 gm. of monohydrated sodium carbonate (or 110 gm. of anhydrous carbonate) and mix to a rather fluffy, granular powder phosphoric-sulphuric acid-copper sulphate m., mix 50 c.c. of 5 per cent. copper sulphate solution with 300 c.c. of 85 per cent. phosphoric acid and then add 100 c.c. of concentrated sulphuric acid. Ringer's m. See Ringer's solution, under solution. Schleich's m. See Schleich's anesthetic, under anesthetic. spleen m., mistura splenetica. Squibb's rhubarb m., compound rhubarb mixture, N. F. Startin's m., a mixture composed of 4 dr. of magnesium sulphate, 1 dr of iron sulphate, 4 dr. of syrup of ginger, 3 oz. of dilute sulphuric acid, and enough water to make 3 oz. Tellyesniczky's m. See Tellyesniczky's fluid under fluid. Thielmann's m., a diarrhea mixture containing 1 fl.oz. of wine of opium, 11 floz. of tincture of valerian, 1 fl.oz. of ether, for min. of oil of peppermint, 15 min. of fluid-extract of ipecac, and enough alcohol to make 4 fl.oz. **Townsend's m.**, a mixture of 1 gr. of red mercuric oxid, 300 gr. of potassium iodid, 2 fl.oz. of syrup of orange peel, 2 fl.dr. of compound tincture of cardamom, and enough water to make 4 floz. Dose, 1-4 teaspoonfuls toxin-antitoxin m. See toxin-antitoxin. Velpeau's diarrhea m., tincture of opium 42, camphor 4, and compound tincture of gambir to make 100. Vincent's m. r. Stearin, paraffin, and vaselin in the proportion of 1-2-2 used for paraffining tubes used in blood transfusion. tubes used in blood transitusion. 2. 12 composed of an intimate mixture of hypochlorite used as a wound dressing Wachs-2. A powder and boric acid used as a wound dressing Wachs-muth's m., an anesthetic mixture of 5 parts of chloroform with 1 part of turpentine.

M. L. Abbreviation for Licentiate in Medicine.

M1. Abbreviation for milliliter.

M. L. A. Abbreviation for left mento-anterior position of the fetus.

M. L. D. An abbreviation for minimum lethal dose. See under dose.

M. L. P. Abbreviation for left mentoposterior position of the fetus

Mmm. An abbreviation for micromillimeter.

Mm., mm. An abbreviation for millimeter

Mn. The symbol for manganese.

mnemic (nem'ik) [Gr. μνήμων mindful]. Pertaining to memory or characterized by memory, as, mnemic theory.

mnemism (ne'mizm). Same as mnemic theory. See under theory.

mnemonics (ne-mon'iks) [Gr. μνημονικόs pertaining to memory]. The art of cultivating or assisting the memory.

mnemotechnics (ne-mo-tek'niks). Mnemonics.

M. O. Abbreviation for Medical Officer.

Mo. The chemic symbol for molybdenum.

mobility (mo-bil'it-e) [L. mobil'itas]. Susceptibility of being moved.

mobilization (mob"il-iz-a'shun). The rendering of a fixed or ankylosed part movable.

Möbius' sign (me'be-us) [Paul Julius Mobius, German neurologist, 1853-1907]. See under sign.

mocezuelo (mo-se-zwa'lo). Trismus neonatorum.

mochras (mo'kras). A gum-resin from Bom'-bax malabar'icum: astringent. Dose, 30-45 gr. (2-3 gm.).

mock-knee (mok'ne). A large swelling on the knees of horses and cattle, caused usually by repeated injury.

modality (mo-dal'it-e). A homeopathic term signifying a condition which modifies drug action. mode (mod). The class which occurs with the greatest frequency in a series of variables.

modenol (mo'den-ol). A double salicylic-arsenious acid salt of mercury: used as a substitute for enesol in syphilis.

modiolus (mo-di'o-lus) [I.. "nave" or "hub"]. [B N A] The central pillar or columella of the cochlea.

modiscop (mo'di-skōp). A proprietary solution of iodin, 3 per cent.; morphin, 2 per cent.; and scopolamin, 0.025 per cent.

Mod. præsc. Abbreviation for L. mo'do præscrip'to, in the way directed.

modus operandi (mo'dus op-er-an'di). The method of performing an operation or action; the steps of an operation.

Moeller's bacillus, reaction, stain (me'lerz) [Alfred *Moeller*, German bacteriologist, born 1868]. See under *bacillus*, *reaction*, *stain*, etc.

Moeller's disease, glossitis (me'lerz) [Moeller, German surgeon, 1829-1862]. See disease and glossitis.

mogigraphia (moj-ig-ra'fe-ah) [Gr. μόγις with difficulty + γράφειν to write]. Writers' cramp.

mogilalia (moj-il-a'le-ah) [Gr. μόγις difficultly + λαλιά chatter]. Difficulty in speech; stuttering.

mogiphonia (moj-if-o'ne-ah) [Gr. μόγις difficultly + φωνή voice]. Difficulty in making vocal sounds. mogitocia (moj-it-o'she-ah) [Gr. μόγις difficultly + τόκος birth]. Difficult parturition.

M. O. H. Abbreviation for Medical Officer of Health.
Mohr's test (morz) [Francis Mohr, American pharmaceutical chemist]. See under tests.

Mohrenheim's fossa (mo'ren-himz) [Baron Joseph Jacob Freiherr von Mohrenheim, Austrian surgeon, died 1799]. See fossa.

moist (moist). Somewhat wet; damp.

Mojon's method (mo'e-onz) [Benedetto Mojon, professor of anatomy and physiology at Genoa, nineteenth century]. See under method.

mol (mol). A Gram-molecule; the molecular weight in grams of any substance **m. fraction**. See under *fraction*.

molality (mol-al'it-e). The number of mols per 1000 grams of solvent. See molarity.

molar (mo'lar) [L. mo'les mass]. 1. Pertaining to a mass; not molecular. 2. [L. mola'ris.] Adapted for grinding; a grinding tooth, one of the back teeth of which there are three on each side in both jaws 3. Pertaining to a mole 4. Same as mol.

Moon's m's, small first molars, somewhat dome shaped, seen in hereditary syphilis second m., the permanent second molar tooth sixth-year m., the permanent third molar tooth third m., the permanent third molar tooth twelfth-year m., the permanent second molar.

molariform (mo-lar'if-orm). Shaped like a molar. molarity (mol-ar'it-e). The number of mols per liter of solution. See molality.

molasquit (mo-las'kit). A horse and cattle food prepared from molasses and the bagasse from sugar-mills.

molasses (mo-las'ez) [L. mella'ceus like honey]. A thick, sweet syrup, the residue left after the crystallization of sugar; treacle; syrupus fuscus. sugar-house m., that which is left after the refining of sugar. West India m., a variety obtained in making raw sugar.

mold, mould (möld). Any one of a large group of minute parasitic and saprophytic fungi which cause mold or moldiness; also the deposit or growth produced by such fungi. The common molds are usually Mucor, Penicillium, or Aspergillus. white m., white or slightly wooly patches which form on the surface of meat in cold storage due to the growth of a fungus, Sporotrichum carnis.

moldine (mol'dēn). A material for taking small impressions in dental work, made of glycerin and potters' clay.

mole (möl) [L. mo'les]. 1. A fleshy mass or tumor formed in the uterus by the degeneration or abortive development of an ovum. 2. A nevus; also a brownish spot on the skin. See news. 3. Same as mol. blood-m., a mass made up of blood-clots, the placenta, and fetal membranes retained after abortion. Breus' m., a malformation of the ovum consisting of tuberous subchorional hematoma of the decidua. Called also hematomole. carneous m. Same as fleshy m. cystic m. Same as hydatid m. false m., an intra-uterine mass formed from a polypus or tumor. fleshy m., a blood-mole which has assumed a flesh-like appearance; also a mole formed by a dead ovum in the uterus. hydatid m., hydatidiform m., a false mole formed by the proliferation of the chorionic villi, resulting in a mass of cysts that resembles a bunch of grapes. Called also vesicular m. stone-m., a mole which has undergone a calcareous degeneration; a womb-stone. true m., a mole which represents the degenerated ovum itself; one which is the actual remains of the degenerated ovum. vesicular m. Same as hydatidiform m.

molecular (mo-lek'u-lar). Of, pertaining to, or composed of, molecules.

molecule (mol'ek-ūl) [L. molec'ula little mass]. A very small mass of matter; an aggregation of The smallest particle of a substance in which its chemic features inhere, or the smallest particle of a substance which can exist by itself. To break up the molecule into its constituent atoms is to change its character. The number of atoms in a molecule varies with the compound. diatomic m., one containing two atoms. gram-m. See gram-molecule. hexa-tomic m., one containing six atoms. monatomic m., one which consists of a single atom. **non-polar m.**, a molecule in which the electrical potential is symmetrically distributed over the molecule. **polar m.**, a molecule in which the electrical potential is not symmetrically distributed. tetratomic m., a molecule made up of four atoms. triatomic m., one composed of three atoms.

molilalia (mol-il-a'le-ah). Mogilalia.

molimen (mo'li-men) [L "effort"]. A natural and normal effort made for the performance of any function; especially the monthly effort to establish the menstrual flow: the menstrual m.

Molisch's test (mol'ish-ez) [Hans Molisch, chemist in Vienna, born 1856]. See under tests.

mollescuse (mol-es'kūs) [L. mol'lis soft]. Softening.

Möllgaard treatment (mel'gahrd) [Holger Möllgaard, contemporary Danish physician]. Treatment of tuberculosis with sanocrysin and convalescent serum. Cf sanocrysin.

mollichthyolin (mol-ik'the-ol-in). A preparation of mollin and ichthyol for skin diseases.

mollin (mol'in). A glycerinated soft soap with excess of fats used as a vehicle for medicines to be applied externally.

mollities (mol-ish'e-ēz) [L]. Softness; abnormal softening. m. os'sium, osteomalacia. m. un'-guium, abnormal softness of the nails.

mollosin (mol-o'sin). An ointment-base made of liquid petrolatum (4 parts) and yellow wax (1 part).

Moll's glands [Jacob Antonius Moll, Dutch histologist, born 1849]. See under gland.

molluscous (mol-lus'kus). Pertaining to mollus-

molluscum (mol-us'kum) [L. "soft"]. The name of various skin diseases. m. contagio'sum, m. epithelia'le, a disease marked by the formation of firm, rounded skin tubercles containing a semifluid caseous matter or solid masses made up of fat, epidermis, and peculiar capsulated bodies (m.-corpuscles). The tubercles appear usually upon the face, are very chronic in their course,

and are without general symptoms. The disease is due to a filtrable virus. m. fibro'sum, m. pen'dulum, m. sim'plex, diseases marked by the development of multiple fibromata of the skin, which often form pendulous growths. They arise from the corium or the subcutaneous tissue.

m. verruco'sum, a late stage of molluscum contagiosum in which the growths have become wart-like masses.

molugram (mol'u-gram). A

Mol. wt. Abbreviation for molecular weight.

molybdate (mo-lib'dāt). Any salt of molybdic acid: some are used as tests.

molybdenum (mol-ib-de'num) [Gr. μόλυβδοs lead]. A hard, silvery-white, metallic element; symbol, Mo; atomic weight, 06, specific gravity, 8.6.

molybdic (mo-lib'dik). Containing mloybdenum as a hexad element.

molybdous (mo-lib'dus). Containing molybdenum as a tetrad element.

molyform (mol'if-orm). A proprietary molybdenum preparation: used as an antiseptic and bactericide.

molysmophobia (mol-is-mofo'be-ah) [Gr. μόλυσμα filth + φόβοs fear]. Mysophobia.

Molluscum fibro-

Momburg's beit [Fritz August Momburg, physician in Berlin, born 1870]. See under belt.

momentum (mo-men'tum) [L.]. The quantity of motion; the product of mass by velocity.

monacid (mon-as'id). Containing one atom of hydrogen that is replaceable by a base: said of a salt or of an alcohol.

monad (mon'ad) [Gr. μονάς]. 1. A single-celled protozoon or a single-celled coccus. 2 A univalent radical or element.

monadin (mon'ad-in). Any microörganism or species belonging to a group (Monadina) of rhizopod animal endoparasites. They are sometimes found in feces and sputum, but are not known to have any pathogenic influence.

Monadina (mon-ad-i'nah). See under monadin.

Monakow's bundle (mon-ah'kovz) [Konstantin von *Monakow*, neurologist in Zürich, born 1853]. See under *bundle*.

monamid (mon-am'id). An amid which contains only one amid group.

monamin (mon-am'in). An amin which contains only one amin group.

monamino acid. See under acid.

monaminuria (mon-am-in-u're-ah). The presence of a monamin in the urine.

Monarda (mo-nar'dah). A genus of fragrant labiate plants, comprising M. fistulo'sa, wild bergamot; M. did'yma, bee-balm; M. sylves'tris, and M. puncta'ta, horsemint The last is diaphoretic, carminative, stimulant, emmenagogue, and rubefacient. Its volatile oil (o'leum monar'da) is used like oil of peppermint. Dose of oil, 2-3 min. (0.133-0.2 c.c.).

monardin (mo-nar'din). A stearopten, like thymol, from oil of monarda.

monarsone (mon-ar'sōn). Disodium monethylarsonate, CH₃.CH₂O.AsO.(ONa)₂, an arsenical preparation for use in syphilis.

monarthric (mon-ar'thrik). Pertaining to a single joint.

monarthritis (mon-ar-thri'tis) [Gr. μόνος single + arthritis]. Inflammation of a single joint. m.

monarticular (mon-ar-tik'u-lar). Pertaining to a single joint.

Monas (mo'nas) [Gr. μονάς monad]. Exceedingly minute, solitary, free-swimming, plastic organisms not yet classified. M. lens is found in sputum.

monaster (mon-as'ter) [Gr. μόνος single + άστήρ star]. The single esis. See mitosis. The single star-shaped figure in karyokin-

monathetosis (mon"ath-et-o'sis) [Gr. μόνος single + athetosis]. Athetosis of one part of the body. monatomic (mon-at-om'ik) [Gr. μόνος single + äτομος atom]. 1. Same as univalent. 2. Containing but one atom. m. acid. See under acid.

monavalent (mo-nav'al-ent). See monovalent.

monavitaminosis (mon"ah-vi-tam-in-o'sis). deficiency disease in which only one vitamin is lacking in the diet.

monaxon (mon-aks'on) [Gr. μόνος single + ἄξων axis]. A neuron possessing only one axon.

monaxonic (mon-aks-on'ik). Having one axon.

Monday-morning sickness. See under sickness. Monera (mo-ne'rah) [Gr. μονήρης solitary]. Protozoan organisms which have no nucleus.

monerula (mon-er'u-lah), pl. moner'ulæ [Gr. μονήρης single]. An impregnated ovum with as yet no nucleus.

monesia (mo-ne'ze-ah) [L.]. An extract from monesia bark, the product of Chrysophyl'lum glyciphlo'um, a tree of Brazil astringent and stomachic. Dose, 5-10 gr. (0.333-0 666 gm.).

monesin (mon'es-in). A glucosid from monesia, identical, or nearly so, with saponin: astringent and oxytocic. Dose, 1 gr. (0.033 gm.).

monesthetic (mon-es-thet'ik) [Gr. μόνος single + Pertaining to or affecting a αΐσθησις sensation] single sense or sensation.

Mongolian idiocy, maculæ, or spots (mon-go'-le-an). See under idiocy and spot.

mongolism (mon'go-lizm). Mongolian idiocy. See under idiocv.

monilethrix (mon-il'e-thriks) [L. moni'le necklace + Gr. $\theta \rho l \xi$ hair]. A diseased condition in which the hairs exhibit bead-like enlargements and become brittle.

Monilia (mo-nil'e-ah). A genus of parasitic fungi characterized by fermenting sugar with the pro-

duction of gas. Fungi of this genus are the ones most frequently found in thrush. m. albicans, a species found in thrush and formerly known as Oidium albicans. M. can'dida. Same as Oïdium albicans. M. fructig'ena, the organism caus ing the brown rotlof plums and peaches.

M. psilo'sis, the

Monilia (Rivas).

organism that is thought to cause sprue. See

moniliasis (mon-il-i'as-is). Infection with any species of Monilia; oidiomycosis.

moniliform (mon-il'if-orm) [L. moni'le necklace + for ma form]. Shaped like a necklace or string of beads.

Moniliformis (mon-il-if-or'mis). Same as Echinorhynchus.

moniliosis (mo-nil-e-o'sis). Moniliasis.

monium (mo'ne-um) [Gr. μόνος single]. An earthmetal discovered in 1898. Obsolete.

monk's-hood (munks'hud). See aconite.

defor'mans, arthritis deformans of a single Monneret's pulse (mon-raz') [Jules Auguste Edjoint.

Monneret, physician in Paris, 1810-1868]. See under pulse.

mono- [Gr. μόνος single]. A prefix denoting one or single; limited to one part; in chemistry, combined with one atom.

mono-amino acid. See under acid.

mono-aminodiphosphatid (mo-no-am"in-o-difos'fat-id). A phosphatid containing r atom of nitrogen and 2 of phosphorus to the molecule.

mono-aminomonophosphatid (mo-no-am"in-omo"no-fos'fat-id). A phosphatid containing r atom of nitrogen and r of phosphorus to the molecule.

mono-anesthesia (mon"o-an-es-the'ze-ah) μόνος single + anesthesia]. Anesthesia of a single part or organ.

mono-articular (mon-o-ar-tik'u-lar). Same as monarticular

monobacillary (mon-o-bas'il-a-re). Caused by or containing a single species of bacillus.

monobacterial (mon-o-bak-te're-al). Monobacillary.

monobasic (mon-o-ba'sik) [Gr. μόνος single + βάσις base]. Having but one base, containing one atom of hydrogen that is replaceable by a base. m. acid. See under acid.

monoblepsia (mon-o-blep'se-ah) [Gr. μόνος single + βλέψις sight]. r. A condition of the vision in which it is more distinct when only one eye is used. 2. A variety of color-blindness in which only one color is perceived.

monobrachius (mon-o-bra'ke-us) [Gr. μόνος single + L bra'chium arm]. A fetus with but one arm. monobromacetanilid (mon"o-bro"mas-et-an'il-See antisepsin.

monobromated (mon-o-bro'māt-ed) [L. monobroma'tus]. Having a single atom of bromin in each molecule

(mon"o-brom-kam'for). monobromcamphor See camphor. Monobromated camphor.

monobromisovalerylglycolurea (mo"no-brōmi-so-val"er-il-gli"kol-u-re'ah). Same as achibromin.

monobromphenol (mon"o-brom-fe'nol) A violet-colored liquid, OH.C. H4Br, of penetrating odor, soluble in water, alcohol, and ether, and used as an external antiseptic, especially in erysipelas, in 3 to 6 per cent. ointment.

monocalcic (mon-o-kal'sik). Containing one atom of calcium in the molecule.

monocelled (mon'o-seld) [Gr. μόνος single + cell].
Unicellular; consisting of a single cell.

monocephalus (mon-o-sef'al-us) [Gr. μόνος single + κεφαλή head]. A monster-fetus with two bodies and one head.

monochloralantipyrin (mon"o-klor-al-an-te-pi'rin). See hypnal.

monochlormethane (mon-o-klor-meth'ān). Methyl chlorid, CH3Cl.

monochlormethylchloroformate (mo"no-klormeth"il-klor-o-for'mat). See chlormethylchlorofor-

monochlorphenol (mon"o-klor-fe'nol). A volatile liquid, C6H4ClOH: inhaled in lung diseases as an antiseptic.

monochord (mo'no-kord) [Gr. μόνος single + χορδή cord]. An instrument for testing upper tone audition. It consists of a long steel or silver wire fas-tened at the ends and having an intermediate movable clamp. The tone is produced by longitudinal friction. Called also Schultze's monochord.

monochorea (mon"o-ko-re'ah) [Gr. μόνος single + chorea]. Chorea affecting but one part.

monochorionic (mo"no-ko-re-on'ik) [Gr. μόνος alone + chorionic]. Having one common chorion: said of twins.

monochroic (mon-o-kro'ik) [Gr. μόνος single + χρόα color]. Having only one color.

monochromasy (mon-o-kro'mas-e). Blindness to all colors but one: color-blindness, in which all colors are seen as one color.

monochromatic (mon"o-kro-mat'ik) [Gr. $\mu \delta \nu \sigma s$ single $+ \chi \rho \hat{\omega} \mu a$ color]. 1. Having but one color. 2. A person who can see only one color. 3. Staining with only one dye at a time. Cf. polychromatic,

monochromatophil, monochromophilic (mon"o-kro-mat'o-fil, mon"o-kro-mo-fil'ik) [Gr. $\mu \delta \nu \sigma s$ single $+ \chi \rho \hat{\omega} \mu \alpha$ color $+ \varphi \iota \lambda \epsilon \hat{\iota} \nu$ to love] 1. Stainable with only one kind of stain. 2. Any cell or other element that will take only one stain.

monoclinic (mon-o-klin'ik) [Gr. μόνος single + κλίνειν to incline]. A term applied to crystals in which the vertical axis is inclined to one lateral axis, but is at right angles to the other.

monococcus (mon-o-kok'us), pl. monococ'ci [Gr. μόνος single + κόκκος berry]. A coccus neither double nor formed into groups, pairs, or chains.

monocranus (mon-ok'ran-us) [Gr μόνος single + κρανίον cranium]. Monocephalus.

monocrotic (mon-o-krot'ik). Characterized by monocrotism.

monocrotism (mo-nok'ro-tizm) [Gr. μόνος single + κρότος stroke]. The quality in a pulse-wave of liaving neither a normal elastic elevation nor a dicrotic or tricrotic one.

monocular (mon-ok'u-lar) [Gr. μόνος single + L. oc'ulus eye]. Pertaining to or h...ving but one eye. monoculus (mon-ok'u-lus) [Gr. μόνος single + L.

oc'ulus eye]. A bandage for but one eye.

monocyesis (mo-no-si-e'sis) [Gr. μόνος single + κίησις pregnancy]. Pregnancy with a single fetus.

Monocystis epithelialis (mo-no-sis'tis ep-e-thele-a'lis). Pfeiffer's name for the protozoan bodies found by him in the cells of the skin

monocyte (mon'o-sit) [Gr. μόνος alone + κύτος cell]. A non-lymphoblastic, mononuclear leukocyte. The term includes large mononuclear leukocytes and transitional leukocytes.

monocytic (mon-o-si'tik). Characterized by or of the nature of monocytes.

monocytopenia (mon"o-si-to-pe'ne-ah) [monocyte + Gr. πένια poverty]. Abnormal decrease in the proportion of monocytes in the blood.

monocytosis (mon"o-si-to'sis). Increase in the proportion of monocytes in the blood.

monodactylism, monodactyly (mon-o-dak'til-izm, mon-o-dak'til-e) [Gr. μόνος single + δάκτυλος finger]. The congenital occurrence of one digit only on the hand or foot.

monodiplopia (mon-o-dip-lo'pe ah) [Gr. μόνοs single + διπλόοs double + ων eye]. Double vision in either eye alone.

monoerg (mo'no-erg). A monogenic antiserum which reacts with its homologous antigen only.

monoganglial (mon-o-gang'le-al). Affecting single ganglion.

monogastric (mon-o-gas'trik) [Gr. μόνος single + γαστήρ stomach]. Having but one belly or stomach.

monogen (mon'o-jen). 1. A univalent chemical element which combines in only one proportion. 2.
 An antiserum produced by the use of one antigen.

monogenesis (mon-o-jen'es-is) [Gr. μόνος single + γένεσις origin]. Non-sexual reproduction.

monogerminal (mon-o-jer'min-al). Developed from one ovum: said of twin fetuses occupying a single chorionic sac.

monogonium (mon-o-go'ne-um), pl. monogo'nia.

Any one of the asexual forms of the malarial parasite as it occurs in the blood. These forms produce the febrile attacks.

monogony (mon-og'o-ne) [Gr. μόνος single + γονή seed]. Asexual reproduction.

monograph (mon'o-graf) [Gr. μόνος single + γράφειν to write]. An essay or treatise on one subject.

monohemerous (mon-o-hem'er-us) [Gr. μόνος one + ἡμέρα day]. Lasting only one day.

monohybrid (mon-o-hi'brid). The offspring of parents differing in one character.

monohydrated (mon-o-hi'dra-ted). United with a single molecule of water or of hydroxyl.

monohydric (mon-o-hi'drik). Containing one atom of replaceable hydrogen.

monoideaism, monoideism (mon-o-i-de'ah-izm, -de'izm) [Gr $\mu \delta \nu \sigma$ single $+ l\delta \epsilon \alpha$ idea]. A condition in which the patient harps on one idea.

mono-infection (mon-o-in-fek'shun). Infection with a single kind of organism.

monol (mo'nol). Two parts of calcium permanganate dissolved in 1000 parts of water: it is used for purifying drinking-water.

monolene (mon'o-lēn). A clear white, oily hydrocarbon.

monolepsis (mon-o-lep'sis) [Gr. $\mu \delta \nu \sigma s$ single + $\lambda \hat{\eta} \psi \iota s$ a taking]. The transmission to the offspring of the characters of one parent, to the exclusion of those of the other.

monolocular (mon-o-lok'u-lar) [Gr. μόνος single + L. loc'ulus cell]. Having but one cell or cavity,

monoma (mo-no'mah) [Gr. μόνος one + -ωμα a tumor]. A solitary uterine tumor accompanied by pain and severe hemorrhage and ending fatally.

monomania (mon-o-ma'ne-ah) [Gr. μόνος single + μανία madness]. Insanity on a single subject or class of subjects. emotional m., monomania with respect to one or a few related emotions. intellectual m., a monomania with respect to one or a few related delusions.

monomastigote (mon-o-mas'tig-ōt) [Gr. μόνος single + μάστιξ lash]. Having a single flagellum.

monomeric (mon-o-mer'ik) [Gr μόνος single + μέρος part]. Pertaining to, made up of, or affecting, a single segment

monometallic (mon"o-met-al'ik) Having one atom of a metal in the molecule.

monomethylxanthin (mon"o-meth-il-zan'thin). See heteroxanthin

monomicrobic (mon"o-mi-kro'bik). Characterized by the presence of a single species of microbe,

monomoria (mon-o-mo're-ah) [Gr. μόνος single + μωρία madness]. Monomania

monomorphic (mon-o-mor/fik). Uniform in structure.

monomorphism (mon-o-mor'fizm) [Gr μόνος single + μορφή form]. Uniformity in structure.

monomphalus (mon-om'fa-lus) [Gr. μόνος single + όμφαλός navel]. Two fetuses joined at the navel.

monomyoplegia (mo"no-mi-o-ple'je-ah) [Gr. μόνος single + μῦς muscle + πλήγη stroke]. Paralysis restricted to a single muscle.

monomyositis (mon-o-mi-o-si'tis) [Gr. μόνος single + myositis]. A myositis of the biceps muscle occurring periodically.

Mononchus (mon-ong'kus). A genus of nematodes found in urine in the Canal Zone

mononephrous (mon-o-nef'rus) [Gr. μόνος single + νεφρός kidney]. Affecting one kidney only.

mononeural (mon-o-nu'ral). Pertaining to a single nerve.

mononeuric (mon-o-nu'rik) [Gr. μόνος single + μεῦρον nerve]. Having only one neuron.

mononeuritis (mon"o-nu-ri'tis) [Gr. μόνος single + νεῦρον nerve + -ιτις inflammation]. Inflammation of a single nerve. m. mul'tiplex, simultaneous inflammation of several nerves remote from one another.

monont (mon'ont). Same as schizont.

mononuclear, mononucleate (mon-o-nu'kle-ar, -nu'kle-āt) [Gr. μόνος single + nucleus]. 1. Having but one nucleus; uninuclear. 2. A cell having a single nucleus.

- mononucleosis (mon"o-nu-kle-o'sis). The presence of an abnormally large number of mononuclear leukocytes in the blood; mononuclear leukocytosis. infectious m. See glandular fever, under fever.
- mononucleotid (mo-no-nu'kle-o-tid). A product obtained by the digestion or hydrolytic decomposition of nucleic acid. It is a compound of phosphoric acid and a glucosid or a pentosid. These latter are combinations of dextrose or a pentose (ribose) with one of the following bases: guanin, adenin, cytosin, or uracil.
- mono-osteitic (mon"o-os-te-it'ik). Denoting a type of osteitis which affects a single bone.
- monoparesis (mon-o-par'es-is) [Gr. μόνος single + παρεσις weakness]. Paresis of a single part.
- monoparesthesia (mon"o-par-es-the'ze-ah) [Gr. μόνος single + paresthesia]. Paresthesia of a single part or limb.
- monopathy (mo-nop'ath-e) [Gr. μόνος single + πάθος disease]. A disease affecting a single part.
- monophagia (mon-o-fa'je-ah) [Gr. μόνος single + φάγειν to eat]. 1. Desire for one kind of food only, 2. The eating of only one meal a day.
- monophagism (mo-nof'aj-izm). Monophagia.
- monophasia (mon-o-fa'ze-ah) [Gr. μόνος single + φάσις speaking]. Aphasia with ability to utter but one word or phrase.
- monophasic (mon-o-fa'zik). Exhibiting only one phase or variation. Cf. diphasic, triphasic.
- monophenetidin (mon"o-fen-et'id-in). An antipyretic and analgesic substance analogous to phenacetin, but having the citric acid radical instead of that of acetic acid.
- monophobia (mon-o-fo'be-ah) [Gr. μόνος single + φόβος fear]. Morbid dread of being left alone.
- monophthalmus (mon-of-thal/mus) [Gr. $\mu \delta \nu \sigma s$ single $+ \delta \varphi \theta a \lambda \mu \delta s$ eye]. A monster-fetus with only one eye.
- monophyletic (mon"o-fi-let'ik) [Gr. μόνος single + φυλή race]. Arising or descended from a single source. m. theory. See under theory.
- monophyodont (mon-o-fi'o-dont) [Gr. $\mu \delta \nu \sigma s$ single $+ \varphi \delta \epsilon \nu \nu$ to grow $+ \delta \delta \delta \sigma \sigma s$ tooth]. Having only one set of teeth, and those permanent.
- monoplasmatic (mon"o-plaz-mat'ik) [Gr. μόνος single + πλάσμα plasm]. Made up of a single substance
- monoplast (mon'o-plast) [Gr. μόνος single + πλαστός formed]. A single constituent cell.
- monoplegia (mon-o-ple'je-ah) [Gr. μόνος single + πληγή stroke] Paralysis of but a single part. Different varieties are distinguished according to the part affected or to the site of the lesion producing the disease; as, brachial, facial, central, peripheral, etc.
- monoplegic (mon-o-ple'jik). Pertaining to or affected with monoplegia.
- monops (mon'ops) [Gr. $\mu \delta \nu \sigma s$ single $+ \omega \psi$ eye]. A fetus having but a single eye.
- monopsychosis (mon-o-si-ko'sis). Monomania.
- monopus (mon'o-pus) [Gr $\mu \delta \nu \sigma s$ single $+ \pi \sigma \delta s$ foot]. A fetus having but a single foot or leg.
- monorchid (mon-or'kid). A person having only one testicle.
- monorchidic (mon-or-kid'ik) [Gr. μόνος single + δρχις testicle]. Having but one descended testicle.
- monorchidism, monorchism (mon-or'kid-izm, mon'or-kizm). The condition of having only one descended testicle.
- monorchis (mon-or'kis) [Gr. $\mu \delta \nu \sigma s$ single + $\delta \rho \chi \iota s$ testicle]. A person having but a single testis.
- monosaccharids (mon-o-sak'ar-idz). Carbohydrates of the class to which glucose, galactose, and levulose belong. They are sugars having six carbon atoms in the molecule, $C_0H_{12}O_0$. So called because they are supposed to contain one (hypothetic) saccharid group.

- monose (mon'os). 1. A monosaccharid. 2. A hypothetic sugar containing only one oxygen atom.
- monosome (mon'o-sōm) [Gr. μόνος alone + σωμα body]. See accessory chromosome under chromosome.
- **monosomian** (mon-o-so'me-an) [Gr. $\mu \dot{o} \nu \sigma_s$ single $+ \sigma \ddot{\omega} \mu \alpha$ body]. A double fetus with only one body.
- monospasm (mon'o-spazm) [Gr. μόνος single + spasm]. Spasm of a single limb or part. Different varieties are distinguished according to the part affected or to the site of the causal lesion; as, brachial, facial, lateral peripheral, etc.
- monospermy (mon'o-sper-me) [Gr. μόνος single + στέρμα seed]. Fertilization in which only one spermatozoön enters the ovum.
- Monostoma (mon-os'to-mah) [Gr. μόνος single + στόμα mouth]. A genus of trematode worms. One species occurs in the crystalline lens.
- monostratal, monostratified (mon-o-stra'tal, mon-o-strat'if-id). Disposed in a single layer or stratum.
- monosubstituted (mon-o-sub'stit-u-ted). Having only one atom in the molecule replaced.
- monosymptom (mon-o-simp'tom) [Gr. μόνος single + symptom]. A symptom occurring singly.
- monosymptomatic (mon"o-simp-to-mat'ik) [Gr. μόνος single + symptom]. Expressed by a single symptom.
- monosyphilid, monosyphilide (mo-no-sif'il-id) [Gr. μόνος single + syphilid]. Showing only a single syphilitic lesion.
- monotal (mo'no-tal). A colorless, oily liquid, the guaiacol ester of ethylglycolic acid, C₂H₅.O CH₂-CO.O(C₆H₄.O.CH₂). It is used as an analgesic for various painful affections, in phlebitis and pulmonary tuberculosis. Dose, ½-1 fl.dr. (2-4 c.c.), applied to the affected area.
- monothermia (mo-no-ther'me-ah) [Gr. $\mu \delta \nu \sigma s$ single $+ \theta \delta \rho \mu \eta$ heat]. A condition in which the temperature of the body remains the same throughout the day.
- monotocous (mo-not'o-kus) [Gr. μόνος single + τόκος birth]. Giving birth to but one offspring at a time.
- Monotremes (mo'no-trēmz). The lowest order of mammals
- Monotricha (mo-not'rik-ah) [see monotrichic]. A group of bacteria including those forms which have one polar flagellum.
- monotrichic, monotrichous (mon-o-trik'ik. mo-not'rik-us) [Gr. $\mu \delta \nu \sigma s$ single $+ \theta \rho i \xi$ hair]. Having but one flagellum.
- monotropic (mo-no-trop'ik) [Gr. μόνος single + τροπή a turning]. Affecting only one particular species of bacterium or one variety of tissue. Cf. polytropic.
- monoureid (mo-no-u're-id). See urcid.
- monovalent (mo-nov'al-ent). 1. Having a valency or potency of one. 2. Capable of binding one complement only: said of an amboceptor.
- monoxeny (mo-noks'en-e) [Gr. μόνος one + ξένος host]. Parasitism on one host only.
- monoxid (mon-oks'id). An oxid containing but one atom of oxygen.
- Monro's bursa, foramen, gland, line, etc. (mon-ro') [Alexander Monro, (primus), English surgeon, 1697-1767]. See bursa, foramen, gland, line, etc.
- mons (monz). Latin for "mountain." m. pu'bis [B N A], the pubic eminence; mons veneris. m. ure'teris, a papilla-like elevation of the mucosa of the bladder where the ureter enters the latter. m. ven'eris [L. "mount of Venus"], a rounded prominence at the symphysis pubis of a woman.
- Monsel's salt, solution (mon'selz). See salt, solution.

Monsonia (mon-so'ne-ah). A genus of African and Asiatic geraniaceous plants. Some of the species are used in medicine as astringents.

monster (mon'ster) [L. mon'strum]. A fetus malformed or with an excess or deficiency of parts; a teratism. autositio m., one capable of independent life. compound m., a monster made up of parts of more than one individual. double m. Same as twin m. endocymic m., a monster which never comes to birth, but is retained and forms the basis of a dermoid tumor. Gila m., a venomous lizard, Heloder'ma hor'ridum, of Mexico and the southwestern part of the United States. parasitic m., an imperfect fetus attached to another and unable to exist alone. triplet m., a monster containing parts of three individuals. twin m., a monster consisting of two individuals joined at some point.

monstriparity (mon-stri-par'it-e) | monster + L. par'ere to give birth to]. The act of giving birth to a monster

monstrosity (mon-stros'it-e) [L. monstros'itas]. 1. Great congenital deformity. 2. A monster or teratism. emmenic m., a fema'e child that menstruates during infancy.

monstrucide (mon'stru-sid) [L. mon'strum monster + cœ'dere to kill]. The destruction of a fetal monstrosity.

monstrum abundans (mon'strum ab-un'danz)
[L.]. A monstrosity characterized by excess.

m. defic'iens, a monstrosity by defect. m. sirenifor'me, a monster having apparently only one leg and no arms.

Monteggia's dislocation (mon-tej'ahz) [Giovanni Battista Monteggia, Italian surgeon, 1762-1815]. See dislocation.

Montgomery's glands (mont-gom'er-ēz) [William Fetherstone Montgomery, Irish gynecologist, 1797-1850]. See gland.

monthlies (munth'lēz). The menses, or monthly sickness of women.

monticulus (mon-tik'u-lus) [L]. A small eminence. m. cerebel'li, the projecting or central part of the superior vermiform process; its anterior portion is the culmen, its posterior portion the declive.

moogrol (moo'grol). A light, oily fluid, being a mixture of the ethyl esters of the fatty acids of the chaulmoogra series of oils They are used in the treatment of leprosy by intramuscular injection in doses of 1 c c. (16 min) increasing to 6 c.c. (1.62 fl.dr.).

moon-blindness. Same as nyctalopia.

moonseed (moon'sed). See Menispermum.

Moore's fracture (moorz) [Edward Mott Moore, American surgeon, 1814-1902]. See under fracture.

Mooren's ulcer (moor'enz) [Albert Mooren, German oculist, 1828–1899] See under ulcer.

moradin (mo-ra'din). An alkaloid from Pogon'opus febrif'ugus, a rutaceous tree.

morament (moram'ent). A person who is feebleminded and without moral sense; a low-grade moran.

moramentia (moram-en'she-ah). The condition of being feeble-minded and without moral sense.

Morand's disease, foot, foramen, spur (morahnz') [Sauveur François Morand, French surgeon, 1697-1773]. See disease, foot, etc.

Morax-Axenfeld conjunctivitis, diplococcus [Victor Morax, physician in Paris; Theodor Axenfeld, German ophthalmologist, born 1867]. See under conjunctivitis and Hemophilus.

morbicid (mor'bis-Id). A disinfectant preparation consisting of a bactericidal soap containing 12 per cent. of formaldehyd.

morbid (mor'bid) [L. mor'bidus sick]. Pertaining to or affected with disease; diseased.

morbidity (mor-bid'it-e). 1. The condition of being diseased or morbid. 2. The sick-rate, or proportion of disease to health in a community.

morbific (mor-bif'ik) [L. morbif'icus; mor'bus sickness + fac'ere to make]. Causing disease.

morbigenous (mor-bij'en-us). Producing disease.

morbilli (mor-bil'i). Latin for measles.

morbillous (mor-bil'us). Pertaining to measles.

morbus (mor'bus). Latin for disease. m. addiso'nii. See Addison's disease, under disease.

m. brigh'tii, Bright's disease. m. cadu'cus, epilepsy. m. cæru'leus, congenital cyanosis. m. comitia'lis, epilepsy. m. cox'æ seni'lis, the hip-joint disease o aged people. m. coxa'rius, hip-joint disease. m. divin'us, epilepsy. m. dormiti'vus, sleeping sickness. m. ele'phas, elephantiasis. m. gal'licus, syphilis. m. hercu'leus. I. Elephantiasis. 2. Epilepsy. m. maculo'sus werlho'fii. See purpura hæmorrhagica. m. medico'rum, a morbid propensity to consult physicians for trifling ailments. m. mise'riæ, any disease due to want and neglect m. pediculo'sus, lousiness. m. re'gius, jaundice. m. sa'cer, epilepsy. m. seni'lis, arthritis deformans. m. strangulato'rius. Same as diphtheria. m. vagabon'dus, vagabond's disease. See disease. m. virgin'eus, chlorosis. m. vul'pis, alopecia.

M. O. R. C. Abbreviation for Medical Officers Re-

morcellation (mor-sel-a'shun) [Fr. morcellement].

The division of a tumor, followed by its removal piecemeal.

morcellement (mor-sel-maw'). Morcellation.

serve Corps.

mordant (mor'dant) [L. morde're to bite]. A substance used to fix a stain or dyc. The chief mordants are alum, anilin oil, and phenol.

mordanting (mor'dant-ing). The operation of fixing the dye in a stained specimen.

Mor. dict. Abbreviation for L. mo're dic'to, in the manner directed.

Morel ear (mo'rel) [Benoît Augustin Morel, French alienist, 1809-1873]. See under ear.

Morel-Kraepelin disease (mo-rel'-kra'pel-in) [B. A Morel, 1809-1873; Emil Kraepelin, German psychiatrist, 1856-1926]. Dementia præcox.

Morelli's reaction (mo-rel'ez) [F. Morelli, Italian physician, died 1918]. See reaction.

Morestin's method or operation (mor-es-taz')
[Hippolyte Morestin, French surgeon, 1869-1919].
See under operation.

Moretti's test (mo-ret'e) [E. Moretti, contemporary physician in Milan]. See under tests

Morgagni's cataract, hydatid, etc. (morgahn'yez) [Giovanni Battista Morgagni, Italian anatomist, 1682-1771]. See cataract, hydatid, etc.

morgue (morg) [Fr.]. A place where dead bodies are sent for identification.

mori succus (mo'ri suk'us) [L.]. Mulberry-juice; the juice of Mo'rus ni'gra, the black mulberry.

moria (mo're-ah) [Gr. μωρία folly]. Dementia or fatuity.

moribund (mor'ib-und) [L. moribun'dus]. In a dying state.

Moringa pterygosperma (mo-rin'gah). An East Indian plant called sajina: used in rheumatism and dyspepsia. Yields ben-oil (q. v.).

morioplasty (mo're-o-plas-te) [Gr. μόριον piece + πλάσσειν to form]. The surgical restoration of lost parts.

Morison's method, paste, pouch (mor'is-unz) [Rutherford Morison, British surgeon]. See under method, paste, and pouch.

Mörner's test (mer'nerz) [K. A. H. Mörner, Stockholm chemist, 1855-1917]. See under tests.

morning-sickness (mor"ning-sik'nes). Nausea and vomiting occurring every morning on arising, and constituting one of the characteristic symptoms of pregnancy.

morococcus (mo-ro-kok'us) [L. mo'rus mulberry + coccus]. A form of coccus or microbial mass from the eczematous skin.

moron (mo'ron) [Gr. μωρός stupid]. A feeble-minded person whose mental age is between eight and twelve years. Cf. idiot and imbecile.

moronity (mo-ron'it-e). The condition of being a moron.

Moro's reaction or test (mo'roz) [E. Moro, pediatrist in Munich, born 1874]. See under reaction. morosis (mo-ro'sis). Moronity.

morphea, morphea (mor-le'ah) [Gr. μορφή form]. A skin disease marked by the formation of pinkish patches or bands, bordered by a purplish arcola. The lesions are firm, but not hard, and are usually elevated or depressed. They may atrophy and disappear, leaving cicatrix-like marks. The disease is probably a trophoneurosis. Called also circumscribed scleroderma and Addison's keloid acroteric m., a form specially affecting the extremities. m. al'ba, morphea in which there is little pigmentation. m. atro-phica, morphea in which the patches are atrophied. m. flam'mea, nævus vascularis. m. gutta'ta. See white-spot disease, under disease. herpetiform m., morphea in which the lesions are disposed as in herpes. m. linea'ris, morphea arranged in lines or bands. m. ni'gra, morphea with pigmented lesions.

morphin (mor'fin) [L. morphi'na, morphi'num, mor'phia, mor'phium]. The principal and most active alkaloid of opium, C₁₇H₁₀NO₃+H₂O, occurring in the form of colorless, shining crystals, having a bitter taste and an alkaline reaction. It is only sparingly soluble in water, and is therefore usually given in the form of its salts. Morphin has the properties of opium, but it has less tendency to produce constipation and narcotism, and is more likely to cause nausea and skin eruptions. Dose of morphin and its salts, skin eruptions. Does of morphin and its satisfactor, $\frac{1}{20}$ - $\frac{1}{2}$ gr. (0.003-0.033 gm.). **m. acetate,** a yellowish-white powder, $C_{17}H_{19}NO_3$. $C_{2}H_{4}O_{2}+3H_{2}O$. It is used in the form of li'quor morphi'næ acetatis, in 20-40 min. (1 3-2 6 c c) doses; also in the form of injec'tio morphi'næ hypoder'mica. m. anisate, a white, soluble, crystalline salt. m. benzoate, a salt in white prisms or in powder: recommended for the relief of asthma. m. borate, a salt used in eye treatment and for hym. hydrochlorid, a white, crystalline substance, C₁₁H₁₉NO₃.HCl+₃H₂O: used in the form of li'quor morphi'næ hydrochlo'ras, tinctu'ra chlorofor mi et morphi'næ, trochis'ci morphi'næ, etc. Dose of hydrochlorid, $\frac{1}{12}$ gr. (0 0054-0.032 gp.). m. meconate, the meconic acid salt of morphin used like other morphin salts. methylbromid. See morphosan. m. phthalate, a yellowish, crystalline salt recommended for hypodermic use. saccharinated m., morphin, 60.0 parts, and saccharin, 30.1 parts. m. stear-ate, a salt, C₁₇H₁₉NO₃.C₁₇H₃₅COOH. m. sulphate, a white, crystalline substance, $(C_{17}H_{19}-NO_3)_2H_2.SO_4+5H_2O$. Dose, $\frac{1}{32}$ gr. (0.0054-0.032 gm.). m. tartrate, a salt adapted for use in subcutaneous injections, $(C_{17}H_{19}O_3N)_2.C_4H_6O_6$.

morphina (mor-fi'nah). See morphin.

morphinbromethylate (mor"fin-brom-eth'il-āt).

A white, crystalline substance, C₁₈H₂₁NO₂Br
+ H₂O, resulting from treating morphin with
dimethyl sulphate: used like other morphin derivatives.

morphinism (mor'fin-izm). A morbid state due to the habitual misuse of morphin; also the morphin habit.

morphinization (mor'fin-iz-a'shun). Subjection to the influence of morphin.

morphinomania, morphiomania (mor'fin-o-ma'ne-ah, mor'fe-o-ma'ne-ah). I. A morbid and habitual craving for morphin. 2. Insanity due to the misuse of morphin.

morphiometry (mor-fe-om'et-re) [morphin + Gr. μέτρον measure]. The measurement of the amount or proportion of morphin in a drug or preparation.

morphosa (mor-fe'ah). See morphea.

morphogenesia (mor"fo-jen-e'se-ah). Morphogenesis.

morphogenesis (mor-fo-jen'es-is) [Gr. μορφή form + γεννῶν to produce]. The evolution and development of form.

morphogenetic (mor"fo-jen-et'ik). Producing growth; producing form or shape.

morphography (mor-fog'raf-e) [Gr. μορφή form + γράφειν to write]. A description of organized beings, with special reference to their forms and structure.

morphologic, morphological (mor-fo-loj'ik, mor-fo-loj'ik-al). Pertaining to morphology.

morphology (mor-fol'o-je) [Gr. $\mu o \rho \varphi \dot{\eta}$ form + $\lambda b \gamma o s$ treatise]. The science of the forms and structure of organized beings.

morphometry (mor-fom'et-re) [Gr. μορφή form + μέτρον measure]. The measurement of the forms of organisms.

morphon (mor'fon) [Gr. μορφοῦν to form]. An individual organism or structural unit.

morphophyly (mor-fof'il-e) [Gr. μόρφη form + φῦλον tribe]. The development of the form of body organs.

morphophysics (mor-fo-fiz'iks). The study of the physical and chemic causes of development.

morphoplasm (mor'fo-plazm) [Gr. μορφή form + πλάσμα anything formed]. The substance of the cellular reticulum

morphosan (mor-fo'san). A proprietary name for morphin methylbromid: used like morphin. Dose of 5 per cent. solution, 20 min. (1.33 c.c.); hypodermically, $\frac{1}{12} - \frac{1}{6}$ gr. (0.005-0.01 gm.).

morphosis (mor-fo'sis) [Gr. μορφοῦν to form]. The process of formation of a part or organ.

morphotic (mor-fot'ik). Pertaining to morphosis or formation concerned in a formative process. morpio, morpion (mor'pe-o, mor'pe-on), pl. morpio'nes [L]. The crab-louse, Phthir'ius pu'bis.

morrhua, which furnishes cod-liver oil. See under oil.

morrhuate (mor'u-āt). A salt of morrhuic acid.

morrhuin (mor'u-in) [L. mor'rhua cod-fish]. A thick, oily ptomain, C₁₉H₃₇N₃, from some samples of cod-liver oil.

morrhuol (mor'u-ol) [L. mor'rhua cod + o'leum oil]. A crystallizable, aromatic, and medicinal substance from cod-liver oil. Dose, 4-12 gr. (0.26-0.78 gm.).

morrhuvin (mor'u-vin). A trade name for a mixture of cod-liver oil and peptonate of iron.

Morris' appendix, point [Robert T. Morris, New York surgeon, born 1857]. See under appendix and point.

mors (morz). Latin for death. m. thy'mica, thymic death; sudden death occurring in thymic asthma and status lymphaticus.

morsal (mor'sal) [L. mor'sus bite]. Taking part in mastication; a term applied to the masticating surface of a bicuspid or molar.

Mor. sol. Abbreviation for L. mo're sol'ito, in the usual way.

morsulus (mor'su-lus) [L. dim. of mor'sus bite]. A troche.

morsus diaboli (mor'sus di-ab'o-li) [L. "devil's bite"]. The fimbriæ at the ovarian extremity of an oviduct.

mortal (mor'tal) [L. morta'lis]. 1. Subject to death or destined to die. 2. Fatal; causing or terminating in death.

mortality (mor-tal'it-e). 1. The quality of being mortal. 2. The death-rate. 3. In life insurance, the ratio of deaths that take place to expected deaths.

mortamin, mortamine (mor'tam-in) [L. mors death + amin as in vitamin]. A term applied to various faulty food factors, such as improperly prepared foods, excessively rich foods, etc.

mortar (mor'tar) [L. morta'rium]. A bell-shaped or urn-shaped vessel of glass, iron, or porcelain, in which drugs are beaten, crushed, or ground with a pestle.

mortification (mor"tif-ik-a'shun). Gangrene or sphacelus; molar death.

mortinatility (mor"te-na-til'-it-e) [L. mors death + na'tus birth]. The mortality of infants during pregnancy, labor, and the first twenty days after birth.

mortisemblant (mor-te-sem'blant). Apparently dead.

Morton's cough (mor'tunz) [Richard Morton, English physician, 1637-1698]. See cough.

Morton's current (mor'tunz) [William James Morton, American neurologist, 1845–1920]. See

Morton's disease, foot, neuralgia (mor'tunz) [Thomas George Morton, Philadelphia surgeon, 1835-1903]. See disease, foot, and neuralgia.

mortuary (mort'u-a-re) [L. mortua'rium tomb].

1. Pertaining to death. 2. A dead-house or place of temporary burial.

morula (mor'u-lah) [L. mo'rus mulberry]. The segmented ovum in the mulberry stage, forming a solid mass of cells.

morulation (mor-u-la'shun). The process of formation of the morula.

moruloid (mor'u-loid) [L. mo'rus mulberry + Gr. elos form]. A bacterial colony in the form of a mulberry-like mass.

Morus (mo'rus). A genus of the family Urticaceæ which contains the mulberry **M**. ni'gra, the black mulberry from which mori succus is obtained. **M**. tincto'ria, yellow-wood, which contains maclurin.

Morvan's chorea, disease (mor'vanz) [Augustin Marie Morvan, French physician, 1819–1807]. See chorea and disease.

morvin (mor'vin). Same as mallein.

mosaic inheritance (mo-sa'ik). See under inheritance.

moschatin (mos'kat-in). An alkaloid, C₂₁H₂₇NO₇, from Achillea moschata.

Moschcowitz's operation, test (mosh'kow-itz)
[Alexis V. Moschcowitz, American surgeon, born 1865] See operation and tests.

moschus (mos'kus). Latin for musk.

Mosetig-Moorhof bone wax (mos-et'ig-mor'hof) [Albert von Mosetig-Moorhof, German surgeon, 1838-1907]. See under wax.

Mosler's diabetes (mos'lerz) [Karl Friedrich Mosler, German physician, born 1831]. See under diabetes.

mosquito (mus-ke'to) [Sp. "little fly"]. 1. A popular name for gnat-like, blood-sucking and venomous insects of various genera, chiefly Cu'lex, Anoph'eles, and Stegomy'ia. The bite of species of the genus Anopheles is a leading means of the transmission of malarial fevers Stegomyia conveys yellow fever. Anopheles and Culex transmit the filaria and dengue, and Jankinosoma transports the eggs of Dermatohia. For the life history of the malarial parasite in the mosquito's body, see Plasmodium malaria 2. An apparatus for drawing blood from a vessel in sterile condition. house m. See Culex pipiens and C. quinquefasciatus.

mosquitocide (mos-ke'to-sid) [mosquito + L. ca'-dere to kill]. Fatal to mosquitos; an agent that is destructive to mosquitos.

moss. Any plant or species of the cryptogamic order Mus'ci; also a material composed of or derived from such a plant. m.-board, a kind of pasteboard for use in preparing surgical dressings: it is made principally of peat-moss (Sphag'num). Ceylon m. See dgar. club-m. See dgar. club-m. See dgar. Club-m. See dgar. Irish m. See dgar. See dgar. Irish m. See dgar. Iniper m. See dgar. Iniper m. See dgar. They are considerably used in the preparation of moss-board and surgical dressings. running m., snake m. See dgar. Sphagnum m. See dgar. See dgar. Sphagnum m. See dgar.

Mosso's ergograph, sphygmomanometer (mos'öz) [Angelo Mosso, Italian physiologist, 1846–1910]. See ergograph and sphygmomanometer.

mossy foot. See under foot.

Motais's operation (mot-āz') [Ernst Motais, French ophthalmologist, died 1913]. See operation.

motarium (mo-ta're-um) [L]. Lint.

moth (mawth). See chloasma. brown-tail m. See Euproctis crysorrhea. tussock m. See Hemerocampa leucostigma.

mother (muth'er) [L. ma'ter]. 1. The female parent. 2. The vinegar fungus, Mycoder'ma ace'ts. m.-cell. See under cell. m.-liquor, the liquid from which any substance has been separated by crystallization. m.'s mark. See nevus. m.-star. Same as monaster.

motile (mo'til). Having a spontaneous but not conscious or volitional movement.

motiline (mo'til-in). A contraction-promoting hormone.

motility (mo-til'it-e). T' e ability to move spontaneously.

motofacient (mo-to-fa'shent). Producing motion: a term applied to that phase of muscular activity by which the muscle produces actual motion, in contradistinction to the non-motofacient phase in which the muscle is contracting without producing motion.

motoneuron (mo-to-nu'ron). A neuron possessing a motor function; a motor neuron.

motor (mo'tor) [L.]. 1. A muscle, nerve, or center that effects or produces movement 2. Producing or subserving motion. m. oc'uli, the third cranial nerve. plastic m., the tissues of an amputation stump used to secure motion in an artificial limb.

motorgraphic (mo-tor-graf'ik). Same as kineto-graphic.

motorial (mo-to're-al). Pertaining to motion or to a motorium.

motorium (mo-to're-um) [L.]. r. A motor center; especially the common center (m. commu'ne) of motor influences. 2. The motor apparatus of the body.

motorius (mo-to're-us) [L.]. A motor nerve. m. oc'uli commu'nis. See motor oculi, in nerves, table of.

motormeter (mo"tor-me'ter). A device for recording the mechanic movements of the stomach.

motorogerminative (mo"tor-o-jer'min-a-tiv).

Developing into the muscles: said of portions of the mesoderm.

motorpathy (mo-tor'path-e) [motor + Gr. πάθος disease]. Treatment of disease by gymnastics.

moulage (moo-lahzh') [Fr.]. A wax model of a skin lesion.

mould (mold). See mold.

mounding (mown'ding). The rising in a lump of a wasting muscle when struck.

mountain anemia, fever, sickness, etc. (mown'ten). See under sickness.

mounting (mownt'ing). The preparation of specimens and slides for study. The chief media used in mounting large specimens are alcohol and glycerin-jelly; for microscopic objects on a slide, Canada balsam and glycerin.

mouse fever or septicemia. See under septicemia.

mouth (mowth). The cavity which contains the tongue and teeth. m.-breathing, habitual respiration through the mouth instead of the nose. glass-blowers' m., swelling of the parotid gland in glass-blowers. m.-phenomenon. See lip reflex, under reflex. tapir m. See lapir mouth. trench m., Vincent's angina.

movement (moov'ment). r. An act of moving; motion. 2. An act of defecation. after-m. See after-movement. ameboid m., the movement of an ameba or leukocyte by the protrusion of a pseudopodium, or a movement similar to it. See ameba. angular m., a movement which changes the angle between two bones. associated m., a movement of parts which act together, as of the automatic m., a movement originating within the organism, but not by an act of the will. Brownian m., brunonian m., the dancing motion of minute particles suspended in a liquid. Brownian-Zsigmondy m. Same as Brownian m. choreic m's, choreiform m's, irregular, jerky movements of muscles or groups of muscles. ciliary m., the lashing motion of cilia occurring in certain of the tissues. circus m. 1. A peculiar circular gait; an involuntary rolling or tumbling movement, the result of lesions of the brain and basal nerve-centers. 2. A movement traveling continuously in circular fashion around a ring of muscle. communicated m., one produced by a force acting from without. m.-cure. See kinesitherapy. elastic m., a movement due to the return of a stretched fiber to its natural length. fetal m., that of a fetus in the womb. forced m., a movement caused by an injury to a motor center or a conducting path. Frenkel's m's, a series of movements of precision to be performed by ataxic patients for the purpose of restorof the cephalic part of a body about the fixed caudal part. Magnan's m., forward and backward movement of the tongue when it is drawn out in general paralysis of the insane. molecular m. Same as Brownian m. nucleopetal m., the movement of a male pronucleus toward the female. passive m., any movement of the body effected by a force entirely outside of the organism. pendular m., one of the movements of the intestine in digestion, consisting of a gentle swinging to and fro of the different loops. These movements are ascribed to rhythmic contractions of the longitudinal muscles. reflex m., an involuntary movement provoked by a remote external stimulus acting through a nervecenter. rolling m., the rolling of an animal on its long axis. scissors m., a movement of the retinal reflex resembling the opening and shutting of scissors: indicative of irregular astigmatism. spontaneous m., one which is originated within the organism. Swedish m. Same as kinesitherapy.

mowers' mite (mo'erz). The Lep'tus autumna'lis.
moxa (moks'ah) [Japanese]. A tuft of soft, combustible substance to be burned upon the skin.

moxibustion (moks-ib-us'tshun). The burning of a moxa upon the skin.

Moynihan's test (moin'yanz) [Sir Berkeley George Moynihan, contemporary surgeon in Leeds, England]. See under tests.

moyrapuama (moi-rah-pu-am'ah). See muirapuama.

M. R. C. Abbreviation for Medical Reserve Corps.

M. R. C. P. Abbreviation for Member of the Royal College of Physicians.

M. R. C. S. Abbreviation for Member of the Royal College of Surgeons.

M. S. Abbreviation for Master of Surgery.

Ms. Symbol for masrium.

M. T., Mt. Abbreviation for membrana tympani.

mu (mū) [the Gr. letter μ]. In micrometry, a micron or micromillimeter— $_{1000}^{1}$ of a millimeter or $_{2500}^{1}$ of an inch.

muavin (mu-a'vin). An alkaloid from muawi-bark, an East African drug. Its hydrobromid, a yellowish powder, acts somewhat like digitalin.

Muc. Abbreviation for L. mucila'go, mucilage.

mucedin (mu'se-din). An amorphous protein derivable from gluten.

Much's bacillus, granules, reaction (mooks) [Hans Much, German physician, born 1880]. See bacillus, granule, and reaction.

Much-Holzmann reaction (mook-holts'man) [Hans Much and V. Holzmann, contemporary German physician]. See reaction.

muchematein (mu-kem'at-in). See Mayer's muchematein, under staining methods.

mucic acid (mu'sik). See under acid.

mucicarmin (mu-se-kar'min). A stain for mucin consisting of 1 gm. of carmin, 0 5 gm. of aluminum chlorid, and 2 c.c. of distilled water.

mucidin (mu'sid-in). A solution of the mucus of red snails: it is bactericidal, but not antitoxic.

muciferous (mu-sif'er-us) [mucus + L. fer're to bear]. Secreting mucus.

muciform (mu'sif-orm) [mucus + L. for'ma form].
Resembling mucus.

mucigen (mu'sij-en) [mucus + Gr. γεννῶν to produce]. A substance found in the epithelial cells that secrete mucus. it is convertible into mucin and mucus.

mucigenous (mu-sij'en-us). Producing mucus.

mucilage (mu'sil-āj) [L. mucila'go]. 1. An artificial viscid paste of gum or dextrin: used in pharmacy as a vehicle or excipient, or in therapy as a demulcent. The principal mucilages are those of acacia (U. S. P.), elm, salep, sassafraspith, starch, and tragacanth (U. S. P.). 2. A naturally formed viscid principle in a plant, consisting of a gum dissolved in the juices of the plant.

mucilaginous (mu-sil-aj'in-us). Of the nature of mucilage; slimy and adhesive.

mucilago (mu-sil-a'go). See mucilage.

mucin (mu'sin). A conjugated protein (glycoprotein), the chief constituent of mucus. It is soluble in water and precipitated by alcohol, alum, and acids. Mucin is present in saliva, mucous secretions, the bile, and in certain cysts.

mucinase (mu'sin-ās). An enzyme secreted by the intestinal mucosa the function of which is to coagulate mucin.

mucinemia (mu-sin-e'me-ah) [mucin + Gr. alμa blood]. The presence of mucin in the blood.

mucinoblast (mu-sin'o-blast) [mucin + Gr. βλαστός germ]. A mast-cell.

mucinogen (mu-sin'o-jen) [mucin + Gr. γεννῶν to produce]. The principle from which mucin is derived.

mucinoid (mu'sin-oid) [mucin + Gr. elbos form].

1. Resembling mucin.

2. Same as mucoid, 2d def.

mucinous (mu'sin-us). Resembling or marked by
the formation of mucin.

mucinuria (mu-sin-u're-ah) [mucus + Gr. οδρον urine]. The occurrence of mucin in the urine.

muciparous (mu-sip'ah-rus) [L. mu'cus mucus + par'ere to produce]. Secreting mucus.
mucitis (mu-si'tis). Inflammation of the mucous

mucicis (mu-si tis). Innammation of the muci membrane.

mucocartilage (mu-ko-kar'til-āj). A soft cartilage the cells of which are in a mucus-like matrix.

mucocele (mu'ko-sēl) [mucus + Gr. κήλη tumor].

Dilatation of a cavity with accumulated mucous secretion, such as catarrhal dilatation of the lacrimal sac or a nasal retention-cyst; also a mucous polypus. suppurating m., a mucocele whose contents are purulent; a pyocele.

mucocolitis (mu-ko-ko-li'tis). Mucous colitis.

mucocutaneous (mu''ko-ku-ta'ne-us) [mucus + cutaneous]. Pertaining to the mucous membrane and the skin.

mucodermal (mu-ko-der'mal). Pertaining to the skin and mucous membrane.

muco-enteritis (mu"ko-en-ter-i'tis). Acute catarrhal enteritis.

mucofibrous (mu-ko-fi'brus). Composed of mucus and fibrous tissue.

mucoglobulin (mu-ko-glob'u-lin). Any one of the class of proteins to which plastin belongs.

mucoid (mu'koid). r. Resembling mucus. 2. Any one of a group of mucus-like conjugated proteins of animal origin. The mucoids differ from mucins in solubility. They are precipitated by acetic acid. They include colloid and ovomucoid. Called also mucinoid. serum-m., a mucoid from the blood-serum.

mucol (mu'kol). A preparation of salicylic acid: used in infectious diseases of the mouth and throat.

mucolysin (mu-kol'is-in) [mucus + Gr. \(\lambda\text{for}\) dissolution]. A lysin which is capable of causing dissolution of mucus.

mucolytic (mu-ko-lit'ik). Destroying or dissolving mucus.

mucomembranous (mu-ko-mem'bran-us). Pertaining to or composed of mucous membrane.

mucoperiosteal (mu"ko-per-e-os'te-al). Consisting of mucous membrane and periosteum.

mucoperiosteum (mu"ko-per-e-os'te-um). Periosteum having a mucous surface, as in parts of the auditory apparatus.

mucopurulent (mu-ko-pu'ru-lent). Containing both mucus and pus.

mucopus (mu'ko-pus) [mucus + pus]. Mucus which has the appearance of pus on account of the presence of leukocytes.

Mucor (mu'kor) [L.]. A genus of molds forming delicate, white tubular filaments and spheric, black sporangia Mucors together with Thamnidium form the profuse grayish-white growths upon the surface of meat in cold storage known as "whiskers." M. corym bifer. Same as Lichtheimia M. muce'do, a non-pathogenic corvmbifera. species from feces or other nitrogenous substances It produces a fatal disease in bees, and has twice been found as a parasite in man in cases of mycosis. **M.** pusil'lus, a species resembling M. rhizopodifor'mis, from moist bread. It is pathogenic for rabbits and is occasionally found in cases of otomycosis in man. M. racemo'sus, a mold from diseased pineapples; it sometimes causes intestinal inflammation. M. ramo'sus, an extremely malignant pathogenic species from white bread and from the ear in otomycosis. M. rhizopodifor mis, a pathogenic organism which has been found in white bread and in the mouth in cases of hyperkeratosis. In rabbits it causes a fatal mycosis of the spleen, kidneys, bone-marrow,

Mucoraces (mu-kor-a'se-e). A family of the order Phycomycetes in which the thallus is not segmented and ramified.

mucoriferous (mu-kor-if'er-us) [L. mu'cor mold + fer're, to carry]. Covered with mold.

mucorin (mu'ko-rin). An albuminous substance from certain molds.

mucormycosis (mu''kor-mi-ko'sis). A mycosis due to fungus of the genus *Mucor*.

mucosa (mu-ko'sah) [L. "mucus"]. The mucous membrane, buccal m., the mucous tissue

beyond the areolar gingiva on buccal surface labial m., the mucous tissue beyond the areolar gingiva on labial surfaces. palantine m., the mucous tissue covering the palate. sublingus m., the mucous tissue beyond the areolar gingiv on sublingual surfaces.

mucosal (mu-ko'sal). Pertaining to the mucou membrane.

mucosanguineous (mu"ko-san-gwin'e-us). Con posed of mucus and blood.

mucosedative (mu-ko-sed'at-iv). Soothing to the mucous surfaces.

mucoserous (mu-ko-se'rus). Containing mucu and serum.

mucosin (mu-ko'sin). A form of mucin peculia to the more tenacious varieties of mucus, as the of the nasal and uterine cavities.

mucosolvene (mu-ko-sol'vēn). A proprietary disinfectant and germicide for use in diphtheria.

mucous (mu'kus) [L. muco'sus]. Pertaining to c resembling mucus.

mucro (mu'kro) [L. "a sharp point"]. The pointe end of a part or organ. m. cor'dis, the apex of th heart.

mucronate (mu'kro-nāt) [L. mu'cro a sharp point Having a spine-like tip or end.

mucroniform (mu-kron'if-orm). Spine-like.

Mucuna (mu-ku'nah) [Brazilian]. 1. A genus c leguminous plants 2. Cowhage; the hairs of th pods of M. pru'riens and M. u'rens: they are ar thelmintic and irritant.

mucus (mu'kus) [L]. The viscid watery secretio of the mucous glands—It is composed of water mucin, inorganic salts, epithelial cells, leukocyte: and granular matter.

mucusan (mu'ku-san). Diboron-zinc-tetra-ortho oxybenzoate: used in gonorrhea, leukorrhea, cor junctivitis, etc.

mudar (mu'dar). The root-bark of Calot'ropi gigan'tea, a plant of India and other hot regions alterative and sudorific. Dose, 2-5 gr. (0.133 0 333 gm).

mudarin (mu'dar-in). A bitter extractive from th bark of mudar.

mud-bath. See bath.

muffle, muffle furnace. An oven in whic material may be heated without exposing it to th direct action of the fire. It is employed in denta ceramics.

muguet (moo-gwa') [Fr.]. Thrush (1st def.).

muhinyo (mu-hin'yo). A fever endemic in Uganda similar to Malta fever.

muiracithin (moo-e-ras'ith-in). A proprietar aphrodisiac combination of muirapuama and lecithin.

muirapuama (moo-e"rah-poo-ah'mah). A druj from Brazil, reputed to be an aphrodisiac and nerve stimulant.

mulberry (mul'ber-e). Any tree of the genu Mo'rus. From the juice of the fruit a syrup i made which is used as a drink in fevers. The roo of M. ni'gsa is used for tapeworm. m. calculus m. mark. See calculus and news.

Mulder's angle (mul'derz) [Johannes Mulder Dutch anatomist, 1769-1810]. See under angle.

Mulder's test (mul'derz) [Gerard Jan Mulder Dutch chemist, 1802-1880]. See under tests.

mulene (mu'len). A preparation similar to ambrine.

Mules's operation (mulz) [Philip Henry Mules English oculist, 1843-1005]. See operation.

muliebria (mu-le-eb're-ah) [L.]. The female generative organs.

muliebrity (mu-le-eb'ri-te) [L. mulieb'ritas]. I Womanly quality; the sum of the peculiarities of the female sex. 2. The assumption of female qualities by the male.

- mull (mul). A variety of thin, soft muslin, used in surgery. plaster-m., a sheet of mull coated with gutta-percha. used in surgery as a dressing and in skin diseases salve m. See mulla.
- mulla (mul'ah). An ointment in which the base is a mixture of salt and lard, spread on mull or soft muslin.
- mullein (mul'in). See Verbascum.
- muller (mul'er). A kind of pestle, flat at the bottom: used for grinding drugs upon a slab of similar material.
- Müller's duct, fibers, muscle, etc. (mil'erz) [1. Johannes Müller, German physiologist, 1801–1858. 2. Heinrich Müller, German anatomist, 1820–1864]. See duct, fiber, muscle, etc.
- Müller's fluid or liquid (mil'erz) [Hermann Franz Muller, German histologist, 1866-1898]. See under fluid.
- Müller's sign (mil'erz) [Koloman Müller, Hungarian physician, born 1849]. See under sign.
- müller's test (mil'erz) [Edward Müller, German physician, born 1870]. See under tests
- multi- [L. mul'tus many, much]. A prefix signifying many or much.
- multi-articular (mul''te-ar-tik'u-lar). Pertaining to or affecting many joints.
- multicapsular (mul-te-kap'su-lar). Having many capsules.
- multicell (mul'tis-el). Any organ made up of many cells; any group of functionally active cells.
- many cells; any group of functionally active cells.

 multicellular (mul-te-sel'u-lar) [L. mul'tus many + cel'lula cell]. Composed of many cells.
- Multiceps (mul'tis-eps). A genus of tapeworms, the bladder-worms of which are found in herbivorous animals and the adult forms in carnivorous animals.
- multicuspid, multicuspidate (mul-te-kus'pid, mul-te-kus'pid-āt) [L. mul'lus many + cus'pis point]. Having many cusps.
- multifamilial (mul"(e-fam-il'e-al). Affecting the several successive generations of a family.
- multifid (mul'tif-id) [L multi'fidus; mul'tus many + fin'dere to split]. Cleft into many parts.
- multiganglionic (mul"te-gan-gle-on'ik). Pertaining to, affecting, or possessing many ganglia.
- multiglandular (mul-te-glan'du-lar). Affecting many glands.
- multigravida (mul-te-grav'id-ah) [L. mul'tus many + grav'ida pregnant]. A woman who has often been pregnant.
- multi-infection (mul"te-in-fek'shun). Infection with several varieties of organisms.
- multilobar (mul-til-o'bar). Having numerous lobes.
- multilobular (mul-te-lob'u-lar) [L. mul'tus many + lob'ulus lobule]. Having many obules.
- multilocular (mul-te-lok'u-lar) [L. mul'tus many + loc'ulus cell]. Having many cells or loculi.
- multimamms (mul-te-mam'e) [L. mul'tus many + mam'ma breast]. The condition of having more than two breasts.
- multinodular (mul-te-nod'u-lar). Composed of many nodules.
- multinuclear, multinucleate (mul-te-nu'kle-ar, -nu'kle-āt) [L. mul'tus many + nucleus]. Having several nuclei.
- multipara (mul-tip'ar-ah) [L. mul'tus many + par'ere to bear]. A woman who has borne several children.
- multiparity (mul-tip-ar'it-e). The condition of being a multipara.
- multiparous (mul-tip'ar-us). Having given birth to several children.
- multipartial (mul-tip-ar'shal). Made from several strains of the same organism: said of sera.
- multiple (mul'tip-l) [L. mul'tiplex]. Manifold; occurring in various parts of the body at once.

- multipolar (mul-te-po'lar) [L. mul'ius many + po'lus pole]. Having more than two poles or processes.
- multirooted (mul-te-roo'ted). Having many roots; said of molar teeth.
- multirotation (mul-tir-o-ta'shun). See mutarota-
- multituberculate (mul"te-tu-ber'ku-lāt). Having many tubercles.
- multivalent (mul-tiv'al-ent) [L. mul'tus many + vale're to have value]. Having the power of combining with more than two univalent atoms.
- muma (mu'mah). Myositis purulenta tropica. mummification (mum''if-ik-a'shun). Dry gangrene; also the drying up and shriveling of the fetus.
- tiditis; a contagious febrile disease marked by inflammation and swelling of the parotid gland. After an incubation period of about three weeks the symptoms appear with fever, headache, and pain beneath the ear. Soon there develops a tense, painful swelling in the parotid region, which interferes with mastication and swallowing and renders both actions painful. After a period of a few days to a week the symptoms gradually disappear. Sometimes the submaxillary and other salivary glands are involved, and occasionally the testicles, mammæ, or the labia majora become swollen. One attack generally confers immunity from another. The causative organism is probably a filterable virus. metastatic m., that which involves the testis or a mammary gland and labium majus. single m., that which affects only one of the parotid glands.
- Mundinus (mun-di'nus). An Italian physician and anatomist, also known as Mondino da Luzzi, professor of medicine at Bologna. He is said to have been the first of his time to dissect the human body. Died 1326.
- munity (mu'nit-e). The state of being susceptible to infection.
- Munro's point (mun-rōz) [John Cummings Munro, Boston surgeon, 1858-1910]. See under point.
- mural (mu'ral) [L. mura'lis, from mu'rus wall].

 Pertaining to or occurring in a wall.
- Murchison's pill (mer'tshis-unz) [Charles Murchison, English physician, 1830-1879]. See under pill.
- Mu'rex purpu'rea. A gastropodous mollusk of the Mediterranean from it a homeopathic remedy is prepared: used in uterine diseases.
- murexid (mu-reks'id) [L. mu'rex purple sea-snail]. Anmonium purpurate, C₈H₄O₆N₅.NH₄.H₂O₇, a brownish-red powder formerly used as a dye. m. test. See under tests.
- muriate (mu're-āt) [L. mu'ria brine]. An obsolete synonym of chlorid.
- muriatic (mu-re-at'ik) [L. muriat'icus; mu'ria brine]. Derived from common salt. m. acid. See acid, hydrochloric.
- murine (mu'rin). A proprietary remedy for local use in eye diseases: antiseptic and astringent.
- murmekiasmosis amphilaphes (mer"me-ki-asmo'sis am-fil'af-ēz) [Gr. μυρμεκιάσμος outbreak of warts on the body and αμφίλαφης spreading]. A supposedly new disease of the tropics, consisting of cutaneous warts marked by extremely rapid growth, spreading to the whole side of the face and neck.
- murmur (mur'mur) [L.]. A gentle blowing auscultatory sound. accidental m., one due to some temporary and unimportant circumstance. amphoric m., a respiratory murmur having an amphoric character. anemic m., one due to a watery condition of the blood. aneurysmal m., a vascular murmur caused by an aneurysm. aortic m., a sound indicative of disease of the aortic

A TABLE OF ENDOCARDIAL MURMURS.

| TIME OF OCCURRENCE. | SITE OF GREATEST INTENSITY. | DIRECTION OF TRANSMISSION. | SEAT OF LESION. | Nature of Lesion. |
|-----------------------------|--|--|-----------------------|----------------------------------|
| Systolic. | At cardiac apex, | Along left fifth and sixth ribs—in left axilla—in the back, at inferior angle of left scapula. | Mitral orifice. | Incompetency—Regurgi- tation. |
| Systolic. | At junction of right second costal cartilage with sternum. | To junction of right clavicle with sternum—in course of right carotid. | Aortic orifice. | Narrowing-Obstruction. |
| Systolic. | At ensiform cartilage. | Feebly transmitted. | Tricuspid orifice. | Incompetency—Regurgi- tation. |
| Systolic. | At left second intercostal space, close to sternum. | Feebly transmitted. | Pulmonary orifice. | Narrowing—Obstruction. |
| Diastolic | At junction of right second costal cartilage with sternum. | To midsternum—in course of sternum. | Aortic orifice, | Incompetency—Regurgitation. |
| Diastolic. | At left second intercostal space, close to sternum. | In course of sternum. | Pulmonary orifice. | Incompetency—Regurgi- tation. |
| (Diastolic) presystolic. | Over body of heart. | To apex of heart. | Mitral orifice. | Narrowing—Obstruction. |
| (Diastolic) presystolic. | At ensiform cartilage. | Feebly transmitted. | Tricuspid orifice. | Narrowing-Obstruction. |
| | | | | 1 |

valves. apex-m., a murmur heard over the apex of the heart. arterial m., a murmur in an artery, sometimes aneurysmal and sometimes hemic. attrition m., the sound produced by the friction of the pericardial surfaces in some cases of pericarditis. bellows m., the bruit de souffle, a puffing systolic heart-sound. blood-m., one due to an abnormal, and commonly to anemic, condition of the blood Called also hemic m. Bright's m. See bruit de cuir neuf. bronchial m., a murmur heard over the large bronchi resembling a laryngeal respiratory murmur. cardiac m., any adventitious sound heard over the region of the heart. cardiopulmonary m., a murmur caused by the impact of the heart against the lung sometimes also due to physical and histologic changes in the substance of the lung. cardiorespiratory m. Same as cardiopulmonary m. crescendo m., a heart murmur marked by a pitch which rises progressively and a force which increases progressively and a sudden termination: it is heard in mitral stenosis. **deglutition m.**, a murmur heard on auscultation over the esophagus during the act of swallowing. diastolic m., one occurring with and after the second sound of the heart. Heard at the apex, it is a sign of mitral obstruction; at the base of the heart, it is due to aortic regurgitation; more rarely to pulmonary regurgitation. direct m., one due to a roughened endocardium and contracted valvular orifice. Called also obstructive m. Duroziez's m., a double murmur in the femoral artery due to aortic regurgitation. dynamic m., one caused by the irregular pulsa-tion of the heart. endocardial m., an abnormal sound produced within the cavity of the heart. Eustace Smith's m., a venous hum heard over the manubrium when the patient's head is stretched backward in bronchial stenosis. **exocardial m.**, a cardiac murmur produced outside of the heart's cavities. **expiratory m.**, a soft buzzing sound heard on expiration and caused by the current of air passing through the bronchi. Fisher's m., a systolic murmur heard over the anterior fontanel or in the temporal region in rickets. Flint's m., a loud presystolic murmur at the apex in aortic regurgitation. Fraentzel m., a murmur louder at the be-ginning and the end of diastole than during the midperiod: heard in mitral stenosis. friction-m., one due to the rubbing together of two serous surfaces. functional m., a cardiac murmur due to anemia or to excited action of the heart.

Graham Steele m., the murmur caused by relative pulmonary insufficiency; it is a soft diastolic murmur heard in the pulmonary area in the third

left intercostal space near the border of the sternum and thence propagated down the sternum. heart m. Same as cardiac m hemic m. See blood-m. humming-top m. Same as venous hum. See hum. indirect m., one that is caused by the reversal of the direction of the blood-current. inorganic m., any murmur not due to a valvular or other lesion. inspiratory m., the murmur heard over the lungs during inspiration. lapping m., a cardiac murmur resembling the sound of a cat lapping milk, heard in rupture of the aorta. Makins's m., a reproduction in the heart of the systolic murmur heard over a wounded artery. metallic m., a metallic musical sound heard over the lungs during inspiration. mitral m., a murmur due to disease of the mitral valve. muscle m., a murmur heard over a muscle in a state of contraction. musical m., a cardiac murmur with a musical quality. Nun's m., bruit de diable. obstructive m. See direct m. organic m., one due to a structural change in the heart, in a vessel, or in the lung substance. Parrot's m., a soft murmur heard instead of the cardiac sound in asystole. pericardial m., a murmur produced in the pericardial sac. pleuropericardial m., a pleural friction-sound heard in the pericardial region and resembling a pericardial murmur. prediastolic m., one that occurs just before and with the diastole. Heard at the apex, it is due to mitral obstruction; at the base of the heart, to aortic regurgitation; more base of the heart, to aortic regurgitation; more rarely, to pulmonary regurgitation. **presystolic** m., one occurring just before the systole, from mitral or tricuspid obstruction. **pulmonic** m., one due to disease of the valves of the pulmonary artery. **reduplication** m., a heart murmur in which the mitral and tricuspid first sound or the aortic and pulmonary second sounds are heard separately. regurgitant m., that which is due to a dilated valvular orifice. piratory m., the murmur heard on auscultation over the normal lung during respiration. Roger's m. See brust de Roger. see-saw m. Same as to-and-fro m. spontaneous m., a cardiac murmur heard over a wide extent, and chiefly due to aortic valvular insufficiency. stenosal m., a sound produced in an artery by artificial pressure or by a stenosis. **subclavicu-lar m.**, a sound sometimes produced in the subclavian artery during systole, and due to a stenosis: mostly a symptom of tuberculous disease. **sys**tolic m., one at the systole: due to aortic, tricuspid, or pulmonary obstruction. to-and-fro m., a pericardial murmur occurring with both the

systole and the diastole. **Traube's m.**, cantering rhythm. See rhythm. tricuspid m., a murmur caused by disease of the tricuspid valves. **Vascular m.**, a murmur occurring in a blood-vessel. **Venous m.**, a murmur occurring in a vein. **vesicular m.**, the murmur of normal breathing. **water-wheel m.** See bruit de moulin.

Murphy button, method, sign, treatment (mer'fe) [John Benjamin Murphy, Chicago surgeon, 1857-1916]. See button, method, sign, treatment.

murrain (mur'in). Any destructive cattle-plague.

murrina (moo-re'nah). A form of trypanosomiasis among mules and horses in the Canal Zone (Darling, 1911). It is thought to be caused by the Trypanoso'ma hip' picum, and is marked by anemia, weakness, emaciation and edema, conjunctivitis pyrexia, and some posterior paralyses.

Mus (mus) [L. "mouse"]. A genus of rats and mice M. decuma'mus. Same as M norvegicus. M. alexandri'nus, the Egyptian or roof rat. M. mus'culus, the common house mouse. M. norve'gicus, the brown or barn rat. M. rat'tus, the English black rat. See rat.

Musca (mus'kah) [L. "fly"]. A genus of flies of the family Muscidæ which have their mouth parts adapted for suction only. M. bra'va, a South American fly which is probably instrumental in transmitting mal de Caderas M. domes'tica, the common house fly. It may act as a mechanical carrier of the microorganisms of typhoid fever, cholera, dysentery, plague,

Musca domestica: A, Fly; B, larva; C, pupa.

and of pyogenic bacteria. The larvæ may cause myiasis. M. lute'o 3. See Auchmeromyia. M. vomito'ria. See Calliphora vomiloria.

musce volitantes (mus'e vol-it-an'tēz) [L. "flitting flies"]. Specks seen floating before the eyes.

muscardin (mus'kar-din). A disease of silk-worms caused by Botry'tis bassia'na.

muscarin (mus'kar-in) [L. musca'rius pertaining to flies]. A deadly alkaloid, OH(CH₃)₃N.CH₂.-CHO.H₂O, from various mushrooms, as the flyagaric, Agar'icus musca'rius; also from rotten fish.

Its nitrate is a cardiant, diaphoretic, and sialogogue. It has been used in hay-fever, bronchitis, and diabetes insipidus. Dose, $\frac{1}{30}$ -1 gr. (0.002-0.066 gm.), to be given with great caution.

muscarinism (mus'kar-in-izm). Poisoning by muscarin.

muscegenetic (mus"e-jen-et'ik). Giving rise to musce volitantes.

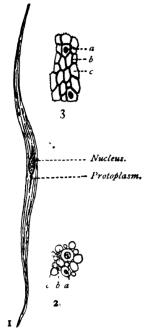

muscicide (mus'kis-id) [L. mus'ca fly + ca'dere to kill]. Destructive to flies; also any agent which destroys flies.

Muscids (mus'id-e). A family of the Diptera. It includes the following genera: Auchmeromyia, Calliphora, Chrysomyia, Cordylobia, Glossina, Lucilia, Musca, and Stomoxys.

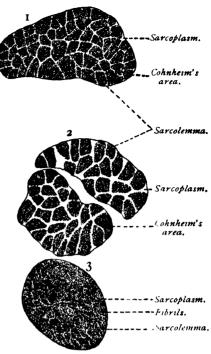

Muscina (mus-i'nah). The non-biting stable-fly which breeds in dung and comes into the house.

muscle (mus'el) [L. mus'culus]. An organ which by contraction produces the movements of an animal organism. They are of two varieties: striated, or striped, including all the muscles in which contraction is voluntary and the heart muscle; unstriated, smooth, or organic, including all the involuntary muscles except the heart, such as the muscular layer of the intestines, bladder, blood-vessels, etc. Striated muscles are covered with a thin layer of connective tissue (epimysium) from which septa (perimysium) pass, dividing the muscle into bundles of fibers, or fasciculi. Each fasciculus contains a number of parallel fibers separated by connective-tissue septa (endomysium). Each fiber consists of an outer covering with transverse septa, the sarcolemma, containing sarcous substance and nuclei, or muscle-corpuscles. The sarcous substance is marked by minute transverse lines, whence the name, stricted muscle. Smooth muscles are composed of elongated, spindle-shaped nucleated cells arranged parallel to one another, and usually in bundles of varying size. Muscle-plasma is the liquid obtained from fresh muscles by means of pressure. Muscle-rods are minute longitudinal lines found by Schäfer in striated muscular tissue. Muscle-serum is the liquid remaining after a clot has formed in muscle-plasma. See muscles, table of. antagonistic m., a muscle which counteracts the action of another muscle. appendicular m., one of the muscles of a limb. articular m., a joint-muscle. Bell's m's, the musculi pylori of the ureters. bipennate m., a muscle in which the

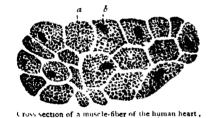

| Muscle. | Origin. | Insertion. | NERVE-SUPPLY. | Action. |
|--|--|--|----------------------------------|---|
| Abduc'tor pol'licis lon'gus. | Same as Extensor ossis metacarpi pol- | | | |
| Abduc'tor pol'licis ma'nus. | Trapezium, annular ligament, and palmar fascia. | First phalanx of thumb and tendon of extensor longus. | First digital branch of median. | Carries forward first phalanx of thumb. |
| Abduc'tor pol'licis pe'dis. | Inner tubercle of os cal- cis; internal annular ligament. | First phalanx of great toe; inner side at base. | Internal plantar. | Abducts the great toe. |
| Accelera'tor un'næ. | Central tendon and median raphé of permeum. | Triangular ligament; bulb, spongy and cavernous bodies of penis, etc. | Perineal branch of pudic. | Ejects urine and semen' aids in erection. |
| Accesso'rius ad accesso'rium. | See Flexor accessorius long us digitorum pedis. | | | |
| Accesso'rius ad flexo'rem digito'- rum profun'dum. | Coronoid process and internal condyle of humerus. | Perforating tendons of flexor profundus digitorium. | Anterior interosseous and ulnar. | Aids in flexing fingers. |
| Accesso'rius ad sacro- lumba'lem. | Angles of six lower ribs. | Angles of six upper ribs. | Branches from dor- sal. | Erects the spine and bends body back- ward. |
| Accesso'rius glute'us min'imus. | Outer surface of ilium. | Anterior border of great trochanter. | Superior glutcal | Aids gluteus min- tmus |
| Accesso'rius orbicu- la'ris inferio'ris. | Inferior maxilla out- ward from levator la- bii inferioris | Angle of mouth, join- ing buccinator, etc. | | Contracts mouth. |
| Accesso'rius orbicu- la'ris superio'ris. | Alveolar edge of upper jaw opposite incisor teeth. | Angle of mouth. | • • • • • • • | Contracts mouth. |
| Adduc'tor bre'vis. | Body and ramus of pubes, | Proximal part of linea aspera of femur. | Obturator. | Adducts, rotates out- ward, and flexes thigh. |
| Adduc'tor hallu'cis. | Tarsal ends of middle metatarsal bones, etc. | Outside of base of first phalanx of great toe. | External plantar. | Adducts the great toe. |
| Adduc'tor lon'gus. | Crest of pubes and symphysis. | ' | Obturator. | Rotates outward, adducts, and flexes thigh. |
| Adduc'tor mag'nus. | Ramus of pubes and of ischium. | Linea aspera of femur and great trochan- ter. | Greatsciatic and obturator. | Adducts thigh and everts it. |
| Adductor min'imus. | The anterior portion of the adductor magnus. See Adductor hallucis. | Ischium and body and ramus of pubes. | Obturator and great sciatic. | Adducts thigh. |
| Adductor obliquus hallucis. | | . D | T.73 | Adducts thumb to- |
| Adductor pol'licis. | Third metacarpal bone. | Base of first phalanx of thumb, inner side. | Ulnar. | ward median line. |
| Adduc'tor quadra'tus. | See Adductor mini- mus. | | | |
| Adductor transver'sus hallu'cis. | See Transversus pedis | | | |
| Amygdaloglos'sus. | Pharyngeal aponeuro- sis over tonsil. | Continuous with pal- atoglossus. | | Assists in lifting edge of tongue, and in rendering the dor- sum concave |
| Ancone'us. | Back of outer condyle of humerus. | Olecranon and shaft of ulna. | Musculospiral. | Extends forearm. |
| Antitra/gicus. | Outer part of antitra- | Caudate process of helix. | Temporal and poste- | i |
| Arrecto'res pi'li. Articula'ris ge'nu. | Papillary layer of skin. Same as Subcrureus | Hair-follicles. | Sympathetic. | Elevates hairs of skin. |
| Articula ris ge nu. Aryepiglot'ticus. | Same as Arytæno-epi- | | | |
| Arytæno - epiglottid'- | glottideus. Arytenoid cartilage. | Epiglottis, anterior surface. | Recurrent laryngeal. | Compresses sacculus laryngis. |
| Arytæno - epiglottid'- | Tip of arytenoid car- tilage. | Arytenoepiglottidean folds. | Recurrent laryngeal. | Constricts the open- ing of larynx. |
| eus supe/rior. Arytænoi/deus. | Base and outer border of arytenoid carti- lage. | Apex of other ary- tenoid cartilage. | Recurrent aryngeal. | Closes posterior part of glottis. |
| Arytænoi'deus rec'- | | Corniculum laryngis. | | Probably shortens the |
| Attol'lens au'rem. | Occipitofrontal apon- | Upper cranial side of pinna. | Femporal branch of facial nerve. | larynx. Elevates pinna; di- lates auditory canal. |
| At'trahens au'rem. | Lateral cranial apon- eurosis. | Helix and edge of concha. | Facial. | Raises and advances pinna. |

Smooth muscle-cells from the intestine of a cat: in 1, isolated, in 2 and 3, in cross-section. At α the cell is cut in the plane of the nucleus; at α , in the neighborhood of the pointed end. In 3 is seen the manner in which neighboring cells are joined to each other by intercellular bridges

Transverse section through striated muscle fibers of a rabbit: 1 and 3, from a muscle of the lower extremity: 2, from a lingual muscle. In 2, Cohnheim's fields are distinct; in 1, less clearly shown, in 3 the muscle-fibrils are more evenly distributed

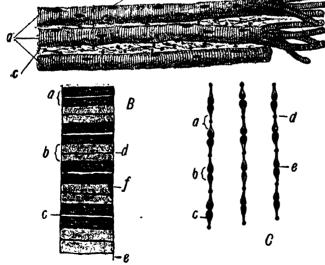

a, contractile substance, b, nucleus

A

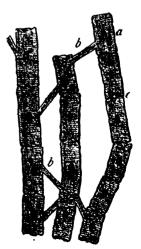

b

From a striated muscle of man, obtained by teasing. h, a median disk lying in the transverse disk, Q, x, the intermediate disk borders above and below on the light isotropic disks.

Voluntary muscle: A, three voluntary muscle-fibers in long sections; a, three voluntary muscle-fibers; b, nuclei of same; c, fibrous tissue between fibers (endomysium); d, fibers separated into sarcostyles. B, structure of a muscle fiber (diagrammatic): a, dark band; b, light band; c, median line of Hensen; d, membrane of Krause; e, sarcolemma; f, nucleus. Giagram of the structure of the fibrils of a striated muscle-fiber; a, light band; b, dark band; c, contractile elements; d, dots composing membrane of Krause; e, narrowing of contracting elements forming Hensen's line (Leroy).

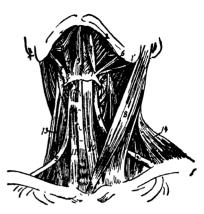

Heart-muscle, semidiagrammatic: a, nucleus; b, branch of fibers, c, cross-striction (Leroy).

| Az'ygos pharyn'gis (occasional). | Pharyngeal tubercle of occipital bone | Raphé of pharynx. | Glossopharyngeal. | Blended with superior constrictor. |
| Az'ygos u'vulæ. | Posterior nasal spines of palate bones. | Uvula | Facial. | Raises tip of uvula. |
| Basioglos'sus. | Fibers of hyoglossus arising from base of hyoid bone. | Tongue. | Hypoglossal. | Depresses side of tongue. |
| Bi'ceps cu'biti. | Long head upper margin of glenoid cavity. 2. Short head coracoid proc- ess. | Tuberosity of radius and fascia of fore- arm. | Musculocutaneous. | Flexes and supinates forearm; flexes and adducts arm. |
| Bi'ceps 'em'oris. | r. Long head from is- chial tuberosity. 2. Short head from li- nea aspera. | Head of fibula and outer tuberosity of head of tibia. | Great sciatic and external popliteal. | Flexes knee and rotates it outward. |
| Biven'ter cervi'cis. | Transverse processes and spines of 2-4 upper dorsal. | Superior curved line of occipital bone. | Upper cervical. | Retracts, lowers, and rotates head. |
| Bowman's, Brachia'lis, | See Ciliary. Same as Brachialis anticus. | | | |
| Brachia'lis anti'cus. | Lower half of the shaft of humerus, front surface. | Coronoid process of ulna at junction with shaft. | Musculospiral; mus- culocutaneous. | Flexes the forearm. |
| Brachiocapsula'ris. Brachioradia'lis. | See Subscapularis. | | | |
| Brücke's. | See Supinator longus The longitudinal portion of ciliary muscle. | | | |
| Buccina'tor | Alveolar edges of max- illary bones, pterygo- maxillary ligament. | Orbicularis oris. | Buccal branch of facial. | Compresses the cheeks and retracts the an- gles of the mouth. |
| Bulbocaverno'sus | See Accelerator urinæ | | | |
| Canı'nus. | Same as Levator anguli oris. | | | |
| Cephalopharyn'geus. Cervica'lis ascen'- dens. | See Constrictor of Angles of four or five upper ribs. | pharynx, superior. Transverse processes of 4th, 5th, and 6th cervical vertebræ. | External branches of cervical. | Keeps head and neck erect, raises upper ribs. |
| Chondrocoracoid (occasional). | First costal cartilage. | Coracoid process over- lying the coraco- brachialis. | | |
| Chondroglos'sus. | Inner side and base of lesser cornu of hyoid bone. | Substance of tongue. | Hypoglossal. | Depresses and re- tracts tongue. |
| Choroid. | See Ciliary. | Outer laws of all | Short (oculomotor) | 377 |
| Ciliary. | Longitudinal division, junction of cornea and sclera; circular division, fibers form a ring. | roid and ciliary | ciliary. | Visual accommoda- |
| Cir'cumflexus pal'ati. Cleidoepitrochlea'ris. | See Tensor palati Clavicular portion of | Internal condyle of | Circumflex. | Raises arm and draws |
| Coccyg'eus. | deltoid. Ischial spine and lesser sacrosciatic ligament | the humerus. Coccyx, sacrococcygeal ligament, and sacrum. | Fourth and fifth sa- cral. | it forward. Supports and raises coccyx, and closes pelvic outlet. |
| Complex'us. | Transverse processes 7th cervical and 6 upper dorsal, and articular processes of 4th to 6th cervical. | Occipital bone. | Suboccipital, great occipital, various internal branches of cervical. | Retracts, rotates, and otherwise moves the head. |
| Compres'sor hemi- sphær'icus bul'bi. | That portion of the bulbocaver nosus which overlies the most prominent part of the bulb. | | | |
| Compres'sor na'rium. | Superior maxillary bone. | Fellow muscle and nasal fibrocartilage. | Facial. | Compresses nostrils. |
| Compres'sor na'rium mi'nor. | Cartilage of ala nasi. | Skin at end of nose. | Facial. | Compresses nostrils. |

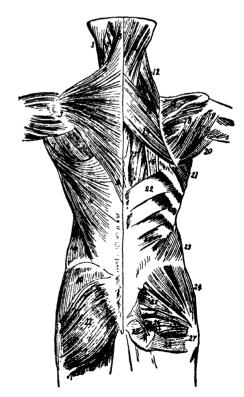

Muscles of the right side of the head and neck 1, frontalis; 2, superior auricular, 3, posterior auricular, 4, orbicularis palpebrarum, 5, pyramidalis nasi; 6, compressor naris; 7, levator labit superioris alæque nasi, 8, levator labit superioris, 9, 2ygomaticus major; 10, orbicularis oris, 11, depressor labit inferioris; 12, depressor anguli oris; 13, anterior belly of digastric; 14, mylohyoid; 15, hyoglossus, 16, stylohyoid; 17, posterior belly of digastric; 18, the masseter, 10, sternohyoid; 20, anterior belly of omnohyoid; 21, thyrohyoid; 22, 23, lower and middle constrictors of pharynx; 24, sternomastoid; 25, 26, splenius; 27, levator scapulæ; 28, anterior scalenus; 29, posterior belly of omnohyoid; 30, middle and posterior scalenus; 31, trapezius.

Muscles of the neck from the front. On the left side the pla tysma has been removed, and on the right the digastric, the stylohyoid, mylohyoid, sternohyoid, and omohyoid: 1, posterior, and r, anterior belly of digastric; 2, mylohyoid, 3, geniohyoid; hyeglossus; 5, styloglossus; 6, stylohyoid, 7, stylopharyngeus; 8, sternomatold; 9, 9', omohyoid; 10, sternohyoid, 11, 12, sternothyoid; 13, levator scapulæ.

Muscles of the trans from before (left side superficial, and right side deep, muscles): 1, pectoralis major; 2, deltoid; 3, portion of latissimus dorsi; 4, serratus magnus; 5, subclavius; 6, the pectoralis, sternocostal portion; 7, serratus magnus; 12, rectus abdominis; 13, internal oblique; 14, external oblique; 15, abdominal aponeurosis and tendinous intersections of rectus abdominis; 16, over symphysis publis; 17, linea semilunaris; 18, gluteus medius; 19, tensor vaginæ femoris; 20, rectus femoris; 21, sartorius; 22, femoral part of iliopsoas; 23, pectineus; 24, adductor longus; 25, gracilis.

Muscles of the trunk from behind (left side, superficial; right; side, deep). 1, sternomastoid, 2, splenius; 3, trapezius; 4, latissimus dorsi; 5, infraspinatus; 6, teres minor; 7, teres major; 8, detoid; 9, external oblique of abdomen; 10, gluteus medius; 11, gluteus maximus; 12, levator anguli scapulæ; 13, rhomboideus minor; 14, rhomboideus major; 15, part of longissimus dorsi; 16, tendons of insertion of illocostalis; 17, supraspinatus; 18, infraspinatus; 19, teres minor; 20, teres major; 21, serratus magnus; 22, upper; and 22, lower part of serratus positius inferior; 23, internal oblique; 24, gluteus medius; 25, pyriformis and superior and inferior gemelli; 26, 26', portions of obturator internus; 27, tendon of obturator internus; 28, quadratus femoris.

| Muscle. | Origin. | Insertion. | Nerve-Supply. | Action. |
|--|---|--|--|---|
| Compres'sor sac'culi laryn'gis. | Arytenoid cartilage. | Anterior surface of epiglottis. | Recurrent laryngeal. | Compresses the sacculus laryngis. |
| Compres'sor ure'thræ. | Ramus of pubes and ischium. | Fellow muscle. | Dorsal nerve of penis. | Expels urine and se- men; aids in erec- tion. |
| Compres'sor vagi'næ. | The bulbocavernosi of the female. | Central tendon of permeum. | Perineal branch of pudic. | Constricts vagina. |
| Compres'sor ve'næ dorsa'lıs pe'nıs. | Ischiocavernosus mus- cle. | Fascia of penis, over dorsal vessels. | Perineal branch of pudic. | Aids in erection. |
| Constric'tor isth'mi fau'cium. | See Palatoglossus | | | |
| Constructor of phar- ynx (inferior). | Cricoid and thyroid cartilages. | Posterior median raphé. | Glossop haryngeal, pharyngeal plexus, and external and recurrent laryngeal. | Contracts pharynx, as in swallowing. |
| Constric'tor of phar- ynx (middle). | Cornua of hyoid and stylohyoid ligament | Posterior median raphé. | Pharyngeal plexus and glossopharyn- geal. | Contracts pharynx, as in swallowing. |
| Constructor of phar- ynx (superior) | Palate bone, internal pterygoid plate, ptery go meaxillary ligament, alveolar process of jaw, and side of tongue. | Posterior median raphé. | Pharyngeal plexus, glossopharyngeal | Contracts pharynx, as in swallowing. |
| Constructor ure'thræ. | See Compressor ure- thræ. | | | |
| Constructor vagi'næ. | See Compressor vagi- næ. | | | |
| Coracobrachia'lis. | Coracoid process of scapula and intermuscular septum | Middle of inner face of shaft of humerus | Musculocutaneous | Flexes and adducts arms. |
| Corruga'tor cu'tis | Submucous tissue with- in the anus. | Skin surrounding anus. | Sympathetic. | Corrugates the skin around the anus. |
| Corruga'tor super- | Inner end of supercultary ridge. | Under surface of or- bicularis palpebra- rum | Facial. | Draws eyebrow down and inward, wrink- les forchead |
| Crampton's Cremas'ter. | See Ciliary Middle of Poupart's ligament. | Crest of pube bone and sheath of rectus abdominis. | Genital branch of genitocrural | Retracts testicle. |
| Cremas'ter, internal, of Henle. | Fibers of gubernac- ulum testis | Elements of fetal spermatic cord. | | |
| Crico-arytenoi'deus latera'lis. | Side of cricoid cartilage | Outer angle of base of arytenoid cartilage. | Recurrent laryngeal. | Closes chink of glot- |
| Cri c o-arytenoi'deus posti'cus. | Back of cricoid carti- lage. | Outer angle of base of arytenoid carti- lage | Recurrent laryngeal. | Opens chink of glot- |
| Cricothyroid. | Front and side of cri- coid cartilage. See Vastus internus. | Thyroid cartilage at lower inner border. | Superior laryngeal. | Renders vocal cords tense. |
| Del'toid. | Clavicle, acromion, and spine of scapula. | Middle of outer side of shaft of humerus. | Circumflex. | Raises arm and aids in carrying it for- ward and back- ward. |
| • | Incisive fossa of upper maxilla. | nose. | Buccal branch of fa- cial. | Contracts nostril and depresses ala. |
| Depres'sor an'guli o'ris | External oblique line of lower maxilla. | Angle of the mouth. | Supramaxillary branch of facial. | Depresses the angle of the mouth. |
| Depres'sor epiglot'- tidis. | A portion of thyro-epi- glottideus. | Epiglottis. | Recurrent laryngeal. | Depresses epiglottis. |
| Depres'sor la'bii in- ferio'ris. | External oblique line of lower jaw bone. | Lower lip. | Supramaxillary branch of facial. | Depresses lower hp. |
| Depres'sor sep'ti. | Septally attached part of depressor alæ nasi. | | | |
| Depres'sor thyroi'- deus (anomalous). | Lower border first tra- cheal ring. | roid cartilage. | | Depresses thyroid cartilage. |
| Depres'sor ure'thræ. | Ramus of ischium near transversus perinei profundus. | Fibers of constrictor vaginæ. | | Depresses urethra. |
| Detru'sor uri'næ. | Posterior surface of pubes. | Outer muscular layer of bladder. | Sympathetic. | Expels urine. |
| Diaphragm. | Ensiform and costal cartilages, 6 or 7 lower ribs, ligamenta arcu- ata and lumbar ver- tebræ. | Central tendon. | Phrenic. | Respiration and expulsive acts. |
| Digastric (anterior belly). | Intermediate tendon and hyoid bone. | Inner surface of in- ferior maxilla, near symphysis. | Mylohyoid branch of inferior dental. | Elevates and retracts hyoid bone and tongue. |

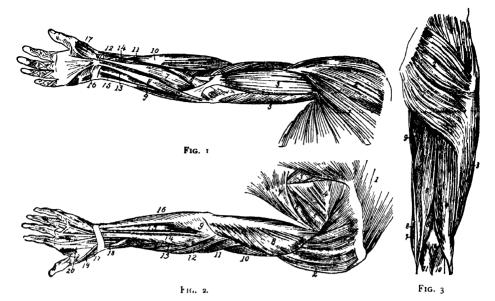

FIG. 1—Superfictal Muscles of Shoulder and Arm, from before 1, pectoralis major. 2, deltoid. 3, biceps brachii; 4, brachialis anticus; 5, triceps, 6, pronator radii teres, 7, flexor carpi radialis. 8, palmaris longus. 9, flexor carpi ulnaris. 10, supinator longus; 11, extensor ossis metacarpi policis; 12, extensor brevis policis; 13, flexor sublimis digitorum, 14, flexor longus policis, 15, flexor profundus digitorum; 16, palmaris brevis, 17, abductor policis.

FIG. 2.—Superficial Muscles of Shoulder and Arm, from behind: 1, trapezius, 2, deltoid: 3, rhomboideus major: 4, infraspinatus, 5, teres minor; 6, teres major, 7, latissimus dorsi, 8, triceps; 9, anconeus, 10, brachialis anticus, 11, supinator longus; 12, extensor carpi radialis longior, 13, extensor carpi radialis longior, 13, extensor carpi ulnaris, 16, flexor carpi ulnaris; 17, extensor cassis metacarpi policis, 18, extensor brevis policis, 19, tendon of extensor longus policis.

FIG 3—Superficial Muscles of Hip and Thigh, from behind 1, gluteus medius, 2, gluteus maximus, 3, vastus externus, 4, is flexor cruris, 5, semitendinosus; 6, semimembranosus, 7, gracilis, 8, sartorius, 9, adductor magnus; 10, 11, gastrocnemius, 12, biceps flexor cruris

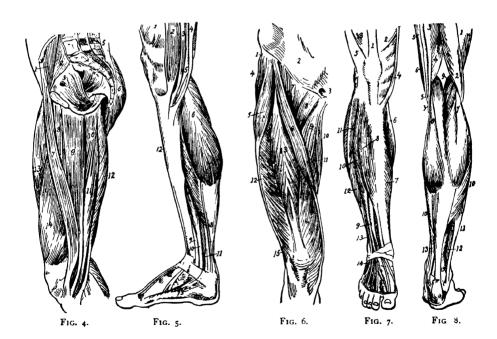

FIG. 4 - Muscles of onner side of thigh and interior of pelvis. 1, iliacus; 2, psoas magnus; 3, obturator internus, 4, pyriformis, 5, erector spine, 6, gluteus maximus, 7, sartorius, 8, adductor longus; 9, gracilis, 10, adductor magnus; 11, semimembranosus, 12, semitendinosus, 13, rectus femoris, 14, vastus internus.

FIG. 5.— Superficial muscle of leg from inner side: 1, vastus internus; 2, sartorius; 3, gracilis; 4, semitendinosus; 5, semimembranosus; 6, inner head of gastrocnemius; 7, soleus; 8, tendon of plantaris, 9, tendon of tibialis posticus; 10, flexor longus digitorum, 11, flexor longus hallucis; 12, tibialis anticus; 13, abductor hallucis

11, nexor longus natures; 12, tibians anticus; 13, aboutcor natures

FIG. 6 — Suberficial muscles of front of thigh: 1, insertion of external oblique into iliac creat; 2, aponeurosis of external oblique; 3, external abdominal ring, 4, gluteus medius; 5, tensor vaginæ femoris; 6, sartorius; 7, iliopsoas; 8, pectineus: 9, adductor longus; 10, gracilis; 11, adductor magnus; 12, vastus externus; 13, tectus femoris; 14, vastus internus; 15, biceps flexor cruris.

FIG. 7 — Muscles of leg and foot, from before: 1, tendon of rectus femoris; 2, vastus internus; 3, vastus externus; 4, sartorius; 5, iliotibial band; 6, inner head of gastrocnemius, 7, inner part of soleus; 8, tibialis anticus; 9, extensor proprius hallucis, 10, extensor longus digitorum; 11, peroneus longus; 12, peroneus brevis; 13, peroneus tertius; 14, origin of extensor brevis digitorum.

FIG. 8 - Superficial muscles of leg. from behind: 1, vastus externus; 2, baceps flexor cruris; 3, semitendinosus; 4, semimembranosus; 5, gracitis; 6, sattorius; 7, outer, and 8, inner head of gastrochemius; 9, plantaris; 10, soleus; 11, peroneus longus, 12, peroneus brevis; 13, flexor longus digitorum; 14, tibialis posticus; 15, lower fibers of flexor longus haliucis

| Muscle. | Origin. | Insertion. | NERVE-SUPPLY. | Action. |
|--|---|---|--|--|
| Digastric (posterior belly). | Digastric groove of mastoid process. | Hyoid bone and intermediate tendon. | Facial. | Elevates and retracts hyoid bone and tongue. |
| Dilata'tor na'ris an- te'rior. | Alar cartilage. | Skin at border of ala of nose. | Infra-orbital branch of facial. | Dilates the nostril. |
| Dilata'tor na'ris pos- te'rior. | Nasal notch of upper maxilla. | Skin near margin of nostril. | Infra-orbital branch of facial. | Dilates the nostril. |
| Dorsal interos'sei of hand, 4. | Sides of metacarpal bones. | Bases of correspond- ing first phalanges. | Ulnar. | Abduct fingers from median line; aid in flexion and extension. |
| Dorsal interos'sei of foot, 4. | Sides of metatarsal bones. | Base of first phalanx of corresponding toe. | External plantar. | Abduct toes; aid in flexion and extension. |
| Epicra'nius. | Same as Occipito- frontalis. | | | |
| Erec'tor clito'ridis | Tuberosity and ramus of ischium. | Crus of clitoris. | Perineal branch of external pudic. | Erects the clitoris. |
| Erec'tor pe'nis. | Ischial tuberosity, crus penis, and pubic ramus. | Tunic of corpus cavernosum. | Perineal branch of external pudic. | Maintains erection. |
| Erec'tor pi'li. Erec'tor spi'næ. | See Arrectores pili. Sacro-iliac groove, spines of sacrum, lumbar and three lower dorsal spinous processes. | Passes into sacrolum- balis, longissimus dorsi, and spinalis dorsi. | Lumbar and dorsal nerves, external posterior branches. | Extension of lumbar spinal column. |
| Exten'sor annula'rıs (anomalous). | Posterior face of shaft of ulna. | Tendon of ring-finger. | | |
| Exten'sor bre'vis digito'rum ma'nus (anomalous). | Ligamentous tissues on back of wrist. | Tendons of third, fourth, and fifth fingers. | | |
| Exten'sor bre'vis digito'rum pe'dis. | Os calcis, anterior annular ligament. | First phalanx of great toe and tendons of extensor longus digitorum. | Anterior tibial. | Extends first pha- langes of toes. |
| Exten'sor bre'vis hallu'cis. | That portion of exten- sor brevis digitorum that goes to great toe. | | | |
| Exten'sor bre'vis pol'licis. | See Extensor primi internodii pollicis. | | | |
| Exten'sor car'pi radia'lis bre'vior. | External condyle of humerus. | Base of third meta- carpal bone. | Posterior interos- seous. | Extends and abducts wrist, helps to flex forearm. |
| Exten'sor car'pi radia'lis lon'gior. | External condyloid ridge of humerus. | Base of metacarpal of index-finger. | Musculo-spiral. | Extends and abducts wrist, helps to flex forearm. |
| Exten'sor car'pi ulna'ris. | 1. External condyle of humerus. 2. Posterior border of ulna. | Fifth metacarpal. | Posterior interesseous. | Extends and abducts wrist, helps to flex forearm. |
| Exten'sor coccy'gis. | Last bone of sacrum or first of coccyx. | Tip of coccyx. | Sacral branches. | Extends coccyx. |
| Exten'sor commu'nis digito'rum. | Outer condyle of hu- merus; intermuscu- lar septum. | Second and third phalanges of fingers. | Posterior interos- seous. | Extends fingers; helps extend fore- arm. |
| Exten'sor dig'iti quin'ti pro'prius. | Same as Extensor | | | |
| Exten'sor in'dicis. | Back of ulna; inter- osseous membrane. | Second and third phalanges of index- finger. | Posterior interos- seous. | Extends index-finger. |
| Exten'sor in'dicis pro'prius. | Same as Extensor in- dicis | | | |
| Exten's or lon'gus digito'rum pe'dis. | Outer tuberosity of tibia, shaft of fibula, etc. | Second and third pha- langes of four lesser toes. | Anterior tibial. | Extends toes; flexes foot and turns it out. |
| Exten'sor lon'gus pol'licis. | See Extensor secundi internodii pollicis. | | | |
| Exten'sor min'imi dig'iti. | Outer condyle of hu- merus, etc. | Second and third pha- langes of little finger. | Posterior interosseous. | Extends little finger; extends forearm slightly. |
| Exten'sor os'sis meta- car'pi pol'licis. | Same as Extensor primi internodii pollicis. | | | |
| Exten'sor pol'licis bre'vis | | | | |
| Exten'sor pol'licis lon'gus. | | Base of metacarpal of thumb, radial side. | Posterior interesseous. | Extends metacarpal bone of thumb. |
| | | | 1 | |

| Muscle. | Origin. | Insertion. | Nerve-supply. | Action, |
|---|---|---|---|--|
| MIUSCLE. | ORIGIN. | INSERTION. | NERVE-SUPPLY. | ACTION. |
| Exten'sor pri'mi interno'dii hallu'cis lon'gus (anomalous). | Fibula and interosse- ous membrane. | Inner part of base of first phalanx of great toe. | | Extends thumb. |
| Exten'sor pri'mi in- terno'dii pol'licis. | Back of radius; inter- osseous membrane. | Base of first phalanx of thumb. | Posterior interos- seous. | Extends thumb. |
| Exten'sor pro'prius dig'iti min'imi (anomalous). | Distal part of ulna, or posterior ligament of wrist. | Base of first phalanx of little finger. | | Extends little finger. |
| Exten'sor pro'prius hallu'cis. | Middle of fibula in front; interesseous membrane. | Base of last phalanx of great toe. | Anterior tibial. | Extends great toe; flexes foot. |
| Exten'sor secun'di in- terno'dii pol'heis. | Back of ulna; interos- seous membrane. | Base of last phalanx of thumb. | Posterior interosseous. | Extends thumb. |
| Flex'or eccesso'rius digito'rum pe'dis (2 heads). | 1. Inner; 2. Outer surface of os calcis, etc. | Tendon of flexor lon- gus digitorum. | External plantar. | Aids in flexing toes. |
| Flex'or accesso'rius lon'gus digito'runi pe'dis (inconstant). | Shaft of tibia or fibula. | Tubercle of os calcis, and tendon of long flexor. | External plantar. | Helps flex the toes. |
| Flex'or bre'vis digi- to'rum pe'dis. | Inner tubercle of os calcis, plantar fas- | Second phalanges of lesser toes. | Internal plantar. | Flexes toes. |
| Flex'or bre'vis hallu'-cis. | Under surface of cu- boid and external cuneiform bones, etc. | Base of first phalanx of the great toe. | Internal plantar. | Flexes and adducts first phalanx of great toe. |
| Flex'or bre'vis min'i- mi dig'iti ma'nus. | Unciform bone and an- nular ligament. | First phalanx of the little finger. | Ulnar. | Flexes and abducts little finger. |
| Flex'or bre'vis min'i- mi dig'iti pe'dis. | Base of fifth metatar- sal bone, etc. | Base of first phalanx of the little toe | External plantar. | Flexes little toe; ad- ducts fifth metatar- sal bone. |
| Flex'or bre'vis pol'li- cis ma'nus. | 2 heads—outer annu- lar ligament, trape- zium, inner, first metacarpal bone. | Base of first phalanx of thumb | Outer head—median, palmar branch. In- ner head—deep ul- nar. | Flexes first phalanx of thumb and ex- tends second pha- lanx. |
| Flex'or bre'vis pol'li- cis pe'dis. | See Flexor brevis hal- lucis. | | | |
| Flex'or car'pi radia'- lis. | Internal condyle of hu- merus, intermuscu- lar septum. | Metacarpal bone of index - finger at base. | Median. | Flexes and abducts wrist, helps to pro- nate hand and flex forearm. |
| Flex'or car'pi ulna'- ris. | 2 heads-1. Internal condyle of humerus. 2. Olecranon, ulna, etc. | 5th metacarpal and pisiform bone. | Ulnar. | Flexes and adducts wrists. |
| Flex'or cru'ris. Flex'or dig'tti quin'- | See Biceps femoris. Same as Flexor brevis | | | |
| ti bre'vis. Flex'or in'dicis. | The indicial portion of the flexor profundus digitorum. | | | |
| Flex'or lon'gus digi- to'rum pe'dis. | Shaft of tibia, posterior surface. | Last phalanges of les- ser toes. | Posterior tibial. | Flexes toes and ex- |
| Flex'or lon'gus hallu'- cis. | Inner surface of lower two-thirds of shaft of fibula. | | Posterior tibial. | Flexes great toe and extends foot. |
| Flex'or lon'gus pol'li- cis. | 1 | Base of distal phalanx of thumb. | Anterior interosseous. | Flexes thumb. |
| Flex'or os'sis meta- car'pi pol'licis. | See Opponens pollicis. | | | |
| Flex'or profun'dus digito'rum. | Shaft of ulna, coronoid process, etc. | Distal phalanges of fingers. | Ulnar and anterior interosseous. | Flexes distal pha- langes. |
| Flex'or subli'mis digito'rum (3 heads). | 1. Inner condyle of humerus, etc. 2. Coronoid process of ulna. 3. Oblique line of radius. | Second phalanges of fingers. | Median. | Flexes second pha- langes, flexes fore- arm slightly. |
| Fronta'lis. Gastrocne'mius (2 heads). | See Occipitofrontalis. Condyles of the femur. | Os calcis by the Achilles tendon. | Internal popliteal. | Extends foot; flexes leg, etc. |
| Gavard's. | The oblique muscular fibers of the stomach-walls. | | | |
| Gemel'lus infe'rior. | Tuberosity of ischium; lesser sacrosciatic notch. | Great trochanter. | Sacral plexus. | Rotates extended thigh; abducts it when flexed. |
| Gemel'lus supe'rior. | Spine of ischium; les- ser sacrosciatic notch. | Great trochanter. | Sacral plexus. | Rotates extended thigh, abducts it when flexed. |

| Intertransversa/les. | Between transverse process of contiguous vertebræ. | , | Spinal nerves. | Support and flex spi- nal column. |
| Ischiococcy'geus. | See Erector penis. Spine of ischium and pelvic fascia. | Coccyx and median | Fourth sacral. | Raises floor of pelvis; |
| Ischiocon'dyloid. | The portion of adduc- tor magnus inserted into the internal con- dyle of femur, | p.uc | | |
| Jar'javay's. | See Depressor ureth- | | | |
| Keratocri'coid. | Near lower border of cricoid cartilage. | Inferior horn of thyroid cartilage. | | |
| Keratoglos'sus. | Those fibers of the hyo- glossus that arise from greater cornu of hyoid bone. | | | |
| Latis'simus dor'si. | Spinous processes of 6 lower dorsal and lumbar and sacral vertebræ, crest of ilium, and 4 lowest ribs. | Bicipital groove of humerus. | Long subscapular. | Draws arm down- ward and backward and rotates it |
| Laxa'tor tym'pani ma'jor. | Spinous process of sphenoid and ante- rior wall of tym- panum. | Neck of malleus. | Tympanic. | Is probably ligament- ous and not truly muscular. |
| Laxa't or tym'pani mi'nor. | Upper and back part of external auditory canal. | Short process and handle of malleus. | Tympanic. | Is a ligament with no true muscular tis- |
| Leva'tor an'guli o'rıs. | Canine fossa of upper maxilla. | Angle of mouth. | Infraorbital branch of facial. | Raises angle of mouth and draws it in. |
| Leva'tor an'guli scap'ulæ. | Transverse processes of 4 upper cervical vertebræ. | Posterior edge of scapula. | Third and fourth cervical. | Raises upper angle of scapula; aids in rotating head. |
| Leva'tor a'ni. | Body and ramus of pubes, pelvic fascia, spine of ischium. | Rectum, coccyx, and raphé of perineum. | Sacral and perineal branch of pudic. | Supports rectum and vagina; aids in defecation. |
| Leva'tor clavic'ulæ (anomalour). | Transverse processes of first and second cervical vertebræ. | Outer portion of clavicle, | | |
| Leva'tor glan'dulæ thyroi'deæ (anom- alous). | Isthmus or pyramid of thyroid gland. | Body of hyoid bone. | | |
| Leva'tor la'bii infe- rio'ris. | Incisive fossa of lower jaw-bone. | Skin of chin. | Supramaxillary branch of facial. | wrinkles chin. |
| Leva'tor la'bii superio'ris. | Inferior margin of orbit. | Upper lip. | Infraorbital branch of facial. | upper lip. |
| Leva'tor la'bii superio'ris alæ'que na'si. Leva'tor men'ti. | Nasal process of upper jaw-bone. See Levator labii infe- | Cartilage of ala nasi and upper lip. | Infraorbital branch of facial. | Raises upper lip and dilates nostril. |
| Leva'tor pala'ti. | Petrous bone and Eustachian tube. | Raphe of soft palate. | Sphenopalatine gan- | Raises soft palate. |
| Leva'tor pal'pebræ | Lesser wing of sphe- noid. | Upper tarsal plate. | glion (facial). Third. | Raises upper lid. |
| Leva'tor pharyn'gis. Leva'tor prosta'tæ. | See Stylopharyngeus. A part of the anterior portion of the levator ani muscle. | | | Supports and com- presses prostate. |
| Leva/tor ve'li palati'- ni. | Same as Levator | | | |
| Levato'res costa'rum (12 pairs). | Transverse processes of seventh cervical and 11 upper dorsal vertebræ. | Each to next two ribs below. | Intercostal. | Lift ribs in inspiration. |
| Lingua'lis infe'rior. | Under surface of tongue at base. | Tip of tongue. | Chorda tympani. | Shortens tongue. |
| Lingua'lis supe'rior. | Submucosa and septum of tongue. | Edges of tongue. | Hypoglossal. | Shortens tongue and raises its edges and tip. |
| Lingua'lis transver'- | Median septum of tongue. | Edges of tongue, | Hypoglossal, | Narrows and stretches tongue and lifts its edges. |
| Lingua'lis vertica'lis. | Upper surface of tongue near sides of tip. | Under surface of tongue. | Hypoglossal. | Flattens tip of tongue. |
| Longis'simus cap'itis, | Same as Trachelomas- toid. | | | |

| Longis'simus cervi'- | Same as Transversa- | | | |
| cis. Longis'simus dor'si. | Its cervicis Transverse and articular processes of lumbar vertebræ and fascia. | Transverse processes of lumbar and dor- sal vertebræ and lowest ribs, | Lumbar and dorsal. | Supports spine and bends trunk back- ward. |
| Lon'gus atlan'tis | The superior or upper oblique portion of the longus colli. | | | |
| Lon'gus cap'itis. | Same as Rectus capi- tis anticus major. | | | |
| Lon'gus col'li · r. Upper oblique portion. | Transverse processes of third to fifth cervical vertebræ. | Anterior arch of atlas. | | |
| 2. Lower oblique portion. | Bodies of first to third dorsal. | Transverse processes of fifth to sixth cer- vical vertebræ. | Lower cervical. | Flexes and supports cervical vertebræ. |
| 3. Vertical portion. | Bodies of 3 dorsal and 3 cervical vertebræ. | Bodies of second to fourth cervical vertebræ. | | |
| Lumbrica'les, 4, of foot. | Tendons of flexor longus. | First phalanges of lesser toes and ten- dons of extensor longus. | External and internal plantar. | Accessory to flexors and extensors. |
| Lumbrica'les, 4, of hand. | Tendons of flexor pro- fundus. | Tendons of extensor communis | Median and ulnar. | Aid in flexion and extension. |
| Masse'ter. | Zygomatic arch and malar process of upper maxilla. | Angle and ramus of lower jaw. | Inferior maxillary. | Mastication. |
| Merkel's. Midriff. Müller's Muluf'idus. | See Keratocricoid See Diaphragm, See Ciliary. Same as Multifidus | | | |
| Mu ltif'idus spi'næ. | spinæ. Sacrum, posterior superior iliac spine, articular processes of lumbar and cervical and transverse processes of dorsal vertebræ | Laminæ and spinous processes of vertebræ. | Posterior branches of spinal nerves | Rotates and supports spinal column. |
| Mylohy'oid. | Mylohyoid ridge of lower jaw-bone. | Hyoid bone and me- dian raphé. | Mylohyoid branch of inferior dental. | Raises and advances hyoid, forms floor of mouth, aids in depressing jaw. |
| Nasolabia'lis. | Septum of nose. | Upper lip. | Buccal branch of facial. | |
| Obli'quus au'ris. | Cranial surface of con- cha. | Cranial surface of pinna above con- cha. | Posterior annular and temporal. | |
| Obli'quus cap'ıtıs in- fe'rior. | Spinous process of the axis. | Transverse process of atlas. | Suboccipital and oc- cipitalis major. | Rotates atlas and head. |
| Obli'quus cap'ıtıs su- pe'rıor. | Transverse process of atlas. | Occipital bone below superior curved line | Suboccipital. | Diaws head back and rotates it. |
| Obli'quus exter'nus. | Eight lowest ribs. | Crest of ilium, Pou- part's and Gimber- nat's ligaments, li- nea alba, crest of pubes. | Iliohypogastric and intercostal. | Compresses viscera, flexes thorax, aids in expulsive acts. |
| Obli'quus infe'rior. | Orbital plate of upper jaw-bone. | Sclera. | Oculomotor. | Abducts and raises eyeball, and rotates it upward and out- ward. |
| Obli'quus inter'nus. | Crest of ilium, Pou- part's ligament, and lumbar fascia. | Six lowest ribs, linea alba, crest of pubes. | Intercostal, ilio-ingui- nal, and iliohypo- gastric. | Compresses abdo- men, flexes thorax, and aids in expira- tion. |
| Obli'quus supe'rior. | Lesser wing of sphe- noid above optic foramen. | Sclera. | Trochlear. | Abducts and depresses eye, and rotates it downward and inward. |
| Obtura'tor exter'nus. | Rim of obturator fora- men and membrane. | Digital fossa at base of great trochanter. | Obturator. | Rotates thigh out- ward. |
| Obtura/tor inter/nus. | Obturator foramen, pubes, sachium, etc. | Inner surface of great trochanter. | Sacral. | Rotates and abducts thigh, |
| Occipita'lis. | Occipital portion of occipitofrontalis. | | | |

| Muscle. | Origin. | Insertion. | NERVE-SUPPLY. | Action. |
|--------------------------------------|--|---|--|--|
| Occipitofronta'lis. | Mastoid process and superior oblique line of occiput; angular process of frontal. | Occipitofrontal apon- eurosis. | Posterior auricular, minor occipital, facial. | Moves scalp; wrink- les and raises eye- brows. |
| Occipitoscap'ular. | Occipital bone near splenius capitis muscle. | Dorsal border of scapula at base of spine. | | |
| Omohy'oid. | Superior border of scapula. | Hyoid bone. | Loop between descendens and communicans nom. | Retracts and depress- es hyoid; contracts cervical fascia. |
| Oppo'nens dig'iti quin'ti. | Same as Opponens minimi digiti. | | | 1 |
| Oppo'nens min'i mi dig'tti. | Unciform bone, annu- lar ligament. | Fifth metacarpal bone. | Ulnar. | Flexes fifth metacar- pal. |
| Oppo'nens min'imi dig'iti pe'dis. | ımı dıgitı pedis. | | | |
| Oppo'nens pol'licis. | Ridge of trapezium, annular ligament. | Metacarpal bone of thumb. | Palmar division of median. | Flexes and adducts thumb. |
| Orbicula'rıs cılıa'rıs. | Palpebral portion of orbicularis palpebra- rum | | | |
| Orbicula'ris la'tus. | Orbital portion of orbi- cularis palpebrarum. | | | |
| Orbicula'rıs oc'uli. | Same as Orbicularis | | | |
| Orbicula'ris o'ris | Nasal septum, canine fossa of lower jaw. | Angle of mouth. | Buccal and supra- maxillary branches of facial | Closes mouth; wrink- les lips. |
| Orbicula'ris palpe- bra'rum. | Internal palpebral liga- ment, mesial margin of orbit, | External palpebral ligament, lateral margin of orbit. | Facial. | Closes eye. |
| Or'bital. | Orbital periosteum. | Fascia of interorbital fissure. | Sympathetic. | Protrudes eye. |
| Orbitopal'pebral. | See Palpebral, supe- | rior. | | |
| Palatoglos'sus. | Anterior surface of soft palate. | Dorsum and side of tongue. | Palatine branches of sphenopalatine ganglion. | Constricts fauces; raises back of tongue. |
| Palatopharyn'geus. | Soft palate by two fasciculi. | Thyroid cartilage, median raphe of pharynx, | Palatine branches of sphenopalatine ganglion. | Closes posterior nares and faucial orifice. |
| Palma'rıs bre'vis. | Annular ligament and palmar fascia. | Skineor fascia of palm. | Ulnar. | Corrugates skin of hypothenar emi- |
| Palma'rıs lon'gus. | Inner condyle of hu- merus. | Palmar fascia. | Median. | Stretches palmar fas- cia, flexes wrist and forearm. |
| Palpe'bral, superior. | Levator palpebræ su- perioris. | Upper border of tar- | Sympathetic. | Raises upper eyelid. |
| Pectine'us. | Iliopectineal line, spine of pubes. | Linea aspera below lesser trochanter. | Anterior crural. | Flexes, adducts, and rotates outward thigh. |
| Pectora'lis ma'jor. | Sternum, clavicle, cos- tal carulages, etc. | Anterior bicipital ridge of humorus. | Anterior thoracic. | Draws arm downward and forward, aids to expand chest. |
| Pectora'lis min'imus. | Sternum and cartilage of first rib. | Coracoid process of scapula. | Anterior thoracic. | Depresses point of shoulder. |
| Pectora'lis mı'nor. | Third, fourth, and fifth ribs, and aponeuro- sis | Coracoid process of scapula. | Anterior thoracic. | Depresses point of shoulder, lowers scapula. |
| Peripe'nial. | A sheet of unstriped muscular tissue form- ing the frenum of the penis, and surround- ing a part of that or- gan. | | Sympathetic. | • |
| Perone'us accesso'-rius. | Fibula between pero- nei longus and bre- vis. | Metatarsal bone of great toe. | Musculocutaneous. | Extends, everts, and abducts foot. |
| Perone'us bre'vis. | Middle of shaft of fibula, intermuscular septum. | Base of fifth meta- tarsal bone. | Musculocutaneous. | Extends and abducts foot. |
| Perone'us lon'gus. | Head and shaft of fibula, intermuscular septum. | Metatarsal bone of great toe. | Musculocutaneous. | Extends, abducts, and everts foot. |
| Perone'us ter'tius. | Lower part of fibula; intermuscular sep- tum. | Fifth metatarsal bone. | Anterior tibial. | Flexes and everts |
| Pharyngopalatr'nus. | Same as Palatophar- yngeus. | | | |

|------------------------------------|--|--|---|--|
| Sple'nius col'li. | Spinous processes of third or sixth dorsal vertebræ. | | Posterior branches of lower cervical. | Extends, flexes side- wise, and rotates neck and head. |
| Stape'dius. | Interior of pyramid of tympanum. | Neck of stapes. | Tympanic branch of facial. | Retracts stapes. |
| Sterna'lis. Sternocleidomas'told. | Two heads, sternum and clavicle. | Mastoid process and outer portion of su- perior oblique line of occipital bone. | Spinal accessory and cervical plexus. | Depresses and rotates head, flexes head and neck, etc. |
| Sternofacia'lis (anomalous). | Upper piece of ster- num, behind sterno- mastoid. | Fascia of subclavian triangle. | | |
| Sternohy'oid. | Manubrium sterni and clavicle. | Body of hyoid bone, | Loop of descendens and communicans nom. | Depresses the hyoid and larynx. |
| Sternothy'roid. | Sternum and cartilage of first rib. | Ala of thyroid car- tilage. | Descendens and com- inunicans hypoglos- si. | Depresses the larynx. |
| Stylo-auricula'ris. | The styloglossus, when it arises from external auditory meatus. | | | |
| Styloglos'sus | Styloid process and stylomaxillary liga- | Side of tongue. | Hypoglossal. | Raises and retracts tongue. |
| Stylohy'oid. | Styloid process of tem- poral bone. | Body of hyoid bone | Facial. | Draws hyoid and tongue upward and backward. |
| Stylopharyn'geus. | Styloid process of tem- poral bone. | Side of pharynx. | Pharyngeal plexus, glossopharyngeal. | pharynx. |
| Subancone'us. | Triceps muscle and humerus above olec- ranon fossa. | Posterior ligament of elbow | Musculospiral. | Tensor of posterior ligament of elbow. |
| Subcla'vius. | lage. | Lower surface of clav- icle | Fifth and sixth cervi- cal., | Draws clavicle down and forward. |
| Subcos'tals. Subcrure'us | See Infracostales. Anterior surface of lower part of femur. | Synovial capsule of knee. | Anterior crural. | Lifts capsule. |
| Subscapula'ris. | Subscapular fossa of scapula. | Lesser tuberosity and neck of humerus. | Subscapular. | Rotates, head of hu- merus inward; lowers the humerus. |
| Supina'tor | Same as Supinator | | | |
| Supina'tor lon'gus. | External condyloid ridge of humerus, intermuscular sep- tum. | Styloid process of ra- dius. | Musculospiral. | Supinates hand, flex- es forearm. |
| Supina'tor ra'dii bre'- vis. | Outer condyle of hu- merus, ligaments of elbow, oblique line of ulna. | Neck of radius, space outside bicipital tu- berosity, and ob- lique line of radius. | seous. | Supinates hand. |
| Supracos'talis. Supraspina'les. | First rib. Summits of spinous processes in cervical region. | Fourth rib To other like summits. | Branches of cervicals. | Aid in supporting neck and head. |
| Supraspina/tus. | Supraspinous fossa and fascia. | Greater tuberosity of humerus. | Suprascapular. | Supports shoulder- joint, raises and adducts arm. |
| Tem'poral. | Temporal fossa and fascia on side of head. | Coronoid process of lower jaw. | Inferior maxillary. | Shuts mouth, retracts jaw. |
| Ten'sor pala'ti. | Scaphoid fossa, spine of sphenoid, vaginal process of tempoial. | About hamular proc- ess into palatine aponeurosis and palate bone. | Otic ganglion. | Renders soft palate tense. |
| Ten'sor tar'sı. | Crest of lacrimal bone. | Tarsal plates. | Infra-orbital branch of facial, | Compresses puncta lacrimalia and lac- rimal sac. |
| Ten'sor tym'pani. | Petrous bone, Fusta- chian tube and canal. | Handle of malleus. | Otic ganglion. | Makes tense the mem- brana tympani. |
| Ten'sor vagi'næ fem'- oris. | Crest and anterior su- perior spinous proc- ess of ilium. | Fascia lata. | Superior gluteal. | Makes tense the fas- cia lata. |
| Ten'sor ve'li palati'ni. | Same as Tensor pala- | | | |
| Te'res ma'jor. | Dorsum of inferior angle of scapula; intermuscular septa. | Posterior bicipital ridge of humerus. | Subscapular. | Draws arm down and backward; rotates it inward. |

| Muscle | Origin. | Insertion. | Nerve-supply. | ACTION. |
|---|--|---|---|--|
| Te'res mi'nor. | Axillary border of scap- ula; intermuscular septa. | | Circumflex. | Rotates humerus out- ward and abducts |
| Thyro-arytænoi'deus. | Thyroid cartilage and cricothyroid mein- brane, | | Recurrent laryngeal. | Relaxes and shortens vocal cords. |
| Thyro-epiglottid'eus. | Thyroid cartilage. | Sacculus laryngis and aryteno - epiglottid-ean folds. | Recurrent laryngeal. | Depresses epiglottis; compresses saccu- lus. |
| Thyrohy'oid. | Oblique line on side of thyroid cartilage. | Greater horn and body of hyoid bone. | Hypoglossal. | Raises and changes form of larynx. |
| Tibia'lis ante'rior | Same as Tibialis an- | | | |
| Tibia'lis anti'cus. | Outer tuberosity and upper part of shaft of tibia, interosseous membrane, fascia and intermuscular septum. | Internal cuneiform and metatarsal bone of great toe | Anterior tibial. | Flexes tarsus and ele- vates inner border of foot |
| Tibia'lis poste'rior. | Same as Tibialis pos- | | | |
| Tibia'lis posti'cus. | Shaft of tibia and fibu- la, interosseous mem- brane, intermuscular septum. | Tuberosity of sca- phoid, internal cu- neiform, and bases of second to fourth metatarsal. | Posterior tibial. | Extends tarsus and turns in the foot. |
| Tibio-accesso'rius. Trachea'lis. | See Flexor accessorius A transverse layer of | longus digitorum | <i>pedis</i> . Sympathetic. | |
| | unstriped fibers in the dorsal portion of the trachea. | | o) in particular. | Lessens caliber of trachea. |
| Trachelomas'toid. | Transverse processes of third to sixth dor- sal, and articular pro- cesses of three or four lowest cervical vertebræ. | mastold process. | Exterior posterior branches of cervi- cal. | Supports head and draws it back or to one side. |
| Tra'gicus | Outer surface of tragus. | Outer surface of tragus | Temporal and pos- terior auricular. | |
| Transversa'lis ab- dom'inis | Poupart's ligament, crest of ilium, six lower ribs, lumbar vertebræ. | Linea alba, crest of pubes, pectineal line. | Intercostal, iliohypo- gastric, ilio-ingui- nal | Compresses the viscera and flexes the thorax. |
| Transversa'lis col'li. | Transverse processes of third to sixth dorsal vertebræ. | Transverse processes of five lowest cer- vical vertebræ. | Cervical nerves. | Supports neck |
| Transver'sus au'ris. | Cranial surface of con- cha. | Circumference of pin- na. | Auricularis magnus and posterior au- ricular. | Retracts helix |
| Transver'sus pe'dis. | Inferior tarsal, meta- tarsal, and transverse metatarsal ligaments. | Base of first phalanx of great toe. | External plantar. | Adducts great toe. |
| Transver'sus perine'i. | Tuberosity of ischium. | Central tendon or sphincter vaginæ. | Perineal branch of pudic. | Tensor of central tendon. |
| Transver'sus perine'i, deep | See Compressor ure- thræ. | | | |
| Transver'sus thora'- | Same as Truangularis sterni. | | | |
| Trape'zius. | Superior curved line of occipital bone, ligamentum nuchæ, spinous processes of last cervical, and all thoracic vertebræ. | Clavicle, spine of scapula, and acro- mion. | Spinal accessory and cervical plexus. | Draws head back- ward or sidewise, rotates scapula, etc. |
| Triangula'rıs men'ti. | See Depressor anguli oris. | | | |
| Triangula'ris ster'ni. | Cartilages of fifth, sixth, and seventh ribs, and sternum. | Inner surfaces sec- ond, third, fourth, and fifth costal car- tilages. | Intercostal nerves. | Forced expiration. |
| Tri'ceps exten'sor cu'biti (<i>3 heads</i>). | External head above and internal head below musculospiral groove, shaft of humerus; middle or long head, lower margin of glenoid cavity. | Tuberosity of olecra- non process of ulna. | Musculospiral, | Extends arm and forearm. |
| Triticeoglos'sus (an- | Cartilago triticea in thyrohyoid ligament. | Side of tongue. | | |

| Muscle. | ORIGIN. | Insertion. | HERVE-SUPPLY. | ACTION |
|----------------------|--|--|------------------|---|
| U'vulæ | Same as Asygos uvulæ | a and a series of the series o | | |
| Vas'tus exter'nus. | Tubercle of femur, great trochanter, and linea aspera. | Common tendon of quadriceps. | Anterior crural, | Extends knee. |
| Vas'tus interme'dius | Same as Crureus | | | |
| Vas'tus inter'nus. | Spiral line and inner lip of linea aspera of femur. | Common tendon of quadriceps. | Anterior crural. | Extends leg, draws patella inward. |
| Vas'tus latera'lis. | Same as Vastus ex- ternus | ! | | |
| Vas'tus media'lis. | Same as Vastus in- | | | |
| Vesicopu'bic. | Pubic bones near symphysis. | External layer of lon gitudinal fibers in bladder | Sympathetic, | Compresses bladder. |
| Voca'lis. | Same as Thyro-ary- tænoideus. | | | |
| Wilson's | A part of constrictor urethræ, q v. | | | |
| Zygomat'ıcus ma'jor | Malar bone before zy- gomatic suture. | Angle of mouth | Facial. | Draws upper hp up ward and outward. |
| Zygomat'ıcus mı'nor | Malar bone behind maxillary suture | Orbicularis oris and levator labit superioris | Facial | Draws upper lip back- ward, upward, and outward |

fibers converge on either side of a central tendon. m.-bound, affected with decreased elasticity of the muscles, combined with increase in their bulk, as a result of overuse. **Bowman's m.**, the ciliary muscle. Bricks's m., the longitudinal part of the ciliary muscle. cardiac m., the muscle of the heart, its fibers are cross-striated. Casser's m., an incorrect name for the anterior ligament of the malleus. Called also laxator tympani minor. Chassaignac's axillary m., an occasional fascicle of muscle tissue extending from the lower edge of the latissimus dorsi across the hollow of the axilla to the brachial fascia or to the lower border of the pectoralis minor. m.-columns, in certain organisms, such as mollusks and worms, the contractile bundles within the central sarcoplasm. Crampton's m., a striated eye-muscle of birds, extending from the annular ligament to the sclera. m.-curve. See myogram. digastric m., a muscle having two fleshy bellies with a fibrous insertion between them. eustachian m., the laxator tympani. femoral m., the crureus. Polius m., the laxator tympani. fusiform m., a spindle-shaped muscle Gavard's m., the oblique muscular elements of the stomach-wall. Guthrie's m., the transversus perinei profundus. Hilton's m., the aryteno-epiglottideus. Horner's m., the tensor tarsi. Houston's m., the compressor venæ dorsalis penis. hypaxial m's, the rectus anticus major, longus colli, the vertebral portion of the diaphragm, and the sacrococcygeus anticus. Called also subvertebral m. infrahyoid m's, the sternohyoid, sternothyroid, thyrohyoid, and omohyoid. **inspiratory m's**, the muscles which act in inspiration, such as the diaphragm, intercostals, and pectorals. **involuntary m**., any muscle that is not under the control of the will: such muscles are, for the most part, non-striated. Koyter's m., the corrugator supercilli muscle. Landström's m., minute muscle-fibers in the fascia around and behind the eyeball, attached in front to the anterior orbital fascia and cyclids. Langer's m., muscular fibers from the insertion of the pectoralis major muscle over the bicipital groove to the insertion of the latissimus dorsi.

Luschka's m's, the uterosacral ligaments, which
contain muscular tissue. Merkel's m., the keratocricoid muscle. Müller's m., the circular part of the ciliary muscle. non-stricted m., unstriped m., a variety without transverse strictions

upon its constituent fibers: such muscles are in almost every case involuntary. Ochsner's m., a sphincter described by Ochsner in the duodenum, 2-4 cm. below the entrance to the common duct. organic m., non-striated muscle pennate m., a muscle with fibers converging on either one or both sides of a central tendon. Phillips's m., a muscular slip from the lateral external ligament of the wrist and the styloid process of the radius to the phalanges. Reisseisen's m's, the muscular elements of the bronchial tubes. rider's m's, the adductor muscles of the thigh. Riolan's m., a slip from the orbicularis palpebrarum, running along the free border of the eyelid. Rouget's m., the circular portion of the ciliary muscle. Santorini's m., the risorius. Santorini's m., circular, the non-striated fibers which incircle the urethra beneath the constrictor urethra. skeletal m's, those which are attached to the bones: nearly always striated. smooth m., a non-striated muscle. somatic m's, skeletal muscles. m.-spindle, a bundle of fine muscular fibers inclosed in a sheath of connective tissue. striated m., striped m., any muscle whose fibers are divided by transverse bands into striations. such muscles are, for the most part, voluntary. synergic m's, synergistic m's, muscles which assist one another in action. thenar m's, the abductor and flexor muscles of the thumb. Treits's m., a muscular suspensory that passes from the left crus of the diaphragm to the points of union of the duodenum and jejunum. unipennate m., a muscle in which the fibers converge on one side of a tendon. ventrolateral See ventrolateral mass, under mass. Veratrinised m. (Kolliker, 1856), frog muscle treated with veratrin, which on stimulation gives a doublesummited curve, with a normal period of shortening, followed by brief relaxation; second, slower contraction with prolonged relaxation. visceral m's, muscles not derived from the somites of the embryo; they may be voluntary or involuntary. voluntary m., any muscle that is under the control of the will: nearly always striated.

musculamin (mus-ku-lam'in). A base isolated from hydrolyzed calf's muscle. It is the same as spermin.

muscular (mus'ku-lar) [L. musculo'ris]. 1. Pertaining to a muscle. 2. Having well-developed muscles.

muscularis (mus-ku-la'ris) [L. "muscular"]. The muscular coat of an organ. m. muco'sse, a layer of non-striated muscular fibers in a mucous membrane.

muscularity (mus-ku-lar'it-e). The condition or quality of being muscular.

muscularize (mus'ku-lar-īz). To change into muscle tissue.

musculation (mus-ku-la'shun). 1. The muscular system or apparatus. 2. The muscular activity or work.

musculature (mus'ku-la-tūr). The muscular apparatus of the body, or of any part of it.

musculi (mus'ku-ii) Latin plural of mus'culus, muscle. m. papilla'res, a name for some of the columnae carneae of the heart ventricles m. pectina'ti, the muscular columns within the auricles of the heart.

musculin (mus'ku-lin). A globulin or protein contained in muscle tissue. It is characterized by its low coagulation-temperature—47° C.

musculine (mus'ku-lin). An extract of animal

muscle: used as a medicine.

musculocutaneous (mus"ku-lo-ku-ta'ne-us). Pertaining to or supplying both muscles and skin.

musculodermic (mus"ku-lo-der'mik). Same as

musculo-elastic (mus"ku-lo-e-las'tik). Composed of muscular and elastic tissue.

musculo-intestinal (mus"ku-lo-in-tes'tin-al). Pertaining to the muscles and the intestines.

musculomembranous (mus"ku-lo-mem'bran-us)
[L. mus'culus muscle + membra'na membrane].
Both muscular and membranous.

musculophrenic (mus"ku-lo-fren'ik) [muscular + phrenic]. Pertaining to or supplying both the muscles and the diaphragm.

musculoprecipitin (mus"ku-lo-pre-sip"it-in). Any one of a series of precipitins used in distinguishing various kinds of meat

musculorachidian (mus"ku-lo-ra-kid'e-an). Pertaining to the spinal muscles.

musculospiral (mus"ku-lo-spiral) [L. mus'culus muscle + spira coil]. Pertaining to muscles and having a spiral direction said of nerves.

musculotegumentary (mus"ku lo-teg-u-men'-tar-e). Pertaining to the muscle and the integument.

musculotendinous (mus"ku-lo-ten'din-us). Pertaining to or composed of muscle and tendon.

musculotonic (mus"ku-lo-ton'ik). Pertaining to muscular contractility.

musculus (mus'ku-lus), pl. mus'culi. Latin for muscle. m. accommodato'rius, the ciliary muscle. m. amato'rius, the obliquus superior of the eye m. cilia'ris [B N A], the ciliary muscle. m. dormita'tor, the orbicularis palpebrarum. m. hip'picus, the tibialis anticus. m. papil'læ op'tici, Nicolai's name for the spindlecells of the optic disk, believed by him to be smooth muscle-fibers. m. pathet'ieus, the obliquus superior of the eye. m. patien'tiæ, the levator scapulæ m. religio'sus, the rectus superior of the eye. m. super'bus, the rectus superior of the eye.

muscusan (mus'ku-san). A proprietary preparation of zinc dibordiortho-oxybenzoate: used as a bactericide.

musennin (mu'sen-in). See mussenin.

mushbite (mush'bit). In dentistry, the taking of a bite in one piece of wax so as to secure an impression of both upper and lower teeth.

mushroom (mush'room). See agaric.

musicomania (mu"zik-o-ma'ne-ah) [Gr. μουσική music + μανία madness]. Insane fondness for music.

musicotherapy (mu"zik-o-ther'ap-e) [Gr. μουσική music + θεραπεία treatment]. The treatment of

musin (mu'sin). A proprietary laxative preparation of tamarinds.

musk (musk) [L. mos'chus]. A dried secretion from the preputial sac of the musk-deer, Mos'chus moschif'erus, a mammal of central Asia. It is a fragrant restorative and stimulant, and is used in low fevers, in hysteric spasms, etc. Dose, 2-10 gr. (0 133-0.66 gm.); of the tincture, 15-60 min. (1-4 c.c.). artificial m., Baur's m., trinitrobutyltoluene, C(CH₃)₃.C₀H(NO₂)₃CH₃. a substance much resembling true musk. Dose, 10 gr. (0.66 gm.).

musomania (mu-zo-ma'ne-ah). Same as musico-

mussanin (mus'an-in). An alkaloid from Acacia' anthelmin'tica: anthelmintic. Dose, 3-5 gr. (0.2-0.3 gm.).

mussel poisoning. See mytilotoxism.

Musset's sign (mu-sāz') [Louis Charles Alfred de Musset, French poet, 1810–1857, who died of aortic insufficiency]. See under sign.

mussitation (mus-it-a'shun) [L. mussita're to mutter]. The moving of the lips with no utterance of sounds.

must (must) [L. mus'tum]. The unfermented juice of grapes.

mustard (mus'tard) [L sina'pis] 1 A plant of the genus Brassica 2. The ripe seeds of Brassica nigra (black mustard) and of Sinapis (Brassica) alba (white mustard) When mustard seed are crushed and moistened volatile oils (see mustard oil, under oil) are liberated from glucosids (see sinegrin and sinalbin). These oils give mustard its counterirritant, stimulant, and revulsant properties. It is used in internal pains and congestions, as gastric colic, abdominal pains, colic, neuralgia, rheumatism, headache, vomiting, and cerebral congestion. It is also employed as a condiment and as an emetic. Dose, as an emetic, 1-2 dr. (4-8 gm.), of volatile oil of black mustard, \(\frac{1}{8} - \frac{1}{4}\) min (0008-0.0165 cc.). brown m., Brassica alba
Brassica alba

mutacism (mu'tah-sizm). I The improper pronunciation of the sounds of mute letters. 2. Same as mylacism.

mutant (mu'tant) [L. muta're to change]. A sport or variation which breeds true

mutarotation (mu"tah-ro-ta'shun) A change in the specific rotation of a solution of certain sugars which occurs on standing Called also multirotation, birotation, and tautorotation

mutase (mu'tās). A vegetable food preparation rich in proteins.

mutation (mu-ta'shun) [L. muta'tro, from muta're to change]. 1. Change, a change in form or quality 2. In biology, a permanent transmissible change in the characters of an offspring from those of its parents; also, an individual showing such a change; a sport (De Vries). See theory of mutation, under theory.

mutational (mu-ta'shun-al). Pertaining to mutation (2d def).

mute (mūt) [L. mu'tus]. 1. Unable to speak. 2. One who cannot speak.

muthanol (mu'than-ol). Trade name for bismuth hydroxia in oil.

mutilation (mu-til-a'shun) [L. mutila'tio]. The act of depriving of a limb, member, or important part; deprival of an organ.

Mutisia viciæfo'lia (mu-tiz'e-ah). A compositeflowered plant of South America extensively used there as a sedative and in various diseases of the heart, respiratory organs, and nervous system.

mutism (mu'tizm). Dumbness, inability to speak. In psychiatry, abnormal inhibition to speech.

mutualism (mu'tu-al-izm). The relation of mutual

765

mutualist (mu'tu-al-ist). Any organism or species associated with another, but neither commensal nor parasitic.

M. V. Abbreviation for Med'icus Veterina'rius, veterinary physician.

My. An abbreviation for myopia.

my. An abbreviation for mayer.

Myà's disease (me-āz') [Giuseppe Myd, Italian physician, 1857-1911]. See under disease.

myalgia (mi-al'je-ah) [Gr. μῦς muscle + ἄλγος pain]. Pain in a muscle or muscles.

myameba, myamæba (mi-am-e'bah). A muscle-cell.

myasis (mi-a'sis). Same as myiasis.

myasthenia (mi-as-the'ne-ah, mi"as-the-ni'ah) [Gr. μΰς muscle + ἀσθένεια weakness]. Muscular debility angiosclerotic m., excessive muscular fatigue due to vascular changes. m. gas'trica, weakness and loss of tone in the muscular coats of the stomach, atony of the stomach m. gra'vis, a chronic progressive muscular weakness without atrophy, asthenobulbospinal paralysis m. gra'vis pseudoparalyt'ica, a disease marked by excessive tiring of the voluntary muscles, shown in rapid decrease of contractility (Willis, 1685, Erb, 1878, Goldflam, 1803).

myasthenic (mi-as-then'ik). Pertaining to or characterized by muscular weakness

myatonia (mi-ah-to'ne-ah) [Gr. μv s muscle $+ \alpha$ neg. $+ \tau \delta v o v$ s tone] Deficiency or absence of muscular tone. m. congen'ita (Oppenheim, 1900), a disease of early childhood, marked by general hypotonia of the muscles. It is congenital, but not hereditary Called also amyotonia congenita, Oppenheim's disease, and congenital atonic pseudoparalysis.

myatony (mi-at'o-ne) Same as myatonia.

myatrophy (mi-at'ro-fe) [Gr. $\mu \hat{v}s$ muscle + atrophy]. Atrophy of a muscle; muscular atrophy.

myautonomy (mi-aw-ton'o-me) [Gr $\mu \hat{v}_s$ muscle + $a\hat{v}\tau \delta_s$ self $+ \nu \delta \mu o_s$ law]. A condition in which muscular contraction aroused by stimulation is so long delayed that it appears to occur independently of the stimulation.

mycelian (mi-se'le-an). Pertaining to mycelium.

mycelioid (mi-se'le-oid) Having the radiate filamentous appearance of mold colonies

mycelium (mi-se'le-um) [Gr. μύκης fungus + ηλος nail]. The vegetative body of a fungus composed of a mass of filaments called hyphæ.

mycethemia (mi-seth-e'me-ah) [Gr. μύκης fungus + alμa blood]. The presence of fungi in the blood.

mycetism, mycetismus (mi'set-izm, mi-set-iz'-mus) [Gr. μύκης fungus]. Mushroom-poisoning.

mycetocyte (mi-se'to-sit). One of the cells which make up a mycetoma.

mycetogenic, mycetogenous (mi"set-o-jen'ik, mi-set-oj'en-us) [Gir. μύκης fungus + γεννῶν to produce]. Caused by fungous growths.

mycetoma (mi-se-to'mah) [Gr. μόκης fungus + ωμα tumor] τ. A tumor caused by a fungus, especially fungus-foot or Madura foot, a disease endemic in India, and marked by swelling of the foot, in which nodules and vesicles develop. The parts become filled with sinuses, which discharge pus and penetrate into the bone. The pus contains granules, red, black, or yellow in color, which are masses of the fungus producing the disease. It is now believed to be caused by the organism, Actinomy'res madu'ræ. 2 An organ-like mass of cells evolved for the purpose of harboring symbiotic organisms. They are found mostly in the arthropods. white m., mycetoma in which the granules are colorless or nearly so.

Mycetosoa (mi-se-to-zo'ah) [Gr. μύκης fungus + ζώον animal]. The slime-molds; so called especially when classed as animals.

myclosene (mi'klo-zēn). A proprietary preparation of bone-marrow used in treating deafness.

myco-agglutinin (mi"ko-ag-lu'tin-in). An agglutin developed in the blood during mycogenic infections, which has the power of agglutinating the infecting fungi.

Mycobacteriaces (mi'ko-bak-te-re-a'se-e). A systematic family under the order Actinomycetales. The members are parasitic, rod-shaped organisms which often show irregular forms and often take stains unevenly. The genera are: Corynebacterium, Fusiformis, Myobacterium, and Pfeifferella.

Mycobacteriales (mi"ko-bak-te-re-a'les). A systematic order under the class Schizomycetes. It includes the slime-molds whose cells during the vegetative stage are united into a pseudoplasmodium.

Mycobacterium (mi"ko-bak-te're-um). A genus of bacteria of the order Actinomycetales under which are now placed the bacilli of tuberculosis and of lepra and the smegma bacillus. They are slender rods, Gram-positive, acid fast, and sometimes show typical dichotomous branching. M. bu-tyr'icum, an organism resembling M. tuber-culosis, which is found in milk and in butter. M. "grass bacillus," a non-pathogenic form of mycobacterium found on grass and in cow dung. M. lep'ræ, an acid-fast organism resembling M. tuberculosis which is found in enormous numbers in cases of leprosy and is now generally accepted as the cause of that disease. M. "Much's granules,'' granular forms of M. tuberculosis found in young cultures which are Gram-positive, but not acid fast. M. smeg'matis, an acid-fast organism found in the smegma præputii and which resembles M. tuberculosis, but is not pathogenic. M. "timothy bacillus," an acid-fast form isolated from timothy grass and from hay lofts. It grows readily on culture-media and takes on a deep red or dark yellow color. M. tuberculo'sis, a slender, aerobic acid-fast organism which causes tuberculosis in man and in many animals. Called also Bacillus tuberculosis and Koch's bacillus. Tuberculosis is common among domestic animals and cultures from such sources closely resemble the human type, but differ chiefly in their pathogenic ability and in minor cultural characteristics. Hence the following self-explanatory names M. luberculosis avium, M. tuberculosis avium, M. tuberculosis losis bovium, M. tuberculosis piscium, and others.

mycocyte (mi'ko-sīt) [Gr. $\mu b \kappa o s$ mucus + $\kappa b r o s$ cell]. A cell of mucous tissue, a mucus cell.

mycoderma (mi-ko-der'mah). [See Mycoderma]
Mucous membrane

Mycoderma (mi-ko-der'mah) [Gr. μβκης fungus + δέρμα skin]. A genus of fungi. M. ace'ti. See Acelobacter. M. dermati'tis, an organism causing a blastomycetic infection in man. M. immi'te. See Coccidiondes.

mycodermatitis (mi"ko-der-mat-i'tis). Inflammation of a mucous membrane.

mycodesmoid (mi-ko-des'moid) [Gr. $\mu b \kappa \eta_3$ fungus + δέσμη bundle + είδος like]. A colony of Micrococ'cus ascofor'mans in the cut end of the spermatic cord after castration in horses.

mycofibroma (mi"ko-fi-bro'mah). Same as my-codesmoid.

mycogastritis (mi"ko-gas-tri'tis) [Gr. μύκης fungus + gastritis]. Inflammation of the mucous membrane of the stomach.

mycohemia, mycohemia (mi-ko-he'me-ah) [Gr. μbκηs fungus + αίμα blood]. The presence of bacteria in the blood.

mycology (mi-kol'o-je) [Gr. μύκης fungus + λόγος discourse]. The science and study of fungi.

mycolysin, mycolysine (mi-kol'is-īn). A preparation of plant cells, alcohol, milk ferments, and non-pathogenic bacteria. used to excite phagocytosis in the human body in the treatment of cancer and tuberculosis.

mycolysin-tuberculin. A mixture of tuberculin and yeast juices. mycomyringitis (mi'ko-mi-rin-ji'tis) [Gr. μίνης fungus + μύριγξ membrane + -ιτις inflammation]. Myringomycosis.

Myconostoc (mi-ko-nos'tok). A genus of schizo-mycetic fungi.

myconucleo-albumin (mi"ko-nu"kle-o-al-bu'min). An offensive and defensive toxin of microbic life.

mycophylaxin (mi"ko-fil-aks'in) [Gr. μύκης fungus + phylaxin]. Any phylaxin that destroys microbes. See phylaxin.

mycoprecipitin (mi"ko-pre-sip'it-in) [Gr. μύκης fungus + precipitin]. A precipitin which will precipitate the proteins of yeast and fungi.

mycoprotein (mi-ko-pro'te-in) [Gr. μύκης fungus + protein]. The albuminous matter of bacterial cells. When set free in the tissues it is capable of producing the effects of the bacteria themselves.

mycoproteination (mi"ko-pro-te-in-a'shun). Inoculation with dead bacterial cells.

mycoproteinization (mi"ko-pro-te-in-iz-a'shun). Mycoproteination.

mycopus (mi'ko-pus). Mucus containing pus.

mycorrhiza (mi-kor-i'zah) [Gr. μύκης fungus + βίζα root]. A peculiar mycelial growth seen on the roots of certain plants, and thought to be concerned with the fixation of nitrogen.

mycose (mi'kδs) [Gr. μύκης fungus]. Ergot-sugar or trehalose. See trehalose.

mycosin (mi'ko-sin) [Gr. μύκηs fungus]. A compound thought to exist in the cell-wall of fungi.

mycosis (mi-ko'sis) [Gr. μύκης fungus]. Any disease caused by a fungus. m. cu'tis chron'ica, a chronic skin disease caused by a fungus. m. fa-vo'sa. Same as favus. m. frambossioi'des, yaws. m. fungoi'des, a very fatal skin disease marked by the development upon the face, scalp, and chest of firm, reddish tumors that are painful and have a tendency to spread and ulcerate. The disease leads to cachexia, and usually ends fatally after continuing a number of years. It is probably due to bacterial infection. Called also granuloma fungoides, granuloma sarcomatodes, inflammatory fungoid neoplasm, eczema scrofuloderma, and ulcerative scrofuloderma. m. intestina'lis, anthrax. m. leptoth'rica, a disease of the tonsil and pharynx produced by Lep'tothrix bucca'lis.

mycososin (mi-ko-so'zin) [Gr. μύκης fungus + sozin]. Any sozin that destroys microbes.

mycotic (mi-kot'ik). Pertaining to a mycosis or caused by vegetable microorganisms.

mycoticopeptic (mi-kot"ik-o-pep'tik). Both mycotic and peptic.

mycotoxination, mycotoxinization (mi-ko-toks-in-a'shun, mi-ko-tok-sin-iz-a'shun). Inoculation with bacterial products.

mycteric (mik-ter'ik) [Gr. μυκτήρ nose]. Pertaining to the nasal cavities.

mycteroxerosis (mik"ter-o-ze-ro'sis) [Gr. μυκτήρ nose + ξηρός dry]. Dryness of the nostrils.

mydalein (mi-d. 'le-in) [Gr. μνδαλέσς putrid]. A poisonous ptomain from putrefied viscera. Poisoning by it is attended with salivation, dilatation of the pupils, rise of temperature followed by a fall, and arrest of the heart in diastole.

mydatoxin (mi-dat-oks'in) [Gr. μυδάειν to be damp + toxin]. A deadly ptomain, C₀H₁₃NO₂, from decaying flesh; also obtained from human intestines kept for a long time at a low temperature.

mydin (mi'din) [Gr. μυδῶν to be damp]. A nonpoisonous ptomain, C₀H₁₁NO₂, from viscera of dead bodies, and found also in cultures of the typhoid bacillus.

mydriasis (mid-ri'as-is) [Gr. μυδρίασις]. Extreme or morbid dilatation of the pupil; dilatation of the pupil as the effect of a drug. alternating m., varying inequality of the pupils, mydriasis occurring now on one side, now on the other. Called also

springing m. bounding m., alternating mydriasis. paralytic m., that caused by paralysis of the oculomotor nerve. spasmodic m., spastic m., that due to spasm of the dilator of the iris or to overaction of the sympathetic. spinal m., that due to lesion of the ciliospinal center of the spinal cord. springing m. See alternating m.

mydriatic (mid-re-at'ik). 1. Dilating the pupil. 2. Any drug that dilates the pupil. The principal mydriatics are daturin, coniin, cocain, eucain, gelsemin, atropin, homatropin, hyoscyamin, holocain, and ephedrin.

mydrin (mid'rin). A proprietary mydriatic composed of 1 part of homatropin and 100 parts of ephedrin. It is a white powder, soluble in water, and is used especially where an evanescent mydriatic is desired.

mydrol (mid'rol). Iodomethylphenylpyrazolon; a bitter, soluble, mydriatic powder.

myectomy (mi-ek'to-me) [Gr. μῦς muscle + ἐκτομή excision]. Excision of a portion of muscle.

myectopia, myectopy (mi-ek-to'pe-ah, mi-ek'to-pe) [Gr. μθs muscle + ἔκτοπος displaced]. Displacement of a muscle.

myel (mi'el) [Gr μυελός marrow]. The spinal cord. myelalgia (mi-el-al'je-ah) [Gr. μυελός marrow + ἄλγος pain]. Pain in the spinal cord.

myelanalosis (mi"cl-an-al-o'sis) [Gr. μυελός marrow + άνάλωσις wasting]. Wasting of the spinal marrow, tabes dorsalis.

myelapoplexy (mi-el-ap'o-pleks-e) [Gr. μυελός marrow + apoplexy]. Hemorrhage within the spinal cord.

myelasthenia (mi"el-as-the'ne-ah) [Gr. μυελός marrow + asthenia]. Neurasthenia due to some cause which affects the spinal cord.

myelatelia (mi"el-at-e'le-ah) [Gr. μυελός marrow + ἀτέλεια imperfection]. Imperfect development of the spinal cord.

myelatrophy (mi-el-at'ro-fe) [Gr. μυελός marrow + atrophy]. Atrophy of the spinal cord.

myelauxe (mi-el-awks'e) [Gr μυελός marrow + αυξή increase]. Morbid increase in size of the spinal cord.

myelemia, myelemia (mi-el-e'me-ah) [Gr. μυελός marrow + alμα blood]. The occurrence of myelocytes or neutrophil leukocytes in the blood; myeloid leukemia, splenomedullary leukemia.

myelen (mi'el-en). A red, syrup-like extract of the bone-marrow of oxen: used for rickets, leukemia, and tuberculosis.

myelencephalon (mi"el-en-sef'al-on) [Gr. μυελός marrow + ἐγκέφαλος brain]. 1. The cerebrospinal axis. 2. The after-brain; the posterior part of the rhombocephalon or posterior cerebral vesicle of the embryo, from which are developed the medulla oblongata and the lower part of the fourth ventricle.

myelencephalospinal (mi"el-en-sef-al-o-spi'nal).

Pertaining to the brain and the spinal cord; cerebrospinal.

myelencephalous (mi"el-en-sef'al-us). Cerebrospinal.

myeleterosis (mi"el-et-er-o'sis) [Gr. μυελός marrow + ἐτέρωσις alteration]. Morbid alteration of the spinal cord.

myelic (mi-el'ik) [Gr. μυελός marrow]. Pertaining to the spinal cord.

myelin (mi'el-in) [Gr. μυελός marrow]. r. The white substance of Schwann; the fat-like substance forming a sheath around the medullated (myelinated) nerve-fibers. See myelin sheath, under sheath. 2. Any one of a certain group of lipoid substances found in various normal and pathologic tissues and differing from fats in being doubly refractive. 3. A monaminomonophosphatid found in small quantities in the brain.

myelinated (mi'el-in-a-ted). Medullated.

myelination (mi''el-in-a'shun). Same as myelinization.

myelinic (mi-el-in'ik). Pertaining to, or of the nature of, myelin.

myelinization (mi-el-in-iz-a'shun). The act of furnishing with or taking on myelin.

myelinogenesis (mi-el-in-o-jen'es-is). Myelinization.

myelinogenetic (mi-cl-in"o-jen-et'ik). Producing myelin; producing myelinization

myelinogeny (mi"e-lin-oj'en-e) [myelin + Gr. γενto produce]. The development of the myelin of nerve-fibers; the myelinization of nerve-fibers.

myelinosis (mi"el-in-o'sis). A form of fatty necrosis in which myelin is formed.

myelitic (mi-el-it'ik). Pertaining to myelitis.

myelitis (mi-el-i'tis) [Gr. μυελός marrow]. flammation of the bone-marrow. See osteomyelitis. 2. Inflammation of the spinal cord. See *leukomyelitis*, *poliomyelitis*. The symptoms of myelitis vary with the location of the lesion, and include pain in the back, girdle-sensation, hyperesthesia, formi-cation, anesthesia, motor disturbances, paralysis, increase of the reflexes, paralysis of the sphincters, bed-sores, and, in the later stages, spasmodic contractions of the paralyzed limbs. acute m., simple myelitis due to exposure, disease, or injury apoplectiform m., myelitis in which the paralysis comes on suddenly. ascending m., that which moves cephalad along the cord. bulbar m., that which involves the oblongata. cavitary m., that which is accompanied by the formation of cavities central m., affects affects chiefly the gray substance of the cord. m. cervicalis, myelitis affecting the cervical portion of the cord, and marked by muscular atrophy of the arms and spastic paralysis of the legs. chronic m., a slowly progressing form. compression-m., a form due to pressure on the cord, as of a tumor. concussion-m., a form due to spinal concussion cornual m., that which affects the horns of gray matter in the cord. descending m., a myelitis that progresses caudad along the cord. diffuse m., involves large and variously placed sections of the cord. disseminated m., a form with several distinct foci. focal m., myelitis affecting a small area only, or in other cases several small areas. foudroyant m. Same as central m. funicular m., myelitis involving the white matter, especially the posterior funiculus; it is characteristic of pernicious anemia. hemorrhagic m., a form associated with hemorrhage. interstitial m., a variety in which the neuroglia is chiefly involved, resulting in increase of the interstitial matter and atrophy of the nervous tissue Called also sclerosing m. parenchy-matous m., a variety in which mainly the proper nerve substance of the myelon is affected. periependymal m., myelitis surrounding the central canal of the cord. sclerosing m., a form characterized by hardening of the cord and over-growth of the interstitial tissue. Called also interstitial m. systemic m., myelitis which affects distinct tracts or systems in the cord. transverse m., a form which extends across the cord. traumatic m., myelitis which follows injury to the cord.

myeloblast (mi'el-o-blast) [Gr. μυελός marrow + βλαστός germ]. One of the large mononuclear nongranular cells of bone-marrow which develop into myelocytes.

myeloblastemia (mi''el-o-blas-te'me-ah) [myeloblast + Gr. alμa blood]. Presence of myeloblasts in the blood.

myeloblastoma (mi''el-o-blas-to'mah). A tumor composed of myeloblasts. The term includes myelogenous leukemia and chloroma.

myelobrachium (mi"el-o-bra'ke-um) [Gr. μυελός marrow + βραχίων arm]. The inferior tubercle of the cerebellum.

myelocele (mi'el-o-sēl). 1. [Gr. μυελός marrow + κοιλία cavity.] The central canal of the spinal cord.
2. [Gr. μυελός marrow + κήλη tumor.] Spina bifida with protrusion of the spinal cord.

myelocene (mi'el-o-sēn). A preparation of bone-marrow: used in chronic ear diseases, psoriasis, and other affections.

myelocone (mi'el-o-kōn) [Gr. μυελός marrow + κόμις dust]. A fatty matter from the brain.

myelocyst (mi'el-o-sist) [Gr. μυελός marrow + κόστις cyst]. Cysts that are developed from rudimentary medullary canals.

myelocystic (mi"el-o-sis'tik). Both myeloid and cystic in structure.

myelocystocele (mi''el-o-sis'to-sēl) [Gr. μυελός marrow + κύστις cyst + κήλη tumor]. A cystic tumor of the spinal cord.

myelocystomeningocele (mi"el-o-sis"to-mening'o-sēl). Myelocystocele blended with meningocele.

myelocyte (mi'el-o-sit) [Gr. μυελός marrow + κbros cell]. 1. A marrow-cell; one of the typical cells of red bone-marrow. They are slightly larger than leukocytes, having vesicular nuclei and a cytoplasm containing neutrophil, eosinophil, or basophil granules. From them are developed the granular leukocytes of the blood. Myelocytes occur in the blood in certain forms of leukemia. 2. Any cell of the gray matter of the nervous system.

myelocythemia, myelocytosis (mi"el-o-si-the'-me-ah, mi"el-o-si-to'sis) [myelocyte + Gr. alμα blood]. Excess of myelocytes in the blood.

myelocytic (mi"el-o-sit'ik). Relating to or of the nature of myelocytes.

myelocytoma (mi"el-o-si-to'mah). Chronic myelocytic leukemia.

myelocytosis (mi"el-o-si-to'sis). The presence of myelocytes in the blood

myelodiastasis (mi"el-o-di-as'tas-is) [Gr. μυελός marrow + διάστασις separation]. Disintegration of the spinal marrow.

myelodysplasia (mi''el-o-dis-pla'se-ah) [Gr. $\mu\nu\epsilon\lambda\delta s$ marrow $+\delta\nu s$ - ill $+\pi\lambda\delta\sigma\sigma\epsilon\iota\nu$ to form]. Defective development of any part (especially the lower segments) of the spinal cord (Fuchs, 1909).

myelo-encephalitis (mi''cl-o-en-sef-al-i'tis) [Gr. μυελός marrow + ἐγκέφαλος brain + -ιτις in-flammation]. Inflammation of the spinal cord and brain. epidemic m., acute anterior poliomyelitis. See poliomyelitis.

myeloganglitis (mi"el-o-gan-gli'tis). A disease with choleraic symptoms attributed to ganglitis of the solar and the hepatic plexus.

myelogenesis (mi"el-o-jen'es-is). The development of the nervous system, especially of the brain and cord.

myelogenic, myelogenous (mi"el-o-jen'ik, mi-eloj'en-us) [Gr. μυελός marrow + γεννῶν to produce]. Produced in the bone-marrow

myelogeny (mi-el-oj'en-e). The maturation of the myelin sheaths of nerve-fibers in the development of the central nervous system.

myelogone (mi'el-o-gŏn). A white, blood-cell of the myeloid series having a reticulate violaceous nucleus, well-stained nucleolus, and a deep blue rim of cytoplasm.

myelogonic (mi-el-o-go'nik). Characterized by the presence of myelogones.

myelogonium (mi"el-o-go'ne-um). Myelogone.

myelography (mi-el-ograf-e) [Gr. μυτλός spinal cord + γράφειν to write]. Roentgenographic demonstration of the spinal cord.

myeloid (mi'el-oid) [Gr. μυελός marrow + είδος form]. 1. Pertaining to, derived from, or resembling bone-marrow. 2. Pertaining to the spinal cord. 3. Having the appearance of myelocytes, but not derived from bone-marrow.

myeloidin (mi-el-oi'din) [Gr. μυελός marrow + είδος form]. A substance resembling myelin, occurring in the pigmented epithelial cells of the retina.

myeloidosis (mi"el-oi-do'sis). The development of myeloid tissue, especially hyperplastic development of such tissue.

myelolymphangioma (mi"el-o-lim-fan-je-o'mah). Elephantiasis.

myelolymphocyte (mi"el-o-lim'fo-sit). An abnormal form of lymphocyte occurring in bonemarrow.

myeloma (mi-el-o'mah) [Gr. μυελός marrow + ωμα tumor]. 1. A tumor-like hyperplasia of the bonemarrow tissue. 2. Any medullary tumor. 3. Giant-cell sarcoma. 4. A slow-growing tumor of a tendinous sheath containing myeloplaxes. glant-cell m., a tumor of bone-marrow containing many giant-cells. multiple m., a disease marked by circumscribed or diffuse tumor-like hyperplasia of the bone-marrow, and usually associated with Bence-Jones protein in the urine. The patient complains of neuralgic pains; later painful swellings appear on the ribs and skull and spontaneous fractures may occur. Called also Kahler's disease, Huppert's disease, myelopalhic albumosuria, Bence-Jones' albumosuria, and lymphadenia ossea.

myelomalacia (mi"el-o-mal-a'se-ah) [Gr. μυελός marrow + μαλακία softening]. Morbid softening of the spinal cord.

myelomatoid (mi-el-o'mat-oid). Resembling myeloma.

myelomatosis (mi''el-o-mat-o'sis). Multiple myeloma. See myeloma.

myelomenia (mi''el-o-me'ne-ah) [Gr. μυελός marrow + μήν month]. Metastasis of the menstrual discharge to the spinal cord.

myelomeningitis (mi"cl-o-men-in-ji'tis) [myelitis + meningitis] Inflammation of the spinal cord and its membranes.

myelomeningocele (mi"el-o-men-ing'o-sēl) [Gr. μυελός marrow + meningocele]. Spina bifida with hernial protrusion of the cord and its meninges.

myelomere (mi'el-o-mēr) [Gr. μυελός marrow + μέρος part]. One of the segments, corresponding to a pair of mesoblastic somites, in the brain and spinal cord of the embryo.

myelomyces (mi-el-om'is-ēz) [Gr. μυελός marrow + μύκης fungus]. Encephaloid cancer.

myelon (mi'el-on) [Gr. μυελός marrow]. The spinal

myeloneuritis (mi"el-o-nu-ri'tis). Multiple neuritis in which there is also myelitis.

myelonic (mi-el-on'ik). Pertaining to the myelon. myeloparalysis (mi"el-o-par-al'is-is) [Gr. μυελός

marrow + paralysis]. Spinal paralysis.

myelopathic (mi"el-o-path'ik). 1. Caused by dis-

ease of the spinal cord. 2. Same as myelogenous. myelopathy (mi-el-op'ath-e) [Gr. μυελός marrow + πάθος sickness]. Any disease of the spinal cord.

myelopetal (mi-el-op'e-tal) [Gr. μυελός marrow + L. pe'tere to seek for]. Moving toward the spinal cord.

myelophthisis (mi''el-o-ti'sis) [Gr. μυελός marrow + φθίσις wasting]. Wasting of the spinal cord.

myeloplaque (mi'el-o-plāk). Same as myeloplax.
myeloplast (mi'el-o-plast) [Gr. μυελός marrow +
πλαστός formed]. Any leukocyte of the bohemarrow.

myeloplax (mi'el-o-plaks) [Gr. μυελός marrow + πλάξ plate]. Any multinuclear giant-cell of the bone-marrow. Robin's m's, the osteoclasts.

myeloplaxoma (mi''el-o-plaks-o'mah) [myeloplax + Gr. -ωμα tumor]. A tumor containing myeloplaxes.

myeloplegía (mi''el-o-ple' je-ah) [Gr μυελός marrow + πληγης stroke]: Spinal paralysis.

myelopore (mi'el-o-pōr) [Gr. μυελός marrow + πόρος opening]. A canal or opening in the spinal cord.

myelorrhagia (mi''el-o-ra'je-ah) [Gr. μυελός marrow + ἡηγυθυαι to burst forth]. Spinal hemorrhage.

myelorrhaphy (mi-el-or'af-e) [Gr. μυελός marrow + ραφή suture]. Suturation of a severed spinal cord.

myelosarcoma (mi"el-o-sar-ko'mah). A sarcoma of the bone-marrow.

myelosclerosis (mi"el-o-skle-ro'sis) [Gr. μυελός marrow + sclerosis]. Sclerosis of the spinal cord.

myelosis (mi-el-o'sis)
1. The formation a of tumor of the spinal cord.
2. Multiple myeloma. See myeloma.

myelospasm (mi'el-o-spazm) [Gr. μυελός marrow + spasm]. Spasm of the spinal cord.

myelospongium (mi"el-o-spon'je-um) [Gr $\mu\nu\epsilon\lambda\delta s$ marrow + $\sigma\pi\delta\gamma\gamma\sigma_0$ sponge]. The network whence the neuroglia is developed it pervades the embryonic cord, and is composed of the spongio-blasts and their branching processes.

myelosyphilis (mi"cl-o-sif'il-is). Syphilis of the myelon.

myelosyphilosis (mi''el-o-sif-il-o'sis). Any syphilitic affection of the spinal cord.

myelosyringosis (mi"cl-o-si-rin-go'sis) [Gr. μυελός marrow + σῦριγξ pipe]. Same as syringomyelia.

myelotherapy (mi''el-o-ther'ap-e) [Gr. μυελός marrow + therapy]. The therapeutic use of marrow, or of the substance of the spinal cord.

myelotome (mi-el'o-tōm) [Gr μυελός marrow + τέμνειν to cut]. r. An instrument for making sections of the spinal cord. 2. An instrument used for cutting the spinal cord squarely across in removing the brain in postmortem examinations.

myelotoxic (mi-el-o-toks'ik) [Gr μυελός marrow + τοξικόν poison] 1 Destructive to bone-marrow.
2. Arising from diseased bone-marrow.

myelotoxin (mi"el-o-toks'in). A cytotoxin which causes destruction of the marrow-cells.

myenteric (mi-en-ter'ik). Pertaining to the myenteron.

myenteron (mi-en'ter-on) [Gr μῦς muscle + ἔντερον intestine]. The muscular coat of the intestine.

myesthesia (mi-es-the'zhe-ah) [Gr $\mu \hat{v}s$ muscle + $\alpha i \theta \eta \sigma \iota s$ sensation] Muscle sensibility, sensibility to impressions coming from the muscles.

Myg. Abbreviation for myriagram.

mylasis (mi-i'as-is) [Gr. μνῖα fly]. Any disease caused by maggots or flies. m. dermato'sa, infection of the skin with the larvæ of flies. m. imagino'sa, myiasis produced by the imago, or full-grown fly. intestinal m., the presence of living larvæ in the intestines. m. larvo'sa, a myiasis produced by larvæ or maggots. m. musco'sa, a myiasis produced by the common housefly. m. ostruo'sa, one produced by a bot-fly or gad-fly (Œs'trus)

myiocephalon, myiocephalum (mi-e-o-sef'alon, -um) [Gr. $\mu\nu$ ia fly $+ \kappa\epsilon\varphi\alpha\lambda\eta$ head]. Projection of the iris through a rent in the cornea.

myiodesopsia (mi''i-o-des-op'se-ah) [Gr. μυιώδης fly-like + δψις vision]. The seeing of muscæ volitantes.

myiosis (mi-i-o'sis). See myiasis.

myitis (mi-i'tis) [Gr. $\mu \hat{v}s$ muscle + - $\iota \tau \iota s$ inflammation]. Inflammation of a muscle; myositis.

myko-. For words thus beginning, see under myco-.

mykol (mi'kol). An alcohol existing in the bodies of certain bacteria.

Myl. Abbreviation for myrialiter

mylohyoid (mi-lo-hi'oid) [Gr. μύλη mill + hyoid].
Pertaining to the molar teeth and hyoid bone.

mylohyoideus (mi'lo-hi-oid'e-us). See muscles, table of.

Mym. Abbreviation for myriameter.

myo-. A prefix denoting some relation to a muscle or to muscles.

myo-albumin (mi-o-al-bu'min). Muscle albumin. myo-albumose (mi-o-al'bu-mōs). A protein from muscle-iuice.

myo-architectonic (mi"o-ar-ke-tek-ton'ik) [Gr. μυs muscle + architectonic]. Pertaining to the structure of muscle.

myoatrophy (mi-o-at'ro-fe). Myatrophy.

myoblast (mi'd-blast) [Gr. μῦς muscle + βλαστός germ]. An embryonic cell which becomes a cell of the muscle-fiber.

myoblastic (mi-o-blas'tik). Pertaining to a myoblast.

myobradia, miobradyia (mi-o-bra'de-ah) [Gr. $μ\hat{v}_s$ muscle $+ βραδ\dot{v}_s$ slow]. A slow, sluggish reaction of muscle to electric stimulation.

myocardiac, myocardial (mi-o-kar'de-ak, mi-o-kar'de-al). Pertaining to the muscular tissue of the heart

myocardiogram (mi-o-kar'de-o-gram). A tracing made by the myocardiograph.

myocardiograph (mi-o-kar'de-o-graf) [Gr. $\mu \hat{v}s$ muscle $+ \kappa a \rho \delta la$ heart $+ \gamma \rho \hat{a} \varphi \epsilon \iota \nu$ to record]. An instrument for making a tracing of the movements of the heart muscles.

myocardism (mi-o-kar'dizm). A tendency toward the development of myocardial weakness and degeneration.

myocarditic (mi"o-kar-dit'ik). Pertaining to myocarditis.

myocarditis (mi"o-kar-di'tis) [Gr. μῦς muscle + καρδία heart + -ιτις inflammation]. Inflammation of the myocardium; inflammation of the muscular walls of the heart. fragmentation m. fragmentation of the myocardium. indurative m., myocarditis causing hardening of the heart muscle. m. scarlatino'sa, myocarditis sometimes seen associated with scarlet fever.

myocardium (mi-o-kar'de-um) [Gr. μῦς muscle + καρδία heart]. The muscular substance of the heart; the heart muscle.

myocardol (mi-o-kar'dol). A proprietary preparation of caffein citrate and ergotin used subcutaneously in cardiac neuroses, arteriosclerosis, etc.

myocele (mi'o-sēl) [Gr. μῦς muscle + κήλη hernia]. Hernia of muscle; protrusion of a muscle through its ruptured sheath.

myocelialgia (mi"o-se-le-al'je-ah) [Gr. μῦς muscle + κοιλία belly + άλγος pain]. Pain in the abdominal muscles.

myocelitis (mi"o-se-li'tis) yocelitis (mi"o-se-li'tis) [Gr. μῦς muscle + κοιλία belly + -ιτις inflammation]. Inflammation of the muscles of the abdomen.

myocellulitis (mi"o-sel-u-li'tis). Myositis conjoined with cellulitis.

myoceptor (mi'o-sep-tor) [Gr. μῶς muscle + cap'ere to take]. The structure in a muscle-fiber that receives the nerve stimulus from the motor end-organ of the nerve.

myocerosis (mi"o-se-ro'sis) [Gr. μῶς muscle + κηρός wax]. Waxy degeneration of muscle. m. angiot'ica hæmorrhag'ica. Same as angiohyalinosis hamorrhagica.

myochorditis (mi"o-kor-di'tis) [Gr. μῦς muscle + χορδή cord + -ιτις inflammation]. Inflammation of the muscles of the vocal cords.

myochrome (mi'o-krōm) [Gr. $\mu \hat{v}_s$ muscle $+ \chi \rho \hat{\omega} \mu a$ color]. Any member of a group of muscle pigments. See histohematin and myohematin.

myochronoscope (mi-o-kron'os-kōp) [Gr. μθε muscle + $\chi \rho \delta \nu \rho s$ time + $\sigma \kappa \rho \pi \epsilon \hat{\imath} \nu$ to view]. A device for measuring the time required for a motor impulse to become effective.

myoclonia (mi-o-klo'ne-ah). That condition which is characterized by myoclonus. m. epilep'tica. See myoclonus epilepsy, under epilepsy. fibrilla'ris mul'tiplex. See myokymia. fibrilla'ris mul'tiplex. See myskymia. fi-brillary m., the twitching of the fibrils of a muscle. See fibrillation. infectious m., chorea. myoclonic (mi-o-klon'ik) Relating to or marked by

myoclonus.

myoclonus (mi-ok'lo-nus) [Gr. μῦς muscle + κλόνος contraction]. Clonic spasm of a muscle or of various muscles. m. mul'tiplex. See paramyoclonus multiplex.

myocœle (mi'o-sēl) [Gr. μῦς muscle + κοῖλος hollow]. The cavity inclosed by a myotome; the cavity of a myotome.

myocolpitis (mi"o-kol-pi'tis) [Gr. μῦς muscle + κόλπος vagina + -ιτις inflammation] Intlammation of the muscular layers of the vaginal wall.

myocomma (mi-o-kom'ah) [Gr. μῦς muscle + κόμμα cut]. A sclerotome, the septum between any two myotomes.

myocrismus (mi-o-kris'mus) [Gr. μῦς muscle + κρίζειν to squeak]. A sound heard on auscultation over a contracting muscle.

myoctonin (mi-ok'to-nin) [Gr. μῦς mouse + κτόνος killing A poisonous alkaloid, Co6H12N2O10, from Aconi'tum lycoc'tonum.

myocyte (mi'o-sīt) [Gr. μῦς muscle + κυτος cell].

1. A cell of the muscular tissue. 2. The inner contractile layer of the ectoplasm of a protozoon.

myocytoma (mi"o-si-to'mah). A tumor made up of myocytes or muscle-cells.

myodegeneration (mi"o-de-jen-er-a'shun)[Gr. μῦς muscle + degeneration]. Degeneration of muscle.

myodemia (mi-o-de'me-ah) [Gr. μῦς muscle + δημός fat]. Fatty degeneration of muscle.

myodesopsia (mi"o-des-op'se-ah). See myiodesopsia.

myodiastasis (mi"o-di-as'tas-is) [Gr. μῦς muscle + διάστασις separation]. Rupture of a muscle.

myodiopter (mi-o-di-op'ter). The force of ciliary muscle contraction necessary to raise the refraction of the emmetropic eye by I diopter from a state of rest.

myodynamic (mi"o-di-nam'ik). Relating to muscular force.

myodynamometer (mi"o-di-nam-om'et-er) [Gr. $\mu \hat{v}_s$ muscle $+\delta \hat{v}_{\mu} \alpha \mu \hat{v}_s$ power $+\mu \hat{e}_{\tau} \rho_{\sigma} \hat{v}$ measure]. A device for testing the power of the muscles.

myodynia (mi-o-din'e-ah) [Gr. μῦς muscle + δδύνη pain]. Pains in a muscle; myalgia.

myo-edema, myo-edema (mi"o-e-de'mah) [Gr. μθs muscle + οίδημα swelling]. 1. Edema of a muscle. 2. Same as mounding.

myo-electric (mi"o-e-lek'trik). Pertaining to the

electric or electromotive properties of muscle.

myo-endocarditis (mi"o-en-do-kar-di'tis), bined myocarditis and endocarditis.

myo-epithelial (mi"o-ep-e-the'le-al). Pertaining to or composed of muscle and epithelium.

myo-epithelium (mi"o-ep-ith-e'le-um) [Gr. μθς muscle + epithelium]. Muscle epithelium.

myofibril, myofibrilla (mi-o-fi'bril, mi"o-fi-bril'ah), pl. myofibrilla. A muscle-fibril; especially one of the fine fibrils traversing longitudinally the cells of smooth muscular tissue and supposed to form the contractile element.

myofibroma (mi"o-fi-bro'mah). Myoma combined with fibroma.

myofibrosis (mi"o-fi-bro'sis) [Gr. $\mu \hat{v}_{S}$ muscle + fib'ra fiber]. Degeneration of muscular tissue into fibroid tissue. m. cor'dis, myofibrosis of the heart.

myogen (mi'o-jen) [Gr. μῦς muscle + γεννῶν to produce]. An albumin-like protein of muscle plasma. It is spontaneously coagulable, passing first into soluble myogen fibrin, and then into myogen fibrin. Cf. myosin.

- myogenetic, myogenic, myogenous (mi-o-jenet'ik, mi-o-jen'ik, mi-oj'en-us) [Gr. $\mu \hat{v}_s$ muscle $+ \gamma \epsilon \nu \hat{v}_s$ to produce]. Originating in the muscular tissue.
- **myoglia** (mi-og'le-ah) [Gr. $\mu \hat{v}s$ muscle $+ \gamma \lambda la$ glue]. A fibrillar substance formed by muscle-cells and bearing the same relation to muscle that neuroglia bears to nerve-cells.
- myoglobulin (mi-o-glob'u-lin) [myo- + globulin].
 A globulin found in muscle-serum.
- myognathus (mi-og'na-thus) [Gr. μῦς muscle + γμάθος jaw]. A supernumerary lower jaw having a muscular attachment to the normally placed lower jaw.
- myogram (mi'o-gram) [Gr. μῦς muscle + γράμμα writing]. The record or tracing made by a myograph.
- myograph (mi'o-graf) [Gr. μῦς muscle + γράφειν to record]. An apparatus for recording the effects of a muscular contraction.
- myographic (mi-o-graf'ik) [Gr. μῦς muscle + γράφειν to record]. Pertaining to a myograph.
- myography (mi-og'raf-e) [Gr. μῦς muscle + γράφειν to write]. 1. The use of the myograph. 2. A description of the muscles.
- myohematin (mi-o-hem'at-in) [myo- + hematin]. MacMunn's name for a pigment occurring in the muscles in association with hemoglobin.
- myohypertro'phia kymoparalyt'ica. A muscular dystrophy, with paralysis, described by Oppenheim (1914).
- myohysterectomy (mi"o-his-ter-ek'to-me). Partial removal of the uterus, the cervix being left in place.
- myoid (mi'oid) [Gr. $\mu \hat{v}_s$ muscle $+ \epsilon i \delta o s$ form]. Resembling or like a muscle.
- myoidem, myoidema (mi-oi'dem, mi-oi-de'mah). Same as myo-edema.
- myoideum (mi-oid'e-um). Myoid tissue.
- myoidism (mi-o-id'izm) [Gr. μῦς muscle + τδιος own]. Idiomuscular contraction.
- myoischemia (mi"o-is-ke'me-ah) [Gr. μῦς muscle + ischemia]. Local deficiency of blood-supply in muscle.
- myokerosis (mi"o-ke-ro'sis) [Gr. μῦς muscle + κηρός wax]. Waxy degeneration of muscle tissue.
- myokinesis (mi-o-kin'e-sis) [Gr. μῦς muscle + κίνησις motion]. Movement of muscles; especially, displacement of muscle-fibers in operation.
- myokinetic (mi-o-kin-et'ik). Pertaining to the motion or kinetic element of muscle, as contrasted with the myotonic or tonicity element.
- **myokymia** (mi-o-kim'e-ah) [Gr. μ0s muscle +κ0μa wave]. Persistent quivering of the muscles (Schultze); myoclonus fibrillaris multiplex (Kny).
- myokynin (mi-o-ki'nin). A base, C₁₁H₂₈N₂O₃, found in muscle.
- myolemma (mi-o-lem'ah) [Gr. μῦς muscle + λέμμα sheath]. The sarcolemma.
- myolin (mi'o-lin). The supposed material of the muscular fibrils.
- **myolipoma** (mi''o-li-po'mah) [Gr. $\mu \hat{v}_s$ muscle + $\lambda i \pi o s$ fat + $-\omega \mu a$ tumor]. Myoma containing fatty or lipomatous elements.
- **myology** (mi-ol'o-je) [Gr. $\mu \hat{v}s$ muscle $+ \lambda \hat{\sigma} \gamma \sigma s$ word]. The sum of knowledge regarding the muscles.
- myolysis (mi-ol'is-is) [Gr. $\mu \hat{v}_s$ muscle $+ \lambda b \sigma \iota s$ solution]. Disintegration or degeneration of muscle tissue. m. cardiotox'ica, degeneration of the heart muscle due to systemic intoxication, as in infectious diseases.
- myoma (mi-o'mah) [Gr. μῦς muscle + -ωμα tumor]. Any tumor made up of muscular elements: if they are striated, it is a rhabdomyoma; if not, it is a leiomyoma. m. lævicellulare, leiomyoma. m. sarcomato'des, myoma in which the muscle tissue has been transformed into sarcomatous fig-

- sue. m. striocellula're, rhabdomyoma. m. telangiecto'des, a tumor consisting of a coil of blood-vessels surrounded by a network of muscular fibers; angiomyoma.
- myomalacia (mi"o-ma-la'se-ah) [Gr. μθς muscle + μαλακία softening]. Morbid softening of a muscle. m. cor'dis, morbid softening of the muscular substance of the heart.
- myomatosis (mi"o-mat-o'sis). The formation of multiple myomata.
- myomatous (mi-o'mat-us). Pertaining to or of the nature of a myoma.
- myomectomy (mi-o-mek'to-me) [myoma + Gr. έκτομή excision]. Surgical removal of a myoma.
- myomelanosis (mi"o-mel-an-o'sis) [Gr. μῦς muscle + μελάνοσις blackening]. Melanosis, or black pigmentation of a portion of the muscular substance.
- myomere (mi'o-mēr) [Gr. μῦς muscle + μέρος share]. 1. A protovertebra or embryonic muscular segment. 2. A muscular segment.
- myometer (mi-om'et-er) [Gr. μῦς muscle + μέτρον measure]. An apparatus for measuring muscle contraction.
- myometrial gland. See under gland.
- myometritis (mi"o-me-tri'tis) [Gr. $\mu \hat{v}s$ muscle + $\mu \hat{\eta} \tau \rho a$ womb + $\iota \tau \iota s$ inflammation]. Inflammation of the muscular substance of the uterus.
- **myometrium** (mi-o-me'tre-um) [Gr. μῦς muscle + μήτρα womb]. The muscular substance of the uterus.
- myomohysterectomy (mi"o-mo-his-ter-ek'to-me) [myoma + Gr. ὑστέρα uterus + ἐκτομή excision]. Myomectomy combined with hysterectomy; surgical removal of a myomatous uterus.
- myomotomy (mi-o-mot'o-me). Same as myomectomy.
- myon (mi'on) [Gr. μῦς muscle]. A muscle; a muscular unit.
- myoneme (mi'o-nēm) [Gr. $\mu \hat{v}_5$ muscle $+ \nu \hat{\eta} \mu a$ thread]. One of the muscular fibrils in the surface of certain protozoa.
- **myonephropezy** (mi-o-nef'ro-pek-se) [Gr. $\mu \hat{v}s$ muscle $+ \nu \epsilon \varphi \rho \dot{o}s$ kidney $+ \pi \hat{\eta} \xi \iota s$ fixation]. The operation of fixing a movable kidney by suturing it to a strap of muscle tissue.
- myoneural (mi-o-nu'ral) [Gr. μῦς muscle + νεὐρον nerve]. Pertaining to both muscle and nerve said of the nerve terminations in muscles,
- myoneuralgia (mi"o-nu-ral'je-ah) [Gr. μῦς muscle + neuralgia]. Muscular neuralgia.
- myoneurasthenia (mi"o-nu-ras-the'ne-ah) [Gr. μῦς muscle + neurasthenia]. The relaxed state of the muscular system in neurasthenia.
- myoneure (mi'o-nūr) [Gr. μῦς muscle + νεῦρον nerve]. A nerve-cell which supplies a muscle.
- myoneuroma (mi"o-nu-ro'mah) [Gr. μῦς muscle + νεῦρον nerve + -ωμα tumor]. A neuroma containing muscular tissue; especially a cyst of the pituitary body containing muscular elements.
- myoneurosis (mi"o-nu-ro'sis) [Gr. μῦς muscle + neurosis]. Any neurosis of muscle. colic m., intestinal m., mucous colitis. See colitis.
- myonosus (mi-on'os-us) [Gr. μῦς muscle + νόσος disease]. Disease of a muscle.
- myonymy (mi-on'im-e) [Gr. μŷs muscle + δνομα name]. Nomenclature of the muscles.
- myopachynsis (mi''o-pak-in'sis) [Gr. μῦς muscle + πάχυνσις thickening]. Hypertrophy of muscle.
- myoparalysis (mi"o-par-al'is-is) [Gr. μῦς muscle + paralysis]. Paralysis of a muscle.
- myoparesis (mi-o-par'es-is). Myoparalysis.
- myopathic (mi-o-path'ik). Of the nature of a myopathy.
- myopathy (mi-op'ath-e) [Gr. μ 0s muscle + $\pi \alpha \theta$ 0s suffering! Any disease of a muscle

myope (mi'δp) [Gr. μθειν to shut + ωψ eye]. A near-sighted person; one affected with myopia.

myopericarditis (mi"o-per-ik-ar-di'tis). Myocarditis combined with pericarditis.

myoperitonitis (mi"o-per-it-o-ni'tis)[Gr. μῦς muscle + peritonitis]. Inflammation of the muscular elements of the peritoneum.

myophage (mi'o-fāj) [see myophagism]. A phagocyte which consumes muscle tissue.

myophagism (mi-of'aj-izm) [Gr. μῦς muscle + φαγεῖν to eat]. The atrophy or wasting away of muscular tissue.

myophone (m'o-fon) [Gr. $\mu \hat{v}s$ muscle $+ \varphi \omega \nu \eta$ voice]. A device which renders audible the sound of a muscular contraction.

myopia (mi-o'pe-ah) [Gr. μύειν to shut + ຜψ eye]. Near-sightedness, or short sight; defective eyesight due to too great refractive power of the eye, so that the rays coming from an object beyond a certain distance are focused in front of the retina. axial m., that which is caused by elongation of the axis of the eye. chronic m., color-blindness for objects at a distance. curvature m., a form due to changes in the curvature of the refracting surfaces of the eye. index-m., a form due to abnormal refractivity of the media of the eye. malignant m., pernicious m., progressive myopia, associated with grave disease of the choroid and leading to retinal detachment and blindness. prodromal m., a condition in which the patient is able to read with glasses; sometimes seen in incipient cataract. progressive m., myopia that continues to increase in adult life.

myopic (mi-op'ik). Pertaining to or affected with myopia. m. crescent. See crescent.

myoplasm (mi'o-plazm) [Gr. μῦς muscle + πλάσμα something formed]. The contractile part of the muscle cell.

myoplastic (mi-o-plas'tik) [Gr. $μ\hat{v}$ s muscle +πλάσ-σειν to form]. Performed by the plastic use of muscle, said of operations.

myoplasty (mi'o-plas-te). Plastic surgery on muscle; an operation in which portions of partly detached muscle are utilized, especially in the field of defects or deformities

myopolar (mi-o-po'lar) [Gr. μῦς muscle + polar].

Applied to a muscle between the electrodes of a battery.

myoprotein (mi-o-pro'te-in). A protein obtained from muscle tissue.

myoproteose (mi-o-pro'te-ōs). Same as myoalbumose.

myopsin (mi-op'sin) [Gr. μῦς muscle + ψίειν to chew up]. A proteolytic enzyme occurring along with trypsin in the pancreatic juice.

myopsis (mi-op'sis). Myiodesopsia.

myopsychic (mi-o-si'kik) [see myopsychosis]. Pertaining to the muscles and the mind—noting the memory images of muscular activity.

myopsychosis, myopsychopathy (mi"o-si-ko'sis, mi"o-si-kop'ath-e)[Gr. $\mu \hat{v}_s$ muscle $+ \psi v \chi \hat{\eta}$ mind $+ \pi \delta \theta v_s$ disease]. Any one of those neuromuscular affections that are associated with mental troubles, as Sydenham's chorea, paralysis agitans.

myorrhaphy (mi-or'af-e) [Gr. μθs muscle + ραφή suture]. Suturation of divided muscle.

myorrhexis (mi-or-eks'is) [Gr. μῦς muscle + βῆξις rupture]. The rupture of a muscle.

myosalgia (mi-o-sal'je-ah). Muscular pain.

myosalpingitis (mi"o-sal-pin-ji'tis) [Gr. $\mu \hat{v}s$ muscle + salpingitis]. Hypertrophic inflammation of the muscular tissue of the oviduct.

myosan (mi'o-san). A protean derived from myosin.

myosarcoma (mi"o-sar-ko'mah). Myoma blended with sarcoma.

myosclerosis (mi"o-skle-ro'sis) [Gr. μθς muscle

+ σκληρός hard]. Hardening or sclerosis of muscle.

myoscope (mi'o-skōp) [Gr. μῦς muscle + σκοπεῖν to view]. An instrument for observing muscle contraction.

myoseism (mi'o-sīzm) [Gr. $\mu \hat{v}_s$ muscle + $\sigma \epsilon \iota \sigma \mu b s$ shake]. Jerky, irregular muscular contractions.

myoseptum (mi-o-sep'tum). Same as myocomma.
myoserum (mi-o-se'rum). Muscle-juice; the juice
expressed from meat.

myosin (mi'o-sin). A globulin-like protein of muscle plasma. It is soluble, but on long standing it co-coagulates into an insoluble protein called myosin fibrin. Cf myogen. Furth's m., paramyosinogen vegetable-m., a substance resembling myosin, from seeds of various plants.

myosinogen (mi-o-sin'o-jen) [myosin + Gr. γεννᾶν to produce]. Kühne's name for the protein now called myogen.

myosinose (mi-os'in-ōs). A proteose produced by the digestion of myosin.

myosinuria (mi"o-sin-u're-ah) [myosin + Gr. οὖρον urine]. The presence of myosin in the

myosis (mi-o'sis). Same as miosis.

myositic (mi-o-sit'ik). Pertaining to myositis.

myositis (mi-o-si'tis) [Gr. $\mu \hat{v}s$ muscle]. mation of a voluntary muscle acute disseminated m. Same as primary multiple m. acute progressive m., a rare disease in which the inflammation gradually involves the whole muscular system and ends in death by asphyxia and pneumonia. m. fibro'sa, a type in which there is a formation of connective tissue within the muscle substance. infectious m., interstitial m., inflammation of the connective and septal elements of muscular tissue. m. ossif'icans, myositis which is characterized by bony deposits or by ossification of muscles. m. ossif'icans circumscrip'ta, a form marked by the formation of muscular osteomata, such as riders' bone. m. ossif'icans progres'siva, a progressive disease, beginning in early life, in which the muscles are gradually converted into bony tissue. m. ossif'icans traumat'ica, myositis ossificans due to injury. parenchymatous m., that which affects the essential substance of a muscle. primary multiple m., an acute febrile disease characterized by edema and inflammation of the skin and muscles in various parts of the body. Called also pseudotrichinosis. m. purulen'ta, a suppurative and gangrenous type, due to a bacterial infection m. purulen'ta trop'ica, a disease of Samoa and the African tropics, characterized by fever, pain in the limbs, and abscesses in the muscles. m. sero'sa, muscle inflammation characterized by a serous exudation. suppurative m., inflammation of muscle resulting in muscular abscesses or in diffuse suppuration of muscles. trichinous m., that which is caused by the presence of trichinæ.

myospasia (mi-o-spa'ze-ah). Clonic contraction of muscle; paramyoclonus.

myospasm (mi'o-spazm) [Gr. $\mu \hat{v}$ s muscle + $\sigma \pi \alpha \sigma \mu \delta s$ spasm]. Spasm of a muscle.

myospasmia (mi-o-spaz'me-ah). Diseases characterized by uncontrollable muscular spasm See isc.

myosteoma (mi-os-te-o'mah) [Gr. μῦς muscle + όσττον bone + -ωμα tumor]. A bony tumor in muscle.

myostroma (mi-o-stro'mah) [Gr. μῦς muscle + stroma]. The stroma or framework of muscle tissue.

myostromin (mi-o-stro'min). A protein occurring in muscle stroma.

myosuria (mi-o-su're-ah) [Gr. μθs muscle + οδρον urine]. Myosin in the urine.

myosuture (mi-o-sūt'ūr) [Gr. μῦς muscle + L. suhi'ra sewing]. The suturation of a muscle.

myosynizesis (mi"o-sin-iz-e'sis) [Gr. μθς muscle + συνίζησις sitting together]. Adhesion of muscles. myotactic (mi-o-tak'tik) [Gr. $\mu \hat{v}_s$ muscle + L. lac'tus touch]. Pertaining to the muscular sense

of touch.

myotasis (mi-ot'as-is) [Gr. μῦς muscle + τάσις stretching]. Stretching of muscle.

myotatic (mi-o-tat'ik) [Gr. μῦς muscle + τείνειν to Performed or induced by stretching or stretchl. extending a muscle.

myotenontoplasty (mi"o-ten-on'to-plas-te). Tenontomyoplasty.

myotenositis (mi-o-ten-o-si'tis) [Gr. μῦς muscle + τένων tendon + -ιτις inflammation]. Inflammation of a muscle and its tendon.

myotenotomy (mi"o-ten-ot'o-me) [Gr. $\mu \hat{v}_s$ muscle + *tenotomy*]. Surgical division of the tendon of

myotherapy (mi-o-ther'ap-e) [Gr. μῦς muscle + θεραπεία treatment]. Treatment by administration of muscle tissue and muscle juice.

myothermic (mi-o-ther'mik) [Gr. μῦς muscle + Pertaining to temperature changes θέρμη heat] in muscle produced by its activity

myotic (mi-ot'ik). Same as miotic.

myotility (mi-o-til'it-e). Muscular contractility.

myotome (mi'o-tôm) [Gr. μῦς muscle + τέμνειν to cut]. 1. An instrument for performing myotomy. 2. Same as somite 3 A myocomma

myotomy (mi-ot'o-me) [Gr. μῦς muscle + τέμνειν to cut]. The cutting or dissection of muscular tissue or of a muscle.

myotone (mi'o-ton). Same as myotonia.

myotonia (mi-o-to'ne-ah) [Gr. μῦς muscle + τόνος tension] Inhibition of voluntary movements due to an increase of muscle tonus m. acquis'ita, tonic muscular spasm developed after injury or in consequence of disease. Called also Talma's disease. m. atroph'ica, a slowly progressive form of muscular atrophy involving special muscles and marked by delayed relaxation of muscle contractions; called also dystrophia myotonica. m. congeni'ta, m. heredita'ria. See Thomsen's disease, under disease m. neonato'rum, tetanism

myotonic (mi-o-ton'ik). 1. Pertaining to or characterized by myotonia 2. Pertaining to the tonic function of muscles as contrasted with the myokinetic or motion function.

myotonometer (mi"o-to-nom'et-er) [myotonia + Gr. μέτρον measure]. An instrument for measuring muscular tonus.

myotonus (mi-ot'o-nus). Tonic spasm of a muscle. myotony (mi-ot'o-ne). See myotonia.

myotrophy (mi-ot'ro-fe) [Gr. μῦς muscle + τροφή nutrition]. Nutrition of muscle.

myrcene (mer'sēn). An essential oil from the oil of bay. It is an olefinic terpene, C₁₀H₁₆, and probably CH₂(CH)₃(CH₂)₂CH C(CH₃)₂

Myrcia (mer'she-ah) [L]. A genus of myrca-ceous trees and shrubs. The leaves of M. a'cris afford oil of bay (o'leum myr'cia), whence bayrum (spir'ilus myr'cia) is prepared, which is used as a perfume and as a local application in headache

myria- [Gr. μυρίος numberless]. A prefix signifying a great number.

myriachit (mir-e'ah-shit) [Russian]. A form of palmus with jumping movements and infirm will, endemic in Siberia. See lata, palmus.

Myriapoda (mir-e-ap'o-dah) [Gr μυρίος numberless $+\pi \sigma \hat{v}$ s foot]. A class of arthropods, including the millepides and centipedes.

myriapodiasis (mir"e-ap-o-di'as-is). Infestation by one of the Myriapoda or centipedes.

myrica (mir-i'kah) The dried bark of the root of Myri'ca cerife'ra, bayberry or wax myrtle. used in diarrhea and jaundice. Dose, 8 gr. (0.5 gm.).

myricin (mir-i'sin) [L. myri'ca myrtle]. crystallizable principle, C30H61.C16H31O2, from beeswax. 2. A medicinal concentration prepared from Myri'ca cerif'era, or wax-myrtle; astringent, antiluetic. Dose, 1-3 gr. (0.00-0.198 gm.).

myricyl (mir'is-il). The radical, C₃₀H₆₁.

myringectomy (mi-rin-jek'to-me). Same as myringodectomy.

myringitis (mir-in-ji'tis) [L. mirin'ga drum-membrane + Gr. -1715 inflammation]. Inflammation of the membrana tympani. m. bullo'sa, myringitis with the formation of blebs.

myringodectomy (mir-in"go-dek'to-me) [L. myrin'ga membrana tympani + Gr. ἐκτομή excision]. Surgical removal of the membrana tympani.

myringodermatitis (mir-in"go-der-mat-i'tis) [L. myrin'ga drum-membrane + Gr. δέρμα skin]. Înflammation of the outer layer of the membrana tympani, with the formation of blebs.

myringomycosis (mir-in"go-mi-ko'sis) [L. myrin'ga drum-membrane + Gr. μύκης fungus]. Disease of the membrana tympani caused by the growth of fungi. m. aspergilli'na, that which is caused by an aspergillus. See Otomycosis.

myringoplasty (mir-in'go-plas-te) [L. myrin'ga drum-membrane + Gr. πλάσσειν to form]. Surgical restoration of the membrana tympani.

myringoscope (mi-ring'o-sköp) [L. myrin'ga drummembrane + Gr $\sigma \kappa o \pi \epsilon \hat{i} \nu$ to view]. An instrument for inspecting the drum-membrane.

myringotome (mir-in'go-tōm) [L. myrin'ga drummembrane + Gr. τέμνειν to cut] A knife for use in operating upon the membrana tympani.

myringotomy (mir-in-got'o-me) [L. **lyringotomy** (mir-in-got'o-me) [L. myrin'ga drum-membrane + Gr. τέμνειν to cut]. Surgical incision of the membrana tympani.

myristic acid (mi-ris'tik). See under acid.

Myristica (mi-ris'tik-ah) [L.; Gr. μυρίζειν to anoint]. A genus of trees of tropical countries. M. fra'grans affords nutmegs and mace nulmee.

myristicene (mi-ris'tis-ēn). A fragrant eleopten, C₁₀H₁₄, from the volatile oil of nutmeg.

myristicol (mi-ris'tik-ol). A stearonten, or camphor, C₁₀H₁₆O, from the volatile oil of nutmeg.

Myristate of glyceryl, C₃myristin (mi-ris'tin). H₅(C₁₄H₂₇O₂)₃: found in nutmeg-butter, spermaceti, and other fats.

myrobalan (mi-rob'al-an) [Gr μύρον ointment + βάλανος nut]. The dried fruit of several species of Terminalia of India used as an astringent in diarrhea. Dose, 30-60 gr. (2-4 gm.).

myronate (mi'ron-āt). Any salt of myronic acid (derivable from black mustard). potassium m. Same as sinigrin.

myronic acid (mi-ron'ik). See acid.

myronin (mi-ro'nin). A proprietary ointmentbase, composed of stearin-soap, carnauba wax, and doegling oil.

myrosin (mi'ro-sin). A ferment found in black mustard seed which decomposes the glucosid

myrrh (mur) [L. myr'rha; Gr. µbppa]. A gumresin from Commiph'ora myr'rha, an old-world burseraceous tree, containing a volatile oil, the resin myrrhin, and a gum. It is stimulant and astringent, and is used in dyspepsia, chronic bronchitis, leukorrhea, amenorrhea, and as a local application in stomatitis, carious teeth, and inflammation of the gums. Dose, 5-30 gr. (0.333-2 gm.); of tincture (U. S. P.), 10-30 min. (0.666-2 c.c.).

myrrholin (mer'o-lin). A mixture of myrrh and fat in equal parts: used as a vehicle for the administration of creosote.

myrtiform (mer'tif-orm) [L. myrtifor'mis; myr'tus myrtle + for'ma shape]. Shaped like the leaf or berry of the myrtle.

myrtillin (mer-til'in). An extractive from huckleberries: said to be useful in the local treatment of eczema; also internally in intestinal catarrh.

myrtle (mer'tl). See Myrtus.

myrtol (mer'tol) [L. myr'tus myrtle + o'leum oil]. A light, volatile oil obtainable from the oil of Myr'tus commu'nis: given in bronchial and pulmonic affections as a stimulant antiseptic. Dose, 1-2 min. (0.06-0.13 c.c.).

Myrtophyllum (mir-to-fil'um) [L. myr'lus myrtle + Gr. φύλλον leaf]. A genus of protozoan organisms. M. hep'atis, a species found in hepatic abscess. It is shaped like a myrtle leaf

Myrtus (mer'tus) [L.; Gr. μύρτος]. A genus of myrtaceous trees M. commu'nis, the old-world myrtle, affords leaves which are antiseptic and astringent, and are used as a dressing for wounds. Dose, 5-20 gr. (0.33-1.33 gm.). See also cheken.

mysophobia (mi-so-fo'be-ah)[Gr. $\mu\nu\sigma\sigma$ s filth $+\varphi\sigma\beta\delta$ s fear]. Insane dread of filth or contamination.

mystin (mis'tin). A milk preservative, consisting of formaldehyd and sodium nitrite.

mytacism (mi'tas-izm) [Gr. μυτακισμός]. Too free use of m-sounds in utterance.

mythomania (mith-o-ma'ne-ah) [Gr. $\mu \hat{\nu} \theta$ os myth + $\mu a \nu l a$ madness]. A morbid propensity to lie or to exaggerate.

mythophobia (mith-o-fo'be-ah) [Gr. $\mu\theta$ os myth + φ oβos fear]. Morbid fear of stating an untruth.

mytilite (mi'til-īt) An alcohol from the muscle of Mytilus edulis, C₆H₁₂O₅ 2H₂O. It is isomeric with quercite.

mytilocongestin (mi-til-o-kon-jes'tin) [Gr. μυτίλος mussel + congestion]. Λ toxic substance obtained by Richet from mussels.

mytilotoxin (mit"ıl-o-toks'in) [Gr. $\mu\nu\tau$ ίλος mussel + τοξικόν poison]. A poisonous leukomain, C_6H_{15} -NO₂, from mussels.

mytilotoxism (mit''il-o-toks'izm). Mussel-poisoning, poisoning from eating mussels.

myurous (mi-u'rus) [Gr μῦς mouse + οὐρά tail].
Gradually tapering like a mouse's tail. said of the pulse when it grows gradually more feeble, and also of certain symptoms

myxadenitis (miks"ad-en-i'tis) [Gr. μύξα mucus + ἀδήν gland + -ιτις inflammation]. Inflammation of a mucous gland m. labia'lis. Same as Baelz's disease, under disease.

myxadenoma (miks-ad-en-o'mah) [Gr. $\mu b \xi a$ mucus + adenoma] An epithelial tumor with the structure of a mucous gland.

myxangitis (miks-an-ji'tis) [Gr. μύξα mucus + άγγεῖον vessel + -ιτις inflammation]. Inflammation of the ducts of mucous glands.

myxangoitis (miks"an-go-i'tis) [Gr. μύξα mucus + άγγεῖον vessel + -ιτις inflammation]. Mucous inflammation of vessels.

myxasthenia (miks-as-the-ne'ah) [Gr. μυξα mucus + ἀσθένεια weakness]. Deficiency in the secretion of mucus.

myxedema, myxœdema (miks-e-de'mah) [Gr. μυξα mucus + οίδημα swelling] A disease, probably due to hypofunction of the thyroid gland, and marked by dropsy-like swelling, especially of the face and hands, smallness of the thyroid gland, slowing of the pulse-rate, dryness and wrinkling of the skin, falling of the hair, dulling of mental activity, sluggishness of movement, and retardation of the rate of basal metabolism. Called also Gull's disease. congenital m., cretinism. infantile m., Brissaud's infantilism; myxedema beginning during infancy from acquired disorder of the thyroid gland. operative m., cachexia strumipriva.

myxedematoid (mix-e-dem'at-oid). Resembling myxedema.

myxedematous (mix-e-dem'at-us). Pertaining to or characterized by myxedema.

myxemia (miks-e'me-ah) [Gr. μυξα mucus + αίμα blood]. Mucinemia.

myxidiocy (miks-id'e-o-se). Same as myxidiotie.

myxidiotie (miks-id'e-o-te). Myxedema marked by defective mental development.

myxo-adenoma (mik"so-ad-en-o'mah). See myx-adenoma.

Myxobacteriales (miks"o-bak-te-re-a'lēz) [Gr. μὐξα slime + bacteria]. An order of Schizomycetes comprising the slime-mold bacteria.

myxoblastoma (miks"o-blas-to'mah). A tumor composed of mucous connective-tissue cells.

Myxob'olus cypri'ni. A protozoan parasite causing the pox disease of carp.

myxochondrofibrosarcoma (miks"o-kon"drofi"bro-sar-ko'mah). A tumor containing myxomatous, cartilaginous, fibrous, and sarcomatous elements.

myxochondroma (miks"o-kon-dro'mah). Myxoma blended with chondroma

myxochondrosarcoma (mik"so-kon"dro-sar-ko'-mah). A mixed tumor containing elements of myxoma, cartilage, and connective tissue.

Myxococcid'ium stegomy'iæ. A sporozoon found in the body of the mosquito, Stegomy'ia fascia'ia.

myxocylindroma (mik"so-sil-in-dro'mah). Same as cylindroma.

myxocystitis (mik"so-sis-ti'tis) [Gr. μbξα mucus + cystuts]. Inflammation of the mucosa of the bladder.

myxocystoma (miks"o-sis-to'mah). Myxoid cystoma.

myxocyte (miks'o-sit) [Gr. $\mu b \xi a$ mucus + $\kappa b r o s$ cell]. One of the characteristic cells of mucous tissue.

myxodermia (miks-o-der'me-ah) [Gr. μύξα mucus + δέρμα skin] An acute disease marked by ecchymoses, softening of the skin, and contraction of certain muscles.

myxædema (miks-e-de'mah). See myxedema.

myxo-enchondroma (mik"so-en-kon-dro'mah).
A chondroma in which some of the elements have undergone mucous degeneration.

myxo-endothelioma (mik"so-en-do-the-le-o'mah). An endothelioma containing myxomatous tissue.

myxofibroma (miks"o-fi-bro'mah). Myxoma blended with fibroma.

myxofibrosarcoma (miks"o-fi"bro-sar-ko'mah). A sarcoma with myxomatous and fibromatous elements

myxoglioma (miks"o-gli-o'mah). A glioma which has undergone myxomatous degeneration.

myxoid (miks'oid) [Gr. μύξα mucus + εlδοs form]. Resembling mucus. m. cysto'ma, a proliferating cyst of the ovary, so called because its inner surface resembles a mucous membrane.

myxoidedema (miks"oid-e-de'mah). Influenza of a severe type; American grip.

myxoinoma (miks"o-in-o'mah). Myxoma blended with inoma.

myxolipoma (miks"o-lip-o'mah). Myxoma blended with lipoma.

myxoma (miks-o'mah) [Gr. μύξα mucus + -ωμα tumor]. A tumor made up of mucous tissue. It forms a soft, translucent growth, made up of va-riously shaped cells of connective tissue and capillary vessels encased in a jelly-like matrix. tic m., one which contains cavities. enchondromatous m., one containing cartilage in the intercellular substance. erectile m., one which contains an excess of vessels, so as to resemble an angioma. m. fibro'sum, myxoinoma. infectious m., a disease of rabbits produced by a filterable virus or a chlamydozoon. lipomatous m., one which contains a deposit of fat within the m. sarcomato'sum, myxosarcoma. vascular m., a myxoma containing many bloodvessels.

myxomatous (miks-o'mat-us). Of the nature of a myxoma.

myxomycetes (miks"o-mi-se'têz), pl. [Gr. μύξα mucus + μύκης fungus]. A group of fungus-like organisms, the slime-molds, now recognized as belonging to the animal kingdom.

myxomyoma (miks-o-mi-o'mah). A myoma that has undergone mucous degeneration.

myxoneuroma (miks"o-nu-ro'mah). Myxoma blended with neuroma.

myxoneurosis (miks"o-nu-ro'sis) [Gr. μύξα mucus + neurosis]. A neurosis characterized by deranged mucous secretion. m. intestina/lis, an intestinal neurosis marked by the passage of mucous shreds in the stools.

myxopapilloma (miks"o-pap-il-o'mah). Myxoma combined with papilloma.

myxopod (miks'o-pod) [Gr. μύξα mucus + πούs foot]. An amebula, the youngest stage of a malarial parasite living within the red blood-corpuscles. Some become sporocytes, others gametocytes.

myxopoiesis (mik"so-poi-e'sis) [Gr. μύξα mucus + ποίειν to make]. The formation of mucus.

myxorrhea (miks-o-re'ah) [Gr. μύξα mucus + ροία flow]. Blennorrhea.

myxosarcoma (miks"o-sar-ko'mah). A - sarcoma containing mucous elements.

myxosarcomatous (miks"o-sar-ko'mat-us). Relating to or affected with myxosarcoma.

myxospore (miks'o-spōr) [Gr. μύξα mucus + σπόρος seed]. A spore embedded in a jelly-like mass.

Myzosporidia (miks"o-spo-rid'e-ah) [Gr. μύξα mucus + sporidia]. An order of endoparasitic ameboid sporozoa, many species of which infest insects, fishes, and animals. Myxosporidian infestation of the human subject is said to occur.

myzesis (mi-ze'sis) [Gr. μύζειν to suck]. Sucking. Myzomyia (mi-zo-mi'e-ah). A genus of anopheline mosquitos, several species of which act as the carriers of malarial parasites. M. funes'la, an African species. M. superpic'ta, an Old World species, which serves as the intermediate host of Filaria immites. M. culicifa'cies, M. ros'si, and M. turkhu'di are found in India.

Myzorhynchus (mi-zo-ring'kus). A genus of anopheline mosquitos, several species of which act as the carriers of malarial parasites M. barbiros'tris, a species which transmits malaria and filariasis in the Orient M pul'udis, an African species M. pseudopic'tus, a European species. M. sinen'sis, a Japanese species.

N

N. 1. Abbreviation for nasal and North Pole. 2. Chemical symbol for nstragen. This symbol is also used as a prefix to denote combination with the nitrogen atom of organic compounds.

n. 1. The symbol for index of refraction. 2. A chemical symbol for normal.

N. A. Abbreviation for numeric aperture.

Na [L. na'trium sodium]. Symbol for sodium.

N. A. B. Abbreviation for novarsenobillon.

Nabalus al'bus (nab'al-us). A composite-flowered plant; also its homeopathic preparation which is used as a bitter tonic.

 $Na_2B_4O_7 + 10H_2O$. Borax.

nabothian (na-bo'the-an). Described by or named in honor of Martin Naboth, a Saxon anatomist, 1675-1721. See under cyst and follicle.

NaBr. Sodium bromid.

NaCl. Sodium chlorid.

NaClO. Sodium hypochlorite.

NaClO₃. Sodium chlorate.

Na₂CO₃. Sodium carbonate.

Na₂C₂O₄. Sodium oxalate.

nacreous (nak're-us). Having a grayish-white, translucent color, with a pearl-like luster: said of bacterial colonies.

N. A. D. Abbreviation for no appreciable disease. nadisan (nad'is-an). A solution of bismuthotartrate of potassium in oil. used in syphilis.

Naegeli's maneuver (na'ga-lez) [Otto Naegeli, Swiss physician, born 1871]. See maneuver.

nachrsalz (nayr'sahlz) [Ger. "nutrient salt"]. A proprietary mixture of sodium phosphate and ammonium phosphate: used as a blood nutrient and purifier.

nssvoid, nssvus, etc. (ne'void, ne'vus). See ne-void, nevus, etc.

naftalan (naf'tal-an). A rectified petrolatum from Russian petroleum, containing about 3 per cent. of a hard soap. It is antiseptic, and is used as a vehicle in external medication.

Naga sore [Naga, a region in British India]. See under sore.

nagana (na-gah'nah). A disease of horses and cattle of Central Africa, due to the presence of the parasite, Trypanoso'ma bru'cei. The parasite is conveyed to the animals by the bite of the tsetse-fly, Glossi'na mor'silans, and other species of Glossina. Called also testse disease

Nagel's test (nah'gelz) [Wilhelm Nagel, German physiologist, born 1870] See under tests.

Nägele's obliquity, pelvis, etc. (na'ge-lez) [Franz Karl Nàgele, German obstetrician, 1777-1851]. See obliquity, pelvis, etc.

Nageotte cell (nazh-yot'). See under cell.

nagphani (nahg-fan'e) [East Indian]. The East Indian name of a cactus, Opun'tia dille'nii: the juice is purgative.

NaHCO3. Sodium bicarbonate.

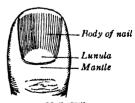

NaH2PO4. Monosodium acid phosphate.

Na₂HPO₄. Disodium acid phosphate

nail (nāl). The horny dorsal plate on the distal phalanx of a finger or toe. The nail is made up of flattened epithelial scales developed from the stratum lucidum of the skin. n.-bed, the surface covered by a nail n.-bound, the condition in which the nail of a horse's shoe is driven too near the sensitive structures marked by lameness. Called also bind or tight-nailing. n.-culture.

See culture. eggshell n., a nail which has become thin and curved upward at its anterior edge. n.-fold, the fold of tissue around the base of the nail. fracture-n., a

steel nail used to fasten together the fragments of a broken

Nail (Hill).

bone. hang-n., an agnail; a shred of epidermis at one side of a nail. hippocratic n. See hippocratic finger, under finger. ingrowing n., the overlapping of a nail by the flesh. n.-matrix, the nail-bed. parrot-beak n., a curvation of the finger-nail like that of a parrot's beak. reedy-n., a nail marked by longitudinal furrows.

spoon n., depression of the central portion of the nail, with raising of the edges at the sides. **n.-tread**, injury of the sole of a horse's hoof from treading on a nail. **turtle-back n.**, a nail greatly distorted. **n.-wall**, the skin that covers the lateral and proximal edges of the nail.

naja (nah'jah) [Arabic]. The cobra di capello, Na'ja tripu'dians, a venomous snake of India; also a homeopathic preparation of its venom.

nalicin (nal'is-in). A proprietary local anesthetic for dental work.

nambi-uvu (nam'be-u'vu). A disease of dogs in Brazil marked by icterus and bleeding from the ear and caused by a blood parasite, Rangelia Vitalii; called also bleeding ear and blood plague.

nandhiroba '(nand-he-ro'bah). A seed from a tree of South America, having emetic, purgative, and febrifuge properties.

nanism (na'nizm) [I.. na'nus dwarf]. Dwarfishness; marked undersize. Paltauf's n., nanism associated with lymphatism. symptomatic n., nanism with defective ossification, dentition, and sexual development.

nanocephalia, nanocephaly (nan-o-sef-a'le-ah, na-no-sef'al-e). Abnormal smallness of the head.

nanocephalous (na-no-sef'al-us) [Gr. νᾶνος dwarf + κεφαλή head]. Having a small head.

nanocormia (na-no-kor'me-ah) [Gr. νᾶνος dwarf + κορμός trunk]. Dwarfishness of the body or trunk.

nanoid (na'noid) [Gr. $\nu \hat{a} \nu os$ dwarf $+ \epsilon l \delta os$ form]. Dwarfish; resembling a dwarf.

nanomelia (na-no-me'le-ah). Teratism or monstrosity characterized by undersized limbs.

nanomelous (na-nom'el-us). Having undersized legs and arms.

nanomelus (na-nom'el-us) [Gr. νᾶνος dwarf + μέλος limb]. A monster-fetus with undersized limbs.

nanosoma, nanosomia (na-no-so'mah, na-no-so'me-ah) [Gr. $\nu\hat{a}\nu\sigma_{S}$ dwarf $+\sigma\hat{\omega}\mu\alpha$ body]. A dwarfish habit of body, nanism.

nanosomus (na-no-so'mus) [Gr. $\nu \hat{a} \rho os$ dwarf + $\sigma \hat{\omega} \mu a$ body]. A person of dwarfish stature and size; a dwarf.

nanous (na'nus). Dwarfish; stunted.

nanukayami (nah-nu-kah-yah'me). Seven-day fever; a fever with symptoms resembling those of Weil's disease, occurring in Japan, caused by Spirocheta hebdomadis, the host of which is probably the field mouse, Microtus montebelli.

nanus (na'nus) [L.; Gr. νᾶνος]. 1. A dwarf. 2. Dwarfed or dwarfish; stunted.

NaOH. Sodium hydroxid.

nape (nap). The back or scruff of the neck.

napellin (na-pel'in) [L. napel'lus aconite]. An analgesic alkaloid, C₂₆H₃₆NO₇(OH)₄, from aconite. Dose, ½-¾ gr. (0033-0048 gm.).

napha (na'fah) [L.]. Orange-flowers; flores aurantii. naphtalin (naf'tah-lin). Same as naphthalene.

naphtalinum, naphthalinum (naf-tah-li'num, naf-tha-li'num). Latin for naphthalene.

naphtha (naf'thah) [L. from Arabic]. r. Crude petroleum; a colorless, inflammable oil derived from petroleum; also a light petroleum distillate. 2. Any volatile, strong-smelling, and highly inflammable liquid. n. ace'ti, ethyl acetate. n. salicin, a proprietary disinfectant solution of salicylic acid, borax, and naphthol. n. vitri'oli, ethylic ether. wood-n., methyl alcohol.

naphthalan (naf'thal-an). A black, unctuous substance obtained by the distillation of Armenian naphtha. It is used as an antiphlogistic and parasiticide in burns, skin diseases, etc.

naphthalene, naphthalin (naf'thal-ën, naf'thal-in) [L. naphthali'num]. A silvery, crystalline hydrocarbon, C₁₀H₈, from coal-tar oil. It is imsoluble in cold water, but soluble in hot water, alco-hol, ether, chloroform, and benzene. It is used as an antiseptic in diarrhea of typhoid fever, and locally in pruritus, scabies, etc. Dose, 2-10 gr. (0.133-0.06 gm.).

naphthalol (naf'thal-ol). Same as betol.

naphthamin (naf'tham-in). Hexamethylenamin.

naphthionic acid (naf-the-on'ik). See under acid. naphthocresol (naf-tho-kre'sol). A brown anti-

naphthocresol (naf-tho-kre'sol). A brown antiseptic fluid.

naphthoform (naf'tho-form). A compound of beta-naphthol and formaldehyd: used as an antiseptic in skin diseases.

naphthoformin (naf-tho-for'min). An antiseptic powder, being a compound of alpha- and beta-naphthol with formaldehyd and ammonia.

naphthol (naf'thol). A crystalline, antiseptic substance, C₁₀H₇.OH, from coal-tar, occurring in two forms: alpha-naphthol and beta-naphthol. alpha-n. is a white or pinkish, crystalline compound, soluble in alcohol, ether, and hot water; slightly soluble in cold water. It is an antiseptic and antifermentative, and is used mainly in the arts. n.-aristol, beta-naphthol diiodid, C₁₆H₆I₂O₂· a yellow-green powder, used as an antiseptic wound dressing. beta-n. occurs in the form of colorless or pale-buff crystals, having the odor of carbolic acid. It is soluble in alcohol, ether, chloroform, oils, etc., and in 75 parts of boiling water and in 1000 parts of cold water. It is an antiseptic and parasiticide: used as an intestinal antiseptic in typhoid fever and in a 1 per cent. solution or 10 per cent. ointment in eczema, psoriasis, and other skin diseases. Dose, 3-72 gr. (0.2-05 gm.). beta-n. benzoate. Same as benzonaphthol. beta-n. bismuth. See beta-naphthol bismuth. n.-camphor, 1 part of beta-naphthol fused with 2 parts of camphor an antiseptic for use in tuberculosis and in furunculosis.

naphtholate (naf'tho-lat). A naphthol compound in which a base takes the place of hydrogen in the hydroxyl.

naphthol-carboxylic acid. See under acid.

naphtholism (naf'thol-izm). The toxic condition brought on by the excessive or continued use of naphthol.

naphtholum, naphtolum (naf-tho'lum, naf-to'-lum). Latin for naphthol.

naphthopyrin (naf-tho-pi'rin). A derivative of beta-naphthol it is antiseptic.

naphthoresorcin (naf"tho-re-sor'sin). A principle in transparent crystals derived from naphthol and resorcin.

naphthosalicin (naf-tho-sal'is-in). A disinfectant compound of naphthol and salicylic acid.

naphthosalol (naf-tho-sal'ol). Same as betol.

naphthoxol (naf-thok'sol). A solution of naphthol in oxygenated water antiseptic and deodorant.

naphthyl (naf'thil). The radical, C₁₀H₇. n. alcohol, naphthol. n. benzoate, benzonaphthol. n. lactate, lactol. n. phenol, naphthol. n. salicylate, betol.

naphtol (naf'tol). Same as naphthol.

naphtoxol (naf-tok'sol). A proprietary solution of naphthol in alcohol and hydrogen dioxid.

napiform (na'pif-orm) [L. na'pus turnip + for'ma shape]. Having the shape or form of a turnip.

naprapath (nap'rap-ath). A person who practices naprapathy.

naprapathy (nap-rap'ath-e) [Bohemian napravit to correct + Gr. πάθος disease]. A system of medicine which attributes all disease to disorder in the ligaments and connective tissue.

narcein (nar'se-in) [Gr. νάρκη stupor]. 1. A bitter, crystalline, hypnotic alkaloid, C₂₃H₃₀NO₉, from opium: slightly soluble in water and alcohol. It is used as a hypnotic like morphin, and is said not to cause constipation. Dose, ½-½ gr. (0.008-

2. An acid azo dye, C10H6(OH).N(SO2-ONa) NH.C₆H₆SO₂.ONa. **n. hydrochlorate**, a salt in white needles, C₂₅H₂₀NO₉.HCl: soluble in boiling water, slightly so in cold. It is hypnotic, sedative, anodyne, etc. Dose, $\frac{1}{6}$ -3 gr. (0.01-0.2 gm.). **n. meconate**, a salt in pale yellow crystals. Hypodermic dose, $\frac{1}{10}$ - $\frac{2}{3}$ gr. (0.006-0.04 gm.).

narcisistic (nar-sis-is'tik). Marked by narcism.

narcism, narcissism (nar'sizm, nar-sis'izm) [from Narcissus, a character in Greek mythology who fell in love with his own image reflected in water]. Sexual excitement through admiration of one's own body; sexual attraction toward oneself.

narcissin (nar-sis'in). A crystalline alkaloid, C₁₆-H₁₇NO₄, from the bulb of Narcissus pseudonarcissus and many other plants of the order Amarvllidaceæ.

narco-anesthesia (nar"ko-an-es-the'ze-ah) [Gr. νάρκη stupor + anesthesia]. Anesthesia by the production of a stuporous condition by the hypodermic injection of scopolamin and morphin.

narcofin (nar'ko-fin). A proprietary double salt of morphin and narcotin used like morphin.

narcohypnia (nar-ko-hip'ne-ah) [Gr. νάρκη stupor + ὑπνός sleep]. Numbness felt on waking from sleep.

narcolepsy (nar'ko-lep-se) [Gr. νάρκη stupor + λαμβάνειν to seize]. Λ condition marked by an uncontrollable desire for sleep occurring at inter-Called also paroxysmal sleep and sleep vals. epilepsy.

narcolysis (nar-kol'is-is) [Gr. νάρκη stupor + λύσις loosening]. Psycho-analysis under light anesthesia.

narcomania (nar-ko-ma'ne-ah) [Gr. νάρκη stupor + $\mu a \nu l a$ madness]. 1. An insane desire for narcotics. 2. Alcoholic insanity.

narcomaniac (nar-ko-ma'ne-ak). One who is affected with narcomania.

narcophin (nar'ko-fin). Narcofin.

A proprietary preparation narcosan (nar'ko-san) put forward as a cure for narcotic addiction.

narcosis (nar-ko'sis) [Gr. νάρκωσιs]. A state of profound unconsciousness produced by a drug. insufflation n. See insufflation anesthesia, under anesthesia. medullary n., spinal cocain-Nussbaum's n., general narcosis by the use of ether or chloroform after an injection of

narcosomania (nar-ko-so-ma'ne-ah). An insane or pathological craving for narcosis.

narcostimulant (nar-ko-stim'u-lant). Having both narcotic and stimulant properties.

narcotic (nar-kot'ik) [L. narcot'icus]. 1. Producing sleep or stupor. 2. Any drug that produces sleep or stupor and at the same time relieves pain.

narcoticism (nar-kot'is-izm). Same as narcotism. narcotico-acrid (nar-kot"ik-o-ak'rid). Both acrid and narcotic.

narcotico-irritant (nar-kot"ik-o-ir'it-ant). Both narcotic and irritant.

narcotile (nar'ko-til). Methylethylene bichlorid, a colorless, transparent, and inflammable liquid: used as a general anesthetic.

narcotin (nar'ko-tin). A crystalline alkaloid, C₂₂-H₂₃NO₇, from opium. It is used as an antipyretic and tonic, and has no narcotic effects. Dose, 1-3 gr. (0.066-0.2 gm.); hypnotic dose, 3\frac{1}{2}-15 gr. (0.25-1 gm.).

narcotism (nar'kot-izm). A condition of stupor or sleep produced by a drug.

narcotize (nar'kot-īz). To put under the influence of a narcotic.

narcyl (nar'sil). Ethylnarcein hydrochlorate: used as a general analgesic. Dose, 1 gr. (0.066 gm.).

narcylen (nar'sil-en). A mixture of purified acetylene, oxygen, and oil of pine: used as a general anesthetic.

nard (nard). See spikenard. n. Celtic, Valeria'na cel'tica and V. saliun'ca, Alpine plants of Europe: valued locally as a medicine and perfume.

Nardostachys (nar-dos'tak-is). See spikenard.

776

Naregamia (nah-re-ga'me-ah) [L.]. 1. A genus of meliaceous plants. 2. The root of N. ala'ta, of the East Indies: emetic and used like ipecac. Dose of tincture, 15-30 min. (1-2 c.c.).

naregamin (nah-rej'am-in). An amorphous alkaloid from naregamia: used like emetin; expectorant and emetic.

nargol (nar'gol). A therapeutic preparation of silver and nucleic acid, containing 10 per cent. of metallic silver. It is employed in 0 25-1 per cent. solution in gonorrhea; in 5 per cent. solution in conjunctivitis, and as a 10 per cent. ointment for burns, ulcers, etc.

naringin (nar h'jin). A crystalline glucosid, C₂₁-H₂₀O₁₁+4H₂O from the flowers of the shaddock, Cil'rus decuma na.

naris (na'ris), pl na'res [L.]. A nostril, especially the anterior naris [B N A]. anterior n., a nostril proper. posterior n., either one of the posterior openings of the nasal fossæ

narkine (nar'kin). A proprietary opium preparation.

narphoquin (nar'fo-kwin) A proprietary narcotinmorphin lactate with quinin and urea hydrochlorid. used as an analgesic. Called also amnesin

narry (nar'e). A stomach disease of the Mongols. due to excessive use of alcoholic drinks.

narzylen (nar'zil-en) A proprietary analgesic and anesthetic used in obstetric practice

nasal (na'zal) [L. nasa'lis]. Pertaining to the nose. nascent (nas'ent) [L. nas'cens]. 1. Just born; just coming into existence. 2. Just liberated from a chemic combination.

nasio-iniac (na"ze-o-in'e-ak). Pertaining to the nasion and the inion.

nasion (na'ze-on) [L. na'sus nose]. The middle point of the frontonasal suture.

nasitis (naz-i'tis) [L. na'sus nose]. Inflammation of the nose.

Nasmyth's membrane (nas'miths) [Alexander Nasmyth, Scotch dental surgeon in London, died 1847]. See membrane.

Na₂S₂O₃. Sodium thiosulphate.

Na₂8O₄. Disodic sulphate

naso-antral (na-zo-an'tral). I nose and the maxillary antrum. Pertaining to the

naso-antritis (na"zo-an-tri'tis). Inflammation of the nose and antrum of Highmore.

nasobronchial (na-zo-brong'ke-al). Pertaining to the nasal cavities and the bronchi.

nasociliary (na-zo-sil'e-a-re) Affecting the eyes, brow, and root of the nose

nasofrontal (na-zo-fron'tal). Pertaining to the nasal and frontal bones.

nasolabial (na-zo-la'be-al) [L. na'sus nose + la'bium lip]. Pertaining to the nose and lip.

nasolabialis (na"zo-la-be-a'lis) [L.]. See muscles, table of.

nasolacrimal (na-zo-lak'rim-al). Pertaining to the nose and lacrimal apparatus.

nasomanometer (na"zo-man-om'et-er). A manometer for measuring the degree of permeability of the nostril.

nasonnement (na-zaw-maw') [Fr.]. A nasal quality of voice.

nasopalatine (na-zo-pal'at-in) [L. na'sus nose + pala'tum palate]. Pertaining to the nose and

nasopharyngeal (na"zo-far-in'je-al). Pertaining to the nasopharvnx.

nasopharyngitis (na"zo-far-in-ji'tis). Inflammation of the nasopharynx.

nasopharynx (na-zo-far'inks) [L. na'sus nose + pharynx]. The part of the pharynx above the soft palate. See pharynx.

nasorostral (na-zo-ros'tral). Pertaining to the rostrum of the nose.

nasoscope (na'zo-skōp) [L. na'sus nose + Gr. σκοπεῖν to examine]. An electrically lighted instrument for inspecting the nasal cavity.

nasoseptal (na-zo-sep'tal). Pertaining to the nasal septum.

nasoseptitis (na"zo-sep-ti'tis). Inflammation of the nasal septum.

nasosinuitis, nasosinusitis (na"zo-si-nu-i'tis, na"zo-si-nu-si'tis). Inflammation of the accessory sinuses of the nose.

nasoturbinal (na-zo-ter'bin-al). Pertaining to the nose and turbinate bone.

nasrol (naz'rol). Same as symphorol.

nastin (nas'tin) [Gr ναστός solid]. A fatty substance from cultures of the streptothrix of leprosy; said to produce active immunity against leprosy. Cf. tuberculonastin.

nasus (na'sus) [L.]. The nose. n. exter'nus, the external nose.

natal (na'tal). 1. [L. na'tus birth.] Pertaining to birth. 2. [L. na'tes buttocks.] Pertaining to the buttocks.

Natal boil, sore (na'tal). See furunculus ori-

natality (na-tal'it-e) [L. nata'lis pertaining to birth]. The birth-rate in any community.

nataloin (na-tal'o-in). An aloin, C₂₅H₂₈O₁₁, derived from Natal aloes.

nates (na'tēz) [L.]. The buttocks; also the two—superior and anterior—prominences of the corpora quadrigemina.

natimortality (na"tim-or-tal'it-e) [L. na'tus birth + mortality]. The proportion of still-births to the general birth-rate; called also still-birth rate.

natri (nah'tre). The leaves and shoots of Sold'num cris'pum, S. guga'num, and S. tomatil'lo, a popular remedy in Chili for measles and scarlatina.

natrium (na'tre-um). Latin for sodium.

natron (na'tron). Native sodium carbonate; also soda or sodium oxid.

natrum (na'trum). Latin for sodium.

natuary (nat'u-a-re) [L. na'tus birth]. A ward for women during childbirth.

natural (nat'u-ral) [L. natura'lis, from natura nature]. Neither artificial nor pathologic.

nauclein (naw'kle-in). An alkaloid, C₂₁H₂₆N₂O₄, from Nau'clea excel'sa, a Japanese plant: used as a remedy for the opium habit.

Nauheim treatment (naw'him). See treatment. naupathia (naw-pa'the-ah, naw-pa-the'ah) [Gr. $\nu \alpha \hat{v}_{S}$ ship $+ \pi \alpha \theta o_{S}$ suffering]. Sea-sickness.

nausea (naw'se-ah) [L.; Gr. vavola sea-sickness]. Tendency to vomit; sickness at the stomach. creatic n., abnormal aversion to flesh as food. n. gravida'rum, the morning-sickness of pregnancy. n. mari'na, sea-sickness. n. nava'lis, sea-sickness.

nauseant (naw'se-ant). 1. Inducing nausea. 2.
An agent which causes nausea.

nauseate (naw'sc-āt). To affect with nausea.

nauseous (naw'se-us). Producing nausea or disgust.

navel (na'vel). The umbilicus. n.-ill. See omphalophlebitis (2). n.-string, the umbilical cord.
 navicula (na-vik'u-lah) [L.]. Fossa navicularis.

navicular (na-vik'u-lar) [L. navic'ula boat]. 1.
Boat shaped. 2. The scaphoid bone of the carpus or of the tarsus.

navicularthritis (na-vik"u-lar-thri'tis). Inflammation of the navicular joint of the horse's forefoot.

Nb. Symbol of niobium.

N. C. A. Abbreviation for neurocirculatory asthenia. See asthenia.

N. C. I. mixture or powder. See under powder. Nd. Symbol of neodymium.

N. D. A. Abbreviation for National Dental Association.

Ne. Symbol of neon.

nealogy (ne-al'o-je) [Gr. νεάλης young + λόγος treatise]. The study of the early infant stages of animals.

Neapolitan fever. Undulant fever. See under fever.

near-point (ner'point). See under point.

near-sight (ner'sit). Same as myopia.

near-sighted (ner-sit'ed). Same as myopic.

nearthrosis (ne-ar-thro'sis) [Gr. νέος new + ἄρθρον joint]. A false joint; pseudarthrosis.

nebenagglutinin (na"ben-ag-lu'tin-in) [Ger.]. A non-specific and collateral agglutinin.

nebenkern (na'ben-kern) [Ger. "near nucleus"].

1. A name given to several structures of the cell, but especially to the paranucleus. 2. The body which forms the envelope of the axial filament in the flagellum of the spermatozoon.

Nebinger-Praun operation (neb-in-ger-prown). See under operation.

nebula (neb'u-lah) [L. "mist"]. 1. A slight corneal opacity. 2 Cloudiness in urine. 3. An oily preparation for use in an atomizer.

nebulium (ne-bu'le-um) [L. neb'ula mist]. A hypothetical chemic element which exists in the nebulæ of astronomic space.

nebulization (neb"u-li-za'shun) [L. neb'ula mist].

1. Conversion into a spray.

2. Treatment by a spray.

nebulizer (neb'u-li-zer). An atomizer; a device for throwing a spray.

Necator americanus (ne-ka'tor am-er-ik-a'nus). The American hookworm, a nematode parasite, resembling but shorter and more slender than Ankylostoma dwodenule. It is characterized by its buccal cavity containing four plates, four pharyngeal lancets, and a dorsal conic tooth. Infection by this parasite produces the disease ankylostomiasis. Called also Ankylostoma americanum and Uncinaria americana. See also ankylostomiasis.

neck (nek). 1. The part between the head and thorax.
2. The part near the extremity of an organ or bone.
anatomic n., the constriction of the humerus
just below the proximal articular surface. Derbyshire n. See goiter. limber n., a disease of
chickens in which they remain quiet, refuse to eat,
develop weakness of the neck, wings, and legs, and
die in a day or two. It is probably a form of
botulism. Madelung's n., a neck affected with
diffuse lipoma. Nithsdale n., goiter. surgical
n., the constricted part of the humerus below the
tuberosities. n. of a tooth, the narrowed part
of a tooth between the crown and the root. n. of
the womb, the cervix uteri.

necrectomy (ne-krek'to-me) [Gr. νεκρός dead + εκτομή excision]. The cutting away of necrosed material.

necremia, necremia (nek-re'me-ah) [Gr. νεκρός dead + αίμα blood]. Loss of vitality of the blood. necrencephalus (nek-ren-sef'al-us) [Gr. νέκρος

dead + ἐνκέφαλος brain! Softening of the brain. **necrobacillosis** (nek"ro-bas-il-o'sis). Any disease of animals caused by *Bacillus necrophorus*.

necrobiosis (nek"ro-bi-o'sis) [Gr. νεκρός dead body + βίωσις life]. Progressive degeneration and death of a tissue.

necrobiotic (nek"ro-bi-ot'ik). Necrotic.

necrocytosis (nek"ro-si-to'sis) [Gr. νεκρός dead + κυτος cell]. Death and decay of cells.

necrocytotoxin (nek"ro-si-to-toks'in). A toxin that produces death of cells.

necrogenic (nek-ro-jen'ik) [Gr. νεκρός corpse + γενναν to produce]. Having origin in dead matter. necrogenous (nek-roj'en-us). Necrogenic.

necrologic (nek-ro-loj'ik). Pertaining to necrology. necrologist (ne-krol'o-jist). An expert in necrol-

necrology (ne-krol'o-je) [Gr. νεκρός dead body + λόγος discourse]. The statistics or records of deaths.

necromania (nek-ro-ma'ne-ah) [Gr. νεκρός dead + µavla madness]. A morbid or insane pleasure in death or dead persons.

necrometer (ne-krom'et-er) [Gr. νεκρός corpse + μέτρον measure]. An instrument for measuring the organs of the dead body.

necronectomy (nek-ro-nek'to-me) [Gr. νεκρός dead + ἐκτομή excision]. The excision of necrotic ossicles or of any other necrotic part.

necroparasite (nek-ro-par'as-īt) [Gr. νεκρός dead + parasite]. An organism which flourishes in dead rather than in living tissue; a saprophyte.

necrophagous (nek-rof'ag-us) [Gr. νεκρός dead + φαγείν to eat]. Devouring or subsisting on dead bodies.

necrophilism (nek-rof'il-izm) [Gr. νεκρός dead body + φιλείν to love]. Insane love for dead bodies: sexual intercourse with a dead body; in some cases it becomes a form of sexual perversion.

necrophilous (nck-rof'il-us). Living on dead tissues.

necrophily (nek-rof'il-e). Necrophilism.

necrophobia (nek-ro-fo'be-ah) [Gr. νεκρός dead + φόβος fear]. 1. Insane or morbid fear of death. 2. Morbid dread of dead bodies.

necropneumonia (nek"ro-nu-mo'ne-ah) [Gr. νεκρός dead + πνεύμον lung]. Gangrene of the lung.

necropsy (nek'rop-se) [Gr. νεκρός dead + δψις view]. A postmortem examination; autopsy.

necropyoculture (nek-ro-pi'o-kul-tshur) νεκρός dead + πύον pus + culture]. A pyoculture in which the leukocytes of the pus have been killed.

necrosadism (nek-ro-sa'dism). [Gr. νεκρός dead + sadisml. Mutilation of a corpse for the purpose of exciting or gratifying sexual feelings.

necroscopy (ne-kros'ko-pe) [Gr. νεκρός corpse + σκοπεῖν to view]. A postmortem examination. necrose (nek'rōs). To be necrotic or become af-

fected with necrosis.

necrosis (ne-kro'sis) [Gr. νέκρωσις deadness].

Death of a circumscribed portion of tissue. Bal-[Gr. νέκρωσις deadness]. ser's fatty n., gangrenous pancreatitis with omental bursitis and disseminated patches of necrosis of the fatty tissues. **caseous n.**, cheesy necrosis. **central n.**, that which affects the central portion of a cell or of a bone. cheesy n., tuberculous necrosis, as of the lung, with the formation of a cheesy deposit. coagulation-n., necrosis of a portion of some organ or tissue, with the formation of fibrous infarcts, in which a relatively small part seems to have been deprived of the afflux of blood by the plugging of its vessels with coagula. colliquative n., liquefactive n., necrosis in an organ marked by the collection of a fluid exudate. dental n., nonmolecular decay of a tooth. dry n., that in which the dead bone becomes dry. embolic n., coagulation-necrosis of an anemic infarct following embolism. fat-n., necrosis of the fatty tissue in small white areas. focal n., the presence of small foci of necrosis often seen in the course of an infection. icteric n., necrosis of the liver in icterus. liquefaction n., colliquative necrosis. mercurial n., a form due to mercurial poisoning. moist n., that in which the dead bone becomes wet and soft. mummification n., dry gangrene. phosphorus-n., necrosis of the upper jaw-bone due to exposure to the fumes of phosphorus-number o n. progre'diens, progressive sloughing. progressive emphysematous n., gas phlegmon.

See phlegmon. radium n., necrosis of the jaw bone occurring in workers in radium plants. simple n., degeneration of the protoplasm and nucleus of the cells of a tissue without change in the appearance of the tissue. superficial n., that which affects the outer layers only of a bone. syphilitic n., necrosis of a bone caused by syphilis. total n., that which affects all parts of a bone. n. ustilagin'ea, dry gangrene from ergot poisoning. Zenker's n., Zenker's degeneration

necrospermia (ne-kro-sper'me-ah). The presence of a urethral discharge in which the spermatozoa are non-motile.

necrotic (ne-krot'ik). Pertaining to or affected with necrosis.

necrotomy (ne-krot'o-me) [Gr. νεκρός corpse + τέμνειν to cut]. The dissection of a dead body; also the excision of a sequestrum. osteoplastic n., removal of a sequestrum from a bone after first lifting a flap of the bone, which is replaced after the operation.

Nectandra (nek-tan'drah) {Gr. νέκταρ nectar + άνήρ man, anther]. See bebeeru.

nectrianin (nek-tri'an-in). An extractive from the fungus of tree-cancer, Nec'tria ditis'sima. It is iniected for cancer.

needle (ne'dl) [L. a'cus]. A sharp instrument for sewing or puncturing. aneurysm n., a needle with a handle: used in ligating blood-vessels. artery n., aspirating n., a long, hollow needle for removing fluid from a cavity. Babcock's n., a large hypodermic needle, provided with a stilet, for spinal puncture. cataract-n., a needle for use in removing a cataract. Deschamp's n., one with the eye near the point used in ligation of deep-seated arteries. dipping-n., a magnetic needle so hung that it can move freely in a vertical plane. discission n., a special form of cataract needle. Emmet's n., a strong, curved needle set in a handle and having an eye in its point. exploring n., a flattened and grooved needle to be thrust into a part where fluid is believed to exist. Hagedorn's n's, surgical needles which are flat from side to side, and have a straight cutting-edge near the point and a large eye. harelip n., a cannula introduced by a trocar through the lips of the wound in harelip operation, a figurea cannula introduced by a trocar through of-8 suture being applied over the cannula. hypodermic n., a form of hollow needle used in injecting medicines beneath the skin. knifea slender knife with a needle-like point: used in discission of a cataract. ligature n., a slender steel needle having an eye in its curved end, used for passing a ligature underneath an artery. Reverdin's n., a surgeon's needle having an eye which can be opened and closed by means of a slide. stop-n., a needle with a shoulder that prevents it from being plunged in more than a certain distance.

needling (ned'ling). Discission or puncture, chiefly of a cataract, with a needle.

neem batti. A little plague packet which contains leaves of the neem (Margosa) tree and pepper. 1t is allowed to burn in rat holes to kill or drive out the rats

neëncephalon (ne-en-sef'al-on) [Gr. νέος new + έγκέφαλη brain]. The new brain; the cerebral cortex and its dependencies.

Neftel's disease (nef-telz') [William Basil Neftel, American physician of Russian birth, 1830-1906]. See under disease.

negativism (neg'at-iv-izm). A morbid propensity in a patient to do the opposite of what he is directed to do, or to oppose his normal physiologic desires.

negatoscope (neg'at-o-skop). An apparatus for showing radiographic negatives.

Negri bodies (na'gre) [Adelchi Negri, Italian physician, 1876-1912]. See under body.

Negro's phenomenon (na'grōz) [Camillo Negro]. See cogwheel phenomenon, under phenomenon.

Neisser's coccus (ni'serz) [Albert Ludwig Siegmund Neisser, German physician, 1855-1916]. Neisseria gonorrhϾ.

Neisser's stain (ni'serz) [Max Neisser, German bacteriologist, born 1869]. See under stain.

neisserbacterin (nīs-er-bak'ter-in). See gonococcus vaccine, under vaccine.

Neisseria (nīs-e're-ah) [Albert L. S. Neisser, physician in Breslau, 1855-1916, the discoverer of the gonococcus]. A genus of Coccaceæ made up of biscuit-shaped hemispheres with the flattened sides adjacent. They are Gram-negative, non-motile and very strictly parasitic. N. al'bicans, a non-motile, species from the vaginal secretion, often in groups; it is much larger than the gono-coccus, which it resembles. N. babe'sii, a pathogenic species composed of flattened cocci girdled with a yellowish zone. from the blood, red blood-corpuscles, and flesh of cattle with epidemic N. catarrha'lis, a Gramhemoglobinuria. negative coccus found in the nasopharynx of healthy persons as well as persons suffering from colds and other respiratory affections. At times it excites catarrhal inflammation and pneumonia and has occurred as a secondary invader in influenza. N. cit'rea, a non-motile species from the pus of gonorrhea and from the dust of air; forming coherent masses of tetrads; it produces a lemonhued pigment. N. edinto'nii, a non-pathogenic and non-motile species found in the blood and desquamated epidermis of scarlatina. The cocci are hyaline. N. fla'va liquefa'ciens tar'da, a non-motile and non-pathogenic form from the skin in seborrhea; it produces a sulphur-yellow or yellowish-green pigment. N. franklandio'rum, a non-motile species from soil. N. gonorrhos's, the specific cause of gonorrhea. It is found particularly inside the pus-cells from the genital tract and the eye. They are Gram-negative biscuit-shaped organisms with the flattened sides adjacent. Called also Micrococcus gonorhae, gono-coccus, Diplococcus of Neisser, Diplococcus gonorhae

N. intracellula'ris. Same as N. meningitidis.

N. lac'tea, a non-pathogenic species from sputum and from vaginal secretions. N. lys'see, a hyaline species from the brain and spinal cord in N. meningit'idis, the microorganism rabies. which causes epidemic cerebrospinal meningitis. It is also known as meningococcus, Diplococcus intracellularis meningilidis, Micrococcus meningilidis, Micrococcus weichselbaumii, and Streptococcus meningliidis. N. miche'li, a species somewhat like the gonococcus, derived from the follicles of trachoma. N. petechia'lis, a species from the blood and petechiæ of typhus fever. N. pharyn'gis sic'ci, a species found in the mucous membrane of the respiratory tract. N. rebel'lis, a species from the follicles of trachoma. N. rosa'cea, a non-pathogenic species from the air. N. ro'sea, a non-pathogenic and non-motile species from the air, producing a rose-red pigment. N. subfla'va, a non-motile species from the healthy urethra and from vaginal secretions and lochia. Subcutane-ously injected it causes large abscesses. N. tardis'sima, a nearly non-motile species from urethral pus. N. weichselbaum'ii. Same as Neisseria meningitidis. N. winck'lori, a species in hyaline diplococci from beriberi.

Neisser-Doering phenomenon (ni"ser-de'ring) [Ernst Neisser, German physician, born 1863; Hans Doering, German physician, born 1871]. See under phenomenon.

Neisser-Wechsberg phenomenon (ni"ser-veks'-berg) [Max Neisser, German bacteriologist, born 1869; Friedrich Wechsberg, German physician]. See deviation of the complement.

neisserosis (nis-er-o'sis). Gonorrhea.

neko (ne'ko). A proprietary antiseptic derived from coal-tar.

nekro-. For words beginning thus see those beginning necro-.

Nélaton's catheter, line, probe, etc. (na-lah-tawz') [Auguste Nélaton, French surgeon, 1807-1873]. See catheter, line, probe, etc.

nelavan (nel'ah-van). The African lethargy, or sleeping disease. See Congo trypanosomiasis, under trypanosomiasis.

nelogism (ne'lo-jism)./ Neologism.

nem (nem) [term coined from initial letters of Nahrungs Einheit Milch (nutritional unit milk)]. The unit of nutrition in Pirquet's system of feeding, equivalent to the nutritive value of 1 gm. of breast milk.

N. E. M. A. Abbreviation for National Electric Medical Association.

nematelminth, nemathelminth (nem-at-el'-minth, nem-ath-el'minth) [Gr. νῆμα thread + ελμινς worm]. A nematode worm.

Nematelminthes, Nemathelminthes (nem-atel-min'thēz). The phylum of round worms. It includes Acanthocephala, Gordiacea, and Nematoda.

nematelminthiasis, nemathelminthiasis (nem-at-el-min-thi'as-is). Infestation by nematodes or round worms.

nematoblast (nem'at-o-blast) [Gr. νημα thread + βλαστός germ]. Same as spermatid.

Nematocera (nem-at-os'er-ah) [Gr. νημα thread + κέραs horn]. A suborder of Diptera characterized by having long antennæ and comprising the gnats, mosquitos, midges, crane-flies, gall-flies, etc.

nematocide (nem'at-o-sid) [nematoid + L. cœ'dere to kill]. r. Destructive to nematoid worms. 2. An agent which destroys nematodes.

Nematoda, Nematodes (nem-at-o'dah, -o'des) [Gr. $\nu\eta\mu\alpha$ thread $+ \epsilon l\delta os$ form]. An order of the Nemathelminthes. It includes the following very important families parasitic in man Angiostomidæ, Anguillulidæ, Ascaridæ, Filaridæ, Gnathostomidæ, Mermithidæ, Strongylidæ, and Trichinellidæ.

nematode, nematoid (nem'at-od, nem'at-oid).

1. Like a thread. 2. Any endoparasite or species belonging to the Nematoda.

nematodiasis (nem"at-o-di'as-is). Infestation by a nematode parasite.

Nematodirus (nem-at-o'di-rus). A genus of nematode parasites found in the duodenum of ruminants.

nematospermia (nem"at-o-sper'me-ah) [Gr $\nu \hat{\eta} \mu a$ thread + $\sigma \pi \hat{\epsilon} \rho \mu a$ sperm]. Spermatozoa having elongated tails.

Nencki's test (nents'kēz) [Marcellus von Nencki, Polish physician, 1847–1901]. See under tests.

neo- [Gr. véos new]. A prefix signifying new.

neo-antiluetin (ne"o-an-te-lu'et-in). Antimony hydrargyrate, a combination of luetin with neutral sulphonic acid, sodium salicylate, and mercury.

neo-arsphenamin (ne"o-ars-fen-am'in). Sodium diaminodihydroxy arsenobenzene methanal sulphoxylate, NH₂(OH).C₆H₃As.As.C₆H₃(OH).NH.-(CH₂O)OSNa it is used like arsphenamin, from which it differs in being neutral in reaction, less toxic, and more soluble. Called also neosalvarsan, "914," neodiarsenol (Canada), neo-kharsivan (England), novarsenobenzol (France), and neo-arsaminol (Japan).

neo-arsycodil (ne"o-ar-sik-o'dil). See arrhenal.
neo-arthrosis (ne"o-ar-thro'sis). Same as near-throsis.

neoblastic (ne-o-blas'tik) [Gr. νέος new + βλαστός germ]. Originating in, or of the nature of, new tissue.

neoby (ne'o-be). A proprietary preparation of iodobismuthate of vanadium in oil for syphilis. **neocain** (ne'o-kān). A French brand of novocain.

neocerebellum (ne"o-ser-e-bel'um). The more recently developed part of the cerebellum, comprising the lateral lobes. Cf. paleocerebellum.

neochinamyl (ne-o-kin'am-il). A combination of chinidin, chloral hydrate, and isovalerianic acid: used in cardiac neuroses.

neocinchophen (ne-o-sin'ko-fen). A pale yellow, odorless and tasteless powder, the ethyl ester of methyl-phenyl-quinolin-carboxylic acid, CH₃.C₉-H₄N(C₆H₈).CO₂.C₂H₆: used like cinchophen.

neocinetic (ne"o-sin-et'ik). Neokinetic.

neocyte (ne'o-sit) [Gr. νέος new + κύτος cell]. An immature form of leukocyte.

neocytosis (ne"o-si-to'sis). The presence of neocytes or immature form of leukocytes in the blood.

neodermin (ne-o-der'min) [Gr. νέος new + δέρμα skin]. A vulnerary ointment containing fluor-pseudocumol.

neodiarsenol (ne"o-di-ar'sen-ol). A Canadian made neo-arsphenamin.

neodymium (ne-o-dim'e-um). A rare element of atomic weight 144.3; symbol, Nd.

neo-encephalon (ne"o-en-sef'al-on). Neencephalon.

neoferrum (ne-o-fer'um) A proprietary preparation of maltopeptonate of iron and manganese with arsenic, maltine, and sherry wine.

neofetal (ne-o-fe'tal). Pertaining to the neofetus, or to the eighth and ninth weeks of intra-uterine life.
 neofetus (ne-o-fe'tus). The embryo during the

eighth and ninth weeks of intra-uterine life.

neoform (ne'o-form). Basic tri-iodophenol bis-

muth. used as a dusting-powder in ulcers, etc. neoformans-bacterin (ne-o-for"manz-bak'te-rin).

See bacterial vaccine, under vaccine.

neoformation (ne"o-for-ma'shun). A new-growth or neoplasm.

neoformative (ne-o-for'mat-iv). Concerned in the formation of new tissue.

neogala (ne-og'al-ah) [Gr. νέος new + γάλα milk]. The first milk developed after childbirth. See also colostrum.

neogenesis (ne-o-jen'es-is) [Gr νέος new + γένεσις production]. A form of regeneration that is slower than anagenesis.

neogenetic (ne"o-jen-et'ik). Pertaining to neogenesis.

neohymen (ne-o-hi'men) [Gr. νέος new + ὑμήν membrane]. A false membrane.

neokharsivan (ne-o-kar'siv-an). A British-made neo-arsphenamin.

neokinetic (ne-o-kin-et'ik) [Gr. νέος new + κινητικός pertaining to movement] A term applied to the nervous motor mechanism regulating voluntary muscular control. It is associated with the motor area of cerebral cortex, and receives its name because of the fact that it was developed more recently than the older paleokinetic system. Cf paleokinetic.

neologism (ne-ol'o-jizm) [Gr. νέος new + λόγος word] The invention of new words; also a meaningless word uttered by an insane patient.

ingless word uttered by an insane patient.

neomembrane (ne-o-mem'brān). A false membrane

neomorph (ne'o-morf) [Gr. νέος new + μορφή form]. A recently acquired part or organ.

form]. A recently acquired part or organ. **neomorphism** (ne-o-mor'fizm). Same as neomorph.

neon (nc'on) [Gr. véos new]. An inert gaseous element discovered in the air in 1898, symbol, Ne; atomic weight, 20.2.

neonatal (ne-o-na'tal) [Gr. νέος new + L. na'tus born] Pertaining to the newborn.

neopallium (ne-o-pal'e-um) [Gr. véos new + I. pallium cloak]. The non-olfactory portion of the cerebral cortex; so called because it is of later development than the archipallium. Cf. archipallium.

neopathy (ne-op'ath-e) [Gr. $\nu \acute{e}os$ new $+ \pi \acute{a}\theta os$ disease]. 1. A new disease. 2. A new condition or complication of disease in a patient.

neophilism (ne-of'il-izm) [Gr. νέος new + φιλείν to love]. Morbid or abnormal love of novelty.

neophobia (ne-o-fo'be-ah) [Gr. νέος new + φόβος fear]. Insane dread of new things.

neophrenia (ne-o-fre'ne-ah) [Gr. νέος new + φρήν mind]. Mental disorder occurring in early youth.

neopin (ne'o-pin). An amorphous opium alkaloid, C₁₈H₂₁NO₃(or 4).

neoplasia (ne-o-pla'ze-ah). The formation of a neoplasm.

neoplasm (ne'o-plazm) [Gr. νέος new + πλάσμα formation]. Any new and abnormal formation, such as a tumor, infarct, or false membrane. histoid n., any neoplasm whose structure resembles that of the tissues in which it is situated. organoid n., a neoplasm whose structure resembles that of some organ of the body.

neoplastic (ne-o-plas'tik). Pertaining to or like a neoplasm.

neoplasty (ne'o-plas-te) [Gr. νέος new + πλάσσειν to mold]. Plastic restoration of lost parts.

Neopsyl'la mus'culi. The mouse flea.

neopyrenol (ne-o-pi'ren-ol). An expectorant, sedative, and antirheumatic preparation of thymol, benzoic acid, and sodium benzoate and oxybenzoate.

neopyrine (ne-o-pi'rin). Valerylamido-antipyrin, a white, crystalline compound, antipyretic and antineuralgic.

neorobin (ne-o-ro'bin). A proprietary product obtained by the reduction of chrysarobin—used as an ointment in psoriasis and dandruff.

neosalvarsan (ne-o-sal'var-san). Neo-arsphenamin

neosidone (ne-o-si'dōn). A yellow powder, a combination of iodin and catechin used as a non-irritating means of administering iodin.

neosilvol (ne-o-sil'vol). A form of colloidal silver iodid containing 18 to 22 per cent of silver iodid in a soluble gelatin base. It is used as a prophylactic against and as a treatment for infections of the mucous membranes in 5 to 50 per cent solutions

neosin (ne'o-sin). A base, C₆H₁₇NO₂, found in muscle.

Neosporidia (ne"o-spo-rid'e-ah) [Gr. $\nu i o s$ new + $\sigma \pi \delta \rho o s$ seed]. A division of sporozoa in which growth and sporulation proceed together and simultaneously.

neossin (ne-o'sin). A glucoprotein derived from edible birds' nests; also from Liebig's extract of beef.

neostomy (ne-os'to-me) [Gr. νέος new + στόμα mouth]. The operation of making an artificial opening into an organ or between two organs.

neostriatum (ne-o-stri-a'tum) [Gr vios new + striatum]. The more recently developed portion of the corpus striatum represented by the caudate nucleus and the putamen Cf paleostriatum

neothalamus (ne-o-thal'am-us) [(ir. véos new + thalamus] New thalamus; the phylogenetically new part of the thalamus, t. e, the more lateral, cortical part. Cf. paleothalamus.

neotrepol (ne-o-tre'pol) Trade name for precipitated bismuth in oil. for intramuscular injection in syphilis.

neottin (ne'o-tin). A yellow powdered proprietary food consisting of nitrogen, albumin, lecithin, and phosphorus.

nepenthe (ne-pen'the) [Gr. $\nu\eta$ - neg. + $\pi \dot{\epsilon}\nu\theta$ os grief]. A deodorized opium preparation.

nepeta (nep'et-ah). Catnip. See cataria.

nephelometer (nef-el-om'et-er) [(ir. νεφέλη mist + μέτρον measure]. An apparatus for performing nephelometry.

nephelometry (nef-el-om'et-re) [Gr. $\nu\epsilon\varphi\epsilon\lambda\eta$ mist + $\mu\epsilon\tau\rho\sigma\nu$ measure]. A method of chemical and bacterial analysis made by measuring the brightness of light reflected by the particles in suspension in a tube.

nephelopia (nef-el-o'pe-ah) [Gr. νεφέλη cloud + ων eye]. Defect of vision from cloudiness of the cornea.

nephradenoma (nef"rad-en-o'mah) [Gr. νεφρός kidney + adenoma]. Adenoma of the kidney.

nephralgia (nef-ral'je-ah) [Gr. νεφρός kidney' + άλγος pain]. Pain in a kidney.

nephralgic (nef-ral'jik). Characterized by pain in the region of the kidneys.

nephrapostasis (nef-rap-os'tas-is) [Gr. νεφρόs kidney + ἀπόστασις suppuration]. Abscess or suppurative inflammation of a kidney.

nephratonia, **nephratony** (nef-rat-o'ne-ah, nef-rat'o-ne) [Gr. $\nu \epsilon \varphi \rho \delta s$ kidney $\frac{1}{4}$ atony]. Atony of the kidney.

nephrauxe (nef-rawks'e) [Gr. νεφρός kidney + αυξή increase]. Enlargement of the kidney.

nephrectasia (nef-rek-ta'ze-ah) [Gr νεφρός kidney + ἔκτασις distention]. Dilatation of a kidney.

nephrectasis (nef-rek-ta'sis) [Gr. νεφρός kidney + ξκτασις distention]. Distention of the kidney; sacciform kidney.

nephrectasy (nef-rek'tas-e). Nephrectasis.

nephrectomize (nef-rek'to-mīz). To remove the kidney from.

nephrectomy (nef-rek'to-me) [Gr. νεφρός kidney + ἐκτομή excision]. Excision of the kidney. abdominal n., anterior n., nephrectomy through an incision in the abdominal wall. lumbar n., nephrectomy through an incision in the loin. paraperitoneal n., the surgical removal of a kidney by a cut through the side along the false rib. posterior n. Same as lumbar n.

nephrelcosis (nef-rel-ko'sis) [Gr. νεφρός kidney + ξλκωσις ulceration] Ulceration of the kidney.

nephremia (nef-re'me-ah) [Gr. νεφρός kidney + alμa blood]. Congestion of the kidney.

nephremphraxis (nef-rem-fraks'is) [Gr. $\nu\epsilon\varphi\rho bs$ kidney + $\xi\mu\varphi\rho\alpha\xi\iota s$ obstruction]. Obstruction of the vessels of the kidney.

nephria (nef're-ah) [Gr. νεφρός kidney]. Bright's disease

nephric (net'rik) [Gr. νεφρός kidney]. Pertaining to the kidney.

nephridium (nef-rid'e-um). The excretory organ of the embryo; the embryonic tube whence the kidney is developed.

nephrin (nef'rin). Same as cystin.

nephrism (nef rizm). Cachexia due to kidney disease.

nephritic (nef-rit'ik) [Gr. νεφριτικόs]. **Pertaining** to or affected with nephritis.

nephritides (nef-rit'id-ēz). The plural of nephritis; a general term for the varieties of nephritis.

nephritin (net'rit-in) A proprietary preparation of the enzymes and hormones of the kidney for use in renal disease

nephritis (nef-ri'tis), pl. nephrit'ides [Gr. νεφρός kidney + -iris inflammation]. Inflammation of the kidney. acute n., suppurative nephritis with a short and severe course, constituting the acute form of Bright's disease. There are two forms. acute parenchymatous n. and acute dif-fuse n., caused by exposure to wet and cold, or by pneumonia or pregnancy, or resulting from scarlet fever or other exanthemata. The kidney becomes soft and enlarged, with fatty degeneration of the tubular epithelium and the forma-tion of tube-casts. It is attended with pain in the lumbar region, fever, dropsy, frequent and painful urination, with presence of casts and of blood in the urine. albuminous n., nephritis in which albuminuria occurs. azotemic n., nephritis in which nitrogen retention is the important feature: contrasted with hydremic nephritis. bacterial n., nephritis which is caused by microorganisms. capsular n., that which specially affects Bowman's capsules. catarrhal n., nephritis in which the pyramids are of a reddish hue, from the plugging of the tubular canals with cells. cheesy n., a chronic suppurative form with case ous deposits. chloro-azotemic n., nephritis in

which there is retention of chlorids and urea, but not of water. **chronic** n., any variety having a relatively slow course. **clostridial** n., chronic nephritis believed to be due to the presence of clostridia. It is characterized by nervousness, sleeplessness, dyspnea, dyspepsia, and albuminuria. croupous n. Same as acute n. desquam-ative n., acute catarrhal nephritis. diffuse n., nephritis affecting both the parenchyma and the stroma. diffuse n., acute. See under acute n. diffuse n., chronic, a form resulting from acute from gout. The kidney becomes small, cysinterstitial tissue is increased, and there is thickening of the vessel walls and of the malpighian corpuscles: the heart becomes hypertrophied, and the walls of the small arteries thickened, the malpighian tubules contain hyaline casts. The disease is attended with progressive loss of strength, edema about the eyelids, dyspnea, headache, dyspepsia, diarrhea, and the frequent passage of large quantities of light-colored urine containing albumin and casts. Called also chronic interstitial n., atrophic kidney, contracted kidney, gouty kidney, and granular kidney. exudative n., nephritis with exudation of the blood covery. Through the twicks prograilly of blood-serum. **fibrous n.**, that which specially af fects the stroma. glomerular n., that which principally affects the glomeruli glomerulocapsular n., a form which primarily affects the glomeruli and Bowman's capsules hydremic n., nephritis in which dropsy is the predominating feature; contrasted with azotemic nephritis. hypogenetic n., nephritis due to an unusual strain upon kidneys that are congenitally underdeveloped. idiopathic n., nephritis the cause of which is not discoverable. indurative n., chronic nephritis with atrophy of the secreting parts of the kidney and hypertrophy of the connective-tissue stroma. interstitial n. Same as fibrous n. Lan-cereaux's n., inter titial nephritis of rheumatic origin. parenchymatous n., nephritis which specially affects the parenchyma of the kidney. parenchymatous n., acute. See under acute n. parenchymatous n., chronic, is marked by changes similar to those of the acute form, without congestion. The kidney becomes soft and white, and the disease is attended by anemia, dropsy, anasarca, gastro-intestinal disorder, and dyspnea, with secretion of small amounts of high-colored urine containing albumin and casts. Called also chronic tubal n., large white kidney, and branny kidney. productive n., nephritis with the development of serous exudate and hypertrophy of the connective-tissue stroma. saturnine n., a form due to chronic lead-poisoning. scarlatinal n., acute nephritis due to scarlet fever. suppurative n., a form accompanied by abscess of the kidney. purative n., acute, is due to septic infection, generally from operations on the genito-urinary tract (then called surgical kidney), and marked by the development of multiple abscesses. purative n., chronic, is caused by infection with the tubercle bacillus. In this disease cavities are found in the kidney, filled with pus-like, cheesy masses and tubercle bacilli. Called also tubercular n. and cheesy n. tartrate n., acute. nephritis produced by the subcutaneous injection of racemic tartaric acid. trench n., acute nephritis affecting soldiers in the trenches. tubal n., tubular n., a variety that affects principally the tubules. tuberculous n., a variety of chronic interstitial nephritis due to the bacillus of tuberculosis.

nephro-abdominal (nef"ro-ab-dom'in-al). Pertaining to the kidney and the abdominal wall.

nephrocapsectomy, nephrocapsacectomy nef"ro-kap-sek'to-me, nei"ro-kap-sas-ek'to-me) [Gr. νεφρός kidney + L. cap'sula capsule + Gr. ἐκτομή excision]. Excision of the renal capsule.

nephrocardiac (nef-ro-kar'de-ak). Pertaining to the kidney and the heart.

nephrocele (nef'ro-sēl) [Gr. νεφρός kidney + κήλη hernia]. Hernial protrusion of a kidney.

nephrocolic (nef-ro-kol'ik) [Gr. νεφρός kidney + colic]. Renal colic.

nephrocolopexy (nef-ro-ko'lo-peks-e). [Gr. $\nu\epsilon\varphi\rho\delta$ s kidney + $\kappa\delta\lambda\rho\nu$ colon + $\pi\hat{\eta}\xi\iota$ s fixation]. Operative suspension of the kidney and colon by means of the nephrocolic ligament.

nephrocoloptosis (nef"ro-ko-lop-to'sis)[Gr. νεφρός kidney + κόλον colon + πτῶσις fall]. Downward displacement of the kidney and colon.

nephrocystanastomosis (nef"ro-sis-tan-as-to-mo'sis) [Gr. νεφρόs kidney +κνστιs bladder +κνστιs bladder +κνστιs tion of a passage between the kidney and the urinary bladder.

nephrocystitis (nef"ro-sis-ti'tis) [Gr. νεφρδs kidney +κίστιs bladder + -ιτιs inflammation]. Inflammation of the kidneys and bladder.

nephrocystosis (nef''ro-sis-to'sis) [Gr. νεφρός kidney + κύστις cyst]. Development of cysts in the kidney.

nephro-erysipelas (nef"ro-ēr-is-ip'el-as). Erysipelas complicated with acute nephritis.

nephrogastric (nef-ro-gas'trik). Pertaining to the kidney and the stomach.

nephrogenic, nephrogenous (nef-ro-jen'ik, nef-roj'en-us) [Gr. νεφρός kidney + γεννῶν to produce] Arising in or from a kidney; forming kidney tissue.

nephrohemia (nef-ro-he'me-ah) [Gr. νεφρός kidney + alμa blood]. Congestion of the kidney.

nephrohydrosis (nef"ro-hi-dro'sis). Hydro-nephrosis.

nephrohypertrophy (nef"ro-hi-per'tro-fe) [Gr. νεφρός kidney + hypertrophy]. Hypertrophy of the kidney.

nephrolith (nef'ro-lith) [Gr. νεφρόs kidney + λlθοs stone]. A renal calculus; gravel in a kidney

nephrolithiasis (nef"ro-lith-i'as-is). A condition marked by the presence of renal calculi.

nephrolithotomy (net"ro-lith-ot'o-me) [Gr. νεφρός kidney + lithotomy]. The removal of renal calculi by cutting through the body of the kidney.

nephrologist (nef-rol'o-jist). An expert, or specialist, in diseases of the kidney.

nephrology (nef-rol'o-je) [Gr. νεφρόs kidney + λόγοs discourse]. Scientific study of the kidney and its diseases.

nephrolysin (nef-rol'is-in) [Gr. νεφρός kidney + lysin]. Same as nephrotoxin.

nephrolysis (nef-rol'is-is) [Gr. νεφρόs kidney + λύσις solution]. 1. Solution of kidney substance produced by a nephrotoxin. 2 The operation of separating the inflamed kidney from paranephric adhesions.

nephrolytic (nef-ro-lit'ik). Producing nephrolysis: nephrotoxic.

nephromalacia (nef"ro-mal-a'se-ah) [Gr. νεφρός kidney + μαλακία softness]. Softening of the kidney.

nephromegaly (nef-ro-meg'al-e) [Gr. νεφρός kidney + μέγας great]. Enlargement of the kidney.

nephromere (nef'ro-mēr) [Gr. νεφρόs kidney + μέροs part]. A metamere of the embryo having relation with the kidney.

nephroncus (nef-rong'kus) [Gr. νεφρός kidney + δγκος mass]. Tumor of the kidney.

nephroparalysis (nef"ro-par-al'is-is) [Gr. νεφρός kidney + paralysis]. Paralysis of the kidney.

nephropathic (nef'ro-path'ik). Due to disease of the kidneys, also causing disease of the kidneys.

nephropathy (nef-rop'ath-e) [Gr. νεφρός kidney + πάθος disease]. Disease of the kidneys. drop-

sical n., hypochloruric nephropathy. hypazoturic n., kidney disease in which insufficient nitrogen is eliminated. hypochloruric n., kidney disease with sodium chlorid retention.

nephropexy (nef'ro-peks-e) [Gr. νεφρός kidney + πηξις fastening]. The fixation of a floating kidney, especially that which is effected by packing with asepticized gauze.

nephrophthisis (nef-ro-tis'is) [Gr. νεφρός kidney + φθίσις wasting]. Same as nephrotuberculosis.

nephropoietic (nef"ro-poi-et'ik) [Gr. νεφρός kidney + ποιείν to make]. Forming kidney tissue.

nephropoietin (nef"ro-poi-e"tin). A substance thought to exist in the blood-serum, in embryonic kidney, and in kidneys undergoing regeneration, and to stimulate the formation of kidney tissue.

nephroptosis, nephroptosia (nef-rop-to'sis, nef-rop-to'se-ah) [Gr. $\nu \epsilon \varphi \rho \delta s$ kidney $+ \pi \tau \hat{\omega} \sigma \iota s$ falling]. Downward displacement of the kidney.

nephropyelitis (net"ro-pi-el-i'tis) [Gr. νεφρός kidney + pyelitis]. Parenchymatous inflammation of the kidney and of its pelvis.

nephropyeloplasty (nef-ro-pi'el-o-plas-te) [Gr. νεφρός kidney + πδελος pelvis + πλάσσειν to form]. Plastic operation on the pelvis of the kidney.

nephropyosis (nef"ro-pi-o'sis) [Gr. νεφρός kidney + πίωσις suppuration]. Suppuration of the kidney.

nephrorosein (nef-ro-ro'ze-in). A urinary pigment identified spectroscopically by its showing an absorption spectrum between the b and F lines.

nephrorrhagia (nef-ro-ra'je-ah) [Gr νεφρός kidney + ἡηγνύναι to burst forth]. Hemorrhage from the kidney.

nephrorrhaphy (nef-ror'a-fe) [Gr. νεφρός kidney + $\dot{\rho}$ αφή stitch]. The suturation of a displaced kidney in its normal place.

nephroscleria (nef-ro-skle're-ah) Nephrosclerosis. **nephrosclerosis** (nef"ro-skle-ro'sis) [Gr. νεφρός kidney + σκλέρωσις hardening]. Sclerosis, or hardening, of the kidney.

nephrosis (nef-ro'sis), pl. nephro'ses [Gr. νέφρος kidney]. Any disease of the kidney, especially degeneration of the epithelium of the renal tubules. The term includes cloudy swelling, fatty degeneration, and tubular necrosis lipoid n., a nephrosis marked by changes in the protein and lipoids of the blood and the deposit of lipoids in the kidney.

nephroson (nef'ro-son). A proprietary diuretic preparation.

nephrospasis (nef-ro-spas'is) [Gr. $\nu\epsilon\varphi\rho\delta s$ kidney $+\sigma\pi\hat{a}\nu$ to draw]. Movable kidney in which the natural supports of the organ are so weakened that the organ hangs by its pedicle.

nephrostoma (nef-ros'to-mah) [Gr. νεφρόs kidney + στόμα mouth]. Any one of the funnel-shaped and ciliated orifices connected with the wolffian tubules.

nephrostome (nef'ro-stom). Nephrostoma.

nephrostomy (nef-ros'to-me) [Gr. νεφρόs kidney + στόμα mouth]. The creation of a permanent fistula leading directly into the pelvis of the kidney.

nephrotome (nef'ro-tōm) [Gr. νεφρόs kidney + τομή cutting, section]. One of the segments of tissue in the embryo from which are developed the excretory tubules of the kidney.

nephrotomy (nef-rot'o-me) [Gr. νεφρός kidney + τέμνειν to cut]. A surgical incision into the kidney. It is called abdominal when performed through an incision into the abdomen, and lumbar when through an incision into the loins.

nephrotoxic (nef-ro-tok'sik). Toxic or destructive to the kidney, as, nephrotoxic serum.

nephrotoxin (nef-ro-tok'sin) [Gr. νεφρός kidney + τοξικόν poison]. A toxin which has a specific destructive effect on kidney cells.

nephrotresis (nef-ro-tre'sis) [Gr. νεφρός kidney + τρήσις boring]. The surgical formation of a permanent opening into the kidney through the loin.

nephrotriesis (nef-ro-tri-e'sis) [Gr. νεφρόs kidney + τριῆσις piercing]. The operation of establishing a fistula into the kidney by stitching the edges of the kidney incision to the parietal muscles.

nephrotuberculosis (nef"ro-tu-ber-ku-lo'sis) [Gr. νεφρός kidney + tuberculosis]. Disease of the kidney due to the tubercle bacillus.

nephrotyphoid (nef-ro-ti'foid). Typhoid fever complicated with acute nephritis.

nephrotyphus (nef-ro-ti'fus) [Gr. νεφρός kidney + typhus]. Typhus fever with renal hemorrhage.

nephro-ureterectomy (nef"ro-u"re-ter-ek'to-me)
[Gr. νεφρός kidney + ureterectomy]. Excision of a kidney and a whole or part of the ureter.

nephro-ureterocystectomy (nef"ro-u-re"ter-osis-tek'to-me) [Gr. νεφρός kidney + οὐρητήρ ureter + κύστις bladder + ἐκτομή excision]. Excision of the kidney, ureter, and a portion of the bladder wall.

nephrozymase (nef-ro-zi'mās) [Gr. $\nu\epsilon\varphi\rho\delta$ s kidney + $\zeta \delta \mu \eta$ leaven]. A ferment, like diastase, found in the urine.

nephrozymosis (nef"ro-zi-mo'sis). Zymotic or fermentative disease of the kidney.

nephydrosis (nef-id-ro'sis) [Gr. νεφρός kidney + τδωρ water]. The accumulation of urine in the pelvis of the kidney; hydronephrosis.

nephydrotic (nef-id-rot'ik). Pertaining to nephydrosis.

nepiology (nep-e-ol'o-je) [Gr. νέπιος infant + λόγος treatise]. The department of pediatrics treating of young infants.

neptunium (nep-tu'ne-um). An element belonging to the tantalum group occurring in certain rare earths associated with tantalum and niobium; atomic weight 118.

nercibus (ner-si'bus). A nervine preparation of glycerophosphates, iron, strychnin, etc.

nerianthin (ne-re-an'thin). A glucosid from oleander: therapeutically less active than oleandrin.

neriin (ne're-in) One of the active principles of oleander a cardiac stimulant and tonic.

Nerium (ne're-um) [Gr. νήριον oleander]. A genus of apocynaceous trees. See oleander.

Nernst lamp, theory (nernst) [Walther H. Nernst, German physicist, born 1864]. See lamp and theory.

neroli (nehr'o-le). An essential oil distilled from orange-blossoms.

nerolin (ne'ro-lin). Betanaphthol-ethyl-ether, C_{10} - H_7O C_2H_5

neropathy (ne-rop'ath-e). That part of the system of weltmerism known as the laying on of hands; manual gerokomy.

nervanin (ner-van'in). A local anesthetic, said to be far better and safer than cocain its chlorhydrate is scarcely poisonous unless given in enormous doses. Dose, 4-8 gr. (0.266-0.533 gm.).

nerve (nerv) [L. ner'vus; Gr. νεῦρον]. A cord-like structure which conveys impulses from one part of the body to another. A nerve consists of a connective-tissue sheath (epineurium) inclosing bundles (funiculi) of nerve-fibers, each bundle being surrounded by its own sheath of perineurium, the various bundles being separated by septa of connective tissue known as the endoneurium. Nerve-fibers are of two kinds: the medullated and the non-medullated. A medullated nerve-fiber consists of a central core or axis-cylinder, which is sometimes inclosed in a sheath, or axilemma, surrounded by a layer of white, fatty matter (myelin, white substance of Schwann, medulla, etc.), which is inclosed in a sheath (neurilemma, or primitive sheath). The myelin is separated by constrictions (nodes of Ranvier) into segments of about one millimeter in length.

each segment containing a nucleus. In the non-medullated nerve-fibers the axis-cylinder is surrounded only by the neurilemma, but the fibers contain nuclei. See table of nerves. celerator n., the cardiac sympathetic nerve: when it is stimulated, the heart's action is accelerated. accessory n. Same as spinal accessory See table of nerves. accessory phrenic n. an anomalous branch of the phrenic nerve, cephalad to the hilum of the lung, found in about 20 per cent. of human beings. acoustic n., the auditory nerve. See table of nerves. afferent n., any nerve which transmits impulses from the periphery intrad. See sensory n. anabolic n., any nerve, like the vagus or accelerans, whose stimulation pron. of arrest. motes the anabolic processes n. of arrest. Same as inhibitory n. n.-avulsion, operation of tearing a nerve from its central origin by traction. n.-block, stoppage of the passage of impulses through a nerve by pressure or by the injection of anesthetics. n.-broach. See broach. calorific n., any nerve whose stimulation increases heat. n.cavity, the pulp cavity of a tooth. n.-cell, any cell of the nervous system, especially a ganglion-cell or one of the special cells of nerve-centers; a neuron or neurodendron A nerve-cell is an ovoid, pear-shaped, or polygonal mass of protoplasm, containing a spheric nucleus, and giving off one axiscylinder process (neurite, neuraxon, axon, Deiters's process, etc.) and several branching protoplasmic processes (dendrites or cytodendrites). According to the number of protoplasmic processes given off, the number of protoplasmic processes or mul-cells are distinguished as unipolar, bipolar, or multipolar. Nerve-cells are of two types. the first type have an axis-cylinder which is continuous with the axis-cylinder of a nerve-fiber. In cells of the second type the axis-cylinder process (dendraron) does not extend into the white matter, but, remaining in the white substance, eventually undergoes division into a mass of delicate fibrill.e (neuropodia or telodendrons). delicate fibrillæ (neuropodia or telodendrons). In both types delicate collateral branches (axodendrites) are given off from the axis-cylinder proc-The protoplasmic processes, or dendrites, end in arborizations of tree-like, branching terminations, known as end-branches, or telodendrons. n.-center, any group of cells of gray nerve-substance having a common function. centrifugal n., any nerve which carries impulses to the periphery centripetal n. Same as afferent n. cranial n., any peripheral nerve connected with the brain. The cranial nerves are arranged in twelve pairs. crotaphitic n., the upper maxillary portion of the fifth cerebral nerve. cubital n., the ulnar nerve. depressor n. 1. Any afferent nerve whose stimulation depresses a motor center.
the activity of an organ
efferent n., exodic n. Same as centrifugal n. eighth n., the auditory nerve. See table of nerves eleventh n., the spinal accessory nerve. **n.-ending**, any terminus of a nerve, especially if peripheral **esodic n**. Same as afferent n. excitor n., a nerve which transmits stimuli that increase functional activity. excitoreflex n., a visceral nerve which produces reflex action. fifth n., the trigeminus. See table of nerves first n., the olfactory nerve. See table of nerves. fourth n., the trochlear nerve. See table of nerves. **frigorific n.**, the sympathetic nerve, stimulation of which lowers the temperature. **furcal n.** [L. fur'ca fork], the fourth lumbar nerve: so called because it is divided between the lumbar and the sacral plexus. gangliated n., any nerve of the sympathetic system. n.-grafting, the replacement of a piece of defective nerve by a segment from a piece of defective nerve by a segment from sound one. inhibitory n., any nerve whose stimulation lowers or inhibits the activity of intermediary n. r. The lesser internal cutaneous nerve. 2. The smaller of the two roots of the seventh cranial nerve. Called also nerve of Wrisberg, pars intermedia facialis, and portio intermedia facialis. mixed n., one

NERVE

which is both sensory and motor. motor n., one which contains wholly or chiefly motor fibers. ninth n., the glossopharyngeal nerve. See table of nerves. pain n., a sensory nerve whose function is the conduction of painful stimuli. pero-

neal n., the common peroneal nerve is the external popliteal nerve; deep peroneal nerve is the same as the anterior tibial nerve; the superficial peroneal nerve is the same as the musculocutaneous nerve. **pressor n.**, any afferent nerve whose irritation

[For continuation of nerve, see p. 790.]

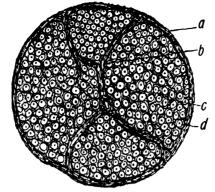

A TABLE OF THE NERVES.

| Nerve. | Function. | Origin. | DISTRIBUTION. | Branches. |
|---|--|--|--|---|
| Abdominal. Abducens (sixth cranial). | Sensation and motion. Motion. | Pneumogastric. Fasciculus teres. | Stomach External rectus of the eye. | |
| Alveolar. | Sensation. | Dental. | Molar and bicuspid teeth and gums. | Gingival. |
| Arnold's. | The auricular branch of the pneumogas- tric. | | | |
| Auditory (eighth cra- nial). | Hearing and equili- bration. | Restis. | Cochlea, vestibule, canals. | Cochlear, vestibular. |
| Auricular. | Sensation. | Occipitalis minor. | Skin of upper portion of pinna. | |
| Auricular, anterior. | Sensation. | Inferior maxillary. | Skin of external ear. | |
| Auricular, inferior. | Sensation. | Auriculotemporal | Ear, internal maxillary artery, etc. | |
| Auricular, posterior. | Motion. | Facial. | Retrahens aurem, oc- cipitofrontalis. | Auricular, occipital. |
| Auricular, superior. | Sensation. | Auriculotemporal. | Skin over tragus and pinna. | |
| Auricula'rıs mag'nus | Sensation. | Cervical plexus, second and third cervical. | Face, ear, neck, parotid. | Facial, mastoid, and auricular. |
| Auricula'ris va'gı | Sensation. | Pneumogastric. | External eat. | |
| Auriculotemporal | Sensation. | Inferior maxillary. | Temple and pinna | Articular, branches to meatus auditorius, parotid, inferior and |
| Bell's. | The external and in- ternal respiratory nerves | | | superior auricular, anterior and posterior temporal. |
| Of Bock. | See Pharyngeal. | | | |

NERVES NERVES

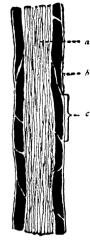

Longitudinal nervefiber, diagrammatic a, axis-cylinder, b, medullery sheath, c, neurilemma d, nucleus. e, node of Ranvier (feroy)

Transverse section of a nerve: a, epineurium, b, perineurium. c, endoneurium, d, section of a single fiber (Leroy).

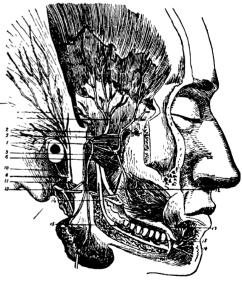

Nerve-cell with dendrites ending in claw-like telodendria a, neuraxis, b, telodendrion.

Longitudinal section through a nerve-fiber. a, fibrils of axis-cylinder; b, neurilemma, c, segments of Lantermann.

Superficial Distribution of Facial, Trigeminal, and Other Nerves of Head 1, trunk of facial nerve after its exit from stylomastoid foramen, 2, posterior auricular branch, 3, filament of great auricular nerve, 4, occipital branch, 5, auricular branch, 6, twig to superior auricular muscle; 7, nerve to digastric, 8, that to stylohyoid muscle; 9, superior or temporofacial division of the nerve, 10, 11, temporal branches; 12, malar; 13, 14, infra-orbital, 15, inferior or cervicofacial division of nerve; 16, mandibular, and above this buccal branches; 17, cervical branch; 18, auriculotemporal uniting with facial, giving anterior auricular and pavotid branches; 19, 20, supra-orbital; 21, lacrimal, 22, infratrochler; 23, malar twig of the temporomalar, 24, superficial branch of nasal, 25, infra-orbital, 26, buccal, 27, mental, 28, great occipital; 39, great auricular; 30, 31, small occipital, 32, superficial cervical.

Branches of Inferior Maxillary Nerve from Outer Side: 1, masseteric nerve; 2, posterior deep temporal nerve; 3, buccal nerve. 4, branch of facial, 5, anterior deep temporal nerve, 6, filaments given by the buccal to external pterygoid muscle, 7, middle deep temporal nerve. 8, auriculotemporal nerve. 9, its temporal branches; 10, its branches to meatus and auricle, 11, its union with facial; 12, lingual nerve, 13, mylohyoid nerve, 14, inferior dental nerve. 15, its twigs to teeth; 16, mental branch, 17, branch of the facial uniting with the mental.

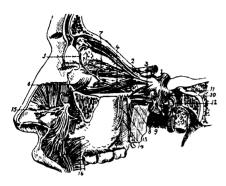

A TABLE OF THE NERVES .- Continued.

| Nerve. | Function. | Origin, | Distribution. | Branches. |
|--|---|--|---|---|
| Cervical, second (dor- sal division). | Sensation and motion. | Spinal cord. | Obliquus inferior, com- plexus, splenius, tra- chelomastoid, scalp, ear. | Occipitalis major and external. |
| Cervical, third (ven- tral division). | Sensation and motion. | Spinal cord. | | Ascending, descending, communicating, and muscular filaments. |
| Cervical, third (dor- sal division). | Sensation and motion. | Spinal cord. | Complexus, splenius, occiput, trachelomas- | External, internal, third occipital, etc. |
| Cervicals, fifth to eighth (ventral divisions). | Sensation and motion. | Spinal cord. | Brachial plexus. | Communicating. |
| Cervicals (fourth to eighth dorsal divisions). | Sensation and motion. | Spinal cord. | Skin and muscles of neck. | External and internal branches. |
| Cervicofacial. | Motion | Facial. | Muscles of lower face and neck. | Supramaxillary, infra- maxillary, buccal. |
| Chor'da tym'pani. | Taste, secretion, vaso- dilation, sensation. | Facial. | Tympanum. submax- illary gland, inferior lingualis, tongue. | maximity, buccuit |
| Ciliary, short (six to ten). | Motion, sensation, nutrition. | Ciliary ganglion. | Ciliary body, iris, | |
| Ciliary, long (two | Motion, sensation, etc. | Nasal nerve. | Ciliary body, iris, | |
| or three). Circumflex. | Sensation and motion | Brachial plexus. | Deltoid, teres minor, skin, and shoulder- joint. | Posterior, anterior, cu- taneous, and articu- lar. |
| Coccygeal. | Motion and sensation. | Spinal cord. | Coccygeus and skin. | Filaments. |
| Cochlear. Colli, superficialis. | Audition. Sensation. | Auditory. Second and third cervical. | Cochlea. Platysma and side of neck, throat, and chin. | Filaments. Descending and ascending branches. |
| Commu'nicans hypo- glos'si (communi- cans noni). | Sensation and motion. | Second and third cervical. | Descendens hypoglos- si depressor mus- cles of hyoid bone | Ansa hypoglossi, omo- hyoid, etc. |
| Commu'nicans pero- | Sensation. | External popliteal. | I o external saphenous. | |
| Commu'nicans pop- lite'i. | Sensation. | Internal popliteal | To external saphenous nerve and skin of foot. | |
| Communicating. | Motion and sensation. | Brachial plexus, | Phrenic. | |
| Communicating. | Sensation and motion. Motion and sensation. | Cervical plexus First and second cervical. | Spinal accessory. Pneumogastric, hypoglossai, sympathetic. | Branches. Three branches and filaments. |
| Of Cotunnius. Crural. | See Nasopalatine Sensation. | nerve. Genitocrural. | Skin, upper and cen- tral part anterior as- pect of thigh. | |
| Crural, anterior. | Motion and sensation. | Lumbar plexus, second, third, and fourth lumbar. | Thigh muscles, iliacus. | Internal and middle cu- taneous, long saphen- ous, muscular, articu- lar, etc. |
| Cutaneous. | Sensation. | Musculospiral. | Back of arm, forearm, | Two external, one inter- |
| Cutaneous. | Sensation. | Ulnar. | Skin of wrist and palm. | |
| Cutaneous, dorsal. | Sensation. | Ulnar. | Skin of little and ring fingers. | Filaments and communicating branches. |
| Cutaneous, external. | Sensation. | Second and third lumbar. | Integument of thigh. | Posterior, anterior, pec- tineus, femoral artery, and branches. |
| Cutaneous, internal. | Sensation. | Brachial plexus. | Forearm and lower | Anterior and posterior branches, etc. |
| Cutaneous, lesser internal (of Wrisberg). | Sensation. | Brachial plexus. | Skin on back of arm. | Filaments. |
| Cutaneous (internal and middle). | Sensation and motion. | Anterior crural. | Thigh, leg, sartorius, pectineus. | Communicating and filaments. |
| Cutaneous, terminal. | Sensation, | Ulnar. | Skin of palm, palmaris brevis, skin of ring and little fingers. | |
| Cutaneous, perforat- | Sensation. | Fourth sacral. | Skin covering gluteus maximus. | |
| Cyon's. | Lowering of the blood-pressure. | Vagus (rabbit). | Heart. | Filaments. |
| Dental, anterior su- perior. | Sensation, etc. | Superior maxillary. | Upper incisors and ca- nine teeth, inferior meatus of nose, etc. | Nasal, etc. |

| Iliac. Iliohypogastric. | Sensation. Sensation and motion. | Iliohypogastric. First lumbar. | Skin of gluteal region. Skin of hypogastrium | Iliac, hypogastric, com- municating. |
| Ilio-ınguinal. | Sensation and motion | First lumbar. | and gluteal region. Internal oblique muscle and skin of upper thigh, labium, and scrotum. | Muscular, cutaneous, and communicating |
| Incisive. | Sensation. | Inferior dental. | Incisor and canine teeth of lower jaw. | Communicating. |
| Inframandibular. | See Inframaxillary. | | | |
| Inframaxillary. Infra-orbital. | Motion. Sensation and motion. | Facial Facial. | Platysma Cheek-muscles, nose, | Nasal, labial, palpebral. |
| Infratrochlear. | Sensation. | Nasal. | and lip. Conjunctiva of part of eye, lacrimal sac side of nose, eyelid, etc. | |

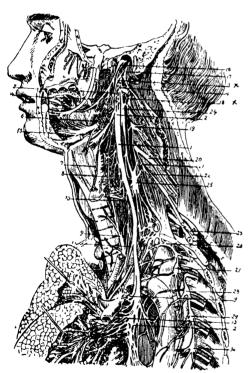

NERVES NERVES

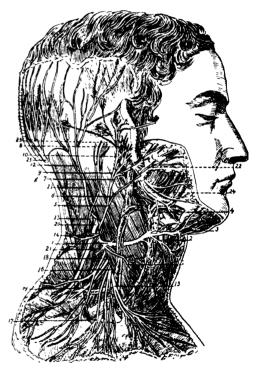

Superior Maxillary Nerve and Some of the Orbital Nerves 1, Gasserian ganglion, 2, lacrimal nerve, 3, trunk of superior maxillary nerve, 4, its orbital branch, 6, origin of its malar twig, 7, its temporal twig, joined by 5, communicating branch from lacrimal nerve, 8, sphenopalatine ganglion, 9, Vidian nerve, 10, its upper branch or great superficial petrosal nerve proceeding to join 11, facial nerve, 12, its lower branch or great deep petrosal nerve joining sympathetic, 13, 14, posterior dental nerves, 15, terminal branches of infra-orbital nerve in the face, 16, a branch of facial uniting with some of the twigs of infra-orbital

Nerves of Nose and Sphenopalatine Ganglion, from Inner Side 1, network of external branches of olfactory nerve, 2, nash nerve, giving its external branch to outer wall of nose, the septal branch is cut short, 3, sphenopalatine ganghon, 4, ramification of large palatine nerve, 5, small, and 6, external palatine nerve, 7, inferior nasal branch, 8, superior nasal branch, 9, nasopalatine nerve cut short, 10, Vidian nerve, 11, great superficial petrosal nerve, 12, great deep petrosal nerve, 13, the sympathetic nerves ascending on internal carotid artery.

Distribution and Conne. tion of Pneumogastric Nerve of Left Side in Neck and Upper Part of Thorax: 1, pneumogastric nerve, 2, ganglion of its trunk; 3, accessory part of spinal accessory, 4, union of pneumogastric with hypoglossal; 5, pharyngeal branch of pneumogastric, 6, superior laryngeal, 7, external laryngeal, 8, communication of external laryngeal with superior cardiac branch of sympathetic; 9, inferior or recurrent laryngeal, 10, superior, and 11, inferior cervical cardiac branches, 12, 13, posterior pulmonary plexus, 14, lingual branch of inferior maxillary, 15, distal part of hypoglossal nerve; 16, glossopharyngeal nerve; 17, spinal accessory nerve; 18, second cervical nerve; 10, third, 20, fourth, 21, origin of phrenic nerve, 22, 23, fifth, sixth, seventh, and eighth cervical nerves, forming with the first dorsal the brachial plexus, 24, superior cervical ganglion of sympathetic, 25, middle cervical ganglion, 26, inferior cervical ganglion; 27, 28, 29, 30, second, third, fourth, and fifth dorsal ganglia.

Superficial Branches of Cervical Plexus: 1, superficial cervical nerve; 2, its inferior branch. 3, its superior branch. 3, its union with facial, 5, great auricular nerve; 6, one of its facial branches, 7, its branch to lobule; 8, twig which pierces the auricle, 9, branch to deep surface of pinna, 10, its union with posterior auricular of the facial, 11, small occipital nerve, 12, its branches; 13, a mastoid branch, 14, twigs from this to back of neck; 15, inner, 16, 17, middle, 18, outer branches of supraclavicular nerves, 19, branch of cervical nerves passing into traperius muscle, 20, spinal accessory distributed to same, and receiving a uniting branch from the cervical nerves; 21, branch to levator scapulæ, 22, trunk of the facial nerve; 23, its posterior auricular branch; 24, its cervical branch, 25, great occipital nerve.

A TABLE OF THE NERVES .- Continued.

| Nerve. | Function. | Origin, | Distribution. | Branches. |
|-----------------------------------|---|--|--|---|
| Intercostal. | Sensation and motion. | Dorsal nerves. | Muscles and skin of thorax and abdo- men. | Muscular, anterior, and lateral cutaneous. |
| Intercostohumeral. | Sensation. | Second intercostal. | Skin of upper half of inner and back part of arm. | |
| Interosseous, ante- | Motion. | Median. | Deep muscles on pal- mar side of forearm. | , |
| Interosseous, poste- | Sensation and motion. | Musculo-piral. | Back of forearm and wrist. | |
| Jacobson's. Labial. | See Tympanic, of the Motion and sensation | glossopharyngeal, Superior maxillary, | Mucous membrane and muscles of lips and mouth. | |
| Lacrimal, | Sensation. | Ophthalmic, | Lacrimal gland, con- junctiva, upper lid. | |
| Of Lancisi | Longitudinal stria- tions on upper sur- face of callosum. | | | |
| Laryngeal, inferior or recurrent. | Motion. | Pneumogastric. | Muscles of larynx, lar- ynx, etc. | Esophageal, brachial, cardiac, terminal. |
| Laryngeal, superior. | Sensation, motion. | Pneumogastric. | Muscles and mucous membrane of larynx. | External, internal. |
| Lingual. | Sensation and motion. | Facial. | Mucous membrane of tongue, styloglossus, palatoglossus, etc. | |
| Lingual. | Sensation, taste. | Glossopharyngeal. | Glands of tongue and circumvallate papillæ. | |
| Lingual. Lumbar (5). | Taste, sensation. Sensation and motion. | Inferior maxillary. Spinal cord. | Tongue, mouth. Lumbar and genital structures. | Anterior and posterior divisions, lumbar plexus. |
| Malar. | Motion | Facial. | Corrugator supercilii, orbicularis palpebra- rum, and eyelids. | • |
| Malar. Mandibular. | Sensation. See Maxillary, infe- | Orbital. | Skin of cheek. | |
| Masseteric. | Motion | Inferior maxillary. | Masseter. Skin behind ear. | Filaments. |
| Mastoid. Maxillary, interior. | Motion, taste, and sensation. | Auricularis magnus. Trigeniinus. | Muscles of lower jaw, cheek, ear, tongue, teeth. | Auriculotemporal, mas- seteric, gustatory, in- ferior dental, buccal, |
| Maxillary, superior. | Sensation | Trigeminus. | Face, teeth. | Orbital, infra-orbital, sphenopalatine, dentals. |
| Median. | Sensation and motion. | Brachial plexus. | Pronator radii teres, fingers, flexors, palms, two lumbricales. | Muscular, palmar cuta- |
| Meningeal. | Vasomotion. | Glossopharyngeal. | Arachnopia, | |
| Meningeal. Meningeal. | Vasomotion. | Hypoglossal. Pneumogastric. | Dura, Dura near base of | |
| Meningeal, recurrent. | Vasomotion. | Inferior maxillary. | skull. Dura and mastoid cells. | |
| Mental | Motion and sensation. | Inferior dental. | Skin and mucous mem- brane of lower lip and chin. | |
| Mo'tor oc'uli (third cramal). | Motion | Floor of aqueduct of Sylvius. | Muscles of eye, except superior oblique, ex- ternal rectus, and orbicularis palpebra- rum. | Inferior, superior. |
| Musculocutaneous. | Sensation, motion. | Outer cord of bra- chial plexus. | Coracobrachialis, bi- ceps, brachialis anti- cus, skin of forearm. | Anterior, posterior, mus- cular, articular. |
| Musculocutaneous of leg. | Sensation, motion. | External popliteal. | Peronei muscles, skin of leg and foot. | Internal, external, cuta- neous, muscular. |
| Musculospiral. | Sensation, motion. | Posterior cord of brachial plexus. | Back of arm and fore- arm, skin of back of hand. | Musculocutaneous, ra- dial, posterior interos- seous. |
| Mylohoid. | Motion. | Inferior dental. | Mylohyoid and digas- tric muscles, etc. | 1 |
| Nasal. | Sensation. | Anterior dental. | Mucous membrane of lower nasal meatus. | |
| Nasal. | Sensation. | Superior maxillary. | Skin of nose. | Carrie in |
| Nasal. | Sensation. | Ophthalmic. | Ciliary ganglion, iris, conjunctiva. | fratrochlear. |
| Nasal, inferior. | Sensation. | Anterior palatine. | Middle meatus of nose. | |

A TABLE OF THE NERVES .- Continued.

| Nerve. | Function. | Origin. | Distribution. | Branches. |
|---|---------------------------------------|--|---|---|
| Nasal, superior. | Sensation. | Meckel's ganglion. | Mucosa of nose and pos- terior ethmoid cells. | |
| Nasopalatine (of Cotunnius). | Sensation. | Meckel's ganglion. | Mucosa of nose and mouth. | |
| Obturator. | Motion, sensation. | Third, fourth, and fifth lumbar nerves. | Obturator externus, adductors, joint, and skin. | Anterior, posterior, articular. |
| Obturator, accessory. | Motion, sensation. | Third and fourth lumbar. | Pectineus, hip-joint, etc. | Filaments. |
| Occipital, third. | Sensation. | Third cervical. | Skin of occiput. | C |
| Occipita'lis mi'nor. | Sensation. | Second cervical. | Skin behind ear, etc. | Communicating, articu- |
| Occipita'lis mag'nus. | Sensation, motion, | Second cervical. | Splenius, complexus, scalp, etc. | |
| Oculomo'tor. | See Motor oculi. | Olfo | Schneiderian mem- | Tourney hunnahan |
| Olfactory (first cra- nial). | Smell. | Olfactory bulb | Schneiderian mem- brane. | Twenty branches. |
| Ophthalmic. | Sensation. | Trigeminus. | Eyes, forehead, nose. | Lacrimal, frontal, na- sal, etc. |
| Optic (second cra- nial). | Sight. | Cortical center in occipital lobe. | Retina. | None. |
| Orbital. Orbitotemporal. | Sensation. See <i>Orbital</i> . | Superior maxillary. | Temple, cheek. | Temporal, malar. |
| Palatine, anterior. | Sensation. | Meckel's ganglion. | Hard palate, upper gum, etc. | Two inferior nasal. |
| Palatine, external. Palatine, posterior. | Sensation. Motion. | Meckel's ganglion. Meckel's ganglion. | Tonsil and soft palate. Levator palati and azy- gos uvulæ. | |
| Palmar, cutaneous. | Sensation. | Median. | Palm and thumb. | Inner and outer. |
| Palmar, deep. | Motion. | Ulnar. | Interosseous muscles, two inner lumbri- cales, abductor pol- licis, etc. | |
| Palmar, superficial. | Motion, sensation. | Ulnar. | Palmaris brevis, ulnar side of hand and little finger. | Muscular and two digi- tal branches. |
| Palpebral. Parotid. | Sensation. Sensation, vasodila- tion. | Superior maxillary. Auriculotemporal. | Lower lid. Parotid gland. | |
| Patellar cutaneous. | Sensation. | Long saphenous. | Skin over patella and plexus patellæ. | |
| Patheticus (fourth cranial). | Motion, etc. | Floor of aqueduct of Sylvius. | Superior oblique of eye, tentorium. | Recurrent, terminal. |
| Pectineal (two). | Motion. | Anterior crural. | Pectineus muscle. | |
| Perforating (of Cas- ser). | See Musculocuta- neous. | | | |
| Perineal. | Sensation and motion. | Pudic. | Perineum, genitalia, muscles, and skin of perineum. | Muscular and cutane- ous. |
| Petrosal, external. | | Facial. | To a plexus over mid- dle meningeal artery. | |
| Petrosal, large, super- ficial. | | Facial. | To Meckel's ganglion and Vidian nerve. | |
| Petrosal, small. | | Facial. | Otic ganglion, | |
| Petrosal, small, deep. | | Tympanic branch | Carotid plexus. | |
| Pharyngeal (three or four). | Sensation and motion. | of eighth. Glossopharyngeal. | Mucosa and muscles of pharynx. | To pharyngeal plexus. |
| Pharyngeal. | Sensation. | Meckel's ganglion. | Upper pharynx, poste- rior nares, etc. | |
| Pharyngeal. | Motion and sensation. | Pneumogastric. | Pharynx and soft pal- ate. | Pharyngeal plexus, muscles and mucosa. |
| Pharyngeal. | Vasomotion. | Sympathetic. | Pharynx. | To pharyngeal plexus. |
| Phrenic. | Sensation and motion. | Third, fourth, and fifth cervical. | Pericardium, pleura, diaphragm. | |
| Plantar, external. | Sensation and motion. | Posterior tibial. | Deep muscle of foot; little toe. | Deep and superficial. |
| Plantar, internal. | Sensation and motion. | Posterior tibial. | Adductor pollicis, flexor brevis digitorum, toes, sole. | muscular, digital. |
| Pneumogastric (tenth cranial, "par va- gum"). | Sensation and motion, | Floor of fourth ven- tricle. | Ear, pharynx, larynx, heart, lungs, esopha- gus, stomach. | Auricular, pharyngeal, superior and inferior laryngeal, recurrent laryngeal, cardiac, pulmonary, esopha- geal, gastric, hepatic, communicating, me- ningeal. |

NERVES

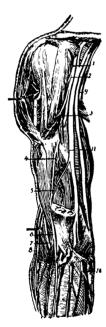

Anterior Cutaneous Nerves of Shoulder and Arm 1, 1, supraclavicular nerves from cervical plexus, 2, 2, 2, cutaneous branches of circumflex nerve, 3, 4, upper branches of internal cutaneous nerve, 5, upper external cutaneous branch of musculospiral, 6, internal cutaneous nerve, 7, its posterior branch, 8, communicating ting with one of anterior branches, 9, 10, anterior branches of this nerve; 11, musculocutaneous nerve, 12, lower external cutaneous branch of musculospiral nerve

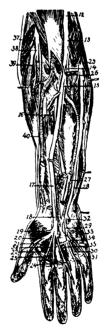

NERVES

Anterior Cutaneous Nerves of Forearm and Hand '9, 10, 13, distribution of anterior division of internal cutaneous nerve, 14, union of one of these with a twig of ulinar nerve, 12, lower external cutaneous branch of musculospiral nerve, 11, 15, distribution of external cutaneous nerve, 16, union of one of its branches with 17, radial nerve, 18, palmar cutaneous branch of median nerve, 10, 20, internal and external digital branches from median nerve, 21, external digital to the index finger, 22, 23, digital branches to index, middle, and ring hingers, 24, 25, digital branches from ulinar nerve to ring and little fingers.

Deep View of Anterior Nerves of Shoulder and Arm 1, musculocutaneous nerve, giving off, 2, branch to coracobrachialis muscle, 3, branch to breeps, 4, brapch to brachialis anticus, 5, communicating branch from median to musculocutaneous nerve, 6, continuation of the nerve to its cutaneous distribution; 7, musculospiral nerve, 8, inferior external cutaneous branch of musculospiral, 9, large and small internal cutaneous nerve divided, 10, anterior branch of internal cutaneous, 11, median nerve; to the inner side of this the ulnar nerve is crossed by line from 11.

Deep View of Anterior Nerves of Forearm and Hand: 12, median nerve, 13, its branch to pronator teres, 14, branch to superficial flexor muscles; 15, branch to flexor profundus digitorium; 16, branch to flexor longus pollicis; 17, anterior interoseous nerve; 18, palmar cutaneous branch cut short; 19, branch to short muscles of thumb, 20, 21, digital branches to thumb, 22, 23, 24, third, fourth, and fifth digital branches, 25, branch from ulnar nerve to flexor carpi ulnaris; 26 branch to flexor profundus digitorium; 27, cutaneous twig; 28, doi:al branches to ring and little fingers; 34, 35, 36, twigs given by deep branch of ulnar ubtraction third and fourth lumbricales, all the interoseous muscles, and the adductors of thumb

A TABLE OF THE NERVES .- Continued.

| Nerve. | Function. | Origin. | Distribution. | Branches. |
|--|---|--|--|--|
| Popliteal, external. | Motion and sensation. | Great sciatic. | Knee-joint, extensors of foot, fascia, skin. | Articular, anterior tibial, musculoc u taneous, cutaneous. |
| Popliteal, internal. | Sensation and motion. | Great sciatic. | Knee, gastrocnemius, popliteus, plantaris, soleus, skin of foot. | Articular, muscular, cu- taneous, external saphenous, plantar. |
| Pterygoid, external. | Motion, | Inferior maxillary. | External pterygoid muscle. | supileilous, pianeur. |
| Pterygoid, internal. | Motion. | Inferior maxillary. | Internal pterygoid muscle. | |
| Pudendal, long (nerve of Sæmmering). | Sensation. | Small sciatic. | Skin of genitalia. | |
| Pudic. | Sensation and motion. | Sacral plexus. | Perineum, sphincter of anus, genitalia | Inferior hemorrhoidal, perineal, cutaneous, dorsalis penis. |
| Pulmonary (anterior and posterior). | Sensation. | Pneumogastric. | Lungs. | To pulmonary plexuses. |
| Radial Sacral (five). | Sensation Motion and sensation. | Musculospiral. Spinal cord. | Thumb, three fingers. Multifidus spinæ, skin, gluteal region, leg, foot. | External, internal. Filaments and sacral plexus. |
| Saphenous, external or short | Sensation. | External and inter- nal popliteal. | Skin of foot and little toe. | |
| Saphenous, long or internal. | Sensation. | Anterior crural. | Knee, ankle, foot, leg. | Cutaneous, patellar, communicating, etc. |
| Of Scarpa. Sciatic (great). | See Nasopalatine. Sensation and motion. | Sacral plexus. | Skin of leg, muscles of | Articular, museular, ex- |
| Solutio (g. cat). | | baciai picaus. | thigh, leg, and foot. | ternal, and popliteal, |
| Sciatic (small). | Sensation | Sacral plexus. | Perineum, back of thigh and leg. | Cutaneous, long puden- dal, etc. |
| Of Sæmmering. | See Pudendal, long. | S | Machel's canalian | |
| Sphenopalatine. Spinal. | Sensation. Sensation and motion. | Superior maxillary. Spinal cord. | Meckel's ganglion. Trunk, neck, arms, leg. | |
| Spinal accessory (eleventh cramal). | Motion. | Floor of fourth ven- tricle; cervical spinal cord. | Sternocleidomas toid, trapezius; pharynx, larynx. | |
| Splanchnic (great sympathetic). | Vasomotor. | Thoracic ganglia. | 1 | |
| Splanchnic (lesser sympathetic). | Vasomotor. | Tenth and eleventh thoracic ganglia, great splanchnic. | Celiac plexus and great splanchnic. | Communicating and filaments. |
| Splanchnic (renal or smallest, sympathetic). | Vasomotor. | Last thoracic gan- glion. | Renal and celiac plex- us | Communicating and filaments. |
| Stapedial. | Motion. | Facial (tympanic). | Stapedius muscle. | 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 |
| Stylohyoid Suboccipital. | Motion. Motion and sensation. | | Stylohyoid muscle. Recti and oblique mus- | |
| Subscapular (upper, | Motion. | Brachial plexus. | cles, complexus, etc. Subscapular, teres ma- | |
| middle, lower). Superficial'is col'li. | Sensation. | Cervical plexus. | Jor, latissimus dorsi. Skin of neck and chest. | |
| Supra-acromial. | Sensation, | Cervical plexus. | Skin over deltoid. | |
| Supraclavicular, descending. | Sensation. | Third and fourth cervical. | Skin of neck and chest. | Sternal, clavicular, acromial. |
| Supramandibular. | See Maxillary, su- perior. | | | |
| Supramaxillary. | See Maxillary, su- persor. | | | |
| Supra-orbital. | Sensation. | Ophthalmic. | Upper lid, forehead, pericranium. | Muscular, cutaneous, and the pericranual branches. |
| Suprascapular. | Sensation and motion. | Fifth and sixth cer- vical. | Scapular muscles, etc. | |
| Suprasternal. | Sensation. | Cervical plexus. | Skin over upper part of sternum. | |
| Supratrochlear. | Sensation. | Ophthalmic (fron- tal). | Upper eyelid, forehead. | Muscular, cutaneous. |
| Sympathetic. | See System, sym- pathetic. | | manual court | |
| Temporal. Temporal. | Motion. Sensation. | Inferior maxillary. Orbital. | Temporal muscle. Skin over temporal muscle. | |

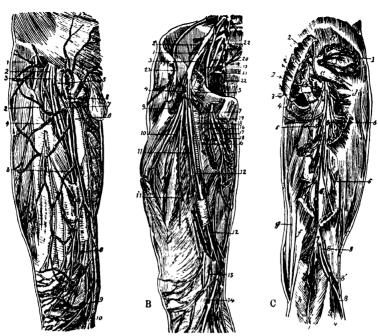

A TABLE OF THE NERVES,-Continued.

| Nerve. | Function. | Origin. | DISTRIBUTION. | Branchbs. |
|--|---|---|--|--|
| Temporal. | Motion. | Temporofacial. | Attrahens and attollens aurem, corrugator supercihi, orbicularis palpebrarum, occipi- tofrontalis. | Muscular. |
| Temporal, superficial. | Sensation. | Auriculotemporal. | Skin over temporal fascia. | |
| Temporofacial. | Motion. | Facial. | Temple and upper face. | Temporal, malar, infia- orbital. |
| Temporomalar. Thoracic, posterior or long. | See Orbital. Motion. | Brachial plexus, fifth and sixth cervical. | Serratus magnus. | |
| Thoracic, spinal. | Sensation and motion. | Cord. | Muscles and skin of chest. | |
| Thoracics, anterior and exterior. | Motion. | Brachial plexus. | Pectoralis major and minor. | |
| Tibial, anterior. | Sensation, motion | External popliteal. | Tibialis anticus, ex- tensor longus digito- rum, peroneus teres, joints of foot, skin of toes. | Articular, muscular, ex- ternal, internal, cuta- neous, recurrent, etc |
| Tibial, posterior. | Sensation and motion. | Internal popliteal. | Tibialis posterior, flexor longus digito- rum, flexor longus pollicis, skin of heel and sole, ankle-joint, etc. | Plantaris, muscular cu- taneous, articular, etc. |
| Tiedeman's. | A plexus of nerve- fibers around the central artery of the retina, derived from the c.liary nerves | | | |
| Tonsillar. | Sensation. | Glossopharyngeal. | Fauces, tonsil, soft pal- | |
| Trigeminus or trifacial (fifth cranial). | Motion sensation, taste. | Oblongata and floor of fourth ventri- cle. | Skin of face, tongue, and teeth. | Ophthalmic, superior and inferior maxillary divisions. |
| Trochlear. | See Patheticus. | | | |
| Tympanic. | Motion. | Facial. | Stapedius. | |
| Tympanic. | Sensation. | Sympathetic. | Tympanum | |
| Tympanic (Jacobson's nerve). | Sensation. | Glossopharyngeal. | Tympanum, fenestra rotunda and ovalis, Eustachian tube. | Communicating, tym- panic, and petrosal. |
| Ulnar. | Sensation and motion. | Inner cord of bra- chial plexus. | Muscles, shoulder- joint, wrist-joint, and skin of wrist, palm, and little finger. | Two articular, muscu- lar, palmar, cuta- neous, dorsal, supe- nor palmar, deep pal- mar. |
| Vagus. | See Pneumogastric. | | | |
| Vestibular. | Sensation. | Auditory. | Utricle and ampullæ of semicircular canals. | Superior, middle, infe- |
| Vidian. | Sensation. | Union of large su- perficial and deep petrosal. | To Meckel's ganghon. | |
| Of Willis | See Spinal accessory | | | |
| Wrisberg's | See Cutaneous, lesser internal | | | . |

stimulates a vasomotor center and increases intravascular tension **Scarpa's n.**, the nasopalatine nerve. **second n.**, the optic nerve. See table of nerves. **secretory n.**, any efferent nerve whose stimulation increases vascular activity. **sensory n.**, a peripheral nerve which conducts afferent impulses from a sense organ to the spinal cord or brain; an afferent nerve. **seventh n.**, the facial nerve. See table of nerves. **sixth n.**, the abducens nerve See table of nerves. **somatic n's**, the sensory and motor nerves. **Sömmering's n.**, the long pudendal nerve. **space-n's**, fibers of the auditory nerve going to the semicircular canals. **spinal n.**, any nerve which makes its exit from the vertebral column. **splanchnic n's**, the nerves of the blood-vessels and viscera: in man they arise from the thoracic ganglia of the sympathetic. **n.-storm**, a sudden outburst of nervous disorder. **n.-storm**, a sudden outburst of nervous disorder. **n.-storm**, the stretching

of a nerve, chiefly to relieve pain. sympathetic n., one of the nerves of the sympathetic nervous system. See sympathetic system, under system tenth n., the vagus nerve. See table of nerves. thermic n. Same as calorific n. third n., the oculomotor nerve. See table of nerves. thoracodorsal n., the middle subscapular nerve. Tiedemann's n., a plexus of nerve-fibrils around the central artery of the retina, arising from the ciliary nerves. n.-tire. Same as neurasthenia. trisplanchnic n., the sympathetic nerve; a general name for the nerves of the sympathetic system. trophic n., one which aids in regulating nutrition. twelfth n., the hypoglossal nerve. vasoconstrictor n., one whose stimulation contracts blood-vessels. vasomotor n., any nerve concerned in controlling the caliber of vessels, whether as a

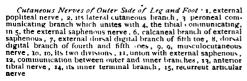

NERVES NERVES

A—Cutaneous Nerves of Anterior and Inner Part of Thigh—1, external cutaneous nerve; 2, 3, middle cutaneous; 4, filament to factorius, 5, internal utaneous nerve, 6, its anterior division, 7, one of its upper branches, 8, a cutaneous twig from the nerve to pectineus, 9, patellar branch of internal saphenous nerve, 10, continuation of saphenous to leg.

B—Deep Nerves of Anterior and Inner Part of Thigh—1, interior crural nerve, 2, branches to liacus muscle, 3 branch to psoas; 4, internal and middle cutaneous nerves; 5, 6, nerves to the pectineus, 7, cutaneous filament from the last, 8, posterior branch of the internal cutaneous nerve—2, branch to exists external cutaneous nerve—3, branch to leg, 15, obturator nerve, 16 branch to vastus internus, 12, internal saphenous nerve—13, its patellar branch, 14, its continuation to leg, 15, obturator nerve, 16 branch addituct longus, 17, branch to addituct or longus, 17, branch to addituct or longus, 17, branch to addituct or longus, 18, branch to sympathen, nerve, 23 external cutaneous nerve—3, but but and shortal parts of sympathen nerve, 2, external cutaneous nerve—3, but the course, 4, inferior pulced aid, 5, points to the divided simil scattic or posterior cutaneous nerve of thigh, 6, great scatte nerve, 6, 6, some of its muscular branches to hamstrings, 7, internal pophical nerve, 7, its muscular or sural branches, 8, external pophical nerve, 8, its external cutaneous branch, 9, communicating tibial, 9, communicating personal branch to external saphenous nerve

Distribution of Branches of External Popliteal Nerve on Front of Leg and Dorsum of Foot 1, external popliteal or peroneal nerve, x', its recurrent articular branches, 2, 2, musculocutaneous nerve; x', z', timps to long and short peroneal muscles, 3, 3, internal branch of musculocutaneous nerve, 4, 4', 4', its external branch of musculocutaneous, nerve, 4, 4', 4', its external branch of musculocutaneous, s', its branch to the outer side of the fifth toe, 6, anietror tibial nerve, 6 6', its muscular branches in leg, 6', of the anterior tibial nerve after it has passed into the foot, 7, its inner branch uniting with a time of the musculocutaneous and giving the dorsal digital nerves, 8, distribution of its outer branch to extensor brevis digitorum and tarsal articulations. lations.

vasodilator or a vasoconstrictor. **Vasosensory** n., any nerve supplying sensory filaments to the vessels. **Wrisberg's** n. See *intermediary* n.

nervi (ner'vi) [pl. of L. ner'vus nerve]. Nerves. n. erigentes [L. "erecting nerves"], minute nerve-fibers going to the rectum, bladder, and genital organs from the second and third sacral nerves. n. nervo'rum, nerve-filaments going to the nerves and nerve-sheaths. n. vaso'rum, the nerves that supply the blood-vessels. They are located in the sheath of the vessels.

nervimotility (ner"vim-o-til'it-e). Susceptibility to nervimotion.

nervimotion (ner-vim-o'shun). Motion effected through the agency of a nerve.

nervimotor (ner-vi-mo'tor). Pertaining to a motor nerve.

nervimuscular (ner-vi-mus'ku-lar). Pertaining to the nerve-supply of muscles.

nervine (ner'vin). 1. Affecting the nerves; allaying nervous excitement. 2. A remedy for nervous disorders; a nerve-tonic. 3. A therapeutic reparation of the gray substance of the brains of sheep. 4. A proprietary remedy for gout, rheumatism, and neuralgia.

nervitone (ner'vit-ōn). A proprietary preparation of phosphorus, iron, asafetida, sumbul, and nux vomica.

nervocidin (ner-vo-si'din) [L. ner'vus nerve + cœ'dere to kill]. An alkaloid from the Indian plant, gasu-basu. It is a powerful local anesthetic and is used in dentistry.

nervol (ner'vol). A sedative preparation of sodium-vanadium citrochlorid and lithium bromid: used in hysteria.

nervomuscular (ner-vo-mus'ku-lar). Same as nervimuscular.

nervosin (ner'vo-sin). A proprietary mixture of reduced iron with valerian and aromatics for neurasthenia and hysteria. Dose, 4-8 gr. (0.25-0.5 gm.), in a pill.

nervosism (ner'vo-sizm). r. Neurasthenia. 2. The theory that disease is dependent on variations in nerve force.

nervosity (ner-vos'it-e). Morbid nervousness.

nervous (ner'vus) [L. nervo'sus]. 1. Pertaining to a nerve or to nerves. 2. Unduly excitable. n. system. See under system.

nervousness (ner'vus-nes). Morbid or undue excitability; a state of excessive irritability, with great mental and physical unrest.

nervus (ner'vus), pl. ner'vi. Latin for nerve.

nesain (nes'a-in). A yellowish powder, a compound of arsenic and protein, used hypodermically in a 10 per cent. solution in cancer.

Nessler's reagent (nes'lerz) [German chemist, born 1827-1905]. See reagent.

nesslerization (nes-ler-iz-a'shun). Treatment with Nessler's reagent.

nesslerize (nes'ler-iz). To treat with Nessler's reagent.

nesteostomy (nes-te-os'to-me) [nestis + Gr. στόμα mouth]. Operation of forming a permanent opening into the jejunum through the abdominal wall.

nestiatria (nes-ti-a'tre-ah). See hunger-cure.

nestiostomy (nes-te-os'to-me) [Gr. $\nu \hat{\eta} \sigma \tau \iota s$ jejunum + $\sigma \tau \delta \mu a$ mouth]. Jejunostomy.

nestis (nes'tis) [Gr. νηστις]. An old name for the jejunum.

nestitherapy (nes-te-ther'ap-e). Nestotherapy.

nestotherapy (nes-to-ther'ap-e) [Gr. $\nu \hat{\eta} \sigma \tau \iota s$ hunger + therapy]. Hunger-cure; the therapeutic use of fasting or of a restricted diet.

nests, Brunn's epithelial. Solid or branched clusters of cells occurring in the healthy ureter. Called also cell-nest. cancer-n's, masses of

concentrically arranged cells seen in cancerous growths.

net, achromatic. The network within the cell which does not stain with dyes. chromidial, n. a network of chromatin staining material in the protoplasm of certain cells. It has the properties of active nuclear material.

net-knot (net-not). One of the larger masses of chromatin of a cell nucleus which appear to be merely thickened portions of the chromatic network.

Ne tr. s. num. Abbreviation for L. ne tra'das si'ne num'mo, do not deliver unless paid.

nettle (net'l). See Urtica.

nettle-rash (net"l-rash). See urticaria.

network (net werk). A rete, reticulum, or retiform structure; also a mitome. cell n. Same as mitoma. Chiari's n., a network of fine fibers which sometimes extends across the interior of the right auricle of the heart. Gerlach's n., an apparent (but not real) interlacement of the dendritic processes of the ganglion-cells of the spinal cord. n. of Gesvelst, a reticular appearance sometimes seen on the myelinsheath, perhaps artificial. neurofibrillar n., the network formed by the neurofibrils of a nerve-cell. peritarsal n., a set of lymphatics in the eyelid. Purkinje's n., a reticulation of immature muscle-fibers in the subendocardial tissue of the ventricles of the heart. subpapillary n., the layer of capillaries underlying the skin.

neu (nu). Same as neurilemma.

Neubauer's artery (noi'bow-erz) [Johann Ernst Neubauer, German anatomist, 1742-1777]. The deep thyroid artery.

Neumann's cells, sheath (noi'manz) [Ernst Neumann, German pathologist, 1834-1918]. See under cell and sheath.

Neumann's disease (noi'manz) [Isador Neumann, dermatologist in Vienna, 1832-1906]. Pemphigus vegetans.

Neumann's law (noi'manz) [Franz Ernst Neumann, German physicist, 1798–1895]. See under law.

neuracetin (nu-ras'et-in). A proprietary analgesic compound allied to phenacetin.

neurad (nu'rad). Toward a neural axis or aspect. neuradynamia (nu'rad-in-a'me-ah) [Gr. νεῦρον nerve + α priv. + δύναμις power]. Same as neurasthenia.

neuragmia (nu-rag'me-ah) [Gr. νεῦρον nerve + άγμός break]. The tearing of a nerve-trunk from its ganglion.

neural (nu'ral) [L. neura'lis; Gr. νεῦρον nerve].
Pertaining to a nerve or to the nerves.

neuralgia (nu-ral'je-ah) [Gr. νεῦρον nerve + ἄλγος pain]. Pain in a nerve or in nerves, or radiating along the course of a nerve; a name applied to pain, which may result from any one or more of a great variety of morbid conditions. Neuralgic pain is of a severe darting or throbbing character, intermittent, and is attended by sensitiveness of the skin and by the presence of tender points (punc'ta doloro'sa) where the cutaneous branches of the nerve are given off from the deeper parts. Many varieties of neuralgia are distinguished according to the part affected or to the cause, as bronchial, facial, occipital, supraorbital, etc., and anemic, diabetic, gouty, malarial, syphilitic, etc. cardiac n., angina pectoris. degenerative n., that which occurs in persons of advanced age, and is marked by signs of degeneration in the central nervous system. epileptiform n., tic douloureux. n. facia'lis ve'ra, geniculate neuralgia. geniculate n., neuralgia involving the geniculate ganglion which is the sensory mechanism of the facial nerve. The pain is limited to the middle ear and the auditory canal. It is called also geniculate olalgia, Hunt's n., and n. facialis vera. hallucinatory n., a

mental impression of pain without any actual peripheral pain. Hunt's n., geniculate neuralgia. idiopathic n., neuralgia that is not accompanied by any structural change. intercostal n., neuralgia of the intercostal nerves causing pain in the side. mammary n., neuralgic pain in the breast. Morton's n., neuralgia in the metatarsophalangeal joint of the third and fourth toes. It is caused by slight dislocation producing pressure on the digital branch of the external plantar nerve. nasociliary n., pain in the eyes, brow, and root of the nose. otic n., geniculate neuralgia. red n., erythromelalgia. reminiscent n., a mental impression of neuralgic pain persisting after the actual pain has ceased. sciatic n., sciatica. Sluder's n., neuralgia of the splenopalatine ganglion. stump-n., neuralgia in the seat of an amputation. supra-orbital n., neuralgia of the supra-orbital nerve. symptomatic n., neuralgia in which there is slight structural change

neuralgic (nu-ral'jik). Pertaining to or of the nature of neuralgia.

neuralgiform (nu-ral'je-torm). Like neuralgia.

neuralgin (nu-ral'jin). A proprietary mixture of caffein, antifebrin, and sodium salicylate: anti-rheumatic. Dose, 8-45 gr. (0.5-3 gm.).

neuralthein (nu-ral-the'in). Sodium paraethyloxyphenyl aminomethane, C₂H₅O.C₆H₄ NH.CH₂.-SO₂.ONa used as a febrifuge. Dose, 4-8 gr. (0 25-0.5 gm.).

neuralward (nu'ral-ward). Same as neurad.

neuramebimeter (nu"ram-e-bim'et-er) [Gr. νεθρον nerve + άμοιβή response + μέτρον measure]. An instrument for measuring the reaction-time of the nerves.

neuranagenesis (nu"ran-ah-jen'es-is) [Gr. νεθρον nerve + ἀναγεννᾶν to regenerate]. Regeneration or renewal of nerve tissue.

neurangiosis (nu''ran-je-o'sis) [Gr. νεθρον nerve + ἀγγείον vessel]. A neurosis of the blood-vessels.

neurapophysis (nu-rap-of'is-is) [Gr. νεῦρον nerve + apophysis]. The structure forming either side of the neural arch; also the part supposedly homologous with the above in a so-called cranial vertebra.

neurarchy (nu'rar-ke) [Gr. νεῦρον nerve + ἄρχη rule]. The control of the cerebrospinal system over the body.

neurarthropathy (nu-rar-throp'ath-e). Joint disease combined with disease of the nerves.

neurasthenia (nu-ras-the'ne-ah, nu"ras-the-ni'ah) [Gr. νεῦρον nerve + ἀσθένεια debility]. Nervous prostration; a nervous disorder characterized by abnormal fatiguability. The name for a group of symptoms resulting from some functional disorder of the nervous system, with severe depression of the vital forces. It is usually due to prolonged and excessive expenditure of energy, and is marked by tendency to fatigue, lack of energy, pain in the back, loss of memory, insomnia, constipation, loss of appetite, etc. acoustic n., neurasthenia marked by deafness of varying degrees. adrenal n., neurasthenia due to defective or disordered adrenal activity. angioparalytic n., angiopathic n., a condition in neurasthenic patients in which there is a constant sense of the pulse-beat. cardiac n. See cardioneurosis. cardiovascular n., phrenocardia. cerebral n., a variety characterized by mental and visual disturbances and other head symptoms. gastric n., a form characterized by functional stomach complications. n. gra'vis, a severe form of neurasthenia with great exhaustion on the slightest exertion. grippal n., neurasthenia occurring as a sequel of influenza. obsessive n., psychasthenia. optic n., neurasthenia attended with contraction of the field of vision. n. præ'cox, neurasthenia occurring during adolescence. prostatic n., a neurasthenic condition due to prostatic hyperemia and hyperesthesia. **pulsating** n. Same as angioparalytic n. n. pu'ra, true neurasthenia. **sexual** n., a variety associated with disorders of the sexual function. **spinal** n., neurasthenia with marked spinal cord symptoms. **traumatic** n., neurasthenia following shock or injury; accident neurosis.

neurastheniac (nu-ras-the'ne-ak). A person suffering from neurasthenia.

neurasthenic (nu-ras-then'ik). Pertaining to or affected with neurasthenia.

neurataxia, neurataxy (nu-rat-aks'e-ah, nu'rat-aks-e) [Gr. νεῦρον nerve + ataxia]. Neuras-thenia.

neuratrophia, neuratrophy (nu-rat-ro'fe-ah, nu-rat'ro-fe) [Gr. νεῦρον nerve + ἀτροφία atrophy]. Impaired nutrition of the nervous system.

neuratrophic (nu-rat-rof'ik). 1. Characterized by atrophy of the nerves. 2. A person affected with atrophy of the nerves.

neuraxial (nu-raks'e-al). Pertaining to the neuraxis.

neuraxis (nu-raks'is) [Gr. νεῦρον nerve + ἄξις axis].

1. An axis-cylinder process. See axon. 2. The cerebrospinal axis.

neuraxitis (nu-rak-si'tis) [Gr. νεθρον nerve + άξις axis + itis inflammation]. Encephalitis. epidemic n., epidemic encephalitis.

neuraxon (nu-raks'on) [Gr. νεῦρον nerve + ἄξων axis]. Any axis-cylinder process. See axon.

neure (nûr). A nerve-cell with all its processes; a neuron.

neurectasia, neurectasis, neurectasy (nurek-ta'ze-ah, nu-rek'tas-is, nu-rek'tas-e) [Gr. νεῦρον nerve + ἔκτασις stretching]. The surgical stretching of a nerve.

neurectomy (nu-rek'to-me) [Gr. νεῦρον nerve + έκτομή excision]. The excision of a part of a nerve. opticociliary n., excision of the optic and ciliary nerves.

neurectopia, neurectopy (nu-rek-to'pe-ah, nu-rek'to-pe) [Gr νεῦρον nerve + ἔκτοπος out of place]. Displacement of a nerve or abnormal situation of a nerve.

neurenergen (nu-ren'er-jen) [Gr. $\nu\epsilon\hat{\nu}\rho\rho\nu$ nerve + $\xi\rho\gamma\rho\nu$ work + $\gamma\epsilon\nu\hat{\mu}$ to produce]. A substance which, it is supposed, is absorbed by the neurons from the bodily fluids and serves to maintain their energy.

neurenteric (nu-ren-ter'ik) [Gr. νεῦρον nerve + ἔντερον bowel]. Pertaining to the medullary tube of the embryo and to the archenteron.

neurepithelial (nu-rep-e-the'le-al). Pertaining to neurepithelium.

neurepithelium (nu-rep-e-the'le-um) [Gr. νεῦρον nerve + epuhelium]. 1. The epithelium forming the nerve terminations of the organ of Corti and the retina. 2. The epiblast, which becomes the cerebrospinal axis.

neurergic (nu-rer'jik) [Gr. νεῦρον nerve + ἔργον work]. Pertaining to or dependent on nerve action.

neurexaíresis (nu"rek-si-re'sis) [Gr νεῦρον nerve + ἐξαιρεῖν to extract]. Operation of tearing out nerves.

neurhypnology (nūr-hip-nol'o-jc). Same as neurohypnology.

neuriatry (nu-ri'at-re) [Gr. νεῦρον nerve + laτρεla medication]. The treatment of nervous diseases.

neuricity (nu-ris'it-e) [Gr. νεῦρον nerve]. The specific energy peculiar to the nervous system.

neuridin (nu'rid-in). Spermin isolated from fresh human brain.

neurilemma (nu-ril-em'ah) [Gr. νεθρον nerve + λέμμα sheath]. The thin membranous outer covering surrounding the myelin sheath of a nerve-fiber or the axis-cylinder of a non-medullated nerve-fiber. Called also primitive sheath, sheath of Schwann. and nucleated sheath. See under nerve.

neurilemmitis (nu"ril-em-i'tis). Inflammation of the neurilemma.

neurility (nu-ril'it-e). The sum of the attributes and functions of nerve tissue.

neurilla (nu-ril'ah). A proprietary nerve tonic said to contain scutellaria.

neurimotility (nu"ri-mo-til'it-e). See nervimo-tility.

neurimotor (nu-rim-o'tor). Same as nervimotor.

meurin (nu'rin) [Gr. νεῦρον nerve]. 1. The most important of the albuminoid constituents of the nervous tissues. 2. A poisonous ptomain, vinyl trimethyl ammonium hydroxid, CH₂.CH.N.-(CH₃)₃.OH, found in decaying fish, fungi, etc., and produced by the decomposition of protagon. 3. A therapeutic extract of nerve tissue. Neurin has been strongly recommended as an injection in treatment of cancer.

neurin-tuberculin (nu"rin-tu-ber'ku-lin). A solution of tuberculin in neurin.

neurinoma (nu-rin-o'mah) [Gr. $\nu \in \hat{\nu} \rho \rho \nu$ nerve + $-\omega \mu a$ tumor]. A benign tumor of a nerve originating in the sheath of Schwann and composed of gliatissue.

neurinomatosis (nu"rin-o-mat-o'sis). Same as

neurit, neurite (nu'rit, nu'rīt). Any axis-cylinder process from a nerve-cell; a neuron.

process from a nerve-cell; a neuron.

neuritic (nu-rit'ik). Pertaining to or affected with

neuritis. neuritis (nu-ri'tis). Inflammation of a nerve. The condition is attended by pain and tenderness over the nerves, anesthesia, disturbances of sensation, paralysis, wasting, and disappearance of the reflexes. adventitial n., that which affects the sheath of a nerve. alcoholic n., a form due to alcoholism. ascending n., that which progresses centrad or centripetally toward the brain or spinal cord. axial n., inflamma-tion of the central part of a nerve. central n., parenchymatous neuritis. degenerative
n., neuritis in which there is degeneration of the proper nerve substance. descending n., that which progresses centrifugally or away from the brain and spinal cord. diabetic n., which is associated with diabetes. diphtheric a form resulting from diphtheria. dis-inated n. parenchymatous neuritis. Eichseminated n., parenchymatous neuritis. horst's n., neuritis fascians. endemic n. See beriberi. facial n., Bell's palsy. fallopian n., neuritis of the facial nerve in the fallopian canal. n. fas'cians, neuritis in which the lesions of the nerve-sheath seem to affect also the interstitial tissue of the muscles. Called also *Eichhorst's n*. interstitial n., inflammation of the connective tissue of a nerve-trunk. intra-ocular n., neuritis of the retinal part of the optic nerve. leprous n., a form associated with true leprosy. Leyden's n., lipomatous neuritis. lipomatous **n.**, that in which the nerve-fibers are destroyed and a fatty connective tissue takes their place. lymphatic n. Sec mesoneuritis. malarial n., a form due to malarial poisoning. malarial multiple n., a disease endemic in Jamaica. n. mi'grans, migrating n., a form which ascends one nerve to a center and then descends another nerve. multiple n., that which affects several nerves at once. It is due to various causes, especially to alcoholic or other poisoning, to diphtheria, pneumonia, and other infectious diseases. See polyneuritis. n. nodo'sa, a form characterized by the formation of nodes on the nerves. optic n., inflammation of the optic nerve. It may affect the part of the nerve within the eyeball (papillitis) or the portion behind the eyeball (retrobulbar n.). parenchymatous n., neuritis affecting principally the medullary substance and axis-cylinders. peripheral n., inflammation of the nerve-endings or of terminal nerves. post-febrile n., that which mostly follows an attack of severe exanthematous disease.

postocular n., retrobulbar optic neuritis. pressure.n., a form due to compression. n. puerpera'lis traumat'ica, traumatic maternal birth paralysis. retrobulbar n. See optic n. rheumatic n., a form associated with rheumatic symptoms. sciatic n. Same as sciatica. segmental n., segmentary n., parenchymatous neuritis exing in segments which are separated by portions of nearby healthy nerves. senile n., a form that attacks the legs and feet of aged people. sympathetic n., that form which involves an opposite nerve without invading a nerve-center. tabetic n., a form associated with locomotor ataxia. toxic n., that which is due to some poison. traumatic n., that which is caused by an injury.

neuro-amebiasis (nu"ro-am-e-bi'as-is). Neuritis due to amebic dysentery.

neuro-anatomy (nu"ro-an-at'o-me) [Gr. νεῦρον nerve + anatomy]. The anatomy of the nervous system.

neuro-arthritism (nu-ro-ar'thrit-izm). The nervous and gouty diathesis.

neuro-arthropathy (nu''ro-ar-throp'ath-e) [Gr. νεθρον nerve + ἄρθρον joint + πάθος disease]. Any disease of joint structures associated with disease of the central nervous system.

neurobion (nu-ro-bi'on) [Gr. νεῦρον nerve + βlos life]. 1. Any one of the delicate granules filling the nerve-cells. 2. Any one of the hypothetic ultramicroscopic particles of living matter concerned in the regeneration of nerves.

neurobiotaxis (nu"ro-bi-o-taks'is) [Gr. νεῦρον nerve + biotaxis]. The tendency of cell bodies during development to migrate in the direction from which they habitually receive their stimuli.

neuroblast (nu'ro-blast) [Gr. νεῦρον nerve + βλαστός germ]. Any embryonic cell from which nervous tissue is formed, an immature nerve-cell.

neuroblastoma (nu"ro-blas-to'mah). A tumor consisting of cells which tend to differentiate into nerve-cells. Called also neurocytoma. n. sympath'icum, n. sympathet'icum, a tumor of sympathetic nerve-cell origin located in the adrenals.

neurocain (nu-ro-ka'in). Billets of cocain hydrochlorid containing 1/2 gr. (0 005 gm.) each. Used for pressure anesthesia and in dental practice.

neurocanal (nu-ro-kan-al') [Gr. νεῦρον nerve + canal]. The central canal of the spinal axis.

neurocardiac (nu-ro-kar'de-ak) [Gr. νεῦρον nerve + καρδία heart]. Pertaining to the nervous system and the heart.

neurocele (nu'ro-sēl) [Gr. νεῦρον nerve + κοῖλον hollow]. The ventricles of the brain and the central canal of the cord taken together.

neurocentrum (nu-ro-sen'trum). One of the embryonic vertebral elements from which the spinous processes of the vertebræ are developed.

neuroceptor (nu'ro-sep-tor) [Gr. νεῦρον nerve + L. cap'ere to take]. One of the terminal elements of a dendrite which receives the stimulus from the neuromittor of the adjoining neuron. Called also ceptor.

neuroceratin (nu-ro-ser'at-in). Neurokeratin.

neurochitin (nu-ro-ki'tin) [Gr. νεῦρον nerve + χιτών tissue]. The substance that forms the framework support of nerve-fibers.

neurochondrite (nu-ro-kon'drīt) [Gr. νεῦρον nerve + χόνδρος cartilage]. One of the embryonic cartilaginous elements which develop into the neural arch of a vertebra.

neurochondrous (nu-ro-kon'drus) [Gr. νεθρον nerve + χόνδρος cartilage]. Fibrocartilaginous.

neurochorioretinitis (nu"ro-ko"re-o-ret-in-i'tis) [Gr. νεθρον nerve + chorioretinitis]. Inflammation of the optic nerve, choroid, and retina.

neurochoroiditis (nu"ro-ko-roid-i"tis). Inflammation of the choroid coat and ciliary nerves.

- neurocirculatory asthenia (nu-ro-cir'cu-la-to-re). See under asthenia.
- neuroclonic (nu-ro-klon'ik) [Gr. ενῦρον nerve + κλόνος spasm]. Characterized by nervous spasms.
- **neurocranial** (nu-ro-kra'ne-al). Pertaining to the neurocranium.
- **neurocranium** (nu-ro-kra'ne-um). The portion of the cranium which incloses the brain.
- **neurocrine** (nu'ro-krīn) [Gr νεῦρον nerve + κρίνειν to secrete]. Noting an endocrine influence on the nerves.
- **neurocyte** (nu'ro-sīt) [Gr. νεῦρον nerve + κυτος cell]. A nerve-cell of any kind, a neuron.
- neurocytoma (nu"ro-si-to'mah). Neuroblastoma. neurodealgia (nu-ro-de-al'je-ah) [Gr. νευρῶδης retina + ἄλγος pain]. Pain in the retina.
- neurodeatrophia (nu-ro"de-at-ro'fe-ah) [Gr. νευρῶδης retina + atrophia] Retinal atrophy.
- neurodegenerative (nu"ro-de-jen'er-a-tiv). Relating to or marked by nervous degeneration.
- neurodendrite, neurodendron (nu-ro-den'drīt, nu-ro-den'dron) [neuron + dendron]. Any process of a nerve-cell combining the features of a neuron and a dendron.
- **neuroderm** (nu'ro-derm). The ectoderm or epiblast. **neurodermatitis** (nu'ro-der-mat-i'tis) [Gr. νεῦρον nerve + δέρμα skin]. A skin inflammation of nervous origin.
- **neurodermatosis** (nu"ro-der-mat-o'sis). Dermatoneurosis.
- neurodermite (nu-ro-der'mīt). A skin lesion in neurodermatitis.
- neurodermitis (nu''ro-der-mi'tis). Same as neuro-dermatitis.
- neurodiagnosis (nu"ro-di-ag-no'sis) [Gr. νεῦρον nerve + diagnosis]. The diagnosis of diseases of the nervous system.
- neurodin (nu-ro'din). I. A base, C₅H₁₀N₂, one of the products of the decomposition of flesh.

 2. Acetyl-para-oxyphenyl-urethan, C₆H₄(OCO-CH₃)NH.COOC₂H₅, a patented remedy in colorless crystals, soluble in 1400 parts of water and 140 parts of water at 100° C. It is used as an antineuralgic in rheumatism, sciatica, migraine, etc., and as an antipyretic in pneumonia, typhoid fever, scarlatina, etc Antipyretic dose, 7½ gr. (0.5 gm.); antineuralgic dose, 15-23 gr. (1-1 5 gm.).
- **neurodocitis** (nu-ro-do-si'tis). Inflammation of rever roots resulting from compression in osseous or aponeurotic canals outside of the meninges (Sicard).
- neurodynamic (nu"ro-di-nam'ik) [Gr. νεῦρον nerve + δύναμις force]. Relating to nervous energy.
- neurodynia (nu-ro-din'e-ah) [Gr. νεῦρον nerve + δδύνη pain]. Pain in a nerve or in nerves.
- **neuro-electrotherapeutics** (nu"ro-e-lek"trother-ap-u'tiks). The treatment of nervous diseases by electricity.
- neuro-enteric (nu-ro-en-ter'ik). Neurenteric
- neuro-epidermal (nu"ro-ep-id-er'mal) [Gr. νεῦρον nerve + epidermus]. Pertaining to or giving origin to the nervous and epidermal tissues.
- neuro-epithelial (nu"ro-ep-i-the'le-al). Pertaining to or composed of neuro-epithelium.
- neuro-epithelioma (nu"ro-ep-i-the-le-o'mah). A tumor composed of neuro-epithelium.
- neuro-epithelium (nu"ro-ep-i-the'le-um) [Gr. νεθρον nerve + epithelium]. I. A specialized epithelium forming the perceptive elements of the organs of special sense, as the hair-cells of the organ of Corti or the rods and cones of the retina. 2. The epithelium of the epiblast whence the cerebrospinal axis is developed.
- **neuro-equilibrium** (nu"ro-e-kwi-lib're-um). The condition of even tension in the nervous system favorable to a ready response to stimuli.

- neurofebrin (nu-ro-feb'rin). A mixture of neuronal and antifebrin.
- neurofibril, neurofibrilla (nu-ro-fi'bril, nu-ro-fibril'ah). The supposed conducting element of the nerve-fibers and nerve-cells; a fiber forming a delicate network in the nerve-cells, and passing out of their processes and ending in or around a muscle or sense-cell.
- neurofibrillar (nu-ro-fi-bril'ar). Of or relating to the neurofibrils.
- **neurofibroma** (nu''ro-fi-bro'mah) [neuroma + fibroma]. A connective-tissue tumor of the nerve-fiber fascicule, formed by proliferation of the perineurium and endoneurium.
- neurofibromatosis (nu"ro-fi-bro-mat-o'sis). A condition marked by the formation of multiple pedunculated soft tumors (neurofibromata) distributed over the entire body associated with areas of pigmentation. Called also multiple neuroma, neuromatosis, and Recklinghausen's disease.
- **neurofibrositis** (nu"ro-fi-bro-si'tis). Inflammation of nerve filaments; also inflammation of muscle-fibers (fibrositis) involving sensory nerve filaments.
- **neurofil** (nu'ro-fil) [Gr. $\nu \epsilon \hat{\nu} \rho \rho \nu$ nerve]. A network of processes springing from the beginning of the axis-cylinder and surrounding the cell.
- neurofixation (nu"ro-fik-sa'shun). Development of syphilis of the nervous system following the successful treatment of a syphilitic skin lesion by one of the arsenical preparations
- neurogangliitis (nu"ro-gan-gle-i'tis). Inflammation of a neuroganglion.
- neuroganglion (nu-ro-gang'le-on). A ganglion, or mass of nervous matter.
- neurogastric (nu-ro-gas'trik). Involving the nerves of the stomach.
- **neurogen** (nu'ro-jen). A substance supposed to exist at the synapse and liberate nervous energy.
- neurogenesis (nu-ro-jen'es-is) [Gr. νεῦρον nerve + γένεσις production]. The development of nervous tissue
- **neurogenetic** (nu"ro-jen-et'ik). Pertaining to neurogenesis.
- **neurogenic** (nu-ro-jen'ik) [Gr. νεῦρον nerve + γεννῶν to produce]. Forming nervous tissue, or stimulating nervous energy.
- neurogenous (nu-roj'en-us). Arising in the nervous system; arising from some lesion of the nervous system.
- neuroglia (nu-rog'le-ah) [Gr. νεῦρον nerve + γλία glue]. The supporting structure of nervous tissue (Virchow, 1854). It consists of a fine web of tissue made up of modified ectodermic elements, in which are inclosed peculiar branched cells known as glia-cells. Called also bind-web. n.-holes, certain perforations in Purkinje's cells.
- neurogliar, neuroglic (nu-rog'le-ar, nu-rog'lik).
 Pertaining to the neuroglia.
- neuroglioma (nu"ro-gli-o'mah) [neuroma + gli-oma]. Glioma containing nerve-cells; a tumor made up of neurogliar tissue. n. gangliona're, a glioma in which ganglion-cells are embedded.
- neurogliosis (nu-rog-le-o'sis). A condition marked by diffuse formation of neurogliomas. n. gangliocellula'ris diffu'sa, epiloia.
- neurogram (nu'ro-gram) [Gr. νεῦρον nerve + γράμμα mark]. Prince's name for residua of past cerebral activities which make up the brain disposition and thus take part in the formation of personality.
- neurography (nu-rog'raf-e) [Gr. νεῦρον nerve + γράφειν to write]. A treatise on or description of the nerves.
- **neurohematology** (nu"ro-hem-at-ol'o-je). The study of blood-changes occurring in diseases of the nervous system.
- **neurohistology** (nu"ro-his-tol'o-je). The histology of the nervous system.

neurohypnologist (nu"ro-hip-nol'o-jist). An expert in neurohypnology.

neurohypnology (nu"ro-hip-nol'o-je) [Gr. νεῦρον nerve + ὕπνος sleep + λόγος discourse]. The sum of knowledge concerning hypnotic conditions.

neurohypophysis (nu"ro-hi-pof"is-is). The pars nervosa or main part of the posterior lobe of the pituitary body. See pituitary body, under body.

neuroid (nu'roid) [Gr. νεῦρον nerve + είδος form]. Resembling a nerve.

neuro-induction (nu''ro-in-duk'shun) [Gr. νεῦρον nerve + indu'cere to persuade]. Mental suggestion.

neuro-inoma (nu"ro-in-o'mah). Neurofibroma.

neuro-inomatosis (nu"ro-in-o-mat-o'sis) [Gr. νεῦρον nerve τ τς fiber + -ομα tumor]. Neuro-fibromatosis.

neurokeratin (nu-ro-ker'at-in) [Gr. νεῦρον nerve + κέρας horn]. A variety of keratin forming the supporting network of the myelin sheath of medullated nerve-fibers.

neurokinet (nu-ro-kin'et) [Gr. $\nu\epsilon\hat{\nu}\rho\nu$ nerve + $\kappa\nu\epsilon\hat{\nu}\nu$ to move]. An apparatus for stimulating the nerve by percussion.

neurokym, neurokyme (nu'ro-kīm). A nervous process in general; a nervous process.

neurolabyrinthitis (nu"ro-lab-ir-in-thi'tis). Inflammation of the nervous structures of the labyrinth.

neurolecithin (nu-ro-les'ith-in). A proprietary preparation containing lecithin with fats and cholesterin.

neurolemma (nu-ro-lem'ah) [Gr. νεῦρον nerve + λέμμα sheath]. 1. Neurilemma. 2. The retina.

neurologist (nu-rol'o-jist). An expert in neurology or in the treatment of nervous diseases.

neurology (nu-rol'o-je) [Gr. $νε \hat{v}ρον$ nerve + λόγοs discourse]. The sum of knowledge regarding the nervous system both normal and in disease

neurolymph (nu'ro-limf). The cerebrospinal fluid. neurolysin (nu-rol'is-in). A cytolysin which has a specific destructive action upon nerve-cells.

neurolysis (nu rol'is-is) [Gr. νεῦρον nerve + λύσις solution].
1. The liberation of a nerve from adhesions.
2. The relief of tension upon a nerve obtained by stretching.
3. Exhaustion of nervous energy.
4. Destruction or dissolution of nerve tissue.

neurolytic (nu-ro-lit'1k). Destructive of nerve substance.

neuroma (nu-ro'mah) [Gr νεῦρον nerve]. A tumor or new-growth largely made up of nerve substance; a tumor growing from a nerve. amputationn., neuroma of a stump after amputation amyelinic n., one containing only non-medullated nerve-fibers. n. cu'tis, neuroma seated in the skin. cystic n., a false neuroma, or a myxoma which has become cystic. false n., one which does not contain genuine nerve-fibers. fascicular n., medullated n., a neuroma made up of medullated nerve-fibers. ganglionated n., ganglionic n., one made up of true nerve-cells.

malignant n., sarcoma of a nerve structure,
usually spindle celled.

multiple n. See neuromatosis. myelinic n., one that contains medullated nerve-fibers. nevoid n., neuroma telangiectodes. plexiform n., a form consisting of nodulous enlargements along the course of the cutaneous nerves. n. telangiecto'des, one which contains an excess of blood-vessels. traumatic n., a neuroma seen in wounds and in amputation stumps. true n., a neuroma made up of nerve tissue. Verneuil's n., plexiform neuroma.

neuromalacia, neuromalakia (nu"ro-mal-a'-se-ah, nu"ro-mal-a'ke-ah) [Gr. νεῦρον nerve + μαλακία softening]. Morbid softening of the nerves.

neuromast (nu'ro-mast) [Gr. νεῦρον nerve +

μαστός hill]. A nerve-hillock; a mass of neuro-epithelium constituting a sense organ.

neuromatosis (nu-ro-mat-o'sis). A diseased condition characterized by the presence of many neuromata.

neuromatous (nu-rom'at-us). Affected with or of the nature of neuroma.

neuromechanism (nu-ro-mek'an-izm). The structure and arrangement of the nervous system in relation to function.

neuromere (nu'ro-mēr) [Gr. νεῦρον nerve + μέρος share]. One of the segments of the embryonic neural tube.

neuromimesis (nu"ro-mi-me'sis) [Gr. νεῦρον nerve + mimesis]. Hysteric simulation of organic disease.

neuromittor (nu-ro-mit'or) [Gr. νεῦρον nerve + L. mul'tere to send]. One of the terminal elements at the peripheral end of a neuron which transfers a stimulus to the neuroceptor of the adjoining neuron. Called also multor.

neuromuscular (nu-ro-mus'ku-lar). Pertaining to nerves and muscles.

neuromyelitis (nu"ro-mi-el-i'tis) [Gr. νεθρον nerve + μυελός marrow + -ιτις inflammation]. Inflammation of nervous and medullary or myelonic substance; myelitis attended with neuritis. n. op'tica, acute myelitis with optic neuritis.

neuromyic (nu-ro-mi'ık) [Gr νεῦρον nerve + μῦs muscle]. Neuromuscular.

neuromyon (nu-ro-mi'on) [Gr. $\nu\epsilon\hat{\nu}\rho\rho\nu$ nerve $+ \mu\hat{\nu}s$ muscle]. The neural elements in a muscle.

neuromyositis (nu"ro-mi-o-si'tis) [Gr. νεθρον nerve + myositis]. Neuritis complicated with myositis.

neuron, neurone (nu'ron, nu'ron) [Gr. νεθρον 1. A nerve-cell with its processes, laterals, and terminations regarded as a structural unit of the nervous system. See nerve-cell. 2. A neuraxon. 3. The cerebrospinal axis afferent n., a neuron which conducts a nervous impulse from a receptor to a center. bipolar n., a neuron having two axons. correlation n., a neuron which takes part in the function of correlating various stimuli into the appropriate response. See correlation. efferent n., a neuron which conducts a nervous impulse from a center to an organ of response. intercalary n., a neuron forming the second portion of a peripheral reflex arc. It is situated within the central nervous system and receives the nerve impulse from the peripheral sensory neuron and transmits it to the peripheral motor neuron. long n. Same as axis-cylinder. lower motor n's, the peripheral Same as neurons whose cell bodies lie in the ventral gray columns of the spinal cord. Cf. upper motor n. multiform n. Same as polymorphic n. peripheral motor n., the third neuron in a peripheral reflex arc, receiving the impulse from the intercalary neuron and transmitting it to a voluntary muscle. **peripheral sensory n.**, a neuron forming the receptive part of a peripheral reflex arc. It is situated outside the central nervous system. It has a peripheral branch forming a sensory nerve-fiber and a central branch which enters the central nervous system. Together with the intercalary neuron and the peripheral motor neuron it forms a peripheral reflex arc. Called also proloneuron. polymorphic n., a neuron of irregular shape. **postganglionic n.**, an efferent sympathetic neuron which is excited by a preganglionic neuron. preganglionic n., an efferent sympathetic neuron whose cell body lies in the central nervous system. **premotor n.**, a neuron not connected directly with muscle, but serving as a connecting center to command excitation in one or more motor neurons. projection n., one which serves for the transmission of nervous impulses, whether motor or sensory. pyramidal n. See pyramidal cell, under cell. sensory n., one which transmits impulses from

the skin to the cerebral cortex. **short n.**, a local process from a nerve-cell or brain-cell reaching only to a nearby gray mass. **unipolar n.**, a neuron having only one axon. **upper motor n's**, the neurons in the cerebral cortex which conduct impulses from the motor cortex to the motor nuclei of the cerebral nerves or to the ventral gray columns of the spinal cord. Cf. lower motor n's.

neuronagenesis (nu"ro-naj-en'es-is) [neuron + Gr. α neg. + γεννᾶν to produce]. Lack of development of neurons.

neuronal (nu'ro-nal) 1. Pertaining to a neuron or neurons. 2. A gray powder, bromdiethylacetamid, slightly soluble in water. used as a hypnotic in doses of 7-15 gr. (0 5-1 gm.).

neuronatrophy (nu-ron-at'ro-fe). Southard and Solomon's term for any nervous disease due to sclerosis of neurons.

neurone (nu'ron). See neuron.

neuronephric (nu-ro-nef'rik). Pertaining to the nervous and renal systems.

neuronic (nu-ron'ik). Pertaining to or affecting a neuron.

neuronidia (nu-ro-nid'e-ah). A proprietary hypnotic for nervous insomnia.

neuronist (nu'ro-nist). An anatomist who considers the nervous system as a mass of neurons.

neuronitis (nu-ro-ni'tis). Inflammation of neurons; degeneration of neurons.

neuronophage (nu-ron'of-āj) [Gr. νεῦρον nerve + φαγεῖν to eat]. A phagocyte which destroys nerve-cells.

neuronophagia, neuronophagy (nu"ron-o-fa'-je-ah, nu-ron-of'aj-e) [Gr. νεῦρον nerve + φαγεῖν to eat]. The destruction of nerve-cells by phagocytic action.

neuronophagocytosis (nu"ro-no-fag-o-si-to'sis). Same as neuronophagia.

neuronosis (nu-ro-no'sis) [Gr. νεῦρον nerve + νόσος disease]. Any disease of nervous origin.

neuronyxis (nu-ro-niks'is) [Gr. νεῦρον nerve + νυξις puncture]. The surgical puncture of a nerve.

neuro-otology (nu"ro-o-tol'o-je). Neurotology. neuroparalysis (nu"ro-pa-ral'is-is). Paralysis due to disease of a nerve or nerves.

neuroparalytic (nu''ro-par-al-it'ik). Pertaining to or caused by paralysis of a nerve.

neuropath (nu'ro-path). A person with a hereditary tendency to neurosis.

neuropathic (nu-ro-path'ik). Pertaining to or characterized by a nervous disorder.

neuropathist (nu-rop'ath-ist). A neurologist.

neuropathogenesis (nu"ro-path-o-jen'es-is) [Gr. νεῦρον nerve + pathogenesis]. The development of nervous disease.

neuropathology (nu"ro-path-ol'o-je) [Gr. νεῦρον nerve + pathology]. The pathology of the nerves and nerve-centers.

neuropathy (nu-rop'ath-e) [Gr. $\nu\epsilon\hat{\nu}\rho\sigma\nu$ nerve + $\pi d\theta os$ disease]. I. Any nervous disease. 2. A system of treatment whereby the activity of the cells of the body can be controlled through the nerve mechanisms governing the given areas.

neurophage (nu'ro-fāj). Same as neuronophage.
neurophilic (nu-ro-fil'ik) [Gr. νεῦρον nerve +
ωίλειν to love]. Same as neurotropic.

neurophonia (nu-ro-fo'ne-ah) [Gr. νεῦρον nerve + φωνή voice]. A form of nervous disorder in which the patient utters peculiar cries, sometimes like those of certain animals.

neurophthisis (nu-rof'this-is) [Gr. νεῦρον nerve + φθίσις wasting]. Wasting of nerve tissue.

neurophysiology (nu"ro-fiz-e-ol'o-je) [Gr. νεθρον nerve + physiology]. The physiology of the nervous system.

neuropil, neuropile (nu'ro-pil) [Gr. νεθρον nerve + πίλος felt]. A network of delicate unmyelinated fibers permeating the entire central

To illustrate the conception of the neuropil (Stiles).

nervous system. It is believed to diffuse and irradiate nervous impulse. Called also molecular substance and dotted substance.

neuropilem (nu-ro-pi'lem) [Gr. νεῦρον nerve + πίλος felt] Same as neuropil.

neuroplasm (nu'ro-plazm) [Gr. $νε \hat{v}ρον$ nerve +πλάσμα something formed]. The undifferentiated basophil protoplasm of a nerve-cell. Same as axoplasm. chorda-n., the rudiment in the embryo which develops into the chorda, notochord, and medullary plate.

neuroplasmic (nu-ro-plaz'mik). Of or relating to neuroplasm.

neuroplasty (nu'ro-plas-te) [Gr. νεῦρον nerve + πλάσσειν to form]. Plastic surgery of a nerve or of the nerves.

neuroplex, neuroplexus (nu'ro-pleks, nu-ro-pleks'us). A plexus of nerves.

neuroploca (nu-rop'lo-kah) [Gr. νεῦρον nerve + πλοκή web]. A nerve-ganglion.

neuropodion (nu-ro-po'de-on). Neuropodium.

neuropodium (nu-ro-po'de-um), pl. neuropo'dia [Gr. νεῦρον nerve + πούς foot]. Any one of the delicate fibrils forming the termination of axis-cylinder processes of the second type. See nerve-cell.

neuropore (nu'ro-pōr) [Gr. νεῦρον nerve + πόρος pore]. An opening in the anterior end of the neural canal of the embryonic brain.

neuropotential (nu-ro-po-ten'shal). Nerve energy; nerve potential.

neuroprin (nu'ro-prin). A proprietary extract from nervous tissue. said to be a specific nerve tonic.

neuropsychiatry (nu"ro-si-ki'at-re). The branch of medicine which deals with cases that are both neurologic and mental or on the borderland between.

neuropsychic (nu-ro-si'kik) [Gr. νεῦρον nerve + ψυχή mind]. Pertaining to the nerve-center concerned in mental processes

neuropsychopathy (nu"ro-si-kop'ath-e) [Gr. $\nu\epsilon\hat{\nu}$ - $\rho\nu\nu$ nerve $+\psi\nu\chi\dot{\eta}$ mind $+\pi\dot{\alpha}\theta\sigma$ s disease]. A diseased condition of the nerves and mind.

neurôpsychosis (nu''ro-si-ko'sis) [Gr. νεῦρον nerve + psychosis]. Nervous disease complicated with mental disorder.

neuropyra (nu-ro-pi'rah) [Gr. νεῦρον nerve + πῦρ fever]. Nervous fever.

neuropyretic (nu"ro-pi-ret'ik). Pertaining to nervous fever.

neurorecidive (nu"ro-ra-se-dēv"). Neurorelapse. neurorecurrence (nu"ro-re-kur'ens). Neurorelapse.

neurorelapse (nu"ro-re-laps'). A peculiar outburst of neurosyphilis precipitated by insufficient treatment with arsphenamin, and characterized by various nervous symptoms. Called also neuro-recidive and neurorecurrence.

neuroretinitis (nu"ro-ret-in-i'tis). Inflammation of the optic nerve and retina.

neurorrhaphy (nu-ror'af-e) [Gr. νεῦρον nerve + ραφή stitch]. The suturing of a cut nerve.

neurorrheuma (nu-ror-u'mah) [Gr. νεῦρον nerve + βεῦμα flow]. Nervous energy.

Neurorrhyctes hydrophobise (nu-ro-rik'tes hidro-to'be-e). Same as Negri bodies. See under body.

neurosal (nu-ro'sal). Pertaining to a neurosis.

neurosarcokleisis (nu"ro-sar-ko-kli'sis) [Gr. νεθρον nerve + σάρξ flesh + κλείσις closure]. An operation performed for neuralgia, done by relieving pressure on the affected nerve by partial resection of the bony canal through which it passes, and transplanting it (the nerve) among the soft tissues.

neurosarcoma (nu''ro-sar-ko'mah). A sarcoma with neuromatous elements.

neurosclerosis (nu"ro-skle-ro'sis) [Gr. νεῦρον nerve + σκληρός hard]. The hardening of the substance of a nerve or nerve-center.

neurosin (nu-ro'sin). A preparation of calcium glycerophosphate: hypnotic and anodyne.

neurosis (nu-ro'sis) [Gr. νεῦρον nerve]. vous disease. more especially a functional dis-order of the nervous system; a disorder of the nervous system not dependent on any discoverable lesion. 2. The neural process corresponding to a mental phenomenon. accident n., a neurosis with hysteric symptoms caused by accident or injury. anxiety n., a form of neurosis characterized by anxious apprehensions. association n., a condition in which an abnormal mental experience tends to be reproduced, with all its original mental and physical phenomena, when an idea related to the original experience is brought into the mind. craft n. Same as occupation n. crampus n., a neurosis marked by tonic spasms and cramps on attempts at motion. Called also conversion hysteria. cyclists' n., a sensitive condition of the skin of the thighs, perineum, and scrotum from excessive riding of the bicycle. **expectation n.**, a neurotic condition in which the expectation of an occurrence induces mental tension, etc fatigue n., a neurosis due to nerve tire, as neurasthenia or psychasthenia. gas n., a condition similar to shell shock seen in persons who have been gassed. occupation-n., professional n., a nervous disease due to the patient's employment. See copodyskinesia. sexual n., a neurosis of the sexual function. torsion n., torsion n., dysbasia lordotica progressiva. traumatic n. one which results from an injury. war n., shell shock, or any nervous disease or condition brought on by war conditions. **Westphal's n.**, hysteria with symptoms that simulate multiple sclerosis.

neurosism (nu'ro-sizm). Neurasthenia.

neuroskeleton (nu-ro-skel'et-on) [Gr. νεθρον nerve + σκελετόν skeleton]. The true bony or vertebrate skeleton; the endoskeleton.

neurosome (nu'ro-sōm) [Gr. νεθρον nerve + σῶμα body]. I. The body of a nerve-cell. 2. Any one of a set of minute particles in the ground-substance of the protoplasm of the neurons, and especially in that of the axis-cylinder and its terminal branches.

neurospasm (nu'ro-spazm) [Gr. νε υρον nerve + σπασμόs spasm]. The nervous twitching of a muscle.

neurosplanchnic (nu-ro-splangk'nik). Pertaining to the cerebrospinal and sympathetic nervous system.

neurospongium (nu-ro-spon'je-um) [Gr. νεῦρον nerve + σπόγγος sponge]. A meshwork or feltwork of nerve-fibrils; neuroglia.

neurostearic (nu"ro-ste-ar'ik) [Gr. νεθρον nerve + στέαρ fat]. Derived from the fatty elements of the nerve substance.

neurosthenia (nu-ro-sthe'ne-ah) [Gr. νεθρον nerve + σθένος strength]. Great nervous power and excitement.

neurosurgeon (nu-ro-sur'jun). A surgeon who specializes in work on the nervous system.

neurosurgery (nu-ro-ser'jer-e). Surgery of the nervous system.

neurosuture (nu-ro-su'tchur). Same as neuror-rhaphy.

neurosyphilis (nu-ro-sif'il-is). Syphilis of the central nervous system.

neurotabes (nu-ro-ta'bēz) [Gr. νεῦρον nerve + tabes]. Multiple peripheral neuritis with symptoms like those of locomotor ataxia See pseudotabes. n. diabet'ica. See tabes diabetica.

neurotagma (nu-ro-tag'mah) [Gr. νεθρον nerve + τάγμα arrangement]. A linear arrangement of the structural elements of a nerve-cell.

neurotendinous (nu-ro-ten'din-us). Pertaining to both nerve and tendon.

neurotension (nu-ro-ten'shun). Same as neurec-

neurothecitis (nu''ro-the-si'tis) [Gr. νεῦρον nerve + θήκη sheath]. Inflammation of a nerve-sheath.

neurothele (nu-ro-the'le) [Gr. νεῦρον nerve + θηλή nipple]. A nervous papilla.

neurotheleitis, neurothelitis (nu'ro-the-le-i'-tis, nu-ro-the-li'tis) [see neurothele + Gr. -tris in-flammation]. Inflammation of a nervous papilla.

neurotherapeutics (nu''ro-ther-ap-u'tiks). Neurotherapy.

neurotherapy (nu-ro-ther'ap-e) [Gr. νεθρον nerve + θεραπεία treatment]. 1. The treatment of nervous disorders. 2. A term proposed for psychotherapy on the ground that the basis of such treatment is the employment of all sources of nervous activity.

neurothlipsis (nu-ro-thlip'sis) [Gr. νεθρον nerve + θλίψις pressure]. Pressure on a nerve or irritation of a nerve.

neurotic (nu-rot'ik). 1. Pertaining to or affected with a neurosis. 2. Pertaining to the nerves. 3. A nervous person in whom emotions predominate over reason.

neurotica (nu-rot'ik-ah) [Gr. νεῦρον nerve]. Functional nervous disorders.

neuroticism (nu-rot'is-izm). A state of perverted or excessive nervous action.

neurotization (nu"rot-iz-a'shun). 1. The regeneration of a nerve after its division. 2. The operation of implanting a nerve into a paralyzed muscle.

neurotology (nu-ro-tol'o-je) [Gr. νεῦρον nerve + otology]. The branch of otology which deals with the internal ear and its associated intracranial nerve pathways; the neurologic phase of otology.

neurotome (nu'ro-tōm) [Gr. νεῦρον nerve + τέμνειν to cut]. I. A needle-like knife for dissecting the nerves. 2. Same as neuromere.

neurotomy (nu-rot'o-me) [Gr. νεῦρον nerve + τέμνειν to cut]. 1. The dissection or anatomy of the nerves. 2. The surgical cutting of a nerve. opticociliary n., division of the optic and ciliary nerves for prevention of sympathetic ophthalmia. retrogasserian n., division of the posterior root of the gasserian ganglion for facial neuralgia.

neurotone (nu'ro-tōn). Spermonuclein salicylate, used as a tonic and in the treatment of morphinism.

neurotonic (nu-ro-ton'ik) [Gr. νεθρον nerve + tonic]. Having a tonic effect upon the nerves.

neurotony (nu-rot'o-ne) [Gr νεῦρον nerve + τείνειν to stretch]. Same as nerve-stretching.

neurotoxia (nu-ro-toks'e-ah). A toxic condition of the nervous system; neurasthenia regarded as an autointoxication.

neurotoxic (nu-ro-tok'sik). Poisonous or destructive to nerve tissue: applied especially to an antibody produced by injecting nerve-cells into an animal.

neurotoxin (nu-ro-tok'sin) [Gr. νεθρον nerve + toxin]. A toxin antagonistic to nerve-cells.

neurotrauma (nu-ro-traw'mah) [Gr. νεῦρον nerve + trauma]. Wounding of a nerve.

neurotripsy (nu-ro-trip'se) [Gr. $\nu\epsilon\hat{\nu}\rho\rho\nu$ nerve + $\tau\rho l\beta\epsilon\iota\nu$ to rub]. The crushing or bruising of a nerve.

neurotrophasthenia (nu"ro-tro-fas-the'ne-ah) [Gr. νεῦρον nerve + τροφή nutrition + ἀσθένεια weakness]. Defective nutrition of the nervous system.

neurotrophic (nu-ro-trof'ik). Relating to nutrition and due to nervous influence.

neurotrophy (nu-rot'ro-fe) [Gr. νεῦρον nerve + τροφή nutrition]. Nutrition of nerve tissue.

neurotropic (nu-ro-trop'ik). Having a chemical affinity for nervous tissue.

neurotropism (nu-rot'ro-pizm) [Gr. νεῦρον nerve + τρέπειν to twist] Special affinity for nervous tissue, particularly the attroctive influence which nervous tissue exerts upon & i nutritive and other substances

neurotropy (nu-rot'ro-pe). Same as neurotropism. **neurotrosis** (nu-ro-tro'sis) [Gr. νεῦρον nerve + τρῶσις wound]. Neurotrauma.

neurovaccine (nu-ro-vak'sin) Vaccine virus prepared by growing the virus on the brain of a rabbit; said to have the advantage over calf lymph of being free from secondary contamination.

neurovaricosis (nu"ro-var-ik-o'sis) [Gr. νεθρον nerve + varicose]. A varicose state of the fibers of a nerve.

neurovascular (nu-ro-vas'ku-lar). Both nervous and vascular.

neurovisceral (nu-ro-vis'er-al). Same as neuro-splanchnic.

neuro-vita (nu-ro-vi'tah). Λ proprietary pulp-protecting preparation for dental work.

neurula (nu'ru-lah) [Gr. νεῦρον nerve + dim. -ula].

The first appearance of the nervous system in the developing embryo.

neururgic (nu-rer'jik) [Gr. νεῦρον nerve + ἔργον work]. Pertaining to nerve action.

neurypnology (nu-rip-nol'o-je). Same as neuro-hypnology.

Neusser's granules (noi'serz) [Edmund von Neusser, Austrian physician, 1852-1912]. See granule. neutral (nu'tral) [L. neu'tralis; neu'ter neither]. Neither acid nor basic. n. red. See under red

neutralite (nu'tral-īt). A proprietary asbestos preparation used in soldering in prosthetic dental work.

neutrality (nu-tral'it-e). The state of being neutral.

neutralize (nu'tral-īz). To render neutral or ineffective.

neutralon (nu'tral-ŏn). A proprietary preparation of soluble aluminum silicate: used to neutralize excess of hydrochloric acid in the stomach.

neutroclusion (nu-trok-lu'zhun). Normal occlusion. See occlusion.

neutron (nu'tron). A hypothetic electrically neutral, massless molecule.

neutropenia (nu-tro-pe'ne-ah) [neutrophil + Gr. mevla poverty]. Abnormal deficiency of neutrophil cells in the blood.

neutrophil (nu'tro-fil) [L. neu'ter neither + Gr. φιλεῖν to love]. 1. Stainable by neutral dyes. 2. A cell or structural element stainable by neutral dyes.

neutrophilia (nu-tro-fil'e-ah). Increase in the number of neutrophil leukocytes in the blood.

number of neutrophil leukocytes in the blood.

neutrophilic (nu-tro-fil'ik). Same as neutrophil.

neutrotaxis (nu-tro-taks'is) [neutrophil + Gr. τάξις arrangement]. The attractive or repellant influence exerted by neutrophil leukocytes.

nevocarcinoma (ne"vo-kar-sin-o'mah). Carcinoma developing on nevi or moles.

nevoid (ne'void). Resembling a nevus.

nevolipoma (ne"vo-lip-o'mah). A nevus containing a large amount of fibrofatty tissue.

nevose (ne'vos). Having nevi; spotted with nevi. nevus (ne'vus) [L. næ'vus]. 1. A mole; a pigmented spot on the skin, either congenital or acquired. 2. A congenital angioma of the skin; a reddish swelling or patch on the skin formed by dilated bloodvessels; a mother's mark. n. angiecto'des. Same as n. vascularis. n. angiomato'des, angioelephantiasis. n. araneo'sus, a nevus with radiating processes like the legs of a spider. n. ara'neus. Same as acne rosacea. capillary n., one that involves the capillaries of the skin. n. caverno'sus, cavernous angioma. n. cor'neum, ichthyosis hystrix. cutaneous n., a nevus of the skin. n. elas'ticus. See pseudoxanthoma elasticum. n. flam'meus, a reddish patch on the kin—the ordinary straw-berry-mark. hepatic n., hemorrhagic infarct of the liver. n. licheno'des, linear ichthy-osis. linear n., an eruption occurring in elongated streaks, consisting of papillary elevations, and due to hypertrophy of the papillary and corneous layers of the skin. n. lipomato's sus. Same as nevolipoma. n. lymphat'icus, lymphangioma of the skin. n. mater'mus, congenital angioma; mother's mark or birth-mark. See nevus (2d def). n. molluscifor'mis. a mole forming a protruding, fat-like tumor. n. nervo'sus. Same as linear n. n. papilla'ris, linear ichthyosis n. papillomato'sus, a wart-like mole. n. pigmento'sus, a pigmented mole; a congenital pigment-spot in the skin, varying in color from light brown to blackish. pilose n. [L. nærus pilo'sus], a hairy cutaneous patch n. sanguin'eus. Same as n vascularis. spider n. Same as n. araneosus. n. spi'lus, a mole having a smooth surface n. vascula'ris, n. vasculo'sus, a reddish swelling or patch on the skin due to hypertrophy of the skin capillaries. venous n., one composed mainly of veins. n. verruco'sus, a mole with a warty surface. n. vino'sus, a strawberry-mark.

Newbouldia læ'vis (nu-böl'de-ah). A plant said to be a good venous astringent.

newglucose. See under glucose.

N. F. Abbreviation for National Formulary: one of the supplements of the United States Dispensatory. n'gana (nag-ag'nah). See nagana.

:NH. The imid group.

-NH2. The amino and also the amide group.

NH3. Ammonia.

NH₄Br. Ammonium bromid.

NH₄Cl. Ammonium chlorid.

NH4CNO. Ammonium cyanate.

(NH₂)₂CO. Urea.

(NH₄)₂CO₃. Ammonium carbonate.

(NH4) HS. Ammonium hydrosulphid.

(NH₁)MgPO₄+6H₂O. Ammoniomagnesium phosphate.

NH4NO3. Ammonium nitrate.

NH₄O.CO.NH₂. Ammonium carbamate.

(NH₄)₂SO₄. Ammonium sulphate.

Ni. The symbol of nickel.

niani (ne-an'e). A varioloid of Senegal riflemen.

Nicander, Nicandros (nik-an'der, nik-an'dros). A celebrated Greek physician and poet who flourished about 175-135 B.C. Two of his toxicologic works, the "Theriaca" and the "Alexipharmica," have survived.

niccolum (nik'o-lum) [gen. nic'coli]. Latin for nickel.

niche, Haudek's (nitsh). A projection from the stomach wall in the rontgenogram of gastric ulcer.

nichochrome (nik'o-krōm). An alloy of nickel and chromium, very resistant to oxidation and the action of acids, and used for chemical apparatus.

nichrome (nik'rom). Same as nicochrome.

nickel (nik'el) [L. nic'colum]. A silver-white metallic element: symbol, Ni; specific gravity, 8.8; atomic weight, 58.6. See elements, table of. n. bromid, a hypnotic and sedative agent, NiBr₁: used in epilepsy. Dose, 2-8 gr. (0.13-0.52 gm.). n. carbonoxid, a poisonous liquid: injected hypodermically, it lowers the temperature. n. chlorid, nickelous chlorid, NiCl₂.6H₂O, a remedy for anemia and atonic conditions. Dose, 1-3 gr. (0.066-0.2 gm.). n. oleate, a waxy solid-used externally in chronic eczema. n. salipyrin, the salicylate of nickel and antipyrin; in whitish needles or in a pale-green powder. n. sulphate, a salt of nickel, NiSO₄.7H₂O: used in neuralgia, rheumatism, and heart disease. Dose, 1-3 gr. (0.066-0 2 gm.).

Nicklès's test (ne-klēz') [François Joseph J. Nicklès, a French chemist, 1821-1869]. See under

nico (ni'ko). Same as symphorol.

Nicol prism (nik'ol) [William Nicol, English physicist, 1768-1851]. See prism.

Nicolaier's bacillus (nik-o'li-erz) [Arthur Nicolaier, Berlin physician, born 1862]. The Clostridium telani.

nicolicin (nik-ol'is-in). A morphin preparation said to be a cure for the morphin habit.

Nicollia (nik-ol'e-ah) [Charles Nicolle, French physician, born 1866]. A genus of protozoan blood parasites which resemble Piroplasma, but are grouped in fours.

nicomors (ni'ko-morz). Tablets containing magnesium dioxid and tannic acid, for use by smokers to counteract the effect of nicotin.

Nicotiana (nik-o-she-a'nah). See tobacco.

nicotianin (nik-o'she-a-nin). A volatilizable and fragrant crystalline principle from tobacco.

nicotin (nik'o-tin) [L. nicotia'na tobacco]. A colorless, soluble fluid alkaloid with a pyridin-like odor and a burning taste, $C_5H_4N.CH(CH_2)_3N.CH_3$, exceedingly poisonous. Nicotin has been prescribed as an antitetanic agent. Dose, $\frac{1}{20}$, $\frac{1}{10}$ min. (0.003 - 0.006 c.c.), but even in much smaller doses it is a dangerous remedy. **n. bitartrate**, a salt in white crystals used in strychnin-poisoning and in tetanus. **n. salicylate**, endermol. **n. tartrate**, a salt, $C_{10}H_{14}N_2C_4H_6O_6$) + $2H_2O$: used in tetanus and in strychnin poisoning

nicotinism (nik'o-tin-izm). Poisoning by tobacco or by nicotin.

nicoulin (nik'oo-lin). A highly poisonous substance, C₃H₄O, which has been employed in acute

nictation (nik-ta'shun) Same as nictitation.

nictitation (nik-tit-a'shun) [L. nictita're to wink]. The act of winking.

nidal (ni'dal). Pertaining to a nidus.

nidation (ni-da'shun) [L. ni'dus nest]. The development of the decidua capsularis in the pregnant uterus.

nidus (ni'dus) [L. "nest"]. 1. A nest; the point of origin or focus of a morbid process. 2. Same as nucleus, 2d def 3. A depression on the ventral surface of the cerebellum n. hirun'dinis [L. "swallow's nest"], a depression in the cerebellum between the posterior velum and the uvula. Called also n. a'vis.

Niemann's disease (ne'manz). See under disease. Niemeyer's pill (ne'mi-erz) [Felix von Niemeyer, German physician, 1820-1871] See pill.

Niewenglowski's ray (nya-ven-glov'ske) [Gaston Henri Niewenglowski, contemporary French physicist]. See under ray.

night-blindness (nit'blind-nes). See nyctalopia.
nightmare (nīt'mār). An oppressive dream attended with fright and a sense of suffocation.

night-palsy (alt'pawl-ze). Numbress of the ex-

tremities in women, seen in the night about the climacteric period; acroparesthesia.

night-soil (nit'soil). The ordure of a privy.

night-sweats (nit'swets). Copious sweating in bed at night, as in tuberculosis.

night-terrors (nīt-ter'erz). Pavor nocturnus; a kind of nightmare in children.

nigricans (ni'grik-ans) [L.]. Blackish.

nigrities (nig-rish'e-ēz) [L.]. Blackness. n. lin'-guæ. See black tongue, under tongue.

nigrosin (ni'gro-sin) [L. ni'ger black]. Anilinblack, C_{3e}H₂₇N_s; a microscopic stain. See under stains, table of.

nigua (ne'gwah). Same as chigger.

nihilism (ni'hil-izm) [L. ni'hil nothing]. 1. Therapeutic nihilism, skepticism as to the therapeutic value of dru, 1, 2, 2. A form of delusion in which, to the patient, everything no longer exists.

niin (ni'in). A fatty substance thought to be identical with axin.

nikalgin (ni-kal'jin). Λ local anesthetic preparation of quinin, hydrochloric acid, and urea.

Nikiforoff's method (ne-ke-for'ofs) [Mikhail Nikiforoff, Russian dermatologist, born 1858]. See method.

Nikolsky's sign (nik-ol'skēz) [Pyotr Vasilyevich Nikolsky, Russian dermatologist, born 1855]. See sien.

nile blue. See under blue.

nimetti (nim-et'e). See Simulium griseicollis.

ninhydrin (nin-hi'drin). Triketohydrindenhydrate, C₆H₄(CO)₂.C(OH)₂· used as a reagent for proteins and amino-acids, and for diagnosing pregnancy. See under reaction.

ninserin (nin-se'rin). A preparation used in the Kiutsi-Malone reaction for pregnancy. See Kiutsi-Malone reaction, under reaction

ninsi (nin'se). The root of Si'um nin'si: used in Corea and China as a substitute for ginseng

ninth nerve (ninth). The glossopharyngeal nerve. niobium (ni-o'be-um). A metallic element, having an atomic weight of 94 and the symbol Nb. It was formerly known as columbium.

nioform (ni'o-form). See vioform

niopo-snuff (ni-o'po-). An intoxicating snuff made from the seeds of *Piplade'nua peregri'na*, a tree of tropical America

niphablepsia (nif-ab-lep'se-ah) [Gr. νίφα snow + άβλεψία blindness] Same as snow-blindness.

niphotyphlosis (nif"o-tif-lo'sis) [Gr. νίφα snow + τύφλωσις blindness]. Snow-blindness.

nipiology (nip-e-ol'o-je). Nepiology.

nipper (nip'er) An incisor tooth of a horse.

nipple (nip'l) The conic organ which gives outlet to the milk; the mammilla, or teat. crater-n., a cavity in the place where the nipple should be.

nirvanin (ner-van'in) [from Nirva'na, the Buddist state of freedom from worldly evils]. A local anesthetic, the hydrochlorid of the diethyl-glycocoll derivative of the methyl ester of meta-amino-ortho-hydroxy-benzoic acid, (C₂H₅)₂N.CH₂ CO-NH C₅H₃(OH).CO OCH₃, in colorless crystals; soluble in water. It is about one-tenth as powerful as cocain, and is used in 2-5 per cent solution.

nirvanol (ner'van-ol). [See nirvanin]. A white crystalline soluble hypnotic, the sodium salt of phenyl-ethyl-hvdantoin, C₆H₅(C₂H₆)C(CO.NII)₂. Dose, \$\frac{1}{2}-30\ \text{gr.}(0.05-2\ \text{gm.})\ subcutaneously or intravenously.

Nisbet's chancre (nis'bets) [William Nisbet, English physician, 1850-1882]. See chancre.

Nissi's bodies, degeneration, method of staining (nis'elz) [Franz Nissi, neurologist in Heidelberg, 1860-1010]. See under body, degeneration, and stains, table of. nisus (ni'sus) [L.]. An effort, strong tendency, or molimen.

nit (nit). The egg of a louse.

niter (ni'ter) [L. ni'trum; Gr. νίτρον]. Potassium nitrate, or saltpeter. cubic n., sodium nitrate. sweet spirit of n., the spirit of nitrous ether (L. spir'itus æth'eris nitro'si).

niton (ni'ton). Radium emanation. See under emanation.

nitragin (ni'traj-in). A nitrifying bacterial soilferment from leguminous root-tubercles: said to be a valuable fertilizer.

nitramin, nitramine (ni-tram'in). A nitroderivative of an amin.

nitrate (ni'trāt) [L. nitra'tum]. Any salt of nitric acid.

nitremia, nitræmia (ni-tre'me-ah). Excess of nitrogen in the blood.

nitric acid (ni'trik). See acid.

nitrid, nitride (ni'trid). A compound of nitrogen with a metal.

nitridation (ni-trid-a'shun). Combination with nitrogen to form a nitrid.

ntrification (ni"trif-ik-a'shun) [nitric acid + L. fa'cere to make]. Conversion of the nitrogen contained in ammonia into nitrous and nitric acid. nitrifier (ni'trif-i-er). A nitrifying microörganism.

nitrifying (ni'trif-i-ing). Forming nitrous and nitric acids out of ammonia: said of certain bac-

nitril (ni'tril). An organic compound containing trivalent nitrogen. Nitrils may be nitril bases, which are tertiary amins, or acid nitrils, which may be considered esters of HCN or as acids in which carboxyl is replaced with cyanogen, or as ammonia whose hydrogen atoms have been replaced by a trivalent radical.

nitrilase (ni'tril-ās). An enzyme which splits nitrils.

nitrilese (ni'tril-ës). An enzyme which synthesizes nitrils.

nitrite (ni'trit). Any salt of nitrous acid. The nitrites act as antispasmodics and lessen the arterial tension. The principal medicinal nitrites are these of amyl, ethyl, potassium, and sodium.

nitritoid crisis or reaction (ni'trit-oid). See under crisis.

nitrituria (ni-tri-tu're-ah) [nitrite + Gr. οδρον urine]. The presence of nitrites in the urine.

nitro-. A prefix indicating the presence of the group —NO₂.

nitro-amin, nitro-amine (ni-tro-am'in). Same as nitramin.

nitro-anisol (ni-tro-an'is-ol). A nitro derivative of ..nisol, NO₂.C₆H₄.O.CH₃.

Nitrobacter (ni'tro-bak-ter). A genus of bacterial organisms capable of securing energy for growth by oxidizing nitrites to nitrates (Winogradsky, 1918).

Nitrobacterese (ni"tro-bak-te're-e). A systematic tribe under the family Nitrobacteriacese. They derive their life energy from the oxidation of hydrogen or simple compounds of carbon or nitrogen. The genera are: Acetobacter, Carboxydomonas, Hydrogenomonas, Methanomonas. Nitrobacter, and Nitrosomonas.

nitrobacteria (ni"tro-bak-te're-ah), pl. Soil bacteria or other microörganisms which convert ammonia and other nitrogenous substances into nitrogen acids.

Nitrobacteriacese (ni"tro-bak-te-re-a'se-e). A systematic family of the order Eubacteriales. They are rod shaped, asporogenic, aërobic and capable of securing growth energy by the direct oxidation of carbon, hydrogen or nitrogen, or of simple compounds of these. There are two tribes: Azotobacterese and Nitrobacterese.

nitrobenzene (ni-tro-ben'zēn). Same as nitrobenzol.

nitrobenzol (ni-tro-ben'zol). A poisonous penzol derivative, C₀H₅NO₂. It is a sweet, oily liquid, used in perfuming soap and as a flavoring agent, It is an active poison. Called also oil of mirbane and artificial oil of bitter almond.

nitrocellulose (ni-tro-sel'u-lōs). Pyroxylin.

nitrochloroform (ni-tro-klo'ro-form). See chloropicrin.

nitrodextrose (ni-tro-deks'trōs). Dextrose nitrate: used like nitroglycerin.

nitro-erythrol (ni-tro-er'ith-rol). Erythrol nitrate: used like nitroglycerin, but slower and more lasting in its action.

nitroform (ni'tro-form). Trinitromethane, CH-(NO₂)₃, a crystalline explosive substance.

nitrogen (ni'tro-jen) [Gr. νίτρον niter + γεννῶν to generate]. A colorless, gaseous element found free in the air; symbol, N; specific gravity, 0.0713; atomic weight, 14.008. It constitutes part of the atmosphere, forming about four-fifths of common air. Chemically, it is almost inert, but forms by combination nitric acid and ammonia. It is a gas unfitted to support respiration; not a poison, but proving fatal if breathed alone, because of the want of oxygen. It is soluble in the blood and body fluids and when released as bubbles of gas by reduction of atmospheric pressure causes serious symptoms. See caisson disease. alloxuric n., nitrogen in the form of alloxur-bases. See purin bases, under purin. amid n., that portion of the nitrogen in protein that exists in the form of acid amids. filtrate n. See non-protein n. n. monoxid, a colorless gas, N₂O, or nitrous oxid, having a sweetish taste and a pleasant odor. It causes a condition of temporary asphyxiation and uncon-sciousness when inhaled, and is administered to produce this condition for the performance of minor operations. Called also laughing-gas and nitrous oxid. nomadic n., free nitrogen from the air which enters into plant and animal growth. non-protein n., the nitrogenous constituents of the blood exclusive of the protein bodies. consists of the nitrogen of urea, uric acid, creatin, creatinin, amino-acids, polypeptids, and an undetermined part known as rest-nitrogen. n. pentoxid, a crystalline compound, N₂O₅, or nitric anhydrid, which combines with water to form nitric acid. n. peroxid, n. tetroxid, a poisonous volatile liquid, N₂O₄, giving off brownish irritant fumes. rest n. See under non-protein n.

nitrogen-lag. The time elapsing after the administration of a protein before there appears in the urine nitrogen equal in amount to that contained in the protein.

nitrogen-partition. The percentage of total nitrogen in the urine represented by each of the nitrogenous constituents.

nitrogenization (ni"tro-jen-iz-a'shun). The act of impregnating with nitrogen.

nitrogenous (ni-troj'en-us). Containing nitrogen. nitroglucose (ni-tro-glu'kōs). Nitrodextrose.

nitroglycerin (ni-tro-glis'er-in). A colorless or yellowish, oily liquid, $C_3H_5(O.NO_2)_3$, formed by the action of nitric and sulphuric acids on glycerin, and known also as glonoin. It is poisonous and highly explosive. Physiologically, it acts as a vaso-dilator: used principally in angina pectoris and asthma. Dose, $\frac{1}{2} \frac{1}{100} \frac{1}{100} gr.$ (0.000335-0.0013 gm.); of tincture, $\frac{1}{2} - 10$ min. (0.033-0.666 c.c.); of spirit (a I per cent. solution), I-2 min. (0.065-0.13 c.c.).

nitrohydrochloric acid (ni"tro-hi-dro-klo'rik). See under acid.

nitrolevulose (ni-tro-lev'u-lōs). Levulose nitrate: used like nitroglycerin.

nitromannitol (ni-tro-man'it-ol). Mannitol nitrate: used like nitroglycerin.

nitrometer (ni-trom'et-er) [nitrogen + Gr. µèrpor

An apparatus for measuring the quanmeasurel. tity of nitrogen given off in a reaction.

nitromonas (ni-tro-mo'nas). Same as nitrosomonas.

Atron (ni'tron). The name suggested by Sir W. Ramsay and R. W. Gray for the molecular weight of a radium-emanation.

nitronaphthalin (ni-tro-naf'thal-in). A stance, C10H7.NO2, whose vapors may cause vesication and opacity of the cornea.

nitrophenol (ni-tro-fe'nol). An indicator, paranitro-phenylic acid, CoH4(NO2)OH, with a PH range of 5 to 7, being colorless at 5 and yellow at 7.

nitropropiol (ni-tro-pro'pe-ol). Orthonitrophenylpropiolic acid, NO2.CoH4.C:C.COOH: used as a test for sugar.

nitroprotein (ni-tro-pro'te-in). A protein made by treating serum protein with nitric acid.

nitrosaccharose (ni-tro-sak'ar-ōs). Nitrated saccharose; an explosive and vasodilator: used like nitroglycerin.

nitrosalol (ni-tro-sal'ol). An ester, C₆H₄(OH)-CO₂.C₆H₄NO₂, in a yellowish, crystalline powder.

nitroscleran (ni-tro-skle'ran). A proprietary preparation recommended for arteriosclerosis.

nitrose (ni'tros). A term used to include nitric and nitrous acids.

A preparation for treating nitrosin (ni'tro-sin). cancer prepared by Ehrlich.

nitroso-. A prefix indicating a compound which contains the group -N:O.

nitrosobacteria (ni-tro"so-bak-te're-ah). Bacteria which oxidize ammonia into nitrites.

nitrosococcus (ni-tro-so-kok'us). A micrococcus with nitrifying powers.

nitroso-indol (ni-tro-so-in'dol). A compound which gives a red reaction when indol is treated with sulphuric acid and potassiun nitrite.

Nitrosomonas (ni-tro-som'o-nas). A genus of bacterial organisms capable of securing growth energy by oxidizing ammonia to nitrites (Winogradsky, 1892)

nitrosophenyldimethylpyrazol fen"il-di-meth"il-pi'ra-zol). Sam (ni-tro"so-Same as isonitrosoantipyrin.

nitrososubstitution (ni-tro"so-sub-sti-tu'shun). The substitution of the radical nitryl for some other radical or atom in a compound.

nitro-sugars (ni-tro-shug'erz). A class of bodies which have been used as vasodilators.

nitrosyl (ni'tro-sil). The univalent radical NO.

nitrous (ni'trus). Pertaining to nitrogen in its lowest valency. n. acid. See acid. n. oxid, nitrogen monoxid.

nitrox (ni'troks). A proprietary germicide and healing agent for local use.

nitroxyl (ni-troks'il). The radical NO₂.

nitryl (ni'tril). The nitrose group.

niveau diagnosis (ne-vo'). See under diagnosis.

nisin (ni'zin). A proprietary antiseptic and astringent, being a zinc salt of sulphanilic acid, (NH₂.C₆H₄.SO₃)₂Zn: used in gonorrhea and in eye lotions.

njallin (njal'in). An alkaloid from the njalla bean. Nm. Abbreviation for L. nux moscha'ta, nutmeg. N:N. The azo group.

N. N. medium [Nicolle, Novy, McNeal]. See under medium.

N. N. R. An abbreviation for new and non-official remedies, i. e., such as have been passed upon by the Council of Pharmacy and Chemistry of the American Medical Association.

No. An abbreviation of L. nu'mero, " to the number of."

No. 102. Luargol.

801

No. 132. Eparseno. No. 190.

Stovarsol. No. 205. See Bayer 205.

No. 309. Fourneau. See Fourneau 309

No. 606. Salvarsan.

No. 914. Neo-arsphenamin.

No. 1116. Galyl.

No. 1151. Ludyl.

N₂O. Nitrogen monoxid.

N₂O₃. Nitrogen trioxid.

N₂O₅. Nitrogen pentoxid.

Nocard's bacillus. [See Nocardia.] The bacillus of psitticosis.

Nocardia (no-kar'de-ah) [Edmond Isidore Étienne Nocard, French veterinarian, 1850-1903]. A genus of trichomycetes characterized by true branching and the formation of spores. Under this genus are and the formation of spores. Under this genus are included various organisms formerly included under the genera Obspora, Discomyces, Streptothrix, and Cladothrix. N. asteroi'des, Cladothrix asteroides. N. bo'vis, Actinomyces bovis. N. farcin'ica, Actinomyces farcinica. N. fors'teri, Streptothrix forsteri. N. isræ'li, Streptothrix forsteri. N. isræ'li, Streptothrix medures. N. isræli. N. madu'ræ, Streptothrix maduræ. N. minutis'sima, Microsporon minutissimum. poncet'i, a species causing pseudo-actinomycosis.

N. pulmona'lis, a species causing pseudotuberculosis.

N. ten'uis. See under trichonocardiasis.

nocardial (no-kar'de-al). Caused by Nocardia.

nocardiasis (no-kar-di'as-is). Nocardiosis.

nocardiosis (no-kar-de-o'sis). Infection with No-cardia; a disease caused by Nocardia. The most frequent point of attack is the respiratory tract where it causes lesions and symptoms resembling pulmonary tuberculosis. Called also pseudotuberculosis and streptothricosis.

Nocht's stain (nokts). See under stain.

noci-association (no-se-as-o-se-a'shun). The unconscious discharge of nervous energy under the stimulus of trauma, as in surgical shock.

nociceptive (no-sis-ep'tiv) [L. nocer'e to injure + ca'pere to receive]. Receiving injury: said of a receptive neuron.

nociceptor (no-sis-ep'tor) [see nociceptive]. The nervous mechanism by which stimuli of injury are received (receptors).

noci-influence (no-se-in'flu-ens). Injurious or traumatic influence.

noci-perception (no-se-per-sep'shun). ception by the system of injurious (traumatic)

Noct. Abbreviation for L. noc'te, at night.

noctambulation (nok"tam-bu-la'shun) [L. noctambula'tio; nox night + ambula're to walk]. Sleep-walking; somnambulism.

noctiphobia (nok-ti-fo'be-ah) [L. nox night + Gr. φόβos fear]. Morbid dread of night and its darkness and silence.

Noct. maneq. Abbreviation for L. noc'te mane'que, at night and in the morning.

nocturia (nok-tu're-ah) [L. nox night + Gr. ούρον urine]. Excessive urination at night.

nocturnal (nok-tur'nal) [L. noctur'nus]. ing to the night.

nodal (no'dal). Pertaining to a node, particularly the atrioventricular node.

node (nod) [L. no'dus knot]. A swelling or pro-tuberance. Aschoff's n., n. of Aschoff and tuberance. Aschoff's n., n. of Aschoff and Tawara. Same as atrioventricular n. atrioventricular n., auriculoventricular n., a remnant of primitive fibers found in all mammalian hearts at the base of the interauricular septum, and forming the beginning of the auriculoventricular bundle or bundle of His. Called also atrioventricular n. and n. of Tawara. Bouchard's n's, nodules on the second joints of the fingers, believed

to be symptomatic of gastrectasis. Féréol's n's, subcutaneous nodes sometimes occurring in acute rheumatism. gouty n., one due to gouty inflammation. Haygarth's n's, joint-swellings in arthritis deformans. Heberden's n's, nodes on the fingers in advanced life, usually ascribed to gout, but often seen when the general health seems perfect. hemal n's, hemolymph n's. See hemolymph glands, under gland. Hensen's n., an area of cell proliferation in the impregnated ovum in which the primitive streak begins. Keith's n., n. of Keith and Flack. See sinoauricular n. Koch's n., atrioventricular node. Legendré's n's. Same as Bouchard's n's. lymph-n's, lymphatic n's, the gland-like structures arranged in groups interposed throughout the lymphatic circulation Called also lymphglands or lymphatic glands. Meynet's n's, nodules in the capsules of joints and in tendons in rheumatic conditions, especially of children. Parrot's n., a syphilitic node on the outer table of the skull. piedric n's, the nodes seen on the hair in piedra. n's of Ranvier, nodes produced by constrictions on medullated nerve-fibers at an interval of about 1 millimeter. Rosenmüller's n., Rosenmuller's gland. See gland. Schmidt's n., the medullated interannular segment of a nerve-fiber. singers' n., hypertrophy of the edge of the vocal cords from continued irritation, as in singers. sino-atrial n., sino-auricu-lar n., a well-defined collection of cells, a remnant of primitive fibers found in all mammalian hearts, at the junction of the superior vena cava with the terminal band of the right auricle. The cardiac rhythm normally takes its origin in this node which has been called the pace-maker of the heart. Called also n. of Keith and Flack. sinus n. Same as sino-auricular n. syphilitic n., a swelling upon a bone due to syphilitic periostitis. n. of Tawara. See atrioventricular n. teachers' n., singers' node. Virchow's n., Virchow's glands See under gland. vital n., Flouran's term expressing the old conception that there is a minute node under the lowest point of the fourth ventricle which is the respiratory center.

nodose (no'dōs) [L. nodo'sus]. Having nodes or projections.

nodosity (no-dos'it-e) [L. nodos'itas]. 1. The quality or fact of being nodose. 2. A node. For varieties, see node.

nodular (nod'u-lar). 1. Like a nodule or node.
2. Marked with nodules.

nodulate, nodulated (nod'u-lāt, nod'u-la-ted). Characterized by nodules.

nodulation (nod-u-la'shun). The presence of nodules.

nodule (nod'ūl) [L. nod'ulus little knot]. 1. A small boss or node. 2. The anterior segment of the inferior vermis of the cerebellum in the fourth ventricle. Albini's n's, gray nodules of the size of sago-grains, sometimes seen on the free edges of the auriculoventricular valves of infants. They are remains of fetal structures. apple-jelly n's, light reddish elevations on the surfaces of leprous ulcers. n. of Arantius. Same as corpus arantii. Aschoff's n's, nodules in the myocardium in rheumatism. Bianchi's n's, corpora arantii. Bouchard's n's, nodes sometimes seen on the joints of the fingers and toes in cases of gastrectasia. epicardial n's, nodules over the vessels of the epicardium, probably due to high pressure. Jeanselme's n's, nodules on the limbs near the joints due to nocardia infection; called also juxta-articular n's, Jeanselme's nodules. Kerkring's n., Köster's n., a tubercle composed of one giant-cell inclosed by a double layer of cells. Leishman's n's, the pinkish nodules seen in the non-ulcerative keloid-like type of oriental sore. lymph-n. See lymph-nodes, under node. Morgagni's n's, the corpora arantii. pearly n., one of the nodules of bovine

tuberculosis. pulp-n., a mass of dentin found in the pulp cavity of a tooth. Called also pulp-stone. triticeous n. See corpus triticeum.

nodule-disease. See under disease.

noduli (nod'u-li). Pl. of nodulus.

nodulous (nod'u-lus). Same as nodose.

nodulus (nod'u-lus), pl. nod'uli [L.]. A nodule.

n. lymphat'icus, a lymph-nodule. nod'uli laquea'ti, a knotted appearance of the hair.
nod'uli lymphat'ici aggrega'ti [pey'eri] [B N A], Peyer's patches. nod'uli lymphat'ici larynge'i [B N A], the laryngeal tonsils. nod'uli lymphat'ici linea'lis [malpig'hii] [B N A], malpighian corpuscles. nod'uli lymphat'ici solita'rii [B N A], Peyer's glands. nod'uli lymphat'ici tuba'rii [B N A], eustachian tonsils. See under tonsil. nod'uli valvula'rium semiluna'rium [aran'tii] [B N A], corpora arantii.

nodus (no'dus) [L.]. Node. n. cer'ebri, the pons Varolii. n. cor'dis, the trigonum fibrosum n. curso'rius, a point in the corpus striatum of some animals, as the rabbit, stimulation of which causes the animal to rush forward.

nœd vital (ne ve-tal') [Fr. "vital knot"]. The supposed respiratory center in the medulla oblongata.

noematachograph (no-e-mah-tak'o-graf) [Gr. $\nu\delta\eta\mu\alpha$ thought $+\tau\alpha\chi\delta$ swift $+\gamma\rho\delta\varphi\epsilon\nu$ to write]. A device for registering the time required in a mental operation.

noematachometer (no-e-mah-tak-om'et-er) [Gr. ν δημα thought + ταχ ψ s wift <math>+ μ ϵ τρον measure]. A device for measuring and registering the time required in a mental operation.

noematic (no-e-mat'ik) [Gr. νόημα thought]. Pertaining to thought or the operation of the mind.

Noguchi's test (no-goo'tshe) [Hideyo Noguchi, Japanese pathologist in New York, born 1876]. See under tests.

noli-me-tangere (no"li-me-tan'jer-e) [L. "touch me not"]. Rodent ulcer; malignant ulcer.

noma (no'mah) [Gr. νομή a spreading]. Gangrenous sore mouth; gangrenous stomatitis, a severe variety of stomatitis affecting especially young children, and marked by the development of a spreading ulcer on the mucous me.nbrane of the mouth. It is attended by progressively increasing prostration, and is generally fatal. Called also cancrum oris. n. puden'di, n. vul'væ, ulceration of the pudendum of young children.

nomadic (no-mad'ik). Wandering; unsettled, free.
n. nitrogen. See nitrogen

nomenclature (no'men-kla-tūr) [L. no'men name + cala're to call]. Terminology; especially a system of names of diseases.

nomogram (nom'o-gram) [Gr.νόμος law + γράμμα mark]. The graphic representation produced in nomography; a chart or diagram on which a number of variables are plotted.

nomography (nom-og'raf-e) [Gr. $\nu \delta \mu os$ law + $\gamma \rho \delta \varphi \epsilon \iota \nu$ to write] A graphic method by which the relation between any number of variables may be represented graphically on a plane surface, such as a piece of paper.

nomotopic (nom-o-top'ik) [Gr. νόμος law + τόπος place]. Occurring at a normal place; occurring normally.

nona (no'nah). A condition resembling lethargic encephalitis which appeared in epidemic form in southern Europe in 1889-1890.

non-adherent (non-ad-he'rent). Not adherent to or connected with adjacent structures.

nonan (no'nan) [L. no'nus ninth]. Recurring every ninth day, or at intervals of eight days.

non-antigenic (non-an-te-jen'ik). Not producing antigens.

non compos mentis (non kom'pos men'tis) [L.]. Not of sound mind. non-conductor (non-kon-duk'tor). Any substance that does not readily transmit electricity, light, or heat.

nonigravida (no-ne-grav'id-ah) [L. no'nus ninth + grav'ida pregnant]. A woman pregnant for the ninth time.

nonipara (no-nip'ar-ah) [L. no'nus ninth + par'ere to bear]. A woman who has borne nine children.

non-metal (non-met'al). Any chemic element that is not a metal.

Nonne's syndrome (non'ez) [Max Nonne, German physician]. See syndrome.

Nonne-Apelt reaction (non'eh-ah'pelt) [Max Nonne and F. A pelt, contemporary German physicians]. See under reaction.

non-nucleated (non-nu'kle-a-ted). Without a nucleus.

non-occlusion (non-ok-lu'zhun). Open-bite malocclusion. See under *malocclusion*.

nonose (non'os) [L. no'nus ninth]. A carbohydrate containing nine atoms of carbon in the molecule.

non-parous (non-par'us). Having borne no children said of a woman.

non-protein nitrogen. See under nitrogen.

non-radiable (non-ra'de-a-bl). Impervious to rays, such as x-rays, cathode rays, etc.

Non repetat. Abbreviation for L. non repeta'tur, do not repeat.

non-restraint (non-re-straint'). Treatment of insanity without physical restraint.

non-specific therapy. See under therapy.

non-toxo (non-tok'so). A proprietary local anesthetic containing procain, suprarenin, duatol, and thymol.

nonus (no'nus) [L. for *ninth*]. The hypoglossal nerve, formerly regarded as the ninth cranial nerve.

non-valent (non'va-lent) [L. non not + vale're to be able]. Having no chemic valency; not capable of entering into chemic composition, used of argon, helium, and the other inert gases

non-viable (non-vi'ab-l) [L non not + viable].
Not capable of living: used of the fetus after delivery.

nonyl (no'nil). The monovalent radical C₉H₁₉. noopsyche (no'o-si-ke) [Gr. νοῦς mind + ψύχη soul]. Intellectual processes.

nopalin G (no'pal-in). Bluish eosin See cosin

noratropin (nor-at'ro-pin). A mydriatic alkaloid obtained when norhyocyamin is racemized with alkali.

Nordau's disease, nordauism (nor'dowz, nor'dow-izm) [Max Simon Nordau, German scientist, 1849-1923]. Degeneracy.

nor-hyoscyamin (nor"hi-o-si-am'in). A mydriatic alkaloid, NH.C₆H₁₀ CH'O CO CH(C₆H₅)CH₂-OH, from certain solanaceous plants

nori (no're). A Japanese culture gelatin.

noridal (no'rid-al). A proprietary suppository used for bleeding piles.

norleucin (nor-lu'sin). An amino-acid, alphaamino normal caproic acid, CH₃ (CH₂)₃.CH(NH₂).-CO₂H, extracted from the leucin fraction of the decomposition of the proteins of nervous tissue (Abderhalden and Weil, 1913).

norm (norm) [L. nor'ma rule]. A fixed or ideal standard.

norma (nor'mah) [L.]. A line established to define the aspects of the cranium.

normacol (nor'mak-ol). A proprietary laxative which acts by increasing the indigestible bulk of the intestinal contents. It contains vegetable mucins which absorb large quantities of water and swell accordingly.

normal (nor'mal). 1. Agreeing with the regular and established type. 2. In chemistry, noting ali-

phatic hydrocarbons in which no carbon atom is combined with more than two other carbon atoms: the term is also applied to salts formed from acids and bases in such a way that no acidic hydrogen of the acid remains nor any of the basic hydroxyl of the base. 3. In bacteriology, not immunized or otherwise bacteriologically treated.

normalin (nor mal-in). A proprietary preparation of iron and arsenic.

normalization (nor"mal-iz-a'shun). The process of bringing or restoring to the normal standard.

normoblast (nor'mo-blast) [L. nor'ma rule + Gr. βλαστός germ]. An erythroblast having the diameter of a normal red blood-corpuscle (erythrocyte), i. e., from 5 to 10 μ. It has a round nucleus with dense, heavily staining chromatin. Normoblasts occur in the blood in secondary anemias and especially in myelogenous leukemia. They have been called sauroid cells because they are like the red blood-cells of reptiles. Cf. erythroblast.

normoblastic (nor-mo-blas'tik). Relating to or having the character of a normoblast.

normocyte (nor'mo-sit) [L. nor'ma rule + Gr. κbros cell]. A normal non-nucleated erythrocyte.

normocytic (nor-mo-sit'ik). Relating to or having the character of a normocyte.

normocytosis (nor"mo-si-to'sis) [see normocyte].

A normal state of the blood in respect to the leukocytes.

normomastic (nor-mo-mas'tik). See Kafka's test, under tests.

normonormocytosis (nor"mo-nor"mo-si-to'sis)
See isonormocytosis.

normo-orthocytosis (nor"mo-or"tho-si-to'sis) [normal + Gr. $\delta \rho \partial \phi$ s correct + $\kappa \dot{\nu} ros$ cell]. A condition of the blood leukocytes in which the total number is increased, but the proportion between the different varieties remains normal.

normosal (nor'mo-sal). An artificial serum designed to replace normal salt solution for transfusion, etc.

normoskeocytosis (nor"mo-ske"o-si-to'sis) [normal + Gr. $\sigma \kappa a \iota \delta s$ left + $\kappa b \tau o s$ cell]. A condition of the leukocytes of the blood in which the number is normal, but many immature forms (deviation to the left) are present.

normovolemia (nor"mo-vo-le'me-ah) [normal + volume + Gr alµa blood]. Normal blood volume.

nornarcotin (nor-nar'ko-tin). An active principle said to exist in opium.

Norris's corpuscles (nor'is-iz) [Richard Norris, English physician 1831-1916]. See corpuscle.

nortropinon (nor-tro'pin-on). A solid, fusible ketone, C₀H₁₁NO, derived from tropin.

Norwegian itch (nor-we'jan). See itch.

Norwood's tincture (nor'woodz) [Wesley C. Norwood, an American physician of the nineteenth century]. See *tincture*.

nosazontology (nos-dz-on-tol'o-je). Nosetiology.
nose (nōz) [L. na'sus]. The special organ of the sense of smell. It consists of a hollow structure occupying the middle of the face, the upper part of which (ol/actory region) forms the organ of smell; the lower part (respiratory region), or beginning of the respiratory tract, acts as a filter and warmer of the inspired air. cone n. See Lamus. hammer n., rhinophyma. saddle-n., saddle-back n., swayback n., a nose with a sunken bridge.

nosebleed (noz'bled). See epistaxis.

nosegay, Riolan's (nōz'gā). The group of muscles that take their origin from the styloid process of the temporal bone.

nosema (no-se'mah), pl. nosem'ata [Gr. νόσημα disease]. 1. Any illness or disease. 2. A genus of microsporidia. N. a'pis causes the nosema disease of bees. N. bom'bycis causes the disease pébrine in silkworms.

nosencephalus (no-sen-sef'al-us) [Gr. νόσος disease + έγκεφαλος brain]. A fetus with a defective cranium and brain.

nosepiece (nōz'pēs). A device for applying several objectives in rapid succession to a microscope without disturbing the focus.

nosetiology (nos-e-te-ol'o-je) [Gr. νόσος disease + αίτία cause + λόγος treatise]. The study of the causation of disease.

nosochthonography (nos''ok-tho-nog'raf-e) [Gr. ν 6σος disease + χ θών earth + γ ράφειν to write]. The geography of endemic or other diseases; the study of the geographic distribution of diseases; nosogeography.

nosocomial (nos-o-ko'me-al). Pertaining to a hospital or an infirmary.

nosocomium (nos-o-ko'me-um) [Gr. νόσος disease + κομεῖν to take care of]. A hospital or an infirmary.

nosode (nos'ōd). Any disease-product used as a remedy.

nosogenesis (no-so-jen'es-is). Nosogeny,

nosogenic (nos-o-jen'ik) [see nosogeny]. Causing disease.

nosogeny (no-soj'en-e) [Gr νόσο disease + γεννᾶν to produce]. Same as pathogenesis.

nosogeography (nos"o-je-og rah-fe) [Gr. νόσος disease + γη earth + γράφειν to write]. Same as nosochthonography.

nosographer (no-sog'raf-er). A writer of nosography.

nosography (no-sog'raf-e) [Gr. νόσος disease + γράφειν to write]. A written account or description of diseases.

nosohemia, nosohemia (nos-o-he'me-ah) [Gr. νόσος disease + αΙμα blood]. Blood disease.

noso-intoxication (nos"o-in-toks-ik-a'shun). Intoxication by the harmful products of disease.

nosologic, nosological (nos-o-loj'ik, -loj'ik-al).
Pertaining to nosology.

nosology (no-sol'o-je) [Gr. $\nu\delta\sigma\sigma$ s disease + $\lambda\delta\gamma\sigma$ s discourse]. The science of the classification of diseases.

nosomania (nos-o-ma'ne-ah) [Gr. νόσος disease + μανία madness]. The insane and incorrect belief of a patient that he has some special disease.

nosometry (nos-om'et-re) [Gr. νόσος disease + μέτρον measure]. The measurement of the morbidity rate.

nosomycosis (nos"o-mi-ko'sis) [Gr. νόσος disease + μόκης fungus]. A disease caused by a parasitic fungus.

nosonomy (no-son'o-me) [Gr. νόσος disease + νόμος law]. The classification of diseases.

nosoparasite (nos-o-par'as-īt) [Gr. νόσος disease + parasite]. An organism found in conjunction with a disease which it is able to modify, but not to produce.

nosophen (nos'o-fen). Tetraiodophenolphthalein; a yellow, antiseptic powder, CO₂.C₆H₄.C.(C₆H₂I₂ OH)₂, soluble in alkalis, slightly so in alcohol, ether, and chloroform, but insoluble in water: used externally as a substitute for iodoform.

nosophobia (nos-o-fo'be-ah) [Gr. νόσος disease + φόβος fear]. Morbid dread of sickness or of any special disease.

nosophyte (nos'o-fit) [Gr. νόσος disease + φυτόν plant]. A pathogenic plant-microörganism.

nosopoietic (nos"o-poi-et'ik) [Gr. νόσος disease + ποιεῖν to make]. Causing or producing disease.

nosotaxy (nos'o-tak-se) [Gr. νόσος disease + τάξις arrangement]. The classification of disease.

nosotoxic (nos-o-toks'ik). Producing nosotoxicosis.

nosotoxicity (nos"o-toks-is'it-e). The quality of being nosotoxic.

nosotoxicosis (nos"o-toks-ik-o'sis) [Gr. v6005 dis-

ease + toxicosis]. Poisoning by retained bodily wastes.

nosotoxin (nos-o-toks'in) [Gr. νόσος disease + toxin]. Any toxin that is the result of a disease process.

nosotrophy (no-sot'ro-fe) [Gr. νόσος disease + τροφή nourishment]. The care and nursing of the sick.

nosotropic (no-so-trop'ik) [Gr. νόσος disease + τρόπος turning]. Directed against or opposed to a disease, especially as distinguished from *etiotropic*.

nostalgia, nostalgy (nos-tal'je-ah, nos'tal-je) [Gr. νοστεῖν to return home + ἄλγος pain]. Homesickness; longing to return home or to one's native land.

nostology (nos-tol'o-je) [Gr. νοστείν to return + λόγος treatise]. Same as gerontology.

nostomania (nos-to-ma'ne-ah) [Gr. νοστεῖν to go home + μανία madness]. Intense or insane nostalgia.

nostrils (nos'trilz). The anterior nares.

nostrum (nos'trum) [L.]. A quack, patent, or secret remedy.

notal (no'tal) [Gr. νῶτον back]. Pertaining to the back; dorsal.

notalgia (no-tal'je-ah) [Gr. νῶτον back + ἄλγος pain]. Pain in the back.

notancephalia (no"tan-se-fa'le-ah) [Gr. νωτον back + αν priv. + κεφαλή head]. Congenital absence of the back of the skull.

notanencephalia (no"tan-en-sef-a'le-ah) [Gr. νῶτον back + ἐγκέφαλος head]. Absence of the cerebellum.

notch (notsh). An indentation or depression; chiefly one on the edge of a bone or other organ. acetabular n. See cotyloid n. aortic n. dicroite n. auricular n. Same as incisura santorini. cardiac n., a depression in the anterior border of the left lung for the apex of the heart. **cerebellar n.**, the incisura cerebelli. **clavicular n.**, a notch at the upper end of the sternum for the articulation of the clavicle. coracoid n., a depression at the upper edge of the scapula at the root of the coracoid process. Called also semilunar n. cotyloid n., a notch in the acetabulum near the obturator foramen. Called also acetabular n. craniofacial n., an opening in the bony partition between the orbital and nasal cavities. dicrotic n., the depression sion on the sphygmogram of a dicrotic pulse-wave which separates the primary from the dicrotic It is caused by closure of the aortic elevation. valves, and is also called aortic n. ethmoid n., the notch between the orbital plates of the frontal bone. fibular n., a depression in the lower end of the tibia for articulation with the fibula. 1110-sciatic n., the greater sciatic notch. interclavicular n., the median depression in the upper border of the sternum. intercondyloid n., the notch between the condyles of the femur. interlobar n., the notch on the ventral border of the liver between the right and left lobes. intertragic n., the notch between the tragus and the antitragus. intervertebral n., a depression of the intervertebral pedicles on the upper or lower surface. ischiatic n., the sacrosciatic notch. jugular n., an indentation that forms the posterior boundary of the jugular foramen. lacrimal n., the notch in the edge of the orbital surface of the superior maxillary bone which receives the lacrimal bone. mandibular n. Same as sigmoid n. marsupial n., the incisura cerebelli posterior. mastoid n., the digastric fossa. nasal n., the interval between the internal angular processes of the frontal bone. pancreatic n., a depression on the posterior surface of the pancreas for the superior mesenteric vessels. parotid n., the notch between the ramus of the mandible and the mastoid process of the temporal bone. popliteal n., a depression of the posterior surface of the head of the

between the two tuberosities. preoccipital n., a notch on the lower edge of the external surface of a cerebral hemisphere, between the occipital and temporal lobes. presternal n., the interclavicular notch. pterygoid n., the notch between the pterygoid processes of the sphe-noid bone. radial n., the lesser sigmoid cavity of the ulna. n. of Rivinus, a groove in the osseous tympanic ring filled with Shrapnell's membrane. sacrosciatic n., either one of two notches (greater and lesser) on the posterior border of the innominate bone. scapular n. Same as suprainnominate bone. scapular n. Same as supra-scapular n. sciatic n., sacrosciatic notch. semilunar n. See coracoid n. Sibson's n., an inward bend of the left upper limit of pre-cordial dulness in acute pericardial effusion. sigmoid n. 1. A deep depression which separates the coronoid and condyloid processes. 2. The intersigmoid fossa. See under fossa spheno-palatine n., the space between the orbital and sphenoid processes of the palate bone. **sternal** n., the interclavicular notch. **supraorbital** n., a notch near the middle of the supraorbital arch. suprascapular n., a depression in the superior border of the scapula. suprasternal n., a depression at the top of the manubrium. trigeminal n., a notch in the superior border of the petrosal near the apex, transmitting the trigeminal nerve. tympanic n. Same as n. of Rivinus. ulnar n., the sigmoid cavity of the ulna. umbilical n., the anterior notch of the liver.

note-blindness (nōt'blind-nes). Loss of the power of recognizing musical notes by the eye.

notencephalus (no-ten-sef'al-us) [Gr. νῶτον back + ἐγκέφαλος brain]. A fetal monster affected with notencephalocele.

Nothnagel's sign, test (nōt'nah-gelz) [Hermann Nothnagel, German physician, 1841-1905]. See under sign and tests.

no-threshold body or substances. See under substance

notifiable (no'ti-fi-a-bl). That should be made known said of diseases that are required to be made known to the board of health.

notochord (no'to-kord) [Gr. νῶτον back + χορδή cord]. The rod-shaped body, composed of cells derived from the mesoblast, below the primitive groove of the embryo, defining the primitive axis of the body. Called also chorda dorsalis.

notogenesis (no-to-jen'es-is) [Gr. νῶτον back + -γεν to produce]. The development of the notochord.

Noted'res ca'ti. An itch mite which causes a very persistent and often fatal mange in cats and temporarily infests man.

notomelus (no-tom'el-us) [Gr. νῶτον back + μέλος limb]. A fetus with accessory limbs.

notomyelitis (no"to-mi-el-i'tis) [Gr. νῶτον back + myelitis]. Inflammation of the spinal cord.

novain (no-va'in). See carnitin.

novargan (no-var'gan). A yellow powder; a protein preparation of silver containing 10 per cent. of silver: used in gonorrhea.

novarsenobenzol (nov-ar-sen-o-ben'zol). Same as neosalvarsan.

novarsenobillon (nov-ar-sen-o-be'yon). A French make of neosalvarsan.

novaspirin (no-vas'pir-in). Anhydromethylene citryldisalicylate, CO₂.(OCH₂).C[CH₂(CO₂).C₆H₄.-CO₂H]₂, a grayish-white powder: used like aspirin. Dose, 10-15 gr. (0.66-1 gm.).

novasurol (no-vas'u-rol). A white crystalline, odorless compound, the double salt of sodium mercurichlorphenyl-oxyacetate with diethyl barbituric acid, (NaO.CO.CH₂.O)Cl.C₆H₃Hg[CO.(NH.CO)₂C-(C₂H₅)₂], containing 40 per cent. of mercury. Dose as a diuretic or as an antisyphilitic, 1-2 c.c. of a 10 per cent. solution intramuscularly or intravenously.

novatopan, novatophan (no-vat'o-pan, -vat'o-fan). Same as neocincho phen.

noviform (no'vif-orm). Novoform.

novocain (no-vo-ka'in). A local anesthetic; a crystalline compound, NH₂.C₀H₄.CO₂ (CH₂)₂.N.(C₂-H₅)₂HCl, or para-amino-benzoyldiethylamino-ethanol hydrochlorid: used in aqueous solution (o 2 to 2 per cent.) like cocain.

novocol (no'vo-kol). Sodium guaiacol monophosphate: used in tuberculosis, chronic bronchitis, and respiratory catarrh.

novoform (no'vo-form). A combination of bismuth oxid with tetra-pyrocatechin: used like iodoform.

novoiodin (no-vo-i'o-din). A proprietary disinfectant hexamethylene amine diiodide, which is said on contact with wound secretion, to liberate iodin and formaldehyd.

novoprotin (no-vo-pro'tin). A sterile solution of a crystalline plant protein used by intravenous injection in inflammatory diseases of the female genitals.

novorenal (no-vo-re'nal). A preparation of novocain and adrenalin hydrochlorid: used as a local anesthetic.

novoscope (no'vo-skōp) [L. no'vis new + scope]. Fornai's instrument for auscultatory percussion.

novozone (no'vo-zōn). Magnesium peroxid.

novrenin (nōv-ren'in). A proprietary preparation of novocain in a solution of adrenalin chlorid.

noxa (noks'ah), pl. nox'æ [L. "harm"]. An injurious agent, act, or influence.

noxious (nok'shus) [L. nox'ius]. Hurtful; not wholesome; pernicious.

noyau (nwo-yō') [Fr]. A liqueur, or cordial, flavored with the kernels of Cer'asus occidenta'lis, a cherry; made in the West Indies: elsewhere flavored with peach-kernels, etc.

N-phenylglycinamid-p-arsonic acid. See under *acid*.

N. P. N. Abbreviation for non-protein nitrogen.

N-rays. See under ray.

Nt. The symbol of *niton*. nubecula (nu-bek'u-lah) [L. dim. of *nu'bes* cloud]. Slight cloudiness of the cornea or of the urine.

nubility (nu-bil'it-e) [I.. nubil'itas; from nube're to marry]. Marriageableness; fitness to marry: used of the female.

nucha (nu'kah) [L]. The back, nape, or scruff of the neck.

nuchal (nu'kal). Pertaining to the nucha.

nucin (nu'sin) [L. nux, nu'cis, nut]. Same as juglandic acid.

nucis (nu'sis) [L. gen. of nux nut]. Of a nut.

Nuck's canal, hydrocele (nuks) [Anton Nuck, Dutch anatomist, 1650-1692]. See canal and hydrocele.

nuclear (nu'kle-ar). Pertaining to a nucleus.n.sap. See karyolymph.

nuclease (nu'kle-as). An enzyme or a group of enzymes which split nucleic acid into mononuleotids and other products. They are present as digestive enzymes in the intestinal tract and as autolytic enzymes in many cells. Similar enzymes are found in bacterial cultures. Cf. phosphonuclease and purin-nuclease.

nucleated (nu'kle-a-ted) [L. nuclea'tus]. Having a nucleus or nuclei.

nuclei (nu'kle-i). Plural of nucleus.

nucleic acid (nu-kle'ik). See under acid.

nucleicacidase (nu''kle-ik-as'id-ās). An enzyme which splits nucleic acid into nucleotids.

with a metallic element.

nucleiform (nu'kle-if-orm). Shaped like a nucleus. nuclein (nu'kle-in). A decomposition product of nucleopretein intermediate between native nucleoprotein and nucleic acid (F. Miescher, 1874). It is a colorless, amorphous compound, soluble in dilute alkalies, but insoluble in dilute acids. The nucleins consist of nucleic acid and bases which vary in the different nucleins. Yeast nuclein yields two purins, adenin and guanin, and two pyrimidins, cytosin and uracil. The nucleins include cellnucleins or true nucleins, which split up into protein and nucleic acids; pseudonucleins and para-nucleins, or nucleo-albumins. The nuclein of various glands is sometimes given therapeutically. Dose, 30-45 gr. (2-3 gm.). n.-animal, an animal into whose blood a certain amount of nuclein has been injected. n.-bases, the bases formed by the chemic decomposition of nuclein. yeast-n., a nuclein extracted from the cells of the yeast (Saccharomyces) which differs somewhat from that obtained from the thymus gland.

nucleinase (nu'kle-in-ās). Nuclease.

nucleinic acid (nu-kle-in'ik). Same as nucleic acid. nucleinotherapy (nu-kle"in-o-ther ap-e). ment with nucleinate of soda, e. g., in paralysis agitans.

nucleo-albumin (nu"kle-o-al-bu'min). jugated protein which differs from nucleoproteins by containing paranucleic acid, which forms no xanthin bodies. Called also paranuclein and Dseudonuclein.

nucleo-albuminuria (nu"kle-o-al-bu-min-u'reah). The presence of nucleo-albumin in the urine.

nucleo-albumose (nu''kle-o-al'bu-mōs). Nucleoalbumin which has been partly hydrolyzed; it has been found in the urine of osteomalacia.

nucleo-analysis (nu"kle-o-an-al'is-is). of the blood from the point of view of the nucleated leukocytes

nucleo-analytic (nu"kle-o-an-al-it'ik). Pertaining to or based on nucleo-analysis.

nucleochylema (nu''kle-o-ki-le'mah) [nucleus + Gr. χυλόs juice]. The ground-substance of the nucleus of a cell as distinguished from that of the cytoplasm, karyochylema

nucleochyme (nu'kle-o-kim) [nucleus + Gr. χυμός juice]. Same as karyenchyma.

nucleofugal (nu-kle-of'u-gal) [nucleus + L. fu'-gere to flee]. Moving away from a nucleus.

nucleogen (nu'kle-o-jen). A proprietary preparation of iron, arsenic, and phosphorus: used as a roborant.

nucleoglucoprotein (nu"kle-o-glu"ko-pro'te-in). A combination of a nucleoprotein with a carbohydrate.

nucleohexyl (nu''klc-o-hex'il). A compound of nucleic acid and hexamethylene tetramin used in 10 per cent, solution for intravenous injections in non-specific protein therapy.

nucleohiston (nu"kle-o-his'ton). 1. A nucleo-protein from the nuclei of lymphocytes, composed of nuclein and histon. 2. A therapeutic extract of the lymphatic glands and spleen of animals: bactericide and antituberculous.

nucleohyaloplasm (nu"kle-o-hi-al'o-plazm). Same as linin.

nucleoid (nu'kle-oid). 1. Resembling a nucleus. 2. The granular substance in the erythrocytes formed from the original nucleus.

nucleokeratin (nu"kle-o-ker'at-in). A variety of keratin found in the nervous system.

nucleol (nu'kle-ol). A protein forming soluble compounds with metallic salts.

nucleolar (nu-kle'o-lar). Pertaining to a nucleo-

nucleid (nu'kle-id). Any compound of nucleic acid nucleoliform (nu-kle'ol-if-orm). Shaped like a nucleolus

nucleolin (nu-kle'o-lin). The substance composing the nucleolus of a cell; plastin.

nucleolinus (nu"kle-o-li'nus). A deeply staining granule in the nucleolus.

nucleoloid (nu'kle-o-loid). Resembling a nucleolus

nucleololus (nu-kle-ol'o-lus). A nucleolonucleus. nucleolonucleus (nu"kle-o-lo-nu'kle-us). A nuclear mass within a nucleus.

nucleolus (nu-kle'o-lus), pl. nucle'oli [L. dim. of nu'cleus]. A round achromatic body within the nucleus of a cell. Called also plasmosome, chromatin n, and karyosome. false n. See karyosome, secondary n., a mass sometimes seen near a nucleolus, and looking like a separated portion of the latter.

nucleomicrosome (nu''kle-o-mi'kro-sōm) [nucleus + Gr. $\mu \iota \kappa \rho \delta s$ small + $\sigma \hat{\omega} \mu a$ body]. Any one of the minute segments of a chromatin fiber.

nucleon (nu'kle-on). Same as phosphocarnic acid. See under acid.

nucleonic (nu-kle-on'ik). Pertaining to a nucleus. Consisting of compounds of one or more protein molecules with nucleic acid.

nucleopetal (nu-kle-op'et-al) [L. nu'cleus nucleus + pet'ere to seek]. Directed toward a nucleus.

Nucleophaga (nu-kle-of'ag-ah) [nucleus + Gr. φάγειν to eat]. An organism which is parasitic in amebas, destroying the nucleus of the latter.

nucleoplasm (nu'kle-o-plazm) [nucleus + plasma].

The protoplasm composing the nucleus of a cell; karyoplasm.

nucleoprotamin (nu''kle-o-pro-tam'in). pound of protamin and nucleic acid found chiefly in fish sperm.

nucleoproteid (nu"kle-o-pro'te-id). Same as nucleo protein.

nucleoprotein (nu"kle-o-pro'te-in). The conjugated protein found in the nuclei of cells. It is a combination of nucleic acid with simple proteins. In digestion a protein fraction is first broken off, thus producing nuclein, and on further digestion the rest of the protein is removed, leaving nucleic acid. It is the most important constituent of nuclei and of chromatin.

nucleoreticulum (nu"kle-o-re-tik'u-lum) [nucleus + reticulum]. Any intranuclear network.

nucleose (nu'kle-ōs). Any albumose of the class to which the vegetable nucleo-albumins belong. The nucleoses are foods, and are also antiseptic, bactericidal, phagocytic, and diuretic.

nucleosid, nucleoside (nu'kle-o-sid) glucosidic compounds into which a nucleotid is split by the action of nucleotidase or by chemical means. It is a combination of a sugar (a hexose or pentose) with a purin or a pyramidin base.

nucleosidase (nu'kle-o-sid-ās). A ferment which splits nucleosid into a carbohydrate portion (pentose) and a base. The nucleosidases are adenosin-hydrolase, guanosin-hydrolase, inosinhydrolase, and xanthosin-hydrolase.

nucleosin (nu'kle-o-sin). Same as thymin.

nucleospindle (nu"kle-o-spin'dl). The spindleshaped body in mitosis.

nucleotherapy (nu"kle-o-ther'ap-e) [nuclein + therapy]. The treatment of disease with nucleins. nucleothyminic acid (nu"kle-o-thi-min'ik). See under acid.

nucleotid, nucleotide (nu'kle-o-tid). One of the compounds into which nucleic acid is split by the action of nuclease. See mononucleotid.

nucleotidase (nu-kle-ot'id-ās). An enzyme which splits nucleotids into nucleosids and phosphoric acid; called also phosphonuclease.

nucleotoxin (nu''kle-o-toks'in). A toxin from cellnuclei: also any toxin which affects the cell-nuclei. nucleus (nu'kle-us), pl. nu'clei [L.]. r. A spheroid body within a cell, forming the essential and vital part. It is distinguished from the rest of the cell by its denser structure and by containing It is made up of a network of threads chromatin) contained in a clear liquid (achromatin). 2. A group of nerve-cells in the central nervous system. 3. In chemistry, the central element in the molecule of a compound; the framework of a molecule. 4. The center of an atom made up of alpha particles, protons, and electrons. It contains an excess of positive electricity, the exact amount depending on the atomic number, and constitutes almost all of the mass of the atom. abducens n., n. abducen'tis, the nucleus of origin of the abducens nerve, a gray mass within the lower part of the pons, near the floor of the fourth ventricle. accessory auditory n., a mass of gray matter in the ob-longata at the junction of the lateral and median roots of the auditory nerve. n. acus'ticus, the auditory nucleus. n. a'læ cine'reæ [B N A], the sensory nucleus of the vagus and glossopharyngeal nerves situated below the acoustic area in the floor of the fourth ventricle. n. ambig'uus [B N A], the nucleus of the glossopharyngeal nerve in the ob-longata. **n. amyg'dalæ** [B N A], **amygdaloid n.**, a small mass of subcortical gray matter under the tip of the temporal lobe, anterior to the lateral end of the descending cornu of the lateral ventricle of the brain. n. angula'ris. See Bechterew's n. n. ante'rior thal'ami, a nucleus in the dorsal part of the thalamus penetrating like a wedge between the medial and lateral nuclei. n. arcifor'mis, a small mass of gray matter on the surface of the anterior pyramid of the oblongata. n. arcua'tus, a gray nucleus within the thalamus, situated dorsad from the red nucleus. **atomic** n., n. of atom. See nucleus, 4th def. auditory n., any one of the nuclei in the oblongata whence the auditory nerves arise. See accessory auditory n, Bechterew's n., Deiters's n. Balbiani's n. See yolk n. n. basa'lis, the inferior olivary body

Bechterew's n., a nucleus of gray matter situated within the lateral wall of the fourth to fibers of the median and vestibular roots of the auditory nerve. Called also n. angularis and n. vestibuli. Béclard's n., a vascular lenticularshaped nucleus of bone seen in the cartilage of the lower epiphysis of the femur during the thirty-seventh week of fetal life. Blumenau's n., the lateral portion of the cuneate nucleus. dach's n., the cuneate nucleus. caudal n., the oculomotor nucleus caudate n., n. cauda'tus [B N A], a part of the corpus striatum which projects anteriorly into the lateral ventricle. cerebel'li, dentate nucleus. n. cerebel'loacus'ticus, a mass of nerve-cells in the wall of the fourth ventricle. **cervical n.**, a nucleus in the spinal cord opposite the third and fourth cervical nerves n. cine'reum, the gray matter of the restiform bodies. Clarke's n., an aggregation of nerve-cells at the level of the third cervical nerve. cleavage-n. See segmentation n. cochlear n., the ventral part of the auditory nucleus. n. collic'uli inferio'ris [B N A], a mass of gray matter in the center of the testis of the corpora quadrigemina. conjugation-n. Same as segmentation n. n. cor'poris genicula'ti latera lis [B N A]. a mass of gray matter in the lateral geniculate body. n. cor'poris geniculati media'lis [B N A], a mass of gray matter in the medial geniculate body. cuneate n., the continuation of the cuneate fasciculus into the oblongata. Darkschewitsch's n., a mass of cells in the upper part of the aqueduct above the third nucleus, and extending into the walls of the third ventricle. The cells are connected with the posterior commissure and the posterior longitudinal fasciculus. Deiters's n., a mass of gray matter in the oblongata on the inner side of the restiform body: it gives origin to the median root of the auditory

dentate n., a large nucleus embedded nerve. within the hemisphere of the cerebellum from which the fibers of the brachium conjunctivum arise. n. de reliquat, rest-body. diploid n., a nucleus containing the fundamental somatic number of chromosomes. dorsal n. Same as Clarke's column. dorsal vagoglossopharyngeal n., a long cell-column placed dorsad to the hypoglossal nucleus. **Duval's n.**, an assemblage of multipolar ganglion cells situated ventrolaterad from the hypoglossal nucleus in the oblongata. **Edinger's n.** 1. Same as Westphal's n. 2. A nucleus at the beginning of the sylvian aqueduct in the third ventricle. emboliform n., a small mass between the dentate nucleus and the nucleus fastigii. n. facia'lis, a nucleus of the pons which supplies the orbicularis palpebrarum and frontalis muscles. n. fasti'gii [B N A], a flat mass of gray matter in the cerebellum over the roof of the fourth ventricle. Called also fastigatum. fertilization n. See synkaryon. free n., a cell-nucleus from which the other parts of the cell have disappeared, the nucleus retaining its functional activity. n. funic'uli cunea'ti [B N A], the cuneate nucleus. n. funic'uli gra'cilis [B N A], the nucleus gracilis. gametic n., the gonad of sarcodina. **germ n., germinal n.**Same as *pronucleus*. **gingival n.**, a part of the cerebellum in the third and fourth months of fetal life. **n. globo'sus** [B N A], a mass of gray matter in the cerebellum between the nucleus dentatus and nucleus fastigii. Goll's n., a nucleus in the basal part of the posterior pyramid of the oblongata. gonad n., the reproductive nucleus of a cell as distinguished from the trophonucleus. n. gra'cilis, a column of gray substance in the dorsal pyramid of the oblongata. gray n., the gray substance of the spinal cord. n. haben'ulse [B N A], the nuclear mass of the habenula (see habenula); it is a center for the correlation of olfactory sensory impulses. Called also ganglion habenula, habenula, and habenular body. haploid n., a nucleus containing the reduced or gametic number of chromosomes. hypoglossal n., the nucleus of origin of the hypoglossal nerve situated in the medulla, anterior to the central canal, and between the level of the decussation of the pyramids and the calamus scriptorius. n. hypothalam'icus [B N A], Luys' body, a lens-shaped collection of gray matter in the subthalamic portion of the hypothalamus. See subthalamus. n. intercala'tus, a group of ganglion-cells between the dorsal nucleus of the vagus nerve and that of the hypoglossal nerve. Called also Staderini's n. interpeduncular n., a nucleus situated between the cerebral peduncles which receives the habenulopeduncular tract. intraventricular n., the nucleus cau-Kaiser's n., longitudinal motor nuclei in the cervical and lumbar enlargements of the cord, between the intermediolateral column and the median column. Klein-Gumprecht n., unstainable nuclei seen in degenerating lymphocytes in leukemia. Kölliker's n., the gray matter surrounding the central canal of the spinal cord. large-cell n. See n. ambiguus large-cell auditory n. See Deiters's n. laryngeal n., the nucleus of origin of the nerve-fibers going to the larynx. n. latera'lis [B N A], a mass of cells in the medulla oblongata between the olive and the substantia gelatinosa of Rolando. n., the external auditory nucleus. lenticular n., the part of the corpus striatum external to the third ventricle. n. lentifor'mis [B N A], the lenticular nucleus. n. len'tis, the nucleus of the crystalline lens. Luys's n., the hypothalamus or, more correctly, its ventral layer. n. media'lis thal'ami, a nucleus of the thalamus situated between the central gray matter of the third ventricle and the internal medullary lamina. medullary n., the white matter of the cerebellum. merocyte n. Same as merocyte. mesencephalic n. Same as Spitzka's n. Monakow's n., the lateral part of the cuneate nucleus. motion

n., kinetonucleus. motor n., any collection of cells of the central nervous system giving origin to a motor nerve. nerve n., a nucleus of the nervous system connected with the roots of a cranial nerve. n. ner'vi abducen'tis [BN A]. See abducens n. n. ner'vi acus'tici [B N A], the auditory nucleus. n. ner'vi cochlea'ris [B N A], the cochlear nucleus. n. ner'vi fa'cialis [B N A], the facial nucleus. n. ner'vi fa'cialis [B N A], the facial nucleus. n. ner'vi hypoglos'si [B N A], the hypoglossal nucleus. n. ner'vi oculomoto'rii [B N A], the oculomotor nucleus. n. ner'vi trochlea'ris [B N A], the trochlear nucleus. n. ner'vi vestibula'ris [B N A], the vestibular nucleus. **nutrition n.**, trophonucleus. **oculomotor n.**, the nucleus of the oculomotor nerve under the aqueduct of Sylvius. **olivary n.**, the olivary body. **n.** of oriolivary n., the olivary body. gin, any collection of ganglion-cells giving origin to the fibers, or a part of the fibers, of a nerve. **Pander's n.**, a lentil-shaped mass of gray matter between the tegmental nucleus and the corresponding corpus albicans, beneath the optic thalamus. Perlia's n., an oculomotor center situated in the cinerea below the aqueduct of Sylvius. Piorry's n., an area of dulness to percussion on the back over the liver. polymorphic n., a nucleus that assumes an irregular form or splits up into more or less completely separated lobes. n. pon'tis [B N A], numerous small masses of gray matter within the pons. n. pulpo'sus, a pulpy mass in the center of the intervertebral disks. pyramidal n., the inner accessory olivary nucleus. n. quin'tus, the nucleus of origin of the trigeminal nerve. red n. See tegmental n. reproductive n., micronucleus. Roller's n., a nucleus near the hilum of the olivary body. Roller's central n., a nucleus in the oblongata near the raphé, and between the posterior longitudinal fasciculus and the lemniscus. roof n., a nucleus in the middle lobe of the cerebellum over the roof of the fourth ventricle. n. ru'ber [B N Al. See tegmental n. sacral n., a mass of gray substance in the spinal cord opposite the origin of the second and third sacral nerves. segmentation n., the nucleus of a fertilized ovum formed by the union of a male with a female pronucleus and the union of a male with a female pronucleus and undergoing segmentation. Called also *cleavage n*. **sensory n.**, a nucleus of nerve-cells forming the origin of the sensory portion of the trigeminal nerve. **shadow n.**, a nucleus without any staining properties; an unstainable nucleus. **Siemerling's n.**, one of the anterior group of oculomotor nuclei in the cinerea under the aqueduct of Sylvius. **somatic n.**, macronucleus **sparm n.**, the male propugleus nucleus. sperm n., the male pronucleus. Spitzka's n., one of a group of oculomotor nuclei in the cinerea below the aqueduct of Sylvius. Staderini's n. See n. intercalatus. Stilling's n. 1. The deep origin of the hypoglossal nerve in the floor of the fourth ventricle. 2. The tegmental nucleus. Stilling's sacral n., the sacral nucleus. subependymal n., the internal nucleus of the auditory nerve. subthalamic n., nucleus hypothalamicus. superior n. Same as Deiters's n. n. tæniæfor'mis. See claustrum. tegmental n., a nucleus of gray matter containing numerous ganglion-cells of a red color, in the tegmental region of the crus cerebri near the optic thalamus. Called also n. tegmenti, red n., roof n., Stilling's n., and tectorial cerebellar n. n. of termination, terminal n., a nucleus into which a fiber tract discharges. n. trac'tus solita'rius [BNA], the nucleus of termination of the vagus and glossopharyngeal nerves. triangular n., the cuneate nucleus. vagoglosso-pharyngeal n., the common nucleus of deep origin of the vagus and glossopharyngeal nerves. vesicular n., a form of cell-nucleus the membrane of which stains deeply, while the central part is rather pale. n. vestibula'ris. Same as Bechterew's n. vitelline n., a nucleus produced by the fusion of the male and female pronuclei in the vitellus. Voit's n., a cerebellar nucleus accessory to the corpus dentatum. Westphal's n., a small gray nucleus beneath the aqueduct of Sylvius, the origin of some of the fibers of the trochlear nerve. white n., the white part of the dentate body of the olive. yolk n., a large dark body of radiate structure within the vitellus of the developing occyte; called also vitelline body, Balbiani's body, and Balbiani's n. zygote n., the nucleus of the fertilized egg.

Nuel's space (ne-elz') [J. P. Nuel, Belgian oculist, 1847-1920]. See under space.

nuforal (nu'fo-ral). A proprietary remedy for tuberculosis containing formic acid, nucleinic acid, and allyl sulphid.

Nuhn's glands (noonz) [Anton Nuhn, German anatomist, 1814-1889]. See under *gland*.

nullipara (nul-ip'ar-ah) [L. nul'lus none + par'ere to bear]. A woman who has never borne a child.

nulliparity (nul-ip-ar'it-e). The condition or fact of being nulliparous.

nulliparous (nul-ip'ar-us). Having never given birth to a child.

number, acetyl. The number of milligrams of KOH necessary to neutralize the acetic acid saponified from 1 gram of acetylated fat. It represents the extent to which the fatty acids are oxidized. acid n., the number of milligrams of potassium hydroxid necessary to neutralize the free fatty acids in 1 gram of substance. It represents a measure of the amount of free fatty acids in the fat. atomic n., the amount of positive charge on the nucleus expressed as protons In a neutral atom the surrounding electrons represent corresponding amount of negative electricity. When arranged according to the atomic numbers the atoms form a series very similar to the periodic table, but without some of its difficulties. Avogadro's n., 6.06 × 10²³ being the number of molecules contained in one mole of any substance. Hehner n., the percentage of water-insoluble fatty acids obtainable from a fat. Hittorf n., the portion of the current conducted by an ion in electrolysis; called also transport n. Hübl n., iodin number. hydrogen n., the amount of hydrogen that fats can take up. It represents the amount of unsaturated fatty acids present. iodin n., the amount of iodin which I gram of the fat can take up. It indicates the amount of unsaturated fatty acids present in the fat. isotopic n., the number which added to twice the atomic number gives the atomic weight. **Loschmidt's**n. 1. Avogadro's number. 2. The number of
molecules per unit volume of an ideal gas at o° C. and normal pressure polar n., the number of valences (positive or negative) possessed by an matom in any particular compound. ReichertMeissi n., the number of cubic centimeters of
N/10 KOH required to neutralize the volatile
fatty acids distilled from 5 grams of fat after it
has been saponified with KOH and then made acid with H₃PO₄ or H₂SO₄. saponification n., the number of milligrams of potassium hydroxid required to neutralize the fatty acids in 1 gram of a fat or oil. It indicates the average size of the fatty acid molecules or the amount of the lower fatty acids present. **transport n**. See *Hittorf n*. wave n., in light waves the reciprocal of the wave length expressed as a fraction of a centimeter.

nummiform (num'if-orm) [L. num'mus coin + for'ma form]. Shaped like a coin or round disk. nummular (num'u-lar) [L. nummula'ris]. 1.

Coin-shaped. 2. Made up of round, flat disks. 3. Piled, like coins, in a rouleau.

nummulation (num-u-la'shun). The assumption of a nummular form.

numoquin (nu'mo-kwin). Same as ethylhydrocuprein. n. hydrochlorid. Same as optochin. Nun's murmur (nunz). Same as bruit de diable. nunnation (nun-a'shun) [Heb. nun letter N].
The too frequent use of n-sounds, or the nasalizing of sounds or words.

Nuphar (Nym'phæa) ad'vena, N. kalmia'na (nu'far). The yellow pond-lily, or spatter-dock, of North America: the roots are used in preparing poultices for carbuncles.

nupharin (nu'far-in). An alkaloid, C₁₈H₂₄N₂O₂, from Nuphar luteum.

nuptiality (nu-shal'it-e) [L. nuptus married]. The proportion of marriages to the population.

nurse (ners). A person who takes care of the sick, wounded, or enfeebled, especially one who makes a profession of it. district n., the name given in Great Britain to a visiting nurse, from the fact that such a nurse was placed in charge of each one of the districts into which the city or community was divided. **graduate n.**, a nurse who is a graduate of a training school. **public health n.**, a graduate nurse employed in a community to safeguard the health of its people. She gives care to the sick or their homes, promotes health by teaching families how to keep well, and assists in the prevention of disease. Queen's n., in Great Britain, a district nurse who has been trained at or in accordance with the regulations of the Queen Victoria Jubilee Institute for Nurses. registered n., a graduate nurse who has been registered and licensed to practice by a State Board of Nurse Examiners or other state authority. Such a nurse is legally entitled to place the letters R. N. after her name. school n., a trained nurse whose duties are to visit the elementary public schools and supplement the work of the physician in medical inspection of schools. **trained n.**, a nurse who has been trained in and graduated from a training school. visiting n., a trained nurse, employed by an association, whose duties consist in visiting and caring for the sick poor in their homes. **wet n.**, a woman who furnishes breast feeding for the infants of others.

nurses' contracture (ner'sez). See contracture.

Nussbaum's cells, experiment (noos'bowns) [Moritz Nussbaum, German histologist, 1850–1915]. See under cell and experiment.

Nussbaum's narcosis (noos'bowms) [Johann Nepomuk von Nussbaum, German surgeon, 1829–1890]. See narcosis.

nutarian (nu-ta're-an). One who lives chiefly on

nutation (nu-ta'shun) [L. nuta'tio]. The act of nodding a to-and-fro movement.

nutgall (nut'gawl) [L. gal'la]. An excrescence growing upon oak-trees, especially the Quer'cus inlecto'ria, and produced by the puncture on the leaf-bud and by the deposited ova of an insect, Cy'nips tin to'ria. Nutgalls contain tannic and gallic acids, and are used as astringents in diarrhea and relaxed mucous membranes. Dose, 8 gr. (0.5 gm.); of tincture, 30-60 min. (2-4 c.c.). They are also used in preparing unguen'tum gal'læ and unguen'tum gal'læ cum o'pio.

nutrneg (nut'meg) [L. myris'tica]. The kernel of the seed of Myris'tica frag'rans, a tree of various hot regions, a native of the East Indies. From it are derived a volatile and a fixed oil, the latter being a thick, butter-like substance, which is used as a demulcent and excipient. Nutmeg and its volatile oil are used as flavoring agents. Dose of spirit, 30-60 min. (2-4 c.c.). Nutmeg is used in aromatic powder (pul'vis aromaticus). Dose, 10-30 gr. (0.66-2 gm.); also in pul'vis cre'tæ aromaticus. Dose, 30-60 gr. (2-4 gm.).

nutmeg liver. The liver of cirrhosis.

nutmeggy (nut'meg-e). Resembling a nutmeg in cross-section.

nutone (nu'tōn). A proprietary nutritive tonic.
nutrabin (nu'trab-in). A proprietary food preparation of beef and milk proteins.

nutramin, nutramine (nu-tram'in). Same as vitamin.

nutrescin (nu-tres'in). A substance supposed to be split off from the bioplasmin molecule and to supply the nutrition of the cell.

nutriant (nu'tre-ant). A drug which affects the nutritive or metabolic processes of the body.

nutriceptor (nu-tri-sep'tor). A receptor or sidechain which combines with nutritive matter to serve the nutrition of a cell.

nutricia (nu-trish'e-ah). A proprietary milkpreparation for infants' food.

nutrient (nu'tre-ent) [L. nu'triens]. Nourishing; affording nutriment.

nutriment (nu'tre-ment) [L. nutrimen'tum]. Nour-ishment; nutritious material.

nutrin (nu'trin). A proprietary food-preparation of meat.

nutrition (nu-trish'un) [L. nutri'tio]. 1. The process of assimilating food. 2. Nutriment. adequate n., optimal n. See under diet.

nutritional (nu-trish'un-al). Relating to or affecting nutrition.

nutritious (nu-trish'us) [L. nutri'tius]. Affording nourishment.

nutritive (nu'trit-iv). Pertaining to nutrition.

nutritorium (nu-trit-o're-um) [L. nutrito'rius nourishing]. The apparatus of nutrition.

nutrivoid flour (nu'triv-oid). A proprietary nonnutritive flour used to give bulk to food in restricted diets.

nutrolactis (nu-tro-lak'tis). A proprietary galactagogue composed of the fluidextracts of Gale'ga officina'lis, G. appolin'ea (each, 3 parts), and G. tephro'sia (1 part).

nutrole (nu'trōl). A proprietary food preparation containing animal and vegetable fats emulsified with eggs and preserved with brandy.

nutrose (nu'tros). Neutral casein sodium; a dry food-preparation of milk for the use of invalids.

Nuttallia (nut-tal'e-ah) [George H. F. Nuttall, biologist, Cambridge University, born 1862]. Same as Piroplasma equi.

nuttalliosis (nut-al-e-o'sis). Infection with Nut-tallia.

nux moschata (nuks mos-ka'tah). In homeopathy, a tincture made from powdered nutmeg. used in nervous and mental disorders, insomnia, flatulence, etc, in doses of sixth, thirtieth, and two hundredth potencies.

of Stryck'nos nux-vom'ica, a loganiaceous tree of the East Indies. It contains several alkaloids, the principal ones being strychnin and brucin, on which the properties of the drug depend. It is a bitter tonic, stimulating the gastric secretion. It is a heart stimulant and a stimulant to the respiration and the motor centers of the cord. In large doses it causes tetanic convulsions. Nux vomica is used in dyspepsia and loss of appetite, in chronic constipation from atony of the intestine, in acute infectious diseases, in shock, in conditions attended with dyspnea, in poisoning by opium, lead, tobacco, or alcohol, in bronchitis, and in incontinence of urine from atony of the bladder. Dose, 1-5 gr. (0.066-0.333 gm.); of abstract, 1-1 gr. (0.016-0.033 gm.); of fluidextract, 1-5 min. (0.066-0.333 c.c.); of tincture (U. S. P.), 5-20 min. (0.333-1.333 c.c.).

Nusum's micrococcus [John W. Nusum, American pathologist, born 1890]. See under micrococcus.

Nv. Abbreviation for naked vision.

nyctalgia (nik-tal'je-ah) [Gr. νυξ night + ἄλγος pain]. Pain that occurs in sleep only.

nyctalope (nik'tal-ōp). A person affected with nyctalopia. **nyctalopia** (nik-tal-o'pe-ah) [Gr. $\nu \nu \xi$ night + $\delta \lambda aos$ blind + $\delta \nu$ eye]. 1. Night-blindness; failure or imperfection of vision at night or in a dim light, with good vision only on bright days (Heberden, 1767). 2. Less correctly, day-blindness, or hemeralopia, a condition in which the patient sees better in an obscure light than in bright sunlight.

nycterine (nik'ter-īn) [Gr. νύκτερος at night]. 1. Occurring at night. 2. Obscure.

nyctophobia (nik-to-fo'be-ah) [Gr. νύξ night + φόβος fear]. Morbid dread of darkness.

nyetophonia (nik-to-fo'ne-ah) [Gr. $\nu \nu \xi$ night + $\varphi \omega \nu \eta$ voice]. Loss of voice during the day.

Nyctotherus (nik-toth'er-us). A genus of infusorian microparasites. N. africa'nus was found in large numbers in the cecum of a case of sleeping sickness. N. fa'ba has been found in the diarrheal discharges of the human subject. N. gigan'tus, a large species found in the intestines of a man in Germany.

nyctotyphlosis (nik"to-tif-lo'sis) [Gr. νυξ night + τύφλωσις blindness]. Nyctalopia.

nycturia (nik-tu're-ah) [Gr. νυξ night + οὐρον urine]. Nocturnal incontinence of urine; frequent urination during the night, i. e., between 7 P. M. and 7 A. M.

N. Y. D. Abbreviation for not yet aiagnosed.

Nylander's test (ni'lan-der) (Class Wilhelm

Nylander's test (ni'lan-derz) [Claes Wilhelm Gabriel Nylander, Swedish chemist, born 1835]. See under tests.

nympha (nim'fah), pl. nym'phæ [L.; Gr. νύμφη maiden]. A labium minus.

Nymphæa (nim-fe'ah). See Nuphar.

nymphectomy (nim-fek'to-me) [Gr. νύμφη nymph + ἐκτομή excision]. Excision of the nymphæ.

nymphitis (nim-fi'tis). Inflammation of the nymphæ.

nymphocaruncular sulcus (nim"fo-kar-unk'u-lar). See under *sulcus*.

nymphohymenal sulcus (nim"fo-hi'men-al). See under *sulcus*.

nympholepsy (nim'fo-lep-se) [Gr. νbμφη nymph + λήψις seizure]. 1. Ecstatic frenzy; morbid exaltation. 2. Surgical removal of the nymphæ.

nymphomania (nim-fo-ma'ne-ah) [Gr. νύμφη nymph + μανία madness]. Insane sexual desire in the female.

nymphomaniac (nim-fo-ma'ne-ak). 1. Affected

with nymphomania. 2. One who is affected with nymphomania.

nymphoneus (nim-fong'kus) [Gr. νύμφη nymph + δγκος tumor]. Swelling of the nymphæ.

nymphotomy (nim-fot'o-me) [nympha + Gr. τομή a cutting]. Excision of the nymphæ, or clitoris.

Nyssa (nis'ah) [L.]. See tupelo.

Nyssorhynchus (nis-o-ring'kus). A genus of anopheline mosquitos, several species of which act as carriers of the malarial parasite.

nystagmic (nis-tag'mik). Pertaining to or characterized by nystagmus.

nystagmiform (nis-tag'mif-orm). Resembling nystagmus.

nystagmograph (nis-tag'mo-graf) [nystagmus + Gr. γράφειν to write]. An instrument for recording the movements of the eyeball in nystagmus.

nystagmoid (nis-tag'moid). Resembling nystagmus.

nystagmus (nis-tag'mus) [Gr. νυστάζειν to nod]. An involuntary rapid movement of the eyeball, which may be either lateral, vertical, rotary, or mixed, i. e., composed of two varieties. n. against the rule, miners' nystagmus, coming on when the eyes are moved downward. aural nystagmus due to disturbances in the labyrinth. caloric n., the nystagmus produced in Barany's sign, which see. Cheyne's n., a peculiar rhythmic eye movement resembling Cheyne-Stokes respiration in its rhythm. jerking n. See rhythmic n. lateral n., a rolling of the eyes horizontally, or from right to left. miners' n., miners. **oscillating n.** See undulatory n. palatal n., spasm of the levator palati muscle. resilient n. See thythmic n. The palatimus of the levator palatimus of the levat nystagmus which consists of a slow movement in one direction, followed by a rapid return movement in the opposite direction. Called also resilient n. and jerking n. rotatory n., the rotation of the eves about the visual axis. undulatory n.. one which consists of two and fro movements of equal velocity Called also vibrating n. and oscillating n. vertical n., an up-and-down movement of the control of the contro ment of the eyes. vestibular n., nystagmus due to aural disturbance. vibratory n. See undulatory n.

nystaxis (nis-tak'sis). Nystagmus.

nyxis (nik'sis) [Gr. νύξις pricking]. Puncture, or paracentesis.

0

Q. I. The symbol for oxygen. 2. An abbreviation for L. oc'ulus, eye; octa'rius, pint; opening.

o-. An abbreviation for ortho-.

O2. 1. Symbol for both eyes. 2. The diatomic gas, oxygen.

oak (ôk). A cupuliferous tree of the genus Quer'cus. The bark of all species contains a large proportion of tannin. Decoctions of the bark of white oak (Quer'cus al'ba) and that of Quer'cus ro'bur, of Europe, are used as astringents in hemorrhoids, leukorrhea, ulcers, relaxation of the pharynx and uvula, etc. dyers'o. (Quer'cus lusitan'ica) affords nutgall.

oakum (o'kum). Prepared fiber from old ropes: used in surgery as a dressing for wounds and in the making of pads to absorb lochial discharges.

oarialgia (o"a-re-al'je-ah) [Gr. ψάριον ovary + άλγος pain]. Pain in the ovary; ovarialgia.

oaric (o-a'rik) [Gr. ψάριον ovary]. Pertaining to the ovary; ovarian.

oario-. For words beginning thus, see those beginning ovario-.

oariopathy (o-a-re-op'ath-e) [Gr. ψάριον ovary + πάθος disease]. Ovarian disease.

oariotomy (o"a-re-ot'o-me) [Gr. ψάριον ovary + τέμνειν to cut]. Same as ovariotomy.

oaritis (o-a-ri'tis) [Gr. ψάριον ovary + -ιτις inflammation]. Ovaritis.

oarium (o-a're-um), pl. oa'ria [L.; Gr. ψάριον little egg]. An ovary.

oasis (o-a'sis), pl. oa'ses. An island or spot of healthy tissue in a diseased area.

oat (ot). See Avena.

oatmeal (ŏt'mēl). A meal made from oats and used in the preparation of a bland, nutritious food.

ob- [L. ob against]. A prefix signifying against, in front of, etc.

obdormition (ob-dor-mish'un) [L. obdormit'io]. Numbness and anesthesia of a part from nerve-pressure; the condition of a part of a limb when it is said to be "asleep."

obduction (ob-duk'shun) [L. obduc'tio]. A medicolegal autopsy.

- O'Beirne's sphincter, tube (o-birnz') [James O'Beirne, Irish surgeon, 1786-1862]. See sphincter, tube.
- obeliac (o-be'le-ak). Pertaining to the obelion.
- obeliad (o-be'le-ad). Toward the obelion.
- obelion (o-be'le-on) [dim. of Gr. δβελός spit]. A point on the sagittal suture where it is crossed by a line which connects the parietal foramina.
- Obermayer's test (o'ber-mi-erz) [Fritz Obermayer, physiologic chemist in Vienna, 1861-1925]. See under tests.
- Obermeier's spirillum (o'ber-mi-erz) [Otto Hugo Franz Obermeier, German physician, 1843–1873]. Spironema recurrentis.
- Obermüller's test (o'ber-mil-erz) [Kuno Obermüller, German physician, born 1861]. See under tests.
- Oberst's method, operation (o'bersts) [M. Oberst, German surgeon, 1849-1925]. See method and operation.
- obese (o-bes') [L. obe'sus]. Excessively fat; corpulent.
- obesitas (o-be'sit-as) [L.]. Obesity, adiposis.
- obesitine (o-bes'it-īn). A proprietary antifat.
- obesity (o-bes'it-e) [L. obes'itas]. An excessive accumulation of fat in the body; corpulence; fatness. hyperplasmic o., obesity due to increase in the body protoplasm, as distinguished from that due to accumulation of fat and water. hypoplasmic o., obesity due to increase of fat and water and marked by decrease of the body protoplasm.
- obex (o'beks) [L. "barrier"]. [B N A] A thickening of the ependyma at the point of the calamus scriptorius.
- obfuscation (ob-fus-ka'shun) [L. obfusca'tio a darkening]. The act of rendering or process of becoming obscure; a darkening.
- object-blindness (ob"jekt-blind'nes). See blindness.
- object-glass (ob'jekt-glas). The lens of a microscope nearest the object.
- objective (ob-jek'tiv) [L. objectivus]. 1. Pertaining to things that are the objects of the external senses. 2. Perceptible to the senses. 3. The lens or system of lenses at the end of a microscope (or telescope) that is nearest to the object under examination. achromatic o., apochromatic o., an objective in which the lenses are so chosen and designed that the natural chromatic aberration is partly climinated. The achromatic objective is corrected for two colors, the apochromatic for three fluorite o., an objective in which some of the lenses are made from fluorite instead of glass. immersion o., an objective designed to have its tip and the object connected by a liquid instead of by air. The liquid may be water (water immersion) or a specially prepared codar oil (oil immersion) with an index of refraction the same as glass (homogenous oil immersion).
- obligate (ob'lig-āt) [L. obliga'tus]. Necessary; compulsory; not facultative.
- oblique (ob-lēk', ob-līk') [L. obli'quus]. Slanting; inclined; between a horizontal and a perpendicular direction.
- obliquimeter (ob-lik-wim'et-er) [oblique + Gr. μέτρον measure]. An instrument for measuring the obliquity of the pelvic brim.
- obliquity (ob-lik'wit-e). The state of being oblique, or slanting. Litzmann's o., inclination of the fetal head so that the posterior parietal bone presents to the parturient canal. Naegele's o. See Naegele's pelvis, under pelvis. Roederer's o., the position of the fetal head with the occiput presenting at the brim of the pelvis.
- obliquus (ob-li'kwus) [L.]. See muscles, table of.
- obliteration (ob-lit-er-a'shun) [L. oblitera'tio]. Complete removal, whether by disease and degeneration or by a surgical operation.

- oblitin (ob'lit-in). A nitrogenous body, the diethyl ester of carnitin, obtained from Liebig's extract of meat. It causes vomiting, purging, salivation, and mydriasis when injected into cats.
- oblongata (ob-long-a'tah). Same as medulla oblongata.
- oblongatal (ob-long-a'tal). Pertaining to the medulla oblongata.
- **obmutescence** (ob-mu-tes'ens) [L. obmutes'cere to be dumb]. Loss of voice.
- **obnubilation** (ob-nu-bil-a'shun). A clouded state of the mind.
- **observerscope** (ob-zer'ver-skop). A form of endoscope with two branches, enabling two persons to inspect the same spot at the same time.
- **obsession** (ob-sesh'un) [L. obses'sio]. An idea which morbidly dominates the mind constantly, suggesting irrational action.
- **obsidional** (ob-sid-i'o-nal) [L. obsid'ium siege] Occurring in trench warfare; as obsidional infection.
- **obsolescence** (ob-so-les'ens) [L. obsoles'cere to grow old]. The cessation or the beginning of the cessation of any physiologic process.
- obsolete (ob'so-let) [L. obsole'tus, from obsole're to go out of use]. Indistinct; faded; gone out of use.
- **obstetric, obstetrical** (ob-stet'rik, ob-stet'rik-al) [L. obstetric'ius]. Pertaining to midwifery.
- obstetrician (ob-stet-rish'un) [L. obstet'rix midwife]. One who practises obstetrics.
- obstetrics (ob-stet'riks) [L. obstetr'cia]. The art of managing childbirth cases; that branch of surgery which deals with the management of pregnancy and labor.
- **obstipation** (ob-stip-a'shun) [L. obstrpa'tro]. Intractable constipation.
- obstruction (ob-struk'shun) [L. obstruc'tio]. I. The act of blocking or clogging. 2. The state or condition of being clogged. **aortic 0.**, adhesion or thickening of the cusps of the aortic valves, obstructing the flow of blood from the left ventricle into the aorta. **intestinal 0.**, any hindrance to the passage of the intestinal contents.
- **obstruent** (ob'stru-ent) [L. ob'struens]. 1. Causing obstruction. 2. An astringent remedy.
- **obtund** (ob-tund') [L. obtun'dere]. To render dull or blunt; to render less acute.
- obtundent (ob-tun'dent) [L. obtun'dens]. 1. Having the power to dull sensibility or to soothe pain.
 2. A soothing or partially anesthetic medicine.
- obtundo (ob-tun'do). A preparation of chloretone, cocain, nitroglycerin, thymol, menthol, and oils of eucalyptus, cloves, and wintergreen: used as a dental anesthetic.
- obturator (ob'tu-ra-tor) [L.]. A disk or plate, natural or artificial, which closes an opening. Cripps' o., an instrument for closing a gastric fistula. o. muscle. See muscles, table of. See also foramen, nerve, plexus, etc.
- obtuse (ob-tūs') [L. obtu'sus]. 1. Blunt; dull. 2. Stupid; having a dull intellect.
- obtusion (ob-tu'zhun) [L. obtu'sio]. Morbid bluntness or dulness of sensibility.
- O. C. Abbreviation for occlusocervical.
- occalcarine (ok-kal'kar-in). Same as occipito-calcarine.
- occipital (ok-sip'it-al) [L. occipita'lis]. Pertaining to the occiput.
- occipitalis (ok"sip-it-a'lis) [L.]. The posterior part of the occipitofrontalis muscle.
- occipitalization (ok-sip-it-al-iz-a'shun). Synostosis of the atlas with the occipital bone.
- occipito-anterior (ok-sip"it-o-an-te're-or). Having the occiput directed ventrad (used of the fetus at the time of labor).
- occipito-atloid (ok-sip"it-o-at'loid). Pertaining to the occipital bone and the atlas.

occipito-axoid (ok-sip"it-o-aks'oid). Pertaining to the occipital bone and the axis.

occipitobasilar (ok-sip"it-o-ba'sil-ar). Pertaining to the occiput and the base of the skull.

occipitobregmatic (ok-sip"it-o-breg-mat'ik). Pertaining to the occiput and the bregma.

occipitocalcarine (ok-sip"it-o-kal'kar-īn). Both occipital and calcarine. See fissure.

occipitocervical (ok-sip"it-o-ser'vik-al). Pertaining to the occiput and neck.

occipitofacial (ok-sip"it-o-fa'shal). Pertaining to the occiput and the face.

occipitofrontal (ok-sip"it-o-fron'tal). Pertaining to the occiput and the forehead.

occipitofrontalis (ok-sip"it-o-fron-ta'lis) [L.]. See muscles, table of.

occipito-iliac position (ok-sip"it-o-il'e-ak). See under position.

occipitomastoid (ok-sip"it-o-mas'toid). Pertaining to the occipital bone and the mastoid process.

occipitomental (ok-sip"it-o-men'tal). Pertaining to the occiput and the chin.

occipitoparietal (ok-sip"it-o-par-i'et-al). Pertaining to the occipital bones or lobes.

occipitoposterior (ok-sip"it-o-pos-te're-or). Having the occiput directed dorsad (used of the fetus in labor).

occipitotemporal (ok-sip"it-o-tem'po-ral). Pertaining to the occipital and the temporal bones.

occipitothalamic (ok-sip'it-o-thal-am'ik). Pertaining to the occipital lobe and thalamus.

occiput (ok'sip-ut) [L.]. The back part of the head.
occlude (ok-lūd'). To fit close together; to close tight.

occlusal (ok-lu'sal). Pertaining to closure: applied to the masticating surfaces of molar and bicuspid teeth

occlusion (ok-lu'zhun) [L. occlu'sio]. 1. The act of closure or state of being closed. 2. A state of molecular adhesion between a precipitate and a soluble substance or between a gas and a metal.
3. The contact of the teeth of both jaws when closed or during those excursive movements of the mandible which are essential to the function of mastication (A. D. A.). abnormal o., occlusion when any of the teeth are not in a position to meet normally. **afunction o.**, dental malocclusion which prevents mastication. **anatomic o.**, occlusion in which all the teeth are present and occlude normally according to the anatomic standard. buccal o., Angle's term for the position of a buccal tooth when it is outside the line of occlusion. capsular o., operative closure of the perinephric capsule for the relief of floating kidney. central o., centric o., occlusion of the teeth when the jaws are closed in the normal position. distal o., Angle's term for the position of a tooth when it is posterior to the line of occlusion. eccentric o., the occlusion of the teeth when the lower jaw has moved from the position of rest. **functional** moved from the position of rest. O., such contact of the teeth of both jaws as will provide the highest efficiency during all the excursive movements of the jaws which are essential to the function of mastication without producing trauma (A. D A.). hyperfunctional o., traumatic occlusion. labial o., Angle's term for the position of a labial tooth when it is anterior to the line of occlusion. lateral o., the occlusion of the teeth when the lower jaw is moved to the right or left of central occlusion.

line of o. See under line. lingual o., Angle's term for the position of a tooth when it is inside or behind the line of occlusion. mesial o., the position of a tooth when it is too mesial to be normal. normal o., the meeting of the teeth when they are in the normal position and relationship. protrusive o., occlusion of the teeth when the mandible is anterior to central occlusion. o. of pupil, closure of the pupil by an opaque membrane. retrusive o., occlusion of the teeth when the mandible is posterior to central occlusion. supra o., occlusion in which one of the teeth is longer than normal. traumatic o., the occlusal condition that exists when normal occlusion is absent, resulting in abnormal and injurious distribution of stress.

occlusive (ok-lu'siv). Effecting a complete occlusion.

occlusocervical (ok-lu"so-ser'vik-al). Pertaining to the occlusal surface and the neck of a tooth.

occlusometer (ok-lu-som'et-er). Same as gnatho-dynamometer.

occult (ok-ult') [L. occul'tus]. Obscure; difficult to be understood.

occupation-neurosis (ok-u-pa'shun-nu-ro'sis). See neurosis.

ocellus (o-sel'us) [L. dim. of oc'ulus eye]. 1. A small simple eye in insects and other invertebrates. 2. Less frequently, one of the elements of a compound eye. 3. A roundish, eye-like patch of color.

Ochlerotatus (ok-ler-o-ta'tus). A genus of mosquitos, species of which are regarded as transmitters of African horse sickness

ochlesis (ok-le'sis) [Gr. δχλησις crowding]. Any disease due to overcrowding.

ochlophobia (ok-lo-fo'be-ah) [Gr. δχλος crowd + φόβος fear]. Insane fear of crowds.

ochrodermatosis (o"kro-der-mat-o'sis). A condition marked by yellowness of the skin, sometimes occurring in Europeans who live in tropical India.

ochrodermia (o-kro-der'me-ah) [Gr. ώχρός yellow + δέρμα skin]. Yellowness of the skin; anemia with pallor.

ochrometer (o-krom'et-er) [Gr. ωχρός pallor + μέτρον measure]. An instrument for measuring the capillary blood-pressure by registering the force necessary to compress a finger by a rubber balloon until blanching of the skin occurs.

Ochromy'ia anthropoph'aga. A fly of Senegal whose larva, the cayor-worm, attacks man.

ochronosis (o-kro-no'sis) [Gr. ἀχρός yellow]. A condition marked by gray, brown, and black pigmentation of the ligaments, cartilages, epidermis, and fibrous tissues (Virchow, 1866). It is further marked by dark color of the urine. The condition is probably dependent on disordered metabolism of phenol or some of its derivatives.

ochronosus (o-kro-no'sus) [Gr. ώχρός yellow + νόσος disease]. Ochronosis.

ochronotic (o-kron-ot'ik). Pertaining to or caused by ochronosis.

Ochsner's ring, solution, treatment (oks'nerz) [Albert John Ochsner, surgeon in Chicago, 1858-1925]. See ring, solution, and treatment.

Ocimum ca'num (os'im-um). A labiate herb of tropical America; also its homeopathic preparation.

octad (ok'tad). Any octavalent chemic element.

octamylose (ok-tam'il-ōs). A polymerized form of diamylose. See *hexamylose*.

octan (ok'tan) [L. oc'to eight]. Recurring every eighth day, or at intervals of seven days.

octane (ok'tān). An oily hydrocarbon, CH₃(CH₂)₆-CH₃, occurring in petroleum.

octaploid (ok'tap-loid). See polyploid.

octarius (ok-ta're-us) [L.; from oc'to eight]. A pint; the eighth part of a gallon.

octavalent (ok-tav'al-ent) [L. oc'to eight + va'lens able]. Having a valency of eight.

octet (ok'tet). The group of eight electrons in the outer shell of an atomic kernel.

octigravida (ok-tig-rav'id-ah) [L. oc'to eight + grav'ida pregnant]. A woman pregnant for the eighth time.

octipara (ok-tip'ah-rah) [L. oc'to eight + par'ere to produce]. A woman who has borne eight children.

- Octom'itus hom'inis. A minute flagellate protozoan found in the human intestine.
- octoroon (ok-to-roon'). The offspring of a white person and a quadroon.
- octose (ok'tos) [L. oc'to eight]. Any sugar containing eight atoms of carbon in the molecule.
- ocular (ok'u-lar) [L. ocula'ris; oc'ulus eye]. 1. Pertaining to the eye. 2. The lens or combination of lenses in a microscope (or telescope) which is nearest to the eye and which serves to magnify the image made by the objective. compensating O., an ocular so designed that it partly corrects the spherical aberration produced by the objective. huygenian o., an eye-piece consisting of two planoconvex lenses, the convexities being toward the object. Ramsden's o., a microscopic eyepiece made of two planoconvex lenses with the convexities turned toward each other. working o., an ordinary ocular for microscopic observation: distinguished from finding ocular.
- oculin (ok'u-lin) [L. oc'ulus eye]. A preparation of the hyaloid membrane and ciliary body of the eyes of oxen said to be useful in eye affections, especially decortication of the retina.
- oculist (ok'u-list). One who is expert in diseases of the eve.
- oculocephalogyric reflex (ok"u-lo-sef"al-o-ji'rik). See under reflex.
- oculofacial (ok"u-lo-fa'she-al). Pertaining to the eyes and the face.
- oculogyration (ck"u-lo-ji-ra'shun). The movement of the eye.
- oculogyric (ok"u-lo-ji'rik) [L. oc'ulus eye + gy'rus a turn]. Causing movements of the eye.
- oculometroscope (ok"u-lo-met'ro-skop). strument for performing retinoscopy in which the trial-lenses are rotated before the eyes without effort on the part of the examiner.
- oculomotor (ok"u-lo-mo'tor) [L. oc'ulus eye + mo'tor mover]. Pertaining to the movements of
- oculomotorius (ok"u-lo-mo-to're-us) [L.]. oculomotor nerve (q. v. under nerve).
- oculomycosis (ok"u-lo-mi-ko'sis) [L. oc'ulus eye + mycosis]. Any eye disease caused by a fungus.
- oculonasal (ok"u-lo-na'zal). Pertaining to the eye and the nose.
- oculopupillary (ok"u-lo-pu'pil-a-re). Pertaining to the pupil of the eye.
- oculoreaction (ok"u-lo-re-ak'shun). The ophthalmic reaction. See under reaction.
- oculospinal (ok"u-lo-spi'nal). Pertaining to the eye and the spinal cord.
- oculozygomatic (ok"u-lo-zi-go-mat'ik). Pertaining to the eye and the zygoma.
- oculus (ok'u-lus), pl. oc'uli. Latin for eye.
- oculustro (ok-u-lus'tro). Soap made of oleate of potassium, glycerin, and turpentine.
- ocyodinic (o"si-o-din'ik) [Gr. ώκυς swift + ώδις labor]. Same as oxytocic.
- O. D. Abbreviation for L. oc'ulus dex'ter, right
- od (od) [Gr. δδός way]. The influence exerted upon the nervous system by magnetic agents.
- Right occipito-anterior position of the fetus.
- odaxesmus (o-daks-ez'mus) [Gr. δδαξησμός a bitingl. 1. The biting of the tongue or cheek in an epileptic fit. 2. Same as odontoconesis.
- odaxetic (o-daks-et'ik). Causing a biting or itching sensation.
- Oddi's sphincter (od'ez). See sphincter.
- odinopean (o-din-o'pe-an) [Gr. δδίς pain + ποιεῖν to make]. Causing pain.
- odol (o'dol). A proprietary mouth-wash containing salol, saccharin, alcohol, and volatile oils.

- odon-eki ["icteric pestilence"]. The Japanese name for a disease resembling Weil's disease.
- odontagra (o-don-ta'grah, o-don'tag-rah) [Gr. δδούς tooth + άγρα seizure]. Toothache associated with gout.
- odontalgia (o-don-tal'je-ah) [Gr. δδούς tooth + άλγος pain]. Toothache; pain in a tooth. phantom o., pain in the place from which a tooth has been extracted.
- odontalgic (o-don-tal'jik). Pertaining to or marked by toothache.
- odontalgicum (o-don-tal'jik-um). Toothache remedy of the N. F. containing oil of cinnamon 10, phenol 20, methyl salicylate 30.
- odontalysis (o-don-tal'is-is). An improper term for examination of the teeth.
- odontatrophia (o-don-tat-ro'fe-ah) [Gr. 6506s tooth + arpopla atrophy]. Atrophy or imperfect development of the teeth.
- odontectomy (o-don-tec'to-me) [Gr. odols tooth + ἐκτομή excision]. Removal of a tooth by a cutting operation.
- odonterism (o-don'ter-izm) [Gr. δδούς tooth +
- έρισμός quarrel]. Chattering of the teeth.

 odontexesis (o-don-teks'e-sis) [Gr. δδοίς tooth +

 εξεσις scraping]. The cleaning, scraping, and polishing of the teeth.
- odonthemodia (o-don-them-o'de-ah) [Gr. ¿δούς tooth $+ a \hat{\iota} \mu \omega \delta l a$ state of having the teeth on edge]. Great sensitiveness of the teeth.
- odontiasis (o-don-ti'as-is) [Gr. bbobs tooth + 1713 Dentition; also any disorder inflammation]. caused by dentition.
- odontic (o-don'tik) [Gr. 6806's tooth]. Pertaining to the teeth.
- odontinoid (o-don'tin-oid) [Gr. δδούς tooth + είδος form]. A tumor composed of tooth-substance.
- odontitis (o-don-ti'tis). Inflammation of a tooth. odonto- [Gr. δδούς tooth]. A prefix implying some
- relation to a tooth. odontoblast (o-don'to-blast) [Gr. ¿δούς tooth -
- βλαστός germ]. One of the connective-tissue cells forming a layer upon the inner wall of the dentin of a tooth, and sending processes into the canaliculi of the dentin. From them the dentin is developed.
- odontoblastoma (o-don"to-blas-to'mah). A tu-mor made up of odontoblasts, a congenital epulis.
- odontobothrion (o-don"to-both're-on). A tooth
- odontobothritis (o-don"to-both-ri'tis) [Gr. δδούς tooth + βοθρίον pit + -ιτις inflammation]. Inflammation of the alveoli of the teeth.
- odontocele (o-don'to-sel) [Gr. δδούς tooth + κήλη hernial. An alveolodental cyst.
- odontoceramic (o-don"to-se-ram'ik) [Gr. òòois tooth + κέραμος pottery]. Pertaining to porcelain teeth.
- odontoceramotechny (o-don"to-se-ram'o-tek-ne) [Gr. δδοῦς tooth + κέραμος potter's clay + τέχνη art]. The art of making porcelain teeth; dental ceramics.
- odontochirurgic (o-don"to-ki-rer'jik). Pertaining to dental operations.
- odontoclamis (o-don-to-kla'mis) [Gr. δδούς tooth + κάλυμμα hood]. The condition in which the alveolus forms a hood of gingival tissue over an erupted tooth. Called also tooth-hood.
- odontoclasis (o-don-tok'las-is) [Gr. 6800's tooth + κλάσις fracture]. Fracture or breaking of tooth.
- odontoclast (o-don'to-klast) [Gr. δδούς tooth + κλâν break]. One of the cells that help to absorb the roots of a milk-tooth. They occur between the milk-tooth and the coming permanent tooth.
- odontocnesis (o-don-tok-ne'sis) [Gr. ¿¿ous tooth + κνήσις itching]. Itching of the gums.

- odontodol (o-don'to-dol) [Gr. δδούς tooth]. A odontorrhagia (o-don-to-ra'je-ah) proprietary dental anodyne. tooth + ρηγνύναι to burst forth].
- odontodynia (o-don-to-din'e-ah) [Gr. δδούς tooth + δδύνη pain]. Toothache; odontalgia.
- odontogen (o-don'to-jen) [Gr. δδούς tooth + γεννᾶν to produce]. The substance which develops into the dentin of the teeth.
- **odontogeny** (o-don-toj'en-e) [Gr. δδούς tooth + γεννᾶν to produce]. The development of the teeth.
- odontoglyph (o-don'to-glif) [Gr. δδούς tooth + γλύφειν to carve]. An instrument used for scraping the teeth.
- odontogram (o-don'to-gram) [Gr. δδούς tooth + γράμμα mark]. The tracing made by an odontograph.
- odontograph (o-don'to-graf) [Gr. δδούς tooth + γράφειν to write]. An instrument for recording the uneveness of surface of tooth enamel.
- odontography (o-don-tog'ra-fe) [Gr. δδούs tooth + γράφειν to write] 1 A description of the teeth.
 The use of the odontograph.
- odontohyperesthesia (o-don"to-hi-per-es-the'zeah) [Gr. δδούς tooth + hyperesthesia]. Sensitiveness of a tooth.
- odontoid (o-don'toid) [Gr. δδούς tooth + εἶδος form]. Like a tooth.
- odontolith (o-don'to-lith) [Gr. δδούς tooth + λίθος stone]. The tartar on the teeth; dental calculus.
- odontology (o-don-tol'o-je) [Gr. δδούς tooth + λόγος discourse]. The sum of knowledge regarding the teeth.
- odontoloxia, odontoloxy (o-don-to-loks'e-ah, o-don-tol'oks-e) [Gr. δδούς tooth + λοξός slanting]. Irregularity of the teeth.
- odontoma (o-don-to'mah) [Gr. δδούs tooth + -ωμα tumor]. An exostosis on a tooth; a tumor of tooth-like structure arising from the teeth. composite o., an odontoma composed of the various tooth structures. coronary o., one attacking the crown of a tooth. epithelial o., an odontoma on the horizontal part of the mandible. fibrous o., an odontoma contained in a fibrous sac. mixed o., an odontoma composed of more than one of the tooth structures radicular o., one attacking the root of a tooth.
- odontome (o-don'tom). Same as odontoma.
- odontonecrosis (o-don"to-ne-kro'sis) [Gr. δδούς tooth + necrosis]. Necrosis, or massive decay of a tooth.
- odontoneuralgia (o-don"to-nu-ral'je-ah) [Gr. bbobs tooth + neuralgia]. Neuralgia from disease of the teeth, or neuralgic pain in the teeth.
- odontonomy (o-don-ton'o-me) [Gr δδούς tooth + δνομα name] Dental nomenclature.
- odontonosology (o-don"to-no-sol'o-je) [Gr. δδούς tooth + nosology]. The branch of medicine that treats of diseases of the teeth.
- odontoparallaxis (o-don"to-par-al-ak'sis) [Gr. δδούς tooth + παράλλαξις alteration]. Irregularity of the teeth.
- odontopathy (o-don-top'ath-e) [Gr. δδούs tooth + πάθοs illness]. Any disease of the teeth.
- odontoperiosteum (o-don"to-per-e-os'te-um) [Gr. osobs tooth + periosteum]. Same as pericementum.
- **odontophobia** (o-don-to-fo'be-ah) [Gr. $\delta\delta\omega$ tooth $+ \varphi\delta\beta$ os fear]. A nervous condition in which the sight of an animal's tooth produces fear.
- odontoplast (o-don'to-plast). Same as odontoblast.
- odontoplerosis (o-don"to-ple-ro'sis) [Gr. δδούς tooth + πλήρωσις filling]. The operation of filling a tooth-cavity.
- odontoprisis (o-don-to-pri'sis) [Gr. δδούς tooth + πρίσις sawing]. The grinding of the teeth.
- odontoradiograph (o-don"to-ra'de-o-graf). A radiograph of a tooth or of the teeth.

- odontorrhagia (o-don-to-ra'je-ah) [Gr. δδούς tooth + βηγνύναι to burst forth]. Hemorrhage following extraction of a tooth.
- odontorthosis (o-don-tor-tho'sis) [Gr. δδούς tooth + δρθός straight]. The correction of dental irregularities.
- odontoschism (o-don'to-skizm) [Gr. δδούς tooth + σχίσμα cleft]. Fissure of a tooth.
- odontoscope (o-don'to-skōp) [Gr. δδούς tooth + σκοπείν to see]. A dental mirror for examining the teeth.
- odontosis (o-don-to'sis) [Gr. δδούς tooth]. Dentition; also odontogeny.
- odontosteophyte (o-don-tos'te-o-fit) [Gr. δδούς tooth + δστέον bone + φυτόν plant]. A bony tumor on a tooth.
- odontotechny (o-don'to-tek-ne) [Gr. δδούς tooth + τέχνη art]. Dentistry.
- odontotherapy (o-don-to-ther'ap-e) [Gr. $\delta\delta obs$ tooth + $\theta\epsilon\rho\alpha\pi\epsilon i\alpha$ cure]. The treatment of diseased teeth.
- odontotomy (o-don-tot'o-me) [Gr. ἐδούς tooth + τομή cut]. The operation of cutting into a tooth.
- odontotrimma (o-don-to-trim'ah) [Gr. δδοντοτρίμμα]. A tooth-powder.
- odontotripsis (o-don-to-trip'sis) [Gr. δδούς tooth + τρίψις wearing]. Wearing away of the teeth.
- odontotrypy (o-don-tot'rip-e) [Gr. δδούs tooth + τρυπᾶν to bore]. The boring or drilling of a tooth.
- odor (o'dor). A volatile emanation that is perceived by the sense of smell butcher-shop o., a smell like that of a butcher shop given off by yellow-fever patients.
- odoriferous (o-dor-if'er-us) [L. o'dor smell + fer're to bear]. Fragrant; emitting an odor.
- **odorimeter** (o-do-rim'et-er). An instrument for performing odorimetry.
- odorimetry (o-do-rim'et-re). The measurement of olfactory stimuli.
- odorography (o-dor-og'raf-e) [L. o'dor odor + Gr. γράφειν to write]. A description of odors.
- O. D. P. Right occipitoposterior position of the fetus.
- O'Dwyer's tubes (o-dwi'erz) [Joseph O'Dwyer, American surgeon, 1841-1898]. See tube.
- odylis (od'il-is). Terpin resorcinate, a yellow, oily liquid used as an antiseptic and cicatrizant.
- odynacusis (o"din-ak-u'sis) [Gr. δδύνη pain + άκυσις hearin] Painful hearing.
- odynolysis (o-din-ol'is-is) [Gr. δδύνη pain + λύσις solution]. Relief of pain.
- odynometer (o-din-om'et-er) [Gr. δδύνη pain + μέτρον measure]. An instrument for measuring pain.
- odynophagia (od"in-o-fa'je-ah) [Gr. δδύνη pain + φαγεῖν to eat]. The painful swallowing of food.
- odynophobia (od"in-o-fo'be-ah) [Gr. δδύνη pain + φόβος fear]. A morbid dread of pain.
- odynopæia (o''din-o-pe'ah) [Gr. δδύνη pain + ποιείν to make]. The induction of labor-pains.
- odynphagia (o-din-fa'je-ah) [Gr. δδύνη pain + φαγεῖν to eat]. Pain on deglutition.
- **ecoid**, edema, and other words in α . See ecoid, edema, etc.
- cology (e-kol'o-je). See ecology.
- comania (e-ko-ma'ne-ah). Ecomania.
- **œdipism** (e'dip-izm) [Gr. olδίπους œdipus]. Self-inflicted injury to the eyes.
- **Edipus com'plex** (e'dip-us) [*Edipus* Tyrannus, a character in Greek tragedy who married his mother after killing his father]. See *complex*.
- Oehl's layer (elz) [Eusebio Oehl, Italian anatomist, 1827-1903]. The stratum lucidum.
- Oehler's symptom (e'lerz) [Johannes Oehler, German physician, born 1879]. See symptom.

cenanthol (e-nan'thol). Heptoic aldehyd, CH₃-(CH₂)₅CHO.

conanthotoxin (e"nan-tho-toks'in). A poisonous resin, C₁₇H₂₂O₅, from *Œnan'the croca'ta*, a poisonous plant of Europe.

Crbiss (er'bis). See larbish.

Oertel's treatment (er'telz) [Max J. Oertel, physician in Munich, 1835-1897]. See under treatment.

Oese (e'ze) [Ger. "loop"]. A platinum wire and

oese (e'ze) [Ger. "loop"]. A platinum wire and loop with a glass handle; used in bacteriologic culture-experiments.

desophagostoma (e-sof-ag-os'to-mah). A genus of nematode worms of the family Strongylidæ, parasitic in the intestines of various animals. The larvæ often encyst in the intestinal wall, while the adults are mostly free in the lumen. Ca. apios'tomum, a parasite which forms tumors in the large intestine of monkeys and occasionally of man in Africa and the Philippines. Ca. brump'ti, a parasite commonly present in monkeys in Africa and occasionally found in man. Ca. columbia'num infests sheep in the southern United States. See nodule disease, under disease. Ca. denta'tum is found in the pig. Ca. infla'tum, one found in cattle. Ca. stephanos'-tomum, a species normally parasitic in gorillas and which has been found in man in Brazil.

cesophagostomiasis (e-sof"ag-o-sto-mi'as-is). The state of being infested with *(Esophagostoma.*

Esophagostomum (e-sof-ag-os'to-mum). Same as *Œsophagostoma*.

csophagus, and other words in **csoph-**. See esophagus and esoph-.

costriasis (es-tri'as-is). Infection with larvæ of flies of the genus Œstrus.

Œstridæ (es'trid-e) The family of the "bot" or "warble" flies They are very hairy diptera with rudimentary mouth parts and with the antennæ inserted into round pits. The family includes the following genera: Gastrophilus, **Œ**strus, Hypoderma, Dermatobia, and Cuterebra.

cestrum (es'trum). See estrum.

Estrus hom'inis (ēs'trus). A bot-fly whose larvæ sometimes infest the human body. **C.** o'vis, a species of bot-fly whose larvæ infest the head of sheep.

cosypus (es'ip-us) [Gr. οἴσυπος suint]. A proprietary name for suint, or unrefined wool-fat.

Of. Abbreviation for official.

official (of-fish'al) [L. officia'lis; offic'ium duty]. Authorized by the U. S. Pharmacopeia.

officinal (of-fis'in-al) [L. officina'lis; offici'na shop].
Regularly kept for sale in the shops of druggists.

ogive (o'jīv). An S-shaped curve; a term used in biometry.

ogo (o'go). See gangosa.

Ogston's line, operation (og'stonz) [Alexander Ogston, Scottish surgeon, born 1844]. See under line and operation.

OH. A symbol for the hydroxyl ion in solution; a hydroxid

—OH. The hydroxyl group.

O'Hara's forceps [Michael O'Hara, Jr., Philadelphia surgeon, born 1869]. See forceps.

Ohara's disease (o-hah'rahz) [Hachiro Ohara, contemporary Japanese physician]. See disease.

ohm (om) [named for George S. Ohm, 1787-1854, a German physicist]. The electric resistance of a column of mercury one square millimeter in diameter and one hundred and six centimeters long; the unit of electric resistance.

ohmammeter (ōm'am-e-ter). An ohmmeter and ammeter combined.

ohmmeter (ōm'me-ter). An instrument for measuring electric resistance in ohms.

oicomania (oi-ko-ma'ne-ah). Ecomania.

Oldiomycetes (o-id"e-o-mi-se'tes). A group of

fungi characterized by having mycelial threads in their cultures. The group includes oldium and similar genera.

oldiomycetic (o-id"e-o-mi-set'ik). Pertaining to or caused by oldiomycetes.

oldiomycosis (o-id'e-o-mi-ko'sis) [oldium + Gr. μbκηs fungus]. A diseased condition due to the presence of an oldium.

oldiomycotic (o-id"c-o-mi-kot'ik). Pertaining to oldiomycosis.

Oldium (0-id'e-um) [dim. of ψόν egg]. A genus of fungi intermediate between the molds and the yeasts, and showing forms that resemble both. O. al'bicans. See Monilia albicans. O. coccidioid'des, a fungus which forms spheric bodies resembling tubercles in the tissues Cf. Coccidioides. O. dermati'tidis. Same as Blastomyces dermatitidis. O. hektoe'nii, an organism causing a blastomycetic infection in man. O. lac'tis, a non-pathogenic species which forms a white mold-like growth in bread, sour milk, etc. It is an important factor in the ripening of Camembert cheese, probably giving it the flavor. O. porrig'inis. Same as Achorionschoenleinii. O. pulmo'nium, a Brazilian fungus causing pulmonary mycosis (Magalhaes, 1914). O. tropica'-le, a species producing broncho-oldiosis.

oikoid (oi'koid). Same as ecoid.

oikology (oi-kol'o-je) [Gr. οἶκος house + λόγος treatise]. The science of houses and homes, considered especially in respect of their sanitary conditions.

oikomania (oi-ko-ma'ne-ah). Same as ecomania.

oikophobia (oi-ko-fo'be-ah) [Gr. οίκος house + φόβος fear]. Morbid aversion to home surroundings (A. Verga, 1882).

oikosite (oi'ko-sīt). A fixed or stationary commensal organism.

oil (oil) [L. o'leum]. 1. A fat which is liquid at 20° C.; the fatty oils. 2. Volatile, usually aromatic substances of varied chemical nature mostly found in plants; the volatile or essential oils 3. A liquid petroleum. o. of allspice, the fragrant volatile oil of pimenta (see *Pimenta*); aromatic and stimulant. Dose, 1-5 min. (0 06-0 33 cc) allyl mustard o., a volatile oil, allyl-iso-thiocyanate allvl C₃H₆NCS, from the seeds of black mustard. **0. of almonds.** 1. The fixed oil of sweet almonds (o'leum amyg'dalæ express'um). 2. The volatile oil of bitter almonds (L. o'leum amyg'dalæ ama'ræ): used like hydrocyanic acid Dose, ‡ min (o 016 c.c.). o. of amber, an irritant stimulant and antispasmodic oil distilled from amber. Dose, 5-10 min. (0.333-0.666 c.c.). animal o. 1. Any oil of animal origin. 2. See Dippel's o o. of anise, a volatile oil from Pimpinella anisum. Dose as a carminative, 2-5 min. (0.133-0.333 gm) anthos 0., oil of rosemary. Bamber 0., a mixture of 1½ parts citronella, 1 part kerosene (paraffin), and 2 parts cocoanut oil: used as a repellent for mosquitos. O. Of bay, a volatile oil from Myrcia a'cris: used in making bay-rum; also that of Lau'rus nob'ilis. beetle O., an African oil derived from a species of beetle. O. of ben, a fixed oil from Morin'ga pterygosper'ma. o. of benné (ben'ne) (L. o'leum ses'ami). Same as o of sessamum. o. of bergamot (L. o'leum berga'mia), a fragrant volatile oil from Citrus aurantium bergamia containing about 36 per cent. of linally acetate. o. of birch. 1. The tarry fixed oil of white birch. 2. L. o'leum bet'ulæ volat'ile, the volatile oil of sweet or black birch-bark (Bet'ula len'ta): used for rheumatism, etc.; identical with oil of wintergreen. Dose, 1-5 min. (0 065-0.33 c c.). **boiled 0.**, linseed oil that has been exposed to a heat of 130° C or more. British o., a mixture of petroleum and of various oils. o. of cade (L. o'leum cadi'num), a tarry fixed oil from Junip'erus oxyce'drus: used in skin diseases. O. of cajuput, a volatile oil (o'leum cajupu'ti) from Melaleu'ca leucaden'dron: anodyne, antiseptic, carminative, and anthelmintic.

Dose, 2-ro min. (0.133-0.66 c.c.). O. of camphor, a solution of camphor in a hydrocarbon camphorated O., a liniment of olive oil and camphor; linimentum camphoræ. candle-nut o., a cathartic oil afforded by Aleuri'tes tril'oba, a o., a cathartic on another by Ateurs is at out, a tree of the Pacific islands. Dose, \(\frac{1}{2}\)-1 fl.oz. (15-30 c.c.). O. of caraway (L. o'leum car'i), the volatile oil of caraway carminative. Dose, 1-10 min. (0.066-0.666 c.c.). carbolic o., that part of the distillate from coal-tar which passes over between 170° and 230° C. o. of cardamom, a volatile oil distilled from the seeds of *Elemaria cardamomum*. carron o., linseed oil mixed with lime-water: used for burns; linimentum calcis. o. of cassia, a fragrant volatile oil from Cassia lignea (Cinnamonum cassia), consisting mostly of cinnamic aldehyd. castor o. (L. o'leum ric'-ini), a thick, purgative, fixed oil from the seeds of Ric'inus commu'nis. It stimulates intestinal peristalsis, causing purgation in four or five hours, and is used to expel irritant matter from the intestine in diarrhea and intestinal inflammation. This action is probably due to a glycerid of ricinoleic acid found in the oil. Dose, 4-8 fl.dr. 16-32 c.c.). **chaulmoogra o.**, a fixed oil obtained from the seeds of a tree of southern Asia (*Taraklogenus kurzii*). It has been used in the treatment of leprosy; ethyl esters of the fatty acids obtained from this oil are now so used. chenopodium, a volatile oil obtained by the distillation of chenopodium ambrosioides. tains 45-70 per cent. of ascaridole, which is the active anthelmintic principle. Dose, 1-2 c.c. for hookworms. o. of cinnamon, a fragrant, volatile oil derived from cinnamon bark and consisting mostly of cinnamic aldehyd: stimulant, etc. Dose, 1-5 min. (0.6-0.3 c.c.). 0. of citronella, a volatile oil of various grasses, Andropo'gon nar'dus, etc.
o. of cloves (L. o'leum caryophyl'li), an aromatic and stimulant volatile oil from cloves (q. v.). Dose, 2-5 min. (0.133-0.333 c.c.). cocoanuto., the fixed oil of the cocoanut. cod-liver o. (L. o'leum mor'rhuæ), a fixed oil from the livers of the codfish (Ga'dus mor'rhua). It contains gaduin, olein, and other glycerids, with small and variable quantities of phosphorus, bromin, iodin, sulphur, morrhuic acid, and various vitamins. It acts by increasing the red corpuscles of the blood, and thus improving the weight of the body. It is used in pulmonary and other varieties of tuberculosis, catarrh, conjunctivitis, anemia, syphilis, and rheumatism. The cold-pressed oil seems to have specific curative properties in cases of rickets. Dose, 2-4 fl.dr. (8-16 c c.). colza o., the fixed oil of the seeds of colza (Bras'sica campes'tris).

o. of copaiba (L. o'leum copa'iba), a volatile oil derived from copaiba, and used for the same purposes as that drug. Dose, 5-15 min. (0.3-1 c.c.).

o. of coriander (L. o'leum corian'dri), the fragrant volatile oil of coriander seed: aromatic and cotton-seed o. (L. o'leum gossyp'ii sem'inis), the fixed oil of the seeds of the cotton plant. croton o. (L. o'leum tig'lii, o'leum croto'nis), the thick, fixed oil of the seeds of Cro'ton tig'lium: a strong irritant and hydragogue cathartic. It is used as a cathartic in constipation from intestinal atony, lead colic, and nervous disorder; in the form of a liniment as a counterirritant in rheumatism, neuralgia, bronchitis, and meningitis; and as a revulsant in coma from apoplexy and uremia. Dose, I min. (0.06 c.c.). O. of cubebs (L. o'leum cu'bebæ), the volatile oil of cubebs: diuretic. Dose, to escap, the volatile of of cubes: duretic. Dose, to 10-15 min. (0.6-1 c.c.). Cypress 0., an oil distilled from the leaves and young branches of Cupressus sempervisens: used in whooping-cough by inhalation. dead o., a black liquid obtained in the rectification and distillation of coal-tar: disinfectant. o. of dill, a volatile oil from the fruit of Anethum graveolens. Dippel's animal 0., an oil procured by destructive distillation of bone, horn, or other animal substances doegling o. See doegling. drying o., an oil which thick-

ens and hardens on exposure to the air, especially when spread out in a thin layer, as in paint. empyreumatic o's, volatile oils formed by the destructive distillation of organic matters. sential o. Same as volatile o. ethereal o. 1. o'leum athe'reum, U. S. P., a compound of strong ether with heavy oil of wine. 2. Same as volatile o. eucalyptus o. (L. o'leum eucalyp'ti), a volatile oil from the leaves of Eucalyp'tus glob'ulus: deodorant and disinfectant. Dose, 2-5 min. (0.133candle-fish, Theleich'thys pacif'icus: used like cod-liver oil. expressed o's, fixed oils obtained by expression. fatty o., a fat which is liquid at 20° C. fennel o., a volatile oil from the ripe fruit of Fæniculum vulgare. ferment o's, volafruit of Faniculum vulgare. ferment o's, volatile oils formed by fermentation. fixed o., any oil that is not volatilizable. Called also fatty o. flaxsoed o. See linseed o. o. of fleabane (L. o'leum erigeron'tis), a thick, volatile oil from Erig'eron canaden'se: hemostatic, and useful in various catarrhal affections. Dose, 5-30 min. (0.333-2 c.c.). fusel o., amyl alcohol. o. of gaultheria. See o. of wintergreen. o. of gomenol. See gomenol. gray o., olive oil and lanolin containing mercury: used hypodermically in syphilis. o. of gurjun. See gurjun. Haarlem o., a proprietary diuretic and stimulant lem o., a proprietary diuretic and stimulant oil. heavy o., the oily product of the action of sulphuric acid on alcohol. o. of hemlock, of sulphuric acid on alcohol. **o. of hemiock**, a volatile oil distilled from the leaves of the hemlock tree, A'bies (or Tsu'ga) canaden'sis. **herring o.**, the fixed oil of herrings. **Hungarian o.**, enanthic (œnanthic) ether, [CH₃(CH₂]₂CI₂]₂C: used to give to blended spirits the flavor of French brandy. **hydnocarpus o.**, an oil obtained from Hydnocarpus wightiana, H. subfalcata, and other species. It resembles chaulmoogra oil in physical and chemical properties and is used in the same and chemical properties and is used in the same way (including the use of its ethyl esters) in the treatment of leprosy. o. of jasmin, an essential oil from Jasmi'num odoratissi'mum. joint o., the synovial fluid. juniper o. (L. o'leum junip'eri), the volatile oil of juniper berries: stimulant and the volatile oil of jumper perries. simulant and diuretic. Dose, 5-15 min. (0.333-1 c.c.). lard o. (L. o'leum ad'ipis), oil from hogs' lard. o. of lavender (L. o'leum lavan'du'æ flo'rum), the volatile oil of lavender flowers: stimulant, antispasmodic. Dose, 1-5 min. (0.06-0.3 c.c.). o. of lemon (L. o'leum limo'nis), the volatile oil of the rind of lemons: aromatic and stimulant. linseed O. (L. o'leum li'ni), the fixed drying oil of flaxseed: laxative. Dose, 1-2 fl.oz. (30-60 c.c.). 0. of lumes, a volatile oil from the fruit of Cit'rus lu'mia, the lume, or sweet lime, of Italy. o. of male fern, a fixed oil from the root of the male fern: anthelmintic when freshly prepared. margosa
o., an oil from the seeds of the Indian lilac tree: said to be useful in rheumatism, leprosy, mange, ulcers, etc. o. of marjoram, the volatile oil of Orig'anum majora'na and O. vul'gare: stimulant, carminative, anodyne, and vulnerary; used also in microscopy. menhaden o., a fixed oil from menhaden fish. **mineral o.**, an oil derived from minerals. The mineral oils include petroleum and its products. **o. of mirbane.** Same as mitrobenzol. O. of mustard (L. o'leum sin'apis vola'tile), a volatile oil, allyl-isothiocyanate, Cs-H_bNCS, from the seeds of black mustard; also a volatile oil, methyl-phenyl-isothiocyanate, OH,-C₆H₄.CH₂.CNS, from the seeds of white mustard: C₆H₄.CH₂.CNS, from the seeds of white mustard: stimulant. Dose, \(\frac{1}{2}\)—\(\frac{1}{2}\) min. (0.0075-0.015 c.c.). mutton bird \(\mathbf{o}\)., the oil extracted from the sooty petrel: used as a substitute for cod-liver oil. \(\mathbf{o}\). Of myrcia. See oil of bay. \(\mathbf{o}\). Of myristica, nutmeg oil. neat's-foot \(\mathbf{o}\). (L. o'leum bu'bulum), a fixed oil from the feet of neat-cattle. Neisser's \(\mathbf{o}\)., a preparation of 20 parts of mercury, 5 parts of ethereal tincture of benzoin, and 40 parts of liquid vaselin: used in syphilis by injection. \(\mathbf{o}\). Of neroli (L. o'leum auran'tii flo'rum), the volatile oil of orange flowers. nutmeg \(\mathbf{o}\). (L. o'leum myris'tica), the

volatile oil of nutmegs: an aromatic stimulant. Dose, r-3 min. (0.06-0.18 c c.). **oleo o.**, the commercial name of an oil prepared from beef-fat. olive o. (L. o'leum oli'væ), a fixed oil from the fruit of the olive tree, O'lea europæ'a: much used in liniments and plasters. o. of orange flowers, a volatile oil distilled from the fresh flowers of the a volatile oil distilled from the fresh flowers of the bitter orange. O. of orange peel (L. o'leum auran'tii cor'licis), a volatile oil from the rind of the orange. palm O., a fixed oil from the fruit of Ela'is guineen'sis, an African palm. paraffin O. See liquid paraffin. O. of patchouli, the volatile oil of Pogosle'mon patchou'li, a mint of the Elast Indies, used mainly as a paraffine. East Indies: used mainly as a perfume. o. of peanut, the fixed oil expressed from the seeds of pennyroyal (L. o'leum pule'gii or o. hedeo'mæ), the volatile oil of Men'tha pulegi'um, M. canaden'sis, and of Hedeo'ma pulegioi'des: carminative, anodyne, deobstruent, and emmenagogue. Dose, I-5 min. (006-0.33 c.c.). 0. of peppermint (L. o'leum men'thæ piper'itæ), the volatile oil of Men'tha piperi'ta: carminative, anodyne, stimulant, and diuretic. Dose, 1-5 min (0 06-0.333 thant, and durent. Dose, 1-5 min (0.00-3.33) (c.). o. of petit-grain, a volatile oil from the leaves, buds, and young shoots of the orange. phosphorated o. (L. o'leum phosphora'tum), oil of sweet almonds, containing ether and phosphora't that the state of the sweet almonds of the sweet almonds. phorus, and having the therapeutic properties of the latter drug. Dose, 1-5 min. (0.06-0.333 c.c.).
o. of pimenta. See o. of allspice. o. of pine needles, the oil distilled from the fresh leaves of Pinus pumilio. It is administered as a vapor to be inhaled. o. of poppy seed, the fixed oil of the seeds of opium poppy. porpoise o., a fixed oil from the blubber of porpoises. puffer fish o., oil from the common puffer fish, Spheroides muculatus It contains vitamins. o. of rape, a fixed oil from the seeds of rape (Bras'sica campes'tris, var. Na'pus). red O., fuchsin. O. of rhodium, the volatile oil from the roots of Convol'vulus scopa'ria and C. flor'ida; also from Am'yris balsamif'era, also a factitious mixture resembling the above: used mainly by veterinarians. rock o., petroleum. o. of rose (L. o'leum ro'sæ), the volatile oil or attar of the fresh petals of Ro'sa damasce'na. rosemary o. (L. o'leum rosmari'ni), the volatile oil of rosemary (q. v.): a stimulant much used in liniments. Dose, 1-5 min. (o o6-0.333 c.c.) rosin o., the volatile oil distilled from rosin. o. of rue, a volatile oil from Ruta graveolens. It consists mostly of methylnonyl-ketone, CH₃ CO (CH₂)₈CH₃, and is used as a vormicida for header and set of the constant of t vermicide for hookworms. sandalwood o. (L. o'leum san'tali), a fragrant volatile oil distilled from sandalwood (q. v.): used in bronchitis and gonorrhea Dose, 10-30 min. (0.6-2 c.c.). sapu-cainha o., the oil of Carpotroches braziliense: used in the treatment of leprosy o. of sas-safras (L. o'leum sas'safras), a fragrant volatile oil distilled from the root-bark of sassafras (q. v.): aromatic and carminative. Dose, 1-5 min. (0.06-0.3 c.c.). 0. of savin (L. o'leum sabi'næ), a volatile oil distilled from the leaves of savin (q. v.): stimulant and emmenagogue. Dose, r-5 min. (0.00-0.3 c.c.). O. of sessamum, a fixed oil from the seeds of Sessamum orientalis. shale o., an oil distilled from bituminous shales. shark o., a fixed oil obtained from the liver of sharks. shore o., a variety of cod-liver oil. Smith's o., a remedy for cuts and wounds in veterinary practice, consisting of turpentine and linseed oil, r pint each; tincture of aloes, 8 ounces; nitric acid and sulphuric acid, each, 4 ounces. spear-mint o. (L. o'leum men'thæ vir'idis), the vola-tile oil of Men'tha vir'idis, or spearmint; car-minative, stimulant: used also like menthol. Dose, 1-5 min. (0.06-0.33 c.c.). o. of spike, the volatile oil distilled from the leaves and twigs of the spruce tree. straits o., a variety of cod-liver oil. o.-sugar. See eleosaccharum. sunflower o., a fixed drying-oil from the seeds of the sunflower, Helian'thus an'nuus. Sweet o., olive oil. tambor o., a purgative oil from the seeds of Omphal'ea oleif'era, a euphorbiaceous tree of tropical America. O. of tar (L. o'leum ph'cis li'quida), a volatile oil distilled from tar, the medicinal properties of which it represents. O. of teaberry. Same as o. of wintergreen. teel o. Same as o. of sessamum. templin o., oil of turpentine from pine-cones. O. of theobroma. See cacao butter, under butter. O. of thyme (L. o'leum thy'mi), the volatile oil of thyme: tonic, stimulant, and carminative. Dose, 1-5 min. (0.06-0.33 c.c.). O. of turpentine (L. o'leum terebin'-thina), a volatile oil from the resinous juice of various pine trees: stimulant, diuretic, and counterirritant. Dose of the rectified oil, 5-30 min. (0.333-2 c.c.). O. of vitriol, an old name for sulphuric acid. volatile o., any one of a class of oils that volatilize at ordinary temperatures. The volatile oils occur in aromatic plants, to which they give their odor. Most volatile oils consist of a mixture of two or more terpenes or of a mixture of an eleopten with a stearopten. Called also essential o. and ethereal o. walpurgis O., a petroleum from Eichstadt, in Germany; a popular polychrest remedy. O. of wine. See Hungarian o. O. of wintergreen (L. o'leum gaulthe'ria), a fragrant volatile oil from Gaultheria procumbens. It consists mostly of methyl-salicylate, OH.C₆H₄.-CO₂.CH₃, and is used in rheumatism. Dose, 5-30 min. (0.333-2 c.c.). wood O. Same as gurjun balsam. wormseed O. (L. o'leum chenopo'dii), the volatile oil of the seeds of Chenopo'dim anthelmin'ticum, or American wormseed: anthelmintic. Dose, 3-10 min. (0.18-0.6 c.). zachun O., the oil afforded by seeds of Balani'tes agyptia'ca, a tree of Africa. See zachun.

oil-breakfast. Two hundred c.c. of olive-oil (Voldhard's) or 100-200 c c. of a 2 per cent. solution of oleic acid in olive oil (Boldiref's breakfast), given in the early morning, fasting. In one-half to one hour the stomach contents are drawn off. The oil-breakfast having caused the duodenal contents to regurgitate into the stomach, the contents contain pancreatic juice from the duodenum.

oinomania (oi-no-ma'ne-ah). Same as enomania.

ointment (oint'ment) [L. unguen'tum]. A fatty medicated preparation for external use, of such consistence that it melts when applied to the skin. See unguentum. ammoniated mercury o., 10 per cent. in lanolin and white petro-latum. Banyer's o., an ointment containing calomel, 2 dr.; lead carbonate and burnt alum, each, 4 dr.; Venice turpentine, 6 dr.; spermaceti ointment, 11 oz.: used for chronic eczema. basilicon o., an ointment made of 1 pound each of yellow wax, Burgundy pitch, and yellow pitch, 16 fl.oz. of olive oil, and 3 fl.oz. of turpentine. belladonna o., pillular extract of belladonna leaves, 10 per cent., in lanolin and lard. blue o. See unguentum hydrargyri. o. of boric acid, 10 per cent. in a petrolatum base. brown o., a digustiant circumstant continuous compositor of the per cent. discutient ointment containing camphorated brown plaster, olive oil, and suet. calomel o. Metchnikoff's o. camiofen o., an ointment containing camiofen in an emollient base. o. of carbolic acid. See phenol o. casein o., a water-soluble varnish used in applying medicines to the skin, and consisting of 14 parts of casein, 0.43 part of sodium and potassium hydroxids, 7 parts of glycerin. 21 parts of vaselin, 1 part of boric or salicylic acid, and 56 parts of water. chrysarobin 0., 6 per cent. in benzoinated lard. citrine 0., an ointment of nitrate of mercury. Cooper's 0., 1 part each of arsenic and sulphun 18 parts of spermaget in them. in 8 parts of spermaceti ointment. Credé's o., one containing 15 per cent. of collargol, 5 per cent. of water, 10 per cent. of white wax, and 70 per cent. of benzoinated lard: used in septicemia, pyemia, boils, carbuncles, etc. Cyrillo's o., an ointment used in syphilis, and composed of mercury perchlorid, 4 parts, and lard, 32 parts. di-

achylon o., a mixture of white petrolatum and lead plaster. Dupuytren's o., a cantharides ointment, 1:80. Gauducheau's o., an ointment for prophylaxis of venereal disease: mercuric gm.; wool fat, 50 gm.; petrolatum to make 100 gm. Hebra's 0., diachylon ointment. iodin 0., 4 per cent. in benzoinated lard. iodoform o., 10 per cent. in benzoinated lard. Jarisch's O., an ointment for psoriasis, consisting of 1 part of pyrogallic acid and 8 parts of lard. kentish o., turpentine liniment. Lister's o., an ointment containing white wax, paraffin, boric acid, and oil of almond. **Maury's 0.**, one containing 1 dr. of mercury nitrate and 1 dr. each of powdered opium and rhubarb mixed with 1 oz of simple ointment: used for ulcers. mercurial o. See unguentum hydrargyri. Metchnikoff's o., calomel, 35 to 50 per cent., made into an ointment with lanolin, petroleum, or a mixture of them. Moro's **0.**, a mixture of lanolin and tuberculin: used in performing Moro's reaction. nutgall o., 20 per cent. in simple ointment. Pagenstecher's o., ointment of yellow oxid of mercury: used in eye diseases. paraffin o. (L. unguen'tum paraf'fini), a mixture of solid and liquid paraffin. phenol o., 21 per cent. in simple ointment. o. of rose water, rose water in a suitable base. Schwimmer's o., an ointment for preventing pitting in small-pox, consisting of carbolic acid, chalk, and olive oil. **seleniovanadic o.**, a preparation of selenium and vanadium, applied locally for relieving pain in malignant disease. **simple o.** [L. unguen'tum or u. sim'plex), lard 4 parts and white wax 1 part. o. of tannic acid, 20 per cent. in glycerin and ointment. tar 0., 50 per cent in lard and wax. wax 0. (L. unguen'tum ce'ræ). Same as cerate, simple. Wortheim's 0., an ointment for chloasma, containing ammoniated mercury, 2 dr.; bismuth, 2 dr.; and glycerin oint-ment, 1 oz. Whitfield's o., an ointment composed of 1 gm. salicylic acid, 2 gm. benzoic acid, and 30 gm. of petrolatum. Wilkinson's 0., and 30 gm. of petrolatum. Wilkinson's o., compound sulphur ointment. yellow mercuric oxid o., 10 per cent in lanolin and petrolatum. zinc o., unguentum zinci oxidi.

- Oken's body (o'kenz) [Lorenz Oken, German physiologist, 1779-1851] Wolffian body.
- O. L. Abbreviation for L. oc'ulus læ'vus, left eye.
- Ol. Abbreviation for L. o'leum, oil.
- -01. A suffix indicating that the substance is an alcohol, i e., a hydroxyl derivative of a hydrocarbon
- O. L. A. An abbreviation for L. occipito lavo anterior, or the left occipito-anterior position of the fetal head in labor.
- olan (o'lan). A paraffin ointment-base forming an emulsion with water.
- olea (o'le-ah) 1. L. for 'live. 2. Pl. of o'leum, oil.
- **oleaginous** (o-le-aj'in-us) [L. oleag'inus]. Oily; greasy; unctuous.
- oleander (o-le-an'der). An evergreen apocynaceous shruh, Ne'rium odo'rum, a poisonous cardiac tonic, diuretic, and aperient. Dose of extract, 1-2 gr. (o.o16-o.o5 gm.); daily dose of tincture, 5 min. (o 33 c.c.).
- oleandrin (o-le-an'drin). 1. A glucosid from oleander. Subcutaneous dose, $\frac{1}{14} \frac{1}{12}$ gr. (0.006-0.015 gm.). 2. An alkaloid from oleander: therapeutically active.
- oleandrism (o-le-an'drizm). Poisoning by oleander.
 olease (o'le-ās). An enzyme from olive oil which produces rancidity and discoloration of the oil.
- Oleaster (o-le-as'ter). 1. The true wild olive, O'lea oleas'ter. 2. Any plant of the genus Elæagnus.
- Oleate (o'le-āt). 1. Any salt of oleic acid. 2.
 [L. olea'tum.] A solution of a chemic substance or drug in oleic acid. The oleates are used as ointments.

- olecco (o-lek'o). A proprietary laxative preparation of castor oil.
- olecranal (o-lek'ran-al). Pertaining to the olecranon.
- olecranarthritis (o''lek-ran-ar-thri'tis) [olecranon + arthritis]. Inflammation of the elbow-joint.
- olecranarthrocace (o-lek"ran-ar-throk'as-e) [Gr. ωλέκρανον elbow + ἄρθρον joint + κάκη badness]. Tuberculosis of the elbow-joint.
- olecranarthropathy (o-lek"ran-ar-throp'ath-e) [Gr. ώλέκρανον elbow + ἄρθρον joint + πάθος disease]. Disease of the elbow-joint.
- olecranoid (o-lek'ran-oid). Resembling the olec-
- olecranon (o-lek'ran-on; properly, o-lek-ra'non) [Gr. ἀλέκρανον]. [B N A] A curved process of the ulna at the elbow; olecranon process.
- **olefin** (o'le-fin) [L. o'leum oil + fa'cere to make]. An unsaturated aliphatic hydrocarbon.
- oleic acid (o-le'ik). See under acid.
- olein (o'le-in) [L. o'leum oil]. An oleate (especially the trioleate) of glyceryl, C₃H₅[CH₃(CH₂)₇ CH.CH(CH₂)₇CO.O]₃; found in various fixed oils and fats. It is a colorless, oily liquid, insoluble in water, but freely soluble in ether and alcohol.
- oleobalsamic (o"le-o-bawl-sam'ik). See mixture.
- oleo-Bi-Roche (o'le-o-bi-rotsh). A suspension of finely divided bismuth oleate in olive oil used in the treatment of syphilis Dose, 32.4 min. (2 c.c.) intramuscularly two or three times a week.
- oleobismuth (o"le-o-biz'muth). See oleo-Bi-Roche. oleocreosote (o"le-o-kre'o-sôt). The oleic acid ester of creosote. It is a yellowish liquid contain-
- ing 33 per cent. of creosote, and is used in phthisis.

 Dose, 10-15 min. (0.65-1 c.c.).
- **oleogen** (o'le-o-jen). An ointment base containing oleic acid, petroleum, and ammonia.
- oleoguaiacol (o''le-o-gwi'ak-ol). The oleic acid ester of guaiacol.
- **oleo-infusion** (o"le-o-in-fu'zhun). A preparation made by infusing a drug in oil.
- **oleomargarin** (o"le-o-mar'jar-in). An artificial butter made from tallow, lard, etc.
- oleomargariscope (o"le-o-mar-gar'is-kōp). A pocket polariscope for the inspection of oleomargarin or butter.
- **oleometer** (o-le-om'et-er) [L. o'leum oil + Gr. μέτρον measure]. An instrument for testing the purity of oil.
- **oleonucleoprotein**(o"le-o-nu"kle-o-pro'te-in). The caseinogen and fat of milk regarded as forming one complex substance.
- **oleopalmitate** (o"le-o-pal'mit-āt). An oleate and a palmitate of the same base.
- oleoresin (o"le-o rez'in) [L. oleoresi'na]. 1. Any natural combination of a resin and a volatile oil such as occurs in certain plants. 2. Ethereal extracts. The official oleoresins are those of aspidium and capsicum.
- oleosaccharum (o"le-o-sak'ar-um). See eleosaccharum.
- oleostearate (o''le-o-ste'ar-āt). An oleate and a stearate of the same base.
- oleosus (o-le-o'sus) [L.]. Oily; greasy.
- **oleothorax** (o''le-o-tho'rax) [L. o'leum oil + thorax]. Intrapleural injection of oil in order to compress the lung in pulmonary tuberculosis.
- **oleotine** (o-le-o'tīn). A peptonized fat: for use as a butter substitute.
- oleum (o'le-um), gen. o'lei [L. for oil]. See oil.
 o. anima'le, a homeopathic preparation of the vulvar mucus of a mare in heat. o. anima'le sthe'reum, Dippel's animal oil (q. v.); also its homeopathic preparation. o. chenoce'ti, the oil of a whale, Bala'na rostra'ta: recommended for pharmaceutic use. o. lig'ni san'tali, the oil of white sandalwood; also its homeopathic prepa-

- ration. o. mor'rhuæ, cod-liver oil. o. rici'ni, castor oil. o. san'tali, sandalwood oil. tig'lii, croton oil.
- olfactie (ol-fak'te). The unit of sme stimulus threshold for a given odor. The unit of smell; the normal
- olfaction (ol-fak'shun) [L. olfa'cere to smell]. The act of smelling, the sense of smell.
- olfactology (ol-fak-tol'o-je). The science of the sense of smell.
- olfactometer (ol-fak-tom'et-er) [L. olfac'tus smell + me'trum measure]. An apparatus for testing the sensitiveness of the nose to odors.
- olfactometry (ol-fak-tom'et-re). The study of the sense of smell.
- olfactory (ol-fak'to-re) [L. olfa'cere to smell]. Pertaining to olfaction, or the sense of smell.
- olfactus (ol-fak'tus). A unit of acuity of smell.
- olfacty (ol-fak'te). Same as olfactie.
- olibanum (o-lib'an-um) [L.]. True frankincense; a gum-resin from various species of Boswel'lia. It is a stimulant emmenagogue, and has been used also in bronchial and laryngeal affections, and locally for chilblains, etc.
- oligemia, oligemia (ol-ig-e'me-ah) [Gr. ολίγος little + αΐμα blood]. Deficiency in the volume of the blood.
- olighydria (ol-ig-hid're-ah). See oligidria.
- oligidria (ol-ig-id're-ah) [Gr. ολίγος scanty + ίδρώς sweat]. A deficiency in the secretion of the sweat.
- oligoamnios (ol"ig-o-am'ne-os) [Gr. δλίγος little + amnios] Oligohydramnios.
- oligocardia (ol''ig-o-kar'de-ah) [Gr. δλίγος few + καρδία heart]. Same as bradycardia.
- oligocholia (ol"ig-o-ko'le-ah) [Gr. δλίγος scanty + χολή bile]. A lack or deficiency of the bile.
- oligochromemia (ol"ig-o-kro-me'me-ah) $\dot{\delta}\lambda i\gamma$ os scanty + χρώμα color + αίμα blood]. Insufficiency of hemoglobin in the blood.
- oligochylia (ol"ig-o-ki'le-ah) [Gr. δλίγος few + χυλός chyle Deficiency of chyle. oligochymia (ol"ig-o-ki'me-ah) [Gr. δλίγος few +
- χυμός juice] Deficiency of chyme.
- oligocystic (ol"ig-o-sis'tik) [Gr. δλίγος few + κύστις cyst]. Containing only a few cysts.
- oligocythemia (ol"ig-o-si-the'me-ah) [Gr. δλίγος few + κύτος cell + αίμα blood]. Scarcity of red corpuscles in the blood
- oligocythemic (ol"ig-o-si-them'ik). Relating to or affected with oligocythemia.
- oligocytosis (ol"ig-o-si-to'sis). Same as oligocythemia.
- oligodactylia (ol"ig-o-dak-til'e-ah) [Gr. δλίγος few + δάκτυλος digit]. A condition in which the fingers or toes are congenitally fewer than is normal.
- oligodendria (ol"ig-o-den'dre-ah). Oligodendroglia.
- lia.

 oligodendroglia (ol"ig-o-den-drog'le-an) [οι δλίγος few + δένδρον dendron + neuroglia].

 Non-neural cells of ectodermal origin forming part of the adventitial structure of the central nervous system. Their vine-like prolongations investment for the myelin form an incomplete investment for the myelin sheaths in the white matter, and with microglia they form the perineuronal satellites in the gray matter Called also mesoglia
- oligodipsia (ol"ig-o-dip'se-ah) [Gr. δλίγος few + δίψα thirst]. Abnormal absence of thirst.
- oligodynamic (ol"ig-o-di-nam'ik) [Gr. δλίγος few + δύναμις power]. Active in very minute quantities.
- oligo-erythrocythemia (ol"ig-o-er"ith-ro-si-the'me-ah) [Gr. $\delta\lambda i\gamma$ os few $+\epsilon\rho\nu\theta\rho\delta$ s red $+\kappa\nu\tau$ os cell $+\alpha i\mu\alpha$ blood]. Deficiency of coloring-matter in the red blood-corpuscles; also deficiency of red blood-corpuscles.
- oligogalactia (ol''ig-o-gal-ak'she-ah) [Gr. δλίγος few + γάλα milk]. Deficient secretion of milk.

- oligogenics (ol"ig-o-jen'iks) [Gr. όλιγος few + YEVVAV to produce]. Limitation of the number of offspring; birth control.
- oligoglobulia (ol"ig-o-glo-bu'le-ah). Same as oligocythemia.
- oligohemia (ol"ig-o-he'me-ah). Same as oligemia.
- oligohydramnios (ol''ig-o-hi-dram'ne-os) όλίγος few + υδωρ water + άμνίον amnion]. Scantiness of the liquor amnii.
- oligohydruria (ol"ig-o-hi-dru're-ah) [Gr. δλίγος few + ὕδωρ water + οὐρον urine]. Abnormally high concentration of the urine.
- oligolecithal (ol"ig-o-les'ith-al) [Gr. δλίγος few λέκιθος yolk]. Possessing only a little yolk; the human ovum is oligolecithal.
- oligoleukocythemia (ol"ig-o-lu"ko-si-the'me-ah) [Gr. όλίγος little + leukocyte + Gr. alμa blood]. Same as leukopenia.
- oligoleukocytosis (ol"ig-o-lu"ko-si-to'sis). Same as leukopenia.
- oligomania (ol''ig-o-ma'ne-ah) [Gr. δλίγος few + μανία madness]. Insanity on a few subjects; impairment of a few of the mental faculties.
- oligomastigate (ol"ig-o-mas'tıg-āt) [Gr. ὀλίγος few + μάστιξ lash]. Having only two flagella.
- oligomenorrhea (ol''ig-o-men-or-e'ah) [Gr. $\delta\lambda i\gamma$ os few $+\mu\hat{\eta}\nu$ month $+\dot{\rho}oi\alpha$ flow]. Scantiness of the menstrual discharge.
- oligomorphic (ol''ig-o-mor'fik) [Gr δλίγος few + μορφή form]. Passing through only a few forms of growth. said of microorganisms.
- oligonecrospermia(ol"ig-o-nek-ro-sper'me-ah)[Gr. ολίγος few + νέκρος dead + $\sigma\pi$ έρμα sperm]. A condition of the spermatic fluid in which there is diminution of the number of spermatozoa, some of which are dead.
- ${\bf oligonit rophilous}\ ({\bf ol''ig\text{-}o\text{-}ni\text{-}}$ tro-fil'ık, ol''ig-o-ni-trof'il-us) [Gr. όλίγος few + nitrogen + Gr. φιλείν to love]. A term describing organisms that absorb nitrogen from the air and from media containing combined nitrogen.
- oligopepsia (ol"ig-o-pep'se-ah) [Gr. ολίγος little $+\pi i\psi_{is}$ digestion]. Feeble digestion.
- oligophosphaturia (ol"ig-o-fos-fat-u're-ah). Deficiency in the excretion of phosphates by the
- oligophrenia (ol"ig-o-fre'ne-ah) [Gr. δλίγος scanty + φρήν mind]. Defective mental development.
- **oligoplasmia** (ol"ig-o-plaz'me-ah) [Gr. $\delta \lambda \lambda \gamma \sigma s$ scanty $+ \pi \lambda \dot{\alpha} \sigma \mu \alpha$ thing formed]. A deficient quantity of plasma in the blood.
- oligoplastic (ol"ig-o-plas'tik) [Gr. δλίγος scanty + plasm]. Deficient in plasm.
- oligopnea, oligopnesa (ol''ig-op-ne'ah) [Gr. δλίγος few + πνοῖα breath]. Retarded breathing.
- oligoposy (ol-ig-op'o-se) [Gr. δλίγος scanty + πόσις drink]. The disordered state resulting from too little drinking of fluids.
- oligopsychia (ol"ig-o-si'ke-ah) [Gr. δλίγος few + ψυχή mind]. Mental weakness.
- oligoptyalism (ol''ig-o-ti'al-izm) [Gr. δλίγος few + πτύαλον saliva]. Diminished secretion of saliva.
- oligoria (ol-ig-o're-ah) [Gr. δλιγορία apathy]. A form of melancholia (Snell).
- oligosialia (ol"ig-o-si-a'le-ah) [Gr. ολίγος few + σlaλον saliva]. Pathologically diminished secretion of saliva
- oligospermatism (ol'ig-o-sper'mat-izm). Same as oligospermia.
- oligospermia (ol"ig-o-sper'me-ah) [Gr. scanty $+ \sigma \pi \dot{\rho} \mu a$ seed). Scantiness of the seminal secretion, or paucity of spermatozoa in the semen.
- oligosporidia (ol"ig-o-spo-rid'e-ah). A suborder of protozoan microorganisms, or coccidia, forming spores which divide, each one producing several sickle-shaped reproductive bodies. Some are pathogenic.

- oligotrichia (ol"ig-o-trik'e-ah) [Gr. $\delta\lambda l\gamma$ os scanty + $\theta\rho l\xi$ hair]. Congenital thinness of the growth of hair.
- oligotrichosis (ol"ig-o-trik-o'sis). Oligotrichia.
- oligotrophy (ol-ig-ot'ro-fe) [Gr. δλίγος deficient + τροφή nourishment]. Insufficient nutrition.
- oligozoöspermatism, oligozoöspermia (ol'igo-zo-o-sper'mat-izm, ol''ig-o-zo-o-sper'me-ah) [Gr. ολίγος few + ζφον animal + σπέρμα seed]. A deficient supply of spermatozoa in the semen.
- oliguresis, oliguria (ol''ig-u-re'sis, ol-ig-u're-ah) [Gr. δλίγος scanty + οὐρον urine]. Deficient secretion of the urine; abnormally diminished frequency of micturition.
- olikaguria (ol'ik-ag-u're-ah) [Gr. δλικ- infrequent + οδρον urine]. A condition in which urination occurs at very long intervals
- olintal (o'lin-tal). A liquid soap containing 2.8 per cent. of myrrh, 0 5 per cent. of camphor, and 0.5 per cent. of menthol used locally in diphtheria.
- oliophen (o-li'o-fen). An antigonorrheal solution of salol and linseed oil in olive oil. Dose, 30 min. (2 c.c.).
- oliva (o-li'vah) [L. "olive"]. [B N A]. The olivary body. See body.
- olivary (ol'iv-a-re) [L. oliva'rius]. Shaped like an olive. o. bodies. See under body.
- olive (ol'iv) [L. oli'va]. 1. The tree O'lea europa'a; also its fruit. The latter affords a fixed
 oil (olive oil, sweet oil), which consists chiefly of
 olein and palmitin, and is employed as a food, as
 a mild laxative, and as an application to wounds,
 bruises, etc. 2. Any olive-shaped body, especially
 the olivary body. See body. inferior o., the
 inferior olivary body. spurge o., mezereon.
 superior o., the superior olivary body.
- olivenol-iodate (ol-iv-e''nol-i'o-dāt). A compound of iodin with olive oil containing 7.6 per cent. of iodin used in asthma, bronchitis, and subcutaneously in syphilis.
- Oliver's sign (ol'iv-erž) [Sir Thomas Oliver, English physician, born 1853]. See under sign.
- Oliver's test [George Oliver, English physician, 1841-1915]. See under tests.
- Oliver-Cardarelli sign (ol'iv-er-kar-dar-el'e). See under sign.
- olivifugal (ol-iv-if'u-gal) [olive + L. fu'gere to flee]. Moving from or going away from the oliva. olivipetal (ol-iv-ip'et-al) [olive + L. pe'tere to
- seek]. Passing or conducting toward the oliva.

 Ollier's disease (ol-e-az') [Léopold Louis Xavier
- Edouard Ollier, a French surgeon, 1830-1901].
 Achondroplasia.
- Ol. lini s. i. Abbreviation for L. o'leum li'ni si'ne ig'ne, cold-drawn linseed oil.
- O1. oliv. Abbreviation for L. o'leum oli'væ, olive oil. olophonia (ol-o-fo'ne-ah) [Gr. όλοός ill + φωνή voice]. Defective speech due to malformed vocal organs.
- O. L. P. An abbreviation for L. occipito lævo posterior, or the left occipitoposterior position of the fetal head in labor.
- Ol. res. Abbreviation for oleoresin.
- Olshausen's method, operation (ols'how-zenz) [Robert von Olshausen, obstetrician in Berlin, 1835–1915]. See under method and operation.
- O. m. Abbreviation for L. om'ni ma'ne, every morning.
- -oma [Gr. -ωμα]. A Greek suffix or termination implying a morbid condition, especially a tumor, of the part indicated by the word to which it is attached.
- omacephalus (o-mas-ef'al-us) [Gr. ὧμος shoulder + κεφαλή head]. A monster fetus with deficient head and no upper extremities.
- omagra (o-ma'grah, o'mag-rah) [Gr. ωμος shoulder + άγρα seizure]. Gout in the shoulder.

- omal (o'mal). Trichlorphenol, OH.C₆H₂.Cl₈; a colorless, crystalline derivative of phenol and chlorin: used by inhalation in diseases of the airpassages, and in 5 to 10 per cent. ointment.
- omalgia (o-mal'je-ah) [Gr. ωμος shoulder + άλγος pain]. Pain in the shoulder.
- omarthritis (o-mar-thri'tis) [Gr. ωμος shoulder + ωρθρον joint + -ιτις inflammation]. Inflammation of the shoulder-joint.
- omasitis (o-ma-si'tis). Inflammation of the omasum.
- omasum (o-ma'sum). The third division of the stomach of ruminant animals. Called also manifold manyplies and psallerium.
- omatidium (o-mat-id'e-um). One of the elongated units of a compound eye of an arthropod.
- ombrophobia (om-bro-fo'be-ah) [Gr $\delta\mu\beta\rho$ os rain $+\varphi\delta\beta$ os fear]. Fear of rain.
- ombrophore (om'bro-för) [Gr. δμβρος rain + φόρος bearer]. An apparatus for applying a douche bath of water containing carbon dioxid.
- omega melancholium (o'me-gah mel-an-ko'leum). A folding of the skin between the eyebrows ike the Greek letter omega (ω); a sign of melancholia.
- omeire (o-mi're). A native drink of southwest Africa, made by permitting milk to ferment.
- omental (o-men'tal). Pertaining to the omentum.
 omentectomy (o-men-tck'to-me) [omentum + Gr. ἐκτομή excision]. Excision of a portion of the omentum.
- omentitis (o-men-ti'tis). Inflammation of the omentum.
- omentofixation (o-men"to-fiks-a'shun). Same as omento pexy.
- omentopexy (o-men'to-peks-e) [omentum + Gr. πηξις fixation]. The operation of suturing the omentum to the abdominal wall, securing anastomotic communication between the portal system and that of the vena cava.
- omentoplasty (o-men'to-plas-te) [omentum + Gr. πλάσσειν to form]. The use of omental grafts.
- omentorrhaphy (o-men-tor'af-e) [omentum + Gr. βαφή suture]. The operation of suturing the omentum.
- omentosplenopexy (o-men-to-sple'no-peks-e). Combined omentopexy and splenopexy.
- omentotomy (o-men-tot'o-me) [omentum + Gr. τομή cut]. Incision of the omentum.
- omentovolvulus (o-men-to-vol'vu-lus). Volvulus of the omentum.
- omentulum (o-men'tu-lum). The lesser omentum. omentum (o-men'tum) [L]. A reduplication of the peritoneum going from the stomach to the adjacent organs. gastrocolic o., great o., a fold of omentum connected with the great curvature of the stomach and infolding the transverse colon. gastrohepatic o., lesser o., the omental fold joining the lesser curvature of the stomach to the transverse fissure of the liver. gastrosplenic o., a fold of peritoneum which connects the spleen with the stomach. Haller's colic o., a process from the greater omentum, which sometimes in fetal life becomes attached to the testis, and may be included in an inguinal hernia. o. ma'jus [B N A], the great omentum. o. mi'nus [B N A], the lesser omentum. pancreaticosplenic o., the peritoneum connecting the tail of the pancreas with the inner surface of the spleen.
- omitis (o-mi'tis) [Gr. ωμως shoulder + -ιτις inflammation]. Inflammation of the shoulder.
- Omn. bih. Abbreviation for L. om'ni biho'ra, every two hours.
- Omn. hor. Abbreviation for L. om'ni ho'ra, every hour.
- omnadin (om'nad-in) [L. om'nis all + Gr. άδην gland]. A proprietary mixture of partial antigens

containing the metabolic products of various bacteria, lipoids from bile, and neutral fats. On injection it is supposed to non-specifically increase the production of any or all antibodies.

omnivit (om'niv-it). A proprietary vitamin preparation.

omnivorous (om-niv'o-rus) [L. om'nis all + vora're to eat]. Subsisting upon food of every kind.

Omn. noct. Abbreviation for L. om'ni noc'te, every night.

omnopon (om'no-pon) [L. om'nis all + opium]. Pantopon.

omo- [Gr. ωμος shoulder]. A prefix denoting some relation to the shoulder.

omocephalus (q-mo-sef'al-us) [Gr. ωμος shoulder + κεφαλή head]. A fetus with no arms and an incomplete head.

omoclavicular (o"mo-klav-ik'u-lar). Pertaining to the shoulder and the clavicle.

omodynia (o-mo-din'e-ah) [Gr. ωμος shoulder + δδύνη pain]. Pain in the shoulder.

omohyoid (o-mo-hi'oid). Pertaining to the shoulder and the hyoid bone. See muscles, table of.

omophagia (o-mo-fa'je-ah) [Gr. ώμός raw φαγεῖν to eat]. The eating of raw food.

omorol (o'mo-rol). An organic silver preparation for local application in diphtheria.

omosternum (o-mo-ster'num). The interarticular cartilage at the joint between the sternum and clavicle.

omphalectomy (om-fal-ek'to-me) [Gr. δμφαλός navel + ἐκτομή excision]. Excision of the navel. omphalelcosis (om'fal-el-ko'sis) [Gr. δμφαλός

navel + ἔλκωσις ulceration]. Ulceration of the umbilicus.

Omphalia (om-fa'le-ah). See tambor oil, under oil. omphalic (om-fal'ik) [Gr. δμφαλικόs]. Pertaining to the umbilicus.

omphalitis (om-fal-i'tis) [Gr. δμφαλός navel + -ιτις inflammation]. Inflammation of the navel.

omphalo-angiopagous (om''fal-o-an-jc-op'ag-us) [Gr. δμφαλός navel + ἄγγεῖον vessel + παγός fixed]. Joined by the vessels of the umbilical cords: said of enzygotic twins.

omphalocele (om-fal'o-sēl) [Gr. δμφαλός navel + κήλη hernia]. An umbilical hernia.

omphalochorion (om''fal-o-ko're-on). The structure in the embryo formed by fusion of the yolksac with the chorion.

omphalogenesis (om-fal-o-jen'es-is) [Gr. δμφαλός navel + γενεσις formation]. Development of the umbilicus in the embryo.

omphaloma (om-fal-o'mah) [Gr ὁμφαλός navel + -ομα tumor]. A tumor of the umbilicus.

omphalomesaraic (om"fal-o-mes-ar-a'ik). Same as omphalomesenteric.

omphalomesenteric (om"fal-o-mes-en-ter'ik).
Pertaining to the navel and mesentery.

omphaloncus (om-fal-ong'kus) [Gr. δμφαλός navel + δγκος tumor]. A tumor or swelling of the umbilicus.

omphalopagus (om-fal-op'ag-us) [Gr. δμφαλός navel + πηγνύναι make fast]. Same as monom-phalus.

omphalophlebitis (om"fal-o-fle-bi'tis) [Gr. $\delta\mu$ - $\varphi a\lambda \delta s$ navel $+ \varphi \lambda \delta \psi$ vein]. 1. Inflammation of the umbilical veins. 2. Navel ill; a condition of markedly suppurative lesions in young animals, due to infection through the umbilicus.

omphalorrhagia (om''fal-o-ra'je-āh) [Gr. ὁμφαλός navel + ἡηγνύναι to burst forth]. Hemorrhage from the umbilicus.

omphalorrhea (om"fal-o-re'ah) [Gr. ὁμφαλός navel + ροία flow]. An effusion of lymph at the navel.

omphalorrhexis (om"fal-o-reks'is) [Gr. ὁμφαλός navel + ῥήξις rupture]. Rupture of the umbilicus.

omphalosite (om'fal-o-sit) [Gr. δμφαλόs navel + σίτος food]. A monster-fetus with no heart and which dies when the navel-string is cut.

omphalosotor (om-fal-o-so'tor) [Gr. $\delta\mu\varphi\alpha\lambda\delta$ s navel $+\sigma\omega\tau\hat{\eta}\rho$ preserver]. An instrument for replacing the prolapsed umbilical cord in childbirth.

omphalospinous (om"fal-o-spi'nus) [Gr. δμφαλός navel + spinous]. Pertaining to the umbilicus and the anterior spine of the ilium.

omphalotomy (om-fal-ot'o-me) [Gr. $\delta\mu\varphi\alpha\lambda\delta$ s navel + $\tau\epsilon\mu\nu\epsilon\nu$ to cut]. The cutting of the navel-string.

omphalotribe (om-fal'o-trīb). An instrument for crushing the umbilical cord.

omphalotripsy (om-fal-o-trip'se) [Gr. $\delta\mu\varphi\alpha\lambda\delta s$ navel + $\tau\rho i\beta\epsilon\iota\nu$ to crush]. The separation of the navel-string by a crushing operation.

omphalus (om'fal-us) [Gr.]. The navel or umbilicus.

Om. quar. hor. Abbreviation for L. om'ni quadran'te ho'ra, every quarter of an hour.

omunono (om-u-no'no). A native name for frambesia.

O. n. Abbreviation for L. om'ni noc'te, every night. onanism (o'nan-izm) [Onan son of Judah]. Masturbation; more correctly, withdrawal of the penis before the completion of the sexual act.

Onanoff's reflex or sign (on-ah'nofs) [Jacques Onanoff, French physician, born 1859]. See reflex.

onaye (o-nah'ye). An exceedingly virulent poison from the seeds of Strophan'thus his pidus.

Onchocerca (ong-ko-ser'kah) [Gr. δγκος tumor + κέρκος tail]. A genus of filarious worms. O. cocu'tiens, a species that causes subcutaneous nodules on the heads of natives in Guatemala. The disease is known locally as coast erysipelas. O. gibso'ni infests the subcutaneous tissues of cattle, producing nodular swellings on the flanks, knees, and shoulders. O. vol'vulus, a species widely distributed in western and central Africa; transmitted by Glossina palpalis. It causes subcutaneous fibrous tumors as large as nuts. It is also found in elephantiasis in the Congo.

onchocerciasis (ong"ko-ser-ki'as-is). The condition produced by infection with Onchocerca.

Oncocerca (ong-ko-ser'kah). Onchocerca.

oncograph (ong'ko-graf) [Gr. ὅγκος tumor + γράφειν to record]. A recording device attached to the oncometer.

oncography (ong-kog'raf-e). The graphic recording of the outlines of organs.

oncoides (ong-koi'dez) [Gr. δγκός tumor + είδος form]. Turgid swelling; intumescence.

oncology (ong-kol'o-je) [Gr. δγκος tumor + λόγος discourse]. The sum of knowledge concerning tumors.

oncolysis (ong-kol'is-is) [Gr. δγκος tumor + λύσις dissolution]. The lysis or destruction of cancer cells.

oncolytic (ong-ko-lit'ik) [See oncolysis]. Destroying tumor cells.

oncoma (ong-ko'mah) [Gr. δγκωμα]. An ancient name for a tumor.

oncometer (ong-kom'et-er) [Gr. δγκος mass + μέτρον measure]. An instrument for measuring variations in the size of viscera.

oncometric (ong-ko-met'rik). Pertaining to the oncometer.

oncometry (ong-kom'et-re). The measurement of variations in the size of viscera.

oncosis (ong-ko'sis) [Gr. δγκος tumor]. The diseased condition characterized by the development of tumors.

oncosphere, oncosphæra (ong'ko-sfēr, ong-ko-sfe'rah) [Gr. δγκος hook + σφαίρα sphere]. The larva of the tape worm in the spheric stage, enclosed in a thick ciliated membrane and armed with six hooks. It may be found in the feces.

- oncothlipsis (ong-ko-thlip'sis) [Gr. δνκος tumor + θλίψις pressure]. Pressure caused by a tumor.
- oncotic (ong-kot'ik). Pertaining to, or marked by, swelling.
- **oncotomy** (ong-kot'o-me) [Gr. δγκος tumor + τεμνειν to cut]. The incision of a tumor, abscess, or swelling.
- oncotropic (on-ko-trop'ik) [Gr. ὅνκος tumor + τροπή a turn]. Having a special affinity or attraction for tumor cells; called also tumorafin.
- ondometer (on-dom'et-er). An apparatus for measuring the frequency of the oscillations in highfrequency currents
- 102. See luargol.
- oneiric, oniric (on-i'rik) [Gr. ὅνειρος dream]. Pertaining to dreams.
- oneirism, onirism (o-ni'rizm) [Gr. ὅνειρος dream].
 A dream-like waking hallucination.
- oneirodynia (o"ni-ro-din'e-ah) [Gr. δνειρος dream + δδύνη pain]. Nightmare.
- oneirology (on-i-rol'o-je) [Gr. ὄνειρος dream + λόγος treatise]. The science of dreams.
- oneiroscopy (o-ni-ros'ko-pe) [Gr. δνειροs dream + σκοπεῖν to examine]. Analysis of dreams for the purpose of diagnosing the patient's mental state.
- one-two-three. A local anesthetic for dental use, containing 1 part oil of cassia, 2 parts carbolic acid, 3 parts oil of wintergreen.
- oniomania (o"ne-o-ma'ne-ah) [Gr. ωνως for sale + μανία madness]. An insane desire to make purchases.
- onion (un'yun) [L. u'nio; ce'pa]. The plant Al'lium ce'pa and its edible bulb. It is expectorant, diuretic, and stimulant, and the syrup is used in bronchitis in doses of 1 fl.dr. (4 c.c.).
- Oniscus asel'lus (o-nis'kus). The sow-bug, an insect-like isopod found in cellars, etc.: diuretic and stimulant. It is principally used in homeopathic practice.
- **onkinocele** (on-kin'o-sēl) [Gr. δγκος swelling + t_s fiber + κήλη tumor]. A swollen condition of a tendon-sheath.
- onobaio (o-no-ba'yo). A powerful arrow-poison from Obok, in Africa. It has a depressant action on the heart.
- onomatology (on-o-mat-ol'o-je) [Gr. ὅνομα name + λόγος treatise]. The science of names and nomenclature.
- onomatomania (on-o-mat-o-ma'ne-ah) [Gr. ὅνομα name + μανία madness]. Mental derangement with regard to words or names, marked by persistent dwelling on some particular word, by perplexed effort to recall some word, by attaching some special significance to certain words, or by showing disgust for certain words (Charcot and Magnan, 1885).
- onomatophobia (on-o-mat-o-fo'be-ah) [Gr. ὅνομα name + φόβος fear]. Morbid dread of hearing a certain name or word.
- onomatopoiesis (on-o-mat"o-poi-e'sis) [Gr. ὅνομα name + ποιεῖν to make]. The formation of meaningless words by the in-anc.
- ononin (o-no'nin). A glucosid, C₃₀H₃₄O₁₃, from the root of *Ono'nis spino'sa*.
- **Ononis spino'sa** (o-no'nis). A leguminous plant of Europe. It is diuretic: used mainly in homeopathic practice.
- onotoxin (on-o-tok'sin). A proprietary remedy for gonorrhea.
- ontogenesis, ontogeny (on-to-jen'es-is, on-toj'-en-e) [Gr. ἄν existing + γεννᾶν to beget] The evolution or developmental history of the in-dividual organism Cf. phylogeny.
- ontogenetic, ontogenic (on"to-jen-et'ik, on-to-jen'ik). Pertaining to ontogenesis.
- onyalia, onyalia (o-ne-al'a-e, o-ne-a'le-ah). A disease occurring among the blacks of Portuguese

- West Africa, and marked by the formation, on the valatal and buccal mucous membrane, of blebs containing semi-coagulated blood and without signs of constitutional disorder.
- onychatrophia, onychatrophy (o"nik-at-ro'-fe-ah, o-nik-at'ro-fe) [Gr. δνυξ nail + α priv. + τροφή food]. Atrophy of a nail or of the nails.
- onychauxis (0-nik-awks'is) [Gr. δνυξ nail + αυξειν to increase]. Overgrowth of the nails.
- onychia (0-nik'e-ah) [Gr. δνυξ nail]. Inflammation of the matrix of the nail resulting in loss of the nail. See paronychia. o. latera'lis, paronychia o. malig'na, onychia with fetid ulceration and loss of the nail. o. parasit'ica, onychomycosis. o. periungua'lis, paronychia. o. sic'ca, syphilitic inflammation of the nail matrix in which the nail becomes thick and brittle.
- onychitis (o-nik-i'tis) [Gr. ὅνυξ nail + -ιτις inflammation]. Inflammation of the matrix of a nail.
- onychoclasis (on-ik-ok'las-is) [Gr ὅνυξ nail + κλάσις breaking]. Breaking of the nail.
- onychocryptosis (on"ik-o-krip-to'sis) [Gr. δνυξ nail + κρίπτειν to conceal]. Ingrowing toe-nail.
- onychogram (o-nik'o-gram). A tracing made by the onychograph.
- onychograph (o-nik'o-graf) [Gr. ὅνυξ nail + γράφειν to write]. An instrument for observing and recording the nail-pulse and capillary circulation.
- onychogryphosis (on''ik-o-grif-o'sis). Onychogryposis.
- onychogryposis (on"ik-o-gri-po'sis) [Gr. δνυξ nail $+ \gamma ρ ίπωσι$ s bending]. A hooked or incurved state of the nails.
- onychohelcosis (on"ik-o-hel-ko'sis) [Gr δυυξ nail + ἔλκωσις ulceration]. Ulceration of the nail.
- onychoid (on'ik-oid) [Gr. $\delta \nu \nu \xi$ nail $+ \epsilon l \delta o s$ form]. Resembling a finger-nail.
- onycholysis (0-nik-ol'is-is) [Gr. δνυξ nail + λύσις loosening]. Loosening of the nails.
- onychoma (o-nik-o'mah) [Gr. ὅνυξ nail + -ωμα tumor]. A tumor of the nail or nail-bed.
- onychomalacia (on"ik-o-ma-la'se-ah) [Gr δνυξ nail + μαλακία softness]. Softening of the fingernail.
- onychomycosis (on"ik-o-mi-ko'sis) [Gr δνυξ nail+μύκης fungus]. A disease of the nails due to the presence of the ringworm or the favus fungus. The nails become opaque, white, thickened, soft, and brittle. Called also o. favo'sa o. favo'sa, that due to the favus fungus. o. tonsu'rans, a disease produced by the growth of Trichoph'ylon in the nails. o. trichophyti'na, that due to the fungus of ringworm.
- onychonosus (o-nik-on'o-sus) [Gr. ὄνυξ nail + νόσος disease]. Disease of the nails.
- onychopathic (on-ik-o-path'ik) Pertaining to onychopathy or any disease of the nails
- onychopathology (on"ik-o-path-ol'o-je) [Gr. δνυξ nail + pathology]. The pathology of diseases of the nails.
- onychopathy (o-nik-op'ath-e) [Gr. ὄνυξ nail + πάθος disease]. Disease of the nails.
- onychophagist (o-nik-of'a-jist). One who habitually bites the finger-nails.
- onychophagy (o-nik-of'a-je) [Gr. $\delta\nu\nu\xi$ nail + $\varphi\alpha\gamma\epsilon\hat{\iota}\nu$ to eat]. The morbid habit of eating or biting the nails.
- onychophosis (on''ik-o-fo'sis) [Gr. ὅνυξ nail]. A horny growth beneath the toe-nails.
- onychophyma (on'ik-o-fi'mah) [Gr. δνυξ nail + φθμα growth]. Thickening or enlargement of the nail.
- onychoptosis (on"ik-op-to'sis) [Gr. δνυξ nail + πτῶσις falling]. Falling off of the nails.
- **onychorrhexis** (on''ik-o-reks'is). Spontaneous splitting of the nail.

- onychosis (on-ik-o'sis) [Gr. δνυξ nail]. Disease or deformity of a nail or of the nails.
- onychotrophy (on-ik-ot'ro-fe) [Gr. δνυξ nail + τροφή nutrition]. Nutrition of the nails.
- onym (on'im) [Gr. ὄνυμα name]. A technical name or term.
- onyx (o'niks) [Gr. δνυξ nail]. 1. A nail of a finger or toe. 2. A variety of hypopyon.
- onyxis (o-niks'is) [Gr. ὄνυξ nail]. Ingrowing nail.
- onyxitis (o-niks-i'tis) [Gr. δνυξ nail + -ιτις inflammationl. Same as onvchitis.
- oöblast (o'o-blast) [Gr. $\phi \delta \nu$ egg + $\beta \lambda \alpha \sigma \tau \delta s$ germ]. The cell whence the ovum is developed.
- oöcenter (o'o-sen-ter). Ovocenter.
- oocinesia (o''o-sin-e'ze-ah). Same as ookinesis.
- oöcinete (o-o-sin'ēt). Same as ookinete.
- oöcyanin (0-0-si'an-in) [Gr. ψόν egg + κύανος blue]. A bluish coloring-matter from birds' eggs.
- oöcyesis (o''o-si-e'sis) [Gr. ψόν egg + κύησις pregnancy]. Ovarian pregnancy.
- oöcyst (o'o-sist) [Gr. ψόν egg + κύστις bladder]. The tough membrane surrounding a sporont after the union of the gametes; also the protozoan individual in this stage of development.
- oöcytase (o-o-si'tās). A cytase or enzyme having a destructive effect on ovarian cells
- oöcyte (o'o-sīt) [Gr. ψόν egg + κύτος cell]. The original cell of the ovarian egg before the formation of the polar bodies The oocyte splits up into the first polar body and the secondary oocyte, the latter dividing to form the second polar body and the mature egg.
- oöcytin (o-o-si'tin). A substance obtained from spermatozoa, leukocytes, and red blood-cells which will cause the formation of fertilization membranes
- oödeocele (o-o'de-o-sēl) [Gr. ψοδης egg-shaped + κήλη hernia]. Obturator hernia
- oögenesis (0-0-jen'is-is) ιGr. ψόν egg + γένεσις production]. The origin and development of the ovum; miosis in the female.
- oögonium (0-0-go'ne-um) [Gr. φόν egg + γονή generation]. 1. The primordial cell from which the ovarian egg arises. 2. Any one of the elements derived from the germ-cell which give rise to the oocytes.
- oökinesis (ο"o-kin-e'sis) [Gr. ψόν egg + κίνησις motion]. The mitotic movements of the egg during maturation and fertilization.
- oökinete (0-0-km'ēt) [see oökinesis]. The motile free stage of the malarial parasite (zygote) in the mosquito during which it penetrates the wall of the gut and becomes the oocyst.
- oölemma (o-o-lem'ah) [Gr. $\dot{\phi}$ ον egg + λέμμα sheath]. The limiting membrane of the ovum; the zona
- oöphoralgia (o"of-or-al'je-ah) [Gr. ψόν egg + φέρειν to bear + ἄλγος pain]. Pain in an ovary.
- oophoraphy (o-of-or'af-e) [oophororrhaphy]. choring of a prolapsed ovary by suturing its hilus to the relaxed infundibulopelvic ligaments (Imlach-Tait, 1885).
- oöphorauxe (ο"o-fo-rawks'e) [οöphoron + Gr. αὐξή increase]. Enlargement of the ovary.
- oöphorectomy (ο"of-o-rek'to-me) [Gr. φόν egg + φέρειν to hear + ἐκτομή excision]. The surgical removal of an ovary.
- oophorin (o-of'o-rin). A therapeutic preparation of the fresh ovaries of cows and swine. Dose, 5 gr. (o.३ gm.).
- oophoritis (ο"of-o-ri'tis) [Gr. ψόν egg + φέρειν to bear + -ιτις inflammation]. Inflammation of an ovary. o. sero'sa, edema of the ovary.
- oophorocystosis (0-of"o-ro-sis-to'sis) [Gr. ψόν egg + ψέρειν to bear + κύστις cyst]. The formation of an ovarian cyst.

- oöphoro-epilepsy (0-0?"o-ro-ep'il-ep-se) [oöpho-ron + epilepsy]. Epilepsy due to ovarian disease.
- opphorohysterectomy (o-of"o-ro-his-ter-ek'tome) [Gr. ψόν egg + φέρειν to bear + ὑστέρα womb + ἐκτομή excision]. Surgical removal of the uterus and ovaries.
- oophoroma (o"of-or-o'mah). A malignant tumor of the ovary.
- oöphoromalacia (o-of"or-o-mal-a'se-ah) [Gr. ψόν egg + ψέρειν to bear + μαλακία softness]. The morbid softening of an ovary.
- oophoromania (o-of"or-o-ma'ne-ah) [Gr. ψόν egg + φέρειν to bear + μανία madness]. Insanity due to ovarian disorder.
- oöphoron (o-of'o-ron) [Gr. ψόν egg + φέρειν to bear]. An ovary.
- oöphoropeliopexy (o-of"o-ro-pe'le-o-pek-se) [L. oophoron + Gr. $\pi\eta\lambda$ ios pelvis + $\pi\eta\xi$ is fixation]. Same as adnexopexy.
- oöphoropexy (o-of'o-ro-pek-se). Same as adnexopexy.
- oöphororrhaphy (o-of-or-or'af-e) [Gr. ψόν egg + ψέρειν to bear + ραφή suture]. The stitching of an ovary to the pelvic wall.
- oophorosalpingectomy (o-of"or-o-sal-pin-jek'tome) [Gr. ψόν egg + φέρειν to bear + σάλπιγξ tube + έκτομή excision]. Surgical removal of an ovary and oviduct.
- oöphorostomy (0-0-fo-ros'to-me) [Gr. ψόν egg + ψέρειν to bear + στόμα mouth]. The making of an opening into an ovarian cyst for drainage
- oophorotomy (o"o-fo-rot'o-me) [oophoron + Gr. τομή cutting]. The operation of splitting the τομή cutting]. ovary.
- oöplasm (o'o-plazm). The cytoplasm of the egg.
- oörhodein (o-o-ro'de-in) [Gr. ψόν egg + ρόδον red]. A red coloring-matter from birds' eggs.
- oösome (o'o-sōm) [Gr. ψόν egg + σόμα body]. A cytoplasmic body in the ovum which passes into the germ cells.
- oösperm (o'os-perm) [Gr. ψόν egg + σπέρμα seed]. The recently fertilized ovum.
- Oöspora (o-os'po-rah). A genus of fungi. lac'tis, a species found on the surface of milk, cheese, etc., and forming a white mold. O. tozen'ri, a species cultivated from black mycetoma. It produces a brown or dark color in cultures and may be responsible for the black color of the lesions in man.
- oösporangium (o-o-spo-ran'je-um). The female element in the sexual formation of oospores.
- oöspore (o'o-spōr) [Gr. ψόν egg + spore] A spore formed by the conjugation of two sexually differentiated elements.
- oösporosis (o"o-spo-ro'sis). Infection by an oospore; e. g., in chronic bronchitis.
- oötheca (o-o-the'kah) [Gr. ψοθήκη ovary]. ovary
- oöthecalgia (o''o-the-kal'je-ah). Ovarialgia.
- ootheco-[Gr. ψοθήκη ovary]. For words beginning thus see those beginning ovario-.
- oöthecocele (o"o-the'ko-sēl). Ovariocele.
- oöthectomy (o-o-thek'to-me). Surgical excision of an ovary.
- oötid (o'o tid). One of four cells derived from the two consecutive divisions of the primary oöcyte, and corresponding to the spermatids derived from division of the primary spermatocyte.
- oötype (o'o-tīp) [Gr. ώον egg + τύπος impression]. In some trematodes, a dilated portion of the uterus into which the oviduct opens and where the ovum is fertilized, invested with the yolk and provided
- ooxanthin (0-0-zan'thin) [Gr. ωόν egg + ξανθός yellow]. A yellow pigment found in egg shells.
- opacification (o"pas-if-ik-a'shun). A growing opaque, as of the cornea or lens.

opacity (o-pas'it-e) [L. opac'itas]. 1. The condition of being opaque. 2. An opaque spot or area.

opalescin (o-pal-es'in). An albuminoid derivable from milk: its solutions are opalescent.

opalgia (o-pal'je-ah) [Gr. ωψ face + άλγος pain]. Facial neuralgia.

opaline (o'pal-ēn) [L. o'palus opal]. Having the appearance of an opal.

opalisin (o-pal'is-in). An opalescent protein, obtainable from human milk.

opaque, opake (o-pāk') [L. opa'cus]. Impervious to light-rays; neither transparent nor translucent.

opeidoscope (o-pi'do-skōp) [Gr. ŏψ voice + είδοs form + σκοπείν to view]. An apparatus for studying the vibrations of the voice by means of light reflected from a mirror.

open (o'pen). 1. Exposed to the air; attended with exposure to the air; not covered by unbroken skin. 2. So interrupted (as a circuit) that an electric current cannot pass.

open-bite malocclusion. See under malocclusion.

opening (o'pen-ing). An aperture. **saphenous 0.**, an oval opening in the fascia of the upper thigh, below Poupart's ligament, transmitting the internal saphenous vein. Called also fossa ovalis.

operable (op'er-ab-l). That can be operated upon with reasonable hope of improvement.

operaphone (op'er-af-on). A proprietary aid for impaired hearing.

operation (op-er-a'shun) [L. opera'tio]. act performed with instruments or by the hands of a surgeon. 2. The specific effect of any drug. Abbe's o. 1. A lateral intestinal anastomosis made with rings of catgut. 2. Division of an esophageal stricture by string friction. 3. Intracranial resection of the second and third divisions of the fifth nerve for tic douloureux. Abernethy's o., an operation for ligation of the external iliac artery, with a curved incision running from a point one inch within and above the anterior superior spine to a point one and a half inches above and outside of the center of Poupart's ligament. Adams's o. 1. Subcutaneous intracapsular division of the neck of the femur for ankylosis of the hip. 2. Subcutaneous division of the palmar fascia at various points for Dupuytren's contraction.

3. Excision of a wedge-shaped piece from the eyelid for relief of ectropion.

4. Operation of crushing the projecting portion of a deflected nasal septum with a forceps and inserting a splint. . Advancement of the round ligaments. Aitken's o., double pelviotomy for narrow pelvis. Albee's o. 1. Operation for ankylosis of the hip, consisting of cutting off the upper surface of the head of the femur and freshening a corresponding point on the acetabulum, and permitting the two freshened surfaces to rest in contact. 2. Trans-plantation of a portion of the tibia into the split spinous processes of the vertebræ for tuber-culous spondylitis. Albee-Delbet o., an operation for fracture of the neck of the femur, done by drilling a hole through the trochanter and the neck and head of the femur and inserting a bone peg in this hole. Albert's o., excision of the knee to secure ankylosis for the cure of flailjoint. Alexander's o. 1. The shortening of the round ligaments of the uterus for displacement of that organ. 2. Ligation of the vertebral arteries for the cure or relief of epilepsy. 2. Ligation of the 3. Prostatectomy by median suprapubic and median perineal incisions. Alexander-Adams o. Same perman incisions. Allarton's o., median lithotomy. Allingham's (H.) o., inguinal colotomy by an incision parallel with and one-half inch above Poupart's ligament. Allingham's (W.) o., excision of the rectum by an incision into the ischiorectal fossæ, about the rectum, and extending backward to the coccyx. Alouette's o. See amputation. Alquié's o., Alquié-Alexander

o., extraperitoneal shortening of the round ligaments. Ammon's o. 1. Blepharoplasty by a flap from the cheek. 2. Dacryocystotomy. Amussat's o., lumbar colotomy by an incision across the outer border of the quadratus lumborum. Andrews's o. 1. An operation for inguinal hernia by the use of an imbricating or an overlapping suture. 2. An operation for hydrocele, including complete eversion of the lining without the use of stitches. Anel's o. I. Ligation of an artery close to an aneurysm and on the cardiac side. 2. Dilatation of the lacrimal duct with a probe, followed by an astringent injection. Annandale's o. 1. The removal of the condyles of the femur for genu valgum. 2. The fixation of displaced cartilages of the knee-joint by stitches. Antyllus's o., the ligation of an artery on both sides of an aneurysm, followed by evacuation of the contents through an incision. Appolito's o., enterorrhaphy by a right-angled continuous suture. Arlt's o., any one of several operations on the eye and the Arlt-Jaesche o., the transplantation of the ciliary bulbs from the edge of the lid for the cure of distichiasis. Armsby's o., an operation for inguinal hernia, consisting of invagination of the sac and the introduction of a single thread as a seton through the sac and the inguinal canal. **Asch's 0.,** an operation for the correction of deflection of the nasal septum, consisting of making a crucial incision over the deflection, taking up the segments, reducing the deflection, and inserting a tube to keep the segments in place. Baccelli's o., introduction of a wire thread into the sac of an ancurysm. **Badal's o.**, laceration of the infratrochlear nerve for the pain of glaucoma. Baker's o., removal of a transverse wedge from the posterior wall of the cervix uteri, done for the cure of anteflexion. Baldwin's o., formation of an artificial vagina by transplantation of a piece of the ileum between the bladder and the rectum Ball's o. 1. Cure of inguinal hernia by an oblitera-tion of the sac, which is partially dissected out and then twisted around its own axis; the fundus is then cut off and the stump made fast in the ring. 2. A special method of iliac colotomy by incision in the left linea semilunaris, the gut being secured by clamps above and below the site for the artificial anus until after suturing and opening the bowel. 3. Cutting of the sensory nerve-trunks of the anus for the relief of pruritus ani. **Bardenheuer's o.**, ligation of the innominate artery by partial bony resection through transverse and vertical incisions. Barker's 0. 1. An excision of the hip-joint by an anterior cut. 2. A special method of excising the astragalus by an incision extending from just above the external malleolus forward and inward to the dorsum of the foot. Barraquer's o. See phaco-eresis Barton's o., an operation for ankylosis consisting of sawing through the bone and removing a V-shaped piece. Barwell's o., a method of osteotomy for genu valgum by division of the upper end of the tibia below and the lower end of the tibia above their respective epiphyses. Bassini's o., a method for the radical cure of inguinal hernia. After twisting and removal of the sac, a layer is formed by stitching the edge of the rectus muscle to that of the internal oblique, and by fastening these to the transversalis muscle and its fascia and to Poupart's ligament. Over this pad the spermatic cord is placed, and then covered by the external oblique, which is stitched to Poupart's ligament. Bates's o., the division of a urethral stricture from within outward by means of a special form of urethrotome. Battey's o., normal ovariotomy, or the induction of the menopause by oophorectomy. Battle's o., an appendix operation in which temporary displacement of the rectus is done. Baudelocque's o., removal of the ovum in extra-uterine pregnancy by an incision through the posterior culde-sac of the vagina. **Baum's o.**, the stretch-ing of the facial nerve by an incision below the

ear. Baynton's o., application of adhesive straps and a bandage to indolent leg ulcers. Beatson's o., ovariotomy in cases of inoperable cancer of the breast, on the theory that lack of the internal secretion of the ovary will produce atrophy of the tumor **Beer's o.**, a flap-method for cataract. **Belfield's o.**, vasotomy. **Belmas's o.**, introduction of gold-beaters' skin into the neck of an inguinal hernia. Bennett's o., operation for varico-cele by partial excision of the pampiniform plexus, followed by suture of the divided ends of the plexus. Bent's o., a form of shoulder excision with flap taken from the deltoid region. Bergenhem's o., an operation for implanting the ureter into the rectum. Berger's o., interscapulothoracic amputation. Best's o., subcutaneous suture of the ab-dominal ring for hernia. Bevan's o., an operation for undescended testicle, by which the testicle is brought down permanently into the scrotum. Beyea's o., gastroplication. Bier's o. See Bier's amputation, under amputation. Bigelow's o., litholapaxy or rapid lithotrity. Billroth's o. 1. Pylorectomy performed through a transverse incision 2. Pylorogastrectomy with anterior gastroenterostomy. 3. Excision of the tongue by making a transverse incision below the symphysis of the jaw and joining it by two incisions, one on each side, parallel to the body of the mandible, with pre-liminary ligation of the lingual arteries. **Bircher's** o., suturing together a portion of the anterior and posterior walls of a dilated stomach in order to reduce its size. Bischoff's o., complete excision of the pregnant uterus through the abdomen. Bissell's O., excision of a section of the round and broad ligaments for uterine retroversion. Boari's o., transplantation of the vasa deferentia so that they will empty into the urethra.

Bobbs's o., cholecystotomy for the removal of gall-stones. Bobroff's o. 1. An osteoplastic operation for spina bifida. 2. Excision of the limit membrane of a cyst of the lines followed by glerness of a cyst of the liver, followed by closure of abdomen without drainage Bogue's o., multiple ligation of the veins with catgut in varicocele. Böhm's o., tenotomy of an ocular muscle for strabismus. Bonzel's o., iridodialysis performed with a hook inserted through a corneal incision. Borthen's o., iridotasis. Bose's o., a method of performing tracheotomy. Bottini's o., the operation of making a channel through the prostate with the galvanocautery for the cure of prostatic enterprise of the cure of th largement. Bouilly's o., excision of a part of the mucous membrane of the neck of the uterus, preserving the mucous membrane of the sides: done for atresia of the cervix. Bozeman's o., hysterocystocleisis. Brailey's o., stretching of the supratrochlear nerve to re-lieve pain in glaucoma. Braquehaye's o., operation for vesicovaginal fistula by freshening and invaginating the mucous membrane of the vagina. Brasdor's o., distal ligation for aneurysm. Brewer's O., closure of wounds of arteries by application of a special rubber plaster. Bryant's o., lumbar colotomy by an oblique incision between the lowest rib and the crest of the ilium. **Buck's o.**, cuneiform excision of the patella and the ends of the tibia and fibula. **Burckhardt's o.**, incision into a retropharyngeal abscess from the outside of the neck. (von) Burow's o., a plastic operation for removal of tumors without scars. Buzzi's o., the creation of an artificial pupil by a needle passed through the cornea. Caldwell-Luc o., the operation of opening into the antrum of Highmore by way of an incision into the supradental fossa opposite the second molar tooth. Callison's o., lumbar colotomy by a vertical incision. Calot's o., forcible reduction of gibbus by stretching under narcosis. capital o., one that involves a risk of life. Carnochan's o. 1. The ligation of a large artery for elephantiasis. 2. Removal of Meckel's ganglion and a considerable part of the fifth nerve for neuralgia; incision is made below the orbit, and the

ganglion is reached by trephination through the maxillary antrum. Carpue's o., the Indian method of rhinoplasty. Carter's o. 1. Formation of an artificial pupil by making a small opening in the cornea and doing an iridotomy. 2. Construction of an artificial bridge of the nose by transplanting a piece of bone from the rib. Cassel's o., excision of exostoses of the ear through the external auditory meatus by means of a gouge. celsian o. 1. Perineal lithotomy. 2. Embryotomy by decapitation. 3. Excision of epithelioma of the lip by a V-shaped incision. 4. Circular amputation. Chaput's o., an operation for artificial anus and for intestinal anastomosis. Cheever's o., complete tonsillectomy through the neck. Cheyne's o., a radical cure of femoral hernia by covering the orifice with a flap of the pectineus muscle. Chiaszi's o., epip-lopexy. Chiene's o. 1. The removal of a wedge from the inner condyle of the femur for the cure of knock-knee. 2. Exposure of the retro-pharyngeal space by lateral cervical incision along the posterior border of the sternomastoid. Chopart's o. 1. See under amputation. 2. A plastic operation on the lip. Civiale's o. 1. Mediobilateral lithotomy. 2. Lithotrity. Clark's o., a plastic operation for urethral fistula. Coakley's by incising through the cheek, removing the anterior wall, and cureting away the mucous membrane. Cock's o., urethrotomy by a cut along the median line of the perineum. Codivilla's o., an operation for pseudarthrosis by surrounding the pseudarthrosis with thin osteoperiosteal plates taken from the internal face of the tibia. o. of complaisance, an operation which need not be done immediately. Cooper's o., a method of tying the external iliac artery in a cut parallel with Poupart's ligament and 1 inch above it. Corradi's o. Same as Moore-Corradi o. cos-metic o., one intended to effect the removal of a deformity. Cotting's o., operation for ingrowing toe-nail, consisting in cutting off the side of the toe down to and including the ingrowing edge of the nail. Credé's o., resection of the pubes, followed by hysterectomy. Crile and Matas's O., production of regional anesthesia by intraneural infiltration. Cripps' O., a method of colotomy in the iliac region Critchett's O., excision of the anterior part of the eyeball. Cushing's O. 1. Exposure of the gasserian gang-lion and three divisions of the fifth nerve by the direct infra-arterial route. 2. A method of performing ureterorrhaphy without sup-port. Czerny's o., a method for the radi-cal cure of inguinal hernia. The sac is cut away after tying its neck with catgut; the stump is thrust into the abdominal cavity, and the wound closed with catgut sutures. **Dallas's o.**, an operation for the obliteration of the canal of an inguinal or femoral hernia by the mechanic incitement of an inflammation **Dana's o.**, resection of the posterior roots of the spinal nerves to relieve pain, athetosis, spastic paralysis, etc. Davat's O., cure of varicocele by compressing the veins by acufilopressure. Daviel's O., extraction of cataract through a corneal incision without cutting the iris. Davies-Colley O., the removal of a wedge of bone from the outer side of the tarsus for the correction of talipes. de Grandmont's O., an operation for ptosis of the lid. Delorme's O. Same as Fowler's O. Delpech's O., ligation of the axillary artery between the pectoralis major and deltoid muscles. Del Toro's o., the destruction of the apex of a conic cornea by a white-hot knife. Denans's o., the joining of a divided intestine over metallic cylinders. Denonvillier's o., plastic corrections of a divided in the cylinders. tion of a defective ala nasi by transferring a triangular flap from the side of the nose. Dieffenbach's o. 1. Amputation at the hip by a circular incision, with application of an elastic ligature, followed by removal of the ligature, securing of the

OPERATION

vessels, and the making of an incision on the outer aspect from a point two inches above the great trochanter to the circular incision. 2. Plastic closure of triangular defects by displacing a quadrangular flap toward one side of the triangle. Dittel's o., the enucleation of the lateral lobes of an enlarged prostate through an external incis-ion. **Doléris's o.**, for retrodeviation of the uterus by shortening the round ligaments and fixing them on either side by an opening in the rectus muscle just above the spine of the ilium. **Dow-ell's o.**, the radical cure of hernia by thrusting the fundus of the sac into its neck and suturing it there. **Doyen's o.**, eversion of the sac for the relief of hydrocele. **Dudley's o.** 1. A method of suturing a retroverted uterus to the round ligaments through an abdominal opening. 2. Posterior sagittal incision of the cervix for the relief of dysmenorrhea and sterility. Dührs-sen's o., vaginofixation of the uterus. Duplay's o., a designation for several plastic operations upon the congenitally deformed penis (epispadias and hypospadias). Dupuytren's o. See under amputation. Edebohls's o., decapsulation of the kidney for Bright's disease. Elliot's o., a method of trephining the sclerocornea for the relief of increased tension in glaucoma. Ely's o., skin-grafting performed on the granulating surfaces in chronic suppurative otitis media. **Em- met's o.** 1. A method of repairing a lacerated perineum. 2. Trachelorrhaphy, or suturation of the edges of a lacerated cervix uteri. 3. Artificially formed vesicovaginal fistula to secure drainage of the bladder in cystitis. equilibrating o., tenotomy of the direct antagonist of a paralyzed eye Estlander's o., the resection of one or more ribs in empyema so as to allow the chestwall to collapse and close the abnormal cavity. Everbusch's o., an operation for proiss.

Farabeut's o., ischiopublictomy

o., operation for prolapse of the uterus by
uniting with silver wire the edges of two denuded ovals on each side of the median line of the anterior vaginal wall Forgusson's O., an operation for excising the maxila Finney's O., a method of performing gastroduodenostomy. Flajani's O., iridodialysis performed with a needle thrust through the cornea. flap o., amputation with the formation of flaps which are rounded over the end of the stump. **Poerster's 0.** 1. The operation of cutting intradurally the seventh, eighth, and ninth dorsal nerveroots on both sides in locomotor ataxia. operation to produce rapid artificial ripening of cataract (1884). Fowler's o., decortication of the lung in empyema in order to allow the lung tissue to expand and fill the pleural space; pleurectomy. **Franco's o.**, suprapubic cystotomy. **Frank's o.**, a method of performing gastrostomy by forming a valve out of a cone of the stomach and suturing it to the incision in the chestwall and inserting a tube. Franke's o., removal of the intercostal nerves for the visceral crises of tabes **Fredet-Rammstedt o.**, the operation for congenital stenosis of the pylorus by incising the thickened serosa and muscularis down to the mucosa Freund's o. 1. See laparohysterectomy. 2. Chondrotomy for congenital funnel breast.

Freyer's o., a method of performing suprapublic enucleation of the hypertrophied prostate. **Friedrich's o.**, pleuropneumonolysis. **Frommel's o.**, shortening of the uterosacral ligaments for retrodeviation. Frost-Lang o., insertion of a gold ball to take the place of an enucleated eyeball. Fukala's o., removal of the lens of the eye for marked myopia. Galbaiti's o., ischiopubiotomy performed on both sides with a chain-saw, the fetus being delivered with the forceps employed in contracted pelvis. Gant's o., a division of the shaft of the femure below the lesser trochanter for ankylosis of the hip-joint. Gersuny's O., an operation for incontinence of feces, done by loosening the rectum from its adhesions, twisting threefourths of a turn on its long axis, and then suturing

it in place. The name is also applied to a similar operation on the female urethra for incontinence of urine. Gifford's o., destruction of the lacrimal sac by instilling trichloracetic acid into it. Gigli's o., lateral section of the os pubis for difficult labor. Gillespie's o., excision of the wrist by a lengthwise dorsal incision between the extensor communis and extensor medii digiti. Gilliam's o., an operation for retroversion of the uterus by drawing a loop of each round ligament through the abdominal wall and fixing the loops to the abdominal fascia. Gillies's O., operation for ectropion by forming the skin of the eyelids by an epithelial flap. Goffe's O., an operation for vaginal cystocele. Gottschalk's O., shortening of the uterosacral ligaments by the vaginal route. Grant's o., excision of tumors of the lip by removing a square block of tissue containing the tumor, and then making oblique incisions extending down and out from each angle of the wound. The triangular flaps thus formed are drawn toward the center and sutured. Gritti's o. See under amputation. Grossmann's o., treatment of retinal detachment by aspiration of the subretinal fluid and the slow injection of warm salt solution into the vitreous. Gussenbauer's o., the cutting of an esophageal stricture through an opening above the stricture. Guyon's o., amputation of the foot by an elliptic incision just above the malleoli. through an incision into the epididymis. Hahn's through an incision into the epididymis. Hahn's o., Hagner's o., drainage of gonorrheal epididymitis extirpation of the lacrimal gland by a curved incision through the middle of the eyebrow.

Halsted's O., a modification of Bassin's o.

Hancock's O. See under amputation. Handyside's o., ovariotomy in which the ligatures of the pedicle are carried into the vagina through Douglas' pouch. Hartley-Krause o., excision of the gasserian ganglion and its roots to relieve facial neuralgia. Haynes's o., the operation of draining the cysterna magna for acute suppurative meningitis. Heath's o., division of the ascending rami of the lower jaw with a saw for ankylosis performed within the mouth.

Heaton's o., an operation for inguinal hernia. Hegar's o., perineorrhaphy by denuding a triangular area on the center of the posterior wall of the vagina and suturing from above downward. Heine's O., cyclodialysis in glaucoma. Heineke's O., operation for cancer of the rectum by a T-shaped incision. Heineke-Mikulicz o., pyloroplasty; enlargement of the pyloric opening by an incision through its walls in a direction parallel to the long axis of the stomach, and closure of this by suture at right angles to the original incision. **Heisrath's o.**, excision of the tarsal folds for trachoma. **Herbert's o.**, displacement of a wedge-shaped flap of sclera in order to form a filtering cicatrix in glaucoma. **Hey's o.** See under amputation. **Hibbs's o.**, an operation for Pott's disease by fracturing the spinous processes of the vertebræ and pressing the tip of each downward to rest in the denuded area caused by the fracture of its fellow below. Hochenegg's O., an operation for rectal cancer. Hoffa-Lorenz O. Same as Lorenz's o. Holmes's o., a method of excising the os calcis by an incision along its upper border and at the outer border of the foot to the calcaneocuboid joint, and another across the sole, the peroneal tendons being divided. Hotchkiss's o., operation for epithelioma of the cheek, with resction of part of the mandible and maxilla and plastic restoration of the defect from the tongue and side of the neck. **Huguier's o.**, right lateral or lumbar colotomy. **Hunter's o.**, ligation of an artery in the proximal side of an aneurysm and at a distance from it. Indian o., the formation of an artificial nose by a flap from the forehead, with its pedicle at the root of the nose. interval o., an operation performed during the interval between two attacks of a disease, such as appendicitis. **Italian 0.**, the formation of an artificial nose by

a flap from the arm, to which it remains attached until union has taken place. Called also lagliaco-lian o. Jaboulay's O., interpelviabdominal amputation. Jansen's O., operation for disease of the frontal sinus by removing the lower wall and a part of the anterior wall and cureting away the mucous membrane. Jarvis's O., removal of the hypertrophied portion of the lower turbinated bone with a special wire-snare écraseur (W. C. Jarvis, 1880). Jobert's o., autoplastic closure of a vesicovaginal fistula. Joly's o., a method of total hysterectomy for prolapse of the uterus. Jonnesco's o., sympathectomy. Kader's o., gastrostomy by which the feeding-tube is introduced through a valve-like flap which closes on withdrawal of the tube. Keegan's o., a modification of the Indian operation for forming an artificial nose the flap is taken mainly from one side of the forehead. **Keen's 0.**, omphalectomy. **Kehr's 0.**, removal of the gall-bladder and cystic duct with drainage of the hepatic duct. **Kehrer's 0.**, an operation for depressed nipple, consisting of excision of a piece of the surrounding skin so as to set up cicatricial contraction. **Key's 0.**, the lateral operation for lithotomy done with a straight staff. **Kilian's 0.**, excision of the anterior wall of the frontal sinus, removal of the diseased tissue, and formation of a permanent communication with the nose. Kirmisson's O., transplantation of the tendo achillis to the peroneus longus muscle in club-foot. Kirschner's o., treatment of hemorrhage from the spleen by suturing the rupture and covering it with omentum. **Knapp's o.**, for cataract, by a peripheral opening in the capsule behind the iris, without iridectomy. **Kocher's o.** 1. A method of excising the ankle-joint by a cut below the outer malleolus, division of the peroneal tendons, removal of the diseased tissues, and suturation of the divided tendons. 2. A method of removing the thyroid gland by one median incision and two lateral ones, the latter being carried upward almost to the angle of the jaw. 3. A method of reducing a subcoracoid dislocation of the humerus. 4. Excision of the tongue through an incision extending from the symphysis of the jaw to the hyoid bone and thence to the mastoid process. Kock's o., shortening of the base of the broad ligament by the vaginal route for uterine retroversion or prolapse. **Koeberle's o.** See Olshausen's o. Kolomnin's o., cauterization of the diseased kylometric disease by ignipuncture. Kondoleon o., treatment of elephantiasis by the removal of strips of subcutaneous tissue. König's o., operation for congenital dislocation of hip by reducing the dislocation and forming an edge on the upper border of the acetabulum by an osteoperiosteal flap from the ilium. Kortzeborn's o., an operation to relieve ape-hand due to median nerve paralysis. The extensor tendons of the thumb are lengthened and the thumb is tied to the ulnar side of the hand by means of a strip of fascia. **Kraske's o.**, removal of the coccyx and of a part of the sacrum for access to a carcinomatous rectum. **Krause's o.**, extradural excision of the gasserian ganglion for trigeminal neuralgia. **Krimer's o.**, uranoplast in which mucoperiosteal flaps from each side of the palatal cleft are sutured together at the median line. **Krönlein's o.** 1. Exposure of the third branch of the trigeminal nerve for facial neuralgia. 2. Resection of the outer wall of the orbit for the removal of an orbital tumor without excising the eye. Kuhnt's o., an operation for disease of the frontal sinus by removing the anterior wall of the sinus and cureting away the mucous membrane. **Küster's o.**, an operation for draining the pus in mastoiditis by exposing the attic, antrum, and tympanum. **Labbé's o.**, gastrotomy in which a parietal incision is made along the margin of the lowest left rib. Lagrange's o. See scierecto-iridectomy. Lancereaux's o., treat-ment of aneurysm of the aorta by subcutaneous

injections of gelatin. Landolt's O., the formation of a lower eyelid from materials taken from the upper lid. Lane's O., the operation of dividing the ileum near the cecum, closing the portion attached to the cecum, and anastomosing the other end with the upper part of the rectum or lower part of the sigmoid, thus eliminating the colon from taking any part in the fecal current. Lane-Lannelongue o., removal of portions of bone from the skull for cerebral decompression Lange's o., artificial tendon transplantation with strands of silk. See silk implantation, under implantation.

Lannelongue's 0., a designation of various methods of craniotomy in cases of microcephalus, etc. Lanz's 0., an operation for clephantiasis of the leg in which strips of fascia lata are inserted into an opening made in the femur. Laroyenne's o., puncture of Douglas' pouch to secure drainage in pelvic suppuration. Larrey's o. See under amputation. Laurens's O., a plastic operation for closure of a cicatricial opening following mastoid operation. Le Fort's O., the operation of uniting the anterior and posterior vaginal walls along the middle line for the repair of prolapse of the uterus. **Lennander's 0.**, removal of the inguinal glands, including those in the pelvis, as far as the bifurcation of the aorta **Leriche's 0.** See periarterial sympathectomy, under sympathectomy. Lexer's o., removal of the gasserian ganglion. Listranc's o. See under amputation. Liston's o., an operation for excision of the upper jaw. Littré's o., a method of inguinal colotomy. The sigmoid flexure is opened on the left side, in a cut parallel to Poupart's ligament and half an inch above it. Lizar's o., excision of the upper jaw by a curved incision extending from the angle of the mouth to the malar bone. Longuet's o., extraserous transplantation of the testicle for Lorenz's o., for varicocele and hydrocele. congenital dislocation of the hip, consisting in reduction of the dislocation, and keeping the head of the femur fixed against the rudimentary acetabutum until a socket is formed. Loreta's o. 1. Gastrotomy with divulsion of either orifice of the stomach for stenosis. 2. The insertion of a wire into an aneurysm, followed by electrolysis. Lossen's o., removal of the second division of the fifth nerve by a method in which the masseter is not divided. Luc's o. See Caldwell-Luc o. Lund's O., removal of the astragalus for the correction of talipes MacDowell's o., the removal of an ovarian cyst or of an ovary by abdominal section. Macewen's o. 1. The scarification of the interior of an aneurysmal sac with a needle. 2. Supracondyloid division of the femur from within for genu valgum. 3. An operation for the radical cure of hernia by closing the internal ring by a pad made of the hernial sac. Mackenrodt's o., vaginal fixation of the round ligaments for retro-displacement of the uterus. **Madelung's o.,** lumbar colotomy in which the distal end of the colon is detached, and then closed by invagination and by two rows of stitches. magnet o., removal of a fragment of steel or iron from the eyeball by means of a powerful magnet major o., a surgical procedure which involves a risk of life. Makka's o., an operation for ectopia of the bladder in which the cecum is utilized as a bladder and the appendix as a ureter. Marckwald's o., excision of two wedge-shaped pieces from opposite sides of the vaginal portion of the cervix uteri for stenosis of the external os uteri. Marian's o., a perineal median opera-tion for stone in the bladder. Marwedel's o., a method of gastrotomy similar to Wizel's o. mastoid o. Same as mastoidotomy. Matas's o. See endo-ancurysmorrhaphy. Maydl's o. 1. Colostomy in which the colon is exposed and drawn out of the wound, being kept in place until adhesions have been formed by means of a glass rod placed beneath it. 2. Insertion of the ureters into the rectum for exstrophy of the bladder. Mayo's

1. Excision of more or less of the pyloric end of the stomach, followed by closure of the proxi-mal end of the duodenum and the making of an independent posterior gastrojejunostomy. 2. For radical cure of umbilical hernia by excision of the aponeuroses transversely and suturing them.

3. Subcutaneous treatment of varicose veins with a blunt curet. **McArthur's o.**, catheterization of the common bile-duct for making effusions into the duodenum. McBurney's o., an operainto the duodenum. McBurney's O., an operation for the radical cure of inguinal hernia: the sac is exposed, ligated, and cut off at the internal ring; the skin is turned in and stitched to the underlying tendinous and ligamentous structures. McGill's O., suprapubic prostatectomy. Meller's O., an operation for excision of the tear-sac. Mercier's O., prostatectomy. Mikulicz's O. 1. Removal of the sternocleidomastoid muscle for torticollis. 2. See Heineke-Mikulicz O. 3. Tarsectomy in which the heel, os calcis, and astragalus are removed, the articular surfaces of the tibia, fibula, cuboid, and articular surfaces of the tibia, fibula, cuboid, and scaphoid are sawn away, and the foot brought into line with the leg. Same as Wladimiroff's o. Mingazzini-Foerster o. Same as Foerster's o. minor o., a surgical operation which is not serious in its extent or severity. Moore's o., introduction of a coil of small wire into the sac of an aortic aneurysm to effect coagulation. Moore-Corradi O., Moore operation in which a strong galvanic current is passed through the wire. Morescurrent is passed through the wire. tin's o., disarticulation of the knee with intracondyloid division of the femur. Morischi's o., circumcision of the leg for varicose veins. Moschcowitz's o., a femoral hernia operation by the inguinal route. Motais's o., an operation for ptosis, consisting of transplanting the middle portion of the tendon of the superior vertus muscle of the subsellibriate the middle portion of the tendon of the superior rectus muscle of the eyeball into the upper lid. Mules's O., evisceration of the eyeball, with insertion of an artificial vitreous. Miller's O. 1. A method of vaginal hysterectomy: the uterus is split into lateral halves, which are brought down in succession and removed. 2. Cesarean section in which the uterus is lifted out of the abdomen and then opened. 3. Resection of the sclera for detachment of the retina. Nebinger-Praun o., an operation for disease of the frontal sinus. Nélaton's o., excision of the shoulder-joint by a transverse incision. Neuber's o., the operation of filling a cavity in bone with skin-flaps taken from the sides of the wound. Oberst's o., an operation for ascites in which a flap of skin from the abdomen is buried so that the end projects into the abdomen, thus providing drainage. Ogston's o. 1. Removal of the inner condyle of the femur for knock-knee. 2. Excision of the wedge of the tarsus for the purpose of restoring the arch in flat-foot. Olshausen's o., the operation of fixing or sutur-ing the uterus to the abdominal wall for the cure of retroversion. Called also Koeberle's o. open o., an operation in which the parts operated on are exposed to the air. Ord's o., an operation for breaking up fresh adhesions in joints. Paci's O., a modification of Lorenz's bloodless operation for congenital dislocation of the hip. palliative o., one which aims simply to relieve untoward symptoms. Panas's o. 1. Linear proctotomy. 2. The attachment of the upper eyelid to the occipitofrontalis muscle for ptosis. Péan's o. 1. Vaginal hysterectomy bit by bit. 2. Laparotomy for uterine fibroids. 3. Hipjoint amputation in which the vessels are ligated as the operation goes on. Perier's o., eversion of the Petersen's O., a modification of high lithotomy.

Phelps's O., for talipes: an open and direct incision through the sole and inner side of the foot.

Physick's O., the removal of a circular piece of the iris by means of a cutting forceps.

Pirogoff's O.

1. See under amputation.

2. An operation for hernia by inserting

a bag of gold-beaters' skin into the sac and allowing it to remain. Pitts's O., the stretching of the inferior dental nerve in an incision within the mouth, along the inner border of the ascending ramus of the lower jaw. plastic o., one in which the shape of a part or the character of its covering is altered by transplantation of tissue, etc. Politzer's o. 1. The creation of an artificial opening in the membrana tympani by incision and galvanocautery. 2. Division of the anterior ligament of the malleus. Pollock's O., amputation at the knee-joint by a long anterior and short posterior flap, the patella being left. Polya's O., gastrojejunostomy following pylorectomy. Ponset's O. r. Lengthening of Achilles' tendon for talipes equinus. 2. Perineotomy. 3. Perineal urethrostomy. Porro's 0., cesarean section followed by removal of the uterus, ovaries, and oviducts. **Porro-Müller o.**, cesarean section in which the uterus is lifted from the abdominal cavity before the fetus is extracted. Porro-Veit o., cesarean section by Porro's method, in which the stump is ligated and returned to its place. Power's o., removal of a corneal leukoma, followed by the insertion of a rabbit's cornea. Pozzi's o., the operation of creating and suturing an artificial bilateral laceration of the cervix uteri for the relief of anteflexion. Prévot's o., the removal by an abdominal incision of a uterus ruptured in labor. Quaglino's o., sclerotomy done with a small knife and a spatula. Quénu's o. Same as quenu-thoracoplasty. Quénu-Mayo o., excision of the rectum, together with the neighboring lymph-glands, for cancer. radical o., one which is intended to extirpate the disease completely. Rammstedt's o., operation for congenital stenosis of the pylorus by a transverse incision through the thickened serosa and muscularis down to, but not through, the mucosa. **Ramsden's o.**, the tying of the subclavian arteries at a point one-half inch above the clavicle in a transverse cut three inches long in the posterior triangle of the neck. Ransohoff's o., the making of several cross incisions of the pleura for empyema. Recamier's o., curetment of the uterus. Reclus's o., making of an artificial anus in the iliac region in cancer of the rectum. Reed's o., an operation for tuboovarian varicocele, consisting in ligating the veins through a median opening below the lower jaw, reaching from the chin to the hyoid bone. Reverdin's o., a process of skin-grafting. Ridell's o., excision of the anterior and inferior walls of the frontal sinus for chronic inflammation. Rigaud's O., a plastic operation for urethral fistula: a square flap is taken from below the fistula, turned over it, and reinforced by flaps from each side. Roberts's o., a method of correcting a deflected nasal septum. The deflection is corrected by manipulation in a linear incision, after which a steel pin is introduced to hold the septum in place. Robinson's O., section of the veins between two ligatures for varicose veins. Rodman's o., a method of excising the breast with wide dissection of the lymphatics for cancer. Rose's o., removal of the gasserian ganglion; gasserectomy. Rouge's o., a method of opening the nasal sinuses by freeing the upper lip and the nasal cartilages from the maxilla. **Routier's 0.**, a method of operat-ing for Dupuytren's contraction. **Routte's 0.**, venoperitoneostomy; the operation of suturing the saphenous vein so that it will open into the per-itoneal cavity, so as to drain that cavity in cases of ascites with cirrhosis of the liver. Roux's O., cutting of the maxilla in the middle line in the operation for removal of the tongue. ROVsing's o., an operation for gastrocoloptosis. Ruggi's o., gastrojejunostomy, with a double opening between the jejunum and stomach.

Rydygier's o., a method for excision of the rectum in which the bowel is reached by dividing the sacrum and turning it back; the portion turned back is replaced after the operation. Saemisch's

820

O., transfixion of the cornea and of the base of the ulcer for the cure of hypopyon. Sanger's o., cesarean section in which the uterus is taken out Sanger's o., through a long abdominal cut before the fetus is removed. Sayre's o., the application of a plaster-of-Paris jacket in the treatment of spondylitis and Pott's disease. **Scanzoni's o.**, pulling the occiput to an anterior position with the forceps to hasten delivery. Scarpa's o., the tying of the femoral artery in Scarpa's triangle. Schauta's o., extended vaginal hysterectomy for cancer of the cervix uteri. Schauta-Wertheim o. See Wertheim-Schauta o. Schede's o. 1. Resection of the thorax for chronic emphysema. An operation for varicose veins of the leg: done by a circular incision, rolling one cuff up and another down, so as to reach and remove the varices. 3. Excision of the necrosed part of a bone, allowing the cavity to fill with blood, which clots and eventually becomes organized. Schiassi's o. 1. Formation of a collateral circulation for the portal blood by making an omental anastomosis.
2. Treatment of varicose veins of the leg by injecting into the vein an aqueous solution of iodin made of 1 gm. of iodin, 1.1 gm. potassium iodid, and 100 gm. distilled water, the object being to produce adhesion of the internal surfaces of the veins. Schlatter's o., total excision of the stomach for cancer. Schmalz's o., the introduction of a thread into the lacrimal duct for the cure of stricture. **Schönbein's o.**, staphyloplasty in which a flap of mucous membrane from the posterior wall of the pharynx is stitched to the velum palati, shutting off the nose from the mouth. Schröder's o., a method of colporrhaphy; also one for trachelorrhaphy; also one for the removal of the uterus by celiotomy; also excision of the mucous membrane of the cervix uteri for chronic mucous membrane of the cervix uteri for enronic endometritis. **Schücking o.**, a special method of vaginal hysteropexy for prolapsed uterus. **Schuschardt's o.**, paravaginal hysterectomy. **Schwartze's o.**, the opening of the mastoid cells with a hammer and chisel in disease of the middle ear. **Sédillot's o.** 1. A method of middle ear. Sédillot's o. 1. A method of staphylorrhaphy. 2. A flap-operation for restoring the upper lip. 3. A method of ligating the innominate artery. Senn's o., intestinal anastomosis by lateral approximation and the use of bone-plates. Siebold's o., hebotomy. Sigult's o., delivery of the fetus by symphysiotomy in cases of contracted pelvic outlet. Simon's o. 1. [John Simon.] Repair of lacerated perineum by suturing the vaginal mucous ated perineum by suturing the vaginal mucous membrane first and the cutaneous surface afterward. 2. [Gustav Simon.] Colpoclesis. Called also Marckwald's operation. Sluder's o., removal of the tonsil along with its capsule. Smith's o. 1. The crushing of hemorrhoids by means of clamps. and subsequent application of the Paquelin cautery. 2. Extraction of an immature cataract with an intact capsule. Socin's o., enucleation of a goitrous or thyroidal tumor from the healthy part of the gland to avoid cachexia strumipriva. Sonneberg's o., excision of the inferior maxillary nerve by deep dissection beneath the angle of the jaw. Sotteau's o., the closure of the inguinal canal for hernia by a double fold of the scrotum. Spinelli's o., the operation of splitting the anterior wall of the prolapsed uterus, reversing the organ, and restoring it to the correct position. **Ssabanajew-Frank o.** See *Frank's o.* Stacke's O., the removal of the mastoid and the contents of the tympanum, so that the antrum, attic, tympanum, and meatus form a single cavity. Steinach o., ligation of the vas deferens with resection of a portion of the vas; done with a view to rejuvenating the patient by causing atrophy of the spermatogenic apparatus and proliferation of the interstitial tissue of the testicle, and thus increasing the patient's output of gonadal hormone. Stoffel's o., resection of a part of the bundles of a nerve trunk supplying a group of muscles af-fected by spastic paralysis. Stokes's o., am-

putation through the articular end of the femur. **Stoltz's o.**, operation for cystocele, done by denuding a patch on the anterior vaginal wall and running a purse-string suture around the edge. Stromeyer-Little o., operation for abscess of the liver; the pus is located by a cannula and the abscess opened by a knife following the cannula as a guide. **subcutaneous o.**, an operanula as a guide. **Subcutaneous o.**, an operation on a part without opening the skin over it. **Surmay's o.**, jejunostomy. **Syme's o.** 1. See under amputation. 2. A method of external urethrotomy. **tagliacotian o.** See *Italian o.* **Tait's o.**, operation for lacerated perineum. the laceration is closed by two floor tables. laceration is closed by two flaps taken from either side. Talma's o., the operation of forming artificial adhesions between the liver and spleen and the omentum and abdominal wall in cases of ascites due to cirrhosis of the liver. **Talma-Morison o.**, omentopexy. **Tansini's o.** 1. Amputation of the breast with all the skin over it, the denuded area being covered by a flap from the back. 2. A method of removing a cyst of the liver. **Teale's o.** See under ampulation. **Terrillon's o.**, excision of hydatids by constriction with elastic ligatures. **Textor's o.**, excision of the knee-joint by a transverse curved anterior cut. Thiersch's o., a method of preparing skin-grafts by means of a razor. Thomas's o., laparo-elytrotomy: the removal of the fetus by Thomas's an opening in the abdominal wall and in the vagina without wounding the uterus. **Toti's o.**, the operation of causing the tear-sac to open into the nasal cavity dacryocystorhinostomy. Trendelenburg's o. 1. Excision of varicose veins. 2. Ligation of the great saphenous vein for varicose veins. 3. Synchondroseotomy. Treves's 0., operation for Pott's disease by opening the abscess through the loin, irrigating and cureting the sac, and scraping away dead bone. Tuffler's o., vaginal hysterectomy in which the broad ligaments are treated by angiotripsy without ligation. van Buren's o., the treatment of prolapsus ani with the Paquelin cautery. van Hook's o., uretero-ureterostomy. Veit's o. See Porro-Veit o. Verhoeff's o., posterior sclerotomy followed by the best property of the product lowed by electrolytic punctures, for detachment of the retina. **Vermale's o.**, amputation by double-flap transfixion. **Verneuil's o.**, iliac colotomy by a nearly vertical cut the exposed gut is pinned to the edges of the wound and stitched there, after which the protruding knuckle of the bowel is cut off. Vicq d'Azyr's o., cricothyroid laryngotomy. Vidal's o., subcutaneous ligation of the veins for varicocele. Volkmann's o., incision of the tunica vaginalis for hydrocele. von Bergmann's o., incision of the tunica vaginalis, with removal of its parietal layer, performed for hydrocele. von Graefe's o., removal of the cataractous lens by a scleral cut, removat of the cataractous lens by a scleral cut, with laceration of the capsule and iridectomy. von Hacker's O., an operation for balanitic hypospadias Wagner's O., osteoplastic resection of the skull. Wardrop's O., distal ligation of an artery for aneurysm. Watkins's O., an operation for prolapse and procidentia uter in which the bladder is separated from the anterior wall of the uterus so that the uterus is late in wall of the uterus so that the uterus is left in a position to support the entire bladder. Webster's o., for retrodisplacement of the uterus: the round ligaments are passed through the perforated broad ligaments and fixed to the back of the uterus. Weir's o., appendicostomy. Wert-heim's o. r. An operation for cancer of the uterus in which there is removed with the uterus as much of the parametrial tissue as possible and a wide margin of the vagina. 2. A modification of Watkins's operation for uterine prolapse in which the bladder is stitched to the posterior wall of the uterus at the level of the internal os; in closing the vaginal wound a portion of the anterior uterine wall is left exposed in the vagina. Wertheim-Schauta o., an operation for cystocele, consisting in the interposition of the uterus between

830

the base of the bladder and the anterior vaginal wall. Wheelhouse's o., a method of perineal section for impermeable stricture of the urethra. White's o., castration for hypertrophy of the prostate. Whitehead's o. 1. Treatment of hemorrhoids by excision. 2. Removal of the tongue with the scissors, the operation being performed within the mouth. Whitman's o., a method of astragalectomy. Wieting's o., anastomosis of the femoral vein to the femoral anastomosis of the femoral vein to the femoral control of the statement o artery for the relief of arteriosclerotic gangrene. Wilms's o., resection of the ribs so as to produce depression of the chest-wall and compression of the lungs thereby, done in tuberculosis of the lungs. Winiwarter's O., cholecystenterostomy. zel's o., gastrotomy by drawing a cone of the stomach-wall through a thoracic incision, and inserting a tube which is buried in the stomach wall by sutures. The stomach cone is replaced The stomach cone is replaced sutured. Wladimiroff's wound sutured. and the o., a method of tarsectomy. Same as Miku-licz's o. Wölfler's o., the formation of a permanent opening between the stomach and lower part of the duodenum in cases of obstructed pylorus. Wood's o. r. Closure of exstrophy of the bladder by a flap of skin cut from the abdominal wall and turned over so that the cutaneous surface forms the inner wall of the bladder. 2. The closure of a hernial canal by subcutaneous sutures through the tendinous tissues cutaneous sutures through the tenumous absolu-surrounding it. Wützer's o., a process for the radical cure of inguinal hernia by stopping up the bernial canal by invaginating the scrotum. Wyhernial canal by invaginating the scrotum. eth's o., amputation at the hip-joint, hemorrhage being controlled by an elastic cord or tube fastened above large needles which transfix the tissues on each side of the articulation. Wylie's o. 1. Operation of shortening the round ligaments for the relief of uterine retroflexion, done by folding the ligaments on themselves and suturing. 2. An operation for appendicitis by pulling aside the rectus, incising its posterior sheath, and making a small incision through the peritoneum. Yank-auer's o., curetment of the bony end of the eustachian tube for the purpose of shutting off infection from the nasopharynx and thereby curing chronic suppuration of the middle ear. Young's **0.**, total excision of the seminal vesicles and partial excision of the ejaculatory ducts by a suprapubic T-shaped incision Ziegler's o., V-shaped iridectomy for forming artificial pupil.

operative (op'er-a-tiv) [L. operativus]. 1. Pertaining to an operation. 2. Effective; not inert.

opercular (o-per'ku-lar). Pertaining to an operculum.

operculum (o-per'ku-lum) [L.]. 1. Any lid or cover. 2. [B N A] The part of the cerebrum above the insula, or island of Reil. Called also o insulae.

3. A plug of mucus that shuts off the contents of the gravid uterus from the vagina. Arnold's O., the operculum of the island of Reil. Burdach's O., the operculum formed by parts of the frontal and parietal lobes O. in'sulse. See operculum, 2d def. occipital O., a part of the occipital lobe of the brain separated from the main portion by the ape fissure. Orbital O., that part of the operculum formed by the orbital surface of the frontal lobe.

ophiasis (o-fi'as-is) [Gr. δφίασις; δφις snake]. Baldness in one or more winding streaks across the head.

ophidiasis (o-fid-i'as-is) Same as ophidism.

ophidiophobia (o-fid"e-o-fo'be-ah) [Gr. δφίδιον serpent + φόβος fear]. A morbid dread of snakes.
 ophidism (o'fid-izm) [Gr. δφις snake]. Poisoning by snake verom.

Ophioph'agus e'laps. The largest variety of Indian cobra.

ophiotoxemia (o"fe-o-tok-se'me-ah) [Gr. δφις snake + toxemia]. Poisoning by snake venom.

ophiotoxin (o-fe-o-toks'in) [Gr. δφις snake + τοξικόν poison]. A non-protein nitrogen-free poison found in cobra venom.

ophioxylin (o-fe-oks'il-in). An anthelmintic and a cathartic principle, $C_{10}H_{13}O_{0}$, from the root of Ophiox'ylon (Rauvol'fia) serpenti'num, an apocynaceous plant of southern Asia.

ophitoxemia (o"fe-tok-se'me-ah). Ophiotoxemia.

ophritis, ophryitis (of-ri'tis, of-re-i'tis) [Gr. όφρύs eyebrow + -ilis]. Dermatitis in the eyebrow region.

ophryon (o'fre-on) [Gr. δφρύς eyebrow]. The middle point of the transverse supra-orbital line.

ophryosis (of-re-o'sis) [Gr. δφρύs eyebrow]. Spasm of the eyebrow.

ophthalmagra (of-thal-mag'rah) [Gr. δφθαλμός eye + ἄγρα seizure]. Sudden pain in the eye.

ophthalmalgia (of-thal-mal'je-ah) [Gr. δφθαλμός eye + ἄλγος pain]. Pain in the eye.

ophthalmatrophia (of"thal-mat-ro'fe-ah) [Gr. δφθαλμός eye + ἀτροφία atrophy]. Atrophy of the eye.

ophthalmectomy (of-thal-mek'to-me) [Gr. δφθαλμός eye + ἐκτομή excision]. The surgical removal of an eye.

ophthalmencephalon (of-thal-men-sef'al-on) [Gr. δφθαλμός eye + ἐγκέφαλον brain]. The retina, optic nerve, and visual apparatus of the brain.

ophthalmia (of-thal'me-ah) [Gr. from δφθαλμός eye]. Severe inflammation of the eye or of the conjunctiva. catarrhal o., a severe form of simple conjunctivitis. caterpillar o., inflammation of the conjunctiva and cornea, due to penetration by caterpillars' hairs. o. eczemato'sa, Egyptian o. See trachoma. phlyctenulosis. electric o., conjunctivitis due to the effect of bright electric light. o. exter'na, paralysis of the extrinsic or external ocular muscles. gonorrheal o., acute and severe purulent conjunctivitis due to gonorrheal infection. granu-lar o., an acute and severe form of purulent conjunctivitis. jequirity o., a form due to poisoning by jequirity. metastatic o., choroditis due to metastasis or to pyemia. mi-Same as sympathetic o cous o. Same as symptome of the new-born. neuroparalytic o., keratitis due to lesion of branches of the fifth nerve or of the gasserian ganglion o. nodo'sa, inflammation of the conjunctiva produced by caterpillar hairs, and marked by the formation of a round, gray swelling where each hair is embedded. **phlyctenular o.**, a form of conjunctivitis and keratitis with vesicles on the epithelium. purulent o., a form with a purulent discharge, commonly due to gonorrheal infection. scrofulous o., phlyctenular conjunctivitis. spring o., a variety chiefly prevailing in the spring of the year. sympathetic o., iridocyclitis following disease or injury of the fellowtransferred o. Same as sympathetic o. varicose o., a variety associated with varicosity of the veins of the conjunctiva.

ophthalmiac (of-thal'me-ak). A person affected with ophthalmia.

ophthalmiatrics (of"thal-me-at'riks) [Gr. δφθαλμός eye + laτρεla treatment]. The treatment of eye diseases

ophthalmic (of-thal'mik) [Gr. δφθαλμικόs]. Pertaining to the eye.

ophthalmin (of-thal'min). The virus of purulent ophthalmia.

ophthalmitic (of-thal-mit'ik). Pertaining to ophthalmitis.

ophthalmitis (of-thal-mi'tis) [Gr. δφθαλμός eye]. Inflammation of the eye.

ophthalmo- [Gr. δφθαλμός eye]. A prefix denoting some relation to the eye.

ophthalmoblennorrhea (of-thal"mo-blen-or-e'-

- ah) [Gr. $\delta \varphi \theta a \lambda \mu b s$ eye $+\beta \lambda \ell \nu \nu a$ mucus $+\beta o l a$ flow]. Gonorrheal or purulent ophthalmia.
- ophthalmocarcinoma (of-thal"mo-kar-sin-o'mah). Carcinoma of the eyeball.
- ophthalmocele (of-thal'mo-sēl) [Gr. ὁφθαλμός eye + κήλη tumor]. Same as exophthalmos.
- ophthalmocopia (of-thal-mo-ko'pe-ah) [Gr. δφθαλμός eye + κόπος weariness]. Asthenopia, or eyestrain; fatigue of the eyes.
- ophthalmodesmitis (of-thal"mo-dez-mi'tis) [Gr. $\delta \varphi \theta a \lambda \mu \delta s$ eye $+\delta \epsilon \sigma \mu \delta s$ ligament $+ \iota \tau \iota s$ inflammation]. Inflammation of the ocular tendons.
- (of-thal"mo-di-ag-no'sis). ophthalmodiagnosis Diagnosis by the aid of the ophthalmic reaction. See under reaction.
- ophthalmodiaphanoscope (of-thal"mo-di-afan'o-skop) [Gr $\delta\varphi\theta\alpha\lambda\mu\delta s$ eye + diaphanoscope]. An instrument for examining the back of the eye (retina) by transillumination through the buccal cavity.
- ophthalmodiastimeter (of-thal"mo-di-as-tim'eter) [Gr. δφθαλμός eye + διάστημα interval + μέτρον An instrument for determining the measurel proper distance at which to place lenses for the two eves.
- ophthalmodonesis (of-thal"mo-don-e'sis) [Gr. δφθαλμός eye + δόνησις trembling]. A trembling motion of the eyes.
- ophthalmodynamometer (of-thal"mo-di-nam-An instrument for determining the om'et-er) near-point of convergence.
- ophthalmodynia (of-thal-mo-din'e-ah) [Gr. ὀφθαλμόs eye + όδύνη pain]. Pain in the eye.
- ophthalmofundoscope (of-thal-mo-fun'do-skop). An apparatus for observing the fundus of the eye
- ophthalmography (of-thal-mog'raf-e) [Gr. οφθαλ μός eye + γράφειν to write]. Description of the eves.
- ophthalmogyric (of-thal-mo-ji'rik) [Gr. δφθαλμός eye + L. gy'rus a turn]. Oculogyric.
- ophthalmol (of-thal'mol). A proprietary preparation for use locally in granular lids.
- ophthalmoleukoscope (of-thal"mo-lu'ko-skop) [Gr. $\delta \varphi \theta \alpha \lambda \mu \delta s$ eye $+ \lambda \epsilon u \kappa \delta s$ white $+ \sigma \kappa \delta \pi \epsilon \hat{\imath} \nu$ to view] An apparatus for testing color-perception by means of colors produced by polarized light.
- ophthalmolith (of-thal'mo-lith) [Gr. δφθαλμός eye + λίθος stone]. A lacrimal calculus.
- ophthalmologist (of-thal-mol'o-jist). One who is versed or expert in ophthalmology.
- ophthalmology (of-thal-mol'o-je) [Gr. δφθαλμός eye + λόγος discourse]. The sum of knowledge concerning the eye and its diseases.
- ophthalmomalacia (of-thal"mo-ma-la'se-ah) [Gr. $\delta \varphi \theta a \lambda \mu \delta s$ eye $+ \mu a \lambda a \kappa l a$ softness]. Abnormal softness and shrinkage of the eye, with less than the normal tension; essential phthis of the eye.
- ophthalmometer (of-thal-mom'et-er) [Gr. δφθαλμός cye + μέτρον measure] Any instrument for measuring the eye, especially one for determining its refractive powers and defects by measuring the size of the images reflected from the cornea and Called also Javal's o.
- ophthalmometroscope (of-thal-mo-met'ro-skop). An ophthalmoscope with an attachment for measuring the refraction of the eye.
- ophthalmometry (of-thal-mom'et-re). Determination of the refractive powers and defects of the eye.
- ophthalmomycosis (of-thal"mo-mi-ko'sis) [Gr. $\delta \varphi \theta \alpha \lambda \mu \delta s$ eye $+ \mu b \kappa \eta s$ fungus]: Any disease of the eye caused by a fungus.
- ophthalmomyitis (of-thal"mo-mi-i'tis) $\delta \varphi \theta \alpha \lambda \mu \delta s$ eye + $\mu \hat{v}s$ muscle + - $\iota r \iota s$ inflammation]. Inflammation of the muscles that move the tionl. eyeball.
- ophthalmomyositis (of-thal"mo-mi-o-si'tis). Inflammation of the eye muscles.

ophthalmomyotomy (of-thal"mo-mi-ot'o-me) [Gr. $\delta \varphi \theta a \lambda \mu \delta s$ eye + myolomy]. Surgical division of the muscles of the eye.

OPHTHALMOSCOPY

- ophthalmoneuritis (of-thal"mo-nu-ri'tis). flammation of the ophthalmic nerve.
- ophthalmopathy (of-thal-mop'ath-e) [Gr. δφθαλ-μός eye + πάθος disease]. Any disease of the eye. external o., any affection of the eyelids, cornea, conjunctiva, or eye muscles. internal o., any affection of the deep or more essential parts of the eve.
- ophthalmophacometer, ophthalmophakometer (of-thal"mo-fak-om'et-er) [Gr. ὁφθαλμός eye + φακός lens + μέτρον measure]. A kind of ophthalmometer for measuring the two surfaces of the lens and the posterior surface of the cornea.
- ophthalmophantom (of-thal-mo-fan'tom). A model of the eye used in demonstration; or an apparatus for holding animals' eyes for operation.
- phthalmophlebotomy (of-thal"mo-fleb-ot'o-me) [Gr. δφθαλμός eye + phichotomy]. Phle-botomy to relieve congestion of the conjunctival ophthalmophlebotomy veins.
- ophthalmophthisis (of-thal-mof'this-is) $\delta \varphi \theta \alpha \lambda \mu \delta s$ eye $+ \varphi \theta l \sigma s$ wasting]. Phthisis bulbi, or ophthalmomalacia; shriveling of the eyeball.
- **ophthalmoplasty** (of-thal'mo-plas-te) [Gr. δφθαλ-μός eye + πλάσσειν to mold]. Plastic surgery Plastic surgery of the eye or of its appendages.
- ophthalmoplegia . (of-thal-mo-ple'je-ah) $\delta \varphi \theta a \lambda \mu \delta s$ eye $+ \pi \lambda \eta \gamma \dot{\eta}$ strokel. Paralysis of the eye muscles. **basal 0.**, ophthalmoplegia due to a lesion at the base of the brain. o. exter'na, paralysis of the external ocular muscles. cicular o., ophthalmoplegia due to lesion in the pons varolii. infectious o. See encephalitis pons varolii. infectious o. See encephalitis lethargica. o. inter'na, paralysis of the iris and ciliary apparatus. nuclear o., that which is due to some lesion of the nuclei of the motor nerves of the eye. orbital o., ophthalmoplegia due to lesion in the orbit. Parinaud's o., paralysis of the external rectus muscle of one eye, together with spasm of the internal rectus of the other. O. partia'lis, paralysis of either one or two of the muscles of the eye. O. progressi'va, gradual paralysis affecting first one eye muscle and then another. Sauvineau's o., paralysis of the internal rectus of one eye and spasm of the external rectus of the other. o. tota'lis, that which affects both the extrinsic and the intrinsic muscular apparatus of the eye.
- ophthalmoplegic (of-thal-mo-ple'jik). Pertaining to ophthalmoplegia.
- ophthalmoptosis (of-thal-mop-to'sis) [Gr. δφθαλμός eye + πτῶσις fall]. Same as exophthalmos.
- ophthalmo-reaction (of-thal"mo-re-ak'shun). See ophthalmic reaction, under reaction.
- ophthalmorrhagia (of-thal-mo-ra'je-ah) οφθαλμός eye + ρηγνύναι to burst forth]. Hemorrhage from the eye.
- ophthalmorrhea (of-thal-mo-re'ah) [Gr. δφθαλμός eye + pola flow]. Oozing of blood from the eye.
- ophthalmorrhexis (of-thal-mor-eks'is) [Gr. 64 θαλμός eye + δήξις rupture]. Rupture of the eyeball.
- ophthalmoscope (of-thal'mo-skop) [Gr. δφθαλμός eye $+ \sigma \kappa \sigma \pi \epsilon \hat{\imath} \nu$ to see]. A perforated mirror used in inspecting the interior of the eye. **ghost o.**, a form in which a portion of the reflected rays are deflected by a mirror. Loring's o., an ophthalmoscope with tilting mirror, complete disk of lenses, and supplemental quadrant of lenses.
- ophthalmoscopy (of-thal-mos'ko-pe). The examination of the interior of the eye with the ophthalmoscope. direct o., the observation of an upright or erect mirrored image of the interior of the eye. indirect o., the observation of an inverted image of the interior of the eye.

 medical o., that which is performed for diag-

nostic purposes. metric o., that which is performed for the measurement of refraction.

ophthalmostasis (of-thal-mos'tas-is) [Gr. δφθαλμός eye + στάσις standing]. Fixation of the eye with the ophthalmostat.

ophthalmostat (of-thal'mo-stat) [Gr. δωθαλμός eye + lστάναι to halt]. An instrument for holding the eye steady during operation.

ophthalmostatometer (of-thal"mo-sta-tom'et-er) [Gr. δφθαλμός eye + ἰστάναι to set + μέτρον measure]. An instrument for determining the degree of protrusion of the eyeball.

ophthalmothermometer (of-thal"mo-ther-mom'et-er) [Gr. δφθαλμός eye + thermometer]. apparatus for recording the temperature of the eve.

ophthalmotomy (of-thal-mot'o-me) [Gr. δφθαλμόs eye + τομή cut]. The operation of incising the eveball.

ophthalmotonometer (of-thal"mo-to-nom'et-er) [Gr. δφθαλμός eye + τόνος tone + μέτρον measure]. An instrument used in measuring the intraocular tension.

ophthalmotonometry (of-thal"mo-to-nom'et-re).
The measurement of the intra-ocular tension.

ophthalmotoxin (of-thal-mo-tok'sin) [Gr. δφθαλ-A toxin formed on injection of $\mu \delta s$ eye + toxin]. emulsion of the ciliary body.

ophthalmotrope (of-thal/mo-trōp) [Gr. $\delta \varphi \theta \alpha \lambda \mu \delta s$ eye $+ \pi \rho \epsilon \pi \epsilon \iota \nu$ to turn]. An artificial eye that moves like a real eye.

ophthalmotropometer (of-thal"mo-tro-pom'eter) [Gr. $\delta \varphi \theta \alpha \lambda \mu \delta s$ eye $+ \tau \rho \delta \pi \sigma s$ turning $+ \mu \epsilon \tau \rho \sigma \nu$ An instrument for measuring eye movements.

ophthalmoxyster (of-thal-moks-is'ter) [Gr. δφθαλ- μ os eye + $\xi v \sigma \tau \rho a$ scraper]. An instrument for scraping the conjunctiva.

opianin (o-pi'an-in). An alkaloid from opium, perhaps an impure narcotin, resembling morphin in its physiologic action.

opiate (o'pe-āt). A remedy containing or derived from opium; also any drug that induces sleep.

opilação, opilageo (o-pil-ah-sa'o). A form of trypanosomiasis occurring in Brazil. See Chagas's disease, under disease.

opiomania (o' pe-o-ma'ne-ah) [Gr. ὅπων opium + μανία madness]. An insane craving for opium.

opiomaniac (o"pe-o-ma'ne-ak). A person affected with opiomania.

opiophagism, opiophagy (o-pe-of'aj-izm, o-pe-of'aj-e) [Gr. δπων opium + φαγεῖν to eat]. The habitual use or eating of opium.

opisthenar (o-pis'the-nar) [Gr. δπίσθε behind + θέναρ palm of the hand]. The dorsum of the

opisthencephalon (o-pis-then-sef'al-on) [Gr. δρισθε backward + κέφαλη head]. The cerebellum.

opisthiobasial (o-pis"the-o-ba'se-al). Pertaining to or connecting the opisthion and basion.

opisthion (o-pis'the-on) [Gr. ὁπίσθων rear]. The midpoint of the lower, border of the foramen magnum.

opisthionasial (o-pis"the-o-na'ze-al). Connect-

ing the opisthion and nasion.

opisthoporoia (o-pis"tho-po-re'ah) [Gr. ὅπισθεν backward + πορεία walk]. Involuntary walking backward.

opisthorchiasis (o-pis-thor-ki'as-is). A diseased condition of the liver due to the presence of flukes of the genus Opisthorchis.

Opisthorchis (o-pis-thor'kis). A genus of trematodes or flukes characterized by having the testicles near the posterior end of the body. O. felin'eus, or Siberian liver-fluke, is found in the liver of cats and dogs and sometimes in man. Infection takes place through eating fish (Leuciscus rutilis

and Idus melanotus). O. nover'ca, the Indian liver-fluke found very commonly in the pariah dogs and also in man. O. sinen'sis, or Asiatic liver-fluke, causes the liver-fluke disease of Asiatic countries, which affects man as well as cats and dogs. Called also Distoma sinense and Distoma japonicum. O. viveri'ni, a species found in Siam.

opisthotic (o-pis-thot'ik) [Gr. δπισθεν behind + σῦς ear]. Situated behind the ear.

opisthotonos (o-pis-thot'o-nos) [Gr. δπισθεν behind + τόνος stretching]. A form of tetanic spasm in which the head and heels are bent backward and the body bowed forward.

opium (o'pe-um) [L.; Gr. δπιον]. The concrete juice of the poppy, Papa'ver somnif'erum, obtained from slits in the cortex of its capsule: sold in brown cakes and lumps of a strong and peculiar taste and odor. It contains morphin, codein, narcotin, narcein, thebain, papaverin, cryptopin, and many other alkaloids, many of them narcotic or otherwise medicinally active. Medium dose: Arrests secretions; stimulates the brain; increases cardiac action, and raises arterial tension; contracts the pupil; first stimulates the mind, and then causes sleep. Headache, depression, and constipation follow the sleep. Full dose: Arrests digestion; causes nausea, vomiting, and diaphoresis; lowers nerve-conduction; depresses the heart, respiration, and temperature; causes pruritus; contracts the pupil; causes profound stupor (succeeding in some cases to delirium). The after-effects are nausea, pruritus, depression, constipation, vertigo, and anorexia. *Toxic dose:* Cold sweat; slow heart; abolished reflexes; profound coma; pin-point pupil (which dilates before death), death occurring from paralysis of the respiratory center. Opium is narcotic, soporific, and astringent, and is used to relieve pain of all forms; in insomnia; to check excessive secretions; in inflammation of serous membranes, in spasmodic and irritable conditions: to slow the respiration in heart disease, pleurisy etc.; to promote perspiration in rheumatism and acute catarrhal conditions; it is also employed locally as an astringent and anodyne. In large doses it is poisonous. Dose of the drug, \(\frac{1}{2}\)-1 gr. (0.016-0.066 gm.); of vinegar (acc'tum o'pii), 5-15 min. (0.333-1 c.c.); of extract, \(\frac{1}{2}\)-1 gr. (0.016-0.066 gm.); of compound solution (li'quor o'pii compos'ilus), 5-15 min. (0.333-1 c.c.); of tincture (tinctu'ra o'pii, or laudanum), 5-20 min. (0.333-1.333 c.c.); of camphorated tincture, or elixir paregoric, 5-15 min. (0.333-1 c.c.); of powder (o'pium pulvera'tum, U. S. P.), \(\frac{1}{2} \)- igr. (0.033-0.066 gm.); of compound powder, 2-5 gr. (0.13-0.33 gm.); of powdered ipecac and opium (pul'vis ipecacuan'hæ et o'pii, Dover's powder), which contains 10 per cent. each of opium and ipecac, 3-10 gr. (0.19-0.66 gm.); of deodorized tincture, 5-20 min. (0.333-1.333 c.c.); of wine (vi'num o'pii), 5-20 min. (0.333-1.333 c.c.). deodorized o., opium deodorized by extracting it with petroleum benzin. granulated o., opium reduced to a coarse powder. lettuce o., lactucarium. o. pulvera'-tum, the U. S. P. name for powdered opium.

opium-habit (o"pe-um-hab'it). Opiumism.

opiumism (o'pe-um-izm). The habitual misuse of opium or its consequences.

opo- [Gr. δπός juice]. A prefix implying a derivation from a juice or serum, usually one of animal

opobalsamum (o-po-bal'sam-um) [Gr. δπός juice + βάλσαμον balsam]. The true balm of Gilead, or Mecca balsam, produced by Balsamoden'dron gileaden'se or B. opobal'samum.

opocephalus (o-po-sef'al-us) [Gr. ωψ face + κεφαλή headl. A monster with the ears fused, one orbit, no mouth, and no nose.

opocerebrin (o-po-ser'e-brin). A patented therapeutic preparation of the gray brain substance: used in many nervous and other diseases. Dose, 3-6 gr. (0.2-0.4 gm.).

- opodeldoc (o-po-del'dok). Camphorated soap liniment. liquid o., soap liniment.
- opodidymus, opodymus (o-po-did'im-us, o-pod'-im-us) [Gr. ωψ face + δίδυμος twin]. A fetus with two fused heads and with the sense-organs partly fused.
- opohepatoidin (o"po-hep-at-oi'din) [Gr. δπός juice + ήπαρ liver]. A patented therapeutic preparation of the liver of animals: used in liver diseases, Dose, 8 gr. (0.5 gm.).
- opohypophysin (o''po-hi-pof'is-in) [Gr. δπόs juice + hypophysis]. A patented preparation of the hypophysis cerebri: used in acromegaly. Dose, 2 gr. (0.04 gm.).
- opoidin (o-poi'din). A preparation containing the mixed alkaloids of opium.
- opolaxyl (o-po-lak'sil). A combination of the secretions of the liver, pancreas, and intestines with vegetable extracts: used for constipation.
- opolienin (o-po-li'en-in) [Gr. $\delta\pi\delta$ s juice + L. ll'en spleen]. A patented spleen-extract: used in leukemia, spleen enlargement, and malarial cachexia. Dose, 20-30 gr. (1.3-2 gm.).
- opomammin (o-po-mam'in) [Gr. δπός juice + L mam'ma breast]. A patented extract of animal udders: used in uterine diseases. Dose, 23 gr. (1.5 gm.).
- opomedullin (o"po-me-dul'in) [Gr. δπός juice + L. medul'la marrow]. A patented extract of red bone-marrow: used in pernicious anemia, leukemia, chlorosis, etc. Dose, 3-15 gr. (0.2-1
- **opoörchidin** (o-po-or'kid-in) [Gr. $\delta \pi \delta s$ juice + $\delta \rho \chi \iota s$ testicle]. A patented extract of the testicles of animals: used in spinal and nervous diseases. Dose, 8-15 gr. (0.5-1 gm.).
- opoössein (0-po-os'e-in) [Gr. δπόs juice + L. os bone]. A patented preparation of yellow bonemarrow: for use in rickets and osteomalacia. Dose, 3-15 gr. (0.2-1 gm).
- opoövariin (o"po-o-va're-in) [Gr. δπόs juice + ovary]. A patented extract of animal ovaries: for use in hysteria, chlorosis, and ovarian disease. Dose, 3-12 gr. (0.2-0.8 gm.).
- opopancreatin (o-po-pan'kre-at-in) [Gr. ὁπός juice + pancreas]. A patented extract of the pancreas: used for diabetes mellitus. Dose, 3-12 gr. (0.2-08 gm.).
- opoprostatin (o-po-pros'tat-in) [Gr. όπός juice + prostate]. A patented preparation of prostate glands: used in hypertrophy of the prostate. Dose, 3 gr. (0.2 gm.).
- oporenin (op-o-re'nin) [Gr. δπός juice + L. ren kidney]. A patented preparation of animal kidneys: used in uremia and nephritis. Dose, 8-12 gr. (0.5-0 8 gm.).
- oposuprarenalin (o"po-su-prah-re-na'lin) [Gr. οπός juice + suprarenal]. A patented preparation of the suprarenal capsules of animals: used in diabetes mellitus, suprarenal melasma. etc. Dose, 3-6 gr. (0.2-0.4 gm.).
- opotherapy (o-po-ther ap-e) [Gr. ὁπός juice + θεραπεία treatment]. 1. Treatment by juices. 2. Organotherapy; treatment of disease by the administration of extracts from animals' organs.
- opothymin (o-po-thi'min) [Gr. δπός juice + thymus]. A patented preparation of the thymus of young animals: for infantile paralysis, leukemia, etc. Dose, 3-8 gr. (0.2-0.5 gm.).
- opothyroidin (o"po-thi-roid'in) [Gr. όπός juice + thyroid]. A patented preparation of thyroid glands: used in myxedema; goiter, cretinism, obesity, etc. Dose, 1-1 gr. (0.05-0.1 gm.).
- Oppenheim's disease, sign, syndrome (op'en-himz) [Hermann Oppenheim, neurologist in Berlin, 1858-1919]. See under disease, sign.
- Oppenheimer treatment (op'en-hi-mer) [Isaac Oppenheimer, physician in New York]. See treatment.

- oppilation (op-il-a'shun) [L. oppila'tio]. constitution.
- oppilative (op'il-a-tiv). Closing the pores: also constipating.
- opponens (op-o'nenz) [L.]. Opposing. See muscles, table of.
- oppositipolar (o-poz"it-i-po'lar). Having two poles on opposite sides of a cell.
- opsialgia (op-se-al'je-ah) [Gr. ωψ face + άλγος painl. Facial neuralgia.
- opsinogen (op-sin'o-jen). A substance having the power of forming opsonins.
- opsinogenous (op-sin-oj'en-us). Able to form opsonins.
- **opsiometer** (op-se-om'et-er) [Gr. δψις vision + μέτρον measure]. Same as optometer.
- opsiuria (op-se-u're-ah) [Gr. οψον food + οὐρον urine]. The condition in which more urine is excreted during fasting than during digestion.
- opsogen (op'so-jen). Same as opsinogen.
- opsomania (op-so-ma'ne-ah) [Gr. övov dainty μανία madness]. A craving for some special food. **opsone** (op'son). Same as opsonin.
- opsonic (op-son'ik). Pertaining to opsonins. action, the action opsonins exert on bacteria by which they become subject to phagocytosis. index. See under index.
- opsoniferous (op-so-nif'er-us). Bearing opsonin.
- opsonification (op-son-if-ik-a'shun). the opsonic index by inoculation with specific opsonins, thus rendering the organisms more subject to phagocytosis.
- opsonify (op-son'if-i). To subject to opsonification. **opsonin** (op-so'nin) [Gr. δψωνεῖν to prepare food for]. A constituent of the blood-serum of an animal or of man which by acting on microorganisms or on red blood-corpuscles makes them more isins of on red blood-corpuscies makes them more liable to be ingulfed by the phagocytes **common, normal**, or **thermolabile o.**, opsonin normally present in the serum of an uninfected individual or an untreated animal. immune or specific o., opsonin developed in the blood-serum as a result of infection or injection of organisms.
- It is more heat resistant than the normal opsonins. opsonist (op'son-ist). One who is expert in opsonic technic.
- opsonization (op-son-iz-a'shun). Same as opsonification.
- opsonize (op'son-iz). To form opsonins in; to treat with opsonins.
- opsonogen (op-son'o-jen). Same as obsinogen.
- opsonoid (op'so-noid). An opsonin in which the opsonophoric or active element has been destroyed.
- opsonology (op-so-nol'o-je). The study of opsonins and opsonic action.
- opsonometry (op-so-nom'et-re). The measurement of the amount of opsonin present
- **opsonophilia** (op"so-no-fil'e-ah) [opsonin + Gr. φιλεῖν to love]. Affinity for opsonins.
- opsonophilic (op"son-o-fil'ik). Having an affinity for opsonins.
- opsonophoric (op"so-no-for'ik). Bearing opsonin: the term applied to that group of an opsonin which acts on the bacterium to render it subject to phagecytosis.
- opsonotherapy (op-son-o-ther ap-e). Treatment by the use of bacterial vaccines to increase the opsonic index of the blood.
- optarson (op-tar'son). A proprietary tonic. It is an amino salt of heptinchlor-arsenic acid containing about 30 per cent. of arsenic and some strych-
- optosthosia (op-tes-the'zhe-ah) [Gr. ὀπτικός taining to the eye + alognous sensation]. sensibility; ability to perceive visual stimuli.

 optic, optical (op'tik, op'tik-al) [L. op'ticus; Gr.
- οπτικός]. Pertaining to the sight or to the eye; subserving vision.

- optician (op-tish'an). A maker of optical instruments or glasses.
- opticociliary (op"tik-o-sil'e-a-re).
 the optic and ciliary nerves. Pertaining to
- opticocinerea (op"tik-o-sin-e're-ah) [optic + cinerea]. The gray matter of the optic tract.
- opticonasion (op"tik-o-na'se-on). The distance from the posterior edge of the optic foramen to the nasion.
- opticopupillary (op"tik-o-pu'pil-a-re).
 ing to the optic nerve and the pupil. Pertain-
- optics (op'tiks) [Gr. δπτική]. The science which treats of light and of vision.
- optimal (op'tim-al). The best; the most favorable. optimeter (op-tim'et-er). Same as optometer.
- optimism (op'tim-izm) [L. op'timus best]. Insane exaltation of mind; amenomania.
- optimum (op'tim-um). 1. That condition of surroundings which is conducive to the most favorable activity of function. 2. Pirquet's term for the amount of food most desirable under given circumstances.
- optist (op'tist). A person skilled in optometry.
- optoblast (op'to-blast) [Gr. δπτικός optic + βλάσ-One of the large ganglion-cells of the Tos germl. retina.
- optocele (op'to-sēl) [Gr. $\delta \pi \tau \delta s$ seen + $\kappa \delta \lambda \eta$ See aqueduct of Sylvius. cavity].
- optochin (op'to-kin). A white crystalline powder, the hydrochlorid of ethyl-hydrocuprein, C₂H₆O.C₉-H₅N.CHOH.C₇H₁₁N.C₂H₅ used in pneumococcus infection, as croupous pneumonia, and in malaria.
- **optogram** (op'to-gram) [Gr. όπτός seen + γράμμα mark). The retinal image formed by the bleaching of the visual purple under the influence of light. epithelial o., an optogram in which the pigment epithelium clings to the exposed locality.
- **optomeninx** (op-to-me'ninks) [Gr. ὁπτικός optic + μῆνιγξ membrane]. The retina.
- optometer (op-tom'et-er) [Gr. όπτός seen + μέτρον measure]. A device for measuring the power and range of vision.
- optometrist (op-tom'et-rist). One who practises optometry.
- optometry (op-tom'et-re). The measurement of visual acuity and the fitting of glasses to correct visual defects. A term adopted by opticians who prescribe and fit glasses.
- optomyometer (op"to-mi-om'et-er) [Gr. seen + μῦς muscle + μέτρον measure]. A device used in measuring the power of the ocular muscles.
- optone (op'ton). A proprietary organic product, deprived of anaphylaxis-producing elements: used by injection in non-specific protein therapy.
- **optophone** (op'to-fon) [Gr. $\delta \pi \tau \delta s$ seen + $\varphi \omega \nu \eta$ voice]. An instrument by means of which light and darkness are made discernible to the blind through their sense of hearing, the light waves being transformed into sound waves.
- Pertaining to the optostriate (op-to-stri'āt). thalamus opticus and the corpus striatum.
- **optotype** (op'to-tip) [Gr. $\delta\pi\tau\delta s$ seen + type]. The test-types used by an oculist.
- Opuntia (o-pun'she-ah). A genus of cacti. O. pulga'ris, the prickly pear, is used as a remedy in homeopathic practice. O. dillin'ii. See nagphani.
- ora serrata (o'rah ser-a'tah) [L. "zigzag border"]. The zigzag anterior edge of the retina (o'ra serra'ta ret'inæ) [B N A].
- orad (o'rad) [L. os, oris mouth + ad toward]. Toward the mouth.
- oral (o'ral) [L. ora'lis; os mouth]. Pertaining to the mouth.
- orale (o-ra'le). The point on the end of the incisive suture on the inner surface of the alveolar process. oralogy (o-ral'o-je) [L. ora'lis pertaining to the

mouth + Gr. λόγος treatise]. The practice of medical and dental co-operation for health; health dentistry; mouth science

ORCHICITHIN

- orange (or'anj) [L. auran'tius]. The rutaceous tree, Ci'trus auran' tium, and its yellow, edible fruit (auran'tii fruc'tus). There are two varieties: bitter o., or auran'tii ama'ra, and sweet o., or auran'tii dul'cis. The rind, or peel, of bitter orange (auran'iii ama'ri cor'tex) and of sweet orange (auran'iii dul'cis cor'tex) furnishes a volatile oil (o'leum auran'tii cor'tex) which is narcotic and irritant. The flowers of orange furnish a fragrant volatile oil (o'leum auran'tii florum, or oil of neroli). Orange-peel is car-minative and stimulant, its use being chiefly as a flavoring-agent. Dose of fluidextract of bitter-orange peel, 1 fl.dr. (4 c.c.); of syrup, 1-2 fl.oz. (30-60 c.c.); of compound elixir of orange (containing also wormwood, gentian, cascarilla, and buckbean, 1-2 fl.dr. (4-8 c.c); of elix'ir ama'ra, 15-30 min. (1-2 c.c.); of tincture, I fl.dr. (4 c.c.); of tincture of sweet orange, I fl.dr. (4 c.c.); of tincture of sweet orange, I fl.dr. (4 c.c.); of syrup, I-2 fl.oz. (30-60 c.c.); of spir'itus auran'tti, I fl.dr. (4 c.c.); of elix'ir aromat'icum, I-4 fl.dr. (4-16 c.c.); of orange-flower water, I fl.oz. (30 c.c.); of syrup of orange-flowers, 4-8 fl.dr. (16-32 c.c.). acridine

 o. tetra-methyl-acridine, CH[N(CH₃)₂C₆H₃]₂N, o., tetra-metnyl-acridine, Ch[N(CH₃)₂C₆H₃]₂N, ethyl o., an indicator with a PH range of 2-4. O. G. an acid azo dye used as a cytoplasmic stain, C₆H₅,N:N.C₁₀H₄(SO₂.ONa)₂.OH. gold o., helianthin. o. III, helianthin. o. IV. Same as tropeolin OO. methyl-o., Poirrier's o. Same as helianthin. o. N. Same as tropoolin OO. naphtholo., tropeolin OOO. wool o., orange G.
- orbicular (or-bik'u-lar) [L. orbicula'ris]. Circular or rounded.
- orbiculare (or"bik-u-la're) [L.]. The orbicular bone; an ossicle of the ear that usually becomes attached to the incus at the head of its long process.
- orbicularis (or"bik-u-la'ris) [L.]. See muscles, table of.
- orbic'ulus cilia'ris. Same as annulus ciliaris.
- orbit (or'bit) [L. or'bita track]. The bony socket which contains the eye.
- orbita (or'bit-ah). Latin for orbit.
- orbital (or'bit-al) [L. orbita'lis]. Pertaining to the orbit.
- orbitale (or-bit-a'le). The lowest point of the inferior edge of the orbit.
- orbitonasal (or"bit-o-na'zal). Pertaining to the orbit and the nose.
- orbitopagus (or-bit-op'ag-us) [L. or'bita orbit + Gr. πάγος fixed]. A twin monster composed of a small fetus attached to the orbit of the autosite.
- orbitotomy (or-bit-ot'o-me) [L. or'bita orbit + Gr. τομή a cut]. The operation of opening into the bony orbit.
- orcein (or-se'in). A brown coloring-matter, C28H24-N2O7, from orcin: used as a stain.
- orchectomy, orchiectomy (or-kek'to-me, or-ke-ek'to-me) [Gr. δρχις testicle + ἐκτομή excision]. Excision of a testicle.
- orchella (or-shel'ah). A histologic stain composed of 5 c.c. of acetic acid and 40 c.c. each of alcohol and water, colored to a dark red with orchil from which excess of NH₃ has been driven off.
- orcheopexy (or'ke-o-pek-se). Same as orchiopexy. orcheoplasty (or'ke-o-plas-te) [Gr. δρχεα scrotum + πλάσσειν to mold]. Plastic surgery of the Plastic surgery of the scrotum.
- orchialgia (or-ke-al'je-ah) [Gr. ὄρχις testis + ἄλγος pain]. Pain in a testicle.
- orchichorea (or"ke-ko-re'ah) [Gr. 8gxis testis + chorea]. The twitching or jerking movement of a testicle.
- orchicithin (or-ke-sith'in). A therapeutic preparation made from testes, used in sexual neurasthenia.

orchidalgia (or-kid-al'je-ah) [Gr. δρχις testicle + άλγος pain]. Pain in the testicle.

orchidectomy (or-kid-ek'to-me). See orchectomy.
orchidin (or'kid-in) [Gr. δρχις testicle]. A therapeutic fluid preparation of testicles of animals.

orchiditis (or-kid-i'tis). Orchitis.

orchidocelioplasty (or'kid-o-se'le-o-plas-te) [Gr. δρχις testicle + κοιλία belly + πλάσσειν to form]. The operation of transplanting an undescended testicle to the abdominal cavity.

orchidoncus (or-ki-dong'kus) [Gr. δρχις testicle + δγκος tumor]. A tumor of a testicle.

orchidopexy (or-kid'o-peks-e) [Gr. δρχιs testis + πηγνύναι to, fix]. 1. The operation of fixing or suturing the undescended testicle into the scrotum.
2. Preternatural fixity of a testis.

orchidoplasty (or'kid-o-plas-te) [Gr. δρχις testicle + πλάσσειν to form]. The operation of transplanting an undescended testicle to its proper place in the scrotum.

orchidoptosis (or-kid-op-to'sis) [Gr. $\delta\rho\chi\iota$ s testicle + $\pi\tau\tilde{\omega}\sigma\iota$ s falling]. Falling of the testicle: a condition due to varicocele or relaxation of the scrotum.

orchidorrhaphy (or-kid-or'af-e). Same as orchiorrhaphy.

orchidotherapy (or-kid-o-ther'ap-e) [Gr. δρχις testicle + θεραπεία treatment]. Use of a testicular extract in treating diseases.

orchidotomy (or-kid-ot'o-me). Same as orchotomy.

orchiectomy (or-ke-ek'to-me) [Gr. δρχις testicle + έκτομή excision]. Excision of a testicle.

orchiencephaloma (or"ke-en-sef-al-o'mah) [Gr. δρχις testicle + encephaloma]. Encephaloma of the testicle.

orchiepididymitis (or"ke-ep-id-id-im-i'tis) [Gr. δρχις testis + epidudymitis]. Inflammation of a testicle and an epididymis.

orchilytic (or-ke-lit'ik) [Gr. δρχις testicle + λυτικός dissolving]. Splitting up testicular tissue.

orchiocatabasis (or"ke-o-kat-ab'as-is) [Gr. δρχις testis + κατάβασις descent]. The descent of the testicles.

orchiocele (or'ke-o-sēl) [Gr. δρχις testis + κήλη hernia]. 1. Hernial protrusion of a testis. 2. Scrotal hernia. 3. Tumor of a testicle.

orchiococcus (or"ke-o-kok'us) [Gr. δρχις testis + κόκκος berry]. A diplococcus from gonorrheal orchitis.

orchiodynia (or"ke-o-din'e-ah) [Gr. ὅρχις testis + δδύνη pain]. Sharp pain in a testicle.

orchiomyeloma (or'ke-o-mi-el-o'mah) [Gr. δρχις testicle + myeloma]. Myeloma of the testicle.

orchioncus (or-ke-ong'kus) [Gr. ὅρχις testicle + ὅγκος tumor]. Tumor of the testicle.

orchioneuralgia (or"ke-o-nu-ral'je-ah) [Gr. δρχις testicle + neuralgia]. Pain in the testicle.

orchiopexy (or-ke-o-pek'se) [Gr. δρχις testicle + πηξις fixation]. The operation of fixing in the scrotum an undescended testicle.

orchioplasty (or'ke-o-plas-te) [Gr. δρχις testicle + πλάσσειν to form]. Plastic surgery of the testicle.

orchiorrhaphy (or-ke-or'af-e) [Gr. δρχις testis + ραφή suture]. The stitching of a testis to a neighboring tissue, particularly the suturing of an imperfectly descended testicle into the scrotum.

orchioscheocele (or-ke-os'ke-o-sēl) [Gr. δρχις testicle + κήλη hernia]. Scrotal tumor with scrotal hernia.

orchioscirrhus (or''ke-o-skir'us) [Gr. δρχις testicle + σκίβρος hard]. Scirrhus, or hardening, of the testicle.

orchiotomy (or-ke-ot'o-me). Same as orchid-

orchis (or'kis) [Gr. öpxis testis]. The testis.

Orchis (or'kis). The typical genus of orchidaceous

plants. O. mas'cula affords salep: various species are medicinal.

orchitic (or-kit'ik). Pertaining to or caused by orchitis.

orchitin (or'kit-in) [Gr. δρχις testis]. A proprietary testicular extract.

orchitis (or-ki'tis) [Gr. δρχις testis + -ιτις inflammation]. Inflammation of a testis. The disease is marked by pain, swelling, and a feeling of weight. It may occur idiopathically, but is usually due to gonorrhea, syphilis, or tuberculosis. o. parotid'ea, orchitis occurring in mumps. o. variolo'sa, orchitis occurring in small-pox.

orchitolytic (or-kit-o-lit'ik) [Gr. δρχις testicle + λίσις dissolution]. Destroying the testicular tissue.

orchotomy (or-kot'o-me) [Gr. δρχις testis + τέμνειν to cut]. I. Surgical incision of a testicle. 2. Less correctly, castration, or semicastration; orchectomy.

orcin, orcinol (or'sin, or'sin-ol). An antiseptic principle, CH₃ C₆H₃ (OH)₂, or dihydroxytoluene, mainly derived from various lichens. It is a cardiac poison and an antiseptic, and is used like resorcinol in skin diseases.

Ord's operation [William Miller Ord, English surgeon, 1834-1902]. See operation.

ordeal bark (or-de'al). The poisonous bark of various trees and shrubs, used by savages in trial by ordeal.

order (or'der). In classification, the main subdivision of a class. See family.

orderly (or'der-le). A male nurse or attendant in a hospital.

ordinate (or'din-āt). See under abscissa.

ordure (or'dūr). Excrement.

oreoselinum (o"re-o-se-li'num) [L]. An umbelliferous plant of the old world, Peuceda'num oreo-selv'num: used in homeopathic practice.

oresol (o-re'sol). An antitubercular preparation of glycerin guaiacol ether.

orexigenic (o-rek-sij-en'ik) [Gr. δρεξις appetite + γεννῶν to produce]. Increasing or stimulating the appetite.

orexin (o-reks'in). Phenyldihydroquinazolin, patented quinolin derivative, C₄H₄,CH₂N.CH.-NC₆H₆, a white, tasteless powder anti-emetic, stomachic, and a stimulant of the appetite. Dose, 2-6 gr. (0.13-0.4 gm.). 0. hydrochlorid, a salt in colorless, bitter crystals. Dose, 2-6 gr. (0.13-0.4 gm.). 0. tannate, a yellow-white powder, insoluble in water: used as a stomachic, appetizer, and anti-emetic in anorexia due to general disease, and in the vomiting of pregnancy. Dose, 4-8 gr. (0.25-0.5 gm.).

orexoid (o-reks'oid). A proprietary tablet of orexin tannate.

organ (or'gan) [L. or'ganum; Gr. δργανον]. Any part of the body having a special function. acoustic o. Same as o. of Corti. cell-o., a structural part of a cell having some definite function in its life or reproduction, as a nucleus or a centrosome. cement o., the embryonic tissue which develops into the cement layer of the tooth. o. of Corti. the terminal acoustic apparatus within the scala media, including the rods of Corti and the auditory cells, with their supporting elements. See ear. enamel-o., a process of epithelium forming a cap over a dental papilla: from it the enamel is developed. end-o., any distal nerve structure; an end-bulb, -brush, -bud, -plate, -corpuscle, or other terminus of a nerve branch. endocrine o's, the organs of the body which yield internal secretions. See under secretion. O. of Giraldes, the paradidymus. Golgi's o's, neuromuscular spindles. See under spindle. Gye-Barnard o., a filtrable virus asserted by Gye and Barnard to be the cause of cancer. incretory o's. Same as endocrine o's. Jacobson's o., a short rudi-mentary canal extending along the septum of Stensen's duct. lateral line o's, sense organs in the skin of fishes and amphibians, intermediate in type between tactile and auditory organs Meyer's O., an area of circumvallate papillæ on either side of the posterior part of the tongue. O. of Rosenmüller, the parovarium or epoöphoron. O. of Ruffini, an end-organ peculiar to the fingertips. segmental O., the pronephros, mesonephros, and metanephros together. Sense O., an organ consisting of a nerve and its termination, by which a stimulus is converted into a sensation. vomeronasal O. Same as Jacobson's o. Weber's O., the sinus pocularis. O's of Zuckerkandl, large paraganglia (chromaffin tissue) found in late fetal life and a short time after birth at the origin of the inferior mesenteric artery.

organacidia (or-gan-as-id'e-ah). The presence of an organic acid, especially in the stomach.

organella, organelles (or-gan-el'ah, or-ganelz'). The minute organs of protozoa concerned in the functions of metabolism, locomotion, etc.

organic (or-gan'ik) [L. organ'icus; Gr. δργανικός].

1. Pertaining to an organ or the organs. 2. Having an organized structure. 3. Arising from an organism. 4. Pertaining to substances derived from living organisms. 0. chemistry. See under chemistry.

organism (or'gan-izm). Any organized body or living economy; any individual animal or plant. Ricketts's o. See Rickettsia. Siegel's o., a coccus-like organism from the blood and tissues of a calf affected with vaccinia; called by Siegel Cytorrhyctes cocci.

organization (or 'gan-iz-a'shun). 1. The process of organizing or of becoming organized. 2. Any organism or organized body.

organize (or'gan-īz). To provide with an organic structure; to form into organs.

organoferric (or-gan-o-fer'ik). Containing iron and some organic compound.

organogel (or-gan'o-jel). A gel in which an organic liquid takes the place of water.

organogen (or-gan'o-jen). Any one of the chemical elements—carbon, hydrogen, oxygen, nitrogen, sulphur, phosphorus, and chlorin—characteristic of organic substances.

organogenesis, organogeny (or"gan-o-jen'es-is, or-gan-oj'en-e) [Gr. δργανον organ + γένεσις generation]. The development or growth of organs.

organogenetic (or"gan-o-jen-et'ik). Pertaining to organogenesis.

organogenic (or-gan-o-jen'ik). Organogenetic.

organography (or-gan-og'raf-e) [Gr. ὅργανον organ + γράφειν to write]. A description of the organs of a living body.

organoid (or'gan-oid) [Gr. δργανον organ + είδος form]. Resembling an organ.

organoleptic (or"gan-o-lep'tik) [Gr. δργανον organ + λαμβάνεεν to seize]. 1. Making an impression on an organ of special sense. 2. Capable of receiving a sense impression. 0. test. See under tests.

organology (or-gan-ol'o-je) [Gr. δργανον organ + λόγος word]. The sum of what is known regarding the organs of the body.

organoma (or-gan-o'mah). A tumor composed of organs or definite portions of an organ, or characterized by the presence in it of definite organs, as a dermoid cyst.

organometallic (or-gan-o-met-al'ik). Consisting of a metal in combination with an organic radical.

organon (or'gan-on) [L.]. An organ. o. audi'tus [B N A], the organ of hearing. o. gus'tus [B N A], the organ of taste. o. olfac'tus [B N A], the organ of smell. o. parenchymato'sum, a parenchymatous organ. o. spira'le [corti] [B N A], the organ of Corti. o. vi'sus [B N A], the organ of vision. o. vomeronasa'le [jacobsoni] [B N A]. See Jacobson's organ, under organ.

- organonomy (or-gan-on'o-me) [Gr. δργανον organ + νόμος law]. The laws of organic life and of living organisms.
- organonymy (or-gan-on'im-e) [Gr. δργανον organ + δνυμα name]. The nomenclature of the bodily organs.
- organopathy (or-gan-op'ath-e) [Gr. δργανον organ + πάθος disease]. 1. Organic disease. 2. Organotherapy.

organopexia, organopexy (or"gan-o-peks'e-ah, or gan-o-peks-e) [Gr. δργανον organ + πηγνύναι to fix]. The surgical fixation of an organ, especially of the uterus after excision of a fibroid.

organopexil (or"gan-o-peks'il). A method of enucleating fibroid growths.

organophil, organophilic (or-gan'o-fil, or-gan-o-fil'ik) [Gr. δργανον organ + φιλεῖν to love]. Having or manifesting organophilism.

organophilism (or-gan-of'il-izm). Having an affinity for certain organs or tissues of the body.

organoscopy (or-gan-os'ko-pe) [Gr δργανον organ + σκοπείν to examine]. Examination of the abdominal viscera by means of a cystoscope inserted through an epigastric incision.

organosol (or-gan'o-sol). 1. A colloidal solution in which the continuous phase is an organic solvent, as alcohol, ether, benzene, etc. 2. A proprietary agent said to be an alcoholic solution of colloidal silver: used for gonorrhea.

organotherapy (or gan-o-ther ap-e) [Gr. δργανον organ + θεραπεία therapy]. The treatment of disease by the administration of animal organs or their extracts. See opotherapy. heterologous o., organotherapy with substances that have no relation to the diseased organ of the patient. homologous o., organotherapy by extractives of the organs of animals corresponding to the diseased organ of the patient.

organotrope, organotropic (or-gan'o-trop, organ-o-trop'ik) [Gr. δργανον organ + τρόπος turning]. Having an affinity for certain tissues of the body. See parasitotrope and chemotherapy.

organotrophic (or-gan-o-trof'ik). Relating to the nutrition of organs of the body.

organotropism (or-gan-ot'ro-pizm). Organotropy. organotropy (or-gan-ot'ro-pe) [see organotrope]. The chemic affinity of substances for certain organs or tissues of the body.

orgasm (or'gazm) [Gr. δργασμός swelling, or δργαν to swell, to be lustful]. The crisis of venereal excitement.

Oribasius (or-e-ba'se-us). A celebrated physician, born about 325 A. D., at Pergamos. He was physician to the Emperor Julian. He wrote a work in seventy books entitled "Medicinalia Collecta," which is chiefly a compilation from Galen and other writers. Died about 400 A. D.

oridine (or'id-In). The trade name of the calcium salt of the iodized fatty acids of cottonseed oil. used like the inorganic iodids, the iodin content of 1 gm. oridine being equivalent to sodium iodid 0.28 gm. and to potassium iodid, 0.31 gm.

oriental boil (o-re-en'tal). See Furunculus orientalis.

orientalism (o-re-en'tal-izm). The condition of taking on the appearance of an oriental.

orientation (o"re-en-ta'shun) [L. o'riens arising]. The determination of the east point; hence, the determination of one's position with respect to surrounding objects.

orifice (or'if-is) [L. orific'ium]. 1. The entrance or outlet of any bodily cavity. 2. Any foramen, meatus, or opening. cardiac o., the opening of the esophagus into the stomach. mitral o., the left auriculoventricular opening.

orificial (or-if-ish'al). Pertaining to an orifice.

orificialist (or-if-ish'al-ist). One who treats disease by dilating or otherwise operating upon the external orifices of the body.

- orificium (or-if-ish'e-um). Latin for orifice. O. exter'num u'teri [B N A], the external os, or vaginal opening of the uterus. O. inter'num u'teri [B N A], the internal os uteri. O. ure'teris [B N A], the opening of the ureter in the bladder O. ure'thræ exter'num [B N A], the urinary meatus of the penis. O. ure'thræ inter'num [B N A], the internal opening of the urethra O. vagi'næ [B N A], the narrowest portion of the vagina.
- Origanum (o-rig'an-um) [L.; Gr. δρίγανον]. A genus of labiate plants. O. vulga're, wild marjoram, affords a stimulant volatile oil (o'leum orig'ani)· used mainly in veterinary practice and in liniments. O. majora'na, sweet marjoram, also affords a similar oil (o'leum majora'næ).
- origin (or'ij-in) [L. ori'go beginning]. The source or beginning of anything, especially the more fixed end or attachment of a muscle, as distinguished from its insertion. apparent o., ectal o., superficial o., the point at which a cranial nerve emerges from the surface of the brain. deep o., ental o., the true beginning of the brain-fibers of a nerve within the substance of the brain.
- orinasal (or-in-a'zal). See oronasal.
- orinotherapy (o-ri-no-ther'ap-e) [Gr. $\delta \rho \epsilon \nu \delta s$ pertaining to mountains $+ \theta \epsilon \rho a \pi \epsilon l a$ treatment]. Treatment by living in high, mountainous regions.
- ormizet (or miz-et'). A proprietary astringent preparation of clay saturated with formic acid.
- ormosin (or'mo-sin) A white, crystalline alkaloid, C₂₀H₂₈N₃, from the seeds of *Ormo'sia dasycar'pa*, a leguminous tree of South America. Its hydrochlorid is narcotic and sedative.
- ornithin (or'nith-in) [Gr. δρνις bird]. An aminoacid, diamino-valerianic acid, NH₂(CH₂)₃.CH-(NH₂) CO₂H, obtained from arginin by splitting off urea; it is found in the urine and excrement of fowls. On decomposition it gives rise to putrescin and with urea it forms arginin.
- Ornithodorus (or"nith-o-do'rus). A genus of ticks **O. coria/ceus**, the pajaroello of California which is greatly feared because of its bite. The bite is painful, slow to heal, and usually leaves an ugly scar. O. megni'ni, the spinous ear tick of Southern California and Mexico. It produces great annoyance to man and to the domestic animals Called also Otobius megnini O. mouba'ta, the tampan tick of South Africa. It is the transmitter of Spironema duttoni and possibly also of Filaria perstans. It is called also Carapatos O. savig'ni, a species found in Abyssinia, Arabia, and India in human habitations. It is thought to transmit a form of relapsing fever found there O. talaje, a species found in Mexico and Central America on both humans and rats. It carries the relapsing fever spirochete found in Panama. O. tholosa'ni, a species found in Persia and thought to transmit African relapsing fever. O. turica'ta, a species common in Mexico and in Central America. It carries the relapsing fever found in Colombia. Called also carapato.
- orodiagnosis (or'o-di-ag-no'sis). Serum diagnosis. See under diagnosis.
- oro-immunity (ο"ro-im-u'nit-e) [Gr. δρος serum + immunity]. Passive immunity.
- orokinase (o-ro-kin'ās) [L. os, oris mouth + kinase]. A kinase produced by the buccal glands of certain animals which converts inactive ptyalin into active ptyalin.
- orolingual (o-ro-lin'gwal) [L. os mouth + lin'gua tongue]. Pertaining to the mouth and tongue.
- oromeningitis. See orrhomeningitis.
- oronasal (o-ro-na'zal) [L. os mouth + na'sus nose]. Pertaining to the mouth and nose.
- oronol (o'ro-nol). A proprietary liquid antiseptic soap containing formaldehyd, glycerin, and eucalyptus oil.
- oropharynx (o-ro-far'inks) [L. os mouth + phar-

- ynx]. 1. The mouth and pharynx regarded as one cavity. 2. The space between the faucial arches. 3. The pharynx proper as distinguished from the nasopharynx.
- orotherapy (0-ro-ther'ap-e) [Gr. δρός whey + θεραπεία treatment]. 1. Whey-cure; the treatment of disease by administering whey. 2. Serum therapy. See serotherapy.
- oroxylin (o-roks'il-in). An antirheumatic agent in bright-yellow crystals.
- Oroya fever (o-ro'yah). See under fever.
- orphol (or'fol). Bismuth beta-naphtholate, (C₁₀-H₇())₃Bi + 3H₂O. It is a light brown, insoluble, aromatic powder, and is used as an intestinal astringent and antiseptic. Dose, 5-15 gr. (0.33-1 gm.), three to five times a day.
- **orpiment** (or'pim-ent) [L. au'ri pigmen'tum]. Arsenic trisulphid, As₂S₃; king's yellow: used mainly as a depilatory.
- orrhodiagnosis (or''o-di-ag-no'sis). See orodiagnosis.
- orrho-immunity (or"o-im-u'nit-e) [Gr. δόρός serum + immunity]. Passive immunity.
- orrhology (or-ol'o-je) [Gr. δρβδς serum + λόγος treatise]. The scientific study of sera; serology.
- orrhomeningitis (or"o-men-in-ji'tis) [Gr. δρρός serum + meningitis]. Inflammation of a serous membrane.
- orrhoreaction (or"o-re-ak'shun) [Gr. ôppos serum + reaction]. Seroreaction.
- orrhorrhea, orrhorrhœa (or-ro-re'ah) [Gr. δρρός serum + ρειν to flow]. A watery or serous discharge.
- orrhotherapeutic (or"ro-ther-ah-pu'tik). Pertaining to or of the nature of orrhotherapy.
- orrhotherapy (or-ro-ther'ap-e) [Gr. δρρόs serum + therapy]. The therapeutic use of sera.
- orris (or'is) The rhizome or root of Florentine iris, I'ris florenti'na: used in dentifrices, perfumes, etc. See Iris.
- Orsi-Grocco method (or-se-grok'o) [Francesco Orsi; Pietro Grocco, Italian physicians]. Palpatory percussion of the heart.
- orsudan (or'su-dan). A proprietary preparation, sodium 3-methyl-4-acetyl-amino-phenylarsonate: used in all protozoan diseases. Dose, by injection into the muscles, 10 gr. (0.6 gm.).
- orthin (or'thin). Orthohydrazinparaoxybenzoic acid, NH₂,NH.C₆H₃(OH) COOH. Its hydrochlorid, a salt in colorless crystals, is a dangerous antipyretic. Dose, 5-8 gr (0 3-0.52 gm.).
- Orth's stains (orths) [Johannes Orth, pathologist in Berlin, 1847-1923]. See under stains, table of.
- ortho- [Gr. δρθός straight]. A prefix meaning straight or normal. In chemistry, this prefix indicates an isomer; also a cyclic derivative which has two substituents in adjacent positions.
- ortho-acid (or-tho-as'id). An acid containing as many hydroxyl groups as the valence of the acidulous element.
- ortho-arteriotony (or"tho-ar-te-re-ot'o-ne) [Gr. δρθός straight + ἀρτηρία artery + τόνος tone]. Normal arterial pressure.
- orthobiosis (or"tho-bi-o'sis) [Gr. ὁρθός straight + βίος life]. Proper living; living in accordance with all the laws of health.
- orthocephalic, orthocephalous (or"tho-sef-al'-ik, or-tho-sef'al-us) [Gr. δρθός straight + κεφαλή head]. Having a head with a height-length index of from 70 to 75.
- orthochlorophenol (or"tho-klo-ro-fe'nol). An agent, C₀H₄(Cl)OH, employed in the treatment of lupus.
- orthochlorosalol (or"tho-klo-ro-sal'ol). A strongly fragrant substance, OH.C₆H₄.CO.OC₆H₄.Cl, isomeric with chlorosalol.
- orthochorea (or"tho-ko-re'ah) [Gr. op865 straight + chorea]. Choreic movements in the erect posture.

orthochromatic (or"tho-kro-mat'ik). Normally colored or stained.

orthochromophil (or-tho-kro'mo-fil) [Gr. δρθός correct $+ \chi \rho \hat{\omega} \mu a$ color $+ \varphi i \lambda \hat{\epsilon} \nu$ to love]. Staining normally with neutral stains.

orthocol (or'tho-kol). See thiocol.

orthocrasia (or-tho-kra'se-ah) [Gr. δρθός correct + κρασις temperament]. A state in which the body reacts normally to ingested or injected drugs, proteins, etc.

orthocresalol (or-tho-kre'sal-ol). See cresalol.

orthocresol (or-tho-kre'sol). One of the three isomeric forms of cresol.

orthocytosis (or"tho-si-to'sis) [Gr. δοθός correct + kbros cell]. Presence of mature cells only in the blood.

orthodentist (or-tho-den'tist). Orthodontist.

orthodiagram (or-tho-di'ag-ram). The print or record made by an orthodiagraph.

orthodiagraph (or-tho-di'ag-raf) [Gr δρθός straight $+\delta i \dot{a}$ through $+\gamma \rho \dot{a} \varphi \epsilon i \nu$ to write]. A radiographic apparatus for recording accurately the form and size of structures inside the body, doing away with the distortion of the ordinary x-ray plate.

orthodiagraphy (or"tho-di-ag'raf-e). The use of the orthodiagraph.

(or"tho-di"ni-tro-kre'sol). orthodinitrocresol Same as antinonnin.

orthodont (or'tho-dont). Having normal teeth.

orthodontia (or-tho-don'she-ah) [Gr. δρθδs straight + δδοδs tooth]. The department of dentistry όδους tooth]. which deals with the prevention and correction of irregularities of the teeth and malocclusion.

orthodontic (or-tho-don'tik). Pertaining to orthodontia.

orthodontics (or-tho-don'tiks). Same as orthodontia.

orthodontist (or-tho-don'tist). A dentist who specializes in orthodontia.

orthodontology (or-tho-don-tol'o-je). Same as orthodontia.

rthoform (or'tho-form). A white crystalline powder, the methyl ester of paramino-metahy-droxy-benzoic acid, NH₂.C₆H₃(OH) CO OCH₃, **orthoform** (or'tho-form). odorless and tasteless—a kind of synthetic cocain. It is soluble in alcohol and ether, but only slightly so in water: it is a local anesthetic and antiseptic, free from toxic effects. It is used internally in ulcer and cancer of the stomach, and in wound burns, and ulcers in the form of an ointment. Dose, 7\frac{1}{2}-15 gr. (0.5-1 gm.). o. hydrochlorid, a crystalline salt: a local anesthetic. new o., metamino-parahydroxy-benzoic acid methyl ester; somewhat whiter than the original orthoform, and used in the same way; patented.

orthogenesis (or-tho-jen'es-is) [Gr. δρθος straight + γένεσις descent]. 1. Progressive evolution in a given direction, in contrast with variations in several directions. 2. The theory that evolution is controlled by intrinsic factors.

orthogenics (or-tho-jen'iks) [Gr. δρθος correct + YEVIKOS concerning reproduction]. Eugenics.

orthognathous (or-thog'na-thus) [Gr. òρθός straight + γνάθος jaw]. Having a gnathic index of less than 98°

orthograde (or'tho-grad) [Gr. δρθός straight + L. gra'di to walk]. Carrying the body upright in walking.

ortholiposis (or"tho-lip-o'sis) [Gr. δρθδς straight + liposis]. The normal proportion of liposin in the serum of the blood.

orthomelic (or-tho-me'lik) [Gr δρθδs straight + Correcting deformities of the limbs. μέλος limbl.

orthometer (or-thom'et-er) [Gr. δρθός straight + μέτρον measure]. An instrument for finding the relative protrusion of the two eyeballs.

orthomsthylacetanilid (or-tho-meth-il-as-et-an'il-id). Exalgin.

orthomonochlorphenol (or"tho-mo"no-klor-fe'nol). A compound, Cl.C.H.OH, recommended in the treatment of nasal diseases. It is locally anesthetic.

orthomorphia (or-tho-mor'fe-ah) [Gr. δρθδς straight + μορφή form]. The surgical and mechanic correction of deformities.

orthonal (or'tho-nal). A dental anesthetic containing cocain hydrochlorid, alypin, adrenalin, and physiologic salt solution.

orthoneutrophil, orthoneutrophile (or-thonu'tro-fil, -fil). Same as orthochromophil.

orthopedia (or-tho-pe'de-ah). Orthopedics.

orthopedic (or-tho-pe'dik) [Gr. δρθδs straight + παιs child]. Pertaining to the correction of deformities; pertaining to orthopedics.

orthopedics (or-tho-pe'diks) [Gr. δρθδs straight + παι̂s child] That branch of surgery which deals with the correction of deformities and with the treatment of chronic diseases of the joints and spine. dental o., correction of deformities or

irregularities of teeth; orthodontia of children's teeth

orthopedist (ortho-pe'dist). An orthopedic SHEgeon.

orthopercussion (or"tho-per-kush'un) [Gr. ο όθο δ straight + percus-Percussion sion]. in which the distal phalanx of the

Orthopercussion (Kulbs).

pleximeter finger is held perpendicularly to the chest wall.

orthophoria (or-tho-fo're-ah) [Gr. ὀρθός straight + φέρειν to bear]. The normal or proper placement of organs; normal adjustment and equilibrium of eye muscles. asthenic o., general weakness of the eye-muscles.

orthoplastocyte (or-tho-plas'to-sit) [Gr. δρθός straight + plastocyte]. A normal blood-plate.

orthoplessimeter (or-tho-ples-im'et-er). An instrument to take the place of the pleximeter finger in orthopercussion.

orthopnea, orthopnœa (or-thop-ne'ah) [Gr. δρθός straight + πνηά, πνοιά breath]. Inability to breathe except in an upright position.

orthopneic (or-thop-ne'ik). Pertaining to or marked by orthopnea.

orthopraxy, orthopraxis (or'tho-praks-e, or-tho-praks'is) [Gr. $\delta\rho\theta\delta$ s straight $+\pi\rho\delta\sigma\sigma\epsilon\nu$ to make]. The mechanical correction of deformities.

orthopsychiatry (or-tho-si-ki'at-re) [Gr. δρθοs straight + psychiatry]. The study and treatment of disorders of behavior.

Orthoptera (or-thop'ter-ah) [Gr. δρθος straight + πτέρα wing]. An order of biting insects which do not undergo metamorphosis. They include the grasshoppers, locusts, crickets, and cockroaches.

orthoptic (or-thop'tik) [Gr. δρθδs straight + δπτιkos optic]. Correcting obliquity of one or both visual axes.

orthorhombic (or-tho-rom'bik). Having three unequal axes intersected at right angles

orthoröntgenography (or"tho-rent-gen-og'raf-e). Same as orthodiagraphy.

orthoscope (or'tho-skop) [Gr. δρθός straight + σκοπείν to view]. An apparatus which neutralizes the corneal refraction by means of a layer of water: it is used in examining the eye.

orthoscopic (or-tho-skop'ik). Affording a correct and undistorted view.

orthoscopy (or-thos'ko-pe). Examination of the eye by means of the orthoscope.

orthosis (or-tho'sis) [Gr. δρθωσις; δρθός straight]. The straightening of a distorted part.

orthoskiagraph (or-tho-ski'ag-raf). Orthodia-

orthoskiagraphy (or"tho-ski-ag'raf-e). Orthodiagraphy

orthostatic (or-tho-stat'ik) [Gr. δρθδs straight + στατικός causing to stand]. Pertaining to or caused by standing erect.

orthostatism (or'tho-stat-izm). An erect standing position of the body.

orthotast (or'tho-tast) [Gr. δρθός straight + τάσσειν to arrange]. An apparatus for straightening curvatures of bones.

orthoterion (or-tho-te're-on) [Gr. δρθωτήρ straightener]. A device for use in straightening crooked

orthotherapy (or-tho-ther ap-e) [Gr. δρθός straight + therapy]. Treatment of disorders by correction of posture.

orthotic (or-thot'ik). r. Pertaining to orthosis. 2. Orthostatic.

orthotonos (or-thot'o-nos). Orthotonus.

orthotonus (or-thot'o-nus) [Gr. optos straight rovos tension]. A spasm which fixes the head, body, and limbs in a rigid straight line.

orthotropic (or-tho-trop'ik) [Gr. δρθός straight + τρέπειν to turn]. Ascending into the abdominal or other cavity.

orthotyphoid (or-tho-ti'foid). Normal typhoid fever as distinguished from paratyphoid.

orthuria (orth-u're-ah) [Gr. δρθός straight + οὖρον urine]. Normal frequency of urination.

ortizon (or'tiz-on). A proprietary solid hydrogen dioxid, consisting of hydrogen peroxid and carbamid prepared in the form of pencils. The pencils are to be inserted into a wound, in which they give off oxygen.

orypan (or'i-pan) [Gr. öpuça rice + L. pa'nis' bread]. A proprietary rice bread preparation.

Oryza (o-ri'zah) [L.; Gr. δρυζα rice]. A genus of cereal plants. O. sati'va produces rice.

oryzanin (o-ri'zan-in) [Gr. δρυζα rice]. An extractive from rice bran.

Os. The chemic symbol of osmium.

O. S., o. s. Abbreviation for L. oc'ulus sinis'ter, left eve.

os (os), gen. o'ris, pl. o'ra. Latin for mouth [B N A]. o. exter'num, the orifice of the vagina. granular o., an os uteri covered with granulation due to chronic endometritis. o. u'teri exter'num, o. tin'cm, the lower or distal extremity of the canal of the cervix uteri. o. u'teri inter'num, the internal or upper orifice of the canal of the cero. ventrio'uli, the cardiac or esovix uteri. phageal orifice of the stomach.

os (os), gen. os'sis, pl. os'sa. Latin for bone. o. acetab'uli, the fetal bone which becomes the public portion of the acetabulum. o. basila're [B N A], the basilar process of the occipital bone. o. bre've, a short bone. o. cal'cis, the calcaneum or heel-bone. o. capita'tum [B N A], the os magnum O. centra'le, an accessory bone sometimes found on the back of the carpus. O. coc'cygis [B N A], the coccyx. o. coro'nse, the small pastern bone of the horse. o. costa'le, a rib bone. o. cox's [B N A], o. innomina'tum, the innominate bone. o. cuboi'deum [B N A], a cuboid bone. o. cuneifor'me, the cuneiform bone. o. cuneifor me pri mum [B N A], the internal cuneiform bone of the tarsus. o. epitympan'icum, a bone of very early fetal life which becomes the posterior portion of the squama that aids in forming the mastoid cells. o. ethmoida'le [B N A], the ethmoid bone. o. fronta'le [B N A], the frontal bone. o. hama'tum [B N A], the frontal bone. o. hama'tum [B N A], the unciform bone. o. hyoi'deum [B N A], the hyoid bone. o. il'ii, the ilium. o. in'cs, the interparietal bone. o. incisi'vum [B N A], the intermaxillary bone. o. is'chi [B N A], the ischium. o. iacrima'le [B N A]. the lacrimal bone. o. lon'gum, a long bone. o. luna'tum [BNA], the semilunar bone. o. mag'num, the third bone in the second or distal row of the carpus. o. mastoi'deum, the mastoid bone. o. metacarpa'le [B N A], a metacarpal bone. o. metatarsa'le [B N A], a metatarsal bone. o. multan'gulum ma'jus [B N A], the trapezium. o. multan'gulum mi'nus [B N A], the trapezoid bone. o. nasa'le In the [B N A], the trapezoid bone. O. nasta le [B N A], the nasal bone. O. navicula're, the scaphoid bone. O. navicula're pe'dis retarda'tum. See Kohler's disease, under disease.
O. occipita'le [B N A], the occipital bone.
O. orbicula're, a bonelet of the ear which usually becomes joined to the incus. O. palati' mum [B N A], the palate bone.

O. parleta'le

[B N A], the parietal bone.

O. pe'dis,
the coffin-bone of the horse.

O. pisitor'me Ine comn-pone of the horse. O. pisitor me [B N A], the pisiform bone. O. pla'num. I. A flat bone. 2. The orbital plate of the ethmoid bone. O. pneumat'icum [B N A], a hollow bone. O. pu'bis [B N A], the pubis or pubic bone. O. sa'crum [B N A], the sacrum. O. sedenta prium the ichium of a preparation to sa'crum. rium, the ischium. o. sphenoida le [B N A], the sphenoid bone. o. tempora le [B N A], temporal bone. o. tibia le exter num, a small anomalous bone situated in the angle between the navicular bone and the head of the talus. trigo'num [B N A], an external tubercle at the back of the astragalus, sometimes occurring as a separate bone. o. trique trum [B N A], the cunciform bone. o. un'guis, the lacrimal bone. o. zygomat'icum [B N A], the malar bone.

OSAZONE (o'sa-zōn). Any one of a series of compounds obtained by heating a sugar with phenylhydrazin and acetic acid.

oscedo (os-se'do) [L.]. An act of yawning.

oscheal (os'ke-al) [Gr. ὄσχεον scrotum]. Pertaining to the scrotum.

oscheitis (os-ke-i'tis) [Gr. δσχεον scrotum + -ιτις inflammation]. Inflammation of the scrotum.

oscheocele (os'ke-o-sēl) [Gr. δσχεον scrotum + κήλη tumor]. Tumor or swelling of the scrotum; also scrotal hernia.

oscheohydrocele (os"ke-o-hi'dro-sēl) [Gr. δσχων scrotum + hydrocele]. Hydrocele in the sac of a scrotal hernia.

oscheolith (os'ke-o-lith) [Gr. δσχεον scrotum + λίθος stone]. A concretion in the sebaceous glands of the scrotum.

oscheoms (os-ke-o'mah) [Gr. δσχεον scrotum + -ωμα tumor]. A tumor of the scrotum.

oscheoncus (os-ke-ong'kus) [Gr. δσχεον scrotum + δγκος tumor]. Same as oscheoma.

oscheoplasty (os ke-o-plas-te) [Gr. δσχεον scrotum + πλάσσειν to mold]. Plastic surgery of the scrotum.

oschitis (os-ki'tis). Same as oscheitis.

Oscillaria (os-il-a're-ah). A genus of Alga. O. mala'riss, the plasmodium of malaria.

oscillator (os'il-a-tor). An instrument used in the mechanic treatment of disease.

oscillogram (os'il-o-gram). The graphic record made by an oscillograph.

oscillograph (os'il-o-graf) [L. oscillo're to swing + Gr. γράφειν to write]. An instrument for recording electric oscillations. Such an instrument, working on the plan of a string galvanometer, is used in recording the action of the heart.

oscillometer (os-il-om'et-er). An instrument for measuring oscillations; a string galvanometer. Same as sphygmo-oscillometer.

oscillometry (os-il-om'et-re). The use of the string-galvanometer or similar apparatus.

oscin (os'in). A substance, CH₂.C₆H₇O(OH)N.CH₃, formed by the decomposition of hyoscin.

Os'cinis pal'lipes. A fly that transmits yaws. oscitate (os'it-at). To yawn.

- oscitation (os-it-a'shun) [L. oscita'tio]. The act of yawning.
- oscodal (os'ko-dal). A proprietary preparation of cod-liver oil containing the vitamin A and vitamin D elements.
- **osculum** (os'ku-lum), pl. os'cula [L.]. Any small aperture or minute opening.
- bse (a'ze) [Ger.]. A loop at the end of a platinum wire inserted into a glass handle. Same as oese.
- -080. A suffix indicating that the substance is a sugar.
- -osis. A termination denoting a disease or morbid process; sometimes a process not morbid.
- Osgood's disease (os'goodz) [Robert Bayley Osgood, Boston orthopedist, born 1873]. See Schlatter's disease, under disease.
- Osler's disease, phenomenon, sign (ōs'lerz) [Sir William Osler, Regius professor of medicine in the University of Oxford, 1849–1919]. See erythremia, phenomenon, and sign.
- Damatic (os-mat'ik) [Gr. δσμάειν to smell]. Having the sense of smell.
- DSMazome (os'maz-ōm) [Gr. ὀσμή odor + ζωμόs broth]. A principle derivable from muscular fiber which gives the peculiar flavor and odor to roast meats and gravies.
- Osmesthesia (os-mes-the'zhe-ah) [Gr. ἀσμή odor + αίθησις sensation]. Olfactory sensibility; ability to perceive and distinguish odors.
- osmic (os'mik). Containing osmium. See acid.
- osmicate (oz/mik-āt). To stain or impregnate with osmic acid.
- **osmics** (oz'miks) [Gr. δσμή odor]. The science of smell.
- **Damidrosis** (os-mid-ro'sis) [Gr. ὁσμή odor + ἰδρώς sweat]. A condition in which the sweat has an abnormally strong odor.
- Osmium (os'me-um) [Gr. δσμή odor: one of its oxids has a very strong smell]. 1. A very hard, gray, and nearly infusible metal; atomic weight, 190.9; symbol, Os. See acid, osmic. 2. A homeopathic trituration of metallic osmium. 0. tetroxid, a crystalline compound used for staining histologic preparations.
- **Dsmodysphoria** (os"mo-dis-fo're-ah) [Gr. $\delta \sigma \mu \dot{\eta}$ smell $+ \delta \nu \sigma$ Ill $+ \varphi \dot{\epsilon} \rho \epsilon \nu$ to bear]. An intense and abnormal dislike of certain odors.
- **Dsmogen** (os'mo-jen) [Gr. $\omega \sigma \mu \delta s$ impulse $+ \gamma \epsilon \nu \nu \hat{a} \nu$ to produce]. An embryo ferment, or one from which an active ferment is developed.
- **osmolagnia, osmolagny** (oz-mo-lag'ne-ah, oz-mo-lag'ne) [Gr. $\delta\sigma\mu\dot{\eta}$ smell $+\lambda a\gamma\nu\epsilon la$ lust]. Sexual excitation produced by odor.
- osmology (os-mol'o-je) [Gr. δσμή smell + λόγος treatise]. 1. Same as osphresiology. 2. That branch of physics that treats of osmosis.
- **Osmometer** (os-mom'et-er). 1. [Gr. ωσμός impulse + μέτρον measure.] A device for testing or exhibiting osmotic force. 2. [Gr. δσμή smell + μέτρον measure.] An instrument for measuring the acuteness of the sense of smell.
- **Osmonosology** (os"mo-nos-ol'o-je) [Gr. $\delta \sigma \mu \dot{\eta}$ smell + nosology]. The study of disorders of the sense of smell.
- D**smophilic** (os-mo-fil'ik) [osmosis + Gr. φιλεῖν to love]. Readily subject to osmosis.
- Dsmoregulator (os-mo-reg'u-la-tor). An instrument for regulating the penetrating power of x-rays.
 Dsmose (os'mōs). See osmosis.
- **Osmosis** (os-mo'sis) [Gr $\dot{\omega}\sigma\mu\delta$ s impulsion]. The passage of pure solvent from the lesser to the greater concentration when two solutions are separated by a membrane which selectively prevents the passage of solute molecules, but is permeable to the solvent.
- **osmosum** (os-mo'sum). A proprietary antiphlogistic and anodyne preparation of aluminum silicate, glycerin, and antiseptics: used externally.
- DSmotaxis (os-mo-tak'sis) [osmosis + Gr. 74Eis

- arrangement]. The movement of cells as affected by the density of the liquid containing them.
- osmotherapy (oz-mo-ther'ap-e) [osmosis + therapy]. Treatment by the intravenous injection of hypertonic solutions.
- osmotic (os-mot'ik). Pertaining to or of the nature of osmosis. o. pressure. See under pressure.
- osone (o'son). A compound formed by the action of hydrochloric acid on osazone, and capable of being converted into a ketone.
- osphresiology (os"fre-ze-ol'o-je) [Gr. δσφρησιs smell + λόγος treatise]. The sum of knowledge regarding odors and the sense of smell.
- osphresiometer (os"fre-ze-om'et-er) [Gr. ὅσφρησιs smell + μέτρον measure]. An instrument for measuring the acuteness of the sense of smell.
- osphresis (os-fre'sis) [Gr. δσφρησις smell]. The sense of smell.
- osphretic (os-fret'ik). Pertaining to the sense of smell.
- osphyalgia (os-fe-al'je-ah) [Gr. δσφbs loin + ἄλγος pain]. Pain in the loins and hips.
- osphyitis (os-fe-i'tis) [Gr δσφίs loin + -ιτις inflammation]. Inflammation of the loins.
- osphyomyelitis (os"fe-o-mi-el-i'tis) [Gr. δσφύs loin + myelitis]. Myelitis of the lumbar region of the cord.
- ossa (os'ah). Latin plural of os, bone. o. car'pi, the bones of the wrist o. cra'nii, the cranial bones. o. extremita'tis inferio'ris, the bones of the lower limb. o. extremita'tis superio'ris, bones of the upper limb o. lon'ga, long bones. o. metacarpa'lia I-V, metacarpal bones. o. metatarsa'lia I-V, the metatarsal bones. o. pla'na, flat bones. o. sesamoi'dea, sesamoid bones. o. sutura'tum, wormian bones. o. tar'si, the tarsal bones.
- ossagen (os'aj-en). A white, therapeutic powder prepared from red bone-marrow and containing the calcium salts of its fatty acids used in rickets, etc. Dose, 30-60 gr. (2-4 gm.).
- ossalin (os'al-in). A greenish-white fat said to be derived from the spinal cords of neat-cattle: used as an ointment-base.
- ossein (os'e-in). The animal matter of bone; ostein.
- osseo-albumoid (os"e-o-al'bu-moid). A protein derived from bone after hydration of the collagen.
- osseo-aponeurotic (os"e-o-ap-o-nu-rot'ik). Pertaining to bone and the aponeurosis of a muscle.
- osseocartilaginous (os"e-o-kar-til-aj'in-us). Pertaining to or composed of bone and cartilage.
- osseofibrous (os"e-o-fi'brus). Made up of fibrous tissue and bone.
- **osseomucin** (os''e-o-mu'sin). The homogeneous ground-substance which binds together the collagen and elastic fibrils of bony tissue.
- osseomucoid (os-e-o-mu'koid). A mucin existing in bone.
- osseous (os'e-us) [L. os'seus]. Of the nature or quality of bone; bony.
- ossicle (os'ik-l) [L. ossic'ulum]. Any bonelet or small bone. Andernach's o's, the worman bones. auditory o's, the malleus, incus, and stapes, the bonelets of the cavity of the tympanum. A fourth ossicle, the orbiculare, usually becomes joined to the incus. o's of Bertin, the sphenoturbinal bones. epactal o., a wormian bone. Kerkring's o., a small bone of early life which becomes the basilar process of the occipital bone. Riolan's o's, small bones occasionally seen in the suture between the mastoid portion of the temporal bone and the occipital bone.
- ossiculectomy (os"ik-u-lek'to-me) [L. ossicu'lum bonelet + Gr. ἐκτομή excision]. Syrgical removal of an ossicle, or of the ossicles, of the ear.

OBSICULOTOMY (os''ik-u-lot'o-me) [L. ossic'ulum bonelet + Gr. τέμνειν to cut]. Surgical incision of the bonelets of the ear.

ossiculum (os-ik'u-lum), pl. ossic'ula. Latin for ossicle, or little bone. o. audi'tus [B N A]. See auditory ossicles, under ossicle.

ossiferous (os-if'er-us) [L. os bone + fer're to bear]. Producing bone.

ossific (os-if'ik) [L. os bone + fa'cere to make]. Forming or becoming bone.

ossification (os"if-ik-a'shun) [L. ossifica'tio]. 1.
The formation of bone or of a bony substance.
2. Conversion into bone or a bony substance.
metaplastic o., the development of bone matter in soft structures.

ossifluence (os-if'lu-ens). Softening of bony tissue. ossifluent abscess (os-if'lu-ent). See abscess.

ossiform (os'if-orm). Resembling bone.

ossifying (os'if-i-ing). Changing or developing into bone.

ossin (os'in). A therapeutic liquid prepared from beef-bones, said to be serviceable in diabetes.

ossiphone (os'if-ōn) [L. os, ossa bone + φωνή voice]. An apparatus for enabling deaf persons to hear by transmitting the sound from the instrument through the bony structure of the body.

ostalgia (os-tal'je-ah) [Gr. δστέον bone + ἄλγος pain]. Pain in a bone or in the bones.

ostarthritis (os-tar-thn'tis). Same as ostearthritis.
ostauxin (os-tawk'sin). Calcium paranucleinate, a
tasteless powder, soluble in water: used in rachitis.
Dose, 15-30 gr. (1-2 gm.) three times a day.

osteal (os'te-al). Bony; osseous.

ostealbumoid (os-te-al'bu-moid). Same as osseo-albumoid.

ostealgia (os-te-al'je-ah) [Gr. δστέον bone + άλγος pain]. Pain in a bone.

osteameba (os-te-am-e'bah). A bone-corpuscle.

osteanabrosis (os"te-an-ab-ro'sis) [Gr. οστέον bone + ἀνάβρωσις eating up]. Atrophy of bone.

osteanagenesis (os"te-an-aj-en'es-is) (Gr. δστέον bone + ἀναγένεσις reproduction]. Reproduction of bone.

osteanaphysis (os"te-an-af'is-is) [Gr. δστέον bone + ἀναφθειν to reproduce]. Reproduction of bone.

Ostearthritis (os"te-ar-thri'tis) [Gr. ὀστέον bone + ἄρθρον joint]. Inflammation of the bones and joints. See also hypertrophic arthritis, under arthritis. o. defor'mans, endemic o., a condition endemic in portions of Russia, marked by thickening of the joints and softening of the articular ends of bones. hyperplastic o., pulmonary osteoarthropathy.

ostearthrotomy (os"te-ar-throt'o-me) [Gr. δστέον bone + ἄρθρον joint + τέμνειν to cut]. Excision of an articular end of a bone.

ostectomy, osteëctomy (os-tek'to-me, os-te-ek'to-me) [Gr. δστέον bone + ἐκτομή excision]. The excision of a bone.

osteëctopia, osteëctopy (os"te-ek-to'pe-ah, oste-ek'to-pe) [Gr. ὀστέον bone + ἔκτοπος out of place]. Displacement of a bone.

ostein (os'te-in) [Gr. δστέον bone]. Same as os-

osteite (os'te-īt). An independent bony element or center of ossification.

osteitis (os-te-i'tis) [Gr. δστέον bone]. Inflammation of a bone; inflammation of the haversian spaces, canals, and their branches, and generally of the medullary cavity. The disease is marked by enlargement of the bone, tenderness, and a dull, aching pain. acute 0., osteomyelitis, usually of septic origin. See osteomyelitis. 0. albumin'osa, osteitis with accumulation of a sticky, albuminous liquid. 0. carno'sa, osteitis fungosa. caseous 0., tuberculous caries of bone. central o. Same as endosteitis. Chronic 0., central caries or bone abscess; often due to

tuberculosis, sometimes syphilitic. o. conden-sans generalisa ta. See osteosclerosis fragilis sans generalisa'ta. See osteosclerosis fragilis generalisata. condensing o., osteitis with hard deposits of earthy salts; osteosclerosis; eburnation. Called also formative o. and sclerosing o. cortical o. Same as periostitis. o. defor'mans, rarefying osteitis with distortion of the bones affected. o. fibro'sa, a disease characterized by defective ossification of bones which leads to thickening, weakening, and deformity, the bone tissue being replaced by cellular fibrous tissue. It occurs chiefly in children, where it has been termed osteodys-trophia juvenilis. o. fibro'sa osteoplas'tica, rarefying osteitis with fibrous degeneration and formation of cysts. formative o. See condensing o. o. fungo'sa, chronic osteitis in which the haversian canals are dilated and filled with granulation tissue. gummatous o., a chronic form associated with syphilis. o. ossificans, condensing osteitis. rarefying o., a bone disease in which the inorganic matter is lessened and the hard bone becomes cancellated. sarcomatous o., myelomatosis. sclerosing o. See condensing o. secondary hyperplastic o., hypertrophic pulmonary osteo-arthropathy. vascular O., rarefying osteitis in which the spaces formed become occupied by blood-vessels.

ostembryon (os-tem'bre-on) [Gr. δστέον bone + έμβρνον fetus]. Ossification of a fetus.

ostemia (os-te'me-ah) [Gr. δοτέον bone + alμa blood]. Morbid congestion of blood in a bone.

ostempyesis (os''tem-pi-e'sis) [Gr. δστέον bone + ξμπίησις suppuration]. Suppuration within a bone.

osteo-aneurysm (os"te-o-an'u-rizm). Aneurysm in a bone.

osteo-arthritis (os"te-o-ar-thri'tis). Same as ostearthritis.

osteo-arthropathy (os"te-o-ar-throp'ath-e) [Gr. δστέον bone + arthropathy]. Any disease of the joints and bones. hypertrophic pneumic o., hypertrophic pulmonary o. 1. Acromegaly. 2. A disease characterized by enlargement of the terminal phalanges of the fingers and toes, thickening of the distal ends of bones, enlargement of the lower jaw, and peculiar curving of the nails. It is believed to be due to disease of the lungs in which toxic matters are absorbed from diseased areas. Called also osteo-arthropathic hypertrophiante pneumique, toxicogenic osteo-periositiis ossificans, and Bamberger-Marie disease. pulmonary o. See hypertrophic pneumic o.

osteo-arthrotomy (os"te-o-ar-throt'o-me). Same as ostearthrotomy.

osteoblast (os'te-o-blast) [Gr. δστέον bone + βλαστός germ]. Any one of the cells that are developed into bone or that are directly active in the production of bony structures.

osteoblastic (os"te-o-blas'tik). Pertaining to or composed of osteoblasts.

osteoblastoma (os"te-o-blas-to'mah) [osteoblast + Gr. -ωμα tumor]. A tumor, the cells of which tend to differentiate into bone-cells. The term includes osteoma and osteosarcoma.

osteocachectic (os"te-o-kak-ek'tik). Relating to or affected with osteocachexia.

osteocachexia (os"te-o-kak-ek'se-ah). Cachexia due to chronic bone disease; also chronic disease of bone.

osteocampsia (os"te-o-kamp'se-ah) [Gr. δστέον bone + κάμπτειν to bend]. Curvature or bending of a bone.

osteocarcinoma (os"te-o-kar-sin-o'mah). 1. Osteoma combined with carcinoma. 2. Carcinoma of a bone.

osteocartilaginous (os"te-o-kar-til-aj'in-us). Pertaining to or composed of bone and cartilage.

Osteocele (os'te-o-sēl) [Gr. όστέον bone + κήλη tumor] 1. Bony tumor of the testis or scrotum.
2. A hernia containing bone.

- osteocephaloma (os"te-o-sef-al-o'mah) [Gr. δστέον bone + encephaloma]. An encephaloid tumor of a bone.
- osteochondral (os"te-o-kon'dral). Pertaining to bone and cartilage; pertaining to a bone and its articular cartilage.
- osteochondritis (os"te-o-kon-dri'tis) [Gr. δοτέον bone + χόνδρο. cartilage]. Inflammation of both bone and cartilage. o. defor'mans juveni'lis, a disease characterized by atrophy and rarefaction of the head of the femur during the age of growth, resulting in a shortened and thickened femoral neck and a broad flat femoral head. Called also Perthes' disease, Calve-Perthes' disease, Legg's disease, pseudocoxalgia, and coxa plana. o. dis'secans, osteochondritis resulting in the splitting of pieces of cartilage into the joint, particularly the knee-joint.
- osteochondrofibroma (os"te-o-kon"dro-fi-bro'-mah). A tumor containing the elements of osteoma, chondroma, and fibroma.
- osteochondroma (os"te-o-kon-dro'mah) [Gr. δστέον bone + χόνδρος cartilage]. Osteoma blended with chondroma; a tumor that is partly bone and partly cartilaginous.
- osteochondromatosis (os"te-o-kon-dro-mat-o'sis). A condition marked by the presence of multiple osteochondromas.
- osteochondrophyte (os"te-o-kon'dro-fit) [Gr. δστέον bone + χόνδρος cartilage + φυτόν growth]. A tumor made up of cartilaginous and bony tissue.
- osteochondrosarcoma (os"te-o-kon"dro-sar-ko'-mah). Sarcoma blended with osteoma and chondroma.
- osteochondrous (os"te-o-kon'drus) [Gr. δστέον bone + χόνδρος cartilage]. Composed of bone and cartilage.
- osteoclasis, osteoclasia (os-te-ok'las-is, os"te-okla'ze-ah) [Gr. δστέον bone + κλάσις a breaking].
 The surgical fracture or refracture of bones.
 The absorption and destruction of bony tissue by osteoclastic cells.
- osteoclast (os'te-o-klast) [Gr. $\delta \sigma \tau \delta \sigma \nu$ bone $+ \kappa \lambda \hat{a}\nu$ to break]. 1. An instrument for use in the surgical fracture or refracture of bones. 2. Any large multinuclear cell concerned in the absorption and removal of bone. **Rizzoli's 0.**, an osteoclast consisting of a rod on which are two sliding padded rings, and between these a padded plate that can be screwed down upon the part, thus fracturing the bone.
- osteoclastic (os"te-o-klas'tik). Pertaining to or of the nature of an osteoclast; destructive to bone.
- osteoclastoma (os"te-o-klas-to'mah). A tumor the cells of which are giant-cells analogous to osteoclasts; malignant myeloid sarcoma.
- osteoclasty (os'te-o-klas-te). Same as osteoclasis.
 osteocomma (os''te-o-kom'ah) [Gr. δοτέον bone + κόμμα fragment]. Any one of the pieces or members of a series of bony structures, as a vertebra.
- osteocope (os'te-o-kōp) [Gr. δστέον bone + κόπος pain]. A severe pain in a bone or in the bones: generally a symptom of syphilitic bone disease.
- osteocopic (os"te-o-kop'ik). Of the nature of an osteocope.
- osteocranium (os''te-o-kra'ne-um) [Gr. δστέον bone + κρανίον cranium]. The fetal cranium after its ossification.
- osteocystoma (os"te-o-sis-to'mah) [Gr. δστέον bone + cystoma]. A cystic tumor in a bone.
- osteodentin (os''te-o-den'tin) [Gr. δστέον bone + dentin]. Dentin that resembles bone.
- osteodermia (os"te-o-der'me-ah) [Gr. δστέον bone + δέρμα skin]. A bony formation in the skin.
- osteodiastasis (os"te-o-di-as'tas-is) [Gr. δοτίον bone + διάστασις separation]. The separation of a bone or of two bones.
- osteodynia (os"te-o-din'e-ah) [Gr. δστέον bone + δδίννη nainl. Pain in a hone.

- osteodystrophia (os"te-o-dis-tro'phi-ah). Defective bone formation. o. juveni'lis. See under osteitis fibrosa.
- osteo-encephaloma (os"te-o-en-sef-al-o'mah) [Gr. όστέον bone + ἐγκέφαλος brain + -ωμα tumor]. Encephaloid tumor of bone.
- osteo-enchondroma (os"te-o-en-kon-dro'mah). Same as osteochondroma.
- osteo-epiphysis (os"te-o-ep-if'is-is) [Gr. δστέον bone + epiphysis]. Any bony epiphysis.
- osteofibroma (os''te-o-fi-bro'mah) [osteoma + fibroma]. A tumor containing both osseous and fibrous elements.
- osteogen (os'te-o-jen) [Gr. δστέον bone + γεννᾶν to produce]. 1. The soft material from which bone is formed. 2. A proprietary syrup of iron and calcium phosphate.
- osteogenesis, osteogeny (os"te-o-jen'es-is, os-te-oj'en-e) [Gr. δστέον bone + γεννῶν to beget]. The development of the bones. o. imperfec'ta, a congenital disease marked by fragility of the bones, with resulting fractures, due to lack of formative power of the bony tissues.
- osteogenic, osteogenetic (os"te-o-jen'ik, os"te-o-jen-et'ik) [Gr. δστέον bone + γεννᾶν to produce]. Pertaining to the development or growth of the bones.
- osteogenous (os-te-oj'en-us). Osteogenic.
- osteography (os-te-og'raf-e) [Gr. οστέον bone + γράφειν to write]. A description of the bones.
- osteohalisteresis (os''te-o-hal-is-ter-e'sis) [Gr. δστέον bone + ἄλς salt + στερεῖν to deprive]. Loss or deficiency of the mineral elements of bones.
- osteohemachromatosis (os"te-o-hem"ah-kromat-o'sis) [Gr. δοτέον bone + αίμα blood + χρῶμα color]. A disease of animals marked by discoloration of the bone by blood-pigment.
- osteoid (os'te-oid) [Gr. $\delta\sigma\tau\delta\sigma\nu$ bone + $\epsilon l\delta\sigma$ form]. Resembling bone.
- osteolipochondroma (os"te-o-li-po-kon-dro'mah). Chondroma with bony and fatty elements.
- **osteology** (os-te-ol'o-je) [Gr. δστέον bone + λόγος treatise]. The sum of what is known regarding the bones; the study of the bones.
- **osteolysis** (os-te-ol'is-is) [Gr. δστέον bone + λύσις solution]. Decay, absorption, or soft necrosis of bone.
- osteolytic (os"te-o-lit"ik). Relating to or affected with osteolysis.
- osteoma (os-te-o'mah), pl. osteo'mala. A bony tumor; a hard tumor of bone-like structure developing on a bone (homoplastic o.) and sometimes on other structures (heteroplastic o.). cavalryman's o., osteoma at the insertion of the adductor femoris longus. O. denta'le, a dental exostosis. o. du'rum, o. ebur'neum, a tumor made up of hard bony tissue. O. medulla're, an osteoma containing marrow-spaces. O. sarcomato'sum, osteosarcoma. O. spongio'sum, osteoma containing cancellated bone.
- osteomalacia (os"te-o-mal-a'se-ah) [Gr. δοτέον bone + μαλακία softness]. Softening of the bones; mollities ossium, or malacosteon: a disease marked by increasing softness of the bones, so that they become flexible and brittle. It is attended with rheumatic pains; the patient becomes weak, and finally dies from exhaustion. It occurs chiefly in adults.
- osteomalacic (os"te-o-mal-a'sik) [Gr. δστέον bone + μαλακία softness]. Pertaining to or of the nature of osteomalacia.
- osteomalaçosis (os"te-o-mal-ak-o"sis). Same as osteomalação.
- osteomatoid (os-te-o'ma-toid). Resembling an osteoma.
- osteomere (os'te-o-mēr) [Gr. δστέον bone + μέρος part]. One of a series of similar bony structures, such as the vertebræ

osteomyelitis (os"te-o-mi-el-i'tis) [Gr. δοτέον bone + μυελός marow]. Inflammation of the bone-marrow, or of the bone and marrow; inflammation of the medullary cavity of a bone. It may be either acute or chronic. The acute form, which is usually a septic condition, is marked by fever, chills, and depression, and is attended with sup-puration of the medullary cavity, with extension to the neighboring parts and the development of pyemic abscesses. The *chronic* form occurs after injury, or from rheumatism, syphilis, or tuber-culosis. It results in rarefaction, condensation, or abscess of the bone. Garre's o., sclerosing, non-suppurative osteomyelitis. hunger o., a condition with symptoms resembling those of the early stages of osteomalacia, occurring among those who have suffered from food deprivation. malignant o., myelomatosis. o. variolo'sa, osteo myelitis due to, or occurring as a complication of, smallbox.

osteoncus (os-te-ong'kus) [Gr. δστέον bone + δγκος mass]. Tumor of a bone.

osteonecrosis (os"te-o-nek-ro'sis) [Gr. ὀστέον bone + νεκρώσις death]. Death, or necrosis, of bone.

osteoneuralgia (os"te-o-nu-ral'je-ah) [Gr. δστέον bone + νεθρον nerve + άλγος pain]. Neuralgia of a bone.

osteopath (os'te-o-path). A practitioner of or a believer in osteopathy.

osteopathic (os-te-o-path'ik). Pertaining to osteopathy.

osteopathy (os-te-op'ath-e) [Gr. δοτέον bone + πάθος disease]. 1. Any disease of a bone. 2. A system of medicine in which diseases are treated by manipulating the bones and by other manual manipulations intended to restore the deranged mechanism of the body. The official definition of osteopathy adopted by the American Osteopathic Association is: "That system of the healing art which places the chief emphasis on the structural integrity of the body mechanism, as being the most important single factor to maintain the well-being of the organism in health and disease." disseminated condensing o. See osteosclerosis fragilis generalisata

osteopedion (os"te-o-pe'de-on) [Gr. δστέον bone + παιδίον child]. Same as lithopedion.

osteoperiosteal (os"te-o-per-e-os'te-al). Pertaining to bone and its periosteum.

osteoperiostitis (os"te-o-per-e-os-ti'tis) [osteitis + periostitis]. Inflammation of a bone and its periosteum.

osteophage (os'te-o-fāj) [Gr. δστέον bone + φαγείν to eat]. Same as osteoclast.

osteophagia (os"te-o-fa'je-ah) [Gr. δστέον bone + φαγεῖν to eat]. The eating of bone due to a φαγείν to eat]. craving for phosphorus.

osteophlebitis (os"te-o-fle-bi'tis) [Gr. δστέον bone + φλέψ vein + -ιτις inflammation]. Inflammation of the veins of a bone.

osteophone (os'te-o-fon) [Gr. δστέον bone + φωνή voice]. Same as audiphone.

osteophony (os-te-of'o-ne) [Gr. δοτέον bone + φωνή voice]. The conduction of sounds by bone; bone-conduction.

osteophore (os'te-o-for) [Gr. δστέον bone + φέρειν to carryl. A bone-crushing forceps.

osteophyma (os"te-o-fi'mah) [Gr. δστέον bone + φυμα growth]. A tumor or outgrowth of a bone.

osteophyte (os'te-o-fit) [Gr. δστέον bone + φυτόν plant]. A bony excrescence or osseous outgrowth.

osteoplaque (os'te-o-plak). A layer of bone.

osteoplast (os'te-o-plast) [Gr. ὀστέον bone + πλαστός formed]. Same as osteoblast.

osteoplastic (os"te-o-plas'tik). 1. Osteogenic. 2. Pertaining to osteoplasty.

osteoplasty (os'te-o-plas-te) [Gr. όστέον bone + πλάσσειν to form]. Plastic surgery of the bones.

osteopoikilosis (os"te-o-poi-kil-o'sis) [Gr. ὀστέον bone + worklas mottled]. See osteosclerosis fragilis generalisata.

osteoporosis (os"te-o-po-ro'sis) [Gr. δστέον bone $+\pi\delta\rho\sigma$ passage]. Abnormal porousness or rarefaction of bone by the enlargement of its canals or the formation of abnormal spaces.

osteoporotic (os"te-o-po-rot'ik). Relating to osteoporosis.

(os"te-op-sath-ir-o'sis) osteopsathyrosis $\delta\sigma\tau\dot{\epsilon}o\nu$ bone + $\psi\alpha\theta\nu\rho\delta$ s friable]. Fragility of the bones; fragilitas ossium.

osteorrhaphy (os-te-or'ah-fe) [Gr. δστέον bone + ραφή suture]. The suturing or wiring of bones.

osteosarcoma (os"te-o-sar-ko'mah) [Gr. ὀστέον bone + sarcoma]. A sarcoma of bone, or a sarcoma containing osseous tissue.

osteosarcomatous (os"te-o-sar-ko'mat-us). the nature of osteosarcoma.

osteosclerosis (os"te-o-skle-ro'sis) [Gr. δστέον bone + σκλήρωσις hardening]. The hardening bone + σκλήρωσει hardening]. The hardening or abnormal denseness of bone. o. congen'ita, achondroplasia. o. frag'ilis generalisa'ta, excessive calcification of the whole skeleton, characterized by a marble-like appearance of the bones in the roentgenogram. Called also Albers-Schönberg disease, osteitis condensans generalisata, and osteo poikilosis.

osteoscope (os'te-o-skōp) [Gr. δστέον bone + σκοπεῖν to view]. An instrument for testing an xray apparatus by examining a standard preparation of the bones of the forearm.

osteoseptum (os"te-o-sep'tum) [Gr. δστέον bone + The bony part of the nasal septum. septum].

osteosis (os-te-o'sis). The formation of bony tissue, especially the infiltration of connective tissue with bone.

osteospongioma (os"te-o-spon-je-o'mah) [Gr. δσ- $\tau \acute{e}o\nu$ bone + $\sigma\pi\acute{o}\gamma\gamma os$ sponge + $-\omega\mu a$ tumor]. A spongy tumor of bone.

osteosteatoma (os"te-o-ste-at-o'mah) [Gr. ὀστέον bone + στεάτωμα sebaceous tumor]. A suet-like tumor with bony elements.

osteostixis (os"te-o-stik'sis) [Gr. δστέον bone + στίξις puncture]. Surgical puncture of a bone.

osteosuture (os'te-o-sūt-ūr) [Gr. ὀστέον bone + L. sutu'ra suture]. Same as osteorrhaphy.

osteosynovitis (os"te-o-si-no-vi'tis). Synovitis together with osteitis of the neighboring bones.

osteosynthesis (os"te-o-sin'the-sis) [Gr. δστέον bone + σίνθησις a putting together]. Operative fastening of the ends of a fractured bone by sutures, Operative rings, plates, or other mechanical means.

osteotabes (os-te-o-ta'bēz) [Gr. δστέον bone + L. ta'bes wasting]. A disease, chiefly of infants, in which the cells of the bone-marrow are destroyed and the marrow disappears.

(os"te-o-tel-an-je-ek-ta'seosteotelangiectasia ah) [Gr. 607tov bone + telangiectasia]. A sarcoma of bone containing dilated capillaries.

Osteothrombosis (os"te-o-throm-bo'sis) [Gr. δστέον bone + thrombosis]. Thrombosis of the veins of a bone.

osteotome (os'te-o-tōm) [Gr. δστέον bone + τέμvew to cut]. A knife or chisel for cutting bone.

Osteotome (DaCosta).

osteotomoclasia (os"te-o-to-mo-kla'se-ah). teotomoclasis.

Osteotomoclasis (os"te-o-to-mok'la-sis) [Gr. 607 tov bone $+\tau \delta \mu os$ section $+\kappa \lambda \dot{\alpha} \sigma \iota s$ breaking]. Correction of curvature of bone by partial division with the osteotome, followed by forcible fracture.

osteotomy (os-te-ot'o-me) [Gr. δστέον bone + τέμvew to cut]. The surgical cutting of a bone. cuneiform o., the removal of a wedge of bone. hinge o., curvilinear cutting of a bone. linear o., the sawing or linear cutting of a bone. Macewen's o., supracondylar cuneiform section of the femur for genu valgum. subtrochanteric o., Gant's operation. See under operation. transtrochanteric o., division of the femur through the lesser trochanter for deformity about the hip-joint.

osteotribe, osteotrite (os'te-o-trib, os'te-o-trit) [Gr. δστέον bone + τρίβειν to rub]. An instrument for rasping carious bone.

osteotrophy (os-te-ot'ro-fe) [Gr. ὀστέον bone + τροφή nutrition]. Nutrition of bone.

osteotylus (os-te-ot'il-us) [Gr. δστέον bone + τύλος callus]. The callus inclosing the end of a broken bone.

osteotympanic (os"te-o-tim-pan'ik). Same as craniotympanic.

osthexia, osthexy (os-thek'se-ah, os'thek-se) [Gr. δστέον bone + ξξις condition]. Abnormal ossification.

ostia (os'te-ah). Plural of ostium.

ostial, ostiary (os'te-al, os'te-a-re) [L. ostia'rius pertaining to a door]. Pertaining to an orifice.

ostitis (os-ti'tis). Same as osteitis.

ostium (os'te-um) pl. os'tia [L]. A mouth or orifice.
o. abdomina'le, o. abdomina'le tu'bæ uteri'næ [B N A], the fimbriated end of an oviduct.
o. arterlo'sum [B N A], the auriculoventricular
opening. o. atrioventricula're. Same as o.
veno'sum. o. inter'num, the uterine end of an
oviduct. o. pharyn'geum tu'bæ auditi'væ
[B N A], the nasopharyngeal end of a eustachian
tube o. tympan'icum, the tympanic orifice of
a eustachian tube. o. tympan'icum tu'bæ
auditi'væ [B N A], the tympanic opening of the
eustachian tube. o. uteri'num tu'bæ uterin'æ [B N A], the uterine opening of the fallopian
tube. o. vagi'næ, the external orifice of the
vagina. o. veno'sum [B N A], the venous orifice
of the ventricles of the heart.

ostosis (os-to'sis). Osteogenesis.

ostreotoxismus (os"tre-o-toks-iz'mus) [Gr. δστρεον oyster + τοξικόν poisoning]. Poisoning that follows the eating of diseased or unwholesome oysters.

Ostrya (os'tre-ah) [L.; Gr. δστρba hornbeam]. A genus of cupuliferous trees. O. virgin'ica, the leverwood of North America, is used in homeopathic practice.

Oswaldocruzia (oz-wal-do-kru'ze-ah). A genus of trichostrongyline parasites inhabiting the lungs and intestines of reptiles and batrachians.

OT. An abbreviation for old term in anatomy as distinguished from the B N A term.

otacoustic (o-tah-koo'stik) [Gr. ωτακουστείν to listen]. Assisting the hearing.

otalgia (o-tal'je-ah) [Gr. ώταλγία]. Pain in the ear; earache. geniculate o., geniculate neuralgia. See under neuralgia. o. intermittens, otalgia of an intermittent type. reflex o., otalgia dependent upon some lesion of the buccal cavity or nasopharynx. secondary o., otalgia dependent on inflammation of the geniculate ganglion. tabetic o., otalgia in tabes dorsalis due to degeneration of the nerve of Wrisberg.

otalgic (o-tal'jik). Pertaining to earache; also an earache remedy.

Otani's test (o-tah'nez) [Morisuke Otani, contemporary Japanese physician]. See under tests.

otaphone (o'taf-on). Same as otophone.

otectomy (o-tek'to-me) [Gr. οὖs ear + ἐκτομή excision]. Excision of tissues of the internal and middle ear.

othelcosis (o-thel-ko'sis) [Gr. οδs ear + ξλκωσις ulceration]. Suppuration of the ear.

othematoma (o"them-at-o'mah) [Gr. ous ear + hematoma]. Same as hæmatoma ausis.

othemorrhea (o"them-o-re'ah) [Gr. $o\bar{b}s$ ear $+ \alpha l\mu a$ blood $+ \dot{\rho}ola$ flow]. Hemorrhage from the ear.

othenometer (o-then-om'et-er). An instrument for measuring the variations of the nervous force.

othygroma (oth-i-gro'mah) [Gr. obs ear + hygroma]. A condition in which the lobe of the ear is distended with fluid.

otiatric (o-te-at'rik). Pertaining to the treatment of ear diseases.

otiatrics (0-te-at'riks) [Gr. οὖs ear + laτρικόs healing]. The therapeutics of ear diseases.

otiatry (o-ti'at-re). Otiatrics.

otic (o'tik) [Gr. ώτικός]. Pertaining to the ear; aural.

oticodinia (o''tik-o-din'e-ah) [Gr. ωτικός aural + δίνη whirl]. Vertigo from ear disease.

otiobiosis (o"te-o-bi-o'sis). Any disease caused by Otiobius (Ornithodorus); especially the presence in the ear of the O. megnini.

Otiobius (o-te-o'be-us). Same as Ornithodorus.

otitic (o-tit'ik). Pertaining to otitis.

Otitis (o-ti'tis) [Gr. ovs ear + -iris inflammation].

Inflammation of the ear. It is distinguished as o. exter'na, inter'na, or me'dia, according as it affects the external, internal, or middle ear. disease is marked by pain, fever, abnormalities of hearing, deafness, tinnitus, and vertigo. O. croupo'sa, that which is associated with the formation of a fibrinous membrane. o. desquamati'va, external or medial otitis in which there are overdevelopment and desquamation of the cutaneous or mucous epithelium o. diphther-Same as o. croupo'sa. o. exter'na, inflammation of the external ear. o. exter'na circumscrip'ta, that which affects a limited area or areas. o. exter'na diffu'sa, that which affects the greater part of the meatus. o. exter'na furunculo'sa. See furuncular o. furuncular O., the formation of furuncles in the external meatus o. hæmorrha'gica, that which is caused by or attended with hemorrhage o. inter'na, inflammation of the internal ear it may be due to syphilis, diphtheria, scarlatina, or to various other causes o. labyrinth'ica affects chiefly the labyrinth o. mastoi'dea, otitis which involves the mastoid spaces. o. me'dia, inflammation of the middle car o. me'dia catarrha'lis acu'ta, an acute catarrhal form.
o. me'dia catarrha'lis chron'ica, a chronic catarrhal form of several subvarieties o. me'dia purulen'ta acu'ta, an acute suppurative form affecting the middle ear. o. me'dia purulen'ta chron'ica, otorrhea. o. me'dia sclerot'ica, dry catarrh of the middle ear o. me'dia sero'sa, one marked by a copious serous exudation. o. me'dia suppurati'va, suppurative inflammation of the middle ear mucosis o., mucosus o., otitis media caused by Streplococcus mucosus. o. mycot'ica, o. parasit'ica, that which is due to parasitic fungi o. sclerot'ica, that which is marked by hardening of the ear structures.

oto-acariasis (o"to-ak-ar-i'as-is) [Gr. ovs ear + acariasis]. Infection of the ears of cats, dogs, and domestic rabbits with the mite Otodectes. Called also parasitic otitis.

oto-antritis (o"to-an-tri'tis). Otitis involving the attic of the tympanum and the mastoid antrum.

otobiosis (o"te-bi-o'sis). See otiobiosis.

Otobius (o-to'be-us). Same as Ornithodorus. otoblennorrhea (o"to-blen-o-re'ah) [Gr. ois ear +

Otoblennorrnea (ο to-blen-o-re an) [Gr. ovs ear + βλέννα mucus + βola flow]. Mucous discharge from the ear.

otocariasis (o"to-kar-i'as-is). See oto-acariasis.

otocephalus (o-to-sef'al-us) [Gr. οὐs ear + κεφαλή head]. A monster-fetus lacking the lower jaw and having ears united below the face.

otocerebritis (o"to-ser-e-bri'tis) [Gr. oùs ear + cerebritis]. Inflammation of the brain dependent upon disease of the middle ear.

- otocleisis (o-to-kli'sis) [Gr. οὖs ear + κλεῖσις closure]. Closure of the auditory passages.
- otoconia (o-to-ko'ne-ah) [Gr. οὖs ear + κόνις dust].

 1. A dust-like substance made up of otoliths.

 2. Plural of otoconium.
- otoconite (o-tok'o-nīt). Same as otoconium.
- otoconium (o-to-ko'ne-um), pl. otoco'nia [Gr. οὐς ear + κόνις dust]. An otolith.
- otocrane, otocranium (o'to-krān, o-to-kra'ne-um) [Gr. ovs ear $+ \kappa \rho \alpha \nu lo\nu$ skull]. 1. The chamber in the petrous bone that lodges the internal ear. 2. The petromastoid; the auditory portion of the cranium.
- otocranial (o-to-kra'ne-al). Pertaining to the otocranium
- otocyst (o'to-sist) [Gr. οὖs ear + κὐστις bladder].
 The auditory vesicle of the embryo. See under vesicle.
 The auditory sac of some of the lower animals.
- Otodectes (o-to-dek'tēz). A genus of mites. See oto-acariasis.
- otodynia (o-to-din'e-ah) [Gr. οὖs ear + ὀδύνη pain]. Pain in the ear; earache.
- oto-encephalitis (o"to-en-sef-al-i'tis) [Gr. oūs ear + encephalitis] Inflammation of the brain due to an extension from an inflamed middle ear.
- otoganglion (o-to-gang'le-on) [Gr. οὖs ear + γάγγλων ganglion]. The otic ganglion; Arnold's ganglion.
- otogenic (o-to-jen'ik). Same as otogenous.
- otogenous (o-toj'en-us) [Gr $o\bar{v}s$ ear $+ \gamma \epsilon \nu \nu \hat{a}\nu$ to produce] Originating within the ear.
- otography (o-tog'raf-e) [Gr. οὖs ear + γράφειν to write] A description of the ear.
- otohemineurasthenia (o"to-hem-e-nu-ras-the'ne-ah) [Gr. οὖs ear + ἡμι- half + neurasthenia]. Nervous defect of hearing in one ear.
- otolaryngology (o"to-lar-in-gol'o-je). Otology and laryngology considered as a single specialty. otolite (o'to-lit). Otolith.
- otolith (o'to-lith) [Gr. $o\bar{v}s$ ear $+\lambda i\theta os$ stone]. An ear-stone; one of the small calcareous masses within the membranous vestibule, near the terminations of the auditory nerve
- otologic (o-to-loj'ik). Pertaining to otology.
- otologist (o-tol'o-jist). A physician versed in otology.
- otology (0-tol'o-je) [Gr. $o\bar{v}s$ ear $+ \lambda \delta \gamma os$ discourse]. The sum of what is known regarding the ear.
- otomassage (o"to-ma-sahzh') [Gr. ovs ear $+ \mu \Delta \sigma \sigma \epsilon \nu$ to knead]. The massage of the tympanic cavity and ossicles.
- otomucormycosis (o"to-mu-kor-mi-ko'sis) Mucormycosis affecting the ear.
- otomyasthenia (o''to-mi-as-the'ne-ah) [Gr. o\(\tilde{v}\)s car $+ \mu \hat{v}$ s muscle $+ \delta \alpha \theta \hat{\epsilon} \nu \epsilon \iota a$ weakness]. A debilitated state of the ear muscles, interfering with the normal selection and amplification of sounds.
- Otomyces (o-tom'is-ēz) [Gr. οὖs ear + μύκης fungus]. A genus of fungi which infest the ear. O. hage'ni, and O. purpu'reus have been found in the human ear.
- otomycosis (o"to-mi-ko'sis) [Gr. οὖs ear + μὑκης fungus]. Any disease of the ear caused by the presence of fungi in the meatus. o. aspergilli'na, any ear disease caused by the presence of an aspergillus. See myringomycosis.
- otonecrectomy, otonecronectomy (o"to-nek-rek'to-me, o"to-nek-ron-ek'to-me) [Gr. ous ear + necrectomy]. The surgical removal of necrosed structures from the ear.
- otoneuralgia (o"to-nu-ral'je-ah) [Gr. oùs ear + neuralgia]. Neuralgic pain in the ear.
- otoneurasthenia (o"to-nu-ras-the'ne-ah) [Gr. oùs ear + neurasthenia]. Neurasthenia due to ear disease.

- otoneurology (o"to-nu-rol'o-je). Same as neuro-tology.
- otopathy (o-top'ath-e) [Gr. oùs ear $+ \pi \dot{\alpha} \theta$ os suffering]. Any disease of the ear.
- otopharyngeal (o"to-far-in'je-al). Pertaining to the ear and pharynx.
- otophone (o'to-fōn) [Gr. οὐs ear + φωνή sound].

 1. An ear trumpet or other external appliance to aid the hearing.
 2. A tube used in the auscultation of the ear.
- otopiesis (o-to-pi'e-sis) [Gr. οὖs ear + πίεσις pressing]. r. The sinking in or depression of the membrana tympani. 2. Pressure upon the labyrinth, producing deafness.
- otoplasty (o'to-plas-te) [Gr. o\u00fcs ear $+ \pi \lambda \alpha \sigma \epsilon \omega \nu$ to form]. Plastic surgery of the ear, the surgical correction of ear deformities and defects.
- otopolypus (o-to-pol'ip-us) [Gr ovs ear + polypus]. A polypus of the ear.
- otopyorrhea (o"to-pi-or-e'ah) [Gr. ovs ear + πύον pus + βεῖν to flow]. A copious purulent discharge from the ear.
- otopyosis (o"to-pi-o'sis) [Gr. οὖs ear + πίωσις suppuration]. A suppurative disease of the ear.
- otor (o'tor) [Gr. ous ear]. Pertaining to the ear; aural.
- otorhinolaryngology (o"to-ri"no-lar-in-gol'o-je) [Gr. δb s ear $+ \delta t$ s nose $+ \lambda \delta \rho \nu \gamma \xi$ larynx $+ \lambda \delta \gamma \rho s$ discourse]. The sum of knowledge regarding the ear, nose, and larynx and their diseases.
- otorrhagia (o-tor-a'je-ah) [Gr. οὖs ear + ῥηγνύναι to burst forth]. Hemorrhage from the ear.
- otorrhea, otorrhea (o-to-re'ah) [Gr. οὖs ear + ρεῖν to flow]. A discharge from the ear, especially a purulent one.
- otosalpinx (o-to-sal'pinks) [Gr. οὖs ear + σάλπιγξ trumpet] The eustachian tube.
- otosclerectomy (o"to-skle-rek'to-me). Otoscleronectomy.
- otoscleronectomy (o"to-skle-ro-nek'to-me) [Gr. ούs ear + σκληρόs hard + ἐκτομή excision]. Excision of the ankylosed sound-conducting apparatus of the middle ear.
- otosclerosis (o"to-skle-ro'sis) [Gr. οὖs ear + σκληρόs hard]. The formation of spongy bone in the capsule of the labyrinth of the ear.
- otoscope (o'to-skôp) [Gr. οὖs ear + σκοπεῖν to inspect]. An instrument for inspecting or for auscultating the ear. **Brunton's 0.**, an otoscope lighted by means of a funnel attached to the side. **Siegle's 0.**, an otoscope which gives a view of the drum-membrane when subjected to condensed or rarefied air. **Toynbee's 0.**, a tube for insertion into the ear of the patient and of the observer for the purpose of auscultating the patient's ear during politzerization.
- otoscopy (o-tos'ko-pe). Examination of the ear by means of the otoscope.
- otosis (o-to'sis) [Gr. ous ear]. A mishearing; a false impression as to sounds uttered by others.
- otosteal (o-tos'te-al) [Gr. οὖs ear + ὁστέον bone].
 Pertaining to the ear bones.
- otosteon (o-tos'te-on) [Gr. οὖs ear + ὀστέον bone].

 1. An otolith. 2. Any one of the auditory ossicles.
- ototomy (o-tot'o-me) [Gr. οδs ear + τέμνειν to cut].
 The dissection or anatomy of the ear.
- Ott's test (ots) [Isaac A. Ott, American physiologist, born 1847]. See under tests
- oturia (0-tu're-ah) [Gr. οὖs ear + οὖρον urine]. A metastatic urinous discharge from the ear.
- O. U. An abbreviation for L. oc'ulus uler'que, each eye.
- ouabain (wah-ba'in). A very poisonous glucosid, C₃₀H₄₆(O₁₂+9H₂O, from ouabaio. It is a powerful local anesthetic and cardiac stimulant. Dose, T₀0₀ T₀0 gr. (0.00066-0.000132 gm.).
- ouabaio (wah-bah'yo). An African arrow-poison derived from the root of Acokanthe'ra schim'peri, an apocynaceous plant.

Oudin current, resonator (or-dan') [Paul Oudin. French electrotherapeutist and roentgenologist. 1851-1923]. See current and resonator. oulectomy (oo-lek'to-me). Same as ulectomy.

oulitis (00-li'tis). Same as ulitis.

oulonitis (oo-lo-ni'tis). Pulpitis.

ounce (owns) [L. un'cia]. A measure of weight. The ounce avoirdupois is one-sixteenth of a pound avoirdupois, or 437.5 grains (28340 gm.); the troy ounce is one-twelfth of a pound troy, or 480 grains (31.103 gm.). See weights and measures, table of.

ourang-outang (o-ran'o-tang). One of the anthropoid apes, Simia satyrus: used for experimental purposes because susceptible to some diseases of man.

ourology, ouroscopy, etc. (oo-rol'o-je, oo-ros'ko-pe). See urology, uroscopy, etc.

Ouronparia (oo-ron-pa're-ah). See catechu.

outlay, epithelial. An epithelial inlay in which the edges of the wound are not completely approximated, permitting new epithelium to grow out around the wound margin. See inlay, epi-See inlay, epithelial

outlet of the pelvis (owt'let). The inferior opening of the pelvis.

outlimb (owt'lim). The distal part or segment of an extremity.

outpatient (owt'pa-shent). A hospital patient not treated within the wards.

outpocketing (owt-pok'et-ing). Inclosure of a pedicle or other part within the edges of the external wound.

Ov. Abbreviation for L. o'vum, egg.

ova (o'vah). Latin plural of ovum, egg.

ovacoids (o'vak-oids). A proprietary preparation of ovarian hormones for sex dysfunction in the female.

ovadin (o'vad-in). A therapeutic preparation of the ovaries of cows and swine, containing traces of

ovagol (o'va-gol). A combination of bile acids with albumin: said to exert a cholagogue action in the intestine.

oval (o'val) [L. ova'lis]. 1. Egg-shaped. 2. Having the outline of the long section of an egg.

ovalbumin (o-val-bu'min) [L. o'vum egg + albumin]. An albumin obtainable from the whites of eggs.

ovaltine (o-val'tin). A proprietary food-preparation composed of malt extract, dried milk, eggs, and cocoa.

ovamammoid (o-vam-am'oid). A proprietary preparation of ovarian extract and mammary gland extract.

ovaraden (o-var'ad-en). A dry, therapeutic powder prepared from animal ovaries. Dose, 15-30 gr. (1-2 gm.): used in amenorrhea, chlorosis, and hysteria. o. triferrin, a combination of ovaraden with triferrin used in diseases of the female reproductive organs.

ovaradentriferrin (o-var-ad"en-tri-fer'in). A preparation of ovaraden and triferrin.

ovaralgia, ovarialgia (o-va-ral'je-ah, o"va-re-al'-je-ah). Same as oophoralgia.

ovarian (o-va're-an). Pertaining to an ovary or to the ovaries.

ovariectomy (o"va-re-ek'to-me). Same as oöphorectomy.

ovarin (o'var-in). I. The dried and policy of cows. Daily dose, 15-75 gr. (1-5 gm.). of swine.

ovariocele (o-va're-o-sēl) [L. ova'rium ovary + Gr. κήλη hernia]. Hernial protrusion of an ovary.

ovariocentesis (o-va"re-o-sen-te'sis) [L. ova rium ovary + Gr. κέντησις puncture]. Surgical puncture of an ovary.

ovariocyesis (o-va"re-o-si-e'sis) [L. ova'rium ovary + Gr. κύησις pregnancy]. Ovarian pregnancy.

ovariodysneuria (ο-να"re-o-dis-nu"re-ah) [L. ova"-rium ovary + Gr. δυς- ill + νεῦρον nerve]. Neuralgic pain in the ovary.

ovariohysterectomy (o-va"re-o-his-ter-ek'to-me). Same as oophorohysterectomy.

ovariolytic (o-va"re-o-lit'ik) [L. ovary + Gr. λυτικός dissolving]. Destroying ovarian cells or tissue.

ovariorrhexis (o-va"re-o-reks'is) [L. ova'rium ovary + Gr. bifis rupture]. Rupture of an ovary.

ovariosalpingectomy (o-va"re-o-sal-pin-jek'tome). Surgical removal of an ovary and oviduct.

ovariosteresis (o-va"re-o-ste-re'sis) [L. ova'rium ovary + Gr. στέρησις loss]. The extirpation of an ovarv.

ovariostomy (o"va-re-os'to-me). Same as obphor-

ovariotomist (o"va-re-ot'o-mist). A surgeon who practises ovariotomy.

ovariotomy (o"va-re-ot'o-me) [L. ova'rium ovary + Gr. τομή cut]. Surgical removal of an ovary (oophorectomy); or, more commonly, the removal of an ovarian tumor. abdominal o., ovariotomy performed through the abdominal wall.

normal o., the removal of a healthy ovary. vaginal o., ovariotomy performed through the vagina.

ovaritis (o-va-ri'tis). Inflammation of an ovary.

ovarium (o-va're-um) [L.]. Ovary. o. masculi'**num**, the appendix of the testicle.

ovary (o'va-re) [L. ova'rium]. The female sexual gland in which the ova are formed It is a flat, oval body connected with the posterior surface of the broad ligament. It is lined by peritoneum, and is made up of a layer of fibrous tissue (tunica albuginea) inclosing a mass of vascular fibrous tissue which contains a number of graafian vesicles, each inclosing an ovum.

ovaserum (o-vah-se'rum). An antiserum found on immunizing with egg-albumin.

ovatherapy (o-vah-ther'ap-e). See ovotherapy.

overbite (o'ver-bit). The overlapping of upper incisor teeth over the lower.

overcorrection (o"ver-kor-ek'shun). The use of too powerful lenses in correcting defect of vision.

(o"ver-de-ter-min-a'shun). overdetermination In psychanalysis, the assigning of too many meanings to the elements of a dream or symptom.

overextension (o"ver-eks-ten'shun). Extension beyond the normal limit.

overflow (o'ver-flo). The continuous escape of a fluid, as of the tears or the urine. o. of the gall, a popular name for jaundice.

overhang (o'ver-hang). A filling on the proximal surface of a tooth at the cervical margin making a protruding shoulder.

overreaching (o-ver-re'tshing). An error of gait in the horse, in which the toe of the hind hoof strikes the heel of the forefoot.

overriding (o-ver-ri'ding). The slipping of either part of a fractured bone past the other.

overstain (o'ver-stan). To stain a tissue excessively, so that certain elements may be properly stained when the excess of stain is washed out.

overstrain (o'ver-stran). An abnormal degree of fatigue brought about by activity. It is intermediate between fatigue and actual exhaustion.

Excessive activity reoverstress (o'ver-stres). sulting in overstrain.

overtone (o'ver-tōn). Any one of the tones into which a clang can be resolved other than the lowest or fundamental tone. **psychic o.**, the consciousness of a fringe or halo of associated relations which surrounds every image presented to the mind.

ovi albumen (o'vi al-bu'men). Latin for white of egg; the white of hens' eggs: used in pharmacy.
o. vitellum, yolk of egg.

ovicapsule (o'vi-kap-sul). The internal coat of a graafian follicle.

oviducal (o'vi-du-kal). Pertaining to the oviducts.
oviduct (o've-dukt) [L. o'vum egg + duc'tus duct].
The duct passing from either uterine cornu to the ovary, and serving to convey the ovum from the ovary to the uterus and spermatozoa to the ovary; a fallopian tube.

oviferous (o-vifer-us) [L. o'vum egg + fer're to bear]. Producing ova.

ovification (o-vif-ik-a'shun) [L. o'vum egg + fa'cere to make]. The formation of the ovum in the ovary; ovulation.

oviform (o'vif-orm) [L. o'vum egg + for'ma shape]. Egg-shaped; ovoid.

ovigenesis (o-vij-en'es-is) [L. o'vum egg + Gr. γεννᾶν to produce]. Oögenesis.

ovigenetic, ovigenic, ovigenous (o"vij-en-et'-ik, o-vij-en'ik, o-vij'en-us). Producing ova.

ovigerm (o've-jerm) [L. o'vum egg + ger'men germ]. A cell which develops into an ovum.

ovigerous (o-vij'er-us) [L. o'vum egg + ger'ere to bear]. Producing or containing ova.

ovination (o-vin-a'shun) [L. ovi'nus of a sheep]. Inoculation with the virus of sheep-pox.

ovinia (o-vin'e-ah) [L. o'vis sheep]. A disease of sheep resembling and perhaps identical with smallpox; sheeppox.

oviparous (0-vip'ar-us) [L. o'vum egg + par'ere to produce]. Producing ova or eggs which are hatched outside the body, producing young from an egg.

oviposition (o"vi-po-zish'un) [L. o'vum egg + po'nere to place]. The act of laying eggs.

oviprotogen (o-vi-pro'to-jen). A proprietary food for infants and for the sick: said to be a preparation of albumin.

ovisac (o'vis-ak) [L. o'vum egg + sac'cus bag]. A graafian vesicle; the structure which holds an ovum while still within the ovary.

ovist (o'vist). One who believes that the undeveloped embryo exists preformed in the ovum. Cf. animalculist.

ovium (o've-um). The mature ovum.

ovi vitellus (o'vi vi-tel'lus) Latin for yolk of egg: used in pharmacy in preparing emulsions.

ovocenter (o'vo-sen-ter). The centrosome of the ovum during fertilization.

ovocyte (o'vo-sīt). Same as oocyte.

ovoferrin (o-vo-fer'in). A liquid preparation of a salt of organic iron. Dose, 2-4 fl.dr. (8-16 c.c.).

ovogal (o'vo-gal). A proprietary cholagogue remedy, being a combination of bile-acids with egg-albumin. Dose, 8-15 gr. (0.5-1 gm.).

ovogenesis (o-vo-jen'es-is). Same as obgenesis.

ovoglobulin (o-vo-glob'u-lin). The globulin of white of egg.

ovogonium (o-vo-go'ne-um). Same as oögonium.

ovoid (o'void) [ovum + Gr. elos form]. A non-flagellated or female malarial microparasite.

ovol (o'vol). Purified and medicated mutton suet for cosmetic and lubricating purposes.

ovolecithin (o-vo-les'ith-in). A lecithin from eggs: used in tuberculosis, pancreatic diabetes, kidney diseases, etc.

ovolysin (o-vol'is-in) [L. o'vum egg + lysin]. A cytotoxin which acts on egg-cells.

ovolytic (o-vo-lit'ik). Splitting up egg-albumen. ovomucin (o-vo-mu'sin). A glycoprotein from the

ovomucin (o-vo-mu'sin). A glycoprotein from the white of egg.

ovomucoid (o-vo-mu'koid) [L. o'vum egg + mu-coid]. A mucus-like principle derivable from egg-white.

ovoplasm (o'vo-plasm) [L. o'vum egg + plasms].

The substance or protoplasm of an unfecundated ovule.

Ovoplas'ma orienta'le. Same as Leishmania tropica.

ovoprecipitin (o"vo-pre-sip'it-in). A precipitin specific for the white of egg.

ovoprotogen (o-vo-pro'to-jen). Protogen.

ovoserum (o-vo-se'rum). The serum of an animal into which egg-albumin has been injected. This serum will precipitate the albumin from eggs of the same species as those from which the injection was made.

ovotherapy (o-vo-ther'ap-e). Therapeutic use of ovarian extract, especially extract from the corpus luteum.

ovovitellin (o-vo-vi-tel'in). The vitellin of egg-yolk.

ovoviviparous (o"vo-viv-ip'ar-us) [L. o'vum ovum + vivip'arus bringing forth alive]. Reproduction by eggs which are hatched within the body.

ov'ula Nabo'thi. See Naboth's ovules, under ovule.

ovular (o'vu-lar). Pertaining to an ovule or an ovum.

ovulase (o'vu-lās). An enzyme thought to be present in living eggs and to stimulate karyokinesis.

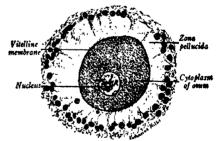

ovulation (o-vu-la'shun). The formation and discharge of an unimpregnated ovum from the ovary.

ovule (o'vūl) [L. ov'ulum]. 1. The ovum within the graafian vesicle. 2. Any small, egg-like structure. 0. of de Graaf, a graafian vesicle. Naboth's o's, glandules or follicles within the os uteri and cervical canal, often distended with mucus. primitive o., primordial o., a rudimentary ovum within the ovary.

ovulin (ov'u-lin). An internal secretion of the ovary.

ovulogenous (o-vu-loj'en-us). Producing or developing from an ovule or ovum.

ovum (o'vum) [Latin for egg]. 1. An egg. 2. The female reproductive cell which, after fertilization, develops into a new member of the same species (von Baer, 1827). The human ovum is a round cell about 120 inch in diameter. It consists of protoplasm (vitellus, or yolk) inclosed by a cell wall, which consists of two layers, an inner one (zona pellucida, zona radiata) and an outer, thin one (vitelline membrane). There is a large nucleus (germinal vesicle), within which is a nucleolus (germinal spot). alecithal 0., one which has

Ovum of monkey (Prentiss).

very little or no food-yolk. apoplectic o., one which is the seat of an extravasation of blood. blighted o., one in which development becomes arrested after impregnation. centrolecithal o., one in which the formative yolk is arranged in a regular manner around the entire ovum. holoblastic o., one in which the food-yolk is scanty and is blended with the formative yolk. lecithal o. Same as meroblastic o. male o., a cell-form seen in the diverticula of the seminiferous tubules: supposed to be an imperfect spermatozoön. Mall's o., an impregnated ovum about thirteen days old; also one twenty-six days old. meroblastic o., one with a large and

nearly inactive food-yolk. permanent o., a complete ovum ready for fertilization. Peters' o., an ovum which was obtained five or six days after impregnation. primitive o., primordial o., any egg-cell which eventually becomes an ovule within the graafian vesicle. telolecithal o., one in which the food-yolk and formative yolk form each a hemisphere.

Ox. Abbreviation for oxymel.

oxacid (oks'as-id). Any acid that contains oxygen. oxalate (oks'al-āt) [L. ox'alas]. Any salt of oxalic acid.

oxalemia, oxalæmia (ok-sal-e'me-ah) [oxalate + Gr. alµa blood]. The presence of an excess of oxalates in the blood.

oxalethylin (oks-al-eth'il-in). A poisonous aromatic liquid, $C_6H_{10}N_2$: a heart stimulant.

oxalic acid (oks-al'ik). See acid.

oxalism (oks'al-izm). Poisoning by oxalic acid or an oxalate.

oxaluria (oks-al-u're-ah) [L. ox'alas oxalate + uri'na urine]. The presence of an excessive amount of oxalic acid or of oxalates in the urine.

oxaluric acid (oks-al-u'rik). An acid derivable from uric acid.

oxalyl (ok'sal-il). The divalent group, (C O)₂, from oxalic acid by the loss of two hydroxyl groups.

oxalylurea (oks"al-il-u're-ah). Parabanic acid, (CO.NH)₂CO, obtainable from uric acid by oxidation; oxalyluveid.

oxamid (oks-am'id). The diamid of oxalic acid, NH₂ CO.CO.NH₂. It will give the biuret reaction. oxaphor (oks'af-or). A 50 per cent. solution of oxycamphor.

ox-bot (oks'bot). The insect, Hypoder'ma linea'ris, whose larvæ infest horned cattle.

oxid (oks'id) [L. ox'idum]. Any compound of oxygen with an element or radical.

oxidase (oks'id-ās). See oxydase.

oxidation (oks-id-a'shun). The act of oxidizing or state of being oxidized. Chemically it consists in the increase of positive charges on an atom or the loss of negative charges.

oxidize (oks'id-īz). To combine or cause to combine with oxygen. See oxidation.

oxidosis (oks-id-o'sis). Same as acidosis.

oxim, oxime (oks'im). Any one of a series of compounds formed by the action of hydroxylamin upon an aldehyd or a ketone.

oxin (oks'in). A proprietary saccharated beefextract.

oxol (oks'ol). Any member of the series of bodies to which menthoxol, camphoxol, and naphtoxol belong.

oxone (oks'on). A proprietary hydrogen dioxid preparation.

oxonemia (oks-o-ne'me-ah) [oxone acetone]. Acetonemia.

oxonium (oks-o'ne-um). Containing tetravalent basic oxygen.

oxonuria (oks-o-nu're-ah). Acetonuria.

oxozone (ox'o-zôn). A hypothetic allotropic form of oxygen, O₄, supposed to be present in ozone.

oxpara (oks'par-ah). A proprietary preparation for treating putrescent teeth.

ox-warble. Same as ox-bot.

oxy- [Gr. δξύς keen]. A prefix meaning sharp, quick, or sour; also denoting the presence of oxygen in a compound

oxyacanthin (oks"e-ak-an'thin). An alkaloid, C₁₈. H₁₉NO₃, from berberis. It causes cerebrospinal paralysis. Called also berbin.

oxyacid, (oks'e-as-id). Same as oxacid.

oxyacoa, oxyacoia, oxyakoia (oks"e-ak-o'ah, oks"e-ak-oi'ah). Same as oxyecoia.

oxyblepsia (oks-e-blep'se-ah) [Gr. δξύς sharp + βλεψ vision]. Unusual acuity of vision.

oxyburserasin (oks-e-bur-ser-az'in). A volatile substance from the resin of myrrh, claimed to be useful in internal wounded surfaces, tuberculous lesions, etc. It is injected and is said to unite with the blood to form a protective membrane.

oxybutyria (oks"e-bu-tir'e-ah) [oxybutyric acid + Gr. οὐρον urine]. The presence of oxybutyric acid in urine.

oxybutyric acid (oks"e-bu-tir'ik). See acid.

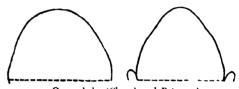

oxybutyricacidemia (oks"e-bu-tir-ik-as-id-e'meah). Same as oxybutyria.

oxycamphor (oks-e-kam'for). A colorless, crystalline powder, C_sH₁₄.CHOH.CO, obtained by the oxidation of camphor. It is used in dyspnea to allay respiratory irritability. Dose, 4 gr. (0.26 gm.).

oxycannabin (oks-e-kan'ab-in). A derivative of cannabinol, C₁₁H₁₁NO₄: nearly inactive.

oxycanthin (oks-e-kan'thin). A white alkaloid, C₁₉H₂₁NO₃, from the root of *Ber'beris vulga'rıs*, the barberry: said to paralyze and irritate the brain and spinal cord.

oxycephalia, oxycephaly (oks"e-sef-a'le-ah, oks-e-sef'al-e) [Gr. δξύς sharp + κεφαλή head]. The

Oxycephalia (Church and Peterson).

possession of an unusually high vertical index. Called also hypsicephaly, turricephaly, steeple head, and tower head.

oxycephalic (oks"e-sef-al'ik). Having a steeple-shaped head.

oxycephalous (oks-e-sef'al-us) [Gr. ὀξύs sharp + κεφαλή head]. Having a high vertical index.

oxychinolin (oks-e-kin'o-lin) A disinfecting principle developed in wounds on the application of chinosol.

oxychlorid (oks-e-klo'rid). A metallic chlorid containing oxygen.

oxychlorin (oks-e-klo'rin). A yellowish powder, soluble in water, being the tetraborate of sodium and potassium with oxychlorid of boron: used as a wound dressing.

oxycholesterin (oks-c-ko-les'ter-in). An oxidized form of cholesterol, C₂₆H₄₅O, found in wool fat.

oxycholin (oks-e-ko'lin). Muscarin.

oxychromatic (oks"e-kro-mat'ik) [Gr. $\delta \xi \delta s$ sour + $\chi \rho \hat{\omega} \mu a$ color]. Staining with acid dyes; acidophile.

oxychromatin (oks-e-kro'mat-in) [Gr. δξύς sour + chromatin]. That part of the chromatin that stains with acid anilin dyes; called also lanthanin.

oxycinesia (oks''e-sin-e'ze-ah) [Gr δξύς sour + κίνησις movement]. Pain on motion.

oxydase (oks'id-ās). Any enzyme that produces oxidation; any one of a group of enzymes which cause oxidation processes. direct o., an oxydase which causes the direct transference of oxygen from the air. indirect o., an oxydase which acts only along with a peroxid. primary o. Same as direct o.

oxydasic (oks-id-a'sik). Of or relating to an oxydase. oxydasis (oks-id-a'sis). The oxidizing action produced by oxydase.

oxydendron (oks-e-den'dron) [Gr. δξύs sour + δένδρον tree] A homeopathic remedy prepared from the leaves of Oxyden'drum arbo'reum, an ericaceous tree of North America.

oxydesis (oks-e-de'sis) [Gr. δξύς sour + δέσις binding]. The acid binding power, especially of the blood. In the latter it represents the greatest amount of HCl (N/100) that can be added to oxalated blood without clumping the erythrocytes.

oxydetic (oks-id-et'ik). Pertaining to the acid binding power.

oxydimorphin (ok-se-di-mor'fin). Dehydromorphin.

oxydum (oks'id-um). Latin for oxid.

oxyecoia (oks''e-e-koi'ah) [Gr. ὀξύς sharp + ἀκοή hearingl. Morbid acuteness of the sense of hear-

oxyesthesia (oks-e-es-the'ze-ah) [Gr. δξύς keen + αίσθησις feeling]. Morbid or abnormal acuteness of the senses.

oxyethylamin (oks-e-eth-il-am'in). A base found in kephalin.

oxygar (oks'e-gar). Agar-agar hydrogen dioxid compound. It is claimed that it liberates oxygen in the intestines, checking fermentation and reducing the bacterial content of the tract.

oxygen (oks'ij-en) [Gr. δξύς sour + γενναν to producel. A gaseous element existing free in the air and in combination in most non-elementary solids, liquids, and gases; atomic weight, 16; symbol, O. Oxygen constitutes 20 per cent. by weight of the atmospheric air; it is the essential agent in the respiration of plants and animals, and is necessary to support combustion. It forms the characteristic constituent of most acids. It is administered chiefly in pulmonary diseases and anemia, mainly by inhalation. **o. want.** See anoxemia.

oxygenase (oks'e-jen-ās). An enzyme that acts by the direct transference of the molecular oxygen of the air. Oxygenases are converted into peroxids.

oxygenate (oks'e-jen-āt). To saturate with oxy-

oxygenation (oks"e-jen-a'shun). Saturation with

oxygenic (oks-e-jen'ik). Containing oxygen.

oxygenium (oks-e-jen'e-um). Oxygen.

oxygousia (oks-e-gu'se-ah) [Gr. δξύς sharp + γεθσις tastel. Unusual acuteness of the sense of taste.

oxyhematoporphyrin (oks"e-hem-at-o-por'fir-in). A pigment sometimes found in the urine, nearly allied to hematoporphyrin.

oxyhemocyanin (oks"e-hem-o-si'an-in). Hemocyanin charged with oxygen.

oxyhemoglobin (oks"e-hem-o-glo'bin). Hemoglobin charged with oxygen as in the arterial blood.

oxyhemoglobinometer (oks"e-hem-o-glo-binom'et-er) An instrument for measuring the oxygen content of the blood.

oxyhydrocephalus (oks"e-hi-dro-sef'al-us). drocephalus in which the top of the head assumes a pointed shape.

oxviodid (oks-e-i'o-did). An oxid combined with its fellow iodid.

oxykrinin (oks-e-krin'in). Same as secretin,

oxylalia (oks-e-la'le-ah) [Gr. δξύς swift + λαλειν to talk]. Swiftness of speech.

oxyleucotin (oks-e-lu'ko-tin). A compound, C₃₄-H₃₂O₁₂, from paracoto bark.

oxyliodid (oks-il-i'o-did). A proprietary preparation, the hydriodid of phenylcinchonic acid: used in myositis, arthritis, and neuritis. Dose, 6 gr. (0.4 gm.) t. i. d.

oxyluciferin (oks-e-lu-sif'er-in). The product of the oxidation of luciferin by lucifarase.

oxymandelic acid (oks"e-man-del'ik). **oxymel** (oks'e-mel) [Gr. δξύς sour + μέλι honey]. A medicated syrup of vinegar and honey.

oxymethylcresoltannin (oks"e-meth"il-kre"sol-tan'in). Cretaform.

oxymorphin (oks-e-mor'fin). See dehydromorphin. oxymyohematin (oks"e-mi-o-hem'at-in). ized myohematin from muscle.

oxynaphthoic acid (oks"e-naf-tho'ik). See acid. oxynarcotin (oks-e-nar'ko-tin). An alkaloid, C22-H₂₃O₈N, from opium.

oxyneurin (oks-e-nu'rin). Same as betain.

oxyntic (oks-in'tik) [Gr. ofluew to make acid]. Secreting an acid substance. See under cell.

oxyntin (oks-in'tin). A combination of hydrochloric acid with albumin, containing 5 per cent. by weight of absolute hydrochloric acid.

oxyopia (oks-e-o'pe-ah). Acuteness of vision.

oxyopter (oks-e-op'ter) [Gr. δξύς sharp + ψψ vision]. A unit of measurement of visual acuity, being the reciprocal value of the visual angle expressed in degrees. An oxyopter (1°) is equivalent to 60 Snellen units (60') and corresponds to the counting of fingers at 1 meter (De Blaskovics).

oxyosis (oks-e-o'sis) [Gr. δξύς acid]. Acidosis.

oxyosphresia (oks''e-os-fre'ze-ah) [Gr. δξύς sharp + δσφρησις smell]. Unusual acuteness of the sense of smell.

oxyparaplastin (oks"e-par-ah-plas'tin). The oxyphil part of paraplastin.

oxypathia (oks-e-pa'the-ah) [Gr. δξύς sharp + πάθος feeling). Acuteness of sensation.

oxypathic (oks-e-path'ik). Pertaining to or characterized by oxypathy.

oxypathy (oks-ip'at-e) [Gr. ὀξύς acid + πάθος disease]. Acid poisoning; inability of the body to eliminate unoxidizable acids which injure the organism by uniting with the fixed alkalis of the tis-The term includes arthritism, lithemia, etc.

oxyperitoneum (oks"e-per-it-o-ne'um). Injection of oxygen into the abdominal cavity.

oxyphenacetin salicylate (oks"if-e-nas'et-in). A salt. antirheumatic and antipyretic.

oxyphenylethylamin (oks-e-fen-il-eth-il-am'in). Tyramin.

oxyphil (oks'if-il). 1. Same as oxyphilous. 2. An oxyphilous cell or histologic element.

oxyphilic (oks-e-fil'ik). Oxyphilous.

oxyphilous (oks-if'il-us) [Gr. όξύς acid + φιλείν to love]. Stainable with an acid dye.

oxyphonia (oks-if-o'ne-ah) [Gr. ὁξυφωνία]. An abnormally sharp quality or pitch of the voice.

oxyphor (oks'e-for). Same as oxycamphor,

oxypinene (oks-e-pi'nēn). A gaseous substance formed by the union of the vapor of pinene with ozonized air: used by inhalation in the treatment of pulmonary tuberculosis.

oxyplasm (oks'e-plazm). The oxyphil part of the cytoplasm.

oxyprolin (oks-e-pro'lin). Oxy-a-pyrrolidin carboxylic acid, OH.C4H6(NH).COOH, obtained from gelatin, one of the cleavage products (aminoacids) of the protein molecule (Emil Fischer, 1902).

oxypropylene diisoamylamin. A colorless liquid principle: a cardiac tonic and stimulant.

oxyproteinic acid (oks"e-pro-te-in'ik). See acid.

oxypurin (oks-e-pu'rin). A purin containing oxygen. The oxypurins include hypoxanthin or monoxypurin, xanthin or dioxypurin, and uric acid or trioxypurin.

oxypurinase (oks-e-pu'rin-as). A ferment which oxidizes oxypurins.

oxyquinaseptol (oks"e-kwin-as-ep'tol). Same as dia phtherin.

oxyquinolin (oks-e-kwin'o-lin). A substance. OH.C₆H₈(CH)₈N, derived from quinolin. It is excreted in the urine paired with glycuronic acid.

oxyrhine (oks'e-rīn) [Gr. δξύς sharp + βίς nose]. Having a sharp-pointed nose.

oxyrygmia (oks-e-rig'me-ah) [Gr. δξύς sharp + έρυγμός eructation]. Acid eructation.

oxysalt (oks'c-sawlt). Any salt of an oxacid.

organitonin (oks-e-san'to-nin). A compound formed in the body from ingested santonin.

exyscasin (eks-e-sep/sin). A toxin derived from a culture of bacteria from cases of tuberculosis with persistent high fever. In the treatment of tuberculosis with added infection from cocci it is injected in connection with oxytuberculin.

oxyspartein (oks-e-spar'te-in). A white, crystalline substance, C₁₃H₂₄N₂O, derived from spartein. It is soluble in water and alcohol, and is used as a heart stimulant, but slows the pulse. Hypodermic dose, \(\frac{3}{4}-\frac{1}{2}\) gr. (0.04-0.1 gm.). O. hydrochlorid, sometimes administered before general anesthetization. Dose, \(\frac{1}{2}-\frac{2}{3}\) gr. (0.03-0.04 gm.).

exyspore (oks'e-spōr) [Gr. δξύs sharp + σπόροs spore]. See exotos pore.

oxytocic (oks-e-to'sik) [Gr. όξθs swift + τόκος birth].
 Hastening the process of childbirth. 2. A medicine which accelerates delivery.

oxytoxin (oks-e-tok'sin). Any substance produced by the oxidation of a toxin.

oxytrimethylbutyrobetaln (oks"e-tri-meth"ilbu-ti"ro-be-ta'in). See carnutin.

Oxytropism (oks-it'ro-pizm) [oxygen + Gr. τρεπεῖν to turn]. Response of living cells to the stimulus of oxygen.

oxytuberculin (oks"e-tu-ber'ku-lin). A tuberculin from cultures of an extremely virulent bacillus, modified by oxidation with hydrogen dioxid: it is injected in relatively large amounts.

oxyuriasis (oks-e-u-ri'as-is). Infection with the oxyuris; pin-worm or seat-worm infection.

oxyuricide (oks-e-u'ris-id) [oxyuris + L. ca'dere to kill]. A medicine which destroys the oxyuris.

oxyurid (oks-e-u'rid). A seat-worm or thread-

worm.

oxyurifuge (oks-e-u'rif-ūj). Same as oxyuricide.

Oryuris (oks-e-u'ris) [Gr. bɛis sharp + obph tail]. A genus of nematode, intestinal worms of the family Ascaridæ. O. vermicula'ris, the seatworm or pin-worm, a minute thread-like worm, found in the rectum of children, and causing itching and reflex disturbances. They are characterized by two cuticular ridges along the ventral and dorsal surface of the body. Infection occurs through the direct transfer of eggs; no intermediate host is necessary. O. appendicula'la and O. diesin'gi are found in the cockroach (Periplanea orientalis). O. incog'nita, a name given to certain ova found in human stools; possibly Heterodera radicicola.

oxyvaselin (oks-e-vas'e-lin). Same as vasogen. oxyzymol (oks-e-zi'mol). Same as carvacrol.

oyster-shanckers' keratitis (oi'ster-shuk-erz). See keratitis.

os. An abbreviation for ounce.

ozalim (o'zal-in). A proprietary disinfectant mixture.

ozena, ozena (o-ze'nah) [Gr. δζη stench]. A disease of the tose with an offensive discharge. It is due to caries, rhinitis, and syphilitic disease. o. laryn'gis, the bad odor of atrophic rhinitis.

ozenous, ozenous (o'ze-nue). Pertaining to or of the nature of ozena.

ozocerite, ozokerit (o-zo-se'rīt, o-zok-e'rīt) [Gr. οζευ to smell + κηρός wax]. Ceresin.

osochrotia (o-zo-kro'she-ah) [Gr. δζειν to smell + χρώς skin]. Strong odor of the skin.

ozogen (o'zo-jen). A proprietary solution of hydrogen dioxid.

ozonnulsion (o-zo-mul'shun). A proprietary preparation of ozonized cod-liver oil and guaiacol: used in tuberculosis and wasting diseases.

ozonator (o'zo-na-tor). An instrument for generating ozone.

ozone (o'zōn) [Gr. δζειν to smell]. An allotropic and more active form of oxygen, O₃: antiseptic and disinfectant. It is formed when oxygen is exposed to the silent discharge of electricity. o.-ether, a mixture of ethylic ether, hydrogen dioxid, and alcohol: used as an antiseptic and for whooping-cough and diabetes. Dose, 30-60 gr (2-4 gm.).

ozonide (o'zo-nid). A compound of an olefin and ozone; the union taking place at the double bond. ozonize (o'zo-niz). To impregnate with ozone.

ozonized (o'zon-īzd). Containing ozone.

ozonizer (o'zo-ni-ser). An apparatus for applying ozone to wounds, sinuses, etc.

ozonoform (o-zo'no-form). A proprietary antisentic mouth-wash.

ozonol (o'zo-nol). A proprietary remedy for diseases of the mucous membranes.

ozonometer (o-zo-nom'et-er) [ozone + Gr. μέτρον measure]. An instrument for estimating the ozone in the air.

ozonophore (o-zo'no-fōr) [ozone + Gr. φέρειν to bear]. 1. One of the granular elements of cell-protoplasm. 2. A red blood-corpuscle.

ozonoscope (o-zo'no-skōp) [ozone + Gr. σκοπείν to view]. An instrument for studying ozone and its effects.

ozophene (o'zo-fen). An alkaline antiseptic coaltar preparation.

ozostomia (o-zo-sto'me-ah) [Gr. δζη stench + στόμα mouth]. Foulness of the breath.

P

- P. The symbol for phosphorus; an abbreviation for presbyopia, pulse, pupil, and L. pon'dere, by weight.
- p. An abbreviation for para.
- P. ▲. Abbreviation for pulpo-axial.
- P. wave. See under wave.

pabular (pab'u-lar). Pertaining to, or of the nature of, pabulum.

pabulin (pab'u-lin) [L. pab'ulum food]. An albuminous substance found in blood just after digestion.

pabulum (pab'u-lum). Latin for food, or aliment. pacchionian bodies, depressions (pak-keo'ne-an) [named from Antonio Pacchioni, an Italian apatomist, 1665-1726]. See body, depression. pacemaker of the heart. See sino-auricular node, under node.

pachemia (pak-e'me-ah). Same as pachyemia.

pachometer (pak-om'et-er). Same as pachymeter.

Pachon's method (pash-awns') [Michel Victor Pachon, French physician, born 1867]. See under method.

pachulosis (pak-u-lo'sis). Same as pachylosis.

pachy- (pak'e-) [Gr. παχύς thick]. A prefix signifying thick.

pachyacria, pachyakria (pak-e-a'kre-ah) [Gr. $\pi \alpha \chi \dot{\nu}$ s thick + $\delta \kappa \rho o \nu$ end]. 1. Same as acromegaly. 2. A condition characterized by enlargement of the soft parts of the extremities, but not of the bones.

pachyæmia (pak-e-e'me-ah). See pachyemia.

- pachyblepharon (pak-e-blef'ar-on) [Gr. παχύς thick $+\beta\lambda k\varphi a\rho \rho\nu$ eyelid]. A thickening of the eyelid, chiefly near the border.
- pachycephalia, pachycephaly (pak"is-ef-a'le-ah, pak-is-ef'al-e). Abnormal thickness of the walls of the skull.
- pachycephalic, pachycephalous (pak"e-se-fal'ik, pak-e-sef'al-us) [Gr. παχύς thick + κεφαλή head]. Having an abnormally thick skull.
- pachychilia (pak-e-ki'le-ah) [Gr. παχύς thick + χείλος lip]. Thickness of the lips.
- pachycholia (pak-e-ko'le-ah) [Gr. παχύς thick + χολή bile]. Abnormal thickness of the bile.
- pachychromatic (pak"e-kro-mat'ik) [Gr. παχύς thick + xpana color]. Having thick chromatin threads.
- pachychymia (pak-e-kim'e-ah) [Gr. παχύς thick + χυμός juice]. Undue thickness of the chyme.
- pachycolpismus (pak"e-kol-piz'mus) [Gr. παχύς thick + κόλπος vaginal. Pachyvaginitis.
- pachydactyly (pak-e-dak'til-e) [Gr. παχύς thick + δάκτυλος finger]. Enlargement of the fingers and toes.
- pachyderma, pachydermia (pak-e-der'mah, pak-e-der'me-ah) [Gr. $\pi \alpha \chi \dot{\nu}_s$ thick + $\delta \dot{\epsilon} \rho \mu a$ skin]. Abnormal thickness of the skin.
- pachydermatocele (pak"id-er-mat'o-sēl) [Gr. παχύς thick + δέρμα skin + κήλη tumor]. 1. Same as dermatolysis. 2. Same as plexisorm neuroma. See under neuroma.
- pachydermatosis (pak"e-der-mat-o'sis) [Gr. παχύς Chronic pachydermia, or thick + dermatolysis]. rosacea hypertrophica.
- pachydermatous (pak-e-der'mat-us). Having a thick skin.
- pachydermia (pak-e-der'me-ah) [Gr. παχύs thick + δέρμα skin]. Hypertrophy, or thickening, of the skin.
 p. laryn'gis, that condition in which the laryngeal epithelium assumes an epidermoid character, due to chronic catarrhal laryngitis. p. ves'ica, a dry, thickened condition of the mucous membrane of the bladder.
- pachydermic (pak-e-der'mik). Characterized by abnormal thickness of the skin.
- pachyemia, pachyemia (pak e-e'me-ah) παχύς thick + αίμα blood]. Thickening of blood, a thick condition of the blood. Thickening of the
- **pachyglossia** (pak-e-glos'e-ah) [Gr. $\pi \alpha \chi \dot{v}_s$ thick $+ \gamma \lambda \hat{\omega} \sigma \sigma \alpha$ tongue]. Abnormal thickness of the tongue.
- pachygnathous (pak-ig'nath-us) [Gr. παχύς thick + γνάθος jaw]. Having a large jaw.
- pachyhematous (pak-e-hem'at-us). Pertaining to or possessing thickened blood.
- pachyhemia (pak-e-he'me-ah) [Gr. παχθς thick + αίμα blood]. Thickening of the blood.
- pachyhymenic (pak"e-hi-men'ik) [Gr. παχύς thick + δμήν membrane]. Having an abnormally thick skin.
- pachyleptomeningitis (pak"e-lep-to-men-in-ji'tis) [Gr. $\pi \alpha \chi \ell s$ thick $+ \lambda \epsilon \pi \tau \ell s$ thin $+ \mu \eta \nu \iota \gamma \xi$ membrane $+ -\iota \tau \iota s$ inflammation]. Inflammation of the dura and pia together.
- pachylosis (pak-il-o'sis) [Gr. παχυλός thick]. A chronic disease in which the skin, particularly that of the legs, becomes dry, thick, and harsh.
- pachymenia (pak-im-e'ne-ah) [Gr. παχύς thick + υμήν membrane]. A thickening of the skin or of a membrane.
- pachymenic (pak-e-men'ik). Having an abnormally thick skin or membrane.
- pachymeningitis (pak"e-men-in-ji'tis) [Gr. παχύς thick $+ \mu \hat{\eta} \nu r \gamma \xi$ membrane $+ \iota r \iota s$ inflammation]. Inflammation of the dura mater. The symptoms of the disease resemble those of meningitis. cerebral p., inflammation of the dura of the brain. external p., inflammation of the outer layers of the dura. hemorrhagic internal p.,

- dural hematoma. internal p., that which affects the inner layer of the dura. serous internal p., the so-called external hydrocephalus. spinal p., inflammation of the dura of the spinal colsyphilitic p., that which is caused by umn. syphilis.
- pachymeninx (pak-e-me'ninks) [Gr. παχίες thick + μῆνιγξ membrane]. The dura mater.
- pachymeter (pak-im'e-ter) [Gr. παχύς thick + με-τρον measure]. An instrument for measuring the thickness of objects.
- pachynema (pak-e-ne'mah) [Gr. παχύs thick + νημα thread]. A post-synaptic stage of mitosis in which the chromatin is in the form of thick spireme threads.
- pachynsis (pak-in'sis) [Gr. πάχυνσις]. Thickening; especially, abnormal thickening.
- pachyntic (pak-in'tik). Marked by unusual thick-
- pachyostosis (pak"e-os-to'sis) [Gr. παχύς thick + όστέον bone. A benign form of hypertrophy of the bones; found particularly in aquatic animals.
- pachyotia (pak-e-o'she-ah) [Gr. παχύς thick + ούς ear]. Marked thickness of the ears.
- pachypelviperitonitis (pak"e-pel"ve-per-it-o-ni'-tis) [Gr. $\pi \alpha \chi \delta s$ thick + pelvic + peritonitis]. Pelvic peritonitis with thickening of the affected parts.
- pachyperitonitis (pak"e-per-it-o-ni'tis)[Gr. παχίσ thick + peritonitis]. Peritonitis with thickening of the affected membrane.
- pachypleuritis (pak"e-plu-ri'tis) [Gr. παχύς thick + pleuritis]. Inflammation of the pleura, with thickening.
- pachypodous (pak-ip'od-us) [Gr. παχύς thick + πούς foot]. Having abnormally thick feet.
- pachyrhizid (pak-ir-i'zid). A poisonous glucosid from Pachyrhi'zus angula'tus, a plant of various tropical regions.
- pachysalpingitis (pak"e-sal-pin-ji'tis) [Gr. παχός thick + σάλπιγξ tube + -ιτις inflammation]. Chronic interstitial inflammation of the muscular coat of the oviduct, producing thickening. Called also mural salpingitis and parenchymatous salpingitis.
- pachysalpingo-oöthecitis (pak-e-sal"ping-o-o"o-the-si'tis) [Gr. $\pi \alpha \chi \nu$ s thick $+ \sigma \dot{\alpha} \lambda \pi \iota \gamma \xi$ tube $+ \dot{\omega} o \theta \eta \kappa \eta$ ovary $+ -i \iota \iota s$]. Chronic parenchymatous inflammation of the ovary and oviduct.
- pachysalpingo-ovaritis (pak"e-sal-pin"go-ovar-i'tis) [Gr. $\pi \alpha \chi \dot{\nu}$ s thick $+ \sigma \dot{\alpha} \lambda \pi \iota \gamma \dot{\nu}$ tube + L. ova'rium ovary]. Inflammation of the ovary and oviduct in which the parts have become hardened and atrophic.
- pachysomia (pak-e-so'me-ah) [Gr. παχύς thick + σῶμα body]. Abnormal thickening of parts of the body.
- pachytrichous (pak-it'rik-us) [Gr. παχύς thick + θρίξ hair]. Having thick hair.
- pachyvaginalitis (pak"e-vaj-in-al-i'tis) [Gr. παχύς thick + vaginalitis]. Inflammatory thickening of the tunica vaginalis.
- pachyvaginitis (pak"e-vaj-in-i'tis) [Gr. παχίς thick + vaginitis]. Chronic vaginitis with thick-ening of the vaginal walls.
- pacinian (pa-sin'e-an). Described by or named for Filippo *Pacini*, Italian anatomist, 1812-1883. p. corpuscies. See corpuscie.
- pacinitis (pas-in-i'tis). Inflammation of the pacinian corpuscles.
- pack (pak). Treatment by wrapping a patient in blankets, wet or dry; also the blankets in which a patient is packed. cold p., the wrapping of a patient in blankets or sheets dipped in cold water. dry p., the wrapping of a patient in dry, hot blankets. hot p., the wrapping of a patient in hot blankets, wet or dry. wet p., the packing of a patient in wet blankets or sheets, hot or cold.

packer (pak'er). An instrument for introducing dressings into the vagina.

packing (pak'ing). 1. The act of filling a wound or cavity with gauze, sponge, or other material.

2. The substance used for filling a cavity.

3. Treatment with the pack.

pad, dinner (pad). A pad placed over the stomach before a plaster jacket is applied. The pad is then removed, leaving space under the jacket to take care of expansion of the stomach after eating. knuckle p's, nodules about the size of a split pea on the dorsal surfaces of the fingers. They are slightly movable and consist of new growths of fibrous tissue. Malgaigne's p's, adipose pads in the knee-joint immediately above the articular surface of the femur and on either side of the upper end of the patella. Mikulicz's p., a pad composed of folded gauze used in surgical work occlusal p., a pad which covers the occlusal surface of a tooth. sucking or suctorial p., a lobulated mass of fat which occupies the space between the masseter and the external surface of the buccinator. It is well developed in infants. Called also fatty ball of Bichat and corpus adiposum buccæ.

P. so. Abbreviation for L. par'tes æqua'les, in equal parts.

pæd-, pædo-, etc. For words thus beginning, see

those beginning ped-, pedo-, etc.

pageism (pa'jism). Sexual perversion in which
the pervert imagines himself a page to a beautiful woman.

Pagenstecher's circle, ointment (pahg'en-stekerz) [Alexander Pagenstecher, German ophthalmologist, 1828-1879]. See circle and ointment.

pageol (paj'e-ol). A proprietary urinary antiseptic. Paget's abscess, disease, etc. (paj'ets) [Sir James Paget, English surgeon, 1814-1899]. See abscess, disease, etc.

pagoplexia (pa-go-pleks'e-ah) [Gr. πάγος frost + πληγή stroke]. Frost-bite or chilblain.

Pahvant valley plague (pah'vant). See tula-

paidology (pi-dol'o-je) [Gr. πa îs child + λόγοs treatise]. The sum of what is known regarding childhood.

pain (pān) [L. pα'na; do'lor]. 1. Distress or suffering. 2. A rhythmic contraction of the uterus in labor. after-p's, the expulsive contractions of the uterus which follow childbirth. bearingdown p., a variety of pain in the female reproductive organs occurring in various local diseases or in childbirth. **boring p.**, a sensation as of being pierced with a gimlet. Called also terebrant p. **Brodie's p.**, pain induced by folding the skin near a joint affected with neuralgia. **Charcot's p's**, rheumatism of a testicle. **dilat**ing p's, those of the first stage of labor. expul-sive p's, those of the second and final stages of labor. false p's, ineffective pains which resemble labor-pains, but which do not indicate the beginning of real labor. fulgurant p's, intense momentary pains, coming and going with swiftness like that of lightning: they are especially characteristic of tabes dorsalis. Called also shooting p. girdle-p., a painful sensation as of a cord about the waist. growing p's, quasi-rheumatic pains peculiar to early youth. hunger-p., pain coming on at the time for feeling hunger for the next meal: ideogenous p., a symptom of gastric disorder. pain caused by an erroneous idea; mentally produced pain. imperative p., a persisting painful sensation felt in psychasthenia. intermenstrual p., a pain occurring during the period between the menses. p.-joy, the hysteric enjoyment of pain. jumping p., a peculiar pain in joint diseases when the bone is laid bare by ulceration of the cartilage. lancinating p., a sharp, darting pain. lightning p's, the cutting and intense darting pains of locomotor ataxia. See also fulgurant p's. mid-p., middle p., intermenstrual pain. mind p., psychalgia. niggling p's, the earliest pains of puerperal labor. osteoscopic p. Same as osteocope. parenchymatous p., pain at the peripheral end of a nerve. premonitory p's, ineffective uter-ine contractions before the beginning of true labor. referred p., pain in a part other than that in which the cause that produced it is situated. p.-sense, the sense by which the pain is perceived. **shooting p.**, a fulgurant pain. **soul p.**, psychalgia. **spot-p's**, pains which seem like patches on the integument. **starting-p's**, pain and muscular spasm in the early stages of sleep. **terebrant p.**, **terebrating p.** Same as borterebrant p., terebrating p. Same as bor-ing p. wandering p., a pain which repeatedly changes its location.

painters' colic (pān'terz). See colic.

Pajot's hook (pazh-oz') [Charles Pajot, French obstetrician, 1816-1896]. See under hook.

pala (pa'lah) [L. "spade"]. A thin, spade-like layer connecting the fimbriæ with the cerebrum.

palmencephalon. See pulcencephalon.

palmogen'esis. See palingenesis (2d def.).

palæopathology. See paleopathology.

palæothalamus. See paleothalamus.

palatal (pal'at-al). Pertaining to the palate.

palate (pal'at) [L. pala'tum]. 1. The roof of the mouth. 2. A popular designation for the uvula, or pendulum of the palate. artificial p., a plate to close a cleft of the palate. **cleft-p.**, a palate having a congenital fissure in the median line. falling p., an elongated uvula. hard p., the anterior part of the roof of the mouth; the bony palate. p.-hook, a hook for raising the palate in rhinoscopy. **pendulous p.**, the uvula. **soft p.**, the part of the palate near the uvula.

palategraph (pal'at-graf) [palate + Gr. γράφειν to record] An apparatus for registering motions record] of the soft palate.

palatiform (pal-at'if-orm) [L. pala'tum palate + for ma form]. Resembling the palate.

palatine (pal'a-tīn) [L. palati'nus]. Pertaining to the palate.

palatinoid (pal-at'in-oid). A form of vehicle for the administration of volatile or unpalatable medicines.

palatitis (pal-at-i'tis). Inflammation of the palate. palatoglossal (pal"at-o-glos'al). Pertaining the palate and tongue.

palatoglossus (pal"at-o-glos'us) [L. pala'tum See muscles, palate + Gr. γλώσσα tongue]. table of.

palatognathous (pal-at-og'na-thus) [L. pala'tum palate + Gr. γνάθος jaw]. Having a congenitally cleft palate.

palatograph (pal'at-o-graf) [L. pala'tum palate + Gr. γράφειν to write]. An instrument to record the movements of the palate in speech.

palatography (pal-at-og'raf-e). The making of graphic records of the movements of the palate in speech.

palatomaxillary (pal"at-o-mak'sil-a-re). Pertaining to the palate and the superior maxillary

palatomyograph (pal"at-o-mi'o-graf) [L. pala'tum palate + Gr. $\mu \hat{v}$ s muscle + $\gamma \rho \delta \varphi \epsilon \iota \nu$ to write]. An instrument used in registering palatal movements.

palatonasal (pal"at-o-na'zal) [L. pala'tum palate + na'sus nose]. Pertaining to the palate and nose.

palatopharyngeal (pal"at-o-far-in'je-al) [L. pala'tum palate + phar'ynx pharynx]. Pertaining to the palate and pharynx.

palatopharyngeus (pal"at-o-far-in'je-us). muscles, table of.

palatoplasty (pal'at-o-plas-te) [L. pala'lum palate + Gr. πλάσσειν to form]. Plastic surgery of the roof of the mouth.

- palatoplegia (pal"at-o-ple'je-ah) [L. pala'lum palate + Gr. πληγή stroke]. Paralysis of the palate.
- palatorrhaphy (pal-at-or'af-e) [L. pala'tum palate + Gr. ραφή suture]. Staphylorrhaphy; the suturation of a cleft-palate.
- palatosalpingeus (pal"at-o-sal-pin'je-us) [L. pala'lum palate + Gr. σάλπιγξ tube]. The tensor palati muscle.
- palatoschisis (pal-at-os'kis-is) [L. pala'tum palate + Gr. σχίσις cleft]. Fissure of the palate.
- palatostaphylinus (pal"at-o-staf-il-i'nus) [L. pala'tum palate + Gr. σταφυλή uvula]. A muscular slip going to the uvula.
- palato-uvularis (pal"at-o-u-vu-la'ris) [L. pala'-tum palate + u'vula uvula]. The azygos uvulæ muscle.
- **palatum** (pal-a'tum) [L.]. The palate. p. du'-rum [B N A], the hard palate. p. mol'le [B N A], the soft palate.
- paleëncephalon (pa"le-en-sef'al-on) [Gr. παλαlos old + ἐγκέφαλον brain]. The old brain; all of the brain except the cerebral cortex and its dependencies
- paleocorebellum (pa"le-o-ser-e-bel'um). The earlier formed part of the cerebellum, comprising the vermis and flocculus. Cf. neocerebellum.
- paleocinetic (pa"le-o-sin-et'ik). See paleokinetic.
- paleo-encephalon (pa"le-o-en-sef'al-on). Pale-encephalon.
- paleogenesis (pa"le-o-jen'es-is). Same as palingenesis (2d def).
- **paleogenetic**, **palæogenetic** (pa"le-o-jen-et'ik) [Gr. $\pi \alpha \lambda \alpha \iota \acute{o}s$ old $+ \gamma \epsilon \nu \nu \mathring{a}\nu$ to produce]. Originated in the past, not newly acquired.
- paleokinetic (pa"le-o-kin-et'ik) [Gr. παλαιός old + κινητικός pertaining to motion] The nervous motor mechanism concerned in automatic associated movements. It is under the control of the corpus striatum and represents a primitive (that is, early developed) type of motor control. Cf. neokinctic
- paleontology, paleontology (pa''le-on-tol'o-je) [Gr $\pi \alpha \lambda \alpha \iota \acute{o}s$ old $+ \lambda \acute{o}\gamma os$ treatise]. The sum of knowledge regarding the early forms of life upon the earth.
- **paleopathology** (pa"/le-o-path-ol'o-je) [Gr π aλαιόs old + pathology] The study of disease in bodies preserved from ancient times, such as mummies.
- paleostriatal (pa"le-o-stri-a'tal). Pertaining to the paleostriatum. p. syndrome, juvenile paralysis agitans. See paralysis agitans.
- paleostriatum (pa"le-o-stri-a'tum) [Gr. παλαιός old + striatum]. The primordial or more early formed portion of the corpus striatum represented by the globus pallidus Cf. neostriatum.
- paleothalamus (pa"le-o-thal'am-us) [Gr. παλαlos eld + thalamus]. Old thalamus; the phylogenetically older part of the thalamus, i. e., the medial (non-cortical) portion of the thalamus.
- palicenesia (pal-e-sin-e'se-ah). Palikinesia.
- palikinesia (pal-e-kin-e'se-ah) [Gr. πάλιν backward + κίνησις movement]. Pathologic repetition of movements.
- palilalia (pal-il-al'e-ah) [Gr. πάλιν backward + λαλεῖν to babble]. Pathologic repetition of words. palinal (pal'in-al) [Gr. πάλιν backward]. Directed
- or moved backward.
 palindromia (pal-in-dro'me-ah) [Gr. παλινδρομία a
- running back]. The recurrence of a disease.

 palindromic (pal-in-dro'mik): Returning; re-
- palinfromic (pal-in-from'ik). Recurring or relapsing.
- palingenesis (pal-in-jen'es-is) [Gr. πάλιν again + γένεσις birth]. 1. The regeneration or restoration of a lost part. 2. The appearance of ancestral characters in successive generations.

- palingraphia (pal-in-gra'fe-ah) [Gr. πάλιν again + γράφειν to write]. Pathologic repetition of letters, words, or parts of words in writing.
- palinmnesis (pal-in-ne'sis) [Gr. πάλω again + μνῆσις memory]. Memory for past events or experiences.
- palinphrasia (pal-in-fra'ze-ah) [Gr. πάλιν again + φράσιs speech]. Pathologic repetition, in speaking, of words or phrases.
- paliphrasia (pal-if-ra'ze-ah). Palinphrasia.
- palirrhea, palirrhœa (pal-ir-e'ah) [Gr. παλίρροια].
 1. Regurgitation. 2. The recurrence of a discharge.
- palisade layer (pal-is-ād'). See under layer.
- palistrophia (pal-is-tro'fe-ah) [Gr. πάλιν again + στρέφειν to turn]. Twisting of the spine upon itself (F. Massa, 1900).
- palite (pal'īt). A war gas. See chloromethylchloroformate.
- palladium (pal-a'de-um) [L.]. 1. A rare, hard metal resembling platinum; symbol, Pd; specific gravity, 11 8; atomic weight, 106 7. 2. A homeopathic preparation of the same metal. p. chlorid, PdCl₂, an agent recommended for use in tuberculosis.
- pallanesthesia, pallanæsthesia (pal"an-esthe'ze-ah) [Gr. πάλλειν to quiver + anesthesia]. Loss of vibration-senses; insensibility to the vibrations of a tuning-fork.
- pallescence (pal-es'ens) [L. palles'cere to grow pale]. Pallor, or paleness; a pale appearance.
- pallesthesia (pal-es-the'ze-ah) [Gr. πάλλειν to shake + αἴσθησις feeling]. Sensibility to vibrations; the peculiar vibrating sensation felt when a vibrating tuning-fork is placed against a subcutaneous bony prominence of the body. Called also bone sensibility.
- pallial (pal'e-al). Pertaining to the pallium.
- palliate (pal'e-āt). To reduce the severity of; to relieve.
- palliative (pal'e-a-tiv) [L. pallia'tus cloaked]. 1. Affording relief, but not cure. 2. An alleviating medicine.
- pallidal (pal'id-al). Pertaining to the globus palidus. p. syndrome, p. system. See syndrome and system.
- pallidin (pal'id-in). A suspension made from the lungs of congenital syphilitics rich in Spirochæta pallida: used in cutaneous test for syphilis.
- pallidum (pal'id-um) [L. "pale"]. The globus pallidus of the brain.
- pallium (pal'e-um) [L. "cloak"]. The cortex of the cerebrum with its underlying white substance; called also mantle and brain-mantle.
- pallography (pal-og'raf-e). See palography.
- pallor (pal'or) [L.]. Paleness; absence of the skin coloration.
- palm (pahm) [L. palma]. r. The hollow, or flexor surface, of the hand. 2. Any tree of the order Palma'ceæ, p.-oil. See oil.
- palmæ plicatæ (pal'me pli-ka'te). The branching folds of the interior of the vagina.
- palmar (pah'mar) [L. pal'maris; pal'ma palm].
 Pertaining to the palm.
- palmaris (pal-ma'ris). See muscles, table of.
- palmature (pal'māt-ūr) [L. pal'ma palm]. A webbed state of the fingers.
- palmellin (pal-mel'in). A red pigment from a fresh-water alga called Palmel'la cruen'ta.
- palmetto, saw- (pal-met'o). See Serenoa.
- palmiacol (pal-mi'ak-ol). A compound, pyrocatechin methyl ether, C₂₃H₄₀O₂, from creosote: used in pulmonary disorders.
- palmic (pal'mik) [Gr. παλμικός].
 palmus, or muscular twitchings.
 Pertaining to the pulse.

palmin (pal'min). Same as palmitin. p. test. See under tests.

palmitic acid (pal-mit'ik). See acid.

palmitin (pal'mit-in). A crystallizable and saponifiable fat, C₃H₆(C₁₆H₃₁O₂)₃, from various fats and oils; glyceryl tripalmitate.

palmitone (pal'mit-on). A crystalline compound; a ketone of palmitic acid, CH₃(CH₂)₁₄.CO.(CH₂)₁₄.CH₃, obtained when palmitic acid is distilled with lime.

palmodic (pal-mod'ik). Pertaining to or affected with palmus.

palmoform (pal'mo-form). Same as guaiaform.

palmoscopy (pal-mos'ko-pe) [Gr. παλμός beat + σκοπείν to examine]. The observation and study of the heart-beat.

palmus (pal'mus) [Gr. παλμός]. r. A throb or leap. 2. Saltatory spasm; jumpers' disease; myriachit, or lata.

palograph (pal'o-graf) [Gr. πάλλειν to oscillate + γράφειν to record]. An instrument for sphygmographic recording in which the impulses are transmitted to a column of mobile fluid in a U-shaped tube, the movements of the liquid surface in the open area of the tube being recorded photographically on a moving sheet of sensitized paper.

palography (pal-og'raf-e). Sphygmography with the palograph.

palp (palp). A feeler; one of the pointed senseorgans attached to the mouth of arthropods.

palpable (pal'pa-bl). Perceptible by touch.

palpate (pal'pāt) [L. palpa're to touch]. To examine by the hand; to feel.

palpation (pal-pa'shun) [L. palpa'tio]. The act of feeling with the hand; the application of the fingers with light pressure to the surface of the body for the purpose of determining the consistence of the parts beneath in physical diagnosis. bimanual p., examination with both hands. light-touch p., light palpation of the surface of the abdomen and thorax with the tip of a finger for the purpose of finding the outlines of the organs.

palpatometry (pal-pa-tom'et-re) [palpation + Gr. μέτρον measure]. The measurement of the amount of pressure that can be borne without causing pain.

palpatopercussion (pal"pa-to-per-kush'un). Palpation combined with percussion.

palpatorium (pal-pa-to're-um). An instrument for palpating the abdomen to locate tender spots.

palpebra (pal-pe'brah, pal'pe-brah), pl. palpe'bra.
Latin for eyelid. p. infe'rior, the lower lid.
p. supe'rior, the upper lid.

palpebral (pal-pe'bral) [L. palpebra'lis]. Pertaining to an eyelid.

palpebralis (pal-pe-bra'lis) [L.]. See muscles, table of.

palpebrate (pal'pe-brāt) [L. palpebra're to wink].
1. To wink. 2. Having eyelids.

palpebration (pal-pe-bra'shun) [L. palpebra'tio].
The act of winking. 2. Abnormally frequent winking.

palpebrine (pal'pe-brin). A proprietary antiseptic containing boric acid, mercuric bichlorid, zinc sulphate, and glycerin: used in conjunctivitis and other eye inflammations.

palpebritis (pal-pe-bri'tis). Same as blepharitis.

palpitation (pal-pit-a'shun) [L. palpita'tio]. Unduly rapid action of the heart; rapid pulsation of the heart.

Pal's stain (pahlz) [physician in Vienna, born 1863]. See under stains, table of.

palsy (pawl'ze). See paralysis.
 Bell's p., facial paralysis.
 birth-p., palsy due to injury received at birth.
 creeping p., progressive muscular atrophy.
 crutch-p., that which is due to the

pressure of a crutch in the axilla. diver's p., caisson disease. drummer's p., paralysis of the ungual phalanx of the thumb from rupture of the extensor pollicis longus tendon: often seen in drummers. Erb's p., paralysis due to degenerative changes in the pyramidal tract of the spinal cord. Féréol-Graux type of ocular p., associated paralysis of the internal rectus muscles of one side and the external rectus of the other. hammer-p., a variety caused by hard work with the hammer. Landry's p. See under paralysis. lead-p., paralysis of the arm muscles from lead-poisoning. night-p., acroparesthesia; paresthesia of the hands, worse at night. pseudo-bulbar p., pseudobulbar paralysis scriveners' p. Same as writers' cramp. shaking p., paralysis agitans. transverse p. See crossed paralysis, under paralysis. wasting p., progressive muscular atrophy.

Paltauf's dwarfism or nanism (pahl'towfs) [Arnold Paltauf, German physician, 1860–1803] See nanism.

Paltauf-Sternberg disease [Paltauf; Karl Sternberg, German pathologist, born 1872] Lymphogranulomatosis.

paludal (pal'u-dal) [L. pa'lus marsh]. Pertaining to or arising from marshes.

paludide (pal'u-did) [L. pa'lus swamp]. A cutaneous eruption of malarial origin.

paludism (pal'u-dizm) [L. pa'lus swamp]. Malarial poisoning; impaludism.

palustral (pal-us'tral) [L. palus'ter marshy]. 1. Paludal; pertaining to marshes. 2. Malarial

pambotano, panbotano (pam-bo-tah'no, pan-bo-tah'no) [Sp.]. The root-bark of Callian'dra housto'ni, a leguminous tree of Mexico: antiperiodic. Dose, 18 dr. (70 gm.).

pampiniform (pam-pin'if-orm) [L. pam'pinus tendril + for'ma form]. Shaped like a tendril. See plexus.

pampinocele (pam-pin'o-sēl) [L. pam'pinus tendril + Gr. κήλη tumor]. Same as varicocele.

pamplegia (pam-ple'je-ah) [Gr. $\pi \hat{a} \nu$ all $+ \pi \lambda \eta \gamma \dot{\eta}$ stroke]. Total paralysis.

pan- [Gr. $\pi \hat{a}_s$, $\pi \hat{a}_{\nu}$ all]. A prefix signifying "all."

panacea (pan-as-e'ah) [Gr. πανάκεια]. 1. A cureall, or remedy for all diseases. 2. An ancient name for various plants.

panæsthesia, panæsthetic. See panesthesia, panesthetic.

panagglutinin (pan-ag-lu'tin-in) [Gr. $\pi \hat{a} \nu$ all + agglutinin]. An agglutinin which agglutinates the corpuscles of all blood groups.

Panama fever (pan-am-ah'). See fever, Chagres.

panaris, panaritium (pan'ah-ris, pan-ah-ris'e-um) [L.]. A whitlow or felon; paronychia. See paronychia. p. anal'gicum, a rare disease marked by a succession of painless felons, usually followed by destruction of the ends of the fingers. Called also Morvan's disease.

panarteritis (pan"ar-te-ri'tis). Inflammation of all the coats of an artery; also inflammation of most of the arteries of the body.

panarthritis (pan-ar-thri'tis) [Gr. $\pi \hat{a}_5$ all $+ \hat{a}_{\rho}\theta_{\rho\rho\nu}$ joint]. Inflammation of all the joints or of all the structures of a joint.

panase (pan'ās). A combination of the digestive ferments of the pancreas of the pig: used in cases where the enzymes of the pancreas are deficient. Dose, 2-5 gr. (0.13-0.33 gm.).

panasthenia (pan-as-the'ne-ah) [Gr. $\pi \hat{a} \nu$ all + a neg. + $\sigma \theta \hat{\epsilon} \nu \sigma$ strength]. A term suggested as a substitute for neurasthenia.

panatrophy (pan-at'ro-fe) [Gr. $\pi \hat{a}s$ all + atrophy]. Atrophy affecting several parts; general atrophy.

Panax (pa'naks) [Gr. πâs all + åκος cure]. 1. A genus of araliaceous plants. 2. The root of P. quinquefo'lium, true or Chinese ginseng. See ginseng.

panblastic (pan-blas'tik) [Gr. πâs all + βλαστός germ]. Pertaining to each of the layers of the blastoderm.

pancarditis (pan-kar-di'tis) [Gr. was all + καρδία heart]. General inflammation of the heart

panchontee (pan-shon-te'). A gum from Bas'sia ellip'tica, a tree of India: it resembles guttapercha.

panchrest (pan'krest) [Gr. πάγχρηστος useful for everything]. A panacea, or remedy, for every disease.

Pancratium (pan-kra'she-um) [L.; Gr. παγράσιον powerful]. An extensive genus of amarylidaceous plants common in most warm regions: reputed to have medicinal qualities.

pancreaden (pan'kre-ad-en). A therapeutic preparation of the pancreas: used in diabetes mellitus.

Daily dose, 4-6 dr. (15-23 gm).

pancreas (pan'kre-as) [Gr. $\pi \hat{\alpha}$ s all + $\kappa \rho \hat{\epsilon} \alpha$ s flesh]. A large, clongated, racemose gland below the stomach and in relation with the spleen and the duodenum. Its right extremity, the head, is the larger, and directed downward; the left extremity, or tail, is transverse, and terminates close to the spleen. The secretion or juice of the pancreas, which passes into the duodenum through the pancreatic duct, is concerned in digestion, and contains four principal ferments-amylopsin, trypsin, steapsin, and rennin. Aselli's p., an assemblage of lymphatic glands at the root of the mesentery. lesser p., the small, partially detached portion of the pancreas lying dorsad of its head. Called also uncinate process and Winslow's ventral p., an outgrowth on the ventral e of the embryonic intestine. Willis's p., side of the embryonic intestine. the lesser pancreas. Winslow's p. See lesser p.

pancreatalgia (pan"kre-at-al'je-ah) [Gr. πάγκρεας pancreas + alyos pain]. Pain in the pancreas

pancreatectomy (pan"kre-at-ek'to-me) [Gr. πάγκρεας pancreas + έκτομή excision]. Surgical removal of the pancreas.

pancreatemphraxis (pan''kre-at-em-frak'sis) [Gr. πάγκρεας pancreas + ξμφραξις stoppage]. Congestion or enlargement of the pancreas from obstruction of the pancreatic duct.

pancreathelcosis (pan''kre-ath-el-ko'sis) creas + Gr. ελκωσις ulceration]. Ulceration of the pancreas.

pancreatic (pan-kre-at'ik) [L. pancreat'icus]. Pertaining to the pancreas.

pancreaticocholecystostomy (pan-kre-at"ik-o-ko-le-sis-tos'to-me) The operation of implanting a pancreatic fistula into the gall-bladder.

pancreaticoduodenal (pan-kre-at"ik-o-du-od'enal). Pertaining to the pancreas and duodenum.

pancreaticoduodenostomy (pan-kre-at"ik-o-duo-de-nos'to-me). The operation of anastomosing a pancreatic fistula into the duodenum.

pancreaticogastrostomy (pan-kre-at"ik-o-gas-'tros'to-me). The operation of anastomosing a pancreatic fistula into the stomach.

pancreaticosplenic (pan-kre-at"ik-o-splen'ik). Pertaining to the pancreas and spleen.

pancreatin (pan'kre-at-in). 1. A ferment from the pancreas. 2. A commercial extract of the pancreas: used as a digestant. Dose, 10-20 gr. (0.666-1.333 gm.).

pancreatism (pan'kre-at-izm). Activity of the pancreas.

pancreatitis (pan"kre-at-i'tis). Inflammation of the pancreas. It is usually a fatal disease, and is attended by abdominal pain, tenderness of the abdomen, tympanites, and vomiting. acute hemorrhagic p., a form due to hemorrhage into the gland. centrilobar p., pancreatitis located around the branches of the pancreatic duct. chronic p., a condition of abrosis of the pancreas. pertiebar p., fibrosis of the pancreas surrounding collections of strophic scins. purulent p., purulent disease of the pancreas.

panereatoduodonectomy (pan"kre-at-o-du"to-de-nek'to-me). The operation of removing the head of the pancreas along with the encircling loop of the duodenum.

pancreato-enterostomy (pan"kre-at-o-en-ter-os'to-me). The operation of forming a communication between the pancreatic duct and the intestine.

pancreatogenie, pancreatogenous (pan'kre-at-o-jen'ik, pan-kre-at-oj'en-us). Arising in the pancreas.

pancreatokinase (pan''kre-at-o-kin'ās). A compound of pancreatin and eukinase: a powerful digestant.

pancreatolipase (pan"kre-at-o-lip'ās). occurring in the pancreatic juice.

pancreatolith (pan-kre-at'o-lith) [pancreas + Gr. λίθος stone]. A pancreatic calculus.

pancreatomy, pancreatotomy (pan-kre-at'ome, pan"kre-at-ot'o-me) [Gr. πάγκρεας pancreas + τέμνειν to cut]. Surgical incision of the pancreas.

pancreatoncus (pan"kre-at-on'kus) [Gr. πάγκρεας pancreas + öykos mass]. A tumor of the pancreas.

pancreatopathy (pan-kre-at-op'ath-e) [pancreas + Gr. πάθος disease]. Any disease of the pancreas. pancreectomy (pan-kre-ek'to-me). Same as pan-

createctomy.

pancreobismuth (pan''kre-o-biz'muth). prietary combination of pancreatic ferments and bismuth.

pancreodigestin (pan"kre-o-di-jes'tin). A broprietary digestant powder containing pepsin, ptyalin, pancreatin, lactic and hydrochloric acids, etc. Dose, 1-5 gr. (0.066-0.333 gm.).

pancreolithotomy (pan"kre-o-lith-ot'o-me) [pancreas + Gr. λίθος stone + τομή cutting]. Incision into the pancreas for the removal of calculi.

pancreolytic (pan-kre-o-lit'ik) [pancreas + Gr. λύσις dissolution]. Destroying pancreatic tissue.

pancreone (pan'kre-ōn). A grayish pewder, derived from pancreatin (2) by the action of tannin. It is an active digestant. Dose, 5-10 gr. (0.3-0.6 gm.).

pancreopathy (pan-kre-op'ath-e) [pancreas + Gr. πάθος disease]. Any disease of the pancreas.

pancreopepsin (pan"kre-o-pep'sin). etary digestant remedy.

pancrobilin (pan-kro-bi'lin). A proprietary pancreatic and bile preparation for stimulating peristalsis.

pandemic (pan-dem'ik) [Gr. πας all + δημος people]. 1. Widely epidemic. 2. A wide-spread epidemic.

pandemicity (pan-dem-is'it-e). The state of being epidemic and widely spread.

Pander's nucleus (pan'derz) [Heinrich Christian von Pander, German anatomist, 1794-1865]. See under nucleus.

pandiculation (pan"dik-u-la'shun) [L. pandicula'ri to stretch one's self]. The act of stretching and yawning.

Pandy's test (pan'dez) [K. Pandy, contemporary Hungarian pathologist]. See under tests

panelectroscope (pane-fek tro-skop). An instru-ment for examining by electric light the várious organs of the body, as the stomach, rectum, prethra, etc.

panesthesia (pan-es-the'ze-ah) [Gr. πās all + αίσbyour sensation]. The sum of the sensations experienced.

panesthetic (pan-es-thet'ik). Relating to panesthesia.

pangaduin (pan-gad'u-in). A crystalline solid representing the basic principles contained in cod-liver oil.

pangen (pan'jen) [Gr. mas all + yeuns producing]. One of the hypothetic units of idioplasm. See miselle.

pangenesis (pan-jen'es-is) [Gr. $\pi \hat{a}s$ all $+ \gamma \hat{e} \nu e \sigma s$ begetting]. The doctrine that in reproduction each cell of the parent body is represented by a particle; the hypothesis that all the units or cells of the body reside in the blood as gemmules, multiply by division, and throw off atoms which are transmitted to the offspring, accounting for the hereditary transmission of acquired mental habits and other phenomena of heredity; the theory implying that the whole organism, in the sense of every atom or unit, reproduces itself.

pangermism (pan-jer'mizm). The theory that all diseases are caused by germs.

panglossia (pan-glos'e-ah) [Gr. παγγλωσσία]. Abnormal or insane garrulity.

panhidrosis (pan-hid-ro'sis) [Gr $\pi \hat{a}s$ all + $l\delta \rho \hat{\omega}s$ sweat]. Perspiration of the whole surface of the body.

panhydrometer (pan-hì-drom'et-er) [Gr. πâs all + hydrometer]. An instrument for ascertaining the specific gravity of any liquid.

panhygrous (pan-hi'grus) [Gr. πâs all + ὑγρός moist]. Moist or damp in all parts.

panhyperemia (pan"hi-per-e'me-ah) [Gr. πα̂s all + hyperemia]. General plethora.

panhysterectomy (pan"his-ter-ek'to-me) [Gr. πâs all + ὑστέρα uterus + ἐκτομή excision]. Complete extirpation of the uterus.

panhysterokolpectomy (pan-his"ter-o-kol-pek'-to-me) [Gr. πας all + υστέρα uterus + κόλπος vagina + ἐκτομή excision]. Complete removal of the uterus and vagina, with obliteration of the cavity made thereby: done for prolapse of the uterus.

panidrosis (pan-id-ro'sis). See panhidrosis.

panighao (pan-e-ga'o). See ground itch, under itch. panis (pa'nis). Latin for bread.

panitrin (pan-i'trin). A proprietary form of papaverin nitrate.

pankreon (pan'kre-on). A proprietary preparation of pancreatin with tannic acid: used in disorders dependent on functional insufficiency of the pancreas.

panmeristic (pan-mer-is'tik) [Gr. πâs all + μέρος part]. Pertaining to a protoplasmic structure made up of independent units or pangens.

panmixia (pan-miks'e-ah) [Gr. πâs all + μιγνύναι to mix]. Promiscuous sexual association.

panmyelophthisis (pan-mi''el-of-thi'sis) [Gr. $\pi \hat{a}\nu$ all $+ \mu \iota \epsilon \lambda \sigma_s$ marrow $+ \varphi \theta \iota \sigma_{\iota s}$ wasting.] Atrophy of the bone-marrow.

panneuritis (pan-u-ri'tis) (Gr. πâs all + νεῦρον nerve + ιτις inflammation). Multiple or general neuritis. p. epidem'ica, beriberi.

panniculitis (pan-ik-u-li'tis). Inflammation of the panniculus adiposus of the abdominal wall, a condition marked by stiffness of the abdominal wall, and by severe pain on movement or on pressure.

panniculus (pan-ik'u-lus) [L. dim. of pan'nus cloth]. A layer of membrane. p. adipo'sus, the subcutaneous layer of fat. p. carno'sus, a muscular layer within the superficial fascia of many animals; in man it is represented mainly by the platysma myoides.

pannus (pan'us) [L. "cloth"]. An abnormal membrane-like vascularization of the cornea, mainly due to the presence of trachomatous granulations. p. carate'us, pinta. p. cras'sus, pannus in which the opacity is extremely dense. phlyctenular p., pannus along with phlyctenular conjunctivitis. p. sic'cus, pannus with xerophthalmia. p. ten'uis, pannus with very slight opacity.

panodic (pan-od'ik). See panthodic.

panopepton (pan-o-pep'ton) [L. pa'nis bread + peptone]. A proprietary food for invalids containing bread and peptonized beef.

panophobia (pan-o-fo'be-ah) [Gr. $\pi \hat{a}s$ all $+ \varphi \delta \beta os$

fear]. A vague and persistent morbid dread of some unknown evil.

panophthalmia, panophthalmitis (pan-of-thal'me-ah, pan"of-thal-mi'tis) [Gr. πās all + οφθαλμός eye]. Inflammation of all the structures or tissues of the eye.

panoptic (pan-op'tik) [Gr. πâν all + δψις vision]. Rendering everything visible: said of a stain which differentiates all the tissues of a specimen. See Giemsa's stain, under stain.

panoptosis (pan-op-to'sis) [Gr. $\pi \hat{a}s$ all $+ \pi \tau \hat{\omega} \sigma \iota s$ falling]. General ptosis of the abdominal organs.

panosteitis (pan"os-te-i'tis) [Gr. πâs all + ὁστἐον bone]. Inflammation of every part of a bone.

panostitis (pan-os-ti'tis). Panosteitis.

panotitis (pan-o-ti'tis) [Gr. $\pi \hat{a}s$ all $+ o\hat{b}s$ ear]. An inflammation of all the parts or structures of the ear.

panpeptin (pan-pep'tin). A proprietary remedy containing pancreatin, trypsin, diastase, sodium cholate, duodenal juice, carica papaya, etc.

panphagin (pan-faj'in). A preparation resembling mycolysin in composition and properties, but used only in veterinary practice.

panphobia (pan-fo'be-ah). Same as panophobia.

panplegia (pan-ple'je-ah). Pamplegia.

Pansch's fissure (pantsh'ez) [Adolf Pansch, German anatomist, 1841-1887]. See fissure.

pansclerosis (pan-skle-ro'sis) [Gr. π as all + σ κλή- ρ ωσις hardening]. Complete induration of a part or organ.

panseptum (pan-sep'tum). The entire nasal septum, including bony and cartilaginous parts.
 pansinuitis (pan"si-nu-i'tis). Pansinusitis.

pansinusitis (pan"si-nus-i'tis) [Gr. πâs all + sinus + Gr. -ιτιs inflammation] Inflammation of all the sinuses, as of the facial bones.

panspermia, panspermatism (pan-sper'me-ah, pan-sper'mat-izm) [Gr. $\pi \hat{a}s$ all $+ \sigma \pi \acute{e}\rho \mu a$ seed].

1. The doctrine that disease-germs and bacteria are everywhere present.

2. Same as biogenesis.

pansphygmograph (pan-sfig'mo-graf) [Gr. πâs all + σφυγμός pulse + γράφειν to record]. A device for recording cardiac, pulse, and chest movements at the same time.

pansporoblast (pan-spo'ro-blast) [Gr. $\pi \hat{a}_s$ all + $\sigma \pi \delta \rho o_s$ spore + $\beta \lambda a \sigma \tau \delta s$ germ]. A mother-cell of certain sporozoa, giving rise to two or more sporoblasts, from each of which a single spore is formed.

pansy (pan'ze). A violaceous herb, Vio'la tri'color: expectorant and aperient. Dose of fluid-extract, 2-10 min. (0.13-0.66 c.c.).

pantachromatic (pan"tak-ro-mat'ik) [Gr. $\pi \hat{a}s$ all + achromatic]. Entirely achromatic.

pantalgia (pan-tal'je-ah) [Gr. $\pi \hat{a} \nu$ all + $\check{a} \lambda \gamma o s$ pain]. Pain over the whole body.

pantamorphia (pan-tah-mor'fe-ah) [Gr. πâs all + άμορφία shapelessness]. Complete or general deformity.

pantamorphic (pan-tah-mor'fik). Formless.

pantanencephalia (pan"tan-en-sef-a'le-ah) [Gr. πâs all + αν- priv. + ἐγκέφαλος brain]. Complete absence of the brain in a fetal monster.

pantankyloblepharon (pan-tang''kil-o-blef'ahron) [Gr. $\pi \hat{a}s$ all $+ \hat{a}\gamma \kappa b \lambda \eta$ noose $+ \beta \lambda \hat{\epsilon} \varphi a \rho o \nu$ lid]. General adhesion of the eyelids to the eyeball and to each other.

pantaphobia (pan-ta-fo'be-ah) [Gr. πâs all + άφοβία fearlessness]. Absence of fear.

pantatrophia, pantatrophy (pan-tat-ro'fe-ah, pan-tat'ro-fe) [Gr. πâs all + ἀτροφία atrophy]. General or complete malnutrition.

pantherapist (pan-ther'ap-ist) [Gr. $\pi \hat{a}s$ all + $\theta \epsilon \rho \alpha \pi \epsilon l \alpha$ treatment]. A practitioner who is ready to draw his information from any and every source.

panthodic (pan-thod'ik) [Gr. πās all + δδόs way]. Radiating in every direction: said of nervous impulses.

panting (pant'ing). Swift and labored breathing; anhelation.

pantochromism (pan-to-kro'mizm) [Gr. πâs all + χρωμα color]. The phenomenon of existing in two or more differently colored forms.

pantograph (pan'to-graf) [Gr. $\pi \hat{a}s$ all + $\gamma \rho \hat{a} \varphi \epsilon \iota \nu$ to write]. An instrument for recording graphically the contour of the chest.

pantomorphia (pan-to-mor'fe-ah) [Gr. $\pi \hat{a}s$ all + $\mu o \rho \varphi \hat{\eta}$ form]. General or perfect symmetry.

pantomorphic (pan-to-mor'fik). Able to assume any shape.

pantophobia (pan-to-fo'be-ah). Panophobia.

pantopon (pan'top-on) [Gr $\pi \hat{a} \hat{s}$ all + opium]. An opium preparation containing the total opium alkaloids in the form of soluble hydrochlorids. It is said to be about double the strength of morphin.

pantoscopic (pan-to-skop'ik) [Gr. π âs all + σ κο π εῖν to view]. Adapted to view both near and distant objects a term appled to bifocal spectacles.

panturbinate (pan-ter'bin-āt). The entire turbinate structure, including bone and soft tissue.

Panum's casein (pah'noomz) [Peter Ludwig *Panum*, Swedish physiologist, 1820–1885]. Serum globulin.

panus (pa'nus) [L. "swelling"]. A lymphatic gland inflamed but not suppurating.

panzoötic (pan-zo-ot'ik) [Gr. πâν all + ζῶον animal]. Occurring pandemically among animals.

panzyme (pan'zim) [Gr. πâs all + ζύμη leaven]. A proprietary preparation of diastase, pepsin, rennin, and pancreatin.

pao-ferro (pah-o-fer'o) The ironwood tree of Brazil The inner bark is said to have antidiabetic properties.

paopereira (pah"o-pah-ra'e-rah) [Portuguese pao tree + pereira briar]. The Brazilian tree Geissosper'mum vello'su, and its febrifugal bark.

pap (pap) Any soft food, as bread soaked in milk. papain (pah'pa-in). A digestive ferment from the juice of the fruit of the papaw, Ca'rica papa'ya. See papaw. It is a grayish powder, soluble in water and glycerin, and insoluble in alcohol, ether, and chloroform. It is used in dyspepsia, and as an application to warts, false membranes, etc. Dose, 1-5 gr. (0.060-0.333 gm.). As an application, a 5-15 per cent. solution in equal parts of water and glycerin is used.

Papaver (pah-pa'ver) [L. for poppy]. A genus of papaveraceous plants. P. somnif'erum affords opium (q. v.).

papaveramin (pap-av-er'am-in). An opium alkaloid, $C_{21}H_{26}NO_6$, obtained from commercial papaverin

papaverin (pap-av'er-in) [L. papa'ver poppy]. A white, hypnotic alkaloid, tetramethoxybenzyl-iso-quinolin, (CH₃())₂C₆H₃ CH₂C₉H₄N(O.CH₃)₂, from opium. Dose, ½-½ gr. (0 008-0.016 gm.).

papaverolin (pap-av-er'o-lin). A crystalline substance, C₁₈H₁₃NO₄ + 2H₂O, derived from papaverin by the loss of four CH₂ groups.

papaveron (pap-av'er-on). A preparation of opium containing all of its alkaloids

papaverosin (pap-av-er'o-sin). A crystalline alkaloid from the dry seed-capsules of poppy.

papaw (pap-aw'). The tree Ca'rica papa'ya, of tropical America; also its digestant and anthelmintic fruit. The fruit contains papain and papayotin. Dose, 2-8 gr. (0 13-0 5 c.c.).

papaya (pap-a'yah). The juice of the papaw fruit. papayotin (pap-ah-yo'tin). A digestive ferment from Ca'rica papa'ya: more active than papain. Dose, \(\frac{1}{4}\)-1 gr. (0.016-0.065 gm.) (Merck).

paper (pa'per). See charta. alkanin p., filter-paper dipped in an alcoholic solution of alkanin: alkalis turn it blue; acids, red. amboceptor p., filter-paper saturated with amboceptor serum: used in the Noguchi test for syphilis. anilin acetate p., mix equal volumes of anilin, water, and glacial acetic acid. Strips of filter-paper are dipped into this mixture and then dried. antigen p., filter-paper saturated with antigen solution: used in the Noguchi test for syphilis. articulating p., a carbon paper to be laid between the upper and lower teeth and bitten upon in order to record the contact relationships of the teeth. **asthma p**. See *niter p*. **azolitmin p**., filter-paper saturated with a solution of azolitmin. Acids turn it from purple to bright red, alkalis turn it blue. biuret p., filter-paper dipped in Gies's biuret reagent, dried, and cut into strips. blistering p., cantharidal p. See charta cantharidis. blue litmus p. See litmus p. Congo-red p., wet filter-paper with a 0.2 per cent solution of Congo red in water, dry, and cut in strips filterp., a porous, unsized paper used in filtering. gutta-percha p., charta guttæ-perchæ; gutta-percha tissue. lacmoid p., blotting-paper impregnated with lacmoid. used in testing for alkalinity or acidlitmus p., bibulous paper impregnated with a solution of litmus, dried, and cut into strips. If slightly alkaline the paper is blue, and is used as a test for acids, which turn it red, if slightly acid it is red and alkalis turn it blue. mustard p., is red and alkalis turn it blue. mustard p., charta sinapis: used as a counterirritant. niter o., paper impregnated with potassium nitrate: burned in order to give off fumes which are inhaled in asthma. potassium nitrate p., paper impregnated with potassium nitrate It is haled in asthma. ignited and used as a moxa or by inhalation in asthma. Called also saltpeter p. red litmus p., charta exploratoria rubra See litmus p. saltpeter p. Same as niter p test p., paper that is impregnated with litmus or other indicators. cator turmeric p., charta exploratoria lutea; paper dyed yellow with turmeric. alkalis turn it brown. wax p., charta cerata, paper treated with beeswax.

paper-skin (pa'per-skin). See under skin.

papescent (pap-es'ent). Having the consistence
 of pap.

papilla (pap-il'ah) [L.]. Any small, nipple-shaped elevation. acoustic p., the organ of Corti. bile-p. Same as duodenal p. circumvallate p., any one of the large papille at the root of the tongue, arranged like the letter V, opening forward. clavate p. See fungiform p. conic p. See filiform p. dental p., dentinal p., the enlargement at the base of a dental follicle whence the dentin of a tooth is developed; the enamel-organ. duodenal p., an elevation near the point where the ductus choledochus communis enters the duodenum. p. filia'ria, a papilla at the inner side of the descending portion of the duodenum, at the apex of which is the opening of the common bile-duct. filiform p., any one of the slender papillæ of the tongue made up of connective tissue covered with a layer of epithelium. Called also conic p. foliate p., one of the projections (rudi-mentary in man) arranged in folds along the lateral margins of the tongue in front of the anterior pillars of the fauces. fungiform p., any one of the low, broad papillæ found on the surface of the tongue and covered by secondary papillæ. Called also clavate p. fusiform p., the slender papillæ of the anterior two-thirds of the tongue. hair-p., the mass within the corium upon which each hair-bulb rests. incisive p., a rounded projection at the anterior end of the raphé of the palate. interdental p., the triangular pad of gum which fills the space between the necks of the teeth. p. lacrima'lis, a papilla at the inner canthus pierced by a lacrimal punctum. lenticular p., one of a series of papillæ of the tongue re-sembling, but less elevated than, the fungiform

papillæ. lingual p., any one of the papillæ of the tongue. p. mam'ms [B N A], the nipple. optic p., the optic disk. palatine p., the incisive papilla. p. pi'll [B N A], a hair papilla. renal p., the summit of any one of the renal pyramids. p. of Santorini, the duodenal papilla. p. spira'lis, the spiral edge formed by Corti's organ. tactile p's, papillæ on the true skin inclosing tactile corpuscles. urethral p., a slight elevation in the vestibule of the vagina on which is situated the external orifice of the urethra. vallate p. Same as circumvallate p. Vater's p. Same as duodenal p.

papillary (pap'il-a-re). Pertaining to a nipple or papilla.

papillectomy (pap-il-ek'to-me) [papilla + Gr. εκτομή excision]. Removal of one or more engorged papillæ from a kidney for the cure of hematuria.

papilledema (pap-il-e-de'mah). Edema of the optic papilla, choked disk; optic neuritis due to intracranial pressure and without inflammatory manifestations.

papilliferous (pap-il-if'er-us) [papilla + L. fer're to bear]. Bearing papilla.

papilliform (pap-il'if-orm) [papilla + L. for'ma shape]. Shaped like a papilla.

papillitis (pap-il-i'tis) [papilla + Gr. -1715 inflammation]. Inflammation of the optic papilla.

papillo-adenocystoma (pap-il"o-ad"en-o-sis-to'-mah). Papilloma blended with adenoma and cystoma.

papillocarcinoma (pap-il"o-kar-sin-o'mah). 1. A carcinoma in which there are papillary excrescences.
 2. A malignant papilloma.

papillædema (pap-il-e-de'mah). See papilledema papilloma (pap-il-o'mah), pl. papillo mata [papilla + Gr. ωμα tumor]. An epithelial tumor in which the cells cover finger-like processes or ridges of stroma. Papillomata include warts, condylomata, cutane-ous horns, polypi, etc. p. diffu'sum, papillomata occurring in numbers on the legs and buttocks hard p., one growing from the squamous epithe-lium. Hoffmann's p., a papillomatous growth of the nasal mucous membrane. p. inguina'le trop'icum, a disease of Colombo marked by the formation of filiform pinkish vegetations in the inguinal region; called also acanthoma tropicum. in-tracanalicular p., a warty, non-malignant growth within the substance of certain glands, especially of the breast. intracystic p., a papilre, linear ichthyosis. p. neuropath'icum, p. neurot'icum, a papillomatous growth or tumor along the course of a nerve. soft p., one developed from the columnar epithelium villous p. A parsistant chypionic villus usually found in 1. A persistent chorionic villus, usually found in the bladder; sometimes in a renal pelvis. villous outgrowth from the choroid plexus in a lateral ventricle of the brain. 3. A mammary tumor liable to be confounded with villous cancer. papillomatosis (pap"il-o-mat-o'sis). A morbid

papillomatosis (pap"il-o-mat-o'sis). A morbid condition characterized by the development of a crop of papillomata.

papillomatous (pap-il-o'mat-us). Of the nature of a papilloma.

papilloretinitis (pap-il"o-ret-in-i'tis). Inflammation of the optic nerve and disk.

papillosarcoma (pap-il"o-sar-ko'mah). A malig-

nant papilloma.

papin (pa'pin). A proprietary preparation of catechu, quinin, and dextrin.

Papin's digester (pap-az') [Denis Papin, French physicist, 1647-1714]. An apparatus for subjecting substances to the action of water at a heat greater than boiling-point.

papine (pa'pin). A proprietary anodyne opium preparation. Dose, 15-60 min. (1-4 c.c.).

papoid (pa'poid). A ferment and digestant from papaw fruit. See papaw.

pappataci fever (pap-at-a'ke). See sandfly fever, under fever.

Pappenheim's staining (pahp'en-himz) [Artur Pappenheim, German physician, 1870-1917]. See under stains, table of.

pappose (pap'pōs). Having a downy surface or pappus.

pappus (pap'pus) [L.; Gr. πάππος]. 1. The first downy growth of the beard. 2. The lanugo.

papular (pap'u-lar) [L. papula'ris]. Consisting of, characterized by, or pertaining to, a papule.

papulation (pap-u-la'shun). The production of papules.

papule (pap'ūl) [L. pap'ula pimple]. A small circumscribed, solid elevation of the skin. Celsus' p's, lichen agrius. dry p., the papule of chancre. moist p., mucous p., a syphilitic condyloma.

papuliferous (pap-u-lif'er-us) [papule + L. fer're to bear]. Having or covered with papules.

papulo-erythematous (pap''u-lo-er-ith-em'at-us). Marked by papules on an erythematous surface.

papuloid (pap'u-loid). Resembling a papule.

papulopustular (pap"u-lo-pus'tu-lar). Marked by the presence of papules and pustules.

papulosquamous (pap"u-lo-skwa'mus). Both papular and scaly.

papulovesicular (pap"u-lo-ves-ik'u-lar). Marked by the presence of papules and vesicles.

papyraceous (pap-ir-a'shus) [L. papyra'ceus]. Like paper; chartaceous.

Paquelin's cautery (pah-ke-lanz') [Claude André Paquelin, French physician, 1836-1905]. See cautery.

par (par). Latin for pair p. va'gum, the vagus nerves.

para- [Gr. παρά beyond]. A prefix meaning beside, beyond, accessory to, apart from, against, etc.

para-aceratosis (par"ah-ah-ser-at-o'sis). Para-keratosis.

para-acetophenolethyl carbonate. A color-less, crystalline powder: hypnotic, analgesic, and antipyretic Dose, 8 gr. (0.5 gm).

para-acetphenetidin (par"ah-as-et-fe-net'id-in). Phenacetin.

para-amidophenetol (par"ah-am"id-o-fen'et-ol). A substance used in preparing pyrantin, NH₂.C₆-H₄.OC₂H₅.

para-analgesia (par'ah-an-al-je'ze-ah). Anal-gesia of the lower part of the body, including the lower limbs.

para-anesthesia (par''ah-an-es-the'ze-ah). Anesthesia of the lower part of the body and of the legs.

para-appendicitis (par'ah-ap-en-dis-i'tis). Appendicitis involving the nearby structures.

parabanic acid (par-ab-an'ik). See acid.

parabiosis (par'ah-bi-o'sis) [Gr. παρά beside + βlωσις living]. 1. The union of two individuals, as of joined twins, or by surgical operation. 2. Temporary suppression of conductivity and excitability in a nerve. vascular p., the crossing of the circulation between two individuals.

parabiotic (par"ah-bi-ot'ik). Pertaining to or marked by parabiosis.

parabismuth (par-ah-biz'muth). A preparation of ostauxin and bismuth containing 50 per cent. of bismuth.

parablast (par'ah-blast) [Gr. παρά beside + βλάστος germ]. That part of the mesoblast from which the blood-vessels, lymphatics, etc., are developed.

parablastic (par-ah-blas'tik). Pertaining to the parablast.

parablastoma (par'ah-blas-to'mah) [parablast + Gr. - coma tumor]. Any tumor made up of parablastic tissue.

- parablepsia, parablepsis (par-ah-blep'se-ah, par-ah-blep'sis) [Gr. παρά amiss + βλέψις vision]. False or perverted vision.
- parabolus (par-ab'o-lus), pl. parab'oli [Gr. παράβολος venturesome]. In medieval medicine, an agent of the church who sought out the indigent sick for care and treatment.
- parabulia (par-ah-bu'le-ah) [Gr. παρά beside + βουλή will]. Perversion of the will.
- paracain (par'ak-a-in). A local anesthetic, the hydrochlorid of paramino-benzoyl-diethyl-aminoethynol: used as a substitute for novocain.
- paracanthoma (par'ah-kan-tho'mah). Same as baracanthosis.
- paracanthosis (par'ah-kan-tho'sis) [Gr. παρά beside + ἄκανθα prickle]. A skin-cancer or other perversion of growth in the prickle-layer of the skin.
- paracarmin (par-ah-kar'min). A staining medium consisting of 1 part of carminic acid, 4 parts of calcium chlorid, and 100 parts of 70 per cent. alcohol. It stains quickly, does not overstain, and is adapted for staining large objects.
- paracasein (par-ak-a'se-in). The insoluble curd formed from casein by the enzyme, rennin.
- paracele (par'as-ēl). Same as paracele.
- paracellulose (par-ah-sel'u-los). A kind of cellulose found in the pith of plants.
- paracelsian (par-ah-sel'se-an). Pertaining to or called after Paracelsus.
- Paracelsus (par-ah-sel'sus). A famous Swiss physician and alchemist, born 1493. His medical importance is due to the impetus which he gave to the development of pharmaceutic chemistry. Died, 1541.
- paracenesthesia, paracœnesthesia (par"ah-se-nes-the'ze-ah) [Gr. παρά beside + cenesthesia]. Any abnormality of the general sense of well-being: it includes demonopathies, zoöpathies, etc. Cf. cenestho palhia.
- paracentesis (par"ah-sen-te'sis) [Gr. παρά beside + κέντησις puncture]. Surgical puncture of a cavity; tapping. p. abdom'inis, paracentesis by tapping of the abdomen. p. capi'tis, tapping of the cranium for the removal of effusion in hydrocephalus. p. cor'dis, surgical puncture of the heart. p. pericar'dii, puncture or tapping of the pericardial sac. p. pulmo'nis, tapping of the lung. p. thora'cis, tapping of the chest; thoracocentesis. p. tu'nicæ vagina'lis, tapping of the tunica vaginalis. p. tym'pani, incision of the tympanic membrane for drainage or irrigation. p. vesi'cæ, puncture of the bladder wall.
- paracentetic (par'ah-sen-tet'ik). Pertaining to or accomplished by a paracentesis.
- paracentral (par-ah-sen'tral). Situated near a center.
- paracephalus (par-ah-sef'al-us) [Gr. παρά beside + κεφαλή head]. A fetus with a rudimentary or misshapen head, imperfect sense-organs, and defective trunk or limbs.
- paracerebellar (par"ah-ser-e-bel'ar). Pertaining to the lateral part of the cerebellum.
- parachloralose (par-ah-klo'ral-ōs). A substance, CaH₁₂Cl₂O₆, in iridescent plates, formed by a combination of dextrose and chloral. It is isomeric with chloralose.
- parachlorophenol (par"ah-klo-ro-fe'nol). Se parachlorophenol.
- parachlorosalol (par"ah-klo-ro-sal'ol). A crystalline combination of chlorin and salol, OH.C₆H₄.-CO.OC₆H₄.Cl: used like salol. Daily dose, 60-90 gr. (4-6 gm.).
- parachlorphenol (par"ah-klor-fe'nol). A crystalline substance, Cl.C₆H₄.OH, a safe and strong disinfectant and antiseptic: used in lupus and erysipelas. p. salicylate is used as an intestinal antiseptic. Dose, 15-20 gr. (1-1.3 gm.).

- paracholera (par-ah-kol'er-ah). A disease resembling Asiatic cholera, but caused by an organism other than the Vibrio cholere.
- paracholesterin (par"ah-ko-les'ter-in). A form of cholesterin occurring in vegetable tissue.
- paracholia (par-ah-ko'le-ah) [Gr. παρά beside + χολή bile]. Disordered bile secretion.
- parachordal (par-ah-kor'dal) [Gr. παρά beside + χορδή cord].
 1. Situated beside the notochord.
 2. Any one of a set of bars of fetal cartilage which appear to mark the growth of centers of chondrification for the occipital vertebræ.
- Parachordodes (par"ah-kor-do'dēs). A genus of Gordiacea. A few cases of infection with this worm have been reported. P. pustulo'sus, from Italy. P. tolosa'nus, from France and from Italy. P. viola'ceus, from Italy, one specimen taken from the throat.
- parachrea (par-ah-kre'ah). Same as parachroia.
- parachroia (par-ah-kroi'ah) [Gr. παρά beside + χροιά color]. Abnormality of coloration.
- parachroma (par-ah-kro'mah) [Gr. παρά beside + χρῶμα color]. Change in the color of the skin; abnormal coloration of the skin.
- parachromatin (par-ah-kro'mat-in). A chromatophil substance contained in the finer part of the nuclear substance, as in the nucleoplasm of the spindle in karyokinesis.
- parachromatism (par-ah-kro'mat-izm) [Gr. παρά beside + χρῶμα color]. Color-blindness; incorrect perception of colors.
- parachromatopsia (par'ah-kro-mat-op'se-ah) [Gr. παρά beside + χρῶμα color + δψις vision]. Color-blindness.
- parachromatosis (par"ah-kro-mat-o'sis). Same as parachroma.
- parachrome (par'ah-krōm). Same as parachromophoric.
- parachromophore (par-ah-kro'mo-för) [Gr. παρά beside + χρῶμα color + φορός bearing]. A bacterium which secretes a pigment and retains it within its own body.
- parachromophoric (par'ah-kro-mo-for'ik) [Gr. παρά beside + chromophoric]. Pervertedly chromophoric; both chromophoric and chromoparic; secreting coloring-matter, but retaining it in the organism.
- parachymosin (par"ah-ki-mo'sin) [Gr. παρά beside + chymosin]. The variety of lab-ferment found in the human stomach and in that of the pig.
- paracinesis, paracinesis (par'ah-sin-e'se-ah, par'ah-sin-e'sis) [Gr. $\pi \alpha \rho \dot{\alpha}$ beside $+ \kappa l \nu \eta \sigma \iota s$ motion]. Any disease characterized by perversion of the motor powers.
- paracmastic (par-ak-mas'tik). Declining.
- paracme (par-ak'me) [Gr. παρά beyond + ἀκμή point]. The stage of decline or remission.
- paracnemis, paracnemidion (par-ak-ne'mis, par'ak-ne-mid'e-on) [Gr. παρά beside + κνήμη shin]. The fibula.
- paraccele (par'as-ēl) [Gr. παρά beside + κοίλος hollow]. A lateral ventricle of the brain.
- paracolitis (par'ah-ko-li'tis). Inflammation of the outer coat of the colon.
- paracolon bacillus (par-ah-ko'lon). See under bacillus.
- paracolpitis (par"ah-kol-pi'tis) [Gr. παρά near + κόλπος vagina + -ιτις inflammation]. Inflammation of the tissues around the vagina.
- paracolpium (par-ah-kol'pe-um) [Gr. παρά near + κόλπος vagina]. The connective and other tissues that surround the vagina.
- paracone (par'ah-kōn) [Gr. παρά beside + χῶνος cone]. The mesiobuccal cusp of any upper molar.
- paraconid (par-ah-ko'nid). The mesiobuccal cusp of a lower molar.

paraconin, paraconiin (par-ah-ko'nin, par-ah-ko'ne-in). A poisonous yellow liquid, C₈H₁₅N, obtained by heating butyric aldehyd with ammonia.

paracoto (par-ah-ko'to). A South American bark much resembling coto, but better and less pungent.

paracotoin (par"ah-ko-to'in). A crystalline substance from paracoto: useful in diarrhea and in night-sweats. Dose, \(\frac{1}{2}-3\) gr. (0.033-0.194 gm.).

paracousis (par-ak-oo'sis). Same as paracusis.

paracreosotic acid (par"ah-kre-o-so'tik). See cresotic acid, under acid.

paracresalol (par-ah-kres'al-ol). A white, crystalline, antiseptic substance: isomeric with the other cresalols. See cresalol. Dose, 3-30 gr. (0.2-2 gm.).

paracresol (par-ah-kre'sol). 1. One of the three isomeric forms or recognized varieties of cresol. See cresol. 2. A patented soluble and nearly odorless preparation of cresol disinfectant.

paracresylol (par-ah-kres'il-ol). Cresalol.

paracrisis (par-ah-kri'sis, par-ak'ris-is) [Gr. παρά beside $+ \kappa \rho l \nu \epsilon \iota \nu$ to secrete]. Any disorder of the secretions.

paracurarin (par"ah-ku-rar'in). An alkaloid, C19-H₂₁NO₄, from curare, which has the characteristic physiologic action of curare

paracusis, paracusia (par-ah-ku'sis, par-ah-ku'se-ah) [Gr. $\pi a \rho \dot{a}$ beside $+ \dot{a} \kappa o \dot{b} \epsilon \nu$ to hear]. Any perversion of the sense of hearing. **p. a'cris**, intense and incessant acuity of hearing. **p. duplica'ta.** Same as diplacusis. **p. lo'ci**, inability to heart generally the origin of the sense. ity to locate correctly the origin of sounds. willisia'na, ability to hear best in a loud din (Thomas Willis, 1672).

paracyesis (par"ah-si-e'sis) [Gr. παρά beside + κύησις pregnancy]. Extra-uterine pregnancy.

paracystic (par-ah-sis'tik) [Gr. παρά near + κύστις bladder]. Situated near the bladder.

paracystitis (par"ah-sis-ti'tis) [Gr. παρά near + κύστις bladder + -ιτις inflammation]. Inflammation of the tissues around the bladder.

paracystium (par-ah-sis'te-um) [Gr. παρά near + κύστις bladder]. The connective and other tissues around the bladder.

paracytic (par-ah-sit'ik) [Gr. παρά beside + κύτος cell]. Noting cell-elements present in the blood or other part of the organism, but enthetic or not normal to it.

paradenitis (par"ad-en-i'tis) [Gr. παρά beside + άδήν gland + - ιτις inflammation]. Inflammation of the tissues around a gland.

paradental (par-ah-den'tal). Near a tooth; alongside of a tooth.

paradentitis (par"ah-den-ti'tis). Same as parodontitis

paraderm (par'ah-derm) [Gr. παρά beside + δέρμα skin]. The part of the vitellus of the ovum whence the cells are formed which enter the body of the embryo.

paradiagnosis (par"ah-di-ag-no'sis) [Gr. παρά beside + diagnosis]. A diagnosis that is almost, but not quite, correct.

paradidymal (par-ah-did'im-al). 1. Pertaining to the paradidymis. 2. Beside the testicle.

paradidymis (par-ah-did'im-is) [Gr. παρά beside + δίδυμος testicle]. [B N A]. A body on the spermatic cord above the epididymis. It consists of closed tubes, and represents the remains of the posterior part of the wolffian body. Called also organ of Giraldès, parepididymis, and massa innom-

paradimethylaminobenzaldehyd (par"ah-di-meth"il-am"in-o-ben-zal'de-hid). A substance, CHO C₆H₄.N(CH₈)₂: used in testing for tryptophan or other indol derivative.

paradiphenylbiuret (par"ah-di-fen-il-bi-u'ret). A

NH(CO.NH.C₆H₄OH)₂, transformed substance. into benzoic acid in the body.

paradiphtherial, paradiphtheric dif-the're-al, par"ah-dif-ther'ik). Hav (par"ab-Having a remote or indirect relation to diphtheria.

paradox (par'ad-oks) [Gr. παραδόξος incredible]. A statement which seems to be, though it may not be, absurd or self-contradictory. p. of Kretz, while the injection of an accurately neutralized toxin-antitoxin mixture produces no bad effects in a normal animal, the reverse is the case in an animal that has previously been actively immunized with a toxin. Weber's p., the elongation of a muscle which has been so stretched that it cannot contract.

paradoxic (par-ah-doks'ik) [Gr. παράδοξος incredi-Occurring at variance with the normal ble]. rule.

paradysentery (par-ah-dis'in-ter-e). A diarrhea resembling mild dysentery.

para-eccrisis (par-ah-ek'ris-is) [Gr. παρά beside + Execution excretion. Disordered secretion or excretion.

para-enteric (par"ah-en-ter'ik). Paratyphoid.

para-epilepsy (par-ah-ep'il-ep-se). An epileptic attack consisting only of the aura without convulsions.

para-equilibrium (par"ah-e-kwil-ib're-um). Vertigo due to disturbance of the vestibular apparatus of the ear.

paræsthesia (par-es-the'zhe-ah). Same as paresthesia.

Abbreviation for L. pars affec'ta, the part Par. aff. affected.

paraffin (par'af-fin) [L. pa'rum little + af'finis akinj. 1. A white, waxy hydrocarbon distilled from coal-tar, shale, or from wood. It occurs in several varieties All varieties are used as excipients and emollients. 2. Any saturated hydrocarbon of the marsh-gas series chlorinated p. See chlorcosane. hard p., a white transparent crystalline wax-like solid melting above 45° C. liquid)., petrolatum liquidum, or parassin oil, an oily liquid. soft p. Same as hard p. solid p., vaselin or petroleum jelly, a white or yellow butterlike substance melting between 30° and 40° C.

paraffinal (par-af'īn-al). A stable emulsion of paraffin employed as a laxative (Weil).

paraffinoma (par-ah-fin-o'mah). A chronic granuloma produced by prolonged continuous exposure to the irritation of paraffin.

paraffinum (par-af-i'num). Paraffin.

parafibrinogen (par"ah-fi-brin'o-jen). A com-pound resembling fibrin, obtained by repeated precipitation of fibrinogen with salt.

paraflagellate (par-ah-flaj'el-āt). Having paraflagella.

paraflagellum (par"ah-flaj-el'um), pl paraflagel'la. A small accessory flagellum.

paraflocculus (par-ah-flok'u-lus). Same as accessory flocculus. See flocculus.

paraform, paraformaldehyd (par'ah-form, par''-ah-for-mal'de-hid). Oxymethylene, (CH₂O)n, a white, crystalline polymer of formaldehyd. It is an internal and external antiscptic. Dose, 71-15 gr. (05-1 gm.). 2. A white powder, formalin, C₃H₆-O₃, an internal antiseptic. Dose, $7\frac{1}{2}$ -15 gr. (0 5-1 gm.).

parafuchsin (par-ah-fook'sin). A dye of the triphenylmethane series, triaminotriphenyl-methane chlorid, C(C₆H₄,NH₂)₃Cl: used in the treatment of trypanosomiasis.

parafunction (par'ah-funk-shun). A disordered or perverted function.

parafunctional (par-ah-funk'shun-al). Characterized by perverted or abnormal function.

paragammacism (par-ah-gam'mah-sizm)[Gr παρά aside $+ \gamma \dot{a}\mu\mu\alpha$ the Greek letter G]. The faulty utterance of g-, k-, and ch- sounds.

- paraganglina, paraganglin (par"ah-gang-li'nah, par-ah-gang'lin). A preparation from the medullary substance of the suprarenal capsule of oxen: used as a stomachic and intestinal stimulant.
- paraganglioma (par'ah-gang-le-o'mah). A tumor of the chromaffin tissue.
- paraganglion (par-ah-gang'le-on), pl. paragan'glia.

 1. Any one of the chromaffin bodies forming masses of chromaffin tissue scattered along the entire sympathetic nervous system and in various parts of the body. 2. One of the oval masses of cells in the medullary substance of the adrenal bodies.

 p. carot'icum. See carotid gland, under gland.
- paragelatose (par-ah-jel'at-ōs). A substance obtained by boiling gelatin.
- parageusia (par-ah-ju'se-ah) [Gr. παρά beside + γεῦσις taste].
 z. Perversion of the sense of taste.
 a. A bad taste in the mouth.
- parageusic (par-ah-ju'sik). Having a perverted sense of taste.
- paragglutination (par-ag-lu-tin-a'shun). See paraserum reflex, under reflex.
- paraglobulin (par-ah-glob'u-lin). A globulin from blood-serum, blood-cells, lymph, and various connective tissues. Called also fibroplastin, fibrinoplastin, and serum-globulin.
- paraglobulinuria (par-ah-glob"u-lin-u're-ah)[para-globulin + Gr. οὐρον urine]. The discharge of paraglobulin in the urine.
- paraglossa (par-ah-glos'sah) [Gr. παρά beside + γλῶσσα tongue] Swelling of the tongue.
- **paraglossia** (par-ah-glos'e-ah) [Gr. $\pi \alpha \rho \acute{\alpha}$ beside + $\gamma \lambda \mathring{\omega} \sigma \sigma \alpha$ tongue]. Inflammation of the tissues under the tongue.
- paraglossitis (par-ah-glos-i'tis). Same as paraglossia.
- paragnathus (par-ag'nath-us) [Gr. παρά beside + γνάθος jaw]. A fetal monster with a supernumerary jaw.
- paragnosis (par-ah-gno'sis) [Gr. παρά beside + γνωσις knowledge]. Diagnosis, after death, by means of contemporaneous accounts of the diseases which have affected historical characters.
- paragomphosis (par"ah-gom-fo'sis) [Gr. παρά beside + γομφοῦν to fasten]. Impaction of the head of the fetus in the pelvic canal.
- paragonimiasis (par-ah-go-nim-i'as-is). Infection by the lung-fluke, Paragon'imus westerman'ii.
- Paragonimus (par-ah-gon'ım-us). A genus of trematode parasites They have two invertebrate hosts, the first is a mollusk (Melania) and the second a crustacean (Polamon or Eriocheir). P. hellicot'ti, a species closely allied to P. westermanii, found in hogs in the United States. P. rin'geri. Same as P westermanii. P. westerman'ii, the lung-fluke, an oval or pearrin'geri. shaped fluke of a pinkish or reddish-brown color, found in cysts in the lungs and sometimes in the pleura, liver, abdominal cavity, and elsewhere. It causes the disease known as parasitic or oriental hemoptysis It occurs especially in Asiatic countries, and infests the lower animals as well as man. Venezuela, the crab, Pseudothelphusa iturbei, probably transmits the parasite to man. Called also Distoma westermanii, Distoma ringeri, and Distoma pulmonale.
- paragonorrheal (par"ah-gon-o-re'al). Having a remote or indirect relation to gonorrhea.
- Paragordius (par-ah-gor'de-us). A genus of the Gordiacea. P. cin'tus, one case has been reported from Africa. P. tricuspida'tus, in one case in France this worm was extracted from the throat P. va'rius, several cases of infection with this worm have been reported in North America.
- paragraphia (par-ah-gra'fe-ah) [Gr. παρά beside + γράφειν to write]. A disorder in which the patient writes one word in place of another.
- Paraguay tea (par'ah-gwi). See mate.

- parahemoglobin (par"ah-hem-o-glo'bin). 1. A dark form of hemoglobin occurring in crystalline form in the tissue in conditions marked by considerable blood destruction. 2. A proprietary therapeutic blood preparation said to contain 5 per cent. of iron.
- parahepatic (par"ah-he-pat'ik) [Gr. παρά beside + ἡπαρ liver]. Beside the liver.
- parahepatitis (par"ah-hep-at-i'tis). Inflammation of parts around the liver.
- parahormone (par-ah-hor'mon) [Gr. παρά beside + hormone]. A substance, not a true hormone, which has a hormone-like action in controlling the action of some distant organ.
- parahydropin (par-ah-hi'dro-pin) [Gr. παρά beside + δδρωψ dropsy]. A proprietary diuretic containing theobromin.
- **parahydroxyphenylethylamin** (par-ah-hi-drok-se-phen-il-eth-il-am'in). Tyramin.
- parahypnosis (par"ah-hip-no'sis) [Gr. παρά beside ὕπνος sleep]. Abnormal or perverted sleep.
- parahypophysis (par"ah-hi-pof'is-is). An accessory pituitary body.
- parainfection (par-ah-in-fek'shun) The condition of being affected with a disease whose symptoms resemble those of an infectious disease, but which is not due to the germs of the infectious disease.
- parainfectious (par-ah-in-fek'shus). Due indirectly to infection; due to the conditions produced by infection rather than by the infection itself.
- para-influenzal (par"ah-in-flu-en'zal). Due indirectly to influenza; due to the conditions produced by influenza.
- **para-iodoxyanisol** (par-ah-i"o-dox-e-an'is-ol). Same as *isoform*.
- parakeratosis (par"ah-ker-at-o'sis). Any abnormality in the horny layer of the skin. p. ostra'-cea. Same as p. scutularis. p. psoriasifor'-mis, a condition characterized by the formation of scabs like those of psoriasis. p. scutula'ris, a disease of the scalp marked by the formation of crusts which envelop the hairs and send up incrustations around the hairs. p. variega'ta, a disease characterized by a red, scaly eruption in the form of a network inclosing patches of normal skin.
- parakinesia (par-ah-kin-e'se-ah) Parakinesis.
- parakinesis (par''ah-kin-e'sis) [Gr. παρά beside + κίνησις motion] Perversion of motor function resulting in strange and unnatural movements.
- parakinetic (par"ah-kin-et'ik). Relating to or affected by parakinesis.
- paral (par'al). A proprietary preparation of lanolin, paraffin, and water.
- paralactic acid (par-ah-lak'tik). Sarcolactic acid. See under acid.
- paralalia (par-ah-la'le-ah) [Gr. παρά beside + λαλιά speech]. Any disturbance of the faculty of speech. p. litera'lis, impairment of the power to utter the sounds of certain letters.
- **paralambdacism** (par-ah-lam'dah-sizm) [Gr. π αρά beside + λάμβδα letter L]. An improper utterance of l-sounds.
- paralbumin (par-al-bu'min) [Gr. παρά near + albumin]. An albumin or protein substance found in ovarian cysts.
- paraldehyd (par-al'de-hid) [Gr. $\pi a \rho \dot{a}$ beside + aldehyd]. A derivative, $C_6 H_{12} O_3$, of aldehyd. It is a clear liquid, of disagreeable taste and smell; soluble in water, alcohol, and ether. It has hypnotic and anodyne properties, and is used in mania, delirium tremens, tetanus, and other nervous disorders, and as an antidote to morphin. Dose, 30–60 min. (2–4 c.c.).
- paraldehydism (par-al'de-hi-dizm). A condition produced by excessive use of paraldehyd; paraldehyd-poisoning.

paraleprosis (par'ah-lep-ro'sis). Paraleprosy. paraleprosy (par-ah-lep'ros-e). A mild or aborted form of leprosy.

paralepsy (par'ah-lep-se). Same as psycholepsy.

paralexia (par-ah-leks'e-ah) [Gr. παρά almost + alexia]. Impairment of the power of reading, marked by the transposition of words and syllables into meaningless combinations.

paralexic (par-ah-lek'sik). Pertaining to or affected with paralexia.

paralgesia, paralgia (par-al-je'se-ah, par-al'je-ah) [Gr. $\pi a \rho \dot{a}$ beside $+ \dot{a} \lambda \gamma \sigma s$ pain]. Any condition marked by abnormal and painful sensations; a painful paresthesia.

paralgesic (par-al-je'sik). Pertaining to or affected with paralgesia.

paralinin (par-ah-li'nin) [Gr. παρά beside + linin]. Karyolymph.

paralipophobia (par"ah-li-po-fo'be-ah) [Gr παραλείπειν to neglect + φόβος fear]. Morbid apprehension of neglecting something.

parallactic (par-al-ak'tik). Pertaining to parallax.

parallagma (par-al-ag'mah) [Gr. παράλλαγμα].
Displacement of a bone or of the fragments of a broken bone.

parallax (par'al-aks) [Gr. παραλλάξ in turn]. An apparent displacement of an object due to a change in the patient's position. binocular p., the seeming difference in position of an object as seen separately by one eye and then by the other, the head remaining stationary. crossed p., heteronymous p., that in which the thing observed seems to move away from the open eye, one of the eyes being closed or covered. direct p., homonymous p., that in which the thing seen appears to move toward the uncovered or open eye. vertical p., that in which the thing observed appears to move upward or downward.

parallelism (par'al-el-izm). The doctrine that mental processes and brain processes run side by side and that they do not interact. See automatism.

parallelometer (par-al-el-om'et-er) [parallel + Gr. μέτρον measure]. An instrument used in artificial denture work to determine the exactness of the parallel relationship of lines and surfaces.

paralodion (par-ah-lo'de-on). Collodion in shredded form, used in the preparation of an embedding medium for microscopic work.

paralogia (par-al-o'je-ah) [Gr. παρά beside + λόγος reason]. A disordered state of the reason; impairment of the reasoning power marked by illogical or delusional speech. thematic p., a perversion of the mind in which the patient dwells unduly upon one subject.

paralogism (par-al'oj-izm). The use of meaningless or illogical language by the insane.

paralysin (par-al'is-in). See agglutinin.

paralysis (par-al'is-is) [Gr. παρά beside + λύειν to loosen]. A loss of motion or sensation in a living part or member. p. of accommodation, paralysis of the ciliary muscles so as to prevent accommodation of the eye. acoustic p., nervous deafness. acute ascending p., a rapidly progressing and often fatal ascending paralysis of unknown cause. It begins in the muscles of the feet and gradually ascends to the other muscles of the body. There are no discoverable lesions, and the disease runs its course in from two days to four weeks. Called also Landry's p. acute actrophic p., infantile p., the acute anterior poliomyelitis of childhood. See anterior poliomyelitis. acute infectious p., acute anterior poliomyelitis. acute wasting p. See poliomyelitis. p. ag'-itans, shaking palsy, or Parkinson's disease: a disease of late life, progressive in its course, and marked by a characteristic tremor of the muscles, weakness, delay of voluntary motion.

a peculiar festinating gait, and muscular contraction, causing peculiar and characteristic positions of the limbs and head. The disease is attended with excessive sweating and feelings of heat and cold. p. ag'itans, juvenile, a condition developing in early life, marked by increased muscle tone with the characteristic attitude and facies of paralysis agitans, due to a progressive degeneration of the globus pallidus. Called also syndrome of globus pallidus and paleostriatal syndrome of Hunt. alcoholic p., paralysis caused drome of Hunt. alcoholic p., paralysis caused by habitual drunkenness. anapeiratic p., occupation neurosis. anesthesia p., paralysis following anesthesia. anterior spinal p., poliomyelitis anterior. arsenical p., paralysis due to arsenical poisoning. ascending p., spinal paralysis that progresses cephalad. as-sociation p. Same as bulbar p. asthenic bulbar p., myasthenia gravis pseudoparalytica.

asthenobulbospinal p., myasthenia gravis.

atrophic spinal p., poliomyelitis anterior.

Bell's p., facial p., paralysis of the face due to lesion of the facial nerve or of its nucleus.

Bernhardt's p., pain and hyperesthesia on the outer surface of the thigh, due to disease of the external cutaneous nerve of the thigh. birth-p., that which is due to injury received at birth. brachial p., paralysis of an arm. brachiofacial p., that which affects the face and an arm. Brown Sequard's p., paralysis of motion on one side and of sensation on the other after hemisection of the spinal cord. bulbar p., paralysis due to changes in the motor centers of the oblongata: especially chronic or progressive bulbar paralysis, a chronic, usually fatal, disease, marked by progressive paralysis and atrophy of the muscles of the lips, tongue, mouth, pharynx, and larynx, and due to degeneration of the nerve nuclei of the floor of the fourth ventricle. Death results in from one to several years from extension to the cardiac or respiratory centers, from atrophy of the muscles of respiration, or from entrance of food into the air-passages. It is called also labioglossopharyn-geal p., labioglossolaryngeal p., and Duchenne's p. bulbospinal p., myasthenia gravis. central p., any paralysis due to a lesion of the brain or spinal cord. centrocapsular p., that which is due to disease of the internal capsule. centrocortical p., that which is due to disease of the cerebral cortex. cerebral p., any paralysis due to an intracranial lesion. chlorotic p., paralysis from chlorosis. circumflex p., paralysis of the circumflex nerve. complete p., entire loss of motion, sensation, and function. compression p., paralysis caused by pressure on a nerve, as by a crutch or during sleep. cortical p., paralysis dependent upon a lesion of the brain cortex. creeping p., locomotor ataxia. crossed p., that which affects one side of the face and the other side of the body. crural p., that which chiefly affects the thigh or thighs. crutch-p., paralysis of an arm or of the arms, due to pressure of the crutch in the axilla. Cruveilhier's p., progressive muscular atrophy. decubitus p., paralysis due to pressure on a nerve from lying for a long time in one position. dental p., poliomyelitis anterior, occurring in teething children. See anterior poliomyelitis. diphtheric p., diphtheritic p., a partial paralysis which often follows diphtheria, chiefly affecting the soft palate and throat muscles. diver's p., caisson disease. drummer's p., an extensor paralysis of the distal phalanx of the thumb of the left side occurring in drummers. drunkards' arm-p., a variety of musculospiral paralysis. Duchen-Same as bulbar p. emotional p., ne's p. paralysis with emotional excitement occurring in hysteric subjects. epidemic infantile p. See acute anterior poliomyelitis, under poliomyelitis. elitis. Erb's p. 1. Same as birth-palsy. 2. Partial paralysis of the brachial plexus affecting various muscles of the arm and chest wall. Erb-Duchenne p., paralysis of the upper roots of

brachial plexus due to destruction of the fifth and sixth cervical roots and characterized by absence of involvement of the small hand muscles. essential p., acute anterior poliomyelitis. exhaustion p., paralysis from overwork. facial p. See Bell's p. Féréol-Graux p., paralysis affecting the internal rectus of one eye and the external rectus of the other, caused by lesion of the abducens nucleus. flaccid p., paralysis with loss of tonus of the muscles of the paralyzed part and absence of referes functional p. a temporary arealof the muscles of the paralyzed part and absence of reflexes. functional p., a temporary paralysis which is apparently not caused by a nerve lesion. galloping p., a rapidly progressive form of general paresis. general p., general p. of the insane, general paresis. See paresis. glossolabial p. See bulbur p. Gubler's p., crossed hemiplegia. histrionic p., paralysis of certain muscles of the face, producing a facial expression of some emotion. hysteric p. expression of some emotion. hysteric p., one that may simulate any form of paralysis: it appears to have no adequate causative lesion. incomplete p., partial paralysis or paresis. Indianbow p., paralysis of the thyro-arytenoid muscles. infantile p., poliomyelitis anterior. See poliomyelitis. infantile spastic p., the cerebral palsy of childhood. infantile spinal p. See palsy of childhood. Intantile spinal p. See acute anterior poliomyelitis, under poliomyelitis. intermittent p., paralysis due to malaria. intrapeduncular p., paralysis of the eye muscles caused by a lesion located between the cerebral peduncles. ischemic p., local paralysis due to a stoppage of the circulation, as in certain cases of the circulation, as in certain cases of a stoppage of the circulation, as in certain cases of embolism or thrombosis; called also Volkmann's ischemic paralysis. juvenile p. agitans. See p agitans, juvenile. Klumpke's p., atrophic paralysis of the muscles of the arm and hand, from lesion of the brachial plexus and the eighth from lesion of the brachial plexus and the eighth cervical and first dorsal nerves. **Kussmaul's p.**, ascending spinal paralysis. **labial p.**, labioglossolaryngeal p., labioglossolpharyngeal p., a form of bulbar paralysis. **Landry's p.**, acute ascending spinal paralysis. **Landry's p.**, paralysis of one of the laryngeal muscles. **lead-p.**, that which is due to lead-poisoning. It is marked by wrist-drop, and is due to a peripheral neuritis. **lenticular p.**, that which is due to a lesion of the lenticular nucleus. **lingual p.**, paralysis of the tongue. **Little's p.**, anterior poliomyelitis; the cerebral spastic paralysis of childhood. **local p.**, paralysis of one muscle or of a group of muscles. **masticatory p.**, paralysis of the muscles of mastication. **motor p.**, paralysis of voluntary muscles. **multiple** p., paralysis of voluntary muscles. multiple p., a complication of local paralyses. musculospiral p., paralysis of the wrist-muscles, due to lesion or injury of the musculospiral nerve: sometimes to a toxic influence or to an alcoholic debauch. myogenic p., acute anterior poliomyelitis. myogenic p., acute anterior poliomyelitis. myopathic p., paralysis due to disease of the muscle itself. narcosis p., paralysis caused by pressure during anesthesia. neural p., paralysis originating in the nerves. p. notario'rum, writers' cramp. nuclear p., any paralysis due to a lesion in a nucleus of origin. obstetric p., a birth-palsy; paralysis due to injuries received at birth. ocular p. See amaurosis, cycloblesia and obthalmoblesia. oculomotor cycloplegia, and ophthalmoplegia. oculomotor p., paralysis of the oculomotor nerve. organic p., paralysis due to lesion of nerve tissue. parturient p., a form of paralysis following delivery in cows, and thought to be due to poisons formed in the udder. Called also milk-fever. periodic p., a recurrent neurosis, often due to malarial disease. peripheral p., loss of power due to some lesion of the neurous mechanism between the pullet of a introduction. tween the nucleus of origin and the periphery. phonetic p., paralysis of the muscles of speech.
post-diphtheric p. Same as diphtheric p.
posti'cus p., paralysis of the posterior cricothyroid muscle in locomotor ataxia. Pott's p., the
paralysis that may accompany Pott's disease. pressure p., paralysis, generally temporary, caused by pressure on a nerve trunk. progressive bulbar p. See bulbar p. pseudobulbar p., a disease affecting especially the facial muscles; simulating bulbar paralysis, but due to supranuclear lesions; supranuclear paralysis. It is marked especially by spasmodic laughing and crying. pseudohypertrophic muscular p., a chronic disease characterized by enlargement without true hypertrophy of the muscles, with paralysis due to disturbance of nutrition, producing atrophy of the muscle-fibers with hypertrophy of the connective tissue and fatty infiltration. The disease occurs tissue and fatty infiltration. usually late in childhood, and is marked by various deformities, lordosis, and a peculiar swaying gait with the legs kept wide apart. The paralysis progressively increases, ending in death, which is usually due to respiratory weakness. psychic p. Same as hysteric p. reflex p., one ascribable to peripheral irritation. In some cases secondary changes occur in the spinal cord, and the paralysis ceases to be truly reflex. Saturday-night p. Same as Sunday-morning p. segmental p., hypnotic paralysis affecting only a segment of a hypnotic paralysis affecting only a segment of a limb. sensory p., anesthesia resulting from a morbid process spastic p., paralysis marked by rigidity of the muscles and heightened tendon-reflexes. spastic spinal p., lateral sclerosis of the spinal cord. spinal p., paralysis dependent on a lesion of the spinal cord. spinomuscular p., paralysis due to lesion of the gray matter of the spinal cord, or the nerves springing therefrom. spinoneural p. See atrophy, spinoneural. Sunday-morning p., musculospiral paralysis caused by pressure in persons who have fallen asleep after a debauch. supranuclear p., paralysis of the facial nerve due to nuclear p., paralysis of the facial nerve due to lesion of the cortex or of the facial fibers in the corona radiata or capsule. **temporary p.**, paralysis which passes away after a short time, and which is usually due to the action of a drug or to hypnotic or hysteric condition. **tic p.** See tic. **tick p.**, a paralysis which follows the bite of certain ticks (Dermacentor venustus) in children and an admentic spinels in Crease Pritish Columbia. tain ticks (*Dermacentor venusius*) in ciniaren and in domestic animals in Oregon, British Columbia, and other parts of the world. The cause is not known. p. va'cillans, chorea. vasomotor p., paralysis of a vasomotor apparatus, resulting in dilatation of blood-vessels. Volkmann's p. Same as *ischemic p*. wasting p., progressive muscular atrophy. Werdnig-Hoffmann p. a type of familial progressive spinal muscular atrophy, beginning in early life and ending fatally in from a few months to four years writers' p. Same as writers' cramp. Zenker's p., partial paralysis of the parts supplied by the external popliteal nerve, due to a prolonged squatting or kneeling posture. Paralysis is further distinguished as traumatic, syphilitic, toxic, etc., according to its cause; or as obturator, ulnar, etc., according to the nerve, part, or muscle specially affected. For other varieties see under hemiplegia, palsy, paraplegia, and paresis.

paralysol (par-ah-li'sol). A cresol preparation used for disinfecting utensils.

paralysor (par'al-i-zor). A substance which hinders or prevents a chemic reaction.

paralytic (par-al-it'ik) [Gr. παραλυτικόs]. 1. Affected with or pertaining to paralysis. 2. A person affected with paralysis.

paralyzant (par-al'iz-ant). r. Causing paralysis. 2. A drug that paralyzes.

paralyze (par'al-īz). To put into a state of paralysis.

paralyzer (par'al-i-zer). A substance which hinders or prevents a chemic reaction.

paramagenta (par"ah-maj-en'tah). Parafuchsin. paramagnetic (par"ah-mag-net'ik). Characterized by or exhibiting paramagnetism.

paramagnetism (par-ah-mag'net-izm) [Gr. παρά beside + μάγνης magnet]. The property of being attracted by a magnet, and of assuming a position parallel to that of a magnetic force.

paramastigote (par-am-as'tig-ōt) [Gr. παρά beside + μάστιξ lash]. Having an accessory flagellum by the side of a larger one.

paramastitis (par"ah-mas-ti'tis) [Gr. παρά near + μαστός mamma]. Inflammation of the tissues around the mammary gland.

paramastoid (par-ah-mas'toid). Near the mastoid process.

paramastoiditis (par"ah-mas-toi-di'tis). Inflammation of the temporal bone in mastoiditis.

Paramecium (par-ah-me'se-um). A genus of holotrichous ciliate protozoans of elongated form. Certain strains of this organism have been employed in the protozoan test. See under tests. P. co'll. Same as Balantulium coli.

paramedian (par-ah-me'de-an). Same as paramesial.

parameliten'sis fever. See under fever.

paramenia (par-ah-me'ne-ah) [Gr. παρά beside + μῆνες menses]. Disordered or difficult menstruation.

parameningococcus (par"ah-me-ning-go-kok'us). A micro-organism resembling the meningococcus, differing only in its serum reactions.

paramesial (par-ah-me'se-al) [Gr. παρά near + μέσος middle]. Situated near the mesial line.

parameter (par-am'et-er) [Gr. παρά beside + μέτρον measure] An arbitrary constant, the values of which characterize the mathematical expressions into which it enters; e. g., rheobasis and chronaxia as parameters of the excitability of nerves (Lapicque).

parametric (par-ah-met'rik) [Gr. παρά beside + μήτρα uterus]. Situated near the uterus.

parametrismus (par"ah-me-triz'mus) [parametrium + trismus]. Pain and spasm of the muscle-fibers in the broad ligament: observed in cellulitis between the broad ligaments.

parametritis (par"ah-me-tri'tis). Inflammation of the parametrium or cellular tissue about the uterus; pelvic cellulitis. posterior p., inflammation of the cellular tissue around the uterosacral ligaments.

parametrium (par-ah-me'tre-um) [Gr. $\pi \alpha \rho \dot{\alpha}$ near $+ \mu \dot{\eta} \tau \rho \alpha$ womb]. The tissues that surround the uterus.

paramido-acetophenone (par-am"id-o-as-e-to-fe'nōn). NH₂.C₆H₄.CO.CH₃: used in Ehrlich's diazo test.

paramimia (par-ah-mim'e-ah) [Gr. παρά beside + μιμία mockery]. Loss of power to make natural or expressive gestures and movements.

paramitome (par-ah-mi'tōm) [Gr. παρά near + μίτος thread] See hyaloplasm.

paramnesia (par-am-ne'ze-ah) [Gr. $\pi\alpha\rho\dot{\alpha}$ almost + amnesia]. τ . Perversion of memory in which the person believes that he remembers events or circumstances which never happened; called also retrospective falsification. 2. A state in which words are remembered, but are used without a comprehension of their meaning.

Paramœba (par-am-e'ba). Same as Craigia.

Paramocium (par-ah-me'se-um). An incorrect spelling of *Paramecium*.

paramonochlorophenol (par"ah-mo"no-klo-rofe'nol). A crystalline body, C₀H₄(Cl).OH(1: 4), produced by the chlorination of phenol: an antiseptic, used in ointments for the treatment of crysipelas. Cf. chlorophenol.

paramorphia (par-ah-mor'fe-ah) [Gr. παρά beside + μορφή form]. Abnormality of form.

paramorphin (par-ah-mor'fin). Same as thebain.

paramphistomiasis (par-am"fe-sto-mi'as-is). Invasion of the body by trematode parasites of the family Paramphistomidæ. namely, Watsonius watsoni and Gastrodiscus hominis

Paramphis'tomum cer'vi. A fluke found in the

stomach of cattle and sheep in Egypt and also in the United States

paramucin (par-ah-mu'sin). A mucoid substance sometimes occurring in ovarian cysts.

paramusia (par-ah-mu'ze-ah) [Gr. παρά almost + amusia]. Perversion or partial loss of the power of correct musical expression.

paramyelin (par-ah-mi'el-in). A mono-aminomonophosphatid obtained from brain substance.

paramyoclonus mul'tiplex (par"ah-mi-ok'lonus) [Gr. π aρά beside + μ \hat{v} s muscle + κλόνος disturbance]. An affection marked by clonic paroxysmal contractions of the muscles of the extremities: it is sometimes due to an organic central lesion, and sometimes hysteric or choreic.

paramyosinogen (par''ah-mi-o-sin'o-jen) [Gr. π αρά beside + μῦς muscle + γεννᾶν to beget]. A protein resembling myosinogen derived from muscle plasm.

paramyotone (par-ah-mi'o-tōn) Same as paramyotonus.

paramyotonia (par'ah-mi-o-to'ne-ah) [Gr. $\pi\alpha\rho\dot{\alpha}$ beside $+\mu\hat{v}\hat{s}$ muscle $+\tau\dot{o}\nu\sigma_{s}$ tension]. A disease marked by tonic spasms due to disorder of muscular tonicity; especially a hereditary and congenital affection. ataxic **p**., muscular spasm with slight ataxia on attempting to move. **p**. congen'ita, or Thomsen's disease, is marked by tonic spasm of the muscles and weakness, and is due to exposure to cold. See *Thomsen's disease*, under disease. symptomatic **p**., temporary stiffness on starting to walk, seen in paralysis agitans.

paramyotonus (par"ah-mi-ot'o-nus). A condition marked by tonic muscular spasm.

paranalgesia (par-an-al-je'se-ah). Analgesia of the lower extremities.

paranea (par-ah-ne'ah). Paranoia.

paranephric (par-ah-nef'rik). 1. Near the kidney.2. Pertaining to the suprarenal capsule.

paranephrin (par-ah-nef'rin). A hemostatic preparation from the suprarenal glands: used in 1 1000 solution. See epinephrin.

paranephritis (par'ah-nef-ri'tis) [Gr. παρά near + νεφρός kidney].
 I. Inflammation of the paranephros.
 Inflammation of the connective tissue around and near the kidney.

paranephros, paranephrus (par-ah-nef'ros, par-ah-nef'rus), pl. parane' phri [Gr. παρά near + νεφρός kidney]. A suprarenal capsule.

paranesthesia (par"an-es-the'ze-ah). Same as para-anesthesia.

paraneural (par-ah-nu'ral) [Gr. παρά beside + νεῦρον nerve]. Beside or alongside of a nerve.

parangi (pah-ran'je). Ceylonese name for a disease resembling yaws. It is probably a form of syphilis.

paranoia (par-ah-noi'ah) [Gr. παρά beside + νοῦς mind]. A chronic, slowly progressive mental disease marked by the presence of systematized delusions which are built up in a logical form. acute hallucinatory p., paranoia in which hallucinations are combined with the delusions. alcoholic p., a paranoic condition developing in chronic alcoholism. p. hallucinato'ria, acute hallucinatory paranoia. heboid p., dementia paranoides p. origina'ria, a form of paranoia in children querulous p., paranoia marked by querulousness. p. sim'plex, a form in which the delusions are related to the actual perceptions of the patient.

paranoiac (par-ah-noi'ak). 1. Affected with paranoia. 2. A person affected with paranoia; a crank; an erratic person with a tendency to insanity.

paranoid (par'an-oid). Resembling paranoia.

paranoidism (par-ah-noi'dizm). The state of being affected with paranoia.

paranomia (par-ah-no'me-ah) [Gr. παρά beside + δνομα name]. Aphasia in which the names of

objects felt (myotactic p.) or seen (visual p.) are not recollected, wrong names being given to them.

paranoval (par-an-o'val). A soluble, tasteless additive compound of veronal-sodium and disodium phosphate. It is used as a hypnotic in doses of 4-8 grains.

paranuclear (par-ah-nu'kle-ar). Pertaining to a paranucleus.

paranucleate (par-ah-nu'kle-āt). Any salt of paranucleic acid.

paranuclein (par-ah-nu'kle-in). 1. The essential substance of true nucleoli. A nuclein derived from cytoplasm.

paranucleo-albumin (par-ah-nu"kle-o-al-bu'-min). A compound of paranuclein with protein.

paranucleolus (par"ah-nu-kle'o-lus). A small basophil body in the enclosing sac of the nucleus.

paranucleoprotein (par"ah-nu"kle-o-pro'te-in).
Any phosphorus-containing protein which, by digestion with acid pepsin, affords soluble peptones and proteoses and an insoluble paranuclein.

paranucleus (par-ah-nu'kle-us) [Gr. $\pi a \rho \dot{a}$ near + nucleus]. A body resembling the nucleus sometimes seen in the cell-protoplasm near the nucleus.

para-omphalic (par"ah-om-fal'ik) [Gr. π αρά beside + \dot{o} μφαλός navel]. Near the umbilicus.

para-operative (par-ah-op'er-a-tiv). Pertaining to the accessories of an operation, such as care of instruments, asepsis, etc.

parapancreatic (par"ah-pan-kre-at'ik) Situated near the pancreas. p. abscess, an abscess in the tissue around the pancreas.

paraparesis (par-ah-par'es-is) [Gr. παρά almost + πάρεσις paralysis] A partial paralysis, especially of the lower extremities.

parapedesis (par'ah-pe-de'sis) [Gr $\pi \alpha \rho \dot{\alpha}$ beyond $+ \pi \dot{\epsilon} \delta \eta_{SiS}$ a bending]. Passage of the bile-pigments into the blood-capillaries instead of into the bile-capillaries.

parapeptone (par-ah-pep ton). Same as anti-albumate.

paraperitoneal (par'ah-per-it-o-ne'al). Near the peritoneum.

parapestis (par-ah-pes'tis). Pestis minor.

paraphasia (par-ah-fa zhe-ah) [Gr. $\pi \alpha \rho \acute{\alpha}$ near + aphasia]. Partial aphasia in which the patient employs wrong words, or uses words in wrong and senseless combinations (**choreic p**.).

paraphasic (par-ah-fa'sik). Characterized by paraphasia.

paraphasis (par-af'as-is) An evagination of the membranous roof of the telencephalon in front of the velum transversum in certain vertebrate brains.

paraphemia (par-ah-fe'me-ah) [Gr. π αρά beside + $\varphi \hat{\eta} \mu \eta$ speech]. Aphasia marked by the employment of the wrong words.

paraphenetidin (par"ah-fe-net'id-in). A substance, amidophenetol, NH₂ C₆H₄:OC₂H₅: used in preparing phenacetin.

paraphenylendiamin (par"ah-fen-il-en-di-am'in). An agent, C₆H₄(NH₂)₂, whose hydrochlorid dyes the hair black, but is liable to cause a facial inflammation.

paraphia (par-a'fe-ah) [Gr. παρά beside + ἀφή touch]. A perversion of the sense of touch.

paraphimosis (par"ah-fi-mo'sis) [Gr. παρά amiss + φιμόειν to muzzle]. Retraction of a narrow or inflamed foreskin which cannot be replaced.

paraphobia (par-ah-fo'be-ah) [Gr. πάρα beside + φόβοι fear]. A mild phobia.

paraphonia (par-ah-fo'ne-ah) [Gr. παρά near + aphonia]. Morbid alteration of the voice; partial aphonia.

paraphora (par-af'o-rah) [Gr. παρά aside + φέρειν to bear]. A slight mental disorder.

paraphrasia (par-ah-fra'ze-ah) [Gr. παρά near +

aphrasia]. Partial aphrasia; speech-defect marked by disorderly arrangement of spoken words.

paraphrenia (par-ah-fre'ne-ah) [Gr. παρά aside + φοήν mind]. 1. Intellectual insanity; insanity marked especially by intellectual disturbance. 2. Paraphrenitis. p. confab'ulans, a form of paraphrenia distinguished by falsifications of memory. p. expan'siva, a form of paraphrenia marked by delusions of grandeur, an exalted mood, and mild excitement. p. phantas'tica, a form of paraphrenia marked by phantastic, changeable, and unsystematized delusions. p. systemat'ica, a form of paraphrenia marked by the gradual development of progressive delusions of persecution, with later appearance of delusions of grandeur without deterioration of personality.

paraphrenitis (par'ah-fre-ni'tis) [Gr. παρά near + φρήν diaphragm]. Inflammation of the diaphragm, or, more correctly, of the parts around it.

paraphronia (par-af-ro'ne-ah). A condition of abnormal mentality marked by change in disposition and character.

paraphysis (par-af'is-is) [Gr. παραφύσις offshoot].
A sterile thread alongside the spore sac or sexual organs of cryptogamous plants.

paraphyte (paraf-it) [Gr. παρά aside + φυτόν plant]. A proliferation or excrescent vegetation.

paraphyton (par-af-i'ton). A vegetable parasite.

parapineal (par-ah-pi'ne-al). Noting the visual part of the pineal body of certain lizards.

paraplasm (par'ah-plazm) [Gr. παρά near + πλάσμα plasm]. 1. See hyaloplasm. 2. Any abnormality or malformation.

Paraplas'ma flavig'enum. See Seidelin bodies, under body.

paraplasmic (par-ah-plaz'mik). Pertaining to paraplasm.

paraplast (par'ah-plast). A plaster-base of caoutchouc, lanolin, rosin, and dammar.

paraplastic (par-ah-plas'tik) [Gr. παρά beside + πλάσσειν to mold]. Exhibiting a perverted formative power; of the nature of a paraplasm.

paraplastin (par-ah-plas'tin). A substance resembling parachromatin in the cytoplasm and nucleus of a cell.

paraplectic (par-ah-plek'tik) [Gr. παραπληκτικόs].
Same as paraplegic.

paraplegia (par-ah-ple'je-ah) [Gr. παρά across + πληγή stroke]. Paralysis of the legs and lower part of the body. The paralysis affects both motion and sensation, and the condition is caused by disease or injury of the spine, locomotor ataxia, transverse myelitis, chronic alcoholism, malaria, anemia, and lesion of the brain. alcoholic p., paraplegia due to chronic alcoholism, and probably dependent upon peripheral neuritis. ataxic p., a disease characterized by slowly developing paraplegia and incoördination, with exaggeration of the tendon-reflexes, and due to lateral and posterior sclerosis of the spinal cord. cerebral esion. cervical p., that which is due to a bilateral cerebral lesion. cervical p., that which affects especially both arms, due to high spinal pressure. congenital spastic p., infantile spastic paraplegia. p. doloro'sa, a variety attended with severe pains, due to the pressure of neoplasms on the spinal cord and nerves. flaccid p. See flaccid paralysis, under paralysis. ideal p., a reflex paraplegia due to emotional excitement. infantile spastic p., spastic paralysis occurring in early childhood, and due to injuries in birth, cerebral hemorrhage before birth, or abnormal development of the brain. p. infe'rior, paralysis of both legs. peripheral p., that which is due to pressure on the nerves. Fott's p., that which is due to vertebral caries. reflex p., paralysis of the lower limbs due to peripheral irritation of the nerve-centers. senile p., spastic p., a form marked by tonic spasm of the paralyzed muscles, with increased

reflex irritability. It is usually caused by transverse lesions of the spinal cord or by anterolateral sclerosis. Called also tetanoid p. spastic p., primary, a form of spastic paraplegia said to be due to primary degeneration in the pyramidal tracts. p. supe'rior, paralysis of both arms. tetanoid p. See spastic p. toxic p., paraplegia due to poisons in the blood.

paraplegic (par-ah-plej'ik) [Gr. παραπληγικός]. Pertaining to or of the nature of paraplegia.

paraplegiform (par-ah-plej'if-orm). Resembling paraplegia.

paraplejapyrin (par-ah-plej-ah-pi'rin). An antipyretic and analgesic compound of antipyrin and paratoluenesulphamin.

parapleuritis (par"ah-plu-ri'tis) [Gr. παρά beside + πλευρόν side]. Inflammation in the wall of the chest.

paraplexus (par-ah-plek'sus) [Gr. παρά beside + The choroid plexus of the lateral venplexus]. tricle.

parapneumonia (par-ah-nu-mo'ne-ah). A disease resembling pneumonia clinically, but not due to infection with its germ.

parapophysis (par-ah-pof'is-is) [Gr. παρά near + abothysis]. The lower transverse process of a vertebra or its homologue.

parapoplexy (par-ap'o-pleks-e) [Gr. παρά near + apoplexy]. Slight apoplexy; also an attack resembling apoplexy, but of a different nature.

parapraxia (par-ah-prak'se-ah) [Gr παρά beside πράξις doing]. 1. Irrational behavior 2. Inability to perform purposive movements properly.

paraproctitis (par"ah-prok-ti'tis) [see paraproctium]. Inflammation of the paraproctium.

paraproctium (par-ah-prok'she-um) [Gr. παρά beside $+\pi\rho\omega\kappa\tau\delta\varsigma$ anus]. The tissues that surround the rectum and anus.

paraprostatitis (par"ah-pros-tat-i'tis). Inflammation of the tissues near the prostate gland.

parapsis (par-ap'sis) [Gr. παρά beside + ἄψις touch]. Morbid sense of touch; paraphia.

parapsoriasis (par-ah-so-ri'as-is). arapsoriasis (par-ah-so-ri'as-is). A chronic skin disease resembling psoriasis and lichen. It is marked by persistent red, scaling patches with lichen-like lesions, and is without subjective sensations.

parapsychosis (par"ah-si-ko'sis). Perversion of the thought function resulting in unnatural and abnormal thinking.

(par"ah-pik-no-mor'fus) parapyknomorphous [Gr. παρά near + πυκνός thick + μορφή form]. Neither pyknomorphous nor apyknomorphous, but between the two. Staining moderately well.

parapyramidal (par"ah-pi-ram'id-al). Beside or near a pyramid.

paraqueduct (par-ak'we-dukt). A lateral extension of the cerebral aqueduct.

pararabin (par-ar'ab-in). A carbohydrate residuum identified by Reichardt (1875) and obtained by depriving agar-agar of its nitrogen (Bordet-Zung, 1914).

pararectal (par-ah-rek'tal). Beside the rectum. **parareducin** (par''ah-re-du'sin) [Gr. παρά near +

reducin]. A leukomain found in the urine.

parareflexia (par"ah-re-flek'se-ah). Any disorder or derangement of the reflexes.

pararegulin (par-ah-reg'u-lin). A proprietary laxative said to contain paraffin and cascara sagrada. pararenal (par-ah-re'nal). Alongside of the kidnev.

pararhotacism (par-ah-ro'tas-izm) [Gr. παρά be-side + βῶ the letter r]. Faulty enunciation of the sound of the letter r.

pararhythmia (par-ar-ith'me-ah). Cardiac arhythmia in which two separate rhythms are going on at the same time.

pararoello (par-ar-o-el'o). Ornithodorus coriaceus.

pararosanilin (par"ah-ro-zan'il-in). Same as parafuchsin.

pararthria (par-ar'thre-ah) [Gr. παρά beside + ἄρθρον articulation]. Disordered or imperfect utterance of speech.

Parasaccharom'yces ashfor'di. Same as Monilia psilosis.

parasacral (par-ah-sa'kral). Situated or occurring near the sacrum. p. anesthesia. See anesthesia.

parasagittal (par-ah-saj'it-al). Parallel with the median plane.

parasalpingitis (par"ah-sal-pin-ji'tis) [Gr. παρά near + $\sigma \dot{\alpha} \lambda \pi i \gamma \xi$ tube + - $i \tau i s$ inflammation]. flammation of the tissues around an oviduct.

parascarlet (par-ah-skar'let). See fourth disease, under disease.

(par"ah-se-kre'shun). Perversion parasecretion of the secretions; also hypersecretion.

paraserum reflex (par-ah-se'rum). See under reflex

parasigmatism (par-ah-sig'mat-izm) [Gr. π αρά beside + σ lγμα letter S]. Imperfect pronunciation of s-sounds.

parasinoidal (par"ah-si-noi'dal) [Gr. παρά near + sinus]. Situated along the course of a sinus.

Parasita (par-as'it-ah). An order of nematodes living as parasites in the open cavities or in the tissues of animals, but also capable of free life during part of their existence.

parasite (par'ah-sīt) [Gr. παράσιτος]. 1 A plant or animal which lives upon or within another living organism at whose expense it obtains some advantage without compensation. 2 A fetus, or part of a fetus, that takes its sustenance from an autosite, or twin fetus. accidental p., an organism which is only occasionally parasitic. allantoic p., a twin embryonic parasite in which the weaker mem-ber takes its blood-supply from the stronger through its allantoic circulation. commensal p., a parasite which derives its sustenance from the food of its host. estivo-autumnal p. See Plasmodium falciparum. facultative p., organism, normally or usually saprophytic, which is capable of living as a parasite. half p., an organism able to produce disease if assisted in some way, but lacking some of the powers of a full pathogen. incidental p., a parasite in a host which normally it does not inhabit inquiline p. See inquiline. intermittent p., a parasite which lives in its host only at times, being free living during the interval. Leishman-Donovan p. See Leishman-Donovan body, under body. malarial p. See Plasmodium obligatory p., a parasite which cannot live apart from its host partial p. Same as half p. quartan p., tertian p. See Plasmodium malariæ. specific p., one normal to its present host tertian p., Plasmodium vivax. true p., a parasite which derives its sustenance from the tissue of its host

parasitic (par-ah-sit'ik) [Gr. παρασιτικός]. Pertaining to or of the nature of a parasite.

parasiticide (par-ah-sit'is-id) [L. paras'itus a parasite + ca' dere to kill]. Destructive to parasites; cipal parasiticides are corrosive sublimate, sulphurous acid, the sulphates, acetic acid, carbolic acid, sulphur, cocculus indicus, staphisagria, and mercurial ointment.

parasitifer (par-ah-sit'is-er) [parasite + L. fer're to bear]. An organism which serves as the host of a parasite.

parasitism (par'ah-sit-izm). 1. The state of being See parasite. 2. Infestation with a parasite. parasites.

parasitogenic (par"ah-si-to-jen'ik) [Gr. παράσιτος parasite + $\gamma \epsilon \nu \nu \hat{a} \nu$ to beget]. Caused by parasites. parasitologist (par-ah-si-tol'o-jist). A student of parasitology.

parasitology (par"ah-si-tol'o-je) [Gr. παράσιτος

- parasite $+\lambda\delta\gamma\sigma$ s treatise]. The sum of what is known in regard to parasites.
- parasitophobia (par"ah-si-to-fo'be-ah) [parasite + Gr. φόβοs fear]. Insane dread of parasites; morbid imagination that one is infested with parasites.
- parasitotrope, parasitotropic (par-ah-si'to-trop, par'ah-si-to-trop'ik) [parasite + Gr. τρέπειν to turn]. Having special affinity for parasites. See organotrope and chemotherapy.
- parasitotropism, parasitotropy (par'ah-si-tot'ro-pizm, par'ah-si-tot'ro-pe). The affinity of a drug for infective parasites.
- para-smallpox. Same as amaas.
- parasol insertion. See under insertion.
- paraspadia (par-ah-spa'de-ah) [Gr. παρασπάειν to draw aside]. A condition in which the urethra opens upon one side of the penis.
- paraspasm (par'ah-spazm) [L. paraspas'mus; Gr. παρασπασμός]. Spasm of both lower extremities; having a relation to paraplegia.
- paraspecific (par"ah-spe-sif'ik). Having curative properties in addition to the specific one.
- **parasteatosis** (par"ah-ste-at-o'sis) [Gr. παρά beside + στέαρ suet]. Disorder of sebaceous secretions.
- parasternal (par-ah-ster'nal) [Gr. παρά beside + στέρνον sternum]. Situated beside the sternum.
- **parasthenia** (par-as-the'ne-ah) [Gr $\pi \alpha \rho \dot{\alpha}$ beside + $\sigma \theta \dot{\epsilon} \nu \sigma \sigma$ strength]. A condition of organic tissue causing it to function at abnormal intervals.
- parastruma (par-ah-stru'mah). Goiter due to enlargement of a parathyroid gland.
- parasympathetic (par"ah-sim-path-et'ik). A term applied to that part of the autonomic nervous system which is made up of the ocular division, the bulbar division, and the sacral division. p. bodies. See under body
- parasynanche (par-ah-sin'an-ke) [Gr. παρασυνάγχη]. Inflammation of a parotid gland or of the throat muscles
- parasynapsis (par-ah-sin-ap'sis) [Gr. παρά beside + συναψις conjugation]. The conjunction of chromosomes side by side. Cf. telosynapsis.
- parasyndesis (par"ah-sin-de'sis). Same as para-synapsis
- parasynovitis (par'ah-sin-o-vi'tis) [Gr. παρά near + synovitis]. Inflammation of the tissues about a synovial sac.
- parasyphilis (par-ah-sif'il-is). Parasyphilosis.
- parasyphilitic (par"ah-sif-il-it'ik). Pertaining to a sequel or result of syphilis, but not to syphilis itself.
- **parasyphilosis** (par"ah-sif-il-o'sis). A diseased condition following and partly due to syphilis, but not itself syphilitic.
- **parasystole** (par-ah-sis'to-le) [Gr. παρά near + συστολή contraction]. An abnormally prolonged interval between the systole and the diastole.
- paratarsium (par-ah-tar'se-um) [Gr. $\pi \alpha \rho \dot{\alpha}$ near + tarsus]. The side of the tarsus of the foot.
- paratenon (par-ah-ten'ōn) [Gr. παρά beside + τενῶν tendon]. The fatty areolar tissue filling the interstices of the fascial compartment in which a tendon is situated.
- **paratereseomania** (par''ah-ter-e''se-o-ma'ne-ah) [Gr. παρατήρησις observation + μανία madness]. A mania for seeing new sights.
- paraterminal body (par-ah-ter'min-al). See under body.
- parathesin (par-ath'e-sin). A white, crystalline powder, the ethyl ester of para-amino-benzoate, NH₂.C₆H₄.CO.O.C₂H₅: used as a local anesthetic and anodyne.
- parathymia (par-ah-thi'me-ah) [Gr. παρά beside + θύμος mind]. Disordered emotion; emotional insanity.

- **parathyrin** (par-ah-thi'rin). The active principle of the parathyroids. It has an inhibitory effect on the activity of nerve-cells.
- parathyroid (par-ah-thi'roid) [Gr. $\pi \alpha \rho \dot{\alpha}$ near + thyroid]. 1. Situated beside the thyroid gland. 2. Any one of four small glands, one on the lateral and one on the mesial surface of each lateral lobe of the thyroid. They are quite distinct from the accessory thyroids.
- parathyroidal (par"ah-thi-roi'dal). Pertaining to the parathyroids.
- parathyroidectomize (par"ah-thi-roi-dek'to-miz).
 To remove the parathyroids from.
- parathyroidectomy (par'ah-thi-roid-ek'to-me) [parathyroid + Gr. ἐκτομή excision]. The excision of a parathyroid.
- **parathyroprival** (par"ah-thi-ro-pri'val). Deprived of the parathyroids.
- parathyroprivia · (par"ah-thi-ro-pri've-ah). The condition resulting from the removal of the parathyroid glands.
- parathyroprivic, parathyroprivous. Same as parathyroprival.
- paratoloid, paratoloidin (par-ah-to'loid, par-ah-to-loi'din). Koch's lymph, or tuberculin.
- paratonia (par-ah-to'ne-ah) [Gr. παρά beside + τόνος tension]. Excessive extension; hyperextension.
- paratophan (par-at'o-fan). A methyl derivative of atophan, used like the latter.
- paratoxin (par-ah-toks'in). A preparation of bile containing cholesterin, but deprived of bile-pigments. It is used in tuberculosis, and is supposed to act by neutralizing the tuberculous toxins.
- **paratrichosis** (par''ah-trik-o'sis) [Gr. π αρά beside + τ ρίχωσις hairiness]. Any abnormality in the character or situation of the hair.
- paratrimma (par-ah-trim'ah) [Gr. παρά beside + τρίβειν to rub]. 1. Irritation; chafing. 2. Intertrigo, especially between the nates.
- paratripsis (par-ah-trip'sis) [see paratrimma]. 1.
 Irritation or chasing. 2. Suppression of tissue waste
- paratriptic (par-ah-trip'tik). 1. Preventing bodily waste. 2. An agent that prevents the waste of nervous or other tissue.
- paratrophic (par-ah-trof'ik) [Gr. παρά beside + τροφή nutrition]. Requiring living material or complex protein matter for food.
- paratrophy (par-at'ro-fe) [Gr. παρά beside + τροφή nutrition].
 r. Perverted nutrition.
 Adiposis dolorosa.
- paratuberculosis (par"ah-tu-ber-ku-lo'sis). Any disease not tuberculous, but flourishing in a tuberculous constitution.
- paratuberculous (par"ah-tu-ber'ku-lus). Having an indirect relation to tuberculosis; due to conditions produced by tuberculosis.
- paratudo (par-ah-tu'do). The tuberous roots of Gomphre'na officina'lis and G. macrophyl'la, of South America: a polychrest native remedy.
- **paratyphlitis** (par"ah-tif-li'tis) [Gr. παρά beside + τυφλόs blind + -ιτιs inflammation]. Inflammation of the postperitoneal tissue of the cecum: it originates in an appendicitis.
- paratyphoid (par-ah-ti'foid). Resembling typhoid fever or the typhoid bacterium. p. bacillus. See under bacterium p. fever. See under fever.
- paratypic, paratypical (par-ah-tip'ik, -tip'ik-al). Differing from the type.
- para-umbilical (par"ah-um-bil'ik-al). Near the umbilicus.
- para-urethral (par"ah-u-re'thral). Situated or occurring near the urethra.
- para-uterine (par-ah-u'ter-in). Situated close to the uterus.

paravaginal (par-ah-vaj'in-al). Beside or alongside of the vagina.

paravaginitis (par"ah-vaj-in-i'tis). Inflammation of the tissue about the vagina.

paravariola (par"ah-var-i'o-lah) See amaas.

paravertebral (par-ah-ver'te-bral). Beside the vertebral column. p. anesthesia. See anesthesia.

paravesical pouch (par-ah-ves'ik-al). See pouch.
paraxanthin (par-aks-an'thin). Dimethyl xanthin,
C7H₈N₄O₂, or 1, 7-dimethyl-2, 6-dioxypurin, a
crystalline substance found in urine. It is isomeric with theobromin which it resembles in
physiologic action. It is poisonous, and produces
rigidity and loss of mobility in the muscles, dyspmea, and reflex excitability. It is one of the causes
of gout.

paraxial (par-aks'e-al) [Gr. παρά beside + axis]. Situated alongside an axis.

paraxin (par-aks'in). A white, crystalline substance, dimethylaminoparaxanthin: used as a diuretic. Dose, 8 gr. (0.5 gm.).

paraxon (par-aks'on) [para- + axon]. A collateral branch of a neuraxon or axis-cylinder process.

parazoön (par-ah-zo'on) [Gr. παρά on + ζῶον animal]. An animal organism parasitic upon or within an animal.

Pardanthus chinen'sis (par-dan'thus). An iridaceous plant of Asia of high repute as an aperient.

Paré (par-à'), Ambroise. A French surgeon, born in 1500, and sometimes called the father of French surgery. He reformed the treatment of gun-shot wounds, substituting the ligation of arteries for cauterization. Died in 1500.

parectasia (par-ek-ta'se-ah). Parectasis.

parectasis (par-ek'ta-sis) [Gr. παρά beside + ἔκτασις extension]. Excessive stretching or distention of a part or organ.

parectropia (par-ek-tro'pe-ah) [Gr. παρά beside + έκ out + τρόπος turning]. Same as apraxia.

paregoric (par-e-gor'ik) [Gr. παρηγορικός consoling].
 I. Anodyne.
 2. Paregoric elixir, or the camphorated tincture of opium: anodyne. Dose, 5-75 min. (0.333-5 c.c.).

pareira (par-a'rah) [Port. "brier"]. The root of Chondroden'dron tomento'sum, a South American plant. It contains the alkaloid pelosin, is diuretic and tonic, and is used in cystitis, pyelitis, rheumatism, dropsy, and leukorrhea. Dose of fluidextract, 30-60 min. (2-4 c.c.); of extract, 15 gr. (1 gm.); of decoction, 1 fl.oz. (30 c.c.). Called also pareira brava.

parelectronomic (par"e-lek-tro-nom'ik). Giving no response to electromotive stimuli.

parelectronomy (pare-lek-tron'o-me) [Gr. $\pi a \rho a$ against + electric + Gr. $\nu b \mu o s$ law]. A condition in which there is a decrease in strength of an electric current passed through a muscle.

parencephalia (par"en-se-fa'le-ah) [Gr. παρά beside + ἐγκέφαλος brain]. Congenital defect of the brain.

parencephalitis (par"en-sef-ah-li'tis). Inflammation of the cerebellum.

parencephalocele (par-en-sef'al-o-sēl) [parencephalon + Gr. κήλη hernia]. Hernial protrusion of the cerebellum.

parencephalon (par-en-sef'al-on) [Gr. παρά near + έγκέφαλος brain]. The cerebellum.

parencephalous (par-en-sef'al-us) [Gr. παρά aside + ἐγκέφαλος brain]. Having a congenital deformity of the brain.

parenchyma (par-en'kim-ah) [Gr. παρέγχυμα].
The essential or functional elements of an organ as distinguished from its stroma, or framework.

parenchymal (par-en'kim-al). Pertaining to or of the nature of parenchyma.

parenchymatitis (par"en-kim-at-i'tis). Inflammation of a parenchyma.

parenchymatous (par-en-kim'at-us). Pertaining to or of the nature of a parenchyma.

parenchymula (par-en-kim'u-lah). The embryonic stage next succeeding that called the closed blastula.

parental (par-en'tal). Pertaining to or derived from the parents.

parenteral (par-en'ter-al) [Gr. παρά beside + ἔντερον intestine]. Not through the alimentary canal, i. e., either subcutaneous or intravenous.

parepicœle (par-ep'e-sēl). The lateral recess of the epicœle, or fourth ventricle.

parepididymis (par''ep-id-id'im-is). Same as paradidymis.

parepigastric (par-ep-e-gas'trik). Near the epigastrium.

parepithymia (par'ep-e-thim'e-ah) [Gr. παρά amiss + ἐπιθυμία longing]. Morbid or abnormal desires or appetites; morbid craving.

paresis (par'es-is) [Gr. πάρεσις relaxation]. I. General paresis. 2. Slight or incomplete paralysis. general p., a chronic disease of the brain characterized by degeneration of the cortical neurons and marked by progressive loss of mental and physical power. It results from antecedent syphilitic infection. The prognosis is hopeless, the disease lasting from several months to three or four years. Called also general paralysis of the insane, paretic dementia, dementia paralytica, cerebral tabes, and chronic meningo-encephalitis.

pareso-analgesia (par"es-o-an-al-je'ze-ah). Incomplete paralysis with analgesia.

paresthesia, paræsthesia (par-es-the'ze-ah) [Gr. $\pi a \rho \dot{a}$ beside $+ a l a \theta \eta \sigma \iota s$ sensation]. Morbid or depraved sensation, an abnormal sensation, as burning, pricking, formication, etc. **Berger's p.**, paresthesia in young persons of one or both lower limbs, accompanied by weakness, but without objective symptoms. **Bernhardt's p.**, numbness, pain on exertion, and hyperesthesia of the part of the thigh supplied by the external cutaneous nerve. **visceral p.**, an abnormal sensation referred to some viscus, not a mere excess or defect of a normal visceral sensation.

paresthetic (par-es-thet'ik). Pertaining to or marked by paresthesia.

paretic (par-et'ik). Pertaining to or affected with

pareunia (par-u'ne-ah) [Gr. παρά beside + εὐνή couch]. Coitus; sexual intercourse.

parhemoglobin (par-hem-o-glo'bin). A form of hemoglobin insoluble in alcohol.

parhormone (par-hor'mon). Any substance, not a true hormone, having a hormone-like action.

parica (par-e-kah'). A narcotic snuff prepared from the seeds of *Piptade'nia ni'ops*, a tree of Brazil. See *niopo*.

paricin (pah'ris-in). An alkaloid, C₁₀H₁₈ON₂ + $\frac{1}{2}$ H₂O, from the bark of Cincho'na succiru'bra.

paridrosis (par-id-ro'sis) [Gr. π aρά beside + $t\delta$ ρωσις perspiration]. Any disorder or perverted state of the perspiration.

paries (pa're-ēz), pl. pari'etes [L.]. The wall of an organ or cavity. p. anterior, an anterior wall, as of the stomach or vagina. p. carot'-ica tym'pani [B N A], the anterior wall of the tympanum. p. infe'rior, the inferior wall of the orbit. p. jugula'ris [B N A], the floor of the cavity of the tympanum. p. labyrin'thica [B N A], the inner wall of the cavity of the tympanum. p. latera'lis, the lateral wall of the orbit. p. mastoi'dea tym'pani [B N A], the posterior wall of the cavity of the tympanum. p. media'lis, the medial wall of the orbit. p. membrana'cea tym'pani [B N A], the outer wall of the cavity of the tympanum. p. poste'rior, the posterior wall, as of the stomach or vagina. p. supe'rior, the superior wall of the orbit. p. tegmenta'lis tym'pani [B N A], the tegmental wall of the cavity of the tympanum.

Of or pertaining to the walls of a cavity.

Parietaria (par-i-e-ta're-ah). See pellitory.

parietes (par-i'et-ēz) [L. "walls"]. The walls of an organ or cavity.

parietofrontal (par-i"et-o-fron'tal). Pertaining to the parietal and frontal bones, gyri, or fissures.

parieto-occipital (par-i"et-o-ok-sip'it-al). Pertaining to the parietal and occipital bones or lobes.

parietosphenoid (par-i"et-o-sfē'noid). Pertaining to the parietal and sphenoid bones.

parietosplanchnic (par-i"et-o-splank'nik). Parietovisceral.

parietosquamosal (par-i"et-o-skwam-o'sal). Pertaining to the parietal bone and the squamous portion of the temporal bone.

parietotemporal (par-i"et-o-tem"po-ral). Pertaining to the parietal and temporal bones or lobes.

parietovisceral (par-i"et-o-vis'er-al). Both parietal and visceral; pertaining to the walls of a cavity and the viscera within it

parigenin (par-ij-e'nin). An alkaloid derived from parillin by the action of sulphuric acid.

parillin (par-il'in) [Spanish parilla vine]. A crystalline glucosid, $C_{40}H_{70}O_{18}$, the active principle of sarsaparilla root. It slows the heart's action. Called also parillic acid, saliseparin, and salseparisin.

Parinaud's conjunctivitis (pah-rin-ōz') [Henri Parinaud, French ophthalmologist, 1844-1905]. See conjunctivitis.

Paris green (par'is). A double salt of copper acctate and copper meta-arsenite, Cu(C₂H₃O₂)_{2.3}Cu-(AsO₂)₂. Called also Schweinfurt green.

parisol (par-i'sol). An antiseptic preparation of formaldehyd and saponified naphthaquinone.

paristhmic (par-ist'mik). Pertaining to the tonsils.
paristhmion (par-isth'me-on) [Gr. παρά beside + iσθμός isthmus]. A tonsil.

paristhmitis (par-ist-mi'tis). Tonsillitis.

parity (par'it-e). I [L. parere to give birth]. The condition of a woman with respect, to her having borne children.
 2 [L. par equal]. Equality; close correspondence or similarity.

Park's aneurysm [Henry Park, English surgeon, 1744-1831]. See aneurysm.

Park-Williams bacillus [William H. Park, American bacteriologist, born 1863; Anna W. Williams, American bacteriologist]. See under bacillus.

Parker's fluid [George A. Parker, American zoologist, born 1864]. See under fluid.

Parker's incision [Willard Parker, New York surgeon, 1800-1884]. See incision.

Parkinson's disease, facies, syndrome (par-kin-sunz) [James Parkinson, English physician, 1755-1824]. See disease, facies, syndrome.

parkinsonism (par'kin-sun-izm). See Parkin-son's syndrome, under syndrome.

paroarium (par-o-a're-um). Same as parovarium.
paroccipital (par-ok-sip'it-al) [Gr. παρά near + L. oc'ciput occiput]. Near the occipital bone.

parodontid (par-o-don'tid) [Gr. παρά beside + δδούς tooth]. A tumor upon the gum.

parodontitis (par"o-don-ti'tis) [see parodontid]. Inflammation of tissues about a tooth.

parodynia (par-o-din'e-ah) [Gr. παρά amiss + οδύνη pain]. Dystocia, or morbid labor.

parogen (par'o-jen). Oxygenated paraffin, a preparation containing liquid paraffin, 40 parts, oleic acid, 40 parts, and ammoniated alcohol (5 per cent), 20 parts: used as a basis for liniments.

paroleine (par-o-le'in). A proprietary liquid paraffin preparation.

paroliva (par-ol'iv-ah). An accessory part of the olivary body.

parolivary (par-ol'iv-ar-e) [Gr. παρά near + olivary]. Situated near the olivary body.

paromphalocele (par-om-fal'o-sēl) [Gr. π aρά near + δ μφαλός navel + κήλη hernia]. Hernia situated near the navel.

paroniria (par-o-nir'e-ah) [Gr. παρά near + δνειρος dream]. Morbid dreaming.

paronychia (par-o-nik'e-ah) [Gr. παρά near + δνυξ nail]. A felon or whitlow; abscess and suppuration of the terminal phalanx of the finger. It may be superficial and confined to the structures about the nails, or deep-seated, in which case the periosteum and bone are affected, and there are pain, necrosis, and marked constitutional disturbance. p. tendino'sa, septic inflammation of the sheath of the tendon of a finger.

paronychial (par-o-nik'e-al). Of or pertaining to paronychia.

paronychosis (par-on-ik-o'sis). The formation of a nail in some abnormal place.

paroöphoric (par-o-of-o'rik). Pertaining to the paroöphoron.

paroophoritis (par"o-of-o-ri'tis). I. Inflammation of the paroophoron. 2. Inflammation of the tissues about the ovary.

paroöphoron (par-o-of'o-ron) [Gr. παρά near + ψόν egg + φέρειν to bear]. A relic in the broad ligament of the urinary portion of a wolffian body. It is a tubular body corresponding to the organ of Giraldès in the male.

parophthalmia (par-of-thal'me-ah) [Gr. $\pi a \rho \dot{a}$ beside $+ \dot{b} \varphi \theta a \lambda \mu \dot{b}$ s eye]. Inflammation of the connective tissue around the eye.

parophthalmoncus (par"of-thal-mong'kus) [Gr. π αρά beside + \dot{o} φ θαλμός eye + \dot{o} γκός tumor]. A tumor situated near the eye.

parophysoxia (par-o-fiz-ok'se-ah). A proprietary veterinary antiseptic, purgative, and carminative: used in colitis and irritative affections of the alimentary canal. Dose, 4-5 fl oz. (118-148 c.c).

paropsis (par-op'sis) [Gr. παρά beside + δψις vision]. Disorder of the sense of vision.

parorchidium (par-or-kid'e-um) [Gr. παρά beside + δρχις testicle]. Misplacement of a testicle or testicles.

parorchis (par-or'kis). The epididymis.

parorexia (par-o-reks'e-ah) [Gr. παρά aside + δρεξις appetite]. Nervous perversion of the appetite, with craving for special articles of diet or for articles that are not fit for food.

parosmia (par-oz'me-ah) [Gr. π αρά aside + δ σμή smell]. Any disease or perversion of the sense of smell.

parosphresia, parosphresis (par-os-fre'ze-ah, par-os-fre'sis) [Gr. παρά near + ὅσφρεσις smelling]. Disorder or perversion of the sense of smell.

parosteal (par-os'te-al). Pertaining to the outer surface of the periosteum.

parosteitis, parostitis (par'os-te-i'tis, par-os-ti'-tis) [Gr. $\pi\alpha\rho\dot{\alpha}$ near + osleitis]. Inflammation of the tissues around a bone.

parosteosis, parostosis (par-os-te-o'sis, par-os-to'sis) [Gr. $\pi a \rho \dot{\alpha}$ near $+ \dot{\alpha} \sigma \tau \dot{\epsilon} o \nu$ bone]. Ossification of the tissues outside of the periosteum.

parotic (par-ot'ik) [Gr. παρά near + οὖs ear].
Situated or occurring near the ear.

parotid (par-ot'id) [Gr. παρά near + οὐs ear].
 Situated near the ear.
 The parotid gland.

parotidean (par-ot-id'e-an). Pertaining to the parotid gland.

parotidectomy (par-ot-id-ek'to-me) [parotid + Gr. ἐκτομή excision]. Excision of the parotid gland.

parotiditis (par-ot-id-i'tis). Same as parotitis.

parotido-auricularis (par-ot"id-o-aw"rik-u-la'-ris). A muscle, somewhat rare in man, arising on the fascia over the parotid gland and inserted in the deep surface of the concha.

parotidoscirrhus (par-ot"id-o-skir"us) [parotid gland + Gr. σκιρρος hardness]. Hardening of the parotid gland.

parotidosclerosis (par-ot"id-o-skle-ro'sis). Sclerosis of the parotid gland.

parotitis (par-ot-i'tis). Inflammation of the parotid gland; mumps. See mumps celiac p., inflammation of the parotid gland following abdominal disease or injury.

parous (pa'rus) [L. par'ere to bear]. Puerperal. parovarian (par-o-va're-an). Pertaining to the parovarium.

parovariotomy (par"o-va-re-ot'o-me) [parovarium + Gr. τέμνειν to cut]. The removal of a cyst of the parovarium by cutting.

parovaritis (par''o-var-i'tis). Inflammation of the parovarium.

parovarium (par-o-va're-um) [Gr. $\pi\alpha\rho\dot{\alpha}$ near + I. ova'rium ovary]. A tubular structure of the broad ligament; the body of Rosenmuller. With the paroophoron, it represents the embryonic wolffian body. Called also epoophoron.

paroxia (par-oks'e-ah). Same as pica.

paroxysm (par'oks-izm) [Gr. παροξυσμός]. A sudden recurrence or intensification of symptoms.

paroxysmal (par-oks-iz'mal). Recurring in paroxysms.

parresine (par'es-in). A mixture of paraffin, gum alum, Japan wax, asphalt, and eucalyptol: used as a protective dressing to wounds and burns.

parrot-beak nail. See nail.

parrot-jaw. The condition produced by protrusion of the upper jaw.

parrot-mouth. Retraction of the lower jaw in the horse.

Parrot's disease, node, sign, ulcer (par-ōz')
[Jules Marie Parrot, a French physician, 1829-1883].
See disease, node, sign, ulcer.

Parry's disease (par'ēz) [Caleb Hillier *Parry*, English physician, 1756–1822]. Exophthalmic goiter.

pars (parz), pl. par'tes. Latin for part. p. basila'ris os'sis occipita'lis, the basilar process of
the occipital bone. p. calcaneocuboi'dea, the internal calcaneocuboid ligament. p. calcaneonavicula'ris, the superior calcaneoscaphoid ligament. p. caverno'sa [B N A], the cavernous portion of the urethra. p. centra'lis [B N A] See cella media. p. convolu'ta, the labyrinth of the kidney. p. flac'cida [B N A], Shrapnell's membrane. p. horizonta'lis [B N A], the horizontal plate of the palate hone. p. inflav's the zontal plate of the palate bone. **p. inflex's**, the bar of a horse's hoof. **p. infundibula'ris**, the orifice of the duct of the mammary gland. **p.** intercartilagin'ea, the respiratory glottis p. interme'dia fos'sæ rhombol'dea [B N A], the middle part of the rhomboid fossa. p. intermembrana'cea, the true glottis. p. irid'ica ret'inæ, the uveal tract. p. laryng'ea, the laryngopharynx. p. mamilla'ris hypothal'ami, the mamillary bodies and their surroundings. p. mastoi'dea [B N A], the mastoid portion of the temporal bone. p. membrana'cea [B N A], the membranous portion of the urethra. p. membrana/cea sep'ti [B N A], the area at the base of the intraventricular septum of the heart where the tissue is extremely thin. p. nasa'lis laryn'gis, the nasopharynx. p. op'tica hypothal'ami, the optic chiasm and its surroundings. p. ora'lis pharyn'gis, the oropharynx. p. orbita'lis [B N A], the orbital portion of the frontal bone. **p. perpendicula ris** [B N A], the vertical plate of the palate bone. **p. petro'sa** [B N Al, the petrous portion of the temporal bone pri'ma, the first portion of the root of the facial nerve. p. prostat'ica [B N A], the prostatic portion of the urethra. p. pylor'ica, the pyloric portion of the stomach. p. radia'ta [proces'sus] ierroi'ni], Ferrein's pyramids. See under pyramid. p. spongio'sa. Same as p. caverno'sa. p.

squamo'sa, the squamous portion of the temporal bone. p. supe'rior duode'ni. See pilleus ventriculi. p. ten'sa [B N A], the main, tense portion of the tympanic membrane. p. triangula-ris, the preoperculum. p. tympan'ica [B N A], the tympanic portion of the temporal bone.

parsley (pars'le). The umbelliferous plant, Petroseli'num sati'vum. The root and fruit or seeds are antiperiodic, stimulant, aperient, and diuretic. The root is given in dropsy and kidney disease; the leaves furnish apiol. Dose of fluidextract, 20-30 min (1.33-2 c.c.). p.-camphor, apiol.

Parsons's disease (par'sunz) [James Parsons, English physician, 1705-1770]. Exophthalmic goiter.

Part. seq. Abbreviation for L. par'tes aqua'les, equal parts.

parthenicin (par-then'is-in). An antipyretic alkaloid from Parthe'nium hysteroph'orus, a plant of tropical America. Dose, 7-15 gr (0.5-1 gm.).

parthenin (par'then-in). A bitter, crystalline, analgesic and febrifugal alkaloid from Parthe'-nium hysteroph'orus. Antiperiodic dose, 7-15 gr. (0.5-1 gm.); analgesic dose, 3 gr. (0.05 gm.).

Parthenium (par-the'ne-um). A genus of composite plants. *P. hysteroph'orus* contains parthenicin and parthenin. *P. integrifo'lium*, the prairie-dock, is antiperiodic.

parthenogenesis (par"then-o-jen'es-is) [Gr. παρθένος virgin + γένεσις production].
 1. Asexual reproduction 2. Same as alternation of generations.
 3. The development of an egg without fertilization.

parthenoplasty (par-then'o-plas-te) [Gr $\pi \alpha \rho$ θένος virgin $+ \pi \lambda \dot{\alpha} \sigma \sigma \epsilon \iota \nu$ to form] Production of a spurious virginity by suturing the ruptured hymen.

parthogenesis (par-tho-jen'es-is). Same as parthenogenesis.

particles, alpha. A particle ejected from the nucleus of a radio-active atom. A stream of these particles constitutes alpha-rays. The alpha particle is simply the nucleus of a belium atom. colloid p., in colloid chemistry the ultimate particles of a disperse phase. In lyophilic colloids the particles are larger than a single molecule, being from 1 to 100 micromicrons in diameter, but not large enough to settle out by gravity; in a lyophilic colloid they may consist of one or more large organic molecules, as of starch or protein. Zimmermann's elementary p's, small, irregular bodies found in the blood, apparently masses derived from the breaking down of blood-plates or other elements.

particulate (par-tik'u-lāt). Composed of separate particles.

partigen (par'te-jen) One of the hypothetic constituents of an antigen, which is considered as a mixture of partigens or partial antigens.

partimute (par'te-mūt). A deaf-mute.

partimutism (par-te-mu'tizm). Deaf-mutism.

partinium (par-tin'e-um). An alloy of aluminum and tungsten.

parturient (par-tu're-ent) [L. partu'riens]. 1. Giving birth. 2. Pertaining to childbirth.

parturifacient (par"tu-re-fa'shent) [L. parturi're to travail + fac'ere to cause]. 1. Inducing or facilitating childbirth 2. A medicine that induces or facilitates childbirth.

parturiometer (par"tu-re-om"et-er) [L. parturit'io childbirth + me'trum measure]. A device used in measuring the expulsive power of the uterus.

parturition (par-tu-rish'un) [L. parturit'io]. The act or process of giving birth to a child.

partus (par'tus) [L.]. r. Labor; childbirth, or parturition. 2. The young when brought forth.
p. agrippi'nus, breech delivery. p. casa'-reus, delivery by cesarean section. p. immatu'rus, premature labor. p. matu'rus, labor at full term. p. seroti'nus, delayed labor; prolongation of pregnancy. p. sic'cus, dry labor.

Part. vic. Abbreviation for L. par'tibus vi'cibus, in divided doses.

parulis (par-u'lis) [Gr. παρά near + οὖλον gum]. A gum-boil; abscess of a gum.

parumbilical (par-um-bil'ik-al). Near the navel.
 paruria (par-u're-ah) [Gr. παρά beside + οὖρον urine]. Discharge of urine from an unusual part.
 parvicellular (par-vis-el'u-lar) [L. par'vus small + cel'lula cell]. Composed of small cells.

parvolin (par'vo-lin). An amber-colored liquid ptomain, C₀H₁₃N, from decaying fish or horse-flesh. See ptomains, table of.

parvule (par'vūl) [L. par'vulus very small]. A very small pill, pellet, or granule.

pasadyne (pas'ad-In). The trade name for what is claimed to be a preparation of passion-flower.

Pascal's law (pas-kahlz') [Blaise Pascal, French scientist, 1623-1662]. See law.

paschachurda (pas-kah-koor'dah). Same as Tashkend ulcer. See under ulcer.

paspalism (pas'pal-izm) Poisoning due to the seeds of a grass, Pas'palum scorbicula'tum, of India.

passage (pas'ej) [L. passa'guum]. r. A channel or meatus. 2 The act of moving from place to place. 3. The introduction of a catheter, probe, or sound 4. An evacuation of the bowels. false p., a hole made in the walls of a canal, as the urethra, mainly by the misuse of the catheter.

Passavant's cushion (pas'av-ans) [Gustav Passavant, German surgeon, 1815–1893]. See under cushion.

Passiflora (pas-if-lo'rah) [L. pas'sio passion + flos flower] A genus of twining plants of the warmer parts of America, passion-flower. Many species are actively medicinal. P. incarna'ta (may-pop), of the United States, is narcotic and sedative Dose of fluidextract, 5-10 min. (0.333-0.666 c.c.).

passion (pash'un) [L. pas'sto suffering]. 1. Pain or suffering. 2. Strong emotion. ileac p. Same as deus.

passional (pash'un-al). Marked by or exhibiting passion p. attitude. See attitude.

passive (pas'iv) [L. passi'vus]. Neither spontaneous nor active; not produced by active efforts.

passivism (pas'iv-izm) Sexual perversion with subjection of the will to another's.

passulæ (pas'u-le). Latin for raisms.

pasta (pas'tah), pl pas'tæ [L.]. Paste. p. peptona'ta, Scheich's paste.

paste (pāst) [L. pas'ta]. A soft, viscid substance; Abbot's p., a paste often an escharotic mixture acid, morphin, and prepared from arsenous creosote used for killing the nerve of a tooth. Alexander's p., a paste for treatment of burns, consisting of ichthyol 4 gm, olive oil 12 gm, woolfat 105 gm. almond-p., a magma prepared from bitter almonds used as a lip-salve and dressing for chapped fingers, etc. **arsenical p.**, a caustic paste containing arsenic **Beck's p.**, a paste consisting of 1 part of bismuth subnitrate and 2 parts of sterile vaselin injected for the treatment of tuberculous cavities and chronic sinuses. bismuth p. See Beck's p. Bougard's p., a caustic cancer paste containing mercuric bichlorid, mercuric sulphid, zinc chlorid, arsenic, starch, and flour. Bourdin's p., nitric acid mixed with sublimed sulphur: escharotic. Brooke's p., oleate of mercury, 28 parts; petro-latum, 14 parts; ichthyol, 1 part; starch and zinc oxid, each, 7 parts; salicylic acid, 1.2 parts: useful in skin diseases Buckley's p., a paste containing trioxymethylene used for desensitizing dentin. Canquoin's p., zinc chlorid mixed with flour and water. **Delbet's p.**, a paste for wound dress-ings, consisting of tincture of iodin 6 c.c., chloroform 6 c.c., wax 50 gm. dermatologic p., a paste made of starch, dextrin, zinc oxid, calcium carbonate, or sulphur, together with glycerin, petrolatum, or a fat, and containing some medicine. dextrinated p., a preparation of equal parts of dextrin, glycerin, and distilled water: used as a vehicle for medicinal pastes. Dupuytren's p. a caustic paste of arsenous anhydrid, calomel, and gum. Esmarch's p., a caustic paste used in the treatment of cancerous and other growths: made of 1 part of arsenic, 1 of morphin sulphate, 8 of calomel, and 48 of acacia. flour-p., a thin mixture of flour and water: used in surgery. Frere Cosme's p., a caustic paste made from 1 part arsenic, 5 parts mercury sulphid, and 2 parts burnt sponge. fruit-p., inspissated fruit-juice: jube-p., a fruit paste originally prepared from jujubes. Lassar's p., a dressing for erythema, intertrigo, etc.: vaselin, 6 ounces; zinc oxid and starch, each, 6 drams; and salicylic acid, 30 grains. London p., a paste containing quicklime and caustic soda. Marsden's p., a mixture of 2 parts of arsenous acid with 1 part of gum acacia: used as an escharotic. Mayet's p., a paste made of 1 part of zinc oxid, 8 parts of zinc chlorid, and 7 parts of flour: used in cancer. Morison's p. See Morison's method, under method. phosphorus p., phosphorus made into a paste with flour: a ratpoison. Piffard's p., a paste made of 1 part of copper sulphate, 5 parts of tartrated soda, and 2 parts of caustic soda used in testing the urine for sugar. Robinquet's p., a paste for cancer, made of equal parts of zinc chlorid and flour with guttapercha. Schleich's p., an adhesive paste for fixing bandages on wounds, called also pasta peptonata. serum-p., a paste prepared from dried and sterilized blood-serum: used as a dressing for wounds. sulphuric-acid p., a mixture of sulphuric acid and powdered saffron in equal parts used as a caustic. Unna's p., a paste made of 1 oz of zinc ovid and 2 oz each of mucilage of acacia and glycerin. It is applied with a brush to eczematous patches Vienna p., a caustic paste of potash and lime. Ward's p., a confection of black pepper.

pastern (pas'tern). The portion of a horse's foot occupied by the first and second phalanges. p. bone. See under bone.

Pasteur's fluid, liquid solution (pas-terz')
[Louis Pasteur, French chemist and bacteriologist, 1822-1895] See Pasteur's solution, under solution.

Pasteurella (pas-ter-el'ah) [Louis Pasteur]. A genus of bacterial organisms, in the form of rod-shaped cells, Gram-negative, and showing bipolar staining. It includes the organism of bubonic plague and of the hemorrhagic septicemias of animals, organisms formerly included under the genus Bacillus P. avisep'tica, a short non-motile, Gram-negative organism showing polar staining and found in the blood of fowls suffering from chicken cholera which it causes. Called also Bacillus avisepticus, B. of chicken cholera, B. choleræ avium, B. choleræ gallinarum, and B. gallinarum P. bovisep'tica, short non-motile rods from the blood and fluids of animals dying of European cattle plague. P. chol'eræ gallina'rum. See P. aviseptica. P. pes'tis, a short, thick, Gram-negative rod-shaped organism which shows polar staining and involution forms. It is highly virulent for most labora-tory animals and causes bubonic plague in man. Called also Bacillus pestis and Versin's bacillus. P. suisep'tica, a small, non-motile, Gram-negative organism closely resembling the P. aviseptica. It is found in cases of swine plague and causes the disease. Called also Bacillus suicida and B suiseptica.

pasteurellosis (pas-ter-el-o'sis). Any one of a group of fatal infectious diseases of various animals, caused by bacteria of the hemorrhagic septicemia group. p. bubalo'rum. Same as barbone.

pasteurin (pas-tu'rin). A proprietary antiseptic fluid mixture.

pasteurization (pas"tur-iz-a'shun) [after Louis Pasteur, French chemist and biologist, 1822-1895].

The arrest or checking of fermentation by heating, usually to 60° C., for thirty minutes.

pasteurizer (pas'tu-ri-zer). An instrument used in effecting pasteurization.

Pastia's sign (pas'te-ahz) [C. Pastia, contemporary Rumanian physician]. See sign.

pastil (pas'til) [Fr. pastille]. A troche or lozenge; also an aromatic mass to be burnt as a fumigant.

pastille (pas-tel'). Same as pastil. Sabou-raud's p's, lozenges of barium platinochlorid with acetate of starch and collodion: used to indicate by their change of color the strength of x-rays.

pastometer (pas-tom'et-er). An instrument for indicating when milk that is being pasteurized has reached the pasteurization temperature.

patarchur (pat-ar-choor'). An East Indian plant, Plectran'tus secun'dus: administered for the relief of strangury.

patch (patsh) [L. pitta'cium; Gr. πιττάκιον]. An area differing from the rest of a surface. drabcolored p., a peculiar spot on the liver after various tropical hepatic diseases. Hutchinson's p., a reddish or salmon-yellow patch of the cornea in syphilitic keratitis. mucous p., condyloma latum: a lesion characteristic of syphilis. opaline p., a mucous patch of the mouth sometimes seen in syphilis. Peyer's p's, whitish patches of lymph-follicles in the mucous and submucous layers of the small intestine. salmon-p., a salmon-colored spot in the cornea in syphilis of that structure. white p., a white, opaque spot on the pericardium or on the capsule of the spleen, due to rubbing against a nodule of a rib in rachitis.

patchouli, patchouly (pat-shoo'le). A labiate herb of India, Pogoste'mon patchou'li: used chiefly in perfumery.

patefaction (pat-e-fak'shun) [L. patefa'cere to lay open]. The act of laying open.

patella (pat-el'ah) [L. "pan"]. The knee-cap, or knee-pan; a lens-shaped sesamoid bone situated in the front of the knee, in the tendon of the quadriceps extensor femoris muscle. **floating p.**, a patella which is floated up from the condyles by a large effusion in the knee. riders' painful p., tenderness and pain in the patella of horseback riders.

pateliapexy (pat-el'ap-ek-se) [patella + Gr. $\pi \hat{\eta} \xi$ ις fixation]. The operation of suturing the patella to the lower end of the femur.

patellar (pat-el'ar) [L. patella'rius]. Of or pertaining to the patella.

patelliform (pat-el'if-orm). Shaped like the patella.

patellofemoral (pa-tel"o-fem'o-ral). Pertaining to the patella and the femur.

patency (pa'ten-se) [L. pa'tens open]. The condition of being wide open.

patent (pa'tent) [L. pa'tens]. Wide open, or patulous.

path (path). The course, or set of fibers, along which any nervous impulse moves, whether esodic or exodic; particularly the intracranial or intraspinal portion of such a course.

pathema (path-e'mah), pl. pathem'ata [Gr. πάθημα disease]. Any diseased state or morbid condition.

pathematology (path"e-mat-ol'o-je) [Gr. πάθημα disease + λόγος treatise]. 1. Pathology. 2. The science treating of mental affections and of the passions.

pathetic (path-et'ik) [L. pathet'icus; Gr. παθητικόs].
Pertaining to the feelings.

patheticus (path-et'ik-us). 1. Either nerve of the fourth pair. 2. The superior oblique muscle of the eye.

pathetism (path'et-izm) [Gr. παθητός passive]. Hypnotism, or mesmerism.

pathfinder (path'find-er). A device for locating strictures of the urethra; also dental instrument for tracing the course of root-canals.

pathic (path'ik) [L. path'ions; Gr. παθικόs]. One who submits himself or herself to the unnatural sexual desires of another.

patho-amin (path-o-am'in). An amin causing disease, or formed as the product of a disease process; a ptomain.

patho-anatomy (path"o-an-at'o-me). Pathologic
anatomy.

pathobiology (path"o-bi-ol'o-je). Same as pathology.

pathobolism (path-ob'o-lizm) [Gr. πάθος disease + metabolism]. A condition of perverted metabolism of a diseased nature.

pathodontia (path-o-don'she-ah) [Gr. πάθος disease + όδούς tooth]. The department of dentistry which deals with diseases of the teeth.

pathoformic (path-o-for'mik) [Gr. πάθος disease + L. for'ma form]. Pertaining to the beginning of disease: said of symptoms at the beginning of mental disorder.

pathogen (path'o-jen) [Gr. πάθος disease + γεννᾶν to produce]. Any disease-producing microorganism or material.

pathogenesis, pathogenesy (path-o-jen'es-is, path-o-jen'es-e) [Gr. πάθος disease + γένεσις origin]. The development of morbid conditions or of disease. drug p., the production of symptoms of disease by the use of drugs.

pathogenic, pathogenetic (path-o-jen'ik, path"-o-jen-et'ik). Giving origin to disease or to morbid symptoms.

pathogenicity (path-o-jen-is'it-e). The state of being pathogenic.

pathogeny (path-oj'en-e). Same as pathogenesis.

pathognomonic (path-og-no-mon'ik) [Gr. πάθος disease + γνωμονικός showing]. Pointing out the nature of a disease or illness.

pathognomy (path-og'no-me) [Gr. $\pi \dot{\alpha} \theta$ os disease $+ \gamma \nu \dot{\omega} \mu \eta$ opinion]. 1. The science of the signs and symptoms of disease 2. The recognition of the nature of a disease by observation of the unconscious revelation of the feelings and passions of the patient.

pathognostic (path-og-nos'tik). Same as pathognomonic.

pathography (path-og'raf-e) [Gr. $\pi \dot{\alpha} \theta os$ disease + $\gamma \rho \dot{\alpha} \varphi \epsilon \iota \nu$ to write]. A history or description of disease.

patholesia (path-o-le'ze-ah). A hysteric condi-

pathologic, pathological (path-o-loj'ik, path-o-loj'ik-al). Pertaining to pathology.

pathologico-anatomic (path-o-loj"ik-o-an-atom'ik). Pertaining to pathologic anatomy.

pathologist (path-ol'o-jist). One learned or skilled in pathology.

pathology (path-ol'o-je) [Gr. πάθος disease + λόγος discourse]. That branch of medicine which treats of the essential nature of disease, especially of the structural and functional changes caused by disease. cellular p., that which regards the cells as starting-points of the phenomena of disease and that every cell descends from some pre-existing cell (Virchow). comparative p., that which institutes comparisons between various diseases of the human body and those of the lower animals. dental p., the sum of knowledge regarding diseases of the teeth. exotic p., a system of pathology foreign to the country or school in which it has found a lodgment. experimental p., the study of artificially induced disease processes. functional p., the study of the changes of function due to morbid tissue changes. general p., that which takes cognizance of pathologic conditions which may occur in various diseases and in different organs. geographic p., pathology in its geographic and climatic relations. humoral p., the opinion

that disease is due to abnormal conditions of the fluids of the body. medical p., internal p., that which relates to morbid processes which are not accessible to operative interference. plant p., vegetable pathology. solidistic p., that opinion which attributes disease to rarefaction or condensation of the solid tissues. special p., the study of the pathology of particular diseases or organs. surgical p., external p., the study of the pathology of such diseases as are accessible to operative interference. vegetable p., the pathology of plant diseases.

patholysis (path-ol'is-is) [Gr. πάθος disease + λύσις dissolution]. The dissolution of disease.

pathomain (path'o-man). Any one of the pathogenic cadaveric alkaloids.

pathomania (path-o-ma'ne-ah) [Gr. πάθος disease + μανία madness]. Moral insanity.

pathometabolism (path"o-met-ab'o-lizm) [Gr. πάθος disease + metabolism]. Metabolism in disease.

pathometry (path-om'et-re) [Gr. πάθος disease + μετρεῦν to measure]. Sir Ronald Ross's term for the quantitative study of parasitic invasion and infection in individuals or groups of individuals.

pathomimecry (path"o-mim'ek-re). Pathomimesis.

pathomimesis (path"o-mim-e'sis) [Gr. πάθος disease + μίμησις mimicry]. The imitation or feigning of disease; malingering

pathomorphism (path-o-mor'fizm). Perverted or abnormal morphology.

pathonomia, pathonomy (path-o-no'me-ah, path-on'o-me) [Gr. πάθος disease + νόμος law]. The sum of knowledge regarding the laws of disease.

patho-occlusion (path"o-ok-lu'zhun). Malocclusion.

pathophilia (path-o-fil'e-ah) [Gr. πάθος disease + φιλεῖν to love]. The condition in which a patient adapts himself and his mode of life to some chronic affection.

pathophobia (path-o-fo'be-ah) [Gr. πάθοs disease + φόβοs fear]. Morbid dread of disease.

pathophoresis (path"o-fo-re'sis) [Gr πάθος disease + φόρος bearing]. The transmission of disease.

pathophoric (path-o-for'ik). Pathophorous.

pathophorous (path-of'o-rus). Conveying or transmitting disease.

pathopoiesis (path" o-poi-e'sis) [Gr. πάθος disease + ποιεῦν to make]. I. The causation of disease.
 2. The tendency of the individual to become diseased.

pathopaychology (path"o-si-kol'o-je) [Gr. πάθος disease + psychology]. The psychology of mental disease; pathologic psychology.

pathoradiography (path"o-ra-de-og'raf-e). Pathoroentgenography.

pathoroentgenography (path"o-rent-gen-og'raf-e). The study of pathologic lesions by the roentgenogram.

patient (pa'shent) [L. pa'tiens]. A person who is ill or who is undergoing treatment for disease. out-p. See out-patient.

Patrick's test (pat'riks) [Hugh Talbot Patrick, neurologist in Chicago, born 1860]. See under tests.

patrilineal (pat-ril-in'e-al) [L. pa'ter father + lin'ea line]. Descended through the male line.

patroclinous (pat-ro-kli'nus) [Gr. πατήρ father + κλίνειν to incline]. Inheriting or inherited from the father. Cf. matroclinous.

patrogenesis (pat-ro-gen'es-is) [Gr. πατήρ father + γεν- to produce]. A form of reproduction in which the chromatin of the new organism is derived entirely from the sperm cell.

patten (pat'n). A metallic support to be worn under the sound foot in hip-joint disease.

pattern (pat'ern). A design or arrangement of figures. action p., Crile's term for the congenital or acquired manner in which certain stimuli produce certain actions in individuals.

patulous (pat'u-lus) [L. pat'ulus]. Spreading somewhat widely apart; open.

paucin (paw'sin). A yellow, flaky alkaloid, C₂₇H₃₈-N₀O₅.6½H₂O, from the pauco-nut, the fruit of Pentacle'thra macrophyl'la, an African plant.

Paullinia (pawl-in'e-ah) [L., after C. F. Paullini, 1643-1712]. A genus of sapindaceous plants of tropical America. P. cupa'na affords guarana (q. v.). P. pinna'ta, of Brazil, is used homeopathically.

paulocardia (paw-lo-kar'de-ah) [Gr. παῦλα pause + καρδία heart]. 1. Abnormal slowness of the heart-beat. 2. The subjective sensation of intermission or stopping of the heart.

Paul of Egina, Paulus Egineta (ej-in-e'tah). A celebrated Greek medical writer who practised in Alexandria during the first half of the seventh century, and was distinguished as surgeon and obstetrician. Of his many works, only one has survived, a compendium of medicine in seven books.

Paul's sign (pawlz) [Constantin Charles Théodore Paul, French physician, 1833-1896] See sign.

Paul's test (pawlz) [Gustav Paul, Austrian physician, born 1859]. See under tests.

Paul-Mixter tube [Frank Thomas Paul, English surgeon, born 1851; Samuel Jason Mixter, Boston surgeon, 1855-1926]. See under tube

Paullinia (pawl-in'e-ah) See guarana.

paunch (pawntsh). See rumen.

pause, compensatory (pawz). The prolonged pause following an extrasystole which compensates for the extra beat, so that the total rate of the beat remains constant.

pausimenia (paw-se-me'ne-ah) [Gr. παῦσις pause + μήν month]. Menopause.

Pauzat's disease (po-zahz') [Jean Eugène Pauzat, French physician]. Osteoplastic periostitis of the metatarsus.

pavement epithelium (pāv'ment). See epithelium.

pavilion (pav-il'yun) [L. papil'io butterfly, tent]. A dilated or flaring expansion at the end of a passage. p. of the ear, the auricle. p. of the oviduct, its outer, or fimbriated, end. p. of the pelvis, its upper, flaring portion.

Pavloff. See Pavlov.

Pavlov's method, stomach (pahv'lof) [Ivan Petrovich Pavlov, Russian physiologist, born 1848]. See method and stomach.

pavon (pa'von). A proprietary opium preparation representing the total alkaloids of the drug.

pavor nocturnus (pa'vor nok-tur'nus) [L.]. Nightterrors: a kind of nightmare of children.

Pavy's disease, solution (pa'vēz) [Frederick William Pavy, English physician, 1829–1911]. See disease and solution.

Pawlik's fold, triangle (pahv'liks) [Karel J. Pawlik, gynecologist in Prague, 1849-1914]. See fold and triangle.

Pawlow. See Pavlov.

pawpaw (paw'paw). 1. Same as papaw. 2. The shrub Asim'ina tri'loba, of North America, and its fruit.

paxine (paks'in). A proprietary vermifuge and sedative for infants. Dose, 10-60 min. (0.666-4 c.c.).

Paxton's disease (paks'tonz). See disease.

Payr's method (pirz) [Erwin Payr, German surgeon, born 1871]. See under method.

payta (pa'tah). A white bark resembling cinchona from an unidentified species of Aspidosperma.

paytamin (pa'tam-in). An alkaloid, C₂₁H₂₄N₂O, from payta bark.

paytin (pa'tin). An alkaloid, C₂₁H₂₄N₂O.H₂O, from payta bark.

P. B. Abbreviation for Pharmacopæia Britannica. British pharmacopeia.

Pb. The symbol for lead [L. plum'bum]. $Pb(C_2H_3O_2)_2$. Lead acetate.

PbCO₃. Lead carbonate.

PbCrO4. Lead chromate.

P. B.-E. Abbreviation for German Perlsucht Bacillen-emulsion, a form of tuberculin prepared from a culture of bacilli of bovine tuberculosis.

PbI₂. Lead iodid.

Pb(NO₃)₂. Lead nitrate.

PbO. Lead monoxid.

PbO₂. Lead dioxid.

PbS. Lead sulphid.

PbSO₄. Lead sulphate.

P. C. Abbreviation for L. pon'dus civi'le, avoirdupois weight

P. c. Abbreviation for L. post ci'bum, after food.

Pc. Abbreviation for convergence near-point.

P. Cc. Abbreviation for periscopic concave.

P. C. M. O. Abbreviation of Principal Colonial Medical Officer.

P. Cx. Abbreviation for periscopic convex.

P. D. Abbreviation for potential difference and interpupillary distance

Pd. The chemic symbol for palladium.

p.-d. An abbreviation for prism-diopter.

peach-fever (pech). See fever.

Péan's operation, position (pa-az') [Jules Péan, French surgeon, 1830-1898]. See operation and position.

peanut (pe'nut). The edible fruit of Ar'achis hypogæ'a, a leguminous plant cultivated in warm and hot regions. Its fixed oil is a substitute for olive

pearl (perl) 1. A small calcareous concretion from various species of mollusks, formerly regarded as having sovereign curative powers. 2. A small medicated granule; also a glass globule with a single dose of volatile medicine. 3 Any one of the rounded masses of tough sputum seen in the early stages of an attack of bronchial asthma. epidermic p's, epithelial p's, rounded concentric masses of epithelial cells found in certain papillomata and epitheliomata. Called also pearly bodies. **Epstein's p's**, small, whitish-yellow masses on either side of the raphé of the hard palate of the new-born gouty p., a sodium urate concretion on the cartilage of the ear in gouty persons. **Laënnec's p's**, soft casts of the smaller bronchial tubes expectorated in bronchial asthma.

pearlash (perl'ash). Impure potassium carbonate in crystals.

pearl-disease. Tuberculosis of the peritoneum and mesentery of cattle.

Pearson's solution [George Pearson, English physician, 1751-1828]. See solution.

peat (pēt). Carbonized vegetable matter found in bogs used in peat-baths and as a dry absorbent dressing

pebble (peb'l). A kind of rock crystal from which lenses are sometimes cut.

pebeco (peb'ek-o). A proprietary tooth-paste containing chlorate of potash.

pébrine (peb-rēn') [Fr] An infectious disease of silkworms caused by Nosema bombycis.

peccant (pek'ant) [L. pec'cans sinning]. healthy; causing illness or disease.

peciloblast, peciloblast (pe-sil'o-blast) [Gr. ποικίλος mottled + βλαστός germ]. A deformed or malformed red blood-corpuscle.

pecilocyte (pes'il-o-sit) [Gr. ποικίλος spotted + κύτος cell]. Same as peciloblast.

pecilocythemia (pes-il"o-si-the'me-ah) [pecilocyte

+ Gr. alua blood]. The presence of pecilocytes in the blood

pecilocytosis (pes"il-o-si-to'sis). Same as pecilocythemia.

pecilonymy (pes-il-on'i-me). See poikilonymy.

pecilothermal, pecilothermic, pecilothermous (pes''il-o-ther'mal, -mik, -mus). See porkilothermal.

pecilothermism (pe-sil-o-ther'mizm). The quality of being poikilothermal.

Pecquet, cistern of, reservoir of (pek-ā') [Jean Pecquet, French anatomist, 1622-1674]. The receptaculum chyli.

pectase (pek'tās). A nitrogenous ferment associated with pectose in fruits; it coagulates various pectins.

pecten (pek'ten) [L. for comb] The os pubis p.
os'sis pu'bis [B N A], p. pu'bis, the pectineal line. p. scle're, the crust-like edge of the sclera around the entrance of the optic nerve Called also scleral rim.

pectenin (pek'ten-in). A poisonous alkaloidal compound from a Mexican cactus, Ce'reus pec'ten. A poisonous alkaloidal pectic acid (pek'tik). See acid.

pectin (pek'tin) [Gr. πηκτός congealed]. A polysaccharid from fruits and plants, the base of vegetable jelly. It is formed by the transformation of the pectose of unripe fruit and consists largely of the methyl and other esters of galacturonic acid

pectinase (pek'tin-ās). A ferment, derivable from most plants, which coagulates all the pectins, and liquefies pectins which have been coagulated by pectase.

pectinate (pek'tin-āt) [L. pec'ten comb]. Shaped like a comb.

pectineal (pek-tin'e-al) [L. pec'ten comb, pubes]. Pertaining to the os pubis.

pectineus (pek-tin'e-us) [L.]. See muscles, table of. pectiniform (pek-tin'if-orm) [L. pec'ten comb + for'ma form]. Comb-shaped.

pectization (pek-tiz-a'shun) [Gr πηκτικός curdling] Coagulation or gelatinization; a term used in colloidal chemistry

pectoral (pek'to-ral) [L. pectora'lis]. 1. Pertaining to the breast or chest; 2. Serviceable in diseases of the chest, bechic.

pectoralgia (pek-to-ral'je-ah) [L. pec'tus breast + Gr. alyos pain]. Pain in the breast.

pectoralis (pek-to-ra'lis) [L.]. See muscles, table of. pectoriloquy (pek-to-ril'o-kwē) [L. pec'tus breast + lo'qui to speak]. Transnission of the sound of spoken words through the chest-wall. It is indicative of excavation of the lung when heard alone if it is combined with bronchophony, it indicates consolidation of the lung. aphonic p., the sound of the whispered voice transmitted through a serous, but not through a purulent, exudate within the pleura; Baccelli's sign. whispering p., the transmission of the sound of whispered words through the walls of the chest.

pectorin (pek'to-rin). A proprietary remedy for pulmonary tuberculosis

pectorophony (pek-to-rof'o-ne) [L. pec'tus breast + Gr. φωνή voice]. Exaggeration of the vocal resonance heard on auscultation.

pectose (pek'tōs). A principle in unripe fruits and plants from which pectin is derived.

pectosinase (pek-to'sin-ās). A ferment which changes pectose into pectin and pectin into various fermentable sugars.

pectous (pek'tus). Pertaining to, composed of, or resembling pectin; having a firm jelly-like consistence.

pectunculus (pek-tung'ku-lus) [L. dim. of pec'ten comb]. Any one of the series of small longitudinal ridges on the aqueduct of Sylvius.

pectus (pek'tus) [L.]. The breast: the chest or thorax. p. carina'tum [L. "keeled breast"],

chicken-breast; pigeon-breast; undue prominence of the sternum. p. excava'tum, funnel-breast. pedal (pe'dal) [L. peda'lis; pes foot]. Pertaining to the foot or feet, or to a pes.

pedarthrocace (pe-dar-throk'as-e) [Gr. παῖς child + arthrocace]. Caries of the joints in children.

pedatrophia, pedatrophy (pe-dat-ro'fe-ah, pe-dat'ro-fe) [Gr. παι̂s child + atrophia or atrophy]. . Infantile atrophy. See under atrophy. Tabes mesenterica.

pederast (ped'er-ast). One who practises peder-

pederasty (ped'er-as-te) [Gr. παις boy + ξραστής lover]. Sexual intercourse with boys by the anus.

pedesis (pe-de'sis) [Gr. πήδησις leaping]. quick darting movement of fine particles of solid matter in a limpid liquid; brownian movement.

pediadontia (pe-de-ad-on'she-ah). Same as pedodontia.

pediadontist (pe"de-ad-on'tist). Same as bedodontist.

pediadontology (pe"de-ad-on-tol'o je). Same as pedodontia

pedialgia (pe-de-al'je-ah) [Gr. $\pi\epsilon\delta io\nu$ foot + å $\lambda\gamma$ os pain]. Neuralgic pain in the foot.

pediatric (pe-de-at'rik) Pertaining to diseases of

children. pediatrician (ped-e-at-rish'un). Same as pediatrist. pediatrics (pe-de-at'riks) [Gr. παις child + laτρεla cure]. That branch of medicine which treats of the diseases of children and their treatment.

pediatrist (ped-e-at'rist). A specialist in the treatment of children's diseases.

pediatry (pe'de-at-re). Same as *pediatrics*.

pedicellate, pedicellated (ped-is'il-āt, ped'is-ila-ted) Same as pediculate.

pedicellation (ped-is-el-a'shun). The development of a pedicle

pedicle (ped'ik-el) [L. pedic'ulus]. 1. The stem of a tumor or of a flap. 2. The process which connects the lamina of a vertebra with the centrum.

pedicled (ped'ık-ld). Having a pedicle. pedicterus, pædicterus (pe-dik'ter-us) [Gr. παîs child $+ i\kappa \tau \epsilon \rho os$ jaundice]. Jaundice of new-born

infants, icterus neonatorum. pedicular (pe-dik'u-lar) [L. pedicula'ris]. Pertain-

ing to or caused by lice. pediculate (pe-dik'u-lat) [L. pedicula'tus]. Pro-

vided with a pedicle. pediculation (pe-dik-u-la'shun) [L. pedicula'tio].

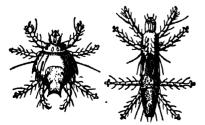

1. Infestation with lice. 2. The process of forming a pedicle

pediculicide (pe-dik'u-lis-īd) [L. pedic'uli lice + cædere to kill]. Destroying lice.
 pediculin (pe-dik'u-lin) A proprietary remedy

for lice, crude naphthalin (35 per cent.) and chalk (65 per cent.).

pediculofrontal (pe-dik"u-lo-fron'tal). ing to the pedicles of the frontal convolutions.

Pediculoi'des ventrico'sus. A small mite of the family Tarsonemidæ, found in the straw of various

Pediculoides ventricosus, male and female.

cereals and producing a peculiar urticaroid dermatitis known as straw-mattress dermatitis and grain itch. See straw itch, under itch.

pediculoparietal (pe-dik"u-lo-pa-ri'et-al). taining to the pedicles of the cerebral convolutions and to the parietal region.

pediculophobia (pe-dik"u-lo-fo'be-ah) [L. pedic'ulus louse + Gr. $\varphi \circ \beta$ os fear]. Morbid dread of infestation with lice.

pediculosis (pe-dik-u-lo'sis) [L. pedic'ulus louse]. Lousiness; a skin disease produced by lice. p. capillit'ii, p. cap'itis, lousiness of the hair of the head. p. cor'poris, the presence of lice on the body or in the clothing. p. inguina'lis, p. pu'bis, the presence of crab-lice in the pubic hairs. **p. palpebra'rum**, the presence of crablice in the eyelashes. **p. vestimen'ti, p. vesti**mento'rum. Same as p. corporis.

pediculous (pe-dik'u-lus). Infested with lice.

pediculus (pe-dik'u-lus), pl. pedic'uli. for louse. 2. Latin for pedicle. 3. A genus of the Hemiptera. **P. cap'itis**, the head-louse, which may carry typhus fever, favus, and impetigo. **P. cor'poris**, **P. vestimen'ti**, the cootie or body louse. It transmits typhus fever, trench fever, relapsing fever, and perhaps other diseases, and causes urticaria and melanoderma. **P. huma'**nus, a term that includes both the head and the body lice. P. inguina'lis, the crab-louse pu'bis, the crab-louse, which infests the hairy parts in the genital region. See Phthirius pubis.

pedicure (ped'ik-ūr) [L. pes foot + cu'ra care]. A chiropodist, or corn-doctor.

pediluvium (ped-il-u've-um) [L. pes foot + lu'ere to wash]. A foot-bath.

Pediococcus (ped"e-o-kok'kus) [Gr πεδίον inster - κόκκος berry]. A genus of bacteria. P. ac'idi lac'tici, a species found in malt-mash and hay-decoction and generating lactic acid. P. al'bus, a non-pathogenic species found in spring-water. P. auranti'acus, a species found in water and in garden-soil, and forming an orange-yellow pigment P. cerevis'ise, a species found in beer, generating traces of lactic acid. P. maggio'rse is found in the skin of the foot and in the nasal passages. it is not known to be pathogenic.

pediodontia (pe"de-o-don'she-ah). Same as pedodontia.

pedionalgia (pe-de-o-nal'je-ah) [Gr. πεδίον sole + ἄλγος pain]. Pain in the sole of the foot.

pediophobia, pædiophobia (pe-de-o-fo'he-ah) [Gr παιδίον child + φόβος fear]. Morbid dread of children or dolls.

pediphalanx (ped-if-a'lanks) [L pes foot + phal-anr] A phalanx of the foot. Cf maniphalanx.

pedistibulum (ped-is-tib'u-lum) [L] The stapes. peditis (pe-di'tis) [L. pes foot + -uis]. Inflammation of the pedal bone of the horse.

(pe"do-bar"o-mak-rom'pedobaromacrometer et-er) [Gr $\pi \alpha \hat{i}$ s boy $+\beta \hat{a} \rho os$ weight $+\mu \alpha \kappa \rho \delta s$ long $+\mu \hat{e} \tau \rho o \nu$ measure] An instrument for measuring and weighing infants

pedobarometer (pe"do-bar-om'et-er) [Gr child + $\beta \dot{\alpha} \rho o s$ weight + $\mu \dot{\epsilon} \tau \rho o \nu$ measure] instrument for weighing infants.

pedodontia (pe-do-don'she-ah) [Gr. παι̂s child + δδου΄s tooth]. The department of dentistry which deals with the teeth and mouth conditions of chil-

pedodontics (pe-do-don'tiks). Same as pedodontia. pedodontist (pe-do-don'tist). A dentist who specializes in pedodontia.

pedodynamometer (pe"do-di-nam-om'et-er) [L. pes foot + dynamometer]. An instrument for measuring the strength of a leg.

pedogamy (pe-doj'am-e) [Gr. παῖς child + γάμος marriage]. Fertilization by the union of separate cells having the same chromatin ancestry: called also endogamy.

pedograph (ped'o-graf) [L. pes foot + Gr. γράφειν to write]. An imprint on paper of the weight-bearing surface of the foot, surrounded by a pencilmarked contour of the upper foot.

pedologist (pe-dol'o-gist). A specialist in pedology, pedology, pedology (pe-dol'o-je, pi-dol'o-je) [Gr. $\pi a \hat{i} s$ child $+ \lambda \delta \gamma o s$ treatise]. The systematic study of the life and development of children.

pedometer (pe-dom'et-er) [Gr. παις child + μέτρον measure]. An instrument for measuring infants.

pedomorphism (pe-do-mor fizm) [Gr. παις child + μορφή form]. The retention of infantile characters in the adult organism.

pedonosology (pe"do-nos-ol'o-je) [Gr. π αῖs child + νόσοs disease + λόγοs treatise]. Pediatrics.

pedontia (pe-don'she-ah). Pedodontia.

pedontology (pe-don-tol'o-je). Pedodontia.

pedophilia (pe-do-fil'e-ah) [Gr. παιs child + φιλειν to love]. The condition of being fond of children.
 pedophilic (pe-do-fil'ik). Fond of children.

peduncle (pe'dung-kl) [L. pedun'culus]. A stem or supporting part. callosal p's, bands which go on either side from under the callosum to the fissure of Sylvius. cerebellar p's, one of the fibrous bands by which the cerebellum is attached to the brain-stem. There are three peduncles on each side. the superior p., or brachium conjunctivum; the middle p., or brachium pontis; the inferior p., or corpus restiforme. cerebral p's, the crura cerebri. olfactory p., the constricted portion of the brain which bears the olfactory lobe. pineal p., a slender band going forward on either side from the pineal body. thalamic p., any one of several bundles of fibers extending from the thalamus to every part of the cerebral cortex.

peduncular (pe-dung'ku-lar). Pertaining to a pe-duncle.

pedunculate, pedunculated (pe-dung'ku-lāt, pe-dung'ku-la-tcd). Provided with a peduncle.

pedunculus (pe-dunk'u-lus). See peduncle. p. cer'ebri [B N A], a crus cerebri p. cor'poris pinea'lis, the peduncle of the pineal body. p. floc'culi [B N A], the lateral expansion of the posterior medullary velum toward the flocculus.

peenash (pe'nash) [India]. Rhinitis due to the presence of insect larvæ in the nose.

peg. See dowel.

pegamoid (peg'am-oid). A collodion preparation: used in treating textile fabrics.

pegnin (peg'nin). A proprietary preparation for coagulating the casein of milk preparatory to infant-feeding (Dungern).

peinotherapy (pi-no-ther'ap-e) [Gr. πεῖνα hunger + θεραπεία cure]. Hunger cure or starvation cure; severe fasting as a means of cure

pelada (pe-la'dah) [Fr. pelade]. Alopecia areata.

pelage (pe'lej) [Fr.]. The hairs of the body, limbs, and head collectively.

pelagia (pe-la'je-ah) [L.]. An erysipelatous disease of the hands or face

pelagin (pel'aj-in). A proprietary cure for seasickness; a solution of ether, cocain, antipyrin, and caffein.

Pel'amis bico'lor. A poisonous sea snake of the Indian ocean.

Pel-Ebstein disease (pel-āb'stīn) [Pieter Kluzes Pel, Dutch physician, 1852-1019. Wilhelm Ebstein, German physician, 1836-1912]. See under disease.

pelicology (pel-ik-ol'o-ge) [Gr. πελίκα pelvis + λόγος treatise]. The study of the pelvis.

pelicometer (pel-ik-om'et-er) [Gr. πελίκα pelvis + μέτρον measure]. Same as pelvimeter.

pelidisi (pel-id-e'se) [Term coined from L. pondus decies linearis divisus sidentis (altitudo) meaning weight ten line divided sitting height]. The unit of Pirquet's index for determining the nutritive condition of children. It is obtained by dividing the cube root of ten times the weight (in grams) by the sitting height (in centimeters). A pelidisi of 94 or less indicates undernutrition; of 95-100, good nutrition, and of 101 or above, overnutrition.

pelidnoma (pel-id-no'mah) [Gr. πελιδνωμα; πελιός livid]. A livid spot or patch on the skin.

pelioma (pe-le-o'mah). 1. A livid spot. 2. Peliosis. p. typho'sum, a state marked by livid spots on the extremities.

peliosis (pel-e-o'sis) [Gr. πελιός livid]. Same as purpura. p. rheumat'ica. See purpura rheumatica.

 pellagra (pel'ag-rah, pel-a'grah) [L. pel'lis skin
 + Gr. āγρa seizure]. An endemic skin and spinal disease of southern Europe (Casal, 1735; Frapolli, 1771), occurring frequently also in the southern and central parts of the United States Various theories as to its etiology have been advanced: 1, The zeistic theory, i. e., the disease is due to an excessive maize diet or to the eating of spoiled maize; 2, that it is an infectious disease caused by an organism that has not as yet been isolated; 3, that it is a deficiency disease dependent upon an inadequate supply of certain vitamins or amino-acids in the food, 4, that it is due to absorption of toxic products formed in the intestinal tract as a result of an improperly balanced diet. It is marked by a recurring erythema of the surface of the body, which is followed by exfoliation of the epidermis. There are weakness and debility, digestive disturbance, spinal pain, convulsions, melancholia, and idiocy. It is called also Italian leprosy, Lombardy leprosy, and mayidism. p. sine pellagra, pellagra in which the characteristic eruption is not present. typhoid p., pellagra characterized by continued high temperature

pellagragenic (pel-ag-rah-jen'ik). Causing pellagra.

pellagral (pel-ag'ral). Pertaining to pellagra.

pellagraphobia (pel-ag-rah-fo'be-ah). An insane or unreasonable dread of pellagra.

pellagrazein, pellagrocein (pel-ah-gra'ze-in, pel-ah-gro'se-in). Poisonous ptomains from damaged maize, regarded as the probable cause of pellagra.

pellagrin (pel-ah'grin). A person affected with pellagra.

pellagrologist (pel-ag-rol'o-jist). One who makes a special study of pellagra.

pellagrology (pel-ag-rol'o-je). The study of pellagra.

pellagrosarium (pel-ag-ro-sa're-um). A hospital for patients affected with pellagra.

pellagrose, pellagrous (pel-ag'rōs, -ah'grus). Affected with pellagra; of the nature of pellagra.

pellant (pel'ant) [L. pella're to drive]. Depurative.

pellate (pel'āt). To repel or tend to separate.

pellet (pel'et). A small pill or granule.

pelletierin (pel-et-i'e-rin) [from Pelletier, a French chemist and manufacturer]. An optically inactive, water-soluble fluid alkaloid, the beta-2-piperidyl-propion-aldehyd of coniin, C₅H₉NH.CH₂.CH₂.CHO, from the root bark of pomegranate. It is employed as a teniacide. Dose, 10-20 gr. (0.666-1.5 gm.); of sulphate, 3-6 gr. (0.2-0.4 gm.). p. hydrobromid, a brownish liquid: used in paralysis of the eye muscles Dose, 4-8 min. (0.25-0.5 c.c.). p. hydrochlorid, a teniafuge, Dose, 5-8 gr. (0.3-0.5 gm.). p. sulphate, a syrupy liquid, a mixture of the sulphates of pelletierin and isopelletierin. a tæniacide. Dose, 4-6 gr. (0.20-0.4 gm.). p. tannate, a tasteless, hygroscopic powder, soluble in 700 parts of water and in 80 parts of alcohol used as a teniacide. Dose, 8-24 gr. (0.5-1.5 gm.), followed by a purgative.

pellicle (pel'ik-l) [L. pellic'ula]. A thin skin or film; also a thin scum on the surface of a liquid.

pellicular, pelliculous (pel-ik'u-lar, pel-ik'ul-us). Characterized by a pellicle.

pellidol (pel'id-ol). A proprietary name for diacetylamidoazotoluene, a reddish-yellow powder: used to promote epithelial formation.

pellitory (pel'it-o-re). Any plant of the genera Pyre'thrum and Parieta'ria.

pellote (pa yo'tah). A narcotic preparation made by the natives of South America from Anhalo'nium lewin'ii.

ellotin (pel'o-tin). An alkaloid, C₁₃H₁₉NO₃, from Anhalo'nium william'sii: a hypnotic. Dose, pellotin 1-1 gr. (0.02-0.06 gm.). p. hydrochlorate, colorless, crystalline compound, C13H49NO3HCl, soluble in water and slightly so in alcohol: used as a hypnotic. Dose, $\frac{3}{4}-1\frac{1}{2}$ gr. (0.05-0.1 gm.).

pellucid (pel-u'sid) [L. pellu'cidus, from per through + lu'cere to shine]. Translucent.

pelma (pel'mah) [Gr. $\pi \dot{\epsilon} \lambda \mu a$ sole]. The sole of the foot.

pelmatic (pel-mat'ik) [Gr. πέλμα sole]. Pertaining to the sole of the foot.

pelmatogram (pel-mat'o-gram) [Gr. πέλμα sole + γράμμα mark]. An impression of the sole of the foot; a foot-print.

pelohemia (pe-lo-he'me-ah) [Gr. $\pi\eta\lambda\delta$ s mud + α l $\mu\alpha$ Undue thickness of the blood. bloodl.

pelopathy (pe-lop'ath-e) [Gr. $\pi\eta\lambda\delta$ s mud + $\pi\delta\theta$ os illness]. Same as pelotherapy.

pelosin (pe-lo'sin). A colorless alkaloid from the root of Chondrodendron pare'ira; said to be identical with bebeerin.

pelotherapy (pe-lo-ther'ap-e) [Gr. πηλός mud + θεραπεία cure]. The therapeutic use of earth or mud.

peltate (pel'tat) [L. pel'ta shield]. Shield shaped. peltation (pel-ta'shun) [L. pel'ta shield]. The protective influence of inoculation with a serum.

pelveoperitonitis (pel"ve-o-per-it-o-ni'tis). Pelvic peritonitis. See *peritonitis*. **pelvic** (pel'vik). Pertaining to the pelvis.

pelvicellulitis (pel-ve-sel-u-li'tis). Pelvic cellu-

pelvicliseometer (pel"ve-kli-se-om'et-er) [pelvis + Gr. κλίσις inclination + μέτρον measure]. An instrument for measuring the inclination and the diameters of the pelvis.

pelvifixation (pel"ve-fiks-a'shun). Surgical fixation of a displaced or wandering pelvic organ.

pelvigraph (pel'vig-raf) [pelvis + Gr. γράφειν to write]. A recording pelvimeter.

pelvilithotomy (pel"ve-lith-ot'o-me). Pelviolithotomy.

pelvimeter (pel-vim'e-ter) [L. pel'vis pelvis + me'trum measure]. An instrument for measuring the diameters and capacity of the pelvis.

pelvimetry (pel-vim'et-re). The measurement of the dimensions and capacity of the pelvis. combined p., pelvimetry in which measurements are made both within and outside the body. digital o., pelvimetry performed with the hands ternal p., that in which the measurements are made outside the body. instrumental p., measurement of the pelvis with the pelvimeter. internal p., that in which the measurements are made within the vagina. manual p., that which is performed with the hands.

pelviography (pel-ve-og'raf-e). Pelvioradiography.

pelviolithotomy (pel"ve-o-lith-ot'o-me). Removal of stone from the kidney by incision through the renal pelvis.

pelvioperitonitis (pel"ve-o-per"it-o-ni'tis). Same as pelviperitonitis.

pelvioplasty (pel"ve-o-plas'te) [pelvis + Gr. πλάσσειν to form]. A plastic operation on the pelvis for its permanent enlargement.

pelvioradiography (pel"ve-o-ra-de-og'raf-e). Examination of the pelvis by the x-ray.

pelvioscopy (pel-ve-os'ko-pe) [L. pel'vis pelvis + Gr. σκοπείν to view]. The inspection or visual examination of the pelvis or pelvic viscera.

pelviotomy (pel-ve-ot'o-me) [pelvis + Gr. τέμνειν

to cut]. 1. The cutting of the pelvic bones. 2. Incision into the pelvis of the kidney.

pelviperitonitis (pel"ve-per-it-o-ni'tis). Pelvic peritonitis. See peritonitis.

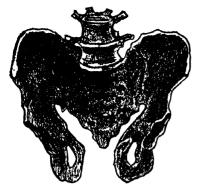

pelvirectal elvirectal (pel-ve-rek'tal). Pertaining to the pelvis and the rectum.

pelvis (pel'vis) [L. "basin"]. 1. Any basin-like structure, as the sac in the kidney, of which the ureter is the outlet. 2. The basin-shaped ring of bone at the posterior extremity of the trunk, supporting the spinal column and resting upon the lower extremities. It is composed of the two innominate bones at the sides and in front, and the sacrum and coccyx behind. It is divided by the iliopectineal line into the false pelvis above and the true pelvis below. The upper extremity of the pelvic canal is known as the inlet, brim, or superior strait of the p. The true pelvis is limited below by the inferior strait or outlet, formed by the coccyx, the symphysis pubis, and the ischium of either side. The outlet of the pelvis is closed by the coccygeus, levator ani, and perineal fas-cia, which form the floor of the p. The inlet and outlet of the pelvis have each three diameters —an anteroposterior, a conjugate, and an oblique.

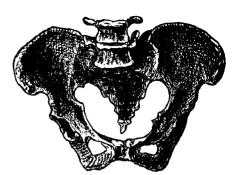

p. sequabil'iter jus'to ma'jor, one unusually and symmetrically large in all its dimensions.

p. sequabil'iter jus'to mi'nor, one with all its dimensions equally reduced.

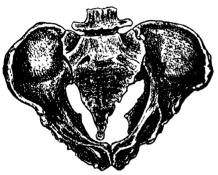

assimilation p., an elongated pelvis in which the lumbar or coccygeal vertebra resembles a sacral vertebra. axis of p., the perpendicular to the anterior diameter at either the inlet or outlet. beaked p., one with the pelvic bones laterally compressed and pushed forward. **brim of the p.**, the upper entrance to the intrapelvic space; the inlet, isthmus, margin, or superior strait. caoutchouc p. Same as india-rubber p. Capuron's carcaoutchouc dinal points of p. See under point, cardinal. cordate p., cordiform p., one that is somewhat heart-shaped. coxalgic p., one deformed in consequence of hip-joint disease. Deventer's , a pelvis which is shortened anteroposteriorly. diameters of the p. See under diameter. dwarf p., a small pelvis with the bones united by cartilage. dynamic p., the pelvis of a woman in labor. elastic p., an osteomalacic pelvis. false p., the part above the iliopectineal line. fetal p. Same as masculine p. fissured p., a shiring arbitists which the ilio are pushed forward. rachitic pelvis in which the ilia are pushed forward so as to be nearly parallel. flat p., a pelvis contracted in the anteroposterior direction. floor of the p., the non-bony material forming the lower boundary of the pelvis. funnel-shaped p., a female pelvis with normal-sized inlet, but greatly narrowed outlet giant p. Same as p. equabiliter justo major. halisteretic p., a deformed pelvis resulting from softening of the bones on account of absorption of their limesalts. Hauder's p. Same as p. spinosa. inclination or obliquity of the p., the angle between the axis of the body and that of angle between the axis of the body and that of the pelvis. **india-rubber p.**, an osteomalacic pelvis, the bones of which may be stretched. Called also caoutchouc p. **infantile p.** Same as funnel-shaped p. **inverted p.** Same as split p. **justomajor p.**, a pelvis whose diameters are increased in equal proportions. p. **jus'to** ma'jor. See p. æquabiliter justo major. p. jus'to min'or. See p. æquabiliter justo minor. Kilian's p., an osteomalacic pelvis. kyphoan irregularly contracted scoliotic p. pelvis due to rachitic kyphoscoliosis. kyphotic p., one characterized by increase of the conjugate diameter at the brim, with decrease of the transverse diameter at the outlet. large p., the false pelvis. lordotic p., one in which the spinal column has an anterior curvature in the lumbar region. p. ma'jor, the false pelvis. humbar region. p. ma'jor, the false pelvis. malacosteon p., a rachitic pelvis. masculine p., a woman's pelvis shaped like that of a man. p. mi'nor, the true pelvis. Nägele's p.,

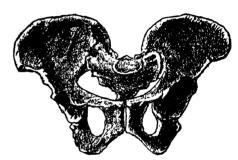

Split pelvis.

Pelvis spinosa (acanthopelvis).

Kyphotic pelvis (from above).

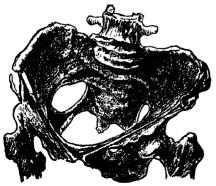

Typic flat rachitic pelvis

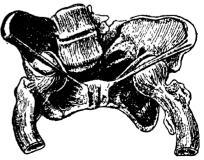

Simple flat pelvis

Osteomalacie pelvis (minor grade).

Coxalgic pelvis.

Pseudo-osteomalacic pelvis.

oblique p., one so distorted that the conjugate diameter takes an oblique direction. p. na'na, a dwarf pelvis. p. obtec'ta, a variety of ky-photic pelvis in which the spinal column extends horizontally across the pelvic inlet. malacic p., one affected with osteomalacia.
p. ova'lis, a depression in the inner wall of the tympanum, at the bottom of which is the fenestra ovalis. **p. pla'na.** See *flat p.* **planes** of the **p.**, two imaginary surfaces which touch all points of the pelvic circumference, called replanes spectively the plane of pelvic expansion and the plane of pelvic contraction. **Prague p.** Same as spondylolisthetic p. pseudo-osteoma-lacic p., a rickety pelvis simulating one af-fected with osteomalacia. rachitic p., one tected with osteomalacia. rachitic p., one distorted from rickets. reduced p. Same as p. aquabiliter justo minor. renal p., p. rena'lis, the cavity in the kidney of which the ureter is the outlet. reniform p., a kidney-shaped pelvis. Roberts's p., one with a rudimentary sacrum and great narrowing of the transverse and oblique diameters. Rokitansky's p. Same as spondylolisthetic p. rostrate p. Same as heaked b. p. rotun'da a depresp. Same as spondylolisthetic p. rostrate
p. Same as beaked p. p. rotun'da, a depression in the inner wall of the tympanum, at the bottom of which is the fenestra rotunda. round p., one with an inlet of nearly circular outline. rubber p., an elastic or osteomalacic pelvis. scoliotic p., one with a diminished oblique diameter. **simple flat p.**, one with a shortened anteroposterior diameter. **small p.**, the true teroposterior diameter. **small p.**, the true pelvis. **p. spino'sa**, a rachitic pelvis with the crest of the pubis very sharp. **split p.**, one with a congental separation at the symphysis pubis. **spondylolisthetic p.**, a pelvis in which the last lumbar vertebra is dislocated in front of the sacrum. Called also *Prague p.* and *Rokitansky's p.* **p. spu'ria**, the false pelvis. **triangular p.**, one with a triangular inlet. **triradiate p.**, a beaked pelvis. **true p.**, the part below the iliopectineal line.

pelvisacrum (pel-ve-sa'krum). The pelvis and the sacrum together.

pelvisection (pel-ve-sek'shun) [pelvis + sec'tio a cutting] A cutting of the pelvic bones, such as publiotomy and symphysiotomy

pelvitherm (pel-ve-therm') [L. pelvis + Gr. θέρμη heat]. An apparatus for applying heat to the pelvic organs through the vagina.

pelvitomy (pel-vit'o-me) [pelvis + Gr. τομή a cutting]. The operation of cutting the pelvis at any point in order to facilitate delivery.

pelvitrochanterian (pel"ve-tro-kan-te're-an). Relating to the pelvis and the great trochanter of the femur.

pelviureteroradiography (pel"ve-u-re"ter-o-rade-og'raf-e). Radiography of the ureter and renal pelvis.

pelvoscopy (pel-vos'ko-pe) [L. pelvis + Gr. σκοπεῖν to examine]. Examination of a pelvis, particularly of the renal pelvis.

pelycalgia (pel-ik-al'je-ah) [Gr. πέλυξ pelvis + άλγος pain]. A general term for all forms of pelvic pain.

pelycochirometresis (pel"ik-o-ki"ro-met-re'sis) [Gr. πέλυξ pelvis + χείρ hand + μέτρησις measurement]. Manual pelvimetry; the estimation of the pelvic diameters and spaces by means of the hand.

pelycogram (pel'ik-o-gram) [Gr. πέλυξ pelvis + γράμμα mark]. An x-ray picture of the pelvis.

pelycography (pel-ik-og raf-e) [Gr. πέλυξ pelvis + γράφειν to write]. X-ray examination of the pelvic contents after pneumoperitoneum.

pelycology (pel-ik-ol'o-je) [Gr. πέλυξ pelvis + λόγος treatise]. A treatise on or the study of the pelvis; the sum of knowledge regarding the pelvis.

pelycometry (pel-e-kom'et-re). Same as pelvimetry. **pemmican** (pem'ik-an). A food of North American Indians, being a preparation of dried meat.

pemphigoid (pem'fig-oid) [Gr. πέμφιξ blister + εΐδος form]. Like or resembling pemphigus.

pemphigus (pem'fig-us) [Gr. πέμφιξ blister]. A disease characterized by the formation of bullæ, which, after absorption, leave pigmented spots. It may be attended with itching and burning, and usually involves the general health of the patient. p. acu'tus, a form of rapid course occurring chiefly in children. p. atthrit'icus, dermatitis herpetiformis. p. benig'nus, a very mild or slight form. p. circina'tus, a form in which the bullæ are arranged in circles. p. contagio'sus, an endemic disease of warm regions, such as the Philippines and the tropical East. It is marked by a vesicular eruption, which affects chiefly the groin and axilla. p. diphtherit'icus, pemphigus attended with superficial sloughing. p. dissemina'tus, a variety with scattered bullæ. p. folia'ceus, a form with flaccid, scabby bullæ. p. gangræno'sus, gangrenous dermatitis. p. hæmorrhag'icus, pemphigus associated with hemorrhage. p. hyster'icus, a variety ascribable to hysteria, gestation, or disease of sexual organs. p. lepro'sus, the bullous eruption of leprosy. p. malig'nus, a severe and sometimes fatal type. p. neonato'rum, a form occurring in young infants, and ascribed to a microbic origin. p. prurigino'sus, a kind attended with severe itching. p. solita'rius, a variety with only one bulla. p. syphiliticus, a syphilitic cruption of bulke. p. veg'etans, a form in which the bulke are followed by fungoid growths a malignant and generally fatal type. Called also Neumann's disease. p. vulga'ris, an ordinary and uncomplicated form which is followed by replacement of the epidermis.

pencil (pen'sil) [L. penicil'lum]. A roll or stick, as of caustic; a roll of lint; a tent.

Pendjdeh or Penjdeh sore (penj'deh) [Penjdeh, a place in Central Asia]. Same as furunculus orientalis.

pendular (pen'du-lar). Having a pendulum-like movement.

pendulous (pen'du-lus) [L. pen'dulus]. Hanging loosely; dependent.

pendulum rhythm (pen'du-lum). See rhythm.
penetrating (pen'e-tra-ting) [L. pen'etrans]. Piercing; entering deeply.

penetration (pen-e-tra'shun) [L. penetra'tio]. I. The act of piercing or entering deeply. 2. The focal depth of a lens, or its power of giving a clear definition at various depths.

penetrology (pen-e-troi'o-je). The study of radiant energy.

penetrometer (pen-e-trom'et-er). An apparatus for measuring the penetrating power and intensity of the x-ray.

penghawar djambi (pen'gah-war jam'be). See penjavar.

penial, penile (pe'ne-al, pe'nil). Pertaining to the penis.

Penic. cam. Abbreviation for L. penicil'lum cameli'num, a camel's-hair brush.

penicilliosis (penis-il-e-o'sis). The condition caused by infection with Penicillium.

Penicillium (penis-il'e-um) [L. penicil'lum brush, roll]. A genus of molds which develop fruit-

Penicillium (Rıvas).

ing organs resembling a broom, or the bones of the hand and fingers. **P. crusta'ceum.** See P.

RRO

glaucum. Other species sometimes found parasitic on man are: P. barbæ, P. bouffardi, P. minimum, P. montoyai. P. glau'cum, the common bluish-green mold. It is a factor in the ripening of Camembert cheese, making it white, soft, and creamy.

penile (pe'nil). Pertaining to the penis.

penis (pe'nis) [L.]. The male organ of copula-tion. It is composed of a root, body, and ex-tremity, or glans penis. The root is attached to the descending portions of the pubic bone by the crura, the latter being the extremities of the corpora cavernosa. The body consists of two parallel cylindric bodies, the corpora cavernosa, and beneath them the corpus spongiosum, which is perforated by the urethra. The glans is covered with mucous membrane, and ensheathed by the prepuce, or foreskin. p. capti'vus, a condition in which, from deep vaginismus, the corona of the fully introduced penis is encircled, and attempts to withdraw the penis cause great pain to both parties. clubbed p., a condition in which the penis is curved when erect. p. palma'tus. See webbed p. webbed p., a penis that is inclosed by the skin of the scrotum. Called also p. palma-

penischisis (pen-is'kis-is) [penis + Gr. σχίσις split-Any fissured state of the penis; a term including epispadias, hypospadias, and paraspa-

penitis (pe-ni'tis). Inflammation of the penis.

penjavar yambi (pen'jah-var yam'be). The hairs of various species of Polypo'drum and Pya'thea: sometimes prescribed as a styptic and hemostatic.

Penjdeh sore (penj'deh) [Penjdeh, a town of Afghanistan]. See furunculus orientalis.

pennate (pen'āt). Penniform.

penniform (pen'if-orm) [L. pen'na feather + for'ma form]. Shaped like a feather.

pennyroyal (pen-e-roi'al). A popular name for various labiate plants, especially Men'tha pule'-gium (European p), M. canaden'sss, and Hedeo'ma pulegioi'des (American p). See Mentha and Hedeoma.

pennyweight (pen'e-wāt). Twenty-four grain troy weight. See weights and measures, table of.

penology, penology (pe-nol'o-je) [Gr. ποινή penalty + λόγος treatise]. The science of the punishment and prevention of crime.

penoscrotal (pe-no-skro'tal). Relating to the penis and the scrotum.

pentabasic (pen-tah-ba'sik). Having five replaceable atoms of hydrogen in the molecule.

pentachromic (pen-tah-kro'mik) [Gr. πέντε five + χρῶμα color]. Able to distinguish five colors only: said of such a partially color-blind person.

Pentaclethra (pen-tah-kle'thrah). See paucin.

pentad (pen'tad). Any element or radical with a valence of five.

pentadactyl (pen-tah-dak'til) [Gr. πέντε five + δάκτυλος finger]. Having five fingers.

pentaglucose (pen-tah-glu'kŏs). Any sugar whose formula contains five atoms of carbon.

pental (pen'tal). A colorless, oily, liquid hydrocarbon, (CH₃)₂C.CH.CH₃, or trimethylethylene, a homologue of ethylene. It is used as an anesthetic in minor operations. Dose, by inhalation, 1\frac{1}{4}-2\frac{1}{2} fl.dr. (5-10 c.c.).

pentamethylendiamin (pen-tah-meth"il-en-diam'in). See cadaverin.

pentamethyl-violet. See methyl-violet, under violet.

pentane (pen'tān). An anesthetic liquid hydrocarbon, C₆H₁₂, obtained by the distillation of petroleum. It is one of the constituents of petroleum ether.

pentaploid (pen'tap-loid). See polyploid.

Pentastoma (pen-tas'to-mah) [Gr. πέντε five + στόμα mouth. A genus of endoparasitic, worm-like arthropods. P. constric'tum and P. tænioi'-des occur in the human subject. P. denticula'tum is the larva of Linguat'ula rhina'ria, occurring in the nose.

pentatomic (pen-tah-tom'ik) [Gr. πέντε five + atom). 1. Containing five atoms. 2. Containing five replaceable hydrogen atoms.

Pentatrichomonas (pen"tah-trik-om'o-nas). A genus of intestinal trichomonads marked by having five anterior flagella. P. ar'din delte'ili. A flagellate parasite resembling Trichomonas hominis, but having five anterior flagella. It seems to be pathogenic for man.

(pen"tah-trik-o-mo-ni'aspentatrichomoniasis is). Infestation of the intestine with Pentatrichomonas.

pentavaccine (pen-tah-vak'sin) [Gr. πέντε five + vaccine]. A vaccine containing dead cultures of the bacteria of typhoid, paratyphoid A, paratyphoid B, cholera, and Malta fever.

pentavalent (pen-tav'al-ent). Same as quinauivalent.

pentene (pen'tën). Same as amylene.

pentenzyme (pen'ten-zīm). A proprietary digestant preparation.

pentodyne (pen'to-din). A proprietary analgesic, antiseptic, and antipyretic: said to be 4NaC₃₄N₅-H₄₀O₁₀OH. Dose, 2-10 gr. (0.133-0.666 gm.).

pentone (pen'ton). Same as valylene.

pentosan (pen'to-san). Any member of a group of compounds having the composition (C₅H₈O₄)n; found in various foods and plant juices. They are gums which yield pentose on hydrolysis. **methyl p.**, a pentosan which on hydrolysis yields methyl pentoses.

pentosazon (pen-to-sa'zon). A crystalline compound formed by treating a pentose with phenyl hydrazine, sometimes abnormally occurring in the urine.

pentose (pen'tos). Any sugar or carbohydrate containing five atoms of carbon. The pentoses are non-fermentable and are sometimes found in the urine.

pentosid (pen'to-sid). A union of a pentose with some other substance. Compounds of pentoses with purin and pyrimidin bases are found in the nucleic acids.

pentosuria (pen-to-su're-ah) [pentose + Gr. oupov urine]. The occurrence of pentose in the urine.

pentosuric (pen-to-su'ric). Affected with pentosuria; also a person so affected.

pentoxid (pen-tox'id). An oxid containing five atoms of oxygen.

Penzoldt's test (pen'zōldz) [Franz Penzoldt, physician in Erlangen, born 1849]. See under tests.

peonin (pe'o-nin). A dye, the amid of pararosolic acid: used as a test for alkalis and acids.

peotillomania (pe-o-til-o-ma'ne-ah) [Gr. penis $+ \tau i \lambda \lambda \epsilon \nu$ to pull $+ \mu a \nu l a$ madness]. A tic-like movement consisting in pulling at the penis: called also pseudomasturbation.

peotomy (pe-ot'o-me) [Gr. πέος penis + τέμνειν to cut]. Surgical removal of the penis.

pepo (pe'po) [L. "pumpkin"]. Pumpkin seed; the dried ripe seeds of the pumpkin, Cucur'bita pe'po: diuretic and useful against tapeworm. Dose of crushed seeds, 1-3 oz. (31-93 gm.); of resin, 10-15 gr. (0.66-1 gm.).

pepper (pep'er) [L. pi'per]. The dried fruit of Pi'per ni'grum and other plants of that genus. black p. contains piperin, a volatile oil, and an acrid resin. It is carminative, counterirtant, stimulant, and antiperiodic. Dose, 5-20 gr. (0.33-1.25 gm.); of confection (confection pipteris), I dr. (4 gm.); of oleoresin, 1-1 gr. (0.016-0.066 gm.); of fluidextract, 15-45 min. (1-3 c.c.).

cayenne p., red p. See Capsicum. water p. See Polygonum hydropiper. white p., a milder prepared form of the ordinary or black pepper.

peppermint (pep'er-mint). The labiate herb Men'tha piper'ita. The leaves and tops are carminative and stimulant, and are used in colic, flatulence, headache, rheumatism, etc. It affords oil of peppermint (see oil) and menthol. Dose of fluidextract, 30-60 min. (2-4 c.c.); of oil, 1-3 min. (0.065-0.2 c.c.); of spirit, 5-15 min. (0.3-1 c.c.); of syrup, I fl.dr. (4 c.c.).

pepsase (pep'sas). Pepsin considered as an enzyme or non-organized ferment.

pepsic (pep'sik). Same as peptic.

pepsin (pep'sin) [L. pepsi'num, from Gr. πέψις digestion]. The proteolytic enzyme of the gastric juice which changes the native proteins of the food into proteoses and peptones. It acts best in the presence of 0.2-0.3 per cent. of hydrochloric acid Pepsin is used in medicine as a digestant and as a remedy for dyspepsia. It is usually prepared from the stomachs of pigs. Dose, 10-15 gr. (0.66-1 gm.); of wine (vi'num pep'sini), ½-1 fl.oz. (16-3.2 c.c.). aromatic p., a mixture of 10 per cent. of pepsin with tartaric acid, sodium chlorid, and milk-sugar. ostrich-p., a pepsin prepared in Argentina from the gizzard of the ostrich or rhea. saccharated p. (L. pepsi'num sacchara'(um), pepsin (10 parts) mixed with sugar of milk (90 parts). Dose, 10-30 gr. (0.66-2 gm.). solution of p. (li'quor pepsi'ni), a solution of pepsin, 1 part in 25. Dose, 2-4 fl dr. (8-16 c c.).

pepsinase (pep'sin-ās). One of a class of enzymes which split native proteins to peptids in acid solution.

pepsinate (pep'sin-āt). To treat or charge with pepsin.

pepsinia (pep-sin'e-ah). The secretion of pepsin. It may be normal, excessive (hyperpepsinia), deficient (hypopepsinia), or totally absent (apepsinia).

pepsiniferous (pep-sin-if'er-us) [pepsin + L. fer're to bear]. Producing or secreting pepsin.

pepsinogen (pep-sin'o-jen) [pepsin + Gr. γεννῶν to produce]. A zymogen in or from the gastric cells which is changed into pepsin by hydrochloric acid.

pepsinogenous (pep-sin-oj'en-us). Producing pepsin.

pepsinum (pep-si'num). See pepsin.

pepsorthin (pep-sor'thin). A preparation of papain, magnesium superoxid, betanaphthol, and sodium bicarbonate: used in dyspepsia.

peptamin (pep-tam'in). Any amin derived from a polypeptid.

peptarnis (pep-tar'nis). Peptone of beef: used as a food for invalids.

peptase (pep'tās). 1. A malt derivative capable of acting on albumin. 2. An enzyme which splits peptids to amino-acids.

peptenzyme (pep'ten-zim). A proprietary digestant composed of the hormones entering into the process of digestion.

peptic (pep'tik) [Gr. πεπτικόs]. Pertaining to pepsin or to digestion.

peptid (peptid). A compound formed by the union of two or more amino-acids. When two amino-acids unite, the result is a dipeptid; when three, a tripeptid; when more than three, a polypeptid.

peptidase (pep'tid-ās). One of a class of enzymes which split peptids or peptones to amino-acids. The same as ereptase.

peptidolytic (pep-tid-o-lit'ik) [peptid + Gr. λύσις dissolution]. Splitting up peptids.

peptinotoxin (pep-tin-o-toks'in). A poisonous intestinal product of imperfect stomach digestion.

peptisation (pep-tiz-a'shun). Increase in the de-

gree of dispersion of a colloid solution; the liquefaction of a colloid gel to form a sol.

peptobromeigon (pep"to-brōm-i'gon). A preparation of bromin and protein: used like the bromids.

peptocrinin (pep-to-krin'in). A substance obtained from the mucosa of the intestine having properties like secretin.

peptogaster (pep'to-gas-ter) [Gr. πέπτειν to digest + γαστήρ belly]. The alimentary tract.

peptogenie, peptogenous (pep-to-jen'ik, peptoj'en-us) [Gr. πέπτειν to digest + γεννῶν to produce]. 1. Producing pepsin or peptones. 2. Of the nature of a peptogen. 3. Promoting digestion.

peptoid (pep'toid). A product of proteolytic digestion, distinguished by not giving the biuret reaction.

pepto-iodeigon (pep"to-i-o-di'gon). A preparation of iodin and protein: used like iodoform.

peptolysis (pep-tol'is-is) [peptone + Gr. hious destruction]. The splitting up of peptone.

peptolytic (pep-to-lit'ik). Splitting up peptone. peptomangan (pep-to-man'gan). A proprietary preparation containing peptones with manganese

and iron.

peptomedullin (pep"to-med-ul'in). A peptonized

therapeutic preparation of bone-marrow.

peptone (pep'ton) [Gr. πέπτων digesting]. A derived protein produced by the hydrolysis of a native protein either by an acid or by an enzyme. Peptones are readily soluble in water, are levorotatory, and are not precipitated by heat by ammonium sulphate, nor by the action of alkalis or acids. They include amphipeptone, antipeptone, hemipeptone, and propeptone. Deef-p., a peptone made from beef made by treating it with extract of pancreas casein-p., milk-p., a light brown powder, soluble in water: a nutrient for convalescents. Dunham's p. See Dunham's solution, under solution. gelatin-p., a peptone formed during the digestion of gelatin with pepsin. Höchst's p. Same as silk p. silk p., peptone obtained from silk: used as a test for the presence of peptone-splitting ferments, either by changes in optical activity or by the precipitation of tyrosin. venom p., a peptone from snake-poison. p. water. See under culture-medium. Witte's p., a proprietary dry peptone prepared from fibrin.

peptonemia, peptonæmia (pep-to-ne'me-ah) [peptone + Gr. alµa blood]. The presence of peptones in the blood.

peptonic (pep-ton'ik). Pertaining to or containing peptone.

peptonize (pep'to-niz). To convert into peptones.
peptonoid (pep'to-noid). Any substance resembling peptone.

peptonoids (pep'to-noids). A proprietary predigested food prepared from beef, milk, and gluten.

peptonuria (pep-to-nu're-ah) [peptone + Gr. olipov urine]. The presence of peptones in the urine. See albumosuria. enterogenous p., that which is due to disease of the intestine. hepatogenous p., that which is due to disease of the liver. nephrogenic p., that which is due to disease of the kidney. puerperal p., that which occurs during the puerperium. pyogenic p., that which is associated with a suppurative process.

peptonutrine (pep-to-nu'trin). A nutrient tonic preparation of peptonized beef and the carbohydrates of wheat.

pepto-ovarin (pep-to-o'va-rin). A peptonized therapeutic preparation of animal ovaries.

peptosin (pep'to-sin). A proprietary digestant preparation of pepsin.

peptothyroid (pep-to-thi'roid). A peptonized preparation of the thyroid: used therapeutically.

peptothyroidin (pep"to-thi-roid'in). A peptonized therapeutic preparation of animal thyroids.

882

peptotoxin (pep-to-toks'in). Any toxin or poisonous base developed from a peptone; also a poisonous cadaveric alkaloid or ptomain occurring in certain peptones and putrefying proteins. cholera p., a poisonous substance resembling a peptone, produced by the cholera bacillus.

peptovarin (pep-to'va-rin). See pepto-ovarin.

peptozym (pep'to-zim). A substance thought to exist in peptone solutions, and having the power of preventing the coagulation of the blood.

per-. A prefix, the Latin per, "through": in composition sometimes meaning "very."

per anum (per a'num). Latin for by the anus.

peracephalus (per-as-ef'al-us) [L. per through + acephalus]. A fetal monster with neither head nor arms, and with a defective thorax.

An acetate containing peracetate (per-as'et-āt). more acetic acid than the ordinary acetate.

peracid (per-as'id). An acid containing more than the usual quantity of oxygen.

peracidity (per-as-id'it-e). Excessive acidity.

peracute (per-ak-ūt') [L. peracu'tus]. Excessively acute or sharp.

peradrenalone (per-ad-ren'al-on). A substance formed by the oxidation of adrenalone.

peralga (per-al'gah). A proprietary analgesic and sedative. amidopyrin diethyl barbiturate.

perarticulation (per"ar-tik-u-la'shun) [L. through + articula'tio joint]. Same as diarthrosis.

peratodynia (per"at-o-din'e-ah) [Gr. $\pi\epsilon\rho\hat{a}\nu$ to pierce + δδ $\nu\eta$ pain]. Cardialgia or heartburn.

perboral (per-bo'ral). A highly oxidated proprietary compound of paraboric and paraiodosulphonic acid: used as an antiseptic.

percept (per'sept). The object perceived.

perception (per-sep'shun) [L. percep'tio]. The receiving of an impression through the senses. facial p. Same as facial vision. See vision. p.-time, p.-reflex. See time and reflex.

perceptive (per-sep'tiv). Pertaining to perception. perceptivity (per-sep-tiv'it-e). Ability to receive sense impressions.

perceptorium (per-sep-to're-um). Same as sen-

perchloric acid (per-klo'rik). A volatile liquid. HClO4, the highest oxyacid of chlorin. perchlorid (per-klo'rid) A chlorid which con-

tains more chlorin than the ordinary chlorid. perchlormethylformate (per-klor-meth-il-for'-

māt). Diphosgene

percin (per'sin). A protamin from the sperm of yellow perch, Perca flavescens

percolate (per'ko-lāt) [L. percola're]. 1. To strain; to submit to percolation. 2. To trickle slowly through a substance. 3. A liquid that has been submitted to percolation

percolation (per-ko-la'shun) [L. percola'tio]. The extraction of the soluble parts of a drug by causing a liquid solvent to flow slowly through it.

percolator (per'ko-la-tor). A vessel used in percolating drugs.

per contiguum (per kon-tig'u-um). In contiguity: arranged in such a way that the edges touch.

per continuum (per kon-tin'u-um). Without separation or break.

percuss (per-kus') [L. percu'tere]. To subject to percussion.

percussion (per-kush'un) [L percus'sio]. The act of striking a part with short, sharp blows as an aid in diagnosing the condition of the parts beneath by the sound obtained (Auenbrugger, 1761). auscultatory p., auscultation of the sound produced by percussion. coin p. See coin test, under lests. deep p., percussion in which a firm blow is struck in order to obtain a note from a deep-seated tissue drop p., drop-stroke p., per-

cussion in which the hammer is allowed to fall by its own weight on to the pleximeter, the elements considered in the examination being the sound heard the vibrations felt in the handle of the hammer, and the rebound of the hammer seen. Called also Lerch's p. finger-p., that in which the fingers of one hand are used as a plexor, and those of the other as a pleximeter. Goldscheider's p.

1. See threshold p. 2. Same as orthopercussion. immediate p., direct p., that in which no pleximeter is used. instrumental p., that in which a plexor or hammer is used. Korányi's p. See Korányi's auscultation, under auscultation. Krönig's p.,

auscultatory percussion over the apices of the lungs in the diagnosis of tubercu-losis. Lerch's See dropstroke p. mediate p., that in which a pleximeter is em-Murployed. phy's p. See piano p. p.note, the sound elicited on percussion. palpatory p., a combination of palpation and peraffordcussion ing tactile rather than auditory impressions. piano p., percussion by striking the body by the four fingers one after the other, beginning with the little finger. Called also Murphy's p. respir-

Immediate percussion (Kulbs).

Strong percussion (Külbs).

Weak percussion (Kulbs).

atory p., per-cussion during respiration so as to bring out the difference in the percussion-notes of inspiration and expiration tangential p., percussion with the pleximeter placed vertically on the body, the strokes being applied to the pleximeter in a direction parallel with the surface of the skin thresh**old p.**, percussion performed by tapping lightly with the finger upon a glass-rod pleximeter, one end of which, fitted with a rubber cap, rests upon an intercostal space, the rod being held at an angle to the surface of the thorax and parallel to the borders of the organ to be delimited This method confines the percussion vibrations to a very restricted area. Called also Goldscheider's p. p.wave, the primary or chief ascending wave of the pulse tracing

percussopunctator (per-kus-o-punk'ta-tor). instrument for performing multiple acupuncture.

percussor (per-kus'or) [L. "striker"]. An instrument for use in performing percussion.

percutaneous (per-ku-ta'ne-us) [L per through + cu'tis skin]. Performed through the skin

percuteur (per-koo-tūr') [Fr.]. An instrument for therapeutic or diagnostic percussion.

percutilan (per-ku'til-an). A preparation of camphor for use percutaneously

Percy cautery or method (per'se) [James F Percy, American surgeon born 1864] See cautery.

perdynamin (per-di'nam-in). An animal iron preparation containing albumin. It is a nutrient fluid and is used in anemic conditions, phthisis, and the vomiting of pregnancy.

pereirin (per-e'ir-in) [Port. pere'ira brier]. A

white alkaloid, $C_{19}H_{24}N_2O$, from the bark of Geissosper'mum la've (wello'sii), a tree of tropical America; antiperiodic, antipyretic, and tonic. Daily dose, 30 gr. (2 gm.).

perencephaly (per-en-sef'al-e) [Gr. πήρα pouch + εγκέφαλος brain]. Cystic disease of the brain.

perennial (per-en'e-al) [L. peren'nis, from per through + an'nus year]. Lasting through the year or for several years.

perethynol (per-eth'in-ol). A colloidal suspension prepared from fresh horse heart in perchlorid of ethylene and alcohol for the Vernes' test for syphilis. See Vernes' test, under tests.

Perez's sign (pa-rāths') [Jorje *Perez*, Spanish physician, died 1920]. See under *sign*.

Perezia (per-e'ze-ah) See pipitzahoac.

perezon (per'e-zon). Pipitzahoic acid.

perflation (per-fla'shun) [L perfla'tio]. 1. The act of blowing air into a space in order to force secretions or other substances out 2. A form of natural ventilation in which the air is brought into the room as a result of the movement of natural air currents.

perforans (per'fo-ranz) [L]. Penetrating, a term applied to various muscles and nerves. p. gas'seri, the musculocutaneous nerve. p. ma'nus, the flexor profundus digitorum muscle.

perforated (per'fo-ra-ted) [L. perfora'tus]. Pierced
with holes

perforation (per-fo-ra'shun) [L. perfora're to pierce through].
 1 The act of boring or piercing through a part.
 1. A hole made through a part or substance.
 Bezold's p., perforation of the inner surface of the mastoid bone.

perforator (per'fo-ra-tor) An instrument for piercing the bones, and especially for perforating the fetal head **Blot's p.**, an instrument for performing craniotomy in difficult labor.

perforatorium (per"for-a-to're-um). The pointed structure on the head of a spermatozoon, the acrosome.

perfrication (per-frik-a'shun) [L. perfrica're to rub]. Rubbing with an ointment or embrocation.

perfrigeration (per-frij-er-a'shun) [L. per very +
 fri'gere to be cold] Frostbite

perfusion (per-fu'zhun). A pouring through or into.

pergenol (per-je'nol). A mixture of sodium perborate and sodium bitartrate, known as "solid hydrogen dioxid"

perhydrol (per-hi'drol). 1. A proprietary 30 per cent solution of hydrogen dioxid. 2. Magnesium peroxid.

peri- [Gr. περl around]. A prefix signifying "around."

periacinal, periacinous (per-e-as'in-al, per-e-as'in-us) [Gr. $\pi\epsilon\rho l$ around + L. acin'us berry]. Situated around an acinus.

periadenitis (per"c-ad-en-i'tis) [Gr. $\pi\epsilon\rho l$ around $+ \dot{a}\delta\dot{\eta}\nu$ gland $+ \iota\tau\iota s$ inflammation]. Inflammation of the tissues around a gland.

periadventitial (per"e-ad-ven-tish'al). Outside of the adventitia.

perialienitis (per-e-a"le-en-i'tis) [Gr. περί around + L. alie'nus foreign + Gr. -ιτις inflammation]. Inflammation around a foreign body, as a biliary concretion.

periamygdalitis (per"e-am-ig-dal-i'tis) [Gr. $\pi\epsilon\rho l$ around $+ \dot{a}\mu\nu\gamma\delta\dot{a}\lambda\eta$ tonsil $+ -\iota\tau\iota s$ inflammation]. Inflammation of the tissue around the tonsil.

perianal (per-e-a'nal) [Gr. περί around + L. a'nus anus]. Located around the anus.

periangiocholitis (per"e-an"je-o-ko-li'tis). Inflammation of the tissues around the bile-ducts, or interlobar capillaries of the liver.

periangioma (per-e-an-je-o'mah) [Gr. περί around

+ $\dot{\alpha}\gamma\gamma\epsilon\hat{\iota}o\nu$ vessel + - $\omega\mu\alpha$ tumor]. A tumor which surrounds a blood-vessel.

periangitis (per"e-an-ji'tis) [Gr. $\pi\epsilon\rho t$ around + $\dot{\alpha}\gamma\gamma\epsilon\hat{t}o\nu$ vessel + $-i\tau\iota s$ inflammation]. Inflammation of the tissue around a blood- or lymphatic vessel.

perianth (per'e-anth) [Gr. περί around + ἄνθος flower]. The floral envelope, including the calyx and corolla.

periaortic (per-e-a-or'tik). Around the aorta.

periaortitis (per"e-a-or-ti'tis). Inflammation of the tissues around the aorta.

periapical (per-e-a'pik-al). Surrounding the apex of the root of a tooth.

periappendicitis (per'e-ap-en-dis-i'tis) [periappendicitis]. Inflammation of the appendix vermiformis and the surrounding tissues. p. decidua'lis, a condition in tubal pregnancy in which, on account of adhesions between the appendix and the fallopian tube, decidual cells are present in the peritoneum of the appendix.

periappendicular (per"e-ap-en-dik'u-lar). Around the appendix vermiformis.

periapt (per'e-apt) [Gr. $\pi\epsilon\rho la\pi\tau o\nu$ amulet]. A substance worn in the belief that it wards off disease.

periarterial (per-e-ar-te're-al). Around an artery. **periarteritis** (per"e-ar-ter-i'tis) [Gr. $\pi\epsilon\rho l$ around $+ \dot{a}\rho\tau\eta\rho ia$ artery $+ -\iota\tau\iota s$ inflammation]. Inflammation of the tissues around an artery. **p. nodo'sa**, a variety producing thickening of the coats of the artery, with nodular swellings.

periarthric (per-e-ar'thrik) [Gr περί around + ἄρθρον joint]. Around a joint.

periarthritis (per"e-ar-thri'tis). Inflammation of the tissues around a joint.

periarticular (per''e-ar-tik'u-lar) [Gr. περί around + L. artic'ulus joint]. Situated around a joint.

periatrial (per-e-a'tre-al). Around the atrium or auricle of the heart.

periauricular (per-e-aw-rik'u-lar).
 1. Around an auricle of the heart.
 2. Around the concha of the ear.

periaxial (per-e-aks'e-al) [Gr. περί around + ἄξων axis]. Situated around an axis

periaxillary (per-e-aks'il-a-re). Situated around the axilla.

periaxonal (per-e-aks'o-nal) [Gr $\pi \epsilon \rho l$ around + axon] Occurring around an axon.

periblast (per'e-blast) [Gr περί around + βλαστός germ]. The protoplasm of a cell outside of the nucleus.

periblepsis (per-e-blep'sis) [Gr. περί around + βλέψις looking]. The staring expression of an insane person.

peribronchial (per-e-brong'ke-al). Situated around a bronchus

peribronchiolar (per-e-brong-ki'o-lar). Around the bronchioles

peribronchiolitis (per"e-brong-ke-o-li'tis). Inflammation of the tissues around the bronchioles.

peribronchitis (per''e-brong-ki'tis). Inflammation of the investment of a bronchus or bronchial tube

peribulbar (per-e-bul'bar). Surrounding the bulb of the eye.

peribursal (per-e-ber'sal). Surrounding a bursa. pericæcal (per-e-se'kal). See pericecal.

pericæcitis (per-e-se-si'tis). Same as pericecitis.

pericanalicular (per''e-kan-al-ik'u-lar). Occurring around canaliculi.

pericapsular (per-e-kap'su-lar). Surrounding a capsule.

pericardectomy (per"e-kar-dek"to-me) Pericar-diectomy.

pericardiac, pericardial (per-e-kar'de-ak, per-e-kar'de-al). Pertaining to the pericardium.

pericardicentesis (per-e-kar"dis-en-te'sis) [Gr. περικάρδιον pericardium + κέντησις puncture]. The surgical puncture of the pericardium.

pericardiectomy (per"e-kar-de-ek'to-me) [pericardium + Gr. ἐκτομή excision]. Complete removal of the pericardium.

pericardiocentesis (per-e-kar"de-o-sen-te'sis).
Pericardicentesis.

pericardiolysis (per"e-kar-de-ol'is-is) [pericardium + Gr. λόσις loosening]. The operation of freeing adhesions between the visceral and parietal pericardium.

pericardiomediastinitis (per-e-kar"de-o-me-deas-tin-i'tis). Pericarditis with mediastinitis; inflammation of the pericardium and mediastinum.

flammation of the pericardium and mediastinum.

pericardiophrenic (per-e-kar''de-o-fren'ik). Pertaining to the pericardium and the diaphragm.

pericardiopleural (per-e-kar"de-o-plu'ral). Pertaining to the pericardium and the pleura.

pericardiorrhaphy (per"e-kar-de-or'af-e) [pericardium + Gr. ραφή suture]. The operation of suturing a wound in the pericardium.

pericardiosymphysis (per-e-kar"de-o-sim'fis-is) [pericardium + Gr. σύμφυσις adhesion]. Adhesion between the visceral and parietal layers of the pericardium.

pericardiotomy (per"e-kar-de-ot'o-me) [Gr. $\pi\epsilon\rho\iota$ κάρδιον pericardium + $\tau\epsilon\mu\nu\epsilon\iota$ ν to cut]. Surgical incision of the pericardium.

pericarditic (per''e-kar-dit'ik). Pertaining to pericarditis.

pericarditis (per'e-kar-di'tis) pericarditis (per"e-kar-di'tis) [Gr. περικάρδιον pericardium]. Inflammation of the pericardium. The disease is attended by elevation of temperature, pain in the precordial region, rapid pulse, cough, and dyspnea. The pericardium is covered with fibrinous deposits, giving it a roughened surface, which causes a friction-murmur occurring with the heart-beats. Later effusion into the sac takes place, producing bulging of the precordia and an area of dulness. adhesive p., that in which the two layers of the pericardium adhere to each other. **p. calculo'sa**, pericarditic calcareous deposit in the pericardium **p. callo'-sa**, a variety of chronic fibrous pericarditis marked by facial cyanosis, edema, and full, tortuous jugular veins, without pulsation and without typical signs of pericarditis. It occurs during childhood. carcinomatous p., that which is associated with malignant disease of the pericardium. dry p., that in which there is no effusion. p. epistenocar'dica, the symptom-complex of stenocardia, fever, pericarditis, and myocardial insufficiency (Sternberg). external p., that which chiefly affects the outer surface of the pericardium. p. exter'na et inter'na, inflammation of the outer and inner surfaces of the pericardium. fibrous p., a chronic pericarditis in which the other interests of the pericardium. adhesions become replaced by fibrous bands. hemorrhagic p., that in which there is a bloody exudate. localized p., a form with white or milky spots. mediastinal p., inflammation of the exterior surface of the pericardium and the mediastinal tissue. **obliterating p.**, an adherent pericarditis which leads to the obliteration of the pericardial cavity. purulent p., a form with effusion of a purulent fluid. serofibrinous p., a variety attended with a serous fluid effusion containing a little fibrin. tuberculous p., a variety caused by tuberculous dis-

pericardium (per-e-kar'de-um) [L.; Gr. $\pi e \rho l$ around $+ \kappa a \rho \delta l a$ heart]. The membranous sac which contains the heart. It consists of an external layer of dense fibrous tissue derived from the cervical fascia, and an inner serous layer (visceral p., cardiac p., or epicardium), which surrounds the heart directly and is reflected over the inner surface of the fibrous coat, forming the parietal p. The base of the pericardium is at-

tached to the central tendon of the diaphragm, and the cavity of the pericardium contains from 5 to 20 c.c. of a thin, serous liquid, the pericardial fluid. bread-and-butter p., a pericardium having a peculiar appearance, produced by the rubbing together of its two surfaces in fibrinous pericarditis. cardiac p., visceral pericardium which is not in contact with the heart. shaggy p., a pericardium with a shaggy coat of fibrinous exudate. visceral p., the epicardium; the fold of the pericardium which is in contact with the heart.

pericardosis (per"e-kar-do'sis). Infection of the pericardium.

pericardotomy (per"e-kar-dot'o-me). Same as pericardiolomy.

pericarp (per'e-karp) [Gr. περί around + κάρπος fruit]. The seed vessel or ripened ovary of a flower.

pericaryon (per-e-kar'e-on). See perikaryon.
pericecal (per-e-se'kal). Surrounding the cecum.

pericecitis (per-c-se-si'tis). Inflammation of the tissues around the cecum.

pericellular (per-c-sel'u-lar) [Gr. $\pi\epsilon\rho l$ around + L. cel'lula cell]. Surrounding a cell.

pericemental (per-e-se-men'tal). Pertaining to the pericementum.

pericementitis (per"e-se-men-ti'tis) [Gr. περι around + L. camen'tum cement + Gr -ιτις inflammation]. Periodontitis; inflammation of the pericementum. chronic suppurative p., pyorrhea alveolaris.

pericementoclasia (per-e-se-men-to-kla'se-ah) [pericementum + Gr. κλάσις breaking]. Disintegration of the pericementum and alveolar bone without loss of the overlying gingival tissue It results in pocket formation. Cf pyorrhea alveolaris.

pericementum (per'e-se-men'tum) [Gr. $\pi\epsilon\rho l$ around + L. camen'tum cement]. The membrane or tissue which occupies the space between the root of a tooth and the alveolus of the jaw. Called also peridental membrane, dental periosteum, periodontium, and alveolodental membrane.

pericentral (per-e-sen'tral) Surrounding a center.
pericephalic (per"e-sef-al'ik). Surrounding the
head.

pericerebral (per-e-ser'e-bral). Surrounding the brain.

perichareia (per"e-kar-i'ah) [Gr. περιχάρεια]. Insane and vehement rejoicing.

pericholangitis (per"e-ko-lan-ji'tis) [Gr. $\pi\epsilon\rho l$ around $+ \chi ολή$ bile + άγγειον vessel]. Inflammation of the tissues that surround a bile-duct.

pericholecystitis (per'e-ko''le-sis-ti'tis). Inflammation of the tissues around the gall-bladder.

perichondrial (per-e-kon'dre-al). Pertaining to or composed of perichondrium.

perichondritis (per"e-kon-dri'tis). Inflammation of the perichondrium

perichondrium (per-e-kon'dre-um) [Gr. $\pi\epsilon\rho l$ around $+ \chi \delta\nu\delta\rho\sigma$ s cartilage]. The membrane which covers the surface of a cartilage. It is a layer of white, fibrous tissue prolonged over the cartilage from neighboring parts.

perichondroma (per"e-kon-dro'mah). A tumor arising from the perichondrium.

perichord (per'e-kord). The investing sheath of the notochord.

perichordal (per-e-kor'dal) [Gr. περί around + χορδή cord]. Situated around the notochord.

perichorioidal (per"e-ko-re-oi'dal). Perichoroidal. perichoroidal (per"e-ko-roi'dal). Surrounding the choroid coat.

perichrome (per'e-krōm) [Gr. $\pi e \rho l$ around $+ \chi \rho \hat{\omega} \mu \alpha$ color]. A nerve-cell in which the Nissl bodies are arranged in rows beneath the cell membrane. Cf. arkyochrome, gyrochrome, and stichochrome.

perichymate (per-e-ki'māt). An enamel prism. periclasia (per-e-kla'se-ah). Same as periodonloclasia.

periclaustral (per-e-klaws'tral). Around the claustrum of the brain.

pericolitis (per'e-ko-li'tis) [Gr. περί around + κόλον colon]. Inflammation around the colon, especially of the peritoneal coat of the colon. p. dex'tra, pericolitis affecting the ascending colon. membranous p. See Jackson's membrane, under membrane. p. sinis'tra, inflammation of the surrounding connective tissue and peritoneum at the lower part of the descending colon. It is comparable to appendicitis, except for its situation on the left side.

pericolonitis (per"e-ko-lon-i'tis). Same as pericolitis.

pericolpitis (per''e-kol-pi'tis) [Gr. $\pi\epsilon\rho i$ around + $\kappa\delta\lambda\pi\sigma s$ vagina]. Inflammation of the tissues around the vagina.

Peric'oma townsvillen'sis. A fly allied to the phlebotomus flies of the family Psychodidæ found in Australia, which bites very severely.

periconchal (per-e-kong'kal) [Gr. περί around + κόγχη concha]. Situated around the concha.

periconchitis (per''e-kong-ki'tis) [Gr. $\pi \epsilon \rho l$ around + $\kappa \delta \gamma \chi \eta$ eye-socket]. Inflammation of the lining of the orbit.

pericorneal (per-e-kor'ne-al). Surrounding the cornea.

pericoronal (per"c-kor'o-nal). Around the crown of a tooth.

pericoronitis (per"e-ko-ron-i'tis) [Gr. *peri* around + *coro'na* crown]. Inflammation around the crown of a tooth.

pericoxitis (per-e-koks-i'tis). Inflammation of the tissues about the hip-joint.

pericranial (per-e-kra'ne-al). Pertaining to the pericranium.

pericranitis (per''e-kra-ni'tis) [see *pericranium*]. Inflammation of the periosteum of the skull.

pericranium (per-e-kra'ne-um) [Gr. $\pi\epsilon\rho l$ around + $\kappa\rho\alpha\nu lo\nu$ cranium]. The cranial periosteum.

pericystic (per-e-sis'tik). Situated about a cyst.

pericystitis (per"e-sis-ti'tis) [Gr. περί around + κύστις bladder]. Inflammation of the tissues around the bladder.

pericystium (per-e-sis'te-um). The vascular envelop of certain cysts.

pericytial (per-e-sish'al) [Gr. $\pi\epsilon\rho l$ around $+\kappa b\tau os$ cell]. Situated around a cell.

peridectomy (per-e-dek'to-me) [Gr περl around + εκτομή excision]. Same as perstomy.

peridendritic (per"e-den-drit'ik). Surrounding the dendrites.

peridental (per-e-den'tal). Same as periodontal.

peridentium (per-e-den'she-um) Periodontium.

peridentoclasia (per'e-den-to-kla'se-ah) [Gr. περι around + L. dens tooth + Gr. κλάσις breaking]. The breaking down of the tissues surrounding the teeth.

periderm (per'e-derm) [Gr. $\pi \epsilon \rho t$ around + $\delta \epsilon \rho \mu \alpha$ skin]. The rete malpighii of the skin.

peridermal (per-e-der'mal). Pertaining to the periderm; cuticular.

peridesmic (per-e-dez'mik). Around a ligament; pertaining to the peridesmium.

peridesmitis (per''e-dez-mi'tis). Inflammation of the peridesmium.

perideamium (per-e-dez'me-um) [Gr. περί around + δέσμιον band]. The areolar membrane which covers the ligaments.

peridiastole (per''e-di-as'to-le) [Gr. $\pi\epsilon\rho l$ around + diastole]. The interval between the systole and the diastole.

peridiastolic (per"e-di-as-tol'ik). Prediastolic.

perididymis (per-e-did'im-is) [Gr. περί around + δίδυμος testicle]. The tunica vaginalis testis.

perididymitis (per"e-did-im-i'tis). Inflammation of the perididymis.

peridiverticulitis (per"e-di-ver-tik-u-li'tis). Inflammation of structures around a diverticulum of the intestine.

peridontal (per-e-don'tal). Periodontal.

peridontia (per-e-don'shc-ah). Periodontia.

peridontoclasia (pcr-e-don-to-kla'se-ah). Same as periodontoclasia.

periductal (per-e-duk'tal). Surrounding a duct.

periduodenitis (per''e-du-o-de-ni'tis). A condition marked by a deformed duodenum surrounded and fixed by peritoneal adhesions.

periencephalitis (per''e-en-sef-al-i'tis) [Gr. περί around + ἐγκέφαλος brain]. Inflammation of the surface of the brain; meningitis with cortical encephalitis.

periencephalomeningitis (per"e-en-sef"al-o-men-in-ji'tis) [Gr. περί around + ἐγκέφαλος brain + μῆνιγξ membrane]. Chronic inflammation of the cerebral cortex and meninges; paresis or general paralysis of the insane.

peri-endothelioma (per'e-en-do-the-le-o'mah). A tumor combining the characteristics of a perithelioma and an endothelioma.

perienteric (per"e-en-ter'ik). Situated around the intestine.

perienteritis (per''e-en-ter-i'tis) [Gr. $\pi\epsilon\rho l$ around $+ \bar{\epsilon}\nu\tau\epsilon\rho\sigma\nu$ intestine]. Inflammation of the peritoneal coat of the intestine.

perienteron (per-e-en'ter-on) [Gr. $\pi\epsilon\rho l$ around + $\tilde{\epsilon}\nu\tau\epsilon\rho\sigma\nu$ intestine]. The primitive perivisceral cavity of the embryo.

periependymal (per"e-ep-en'dim-al). Situated around the ependyma.

periepithelioma (per" e-ep-e-the-le-o'mah). A tumor which sometimes affects the suprarenal body, and may lead to a large metastatic growth of the liver.

Périer's operation (per-e-āz') [Charles *Périer*, French surgeon, 1838-1914]. See under *operation*.

periesophageal (per"c-e-so-fa'je-al). Situated around the esophagus.

periesophagitis (per"e-e-sof-aj-i'tis). Inflammation of the tissues around the esophagus.

perifistular (per-e-fis'tu-lar). Around a fistula.

perifollicular (per-e-fol-ik'u-lar). Surrounding a follicle

perifolliculitis (per''e-fol-ik-u-li'tis). Inflammation around the hair-follicles.

perigangliitis (per''e-gang-le-i'tis). Inflammation of tissues around a ganglion.

periganglionic (per"e-gang-le-on'ik). Situated
around a ganglion.

perigastric (per-e-gas'trik). Situated around the stomach, pertaining to the peritoneal coat of the stomach.

perigastritis (per''e-gas-tri'tis) [Gr. περl around + γαστήρ stomach]. Inflammation of the peritoneal coat of the stomach.

perigemmal (per-e-jem'al). Surrounding a tastebud or other bud.

periglandular (per-e-glan'du-lar). Surrounding a gland or glands.

periglandulitis (per"e-glan-du-li'tis). Inflammation of the tissues about a glandule or glandules.

periglial (per-e-gli'al). Surrounding the glia-cells of the brain.

periglossitis (per-e-glos-i'tis). Inflammation of the tissues around the tongue.

periglottic (per-e-glot'ik). Situated around the tongue.

periglottis (per-e-glot'is) [Gr. περί around + γλῶττα tongue]. The mucous membrane of the tongue.

886

perihepatic (per"e-hep-at'ik) [Gr. περί around + ήπαρ liver]. Situated or occurring about the liver. perihepatitis (per"e-hep-at-i'tis) [Gr. περί around

perihepatitis (per"e-hep-at-i'tis) [Gr. περί around + ήπαρ liver]. Inflammation of the peritoneal capsule of the liver. p. chron'ica hyperplas'-tica, a disease in which the peritoneal covering of the liver becomes converted into a white mass resembling the icing of a cake. Called frosted liver, icing liver, zuckerguss-leber, etc.

perihernial, periherniary (per-e-her'ne-al, per-e-her'ne-a-re). Situated or occurring around a hernia.

perihysteric (per-e-his-ter'ik) [Gr. περί around + ὑστέρα uterus]. Around the uterus.

peri-insular (per-e-in'su-lar). Surrounding an insula, particularly the island of Reil.

perijejunitis (per"e-jej-u-ni'tis). Inflammation around the jejunum.

perikaryon (per-e-kar'e-on) [Gr. $\pi\epsilon\rho t$ around + $\kappa \dot{\alpha} \rho \nu \sigma \nu$ nucleus]. The main protoplasmic mass of a cell; the cell-body as distinguished from the nucleus and the processes.

perikeratic (per-e-ker-at'ik). Surrounding the cornea.

perilabyrinth (per-e-lab'ir-inth). The tissues that surround the labyrinth of the ear.

perilabyrinthitis (per''e-lab-ir-in-thi'tis). In flammation of the tissues around the labyrinth.

flammation of the tissues around the labyrinth. **perilaryngeal** (per"e-lar-in'je-al). Situated around the larynx.

perilaryngitis (per"e-lar-in-ji'tis) [Gr. περί around + λάρυγξ larynx]. Inflammation of the areolar tissue around the larynx.

perilenticular (per-e-len-tik'u-lar). Surrounding the crystalline lens.

periligamentous (per"e-lig-am-en'tus). Around a ligament.

perilobar (per-e-lo'bar). Surrounding a lobe.

perilymph (per'e-limf) [Gr. $\pi\epsilon\rho t$ around + L. lym'pha lymph]. The fluid contained in the space between the osseous and the membranous labyrinth of the ear.

perilymphadenitis (per"e-lim-fad-en-i'tis). Inflanmation of the tissues around a lymph-gland.

perilymphangeal (per"e-lim-fan'je-al). Around a lymphatic vessel

perilymphangitis (per"e-lim-fan-ji'tis). Inflammation around a lymphatic vessel.

perilymphatic (per"e-lim-fat'ik). 1. Pertaining to the perilymph. 2. Located around a lymphatic vessel.

perimastitis (per"e-mas-ti'tis) [Gr. περί around + μαστός breast]. Inflammation of the connective tissue around the mammary gland.

perimedullary (per-e-med'u-la-re). Surrounding the medulla oblongata or the marrow of a bone.

perimeningitis (per''e-men-in-ji'tis) [Gr. περl around + μηνιγξ membrane]. Inflammation of the dura; pachymeningitis.

perimeter (per-im'et-er) [Gr. $\pi\epsilon\rho l$ around $+\mu \ell \tau \rho \rho \nu$ measure]. 1. The line that bounds any plane figure. 2. An instrument for measuring the field of vision. **bed-p.**, a perimeter for examining the eyes of bed-ridden patients. **dental p.**, an instrument for measuring the circumference of a tooth.

perimetric (per-e-met'rik). Pertaining to the perimetrium.

perimetritic (per'e-met-rit'ik). Pertaining to perimetritis.

perimetritis (per"e-me-tri'tis) [Gr. $\pi\epsilon\rho i$ around + $\mu\eta\tau\rho\alpha$ uterus]. Inflammation of the perimetrium.

perimetrium (per-e-me'tre-um) [Gr. περί around + μήτρα womb]. The peritoneal covering of the uterus.

perimetrosalpingitis (per-e-met"ro-sal-pin-ji'tis).
Pelvic inflammation, including perimetritis, parametritis, perisalpingitis, etc.

perimetry (per-im'et-re) [Gr. $\pi\epsilon\rho l$ around $+\mu\epsilon$ $\tau\rho\rho\nu$ measure]. The measuring of the field of vision.

perimyelis (per-e-mi'el-is) [Gr. περί around + μυελός marrow]. Same as endosteum.

perimyelitis (per"e-mi-el-i'tis). 1. Inflammation
 of the perimyelis. 2. Spinal meningitis.

perimyelography (per"e-mi-el-og raf-e) [Gr. $\pi\epsilon\rho l$ around $+ \mu\nu\epsilon\lambda\delta s$ marrow $+ \gamma\rho\alpha\varphi\epsilon\nu$ to record]. Roentgen-ray examination after injecting iodized oil or other contrast fluid into the subarachnoid space of the spinal cord.

perimyo-endocarditis (per-e-mi"o-en-do-kar-di'tis). Pericarditis associated with myocarditis and endocarditis.

perimysial (per-e-mis'e-al). Pertaining to the perimysium.

perimysiitis, perimysitis (per"e-mis-e-i'tis, -misi'tis). Inflammation of the perimysium.

perimysium (per-e-mis'e-um) [Gr $\pi\epsilon\rho l$ around $+\mu 0$; muscle]. The delicate sheath of connective tissue that surrounds each fasciculus of muscular fiber.

perinæum (per-e-ne'um). See perineum.

perineal (per-e-ne'al). Pertaining to the perineum. perineauxesis (per"in-e-awks-e'sis) [Gr. περίναιον perineum + αυξησις increase] Same as colpoperineorrhaphy.

perineocele (per-e-ne'o-sēl) [Gr. περίναιον perineum + κήλη hernia]. A hernia lying between the rectum and the prostate, or between the rectum and vagina; perineal hernia.

perineocolporectomyomectomy (per-e-ne"o-kol"po-rek"to-mi-o-mek'to-me) [perineum + Gr. κόλπος vagina + reclum + myoma + Gr ἐκτομή excision]. Removal of a myoma by cutting the perineum, vagina, and rectum.

perineoplasty (per-e-ne'o-plas-te) [Gr. περίναιον perineum + πλάσσειν to shape] Plastic surgery of the perineum.

perineorrhaphy (per"e-ne-or'a-fe) [Gr. $\pi\epsilon\rho l \nu a \iota \nu \nu$ perineum + $\rho a \varphi \dot{\eta}$ suture] Suturation of the perineum, performed for the repair of a laceration

perineoscrotal (per-e-ne-o-skro'tal). Pertaining to the perineum and scrotum.

perineostomy (per e-ne-os'to-me) [perineum + Gr. $\sigma \tau \dot{o} \mu a$ a mouth] Urethrostomy through the perineum: called also Poncet's operation.

perineosynthesis (per-e-ne"o-sin'the-sis) [Gr. $\pi \epsilon \rho i \nu a \omega \nu$ perineum $+ \sigma i \nu \theta \epsilon \sigma \iota s$ a placing together]. Surgical restoration of a completely lacerated perineum.

perineotomy (per"e-ne-ot'o-me) [Gr. περίναιον perineum + τομή to cut]. A surgical incision through the perineum anteroposteriorly.

perineovaginal (per-e-ne"o-vaj'in-al). Pertaining to the perineum and the vagina.

perineovaginorectal (per-e-ne"o-vaj"in-o-rek'-tal). Pertaining to the perineum, vagina, and rectum.

perineovulvar (per-e-ne-o-vul'var). Pertaining to the perineum and the vulva.

perinephrial (per-e-nef're-al). Pertaining to the perinephrium.

perinephric (per-e-nef'rik) [Gr. περί around + νεφρός kidney]. Situated or occurring around the kidney.

perinephritic (per"e-nef-rit"ik). Pertaining to or caused by perinephritis.

perinephritis (per''e-nef-ri'tis) [Gr. περί around + νεφρός kidney + -ιτις inflammation]. Inflammation of the perinephrium. It is marked by fever, local pain, and tenderness on pressure.

perinephrium (per-e-nef're-um) [Gr. $\pi\epsilon\rho l$ around $+ \nu\epsilon\varphi\rho b$ s kidney]. The peritoneal envelop and other tissues around the kidney.

perineum (per-e-ne'um) [Gr. $\pi \epsilon \rho l \nu \alpha \iota \nu \nu$]. The space, or area, between the anus and the genital organs. It is limited in front by the pubic arch, behind by a line joining the tuberosities of the ischia, and on either side by the rami of the ischium. It is occupied by the urethra and vagina in the female, and by various muscles, nerves, and vessels.

perineural (per-e-nu'ral). Surrounding a nerve or nerves.

perineurial (per-e-nu're-al). Pertaining to the perineurium.

perineuritic (per-e-nu-rit'ik). Pertaining to or suffering from perineuritis.

perineuritis (per"e-nu-ri'tis). Inflammation of the perineurjum.

perineurium (per-e-nu're-um) [Gr. περl around + νεθρον nerve]. The sheath which incloses each funiculus of a nerve-fiber. See nerve.

perinuclear (per-e-nu'kle-ar). Situated or occurring around a nucleus.

periocular (per-e-ok'u-lar). Situated or occurring around the eye.

period (pe're-od) [Gr. $\pi \epsilon \rho l$ around $+ \delta \delta \delta s$ way]. An interval or division of time; the time for the regular recurrence of a phenomenon. half-life p., the period after which half of a radio-active element is so transformed that it is no longer of therapeutic potency. incubation p., the period of time between the moment of entrance of the infecting organism into the body and the first appearance of the symptoms of the consequent disease. intersystolic p., the atriocarotid interval See under interval lag p., the time which elapses after a microorganism is introduced into a nutrient medium before reproduction begins monthly p., the time of menstruation. presphygmic p., a short period (0 07 to 0 00 second) early in the systole of the ventricles when both the auriculoventricular and semilunar valves are closed During this period the blood flow in the auricles and ventricles ceases reaction p., the stage of rallying from shock after trauma refractory p., a short period succeeding the time at which a nerve or muscle enters into a condition of functional activity during which the nerve or muscle does not respond to a second stimulus

periodic (pe-re-od'ik) [Gr. περιοδικόs]. Recurring at certain intervals.

periodicity (per"c-o-dis'it-e). Recurrent at regular intervals of time. filarial p., the periodic recurrence every night of filaria in the blood of a person who has been infected.

periodocasein (per-i"o-do-ka'se-in). An iodin and casein preparation for use in goiter and myxedema.

periodontal (per"e-o-don'tal) [Gr. περl around + δδούς tooth]. Situated or occurring around a tooth, pertaining to the alveolodental ligament.

periodontia (per e-o-don'she-ah) [Gr. $\pi\epsilon\rho t$ around $+ \delta\delta\omega t$ tooth]. That branch of dentistry which treats of the periodontal tissues and its diseases.

periodontist (per-e-o-don'tist). A dentist who specializes in periodontia.

periodontitis (per"e-o-don-ti'tis). Inflammation
 of the periodontium. apical p., periodontitis of
 the apex of the root of a tooth.

periodontium (per"e-o-don'she-um) [Gr. περί around + όδους tooth]. See pericementum.

periodontoclasia (per"e-o-don-to-kla'se-ah) [Gr. $\pi\epsilon\rho l$ around + δδούs tooth + $\kappa\lambda\delta\sigma\iota s$ breaking]. Destruction of periodontal tissue; pyorrhea alveolaris.

periodontology (per-e-o-don-tol'o-je) [Gr. π ερί around + δδούς tooth + λόγος treatise]. That department of dentistry which treats of disorders and diseases of the peridontal tissues.

periodoscope (pe-re-od'o-skōp) [Gr. περί around + όδός way + σκοπεῖν to view]. A calendar or dial indicating the probable date of parturition.

periomphalic (per-e-om-fal'ik) [Gr. περί around + δμφαλος navel]. Around the umbilicus.

perionychia (per"e-o-nik'e-ah). Same as perionychium.

perionychium (per"e-o-nik'e-um) [Gr. περί around + δνυξ nail]. The epidermis bordering a nail.

perionyx (per-e-o'niks) [Gr. περί around + δνυξ nail]. A relic of the eponychium persisting as a band across the root of the nail, seen in the eighth month of fetal life.

perionyxis (per''e-o-niks'is) [Gr. περί around + δνυξ nail]. Inflammation of the skin surrounding a finger- or toe-nail.

perioophoritis (per"e-o-of-o-ri'tis) [Gr. π ερί around + $\dot{\varphi}$ ον egg + φ έρειν to bear]. Inflammation of the peritoneum around the ovary.

perioöphorosalpingitis (per"e-o-of"o-ro-sal-pinji'tis) [Gr. περί around + ψόν egg + φέρειν to bear + σάλπιγξ tube]. Inflammation of the tissues around the ovary and oviduct.

perioöthecitis (per-e-o"o-the-si'tis) [Gr. περί around + ψοθηκη ovary + -ιτις inflammation]. Inflammation of the peritoneum around the ovary.

perioöthecosalpingitis (per-e-o"o-the-ko-sal-pinji'tis) [Gr. περί around $+ \dot{\varphi}$ οθηκη ovary $+ \sigma \dot{\alpha} \lambda$ πινξ tube + -ιτις inflammation]. Inflammation of the tissues around the ovary and fallopian tube.

periophthalmia (per-e-of-thal'me-ah). Same as periophthalmitis.

periophthalmic (per"e-of-thal"mik). Situated
around the eye.

periophthalmitis (per"e-of-thal-mi'tis). Inflammation of the tissues around the eye.

periople (per'e-o-pl) [Gr. $\pi \epsilon \rho i$ around $+ \delta \pi \lambda o \nu$ hoof]. The smooth, shiny layer on the outer surface of the hoofs of animals.

perioptometry (per"e-op-tom'et-re) [Gr. $\pi\epsilon\rho l$ around $+\delta\pi\tau\delta s$ visible $+\mu\epsilon\tau\rho\rho\nu$ measure]. The measurement of the peripheral acuity of vision or of the limits of the visual field.

perioral (per-e-o'ral) [Gr. $\pi\epsilon\rho l$ around + L. os mouth]. Situated or occurring around the

periorbit (per-e-or'bit). Periorbita.

periorbita (per-e-or'bit-ah) [Gr. $\pi \epsilon \rho l$ around + L. or'bita orbit]. The periosteum of the eye-socket.

periorbital (per-e-or'bit-al). Situated around the eye-socket.

periorbititis periorbitis (per''e-or-bit-i'tis, per''-e-or-bi'tis). Inflammation of the periorbita.

periorchitis (per"e-or-ki'tis) [Gr. περί around + δρχις testis + -ιτις inflammation]. Inflammation of the tunica vaginalis testis. p. adhæsi'va, a variety in which the two layers of the tunica vaginalis are more or less adherent.

periost (per'e-ost). Same as periosteum.

periosteal (per-e-os'te-al). Pertaining to the periosteum.

periosteitis (per"e-os-te-i'tis). Same as periostitis. periosteodema (per-e-os"te-o-de'mah). Same as periosteo-edema.

periosteo-edema (per-e-os"te-o-e-de'mah). Edema of the periosteum.

periosteoma, periostoma (per"e-os-te-o'mah, per"e-os-to'mah). A morbid bony growth surrounding a bone.

periosteomedullitis, periostomedullitis (pere-os"te-o-med-ul-i'tis, per-e-os"to-med-ul-i'tis). Inflammation of the periosteum and the marrow.

periosteomyelitis (per-e-os"te-o-mi-e-li'tis) [Gr. $\pi\epsilon\rho l$ around $+ \delta\sigma\tau\dot{\epsilon}o\nu$ bone $+ \mu\dot{\nu}\epsilon\lambda$ os marrow + -ιτις inflammation]. Inflammation of the entire bone, including periosteum and marrow.

periosteophyte (per-e-os'te-o-fit) [periosteum + Gr. φυτόν growth]. A bony outgrowth on the periosteum.

periosteorrhaphy (per"e-os-te-or'af-e) [periosteum

+ Gr. sagn suture]. The suturing together of the margins of severed periosteum. periosteosis (per-e-os-te-o'sis). The development

of periosteomas.

periosteotome (per-e-os'te-o-tom) [Gr. περί around + δστέον bone + τέμνειν to cut]. An instrument for cutting the periosteum; also an instrument for separating the periosteum from the bone.

periosteotomy (per"e-os-te-ot'o-me) [Gr. περί around + δστέον bone + τομή a cut]. Surgical incision or slitting of the periosteum.

periosteous (per-e-os'te-us). Pertaining to or of the nature of periosteum.

periosteum (per-e-os'te-um) [Gr. περί around + δστέον bone]. The tough fibrous membrane surrounding a bone. It adheres to the surface of the bones, excepting at their cartilaginous extremities. It consists of two closely united layers, the outer one made up of connective tissue, with occasionally a few fat-cells; the inner one of fine elastic fibers, forming a dense network. p. alveola're [B N A], alveolar p., the periodontium. dental p. Same as pericementum.

periostitis (per"e-os-ti'tis). Inflammation of the The condition is generally chronic, periosteum. and is marked by tenderness and swelling of the bone and an aching pain. Acute periostitis is due to infection, and is characterized by diffuse suppuration, severe pain, constitutional symptoms, and usually results in necrosis. p. albumino'sa, albuminous p., a form accompanied by the exudation of a clear, albuminous liquid into a flattened cavity beneath the periosteum; called also serous abscess and periosteal ganglion. dental p., inflammation of the dental periosteum. dif-tuse p., a non-circumscribed periostitis of the long bones. hemorrhagic p., a form in which blood is extravasated beneath the periosteum. p. inter'na cra'nii, inflammation of the endocranium; external pachymeningitis. precocious p., syphilitic osteoperiostitis occurring as an early symptom.

periostoma (per-e-os-to'mah). Periosteoma.

periostomedullitis (per-e-os"to-med-u-li'tis). See periosteomedullitis.

periostosis (per"e-os-to'sis). A bony growth formed about a bone.

periostosteitis (per"e-os-tos-te-i'tis). Periostitis and osteitis occurring together.

periostotome (per-e-os'to-tom). Same as beriosteotome.

periostotomy (per"e-os-tot'o-me). Same as periosteotomv.

periotic (per-e-o'tik) [Gr. περί around + ους ear]. 1. Situated about the ear, especially the internal ear. 2. The petrous and mastoid portions of the temporal bone, at one stage a distinct bone.

periovaritis (per"e-o-var-i'tis). Same as *peri*oo phoritis.

periovular (per-e-o'vu-lar). Surrounding an ovum. peripachymeningitis (per-e-pak"e-men-in-ji'tis) [Gr. $\pi\epsilon\rho i$ around $+\pi\alpha\chi i$ s thick $+\mu\eta \nu_i \xi$ membrane]. Inflammation of the substance between the dura and the bone.

peripancreatic (per-e-pan-kre-at'ik). Surrounding the pancreas.

peripancreatitis (per-e-pan"kre-at-i'tis) [Gr. περί around $+ \pi \dot{\alpha} \gamma \kappa \rho \epsilon \alpha s$ pancreas]. Inflammation of tissues around the pancreas.

peripapillary (per-e-pap'il-a-re). Situated around the optic papilla.

peripatetic (per"e-pat-et'ik). Walking about, as, peripatetic typhoid.

peripenial (per-e-pe'ne-al). Around the penis.

peripericarditis (per"e-per-e-kar-di'tis). mation around the pericardium producing adhesions of the pericardium to the pleura and chest wall

periphacitis (per'e-fa-si'tis) [Gr. reol around +

φακός lens + -ιτις inflammation]. Inflammation of the capsule of the eye-lens.

periphakitis (per-e-fak-i'tis). Periphacitis.

peripharyngeal (per"e-far-in'je-al). Situated around the pharynx.

peripherad (per-if'er-ad). Toward the peripherv.

peripheral, peripheric (per-if'er-al, per-if'er-ik).

Pertaining to or situated at or near the periphery.

peripheraphose (per-if-er'af-oz). Any aphose originating in the peripheral ocular mechanism.

peripheric (per-if-er'ik). Peripheral.

peripherocentral (per-if"er-o-sen'tral). peripheral and central, but primarily or preponderatingly peripheral.

peripheroceptor (per-if"er-o-sep'tor). Any one of the receptors at the peripheral ends of the sensory peripheral neuron which receive the stimulus.

peripheromittor (per-if"er-o-mit'or). A terminal mittor placed in connection with the ceptor of a muscle-fiber or gland cell which transmits the impulse to the fiber or cell.

peripheroneural (per-if"er-o-nu'ral). Pertaining to the nerves situated at the surface of the body.

peripherophose (per-if'er-o-foz) [periphery phose]. Any phose originating in the eye or the optic nerve.

periphery (per-if'er-e) [Gr. περιφέρεια; περί around + φέρειν to bear]. The outward part or surface. periphlebitic (per"e-fleb-it'ik). Pertaining to periphlebitis.

periphlebitis (per"if-le-bi'tis) [Gr. $\pi \epsilon \rho l$ around + $\varphi \lambda \dot{\epsilon} \psi$ vein]. Inflammation of the tissues around φλέψ vein]. Inflammation of the tiss a vein, or of the external coat of a vein.

periphoria (per-if-o're-ah) [Gr. $\pi \epsilon \rho l$ around + φορός bearing]. Same as cyclophoria.

Periplaneta (per-e-plan-e'tah). A genus of roaches. **periplast** (perip-last) [Gr. περί around + πλάσσειν to mold]. The protoplasm within a cell and outside of the nucleus.

periplastic (per-e-plas'tik). Formed from or relating to the periplasm: said of flagella.

peripleural (per-e-plu'ral). Surrounding the pleura.

peripleuritis (per"e-plu-ri'tis) [Gr. $\pi \epsilon \rho l$ around + pleura]. Inflammation of the tissues between the pleura and the chest-wall.

periplocin (per-ip-lo'sin). A crystallizable glucosid, C₃₀H₄₈O₁₂, from *Perip'loca gra'ca*: it acts like digitalin as a heart tonic and slower of the pulse. Subcutaneous dose, $1\frac{1}{30}$ - $\frac{1}{66}$ gr. (0.0007-0.001 gm.).

peripneumonia (per"ip-nu-mo'ne-ah) [Gr. περι around + πνεύμων lung]. Pneumonia; also pleuropneumonia. p. no'tha, a variety of acute bronchitis simulating pneumonia; congestion of the lungs.

peripneumonitis (per-e-nu-mo-ni'tis). Peripneumonia.

peripolar (per-ip-o'lar). Situated about a pole or the poles.

periportal (per-ip-or'tal). Situated around the portal vein.

periproctic (per-e-prok'tik) [Gr. περί around + πρωκτός anus]. Situated around the anus.

periproctitis (per"e-prok-ti'tis) [Gr. περί around $+\pi\rho\omega\kappa\tau\dot{o}s$ anus]. Inflammation of the tissues surrounding the rectum and anus.

periprostatic (per"e-pros-tat'ik). Situated about the prostate.

periprostatitis (per"e-pros-ta-ti'tis). Inflammation of the tissues and structures around the prostate gland.

peripyema (per-e-pi-e'mah) [Gr.]. Suppuration surrounding a part, as a tooth.

peripylephlebitis (per"e-pi-le-fle-bi'tis) [Gr. **epl around + \(\psi \lambda \eta \text{gate} + \varphi \lambda \eta \text{vein} + - \text{oris inflamportal vein.

peripylic (per-e-pi'lik) [Gr. περί around + πύλη gate]. Around the portal vein.

peripyloric (per-e-pi-lor'ik). Around the pylorus. perirectal (per-e-rek'tal). Around the rectum.

perirectitis (per"e-rek-ti'tis). Same as periproctitis.

perirenal (per-e-re'nal) [Gr. $\pi \epsilon \rho l$ around + L. ren kidney]. Situated around a kidney.

perirhinal (per-e-ri'nal) [Gr. $\pi \epsilon \rho l$ around + δls nose]. Situated about the nose.

perisalpingitis (per"e-sal-pin-ji'tis) [Gr. περί around + σάλπιγξ tube]. Inflammation of the tissues and peritoneum around an oviduct.

erisalpingoövaritis (per"e-sal-ping"o-o-var-i'-tis). Inflammation resulting in adherent oviducts perisalpingoövaritis and ovaries.

perisalpinx (per-e-sal'pinks). The peritoneal cover of the upper border of the oviduct.

perisclerium (per-e-skle're-um) [Gr. περί around + σκληρός hard]. Fibrous tissue surrounding ossifying cartilage.

periscopic (per-is-kop'ik) [Gr. $\pi \epsilon \rho l$ around + σκοπείν to see]. Affording a wide range of vision.

perisigmoiditis (per"e-sig-moi-di'tis). Inflammation of the peritoneal covering of the sigmoid flexure.

perisinuitis (per"e-si-nu-i'tis). Inflammation of the tissues around a sinus.

perisinuous (per-is-in'u-us). Situated around a venous sinus.

perisinusitis (per-e-si-nu-si'tis). Same as perisinuitis.

perispermatitis (per"e-sper-mat-i'tis). Inflammation of the tissues about the spermatic cord. p. sero'sa, encysted hydrocele of the cord.

perisphere (per'e-sper). The outer region of the aster in nerve-cells

perisplanchnic (per-e-splank'nik) [Gr. περί around + σπλάγχνον viscus]. Around a viscus or the viscera.

perisplanchnitis (per'e-splank-ni'tis) tion around the viscera, perivisceritis.

perisplenic (per-e-splen'ik). Occurring around the spleen.

perisplenitis (per"is-ple-ni'tis) [Gr περί around + σπλήν spleen]. Inflammation of the peritoneal coat of the spleen and of the structures around p. cartilagin'ea, inflammatory overgrowth of the capsule of the spleen, causing a thickening of cartilaginous hardness.

perispondylic (per-e-spon-dil'ik). Around a vertebra.

perispondylitis (per"is-pon-dil-i'tis) [Gr. around + σπόνδυλος vertebra]. Inflammation of the parts around a vertebra.

Perisporiacea (per-e-spo-re-a'se-a). A family of the Ascomycetes including the penicillium and aspergillus molds.

perissad (per-is'ad). Any element or radical with an odd-numbered valence.

peristalsis (per-is-tal'sis) [Gr. περί around + στάλ-σις contraction]. The worm-like movement by which the alimentary canal propels its contents. It consists of a wave of contraction passing along the tube. A similar form of contraction is seen in other tubes that are provided with both longitudinal and circular muscular fibers. mass p., strong peristaltic movements, which last only a few seconds, but move the intestinal contents from reversed one section of the colon to another. p., that which impels the contents of the intestine cephalad.

peristaltic (per-is-tal'tik). Of the nature of peristalsis

peristaltin (per-e-stal'tin). A glucosid, C14H18O2, of cascara sagrada.

mation]. Inflammation of the tissue about the peristaphyline (per-is-taf'il-in) [Gr. περί around + σταφυλή uvula]. Situated around the uvula.

peristaphylitis (per"e-staf-il-i'tis). Inflammation of the tissues about the uvula.

peristole (per-is'to-le) [Gr. περί around + στέλλειν to place]. The capacity of the stomach wall to surround or grasp its contents following the ingestion of food.

peristolic (per-e-stol'ik). Pertaining to peristole.

peristoma (per-is'to-ma). Peristome.

peristomal, peristomatous (per'e-sto-mal, peris-tom'a-tus) [Gr. $\pi \epsilon \rho i$ around + $\sigma \tau \delta \mu \alpha$ mouth]. Around the mouth.

peristome (per'is-tom) [See peristomal]. A groove running from the cytosome in certain protozoa.

peristrumitis (per"e-stru-mi'tis). Inflammation extending from an inflamed goiter to the surrounding structures.

peristrumous (per-e-stru'mus). Around or near a goiter.

perisynovial (per"e-si-no'ye-al). Around a synovial structure.

perisystole (per-e-sis'to-le) [Gr. $\pi \in \mathcal{A}$ about + systole]. The pause after the diastole and before the systole.

perisystolic (per''e-sis-tol'ik). Presystolic.

peritectomy (per-it-ek'to-me) [Gr $\pi \epsilon \rho l$ around + έκτομή excision | Excision of a ring of conjunction around and very near the cornea, followed by cauterization of the trench thus made: done for pannus

peritendineum (per"e-ten-din'e-um). The sheath of a tendon.

peritendinitis (per"e-ten-din-i'tis). Inflammation of a tendon-sheath. p. sero'sa. Same as ganglion (2d def).

peritenon (per-e-te'non) [Gr. περi around + τενῶν tendon]. The connective-tissue structures associated with a tendon.

perithecium (per-ith-e'se-um) [Gr. περί around + θήκη cover]. A cup or flask-shaped envelope enclosing the fructification of certain fungi and molds.

perithelial (per-e-the'le-al). Pertaining to the perithelium.

perithelioma (per"e-the-le-o'mah). A tumor of the perithelium; a form of tumor appearing to spring from the adventitia of the blood-vessels, especially of the brain.

perithelium (per-e-the'le-um) [Gr. $\pi \epsilon \rho i$ around + $\theta \eta \lambda \dot{\eta}$ nipple]. The layer of cells and fibrils that surrounds the capillaries and smaller vessels. Eberth's p., a partial layer of cells on the external surface of the capillaries.

perithoracic (per"e-tho-ras'ik). Surrounding the thorax.

perithyreoiditis (per"e-thi-re-oi-di'tis). Perithyroiditis

perithyroiditis (per"e-thi-roid-i'tis). Inflammation of the capsule of the thyroid body.

peritomist (per-it'o-mist). 1. A circumciser. 2. A performer of peritomy of any kind.

peritomize (per-it'o-miz). To perform the operation of peritomy upon.

peritomy (per-it'o-me) [Gr. $\pi \epsilon \rho l$ around + $\tau \rho \mu \dot{\eta}$ cut]. 1. The treatment of pannus by the removal of a circular strip of the conjunctiva from around the cornea. 2. Circumcision.

peritoneal (per-it-o-ne'al). Pertaining to the peritoneum.

peritonealgia (per'it-o-ne-al'je-ah) [peritoneum + Gr. ἄλγος pain]. Pain in the peritoneum.

peritoneocentesis (per-it-o"ne-o-sen-te'sis) [peritoneum + Gr. κέντησις puncture]. Puncture of the peritoneal cavity for the purpose of obtaining fluid.

peritoneoclysis (per-it-o"ne-o-kli'sis). Injection of water or nutrient fluids into the peritoneal caveity in anemia or the algid stage of cholera (Sir B. W. Richardson, 1854).

peritoneomuscular (per-it-o-ne"o-mus'ku-lar).

Pertaining to or composed of peritoneum and muscle.

peritoneopathy (per-it-o-ne-op'ath-e) [peritoneum + Gr. πάθος disease]. Any disease of the peritoneum.

peritoneopericardial (per-it-o-ne"o-per-e-kar'-de-al). Pertaining to the peritoneum and pericardium.

peritoneopexy (per-it-o'ne-o-peks-e) [peritoneum + Gr. πηξιs fixation]. Fixation of the uterus by the vaginal route.

peritoneoplasty (per-it-o'ne-o-plas-te) [peritoneum + Gr. πλάσσειν to form]. The operation of covering abraded areas with peritoneum.

peritoneoscope (per-it-o'ne-o-skōp). An instrument for performing peritoneoscopy.

peritoneoscopy (per-it-o-ne-os'ko-pe) [peritoneum + Gr. σκοπεῖν to view]. Examination of the peritoneum by an instrument inserted through the abdominal wall.

peritoneotomy (per"it-o-ne-ot'o-me) [peritoneum + Gr. τομή cut]. Incision into the peritoneum.

peritoneum (per"it-o-ne'um) [L peritona'um; Gr. περιτόναιον, περί around + τείνειν to stretch]. The serous membrane which lines the abdominal walls (parietal p) and invests the contained viscera. It is a strong, colorless membrane, with a smooth surface, and forms a closed sac except in the female, in whom it is continuous with the mucous membrane of the fallopian tubes. parietal p., that which lines the abdominal and pel-vic walls and the under surface of the diaphragm. visceral p., that reflected at various places over the viscera, forming a complete covering for the stomach, spleen, liver, ascending portion of the duodenum, jejunum, ileum, transverse colon, sigmoid flexure, upper end of rectum, uterus, ovaries; it also partially covers the descending and transverse portions of the duodenum, the cecum, ascending and descending colon, the middle part of the rectum, the posterior wall of the bladder, and the upper portion of the vagina. The peritoneum serves to hold the viscera in position by its folds, some of which form the mesenteries, which connect portions of the intestine with the posterior abdominal wall, others, the omenta, folds attached to the stomach; and still others, the ligaments of the liver, spleen, stomach, kidneys, bladder, and uterus. The space between the visceral and parietal peritoneums is the peritoneal cavity, which consists of the pelvic peritoneal cavity below and the general peritoneal cavity above. The general peritoneal cavity cavity above. The general peritoneal cavity communicates by the foramen of Winslow with the cavity of the great omentum, which is also known as the lesser peritoneal cavity.

peritonism (per'it-o-nizm). A condition of shock simulating peritonitis, but without inflammation of the peritoneum.

peritonitis (per"it-o-ni'tis). Inflammation of the peritoneum; a condition marked by exudations in the peritoneum of serum, fibrin, cells, and pus. It is attended by abdominal pain and tenderness, constipation, vomiting, and moderate fever. adhesive p., that which is characterized by adhesions between the visceral and parietal layers. biliary p. See choleperitoneum. circumscribed p., that which is limited to a portion of the peritoneum. p. defor mans, chronic peritonitis producing shortening of the mesentery so that the intestines are drawn up in loops toward the spine. diaphragmatic p., that which affects the under, or peritoneal, surface of the diaphragm. diffuse p., general p., that which is not localized. encysted

peritonitis in which there is a collection of pus or serum inclosed by adhesions. fibrocaseous p., tubercular peritonitis with fibrous and caseous degeneration. general p., inflammation of the greater part of the peritoneum. hemorrhagic p., that which is attended with hemorrhagic effusion. localized p. Same as circumscribed p. pelvic p., perimetritis; peritonitis situated in the pelvis. puerperal p., that which occurs in childbed. septic p., that which is due to a pyogenic microorganism. serous p., that which is attended with a copious liquid exudation. silent p., acute peritonitis which causes sudden death without betraying its presence by any symptoms. terminal p., primary peritonitis in the late stages of a wasting disease. traumatic p., simple acute peritonitis due to traumatism or injury. tuberculous p., that which accompanies tuberculosis of the peritoneum.

peritonization (per"it-o-niz-a'shun). The operation of covering an injured surface of an abdominal organ with peritoneum; peritoneoplasty.

peritonize (per'it-o-nīz). To cover with peritoneum.

peritonsillar (per-e-ton'sil-ar). Situated around or near a tonsil.

peritonsillitis (per"it-on-sil-i'tis). Inflammation of the peritonsillar tissues.

peritracheal (per-e-tra'ke-al). Situated around the trachea.

Peritricha (per-it'rik-ah) [Gr. $\pi \epsilon \rho l$ around $+ \theta \rho l \xi$ hair]. A group of bacteria including those forms which are surrounded by flagella.

peritrichal, peritrichic, peritrichous (per-it'-rik-al, per-e-trik'ik, per-it'rik-us) [Gr. $\pi\epsilon\rho t$ around $+\theta\rho t\xi$ hair]. Having flagella distributed over the whole surface said of microorganisms.

peritrochanteric (per"e-tro-kan-ter'ik). Situated about a trochanter.

perityphlic (per-e-tif'lik) [Gr. περί around + τύφλον cecum]. Around the cecum.

perityphlitis (per"e-tif-li'tis) [Gr. περί around + τυφλόs blind + -ιτις inflammation]. Inflammation of the peritoneum surrounding the cecum; appendicitis. **p. actinomycot'ica**, actinomycosis whose principal seat is pericecal.

periumbilical (per"e-um-bil'ik-al). Situated around the umbilicus.

periungual (per-e-ung'-wal). Around the nail.

periureteric (per''e-u-re-ter'ik). About the

periureteritis (per-e-u"re-ter-i'tis) [Gr. $\pi\epsilon\rho l$ around $+ ο b \rho \eta \tau \dot{\eta} \rho$ ureter $+ \iota \iota \tau \iota s$ inflammation]. Inflammation of the tissues around a ureter.

periurethral (per"e-u-re'thral). Occurring around the urethra.

periurethritis (per"e-u-re-thri'tis) [Gr. περί around + οὐρήθρα urethra + -ιτις inflammation]. Inflammation of the tissues around the urethra.

periuterine (per-e-u'ter-in). Situated around the uterus.

periuvular (per-e-u'vu-lar). Around the uvula. perivaginal (per-e-vaj'in-al). Around the vagina. perivaginitis (per''e-vaj-in-i'tis). Same as pericolpitis.

perivascular (per-e-vas'ku-lar). Situated around a vessel.

perivasculitis (per"e-vas-ku-li'tis). Inflammation of a perivascular sheath.

perivenous (per-e-ve'nus). Around a vein.

a viscus or the viscera.

perivertebral (per-e-ver'te-bral). Surrounding a vertebra.

perivesical (per-e-ves'ik-al) [Gr. $\pi\epsilon\rho l$ around + L. vesi'ca bladder]. Occurring around the bladder. **perivisceral** (per-e-vis'er-al). Occurring around

perivisceritis (per"e-vis-er-i'tis). Inflammation around a viscus or around the viscera.

perivitelline (per-e-vit-el'In)., Situated around a vitellus or yolk.

perixenitis (per-e-zen-i'tis) [Gr. περί around + ξένος strange]. Inflammation occurring around a foreign body in a tissue or organ.

perkinism, perkinsism (per'kin-izm, per'kin-sizm) [Elisha *Perkins*, of Norwich, Connecticut, 1740-1799]. An obsolete form of metallotherapy; the therapeutic use of metallic tractors.

Perkins's tractor. See perkinism and tractor.

perièche (per-lesh') [Fr.]. A contagious microbic disease attacking the labial commissures of children causing them to lick their lips and resulting in a thickening and desquamation of the epithelium at the corners of the mouth. Sometimes smarting fissures are formed.

Perles's bodies and test (per'laz) [Max Perles, German pathologist, 1843-1881]. See body, tests. Perlia's nucleus (per'le-ahz) [Richard Perlia, con-

temporary German oculist]. See nucleus.

perlingual (per-ling'wal) [L per through + lin'gua tongue]. Through the tongue. The term is applied to the administration of medicines which are resorbed from the surface of the tongue.

perloid (per'loid). A proprietary form of capsule.Perlsucht (perl'sookt) [German]. Tuberculosis of the mesentery and peritoneum in cattle

permanganate (per-man'gan-āt). Any salt of permanganic acid (q. v. under acid).

permeable (per'mē-ah-bl) [L. per through + mea're to pass]. Not impassable; pervious; that may be traversed.

permeability (per-me-a-bil'it-e) The property or state of being permeable **capillary p.**, in the reaction to non-specific protein therapy the endothelial cells of the capillaries become more permeable

permutit (per-mu'tit). An exchange silicate. A glass made by fusing felspar, kaolin, pearl ash, and soda. When crushed and placed in water it removes the calcum and magnesium from the water and gives up, "exchanges," sodium, thus softening the water. Its activity can be renewed by treating it with 10 per cent. sodium chlorid.

pernasal (per-na'sal) [L. per through + na'sus nose]. Performed through the nose.

pernicious (per-nish'us) [L. pernicio'sus]. Tending to a fatal issue.

pernio (per'ne-o). Latin for chilblain.

pero (pe'ro) {L. "a boot"]. The external layer of the olfactory lobe of the brain, giving rise to the olfactory nerves.

perobrachius (pe-ro-bra'ke-us) [Gr. $\pi\eta\rho\delta$ s maimed $+\beta\rho\alpha\chi i\omega\nu$ arm]. A fetus with deformed feet and arms.

perocephalus (pe-ro-sef'al-us) [Gr. $\pi\eta\rho\delta$ s maimed + $\kappa\epsilon\varphi\alpha\lambda\dot{\eta}$ head]. A monster-fetus with a deformed head.

perochirus (pe-ro-ki'rus) [Gr. $\pi\eta\rho\delta$ s maimed + $\chi\epsilon l\rho$ hand]. A fetus with malformed hands.

perocormus (pe-ro-kor'mus) [Gr. πηρός maimed + κορμός body]. Perosomus

perodactylus (pe-ro-dak'til-us) [Gr. πηρόs maimed + δάκτυλος finger]. A fetus with deformity of fingers or toes, or both, especially absence of one or more digits

perogen (per'o-jen). A preparation for making an oxygen bath, consisting of a catalyzer and sodium perborate wrapped separately. When the two substances are mixed in the bath water, oxygen is liberated.

peromelus (pe-rom'el-us) [Gr. πηρός maimed + μέλος limb]. A fetus with malformed limbs.

peronæus, peroneus (per-o-ne'us) [Gr. περόνη pin]. See muscles, table of.

peronarthrosis (per"o-nar-thro'sis) [Gr. περόνη pin + ἄρθρον joint]. An articulation in which the

surfaces are convex in one direction and concave in the other.

perone (per-o'ne) [Gr. περόνη brooch]. The fibula. **peroneal** (per-o-ne'al) [Gr. περόνη pin]. Pertaining to the fibula.

peroneotibial (per-o-ne-o-tib'e-al). Pertaining to the fibula and tibia.

peronin (per'o-nin). A patented white powder, C₀H₃CH₂.C(OH).C₁₇H₁₇NO.HCl, a hydrochlorid of the benzyl ester of morphin. It is a narcotic, nearly free from the harmful effects of morphin: used in irritative coughs, as those of phthisis and bronchitis. Dose, \(\frac{1}{2}\to \text{gr.}\) (0.022\to 0.066 gm.).

Peronospora (per-o-nos'po-rah) [Gr. περόνη point + σπόρος seed]. A genus of mildew fungi. P. ferra'ni and P. lu'tea have been supposed to cause yellow fever.

pero-olfactorius (pe"ro-ol-fak-to're-us). The outer part of the olfactory bulb.

Per. op. emet. Abbreviation for I. perac'ta operatio'ne emct'icus, when the action of the emetic is over.

peropus (pe'ro-pus) [Gr. $\pi\eta\rho\dot{o}s$ maimed + $\pi\sigma\dot{b}s$ foot]. A fetus with malformed limbs.

peroral (per-o'ral) [L per through + os, oris, the mouth]. Performed through the mouth.

per os (per os) [L.]. By the mouth.

peroscols (per-os'kolz). An antiseptic liquid preparation of hydrogen dioxid, salicylic acid, etc.

perosomus (pe-ro-so'mus) [Gr. $\pi\eta\rho\delta$ s maimed + $\sigma\hat{\omega}\mu\alpha$ body]. A monster-fetus with a body or trunk greatly deformed.

perosseous (per-os'e-us) [L. per through + os bone].
Transmitted through bone.

peroxid (per-oks'id). That oxid of any element which contains more oxygen than any other.

peroxidase (per-oks'id-ās). A substance (possibly an enzyme) which decomposes organic peroxids.

peroxol (per-oks'ol). Any compound of hydrogen dioxid with such a principle as menthol (forming menthoxol) or camphor (camphoxol).

peroxydase (per-ok'sid-ās). Same as peroxidase.

peroxydasis (per-ok-si-da'sis). The action produced by peroxydase.

peroxydol (per-ok'se-dol). Sodium perborate.

perplication (per-plik-a'shun) [L. per through + plica're to fold]. The closure of a divided vessel by drawing its bleeding end through an incision in its own wall

perpona (per-pe'nah). A proprietary analgesic and antirheumatic agent; a white powder, said to be a coal-tar derivative. Dose, 5-10 gr. (0.3-0.6 gm.).

per primam (per pri'mam). See per primam intentionem.

per primam intentionem (per pri'mam in-tenshe-o'nem). Latin for by first intention.

per rectum (per rek'tum) [L.]. Through or by the rectum.

persalt (per'sawlt) A salt of a peracid; a salt the acid radical of which has a higher valence than the protosalt

per saltum (per sal'tum) [L.]. By leaps.

per secundam (per se-kun'dam). See per secundam intentionem.

per secundam intentionem (per se-kun'dam in-ten-she-o'nem). Latin for by second intention.

persensitized (per-sen'sit-īzd). See under cell.

perseveration (per-sev-er-a'shun). Persistence of one reply or one idea in response to various questions.

persio (per'se-o). Same as cudbear.

persodin (per-so'din). A proprietary preparation of sodium persulphate containing free sulphuric acid.

personal equation (per'so-nal). See equation.

personality (per-son-al'it-e). That which constitutes, distinguishes, and characterizes a person.

disordered p., a mental condition in which the
patient thinks that he is some other person than
himself. multiple p., a mental state in which the
patient seems to have a double or multiple consciousness, such personalities being usually separated from one another by complete amnesia.

psychopathic p., a hereditary tendency to
mental disorder. shut-in p., a personality which habitually responds inadequately to normal social appeal.

perspira'tio insensib'ilis. Insensible perspiration. See under perspiration

perspiration (per-spir-a'shun) [L. perspira're to breathe through]. 1. Sweating; the functional excretion of sweat. 2. Sweat. insensible p., those gaseous emanations from the body which do not appear in the form of sensible sweat or moisture, such as gaseous productions arising from the lungs in exhalation and from the skin by vaporization. sensible p., perspiration which appears as moisture upon the skin

perstriction (per-strik'shun). Ligation or compression of a blood-vessel for the arrest of hemorrhage.

persulphate (per-sul'fāt). A sulphate which contains more sulphuric acid than the ordinary sulphate.

persulphid (per-sul'fid). A sulphid which contains more sulphur than the ordinary sulphid.

per tertiam intentionem (per ter'she-am inten-she-o'nem). Latin for by third intention.

Perthes's disease (pār'tēz) [G. Perthes, German physician, 1869-1927]. Osteochondritis deformans iuvenalis.

Pertik's diverticulum (per'tiks) [Otto Pertik, Hungarian physician, 1852-1913]. See diverticu-

pertonal (per-to'nal). Acetyl-amido-ethoxy-benzene, recommended as an antipyretic less toxic and more effective than acetphenetidin.

per tubam (per tu'bam) [L.]. Through a tube: chiefly used of the eustachian tube.

pertussin (per-tus'in). A remedy for whoopingcough, asthma, bronchitis, etc.: a syrup prepared from the fluidextract of thyme.

pertussis (per-tus'is) [L. per intensive + tus'sis cough]. Same as whooping-cough.

peruanum (per-u-a'num). An element said to have

been discovered in 1899 in a mineral from Peru.

perugen (per'u-jen). A proprietary preparation resembling balsam of Peru in appearance and action.

benzoate, the most active element of balsam of peruol (per'u-ol). Peru: used in scabies.

peruscabin (per-u-ska'bin). Benzoic acid benzyl ester, a crystalline compound, C₆H₅.CH₂.O.CO.C₆-H₅: used along with 3 parts of castor oil in scabies. peruvian bark (pe-ru've-an). See Cinchona. p.

balsam. See balsam of Peru.

peruvin (pe-ru'vin). Cinnamic alcohol derived from peruvian balsam.

perversion (per-ver'shun) [L. per through + ver'sio a turning]. A turning aside from the normal course; a morbid alteration of function which may occur in emotional, intellectual, or volitional fields. sexual p., any abnormality of the sexual instinct. A person with abnormal sexual instincts is called a sexual pervert.

pervert (per'vert). A perverted person; especially a sexual p., or a person who indulges in unnatural sexual acts.

per vi'as natura'les. Latin for by the natural ways.

per vigilium (per vij-il'e-um) [L.]. Sleeplessness; insomnia.

pervious (per've-us) [L. per'vius]. Permeable; not impassable; that may be traversed.

pes (pēz), pl. pe'des. 1. Latin for foot. 2. The lower or anterior part of the crus cerebri. See basis pedunculi. p. accesso'rius, the eminentia collateralis. p. anseri'nus, the goose's foot; the neus. See talipes calcaneus. p. ca'vus, hollow foot; excessive curvature or hollowness of the sole of the foot. p. corvi'nus, the crow's foot; a set of wrinkles at the outer canthus of the eye. p. equi'nus. See talipes equinus. p. febric'itans, elephantiasis. p. gi'gas, macropodia. p. hippocam'pi, the lower end of the hippocampus major. p. lemnis'ci, a bundle of aberrant pyramidal fibers associated with the mesial fillet. p. olfacto'rius, the inner layer of the olfactory bulb. p. pedun'culi. See basis pedunculi. p. pla'nus, flat-foot; undue flatness of the sole and arch of the foot. p. va'rus. See talipes varus.

pessary (pes'ar-e) [L. pessa'rium]. 1. An instrument placed in the vagina to support the uterus or rectum. 2. A medicated vaginal suppository. cup-p., a pessary the top of which has a cup-like shape to fit over the os uteri Gariel's p., a hollow rubber pessary which can be inflated. Gehrung p., a pessary for cystocele, being a Hodge pessary bent on itself so as to form a double horseshoe, one lever being a little shorter than the other. Hodge's p., a pessary for retrodeviations of the uterus. lever-p., a pessary which acts on the principle of the lever. Menge's p., a ringpessary with a fixed cross-bar holding a detachable stem. ring-p., a round or ring-shaped pessary. stem-p., a pessary with a stem for introduction into the uterine canal. Zwanck's p., a pessary with two wings.

pessima (pes'im-ah). A skin disease characterized by papules and bordered with inflammatory patches.

pessimism (pes'im-izm) [L. pes'simus worst]. A morbid or insane disposition to put the worst construction upon everything. therapeutic p., a tendency to undervalue the curative properties of drugs.

pessulum, pessum, pessus (pes'u-lum, pes'sum, pes'us) [Gr. πεσσόν, πεσσός pessary]. Latin names for a pessary.

pest (pest). Same as plague. chicken p., fowl scratching p., Anjeszky's disease. olague. Siberian p., anthrax.

peste-boba (pes'ta-bo'bah). See Trypanosoma venezuelense.

pest-house (pest'hows). A hospital for persons with contagious diseases.

pesticemia, pesticemia (pes-tis-e'me-ah) [L. pes'tis place + Gr. alua blood] 1. The presence of plague germs (Pasteurella pestis) in the blood. 2. Septicemic plague.

pestiferous (pes-tif'er-us) [L. pestif'erus; pes'tis plague + fer're to bear]. Causing or propagating a pestilence.

pestilence (pes'til-ens) [L. pestilen'tia]. Any virulent contagious or infectious epidemic disease; also an epidemic of such a disease.

pestilential (pes-til-en'shal). Of the nature of a pestilence; producing an epidemic disease.

pestis (pes'tis). Latin for plague. p. ma'jor, oriental plague of the usual form. p. mi'nor, a mild form of oriental plague.

pestle (pes'l) [L. pestil'lum]. An instrument for pounding drugs in a mortar.

pestology (pes-tol'o-je). The scientific study of pests.

petalobacteria (pet"al-o-bak-te're-ah) [Gr. πέτα-λον leaf + bacteria]. Bacteria which become so aggregated as to form thin pellicles.

petalococcus (pet"al-o-kok'us) [Gr. πέταλον leaf + κόκκος berry]. Any representative of a group of cocci which become so aggregated as to form thin pellicles.

petechia (pe-te'ke-ah) [L.]. A small spot formed by the effusion of blood, as in typhus or pur-

pura. The spots of typhoid are also sometimes called petechiæ.

petechial (pe-te'ke-al). Characterized by or of the nature of petechiæ.

Peters's ovum (pa'terz) [H. Peters, obstetrician in Viennal. See ovum.

Petersen's bag (pa'ter-senz) [F. Petersen, surgeon in Kiel, born 1845]. See bag.

petiole (pet'e-ol) [L. peti'olus, dim. of pes foot]. A stem, stalk, or pedicle.

petit mal (pet-e-mahl') [Fr. "little illness"]. A relatively mild form of epileptic attack. See epilepsy.

Petit's canal, triangle (ptez) [1. François Pourfour du Petit, French anatomist and surgeon, 1664-1741. 2. Jean Louis Petit, French surgeon, 1674-1750]. See canal, triangle.

petits maux (pa-tet' mo') [Fr. "little pains"]. The slight pains preluding the beginning of labor.

petrifaction (pet-rif-ak'shun) [L. pe'tra stone + fa'cere to make]. Conversion into a stone-like substance.

Petri's dishes (pa'trēz) [R. J. Petri, German bacteriologist, 1852–1922]. Shallow glass dishes for use in bacteriologic work.

pétrissage (pa-trēs-sahzh') [Fr.]. A kneading action in massage.

petroccipital (pet-rok-sip'et-al).
 Petro-occipital
 petrochondrin (pet-ro-kon'drin).
 A proprietary preparation of mineral oil and Irish moss. used in constipation

petrogen (pet'ro-jen). A proprietary mineral oil preparation which forms an emulsion with water and is used as a vehicle for various remedies.

petrogenous (pet-roj'en-us) [L. pe'tra rock + Gr. γενναν to producel. Derived from rocks; a term applied to the hypothesis that endemic goiter is caused by waters impregnated from certain geologic formations.

petrohol (pet'ro-hol). A trade name for isopropyl alcohol.

petrolagar (pet-röl-ag'ar). A mixture of ό5 c.c. of liquid petrolatum, 10 gm. of agar, 1 gm. of sodium benzoate, 2 gm of sugar and water to make 100 c.c. It is given to promote peristalsis. Dose, 4 fl.dr. (15 c c)

petrolate (pet'ro-lat). Same as petrolatum.

petrolatoma (pet-ro-la-to'mah). A tumor developing consecutive to injection of liquid petrolatum.

petrolatum (pet-ro-la'tum) [L.]. A yellowish ointment-like substance, a mixture of hydrocarbons of the methane series obtained by distilling off the more volatile portions of petroleum. It is used as a basis for ointments and as a soothing application to the skin. Called also parafin, cosmolin, vaselin, and petroleum jelly. p. al'-bum, white petrolatum. Petrolatum which by care in preparation is kept white in color. p. liq'uidum, liquid parafin. p. mol'le, p. spis'sum, soft petrolatum: petroleum jelly, duroleum, vaselin, or cosmolin. p. sapona'tum liq'uidum, a preparation made by shaking together liquid parafin 10 parts, oleic acid 5 parts, and spirit of ammonia 2½ parts: used as a solvent for iodin, phenol, etc. Called also liquid petrox.

p. sapona'tum spis'sum, a mixture of oleic acid 5 parts, spirit of ammonia 2½ parts, and enough parafin to make 100 parts: used as a vehicle for iodin, phenol, etc. Called also solid petrox.

petroleum (pe-tro'le-um) [L. pe'tra stone + o'leum oil]. A thick natural oil obtained from wells and springs especially dug in the earth. It consists of a mixture of various hydrocarbons of the paraffin and olefin series. It has been used as an expectorant, diaphoretic, and vermifuge; also in skin diseases, etc. Dose, 5-10 min. (0.33-0.66 c.c.).

petrolin (pet'ro-lin). A variety of paraffin from petroleum. petrolization (pet-rol-i-za'shun). The spreading of petroleum on water for the purpose of destroying mosquito larvæ therein.

petromastoid (pe-tro-mas'toid) [petrous + mastoid]. 1. Pertaining to the petrous and mastoid bones. 2. The periotic bone.

petromortis (pet-ro-mor'tis). See garage poisoning, under poisoning.

petro-occipital (pe"tro-ok-sip"it-al). Pertaining to the petrous and occipital bones.

petropharyngeus (pet"ro-far-in'je-us). An occasional muscle arising from the lower surface of the petrous portion of the temporal bone and inserted into the pharynx.

petrosa (pe-tro'sah) [L. "stony"]. The petrous portion of the temporal bone.

petrosal (pe-tro'sal). Pertaining to the petrous portion of the temporal bone.

petrosalpingostaphylinus (pe"tro-sal-pin"gostaf-il-i'nus) [Gr. πέτρα stone (petrous) + σάλ- $\pi ι γ ξ$ tube + σταφυλή uvula]. The levator palati muscle.

Petroselinum (pe"tro-sel-i'num) [L; Gr. πέτρα stone + σέλινον parsley]. A genus of umbelliferous plants. See parsley.

petrosomastoid (pe-tro-so-mas'toid). Same as petromastoid.

petrosphenoid (pe-tro-sfë'noid). Pertaining to the sphenoid bone and the petrous portion of the temporal bone.

petrosphere (pet'ro-sfēr). The solid structure of the earth as distinguished from the atmosphere and the aquasphere.

petrosquamosal, petrosquamous (pe"tro-skwamo'sal, pe-tro-skwa'mus). Pertaining to the petrous and the squamous portions of the temporal bone.

petrostaphylinus (pet"ro-staf-il-i'nus). The levator palati. See muscles, table of.

petrosulfol (pe-tro-sul'fol). A proprietary artificial ichthyol prepared from petroleum and sulphur. In the treatment of skin diseases its action is similar to that of ichthyol.

petrous (pe'trus) [L. petro'sus]. Resembling a rock or stone. p. bone, the petrosa, or petrous portion of the temporal bone.

petrox (pe'trox). See petrolatum saponatum.

petroxolin (pet-rok'so-lin). Petrolatum saponatum. **Petruschky's litmus whey** (pe-trush'kéz)
[Johann Petruschky, German bacteriologist, born 1863]. See whey.

Pettenkofer's test (pet'en-kof-erz) [Max von Pettenkofer, chemist in Munich, 1818-1901]. See tests.

Petzetaki's reaction or test (pet-za-tah'kēz). See under tests.

Peucedanum (pu-sed'a-num). See oroselinum.

pexin (peks'in) [Gr. $\pi \hat{\eta} \xi \iota s$ fixation]. Same as lab.

pexinogen (peks-in'o-jen) [pexin + Gr. γεν to produce]. Same as renninogen.

Peyer's glands, patches (pi'erz) [Johann Conrad Peyer, Swiss anatomist, 1653-1712]. See gland, patch.

Peyrot's thorax (pa-roz') [Jean Joseph Peyrot, surgeon in Paris, 1843-1918]. See thorax.

Pfannenstiel's incision (fan'en-stēl) [gynecologist in Breslau, 1862-1909]. See incision.

Pfaundler's reaction (pfownd'lerz) [Meinhard Pfaundler, German physician, born 1872]. Mandelbaum's reaction. See under reaction.

Pfeifer's disease (fi'ferz) [Emil Pfeifer, contemporary German physician]. See disease.

Pfeifferella (fi-fer-el'ah) [named after Richard F. J. Pfeiffer]. A genus of Mycobacteriaceæ. They are non-motile, Gram-negative rods and produce a characteristically honey-like growth on potato.

P. mal'lei, the organism causing glanders in horses and in man. It is a small rod with rounded ends which is usually identified by the Strauss reaction, q. v., and by agglutination.

Pfeisfer's bacillus, phenomenon (si'ferz) [Richard Friedrich Johannes Pfeisfer, bacteriologist in Breslau, born 1858]. See bacillus and phenomenon.

Pforderpest (pfer'der-pest) [Ger.]. See horse-sickness.

Pflüger's law (fle'gerz) [Eduard Friedrich Wilhelm Pflüger, physiologist in Bonn, 1829–1910]. See law.

Pfropfhebephrenia (pfropf'he-be-fre'ne-ah) [Ger.]. See grafted hebephrenia, under hebephrenia.

Pfuhl's sign (pfoolz) [Edward *Pfull*, German physician, born 1852]. See under sign.

P. G. Abbreviation of *Pharmacopaia Germanica*, German Pharmacopeia.

PH or **PH**. The symbol commonly used in expressing hydrogen-ion concentration. It signifies the logarithm of the reciprocal of the hydrogen-ion concentration expressed as a power of ten.

phacitis (fa-si'tis). Same as phakitis.

phaco-anaphylaxis (fa"ko-an-if-al-ak'sis) [Gr. φακόs lens + anaphylaxis]. Anaphylaxis or hypersensitiveness to protein of the crystalline lens.

phacocele (fa'ko-sēl) [Gr. φακός lens + κήλη hernia].
The escape of the eye-lens from its proper place;
a displaced eye-lens.

phacocyst (fa'ko-sist) [Gr. φακός lens + κύστις bladder]. The capsule of the lens.

phacocystectomy (fak"o-sis-tek'to-me) [Gr. φ ακόs lens + κύστις bladder + ἐκτομή excision]. Excision of a portion of the capsule of the lens for cataract.

phacocystitis (fak"o-sis-ti'tis) [Gr. φακός lens + κύστις bladder + -ιτις inflammation]. Inflammation of the capsule of the crystalline lens.

phaco-eresis (fak-o-er-e'sis) [Gr. φακός lens + ερησις removal]. Removal of the lens in cataract by means of suction with an instrument known as eresiphake Called also Barraquer's method

phacoglaucoma (fa"ko-glaw-ko'mah) [Gr. φακόs lens + glaucoma]. The structural changes in the lens produced by glaucoma.

phacoid (fak'oid) [Gr φακός lens + είδος form]. Shaped like a lens or a lentil.

phacoidoscope (fa-koid'os-kōp) [Gr. φακόs lens + εἶδος form + σκοπεῖν to see]. Same as phacoscope.
 phacolysis (fa-kol'is-is). Same as phakolysis.

phacomalacia (fa"ko-mal-a'she-ah) [Gr. φακός lens + μαλακία softness]. Softening of the lens; a soft cataract.

phacometachoresis (fa''ko-met-ah-ko-re'sis) [Gr. φακόs lens + μεταχώρησις displacement]. Displacement of the eye-lens.

phacometecesis (fa"ko-met-es-e'sis) [Gr. φακόs lentil + μετοίκησις migration]. Same as phaco-metachoresis.

phacometer (fak-om'et-er) [Gr. φακός lens + μέτρον measure]. An instrument for measuring the refractive power of lenses.

phacoplanesis (fa"ko-plan-e'sis) [Gr. φακός lens + πλάνησις wandering]. Wandering lens; preternatural mobility of the eye-lens.

phacosclerosis (fa"ko-skle-ro'sis) [Gr. φακός lens + σκληρός hard]. Hardening of the eye-lens; a hard cataract.

phacoscope (fa'ko-skōp) [Gr. φακόs lens + σκοπείν to view]. An instrument for viewing accommodative changes of the eye-lens.

phacoscotasmus (fa"ko-sko-taz'mus) [Gr. φ ακός lens + σκοτασμός a clouding]. The clouding of the lens of the eye.

phacotherapy (fak-o-ther'ap-e) [Gr. φακόs lens + θεραπεία treatment]. Heliotherapy.

phacoxymase (fak-o-zi'mās). A ferment from an aqueous extract of the crystalline lens.

phæochrome (fe-o'krōm). See pheochrome.

phagedena, phagedæna (faj-e-de'nah) [Gr. φαγέ δαινα; φαγέιν to eat]. Rapidly spreading and sloughing ulceration. sloughing p., hospita gangrene. tropical p., an infectious phagedent occurring in the tropics in repeated attacks. It sometimes results in a chronic atonic ulcer.

phagedenic (faj-e-den'ik) [Gr. φαγεδαινικόs]. Rap idly spreading and eating; like phagedena.

phagedenoma, phagedænoma (faj"ed-en-o mah) [Gr. φαγεδαίνωμα]. A phagedenic ulcer.

phagmesis (fag-me'sis). Presence of feathers in stead of hairs.

phagocaryosis (fag"o-kar-e-o'sis). Phagokaryosis phagocytable (fag'o-sīt-ab-l). Capable of being subject to phagocytosis.

phagocyte (fag'o-sit) [Gr. φαγεῖν to eat + κότο cell]. Any cell that destroys microörganisms o harmful cells by enveloping and absorbing them. Phagocytes are either fixed (endothelial cells, etc. or free (leukocytes). The two forms of leukocyte which are phagocytic are the large lymphocyte (macrophage) and the polymorphonuclear leukocyte (microphage). educated p. See educated cor puscle, under corpuscle endothelial p. See endotheliocyte. globuliferous p., one which takes up the blood-corpuscles. melaniferous p., one which takes up the blood-pigment.

phagocytic (fag-o-sit'ik). Pertaining to or produced by phagocytes.

phagocytin (fag-o-si'tin). A proprietary prepara tion of nucleic acid employed in septic and venerea infections (Rosenberg).

phagocytoblast (fag-o-si'to-blast) [phagocyte + Gr. βλαστός germ]. A cell which gives rise to phagocytes.

phagocytolysis (fag-o-si-tol'is-is). Destruction of phagocytes; also destruction of the phagocytic power of leukocytes.

phagocytolytic (fag-o-si-to-lit'ik). Pertaining to phagocytolysis.

phagocytose (fag-o-si'tōs). To envelop and de stroy bacteria and other foreign bodies.

phagocytosis (fag"o-si-to'sis). The destruction of microorganisms and injurious cells by phago cytes. induced p., phagocytosis aided by sub jecting bacteria to the action of blood-serum spontaneous p., phagocytosis of bacteria taking place in an indifferent medium.

phagodynamometer (fag"o-di-nam-om'et-er) [Gr φαγεῖν to eat + δύναμις force + μέτρον measure. An apparatus for measuring the force exerted in chewing food.

phagokaryosis (fag''o-kar-e-o'sis) [Gr. φαγείν to eat + κάρνον nucleus]. Phagocytic action on the part of the cell-nucleus.

phagolysis (fag-ol'is-is) [Gr. $\varphi \alpha \gamma \epsilon \hat{\imath} \nu$ to eat $+ \lambda \psi \sigma \iota s$ solution]. The destruction of phagocytes by bacteria.

phagolytic (fag-o-lit'ik). Pertaining to phagolysis phagomania (fag-o-ma'ne-ah) [Gr. φαγεῖν to eat + μανία madness]. Insanity characterized by in satiable hunger.

phagopyrism, phagopyrismus (fag-o-pi'rizm fag''o-pi-riz'mus) [Gr. $\varphi \alpha \gamma \epsilon \hat{\nu} \nu$ to eat $+\pi \hat{\nu} \rho$ fever] A condition of hypersensitiveness to certain foods such as pork, buckwheat, oysters, cheese, etc. causing symptoms of mild poisoning on the inges tion of such foods.

phagopyrosis (fag"o-pi-ro'sis). Pyrosis follow ing eating.

phagotherapy (fag-o-ther'ap-e) [Gr. $\varphi \alpha \gamma \epsilon \hat{\imath} \nu$ to eat $+ \theta \epsilon \rho \alpha \pi \epsilon \hat{\imath} \alpha$ treatment]. Treatment by feeding.

phagotoxin (fag-o-tok'sin). A proprietary satu rated aqueous solution of oxygen: used in treating burns, boils, etc.

phakitis (fa-ki'tis) [Gr. φακόs lens + -ιτιs inflammation]. Inflammation of the eye-lens.

phakolysis (fak-ol'is-is) [Gr. φακόs lens + λύσις destruction]. Discission of the crystalline lens, followed by extraction. An operation for the relief of high myopia.

phakometer (fak-om'et-er). See phacometer.

phakoscope (fa'ko-skōp) [Gr. φακόs lentil +σκοπεῖν to view]. See phacoscope.

phalacrosis (fal-ak-ro'sis) [Gr. φαλάκρωσις baldness] Same as alopecia.

phalangeal (fa-lan'je-al). Pertaining to a phalanx. phalanges (fa-lan'jez). Plural of phalanx. Deiters' p., modified cuticular plates forming the ends of sustentacular epithelial cells of the reticular membrane of the organ of Corti.

phalangette (fal-an-jet'). The distal phalanx.
drop p., dropping of the distal phalanx and loss of power to extend it when the hand is prone.

phalangitis (fal-an-ji'tis) [Gr. φάλαγξ phalanx].
Inflammation of one or more phalanges.

phalangization (fal-an-jiz-a'shun). The formation of a stump which will serve as a finger.

phalanx (fa'lanks), pl. phalan'ges [Gr. φάλαγξ]. 1. Any bone of a finger or toe. 2. Any one of a set of plates disposed in rows which makes up the lamina reticularis. ungual p., the terminal phalanx of a finger or toe.

phallalgia (fal-al'je-ah)[Gr. φαλλός penis + ἄλγος pain]. Pain in the penis.

phallaneurysm (fal-an'u-rizm) [Gr. φαλλός penis + ἀνεύρυσμα aneurysm]. Aneurysm of the penis.

phallic (fal'ik) [Gr. φαλλικόs]. Pertaining to the penis.

phalliform (fal'if-orm) [phallus + L. for'ma form]. Shaped like the phallus or penis.

phallin (fal'in) A deadly toxalbumin from Amanita phallor'des. It breaks up red blood-corpuscles and expels the blood-serum from the bowels. There is no known antidote except the transfusion of fresh blood or of a salt solution.

phallitis (fal-i'tis) [Gr. φαλλός penis + -ιτις inflammation] Inflammation of the penis.

phallocampsis (fal-o-kamp'sis) [Gr. φαλλός penis + κάμψις bending]. Curvature of the penis when erect

phallocrypsis (fal-o-krip'sis) [Gr. φαλλός penis + κρύψις hiding] Retraction of the penis.

phallodynia (fal-o-din'e-ah) [Gr. φαλλός penis + δδύνη pain]. Pain in the penis.

phalloid (fal'oid) [Gr. φαλλός penis + είδος form] Resembling a penis.

phalloneus (fal-ong'kus) [Gr. φαλλός penis + δγκος tumor]. A morbid swelling or tumor of the penis.

phalloplasty (fal'o-plas-te) [Gr. φ αλλός penis + π λάσσε ω to shape]. The plastic surgery of the penis.

phallorrhagia (fal-o-ra'je-ah) [Gr. φαλλός penis + ρηγνύναι to burst forth]. Hemorrhage from the penis.

phallus (fal'us) [Gr. φαλλός]. The penis.

phan (fan) [Gr. φανερός evident]. The external manifestation or expression of a physical character. Cf gen.

phanerogenetic, phanerogenic (fan"er-o-jenet'ik, -jen'ik) [Gr. φανερός evident + γεννᾶν to cause] Having a known cause. Cf. cryptogenetic.

phaneromania (fan"er-o-ma'ne-ah) [Gr. $\varphi a \nu \epsilon \rho b s$ evident $+ \mu a \nu l a$ madness]. An obsession of abnormal and persistent attention to some exterior growth, as a wart; nail-biting is an example.

phaneroscope (fan-er'os-kōp) [Gr. φανερός evident + σκοπεῖν to see]. An instrument for illuminating the skin and rendering it translucent.

phaneroscopy (fan-er-os'ko-pe). The examination of the skin by the phaneroscope. phanerosis (fan-er-o'sis) [Gr. φανερός evident].

The act of becoming visible; the setting free of a substance which has previously been undemonstrable, owing to its being held in combination.

phanic (fan'ik) [Gr. φανείν to appear]. Apparent, visible.

phantasia (fan-ta'ze-ah) [Gr. φαντασία appearance]. An imaginary or illusory appearance.

phantasm (fan'tazm) [Gr. φάντασμα appearance]. An optical illusion; a vision resulting from disease.

phantasmatology (fan"taz-mat-ol'o-je) [Gr. φ άν- τ ασμα phantom + λόγος discourse]. The sum of what is known regarding apparitions and phantasms.

phantasmatomoria (fan-taz"mat-o-mo're-ah) [Gr. φάντασμα image + μορία folly]. Childishness or dementia with absurd delusions.

phantasmology (fan-taz-mol'o-je). Phantasmatology.

phantasmoscopia (fan"taz-mo-sko'pe-ah) [Gr. φάντασμα image + σκοπεῖν to view]. The seeing of insane or delirious phantasms.

phantom (fan'tum) [Gr. φάντασμα]. 1. A phantasm. 2. A model of the body or of a part thereof. **Schultze's p.**, a model of the female pelvis used in teaching obstetrics

phaochrome (fa'o-krom) See pheochrome.

phar., pharm. Abbreviations for pharmacy, pharmaceutic, and pharmacopeia.

Phar. B. Abbreviation for *Pharmaciae Baccalaureus*, Bachelor of Pharmacy.

Phar. C. Abbreviation for Pharmaceutical Chemist.
Phar. D. Abbreviation for Pharmaciæ Doctor,
Doctor of Pharmacy.

Phar. G. Abbreviation for Graduate in Pharmacy. Phar. M. Abbreviation for Pharmacia Magister,

Master of Pharmacy.

pharmacal (far'mak-al). Pertaining to pharmacy.

pharmaceutic, pharmaceutical (far-mas-u'tik, far-mas-u'tik-al) [Gr. φαρμακευτικόs]. Pertaining to pharmacy or to drugs.

pharmaceutics (far-mas-u'tiks). The art of the apothecary.

pharmaceutist (far-mas-u'tist). A pharmacist. pharmacist (far'mas-ist). An apothecary or drug-

pharmacist (far mas-ist). An apothecary or druggist.

pharmacodiagnosis (far"mak-o-di-ag-no'sis) [Gr. φάρμακον drug + diagnosis]. The employment of drugs in the diagnosis of disease.

pharmacodynamic (far'mak-o-di-nam'ik) [Gr. φάρμακον medicine + δύναμις power]. Pertaining to the effects of medicine.

pharmacodynamics (far"mak-o-di-nam'iks). The study of the action of medicines.

pharmaco-endocrinology (far"mak-o-en-dokrin-ol'o-je). The study of the influence of drugs on the activity of the ductless glands.

pharmacognostics (far-mak-og-nos'tiks). Pharmacognosy.

pharmacognosy (far-mak-og'no-se) [Gr. φάρμακον medicine + γνῶσις knowledge]. The study of crude medicines.

pharmacography (far-mak-og'rah-fe) [Gr. φάρμακον drug + γράφειν to write]. An account or written description of drugs.

pharmacologist (far-mak-ol'o-jist). One who makes a study of drugs, their nature and action.

pharmacology (far-mak-ol'o-je) [Gr. φάρμακον medicine + λόγος discourse]. The sum of knowledge regarding drugs; as now used the term is restricted to the study of the action of drugs, and in this sense it has the same meaning as pharmacodynamics.

pharmacomania (far"mak-o-ma'ne-ah) [Gr. φάρμακον drug + μανία madness]. Insane fondness for taking or administering medicines.

pharmaco-oryctology (far"mak-o-or-ik-tol'o-je) [Gr. φάρμακον drug + δρυκτός mineral + λόγος treatise]. Pharmaceutic mineralogy; the study of mineral drugs.

pharmacopedia, pharmacopedics (far"mak-ope'de-ah, far"mak-o-pe'diks) [Gr. φάρμακον drug + παιδεία instruction]. The science which deals with the properties and preparations of drugs.

pharmacopeia, pharmacopeia (far"mak-o-pe'-ah) [Gr. φάρμακον medicine + ποιεῖν to make]. An authoritative treatise on drugs and their preparations. The United States Pharmacopeia is revised and issued every ten years, under the supervision of a national committee.

pharmacopeial (far'mak-o-pe'al). Pertaining to or recognized by the pharmacopeia.

pharmacophobia (far''mak-o-fo'be-ah) [Gr. φάρμακον drug + φόβος fear]. Insane dread of drugs or medicines.

pharmacopsychosis (far'mak-o-si-ko'sis) [Gr. φάρμακον drug + psychosis]. Southard's term for any one of the group of mental diseases due to alcohol, drugs, or poisons.

pharmacotherapy (far"mak-o-ther'ap-e) [Gr. φάρμακον drug + θεραπεία treatment]. The treatment of disease by medicines.

pharmacy (far'mas-e) [Gr. φάρμακον medicine]. 1.
The art of preparing and compounding medicines.
2. An apothecary's shop. chemic p. Same as pharmaceutic chemistry. galenic p., the pharmacy of vegetable medicines.

pharyngalgia (far-in-gal'je-ah) [Gr. φάρυγξ pharynx + ἄλγος pain]. Pain in the pharynx.

pharyngeal (far-in'je-al) [L. pharyn'geus]. Pertaining to the pharynx.

pharyngectomy (far-in-jek'to-me) [Gr. φάρυγξ pharynx + ἐκτομή excision]. Surgical removal of a part of the pharynx.

pharyngemphraxis (far"in-jem-fraks'is) [Gr. φάρυγξ pharynx + ξμφραξιs stoppage]. Obstruction of the pharynx.

pharyngismus (far-in-jiz'mus). Muscular spasm of the pharynx.

pharyngitic (far-in-jit'ik). Affected with or of the nature of pharyngitis.

pharyngitis (far-in-ji'tis) [Gr. φάρυγξ pharynx]. Inflammation of the pharynx. acute p., that which is due to cold and exposure. It is attended with pain in the throat, especially on swallowing, dryness, followed by moisture, of the pharynx, congestion of the mucous membrane, and fever. Called also catarrhal p. atrophic p., a chronic pharyngitis which leads to wasting of the submucous tissue. catarrhal p. See acute p. chronic p., that which results from repeated acute attacks or is due to tuberculosis or syphilis. It is attended with excessive secretion, and in the severe ulcerated varieties by pain and dysphagia. croupous p., that which has the false membrane of true croup. diphtheric p., diphtheria of the pharynx. follicular p., glandular p., clergyman's sore throat with enlargement of the pharyngeal glands. gangrenous p., a form characterized by gangrenous patches. granular p., a chronic variety in which the mucous membrane becomes granular. p. herpet'ica, membranous or aphthous sore throat. A form of acute pharyngitis characterized by the formation of vesicles, which give place to excoriations. hypertrophic p., a chronic form which leads to thickening of the submucous tissues. membranous p., pharyngitis with a fibrinous exudate leading to the formation of a false membrane. phlegmonous p., acute parenchymatous tonsillitis attended with the formation of abscesses, p. sic'ca, an atrophic pharyngitis in which the throat becomes dry. p. ulcero'sa, ulcerated or hospital sore throat; pharyngitis ascribed to the breathing of vitiated air. It is attended with

fever, pain, and prostration, and the formation of ulcers covered by a yellow, membrane-like deposit.

pharyngo-amygdalitis (far-ing"go-am-ig-dal-i'tis). Inflammation of the pharynx and tonsil.

pharyngocele (far-in'go-sēl) [Gr. φάρυγξ pharynx + κήλη hernia]. Hernial protrusion of a part of the pharynx; a hernial pouch or other cystic deformity of the pharynx.

pharyngoceratosis (far-ing''go-ser-at-o'sis). Pharyngokeratosis.

pharyngodynia (far-in-go-din'e-ah) [Gr. φάρυγξ pharynx + όδυνη pain]. Pain in the pharynx.

pharyngo-epiglottic, pharyngo-epiglottidean (far-ing"o-ep-e-glot'ik, -glot-id'e-an). Pertaining to the pharynx and epiglottis.

pharyngo-esophageal (far-ing"go-e-sof-a'je-al). Pertaining to the pharynx and esophagus.

pharyngoglossal (far-in-go-glos'al). Pertaining to the pharynx and the tongue.

pharyngoglossus (far-in-go-glos'us). The muscular fibers from the superior constrictor of the pharynx to the tongue.

pharyngokeratosis (far-in"go-ker-at-o'sis). Keratosis of the pharynx.

pharyngolaryngeal (far-in"go-lar-in'je-al). Pertaining to the pharynx and the larynx.

pharyngolaryngitis (far-in''go-lar-in-ji'tis) [Gr. φ άρυγξ pharynx + λάρυγξ larynx]. Inflammation of the pharynx and the larynx.

pharyngolith (far-in'go-lith) [Gr. φάρυγξ pharynx + λίθος stone]. A concretion in the walls of the pharynx.

pharyngology (far-in-gol'o-je) [Gr. φάρυγξ pharynx + λόγος treatise]. The sum of what is known regarding the pharynx.

pharyngomaxillary (far-in"go-maks'il-a-re). Pertaining to the pharynx and the jaw.

pharyngomycosis (far-in"go-mi-ko'sis) [Gr. φάρυγξ pharynx + μύκης fungus]. Any bacterial disease of the pharynx.

pharyngonasal (far-in-go-na'sal). Pertaining to the pharynx and the nose.

pharyngo-oral (far-in-go-o'ral). Pertaining to the pharynx and the mouth.

pharyngopalatine (far-ing-o-pal'at-in). Pertaining to the pharynx and the palate.

pharyngoparalysis (far-ing"o-par-al'is-is) [phar-ynx + paralysis]. Paralysis of the pharyngeal muscles.

pharyngopathy (far-in-gop'ath-e) [pharynx + Gr. πάθος disease]. Disease of the pharynx.

pharyngoperistole (far-in-go-per-is'to-le) [pharynx + Gr. περιστολή a drawing out]. Narrowing of the pharynx.

pharyngoplasty (far-ing'o-plas-te) [pharynx + Gr. πλάσσειν to form]. Plastic operation on the pharynx.

pharyngoplegia (far"in-go-ple'je-ah) [Gr. φάρυγξ pharynx + πληγή stroke]. Paralysis of the muscles of the pharynx.

pharyngorhinitis (far-in"go-ri-ni'tis). Inflammation of the nasopharynx.

pharyngorhinoscopy (far-in"go-ri-nos'ko-pe). Examination of the nasopharynx and posterior nares with the rhinoscope.

pharyngoscleroma (far-in"go-skle-ro'mah). Scleroma of the pharynx.

pharyngoscope (far-in'go-skôp) [Gr. φάρυγξ pharynx + σκοπεῖν to see]. An instrument for inspecting the pharynx.

pharyngoscopy (far-in-gos'ko-pe). The examination of the pharynx.

pharyngospasm (far-in'go-spazm) [Gr. φάρυγξ pharynx + σπασμός spasm]. Spasm of the pharyngeal muscles.

pharyngostaphylinus (far-in"go-staf-il-i'nus). The palatopharyngeus muscle.

pharyngostenosis (far-ing"o-sten-o'sis) [pharynx + Gr. στένωσις narrowing]. Narrowing of the lumen of the pharynx.

pharyngotherapy (far-in-go-ther'ap-e) [pharynx + therapy]. The treatment of pharyngeal disorders, and especially the irrigation of the nasopharynx in infectious diseases.

pharyngotome (far-in'go-tōm) [Gr. φάρυγξ phar-ynx + τέμνειν to cut]. A cutting instrument used in pharyngeal surgery.

pharyngotomy (far-in-got'o-me) [Gr. φάρυγξ pharynx + τέμνεν to cut]. Surgical incision of the pharynx. external p., pharyngotomy done from the outside. internal p., that which is performed from within the pharynx. lateral p., the opening of the pharynx from one side. subhyoid p., section of the larynx through the thyrohyoid membrane.

pharyngotonsillitis (far-in"go-ton-sil-i'tis). Inflammation of the pharynx and the tonsil.

pharyngotyphoid (far-in-go-ti'foid). Enteric fever with angina and sore patches on the tonsils.

pharyngoxerosis (far-in"go-ze-ro'sis) [Gr. φάρυγξ pharynx + ξηρός dry]. Dryness of the pharynx.

pharynx (far'inks) [Gr. φάρυγξ pharynx]. The musculomembranous sac between the mouth and nares and the esophagus. It is continuous below with the esophagus, and above it communicates with the larynx, mouth, nasal passages, and eustachian tubes. The part above the soft palate is the nasopharynx, and communicates with the posterior nares and the eustachian tube. The lower portion consists of two sections—the oropharynx, which communicates with the mouth, and the laryngopharynx, which opens into the larynx and esophagus. The posterior cavity of the pharynx is designated the retropharynx. The pharynx is lined by mucous membrane containing ciliated epithelium in the nasopharynx, and with squamous epithelium below. Outside of this is a fibrous or cellular coat inclosed by a muscular layer made up of the stylopharyngeus and the pharyngeal constrictor muscles.

phase (faz). 1 The view that a thing presents to the eye. 2. In physical chemistry, any aspect of a substance which is homogeneous in physical state and percentage composition, e. g., ice and steam as phases of water. In heterogeneous chemical systems, phases are separated by surfaces of discontinuity; e. g., oil and water in contact.

apophylactic p., negative phase. continuous p. Same as dispersion medium. See medium. disperse p., the internal or discontinuous portion of a colloid system. It is an-Called alogous to the solute in a solution. also internal p. external p. Same as dispersion' medium. See under medium. internal internal p. Same as disperse p p. of meditation, the time elapsing between the occurrence of the injury and the development of tremor in a traumatic neurosis. miotic p., that stage in karyokinesis in which the reduction of the m karyokinesis in which the reduction of the chromosomes occurs. Called also reduction p. motofacient p. See motofacient. negative p., the initial lowering of the opsonic index following an injection of vaccine or bacterin. non-motofacient p. See motofacient. Nonne-Apelt p. See Nonne-Apelt reaction, under reaction. tion. positive p., the rise above unity in the opsonic index which follows the negative phase. postmeiotic p., the stage following the reduction of the chromosomes in karyokinesis. reduction p. See miotic p. synaptic p., synapsis.

phaselin (fas'e-lin). A medicine derived from two species of *Phase'olus*; digestive, stimulant, and soothing: used externally and internally.

phaseolin (fa-se'o-lin). A protein from the kidneybean. phaseolunatin (fa-se-o-lu'na-tin). A bitter glucosid, C₁₀H₁₇O₆N, found in the lima bean (*Phase-olus lunatus*).

phase-rule. See under rule.

phasin, phasine (fa'sin). Any one of a group of nitrogenous substances found in seeds, bark, and other plant tissues, which agglutinate red bloodcorpuscles.

phatne (fat'ne). A tooth socket.

phatnoma (fat-no'mah), pl phatno'mata [Gr. φάτ-νωμα]. A tooth-socket.

phatnorrhagia (fat-no-ra'je-ah) [Gr. φάτνη tooth socket + δαγία hemorrhage]. Hemorrhage from a tooth socket.

phatnorrhea (fat-no-re'ah) [Gr. φάτνη tooth socket + ροιά flow]. Pyorrhea alveolaris.

Ph.B. Abbreviation for British Pharmacopaia.

pheasant's eye. A common name for the plant Adonis vernalis. See Adonis.

Ph.G. Abbreviation for Graduate in Pharmacy and German Pharmacopæia.

phecin (fe'sin) Sulphate of the dihydrate of benzene, C₀H₄(OH)₂SO₄: it is antiseptic, and is used in diseases of the urinary tract.

phediuretin (fed"i-u-re'tin). Same as pheduretin.
pheduretin (fed-u-re'tin). A diuretic and anodyne phenol preparation. Dose, 5-15 gr. (0.33-1 gm.).

phellandrene (fel-an'drēn). A liquid hydrocarbon, C₁₀H₁₀, occurring in fennel oil, elemi oil, the oil of water-hemlock, and Australian eucalyptus.

phellandrium (fel-an'dre-um). The fruit of P. aquat'icum; also its homeopathic preparations.

Phelps's operation (felps) [Abel Mix Phelps, surgeon in New York, 1851-1902]. See operation.

phen-. A prefix indicating derivation from benzene.

phenacain (fen-ak-a'in). Holocain hydrochlorid, ethemyl-paradiethoxy-diphenyl-amidin hydrochlorid, CH₃ C(N.C₆H₄ O.C₂H₅).(NH C₆H₄.O.C₂-H₅).HClH₂O, a local anesthetic used like cocain in a 1 per cent. aqueous solution, especially in eye operations.

phenacetein (fen-as-et-e'in). Same as phenacetolin. phenacetin (fe-nas'et-in). A crystalline, antipyretic, analgesic, and antirheumatic remedy, acetaminophenetole, CH₃ CO NH.CeH₄O.C₂H₅, or acetphenetidin. It is nearly insoluble in water, and is used in fevers, especially typhoid fever, influenza, rheumatic fever, and the fever of pneumonia and phthisis; also in neuralgias of all kinds. Dose, 5-15 gr. (0.333-1 gm.).

phenacetinum (fe-nas-et-i'num). Phenacetin.

phenacetolin (fen-as-et'o-lin). A red powder, C₁₆H₁₂O₂ used as an indicator. It has a PH range of 5 to 6, being yellow at 5 and red at 6.

phenacodin (fen-ak-o'din). A sedative or head-ache powder, compounded of phenacetin, caffein-codein, and guarana (Fuchs, 1903).

phenacylidin (fe-nas-il'id-in). An antipyretic agent, C₀H₄(OC₂H₅)NH.CH₂CO.C₀H₅: for use chiefly in veterinary medicine.

phenadul (fen'ad-ul). A proprietary analgesic and antiseptic.

phenakistoscope (fe-nak-is'to-skōp) [Gr. φενακίστης deceiver + σκοπεῖν to view]. Same as stroboscope.

phenalgene (fe-nal'jēn). A proprietary analgesic preparation of acetanilid.

phenalgin (fe-nal'jin). A coal-tar product, ammoniophenylacetamid, an antipyretic and hypnotic vascular stimulant.

phenalin (fen'ah-lin). A proprietary preparation of phenolphthalein in tablet form: used as a cathartic.
 phenamin (fen'am-in). Phenocoll.

phenandyne (fen-an'din). A non-irritating and non-escharotic preparation of phenol: used like lysol.

phenanthrene (fe-nan'thren). A colorless, crystalline hydrocarbon, (C₆H₄.CH)₂, obtained by distilling certain mercury ores and by passing the vapors of certain benzene compounds through a red-hot tube.

phenantipyrin (fe"nan-te-pi"rin). An antipyretic recommended for typhoid fever, rheumatism, and pneumonia.

phenarsenamin (fen-ar-sen'am-in). A Canadian make of arsphenamin.

phenate (fe'nat). Any salt of phenic acid; a carbolate.

phenatol (fen'at-ol). Phenol-ethyl-ether, C₆H₆.O.-C₂H₅, an oily liquid: analgesic and antipyretic.

phenatrocin (fe-nat'ro-sin). A proprietary analgesic and antiseptic preparation.

phenazone (fen'az-on). Same as antipyrin.

phenegol (fen-e'gol). The mercuric potassium salt of nitroparaphenolsulfonic acid, NO₂.O. C₆H₄.SO₂.-OK.HgOK.SO₂.C₆H₄.O.NO₂; a reddish-brown powder, antiseptic and emetic.

phenethylol (fen-eth'il-ol). Same as benzyl carbinol.

phenetidin (fe-net'id-in). A substance, the ethyl ester of para-aminophenol, NH₂.C₆H₄.OC₂H₅: used in preparing phenacetin. It often appears in the urine after the administration of phenacetin.

phenetidinuria (fe-net"id-in-u're-ah). The presence of phenetidin in the urine.

phenetol (fen'et-ol). Ethyl phenate; an oily liquid, C₆H₅O.C₂H₅.

phenetsal (fe-net'sal). Salophen.

phengophobia (fen-go-fo'be-ah) [Gr. φέγγος light + φόβος fear]. Morbid intolerance or dread of light.

phenic acid (fe'nik). Carbolic acid. See acid.
phenicate (fen'e-kāt). To charge with phenic acid, or phenol.

phenidin (fen'id-in). Same as phenacetin.

phenin (fe'nin). Same as phenacetin.

phenixin, phonixin (fe-niks'in). See carbon tetrachlorid.

phenmethylol (fen-meth'il-ol). Benzyl alcohol. See under alcohol.

phenobarbital (fe-no-bar'bit-al). Phenylethylbarbituric acid or phenylethylmalonylurea, C₆H₅-(C₂H₅).C(CO.NH)₂CO, a white colorless substance: used as a hypnotic in nervous insomnia and states of nervous excitement and as a sedative in epilepsy. Dose, ½-5 gr. (0.03-0.3 gm). Called also luminal.

phenobromate (fe-no-bro'māt). A proprietary phenol and bromin preparation: used in dysmenorrhea.

phenoco (fe'no-ko). A mixture of creosote and higher phenol homologues in soap solution: used as a germicide and antiseptic.

phenocoll (fe'no-kol) [L. phenocol'lum]. Aminophenacetin; an antipyretic and analgesic substance, C₂H₆O.C₆H₄.NH.CO.CH₂.NH₂.H₂O, from coal-tar. Dose of the hydrochlorid, 10-15 gr. (0.66-1 gm.). p. acetate, a salt in bulky needles; well suited for hypodermic use. p. carbonate, a crystalline powder, C₆H₄(OC₂H₆)NH.CO:CH₂NH₂CO₂: antiseptic and antipyretic. p. hydrochlorid, a salt in colorless needles, C₆H₄(OC₂H₆)NH.COCH₂NH₂.HCl: antipyretic, antiseptic, and analgesic. Dose, 5-15 gr. (0.3-1 gm.). p. salicylate. Same as salocoll.

phenocollum (fe-no-kol'um). Latin for phenocoll.

phenocreosote (fe-no-kre'o-sōt). A name for various preparations of creosote and carbolic acid.

phenodin (fe'no-din) [Gr. φοινώδης blood-red]. Hematin.

phenoiodin (fe-no-i'o-din). A preparation of iodin and phenol used internally in septic conditions, such as puerperal sepsis and pneumonia. phenol (fe'nol). 1. Carbolic acid. See under acid
2. Any hydroxyl derivative from a carbocyclic compound in which the hydroxyl is united directly
OH

to a ring carbon atom, as . p. bismuth

bismuth carbolate, $C_6H_6O.Bi(OH)_2$. **p. camphor**, a mixture of phenol and camphor in variou proportions: antiseptic and germicide. Used fo a local anesthetic in toothache. **p. diiodid**, a red dish-violet antiseptic powder, $C_6H_4I_2.OH$: used a a wound dressing. **p. liquefac'tum**, an aque ous solution of phenol containing 88 per cent **monobromo-p.**, a violet colored, strong smell ing, oily fluid, $C_6H_4Br.OH$: antiseptic. **orthomonochloro-p.**, a colorless liquid, $C_6H_4Cl.OH$ (2:1): an antiseptic, useful in skin diseases **paramonochloro-p.**, a crystalline antiseptic $C_6H_4Cl.OH$ (4.1). **paramitro p.**, an indicator $NO_2.C_6H_4.OH$, used in the determination of hy drogen-ion concentration. It has a PH range o 5-7. **p. red**, an indicator, phenolsulphone phthalein, q. v., used in the determination of hy drogen-ion concentration. It has a PH range o 6.8 to 8.4, being yellow at 6.8 and red at 8.4. **p** salicylate, salol. **p.** sulphonephthalein See phenolsulphonephthalein.

phenolase (fe'nol-ās). A ferment which oxidize phenols and aromatic amins.

phenolate (fe'nol-āt). A compound of a pheno with a metal in which the hydrogen of the hydroxy is replaced by a univalent metal.

phenolated (fe'no-la-ted). Charged with pheno phenolax (fe'no-laks). A proprietary preparation c phenolphthalein: used as a palatable cathartic.

phenoleum (fe-no'le-um). A proprietary antiser tic and germicide preparation.

phenolic (fe-nol'ik). Pertaining to or derived fror phenol.

phenolid (fen'o-lid). A compound said to contai acetanilid and sodium bicarbonate or sodiur salicylate. Dose, 5-10 gr. (0.333-0.666 gm.).

phenolin (fen'o-lin). An antiseptic solution c cresol in potassium soap.

phenolization (fen-ol-iz-a'shun). Treatment c infected wounds by subjecting them to the energetic action of strong carbolic acid.

phenologist, phænologist (fe-nol'o-jist). An en pert or specialist in phenology.

phenology, phænology (fe-nol'o-je). The stud of the effects of climate upon the life and healt of living organisms.

phenololipoid (fe-nol-o-li'poid). A compound c phenol with a lipoid, such as cholesterin wit camphor as the connecting link. It is believed t combine the parasitotropic power of phenol and the antitoxic power of cholesterin and yet to be fre from the organotropic action of phenol.

phenolphthalein (fe-nol-thal'e-in). A condensa tion product of phenol and phthalic anhydrid. It sodium salt is C₆H₄OH.C(C₆H₄O).C₆H₄COONa It is used as an indicator with a P_B range of 8 to 10, being colorless at 8 3 and red at 10; it also used as a purgative in 7-gr. (0.5 gm.) doses p. sodium ricinate, a yellowish antiseptic and rubefacient. p. sulphoricinate, a yellowish antiseptic fluid: used in tuberculosis of the throa and nose.

phenolquinin (fe-nol-kwin'in). Quinin carbolate phenolsulphonephthalein (fe"nol-sul-fon-thal' e-in). A condensation product of phenol and ortho sulpho-benzoic acid, C₆H₄(SO₃).C(C₆H₄OH)₂. It is an indicator and the mother of indicators. It monosodium salt, (C₆H₄OH)₂C.C₆H₄.SO₂ONa, a red, crystalline powder, is used as a test for the secreting power of the kidney. After hypodermic injection it appears in the urine in from ten to fifteen minutes in normal conditions; delay beyond such time indicates disorder of renal function Called also thenal red

phenolsulphonic acid (fe-nol-sul-fon'ik). Aseptol.

phenoltetrachlorphthalein (fe"nol-tet-rah-klor-tha'le-in). A coal-tar derivative: used as a purgative by subcutaneous injection and as a diagnostic agent for hepatic function intravenously. See under tests.

phenoltetraiodophthalein (fe"nol-tet"rah-i"o-do-thal'e-in). A coal-tar derivative used in cholecystography.

phenomenon (fe-nom'en-on) [L. phænom'enon; Gr. φαινόμενον thing seen]. Any remarkable Gr. φαινόμενον thing seen]. Any remarkable appearance; any sign or objective symptom. arm p. Same as Pool's p. (2d def.). p. of Arthus, the subcutaneous tissues of the rabbit can, by repeated injections of horse serum, be sensitized and thus made to react so as to cause their destruction, the rest of the body meanwhile showing no increase of sensitiveness. Aschner's p., slowing of the pulse following pressure on the eyeball: it is indicative of cardiac vagus irritability. Aubert's p., by an optic illusion, when the head is turned toward one side a vertical line appears to incline toward the other side. Babinski's p., extension and spreading in place of flexion of the toes when the sole is excited: it is characteristic of hemiplegia due to a lesion in the pyramidal tract, or of the anterolateral portions of the spinal cord. **Bab**inski's combined flexion p. See Babinski's sign (4), under sign. Becker's p., pulsation of the retinal arteries in exophthalmic goiter. Bell's p., an outward and upward rolling of the eyeball on the attempt to close the eye. it occurs on the affected side in peripheral facial (Bell's) paralysis. blanching p. See Schultz-Charlton p. Bordet's p. Sce serum-test, under tests. Bordet-Gengou p. See fixation of complement. cervicolumbar p., sensations in the neck associated with a lesion in the lower part of the spinal cord; or weakness of the lower limbs on movement of the neck when a lesion exists in the upper part of the cord. **chameleon** p., the assumption of a green color by a potato-culture of *Bacillus pyo*cyancus at the point where touched by a platinum wire. cogwheel p., when a hypertonic muscle is passively stretched it resists, and this resistance sometimes takes the form of an regular jerkiness; called also Negro's p p., when pure neon is inclosed in a glass tube with a globule of mercury and shaken it glows with a bright, orange-red color, and when the globule rolls it appears to be followed by a flame. **Danysz's p.**, decrease of the neutralizing influence of an antitoxin when a toxin is added to it in divided portions instead of all at once. **Déjerine-Lichtheim p.**, in subcortain tical motor aphasia, while the patient cannot speak he can indicate with his fingers the number of syllables in a word. **dental p.**, thermal and tactile sensations in the gums with toothache, produced by repeated faradic stimulation of hyperesthetic lines on the body (Calligaris). **Deny-Leclef p.,** phagocytosis taking place in a test-tube on mixing therein leukocytes, bacteria, and their immune serum. d'Herelle's p. See Twort-d'Herelle p. diaphragm p., diaphragmatic p., the movement of the diaphragm as seen through the walls of the body; its variations have a certain diagnostic value. Called also phrenic phenomenon and phrenic wave. **Doppler's p.**, the pitch of a whistle on a rapidly moving body, like a locomotive, is higher when the body is approaching the listener. Duckworth's p., arrest of breathing before stoppage of the heart's action in certain fatal brain affections. Eisenberg's p., with increasing concentration of the agglutinins added to a bacterial emulsion the absolute absorption by the bacteria rises, while the coefficient of absorption falls. **Erb's p.** See *Erb's sign* (1), under sign. Erben's p., temporary slowness of the pulse on stooping or sitting down: said to characterize certain cases of neurasthenia. face-p., facia'lis p.

Same as Chvostek's sign, under sign. Tahraeus p. Same as erythrocyte sedimentation reaction, under reaction. finger p. See Souque's p. Triedreich's p., the percussion sound over a cavity in the lung is raised on deep inspiration.

Galassi's pupillary p. Same as Westphal-Pillz p. Gartner's p., the degree of fulness of the veins of the arm as it is raised to varying heights indicates the degree of pressure in the right auricle. **Gengou-Moreschi p.**, complement-fixation test for the differentiation of human from animal blood. **Grasset's p., Grasset-Graussel p.**, inability of a patient to raise both legs at the same time, though he can do either separately: seen in incomplete organic hemiplegia. Hapke's p., unusually prominent presentation of the parietal bone of the head of the first one of twins. Hata p., increase in severity of an infectious disease when a small dose of a chemotherapeutic remedy is given. d'Herelle's p. See Twort-d'Herelle p. Hering's p., a faint murmur heard with the stethoscope over the lower end of the sternum for a short time after death. hip-flexion p., in paraplegia, when the patient attempts to rise from a lying position or when he lies down, he first flexes the hip of the paralyzed side hip-p., Joffroy's reflex. See under reflex. Hochsinger's p., pressure on the inner side of the biceps muscle produces closure of the fist in tetany. **Holmes's p.** See rebound p. **Hunt's para**doxical p., in dystonia musculorum deformans, if the examiner attempts forcible plantar flexion of the foot which is in dorsal spasm there is produced increase of the dorsal spasm, but if the patient is ordered to extend the foot he will perform plantar flexion. jaw-winking p., raising of the upper eyelid when the jaw is pressed downward, and slight ptosis when the mouth is closed. **knee p**., the patellar tendon reflex. **Koch's p**., the sudden collapse of tuberculous animals when a fresh culture of tubercle bacilli is injected within the peritoneum. The exudate that forms contains lymphocytes almost exclusively. Kohnstamm's p. See after-movement. Kühne's muscular p. Same as Porret's p. log-p. See Schlesinger's sign, under sign. Leichtenstern's p. See Leichtenstern's sign, under sign. Litten's diaphragm-p., a movable horizontal depression on the lower part of the sides of the thorax, seen in respiration. Lust's p., abduction with dorsal flexion of the foot on tapping the external popliteal nerve just below the head of the fibula. indicative of spasmophilia. metallic p. See under sound and tinkling. Mills-Reincke p., the mortality from all diseases decreases as a result of water purification. mouth See lip reflex, under reflex. muscle-p., the tendency of striated muscle to contract in hard lumps upon tapping; this condition was frequently seen in overexerted soldiers in the late war. Nasaroff's p., gradual decrease in the difference between the rectal temperature before and after the bath, seen after repeated cold baths. Negro's p. See cogwheel p. Neisser-Doering p., suppression of the normal hemolytic action of human serum due to the presence of some antihemolytic substance; sometimes seen in renal cirrhosis and arteriosclerosis. Noissor-Wechs-berg p. See deviation of complement. or-bicularis p. Same as Westphal-Piltz p. Osler's p., agglutination of the platelets of blood directly after it is withdrawn from the circudirectly after it is withdrawn from the circu-lation. palmoplantar p., a yellowish dis-coloration of parts of the palms and soles in typhoid fever; Filipovicz's sign. paradoxical diaphragm p. Same as Litten's diaphragm p. paradoxical p. of dystonia. See Hun's paradoxical p. paradoxical pupil p. Same as Westphal-Pilts p. peroneal-nerve p. Same as Lust's p. Pfeiffer's p., cholera vibrios introduced into the peritoneal cavity of a guinea-nig that has into the peritoneal cavity of a guinea-pig that has been immunized against cholera, lose their motility, disintegrate, and pass into solution. The dis-integration can be followed under the microscope

by removing a portion of the peritoneal contents from time to time. The same result is observed if a bacteriolytic serum (against cholera) is introduced along with the bacteria into the peritoneal cavity of a normal guinea-pig. The dilution of the serum which just fails to produce bacteriolysis in a given time determines the titer of the serum. phrenic p. 1. Rhythmic spasm of the left half of the diaphragm; seen in tetanus. 2. See diaphragmatic p. Pilcz-Westphal p. See diaphragmatic p. Pilcz-Westphal p. See Westphal-Pilcz p. Pool's p. 1. Same as Schlesinger's sign, under sign. 2. Contraction of the muscles of the arm following the raising of the arm above the head with the forearm extended. so as to cause stretching of the brachial plexus: seen in postoperative tetany. Porret's p., the passage of a continuous current through a living muscle-fiber causes an undulation proceeding from the positive toward the negative pole. **Purkinje's p.**, the phenomenon that fields of equal brightness but different color become unequally bright if the intensity of the illumination is decreased. radial p., the involuntary dorsal flexion of the wrist which occurs on palmar flexion of the fingers. rash-extinction p. See Schultz-Charlon p. rebound p., when the examiner grasps the patient's wrist and attempts to draw the arm into extension against the patient's resistance and then suddenly releases the wrist the patient's hand rebounds toward his body. A similar rebound occurs in the lower extremity. The phenomenon indicates motor disorder due to cerebellar lesion. Called also Holmes's p. Rieckenberg's p., when the blood of a mouse cured of a trypanosome infection (or with a chronic infection) is mixed with the same strain of trypanosomes from another mouse masses of blood-platelets adhere to the flagella end of the trypanosomes or may completely cover some of the trypanosomes. Ritter-Rollet p., flexion of the foot upon gentle electric stimulation, and its extension upon energetic stimulation. Rumpel-Leede p., the appearance of minute subcutaneous hemorrhages below the area at which a rubber bandage is applied not too tightly for ten minutes upon the upper arm. characteristic of scarlet fever and hemorrhagic diathesis. Rust's p., in cases of caries or cancer of the upper cervical vertebræ the patient supports his head with his hands when lying down or when rising from a lying position. Schramm's p., visibility with the cystoscope of a whole or part of the posterior urethra. seen in spinal cord disease. Schüller's p., in functional hemiplegia. Schultz-Charlton p., localized blanching of the rash of scarlet fever after intracutaneous injections of serum from normal persons or scarlet fever convalescents; called also blanching p. and rash-extraction p. Souque's p., a phenomenon seen in incomplete hemiplegia, consisting of involuntary extension and separation of the fingers when the arm is raised. Called also finger p staircase p., successive increase in the stimuli of equal intensity. **Strassmann's p.**, phenomena seen in the umbilical 'cord of the still attached placenta. When the umbilical cord is ligated, the umbilical arteries contract and the umbilical vein remains filled with blood. The slightest tapping upon the fundus uteri will be felt at the lower end of the umbilical cord, and if pressure is applied to the fundus uteri, the umbilpressure is applied to the fundus uter, the unfolical vein becomes distended with blood at its extremity. **Strümpell p.**, involuntary flexion of the ankle on flexing the hip and knee. **Theobald Smith's p.**, guinea-pigs which have been used for standardizing diphtheria antitoxin and have thus been injected with a small dose of blood-serum become highly susceptible to the serum and may die very promptly if given a rather large second dose of the same serum a few weeks later. See anaphylaxis. tibial p., Strumpell s sign. See under sign. toe-p., extension of the toes on stimulation of the sole of the foot: seen in certain morbid conditions. tongue p., a slight blow upon

the tongue produces a contraction with the appearance of deep depressions; seen in tetany. Called also Schultze's sign and tongue test. Traube's p., a double diastolic and systolic murmur heard at the femoral and other peripheral arteries, as in aortic insufficiency, and sometimes in mitral stenosis. Trousseau's p., spasmodic contractions of muscles provoked by pressure upon the nerves which go to them; seen in rickets, etc. Twort-d'Herelle p., the phenomenon of transmissible bacterial lysis; bacteriophagia: when to a broth culture of typhoid or dysentery bacilli there is added a drop of filtered broth emulsion of the stool from a convalescent typhoid or dysentery patient, complete lysis of the bacterial culture will occur in a few hours. If a drop of this lysed culture is added to another culture of the bacilli lysis will take place exactly as in the first. A drop of this culture will then dissolve a third culture, and so on through hundreds of transfers. d'Herelle attributes this phenomenon to the action of an ultramicroscopic parasite of bacteria which he named the bacteriophage. By some this phenomenon is believed to be caused not by a living organism, but by an autolytic enzyme produced by the bacteria Tyndall p., illumination by a transverse beam of light renders visible the particles floating in gases or liquids. **Wedensky's p.**, on applying a series of rapidly repeated stimuli to a nerve, the muscle contracts quickly in response to the first cle contracts quickly in response stimulus and then fails to respond further, but if the stimuli are applied to the nerve at a slower than a supplied to all of them **West**rate, the muscle responds to all of them **West-phal's p.**, Westphal's sign. See sign **West-phal-Pilez p.**, contraction of the pupil, followed by dilatation, after vigorous closing of the lids; caused by tension of the orbicularis muscle **zone** p., an excess of amboceptor or immune body often lessens or even suspends the specific activity which is known to be present in a serum and which appears at a different dilution. This seems to be a colloid phenomenon in which the constituents must be in certain proportions to each other in order that the specific activity may be manifested, and is spoken of as zone phenomenon. Called also deviation of the complement.

phenopyrin (fe-no-pi'rin). An oily liquid composed of phenol and antipyrin in equal parts: antiseptic.

phenoquin (fe'no-kwin). Phenyl quinolin carboxylic acid, C₀H₅ C₈H₄N₂ COOH: used in doses of 30-35 gr. (1 95-2-25 gm.) daily to increase the excretion of uric acid.

phenoresorcin (fe''no-re-sor'sin). A compound of carbolic acid (67 parts) with resorcin (33 parts): used in skin diseases.

phenosal (fe'no-sal). Paraphenetidin acetosalicy-late, C₂H₅O.C₆H₄ NH.CO CH₂ OC₆H₄ COOH, a salt in colorless plates or needles; antipyretic: used in acute rheumatism. Dose, 7-8 gr. (o 466-0 5 gm.).

phenosalyl (fe-no-sal'il). A thick, syrupy disinfectant and antiseptic compound of phenol (8 gm), salicylic acid (1 gm), menthol (0.1 gm.), and lactic acid (3 gm.). Said sometimes to contain benzoic acid. Called also Christmas' solution.

 $\begin{array}{ll} \textbf{phenostal} & \text{(fen'os-tal)}. & \text{Diphenyloxalic} & \text{ester,} \\ & (\text{CO}_2\ \text{C}_6\text{H}_6)_2, \ a \ disinfectant} & \text{and bactericide.} \end{array}$

phenosuccin (fe-no-suk'sin). Pyrantin.

phenosuccinate (fe-no-suk'sin-āt). Any compound of an amid derivative of succinic acid and phenol with a base. sodium-p., an analgesic and antipyretic remedy.

phenotype (fe'no-tip) [Gr. φαινεῖν to display + τὑπος type] τ. The visible characters common to a group of individuals.
 2. A group of individuals alike in appearance, but having a different heredity.

phenotypic (fe-no-tip'ik). Alike in appearance, but different in heredity.

phenoxin (fe-noks'in). Carbon tetrachlorid.

phenoxy-. A prefix indicating the presence of the group OC_6H_5 , composed of phenyl and an atom of oxygen.

phenoxycaffein (fe"noks-e-kaf'e-in). A white, crystalline substance, C₈H₉(OC₈H₅)N₄O₂: antineuralgic, hypnotic, and anesthetic. Dose, 4 gr. (0.26 gm.).

phenoxyproprandiol (fe-nok"se-pro-pran'de-ol). See autodyne.

phenozygous (fen-oz'ig-us) [Gr. φαίνειν to show + ξύγον yoke, zygoma]. Having the cranium much narrower than the face, so that the zygomatic arches are seen when the skull is viewed from above.

phenychinolin (fen-ik-in'o-lin). Any one of a group of chinolin derivatives of the general formula C₉H₆(C₆H₅)N. actively fatal to microscopic and infusorial organisms.

phenyform (fen'if-orm). A proprietary antiseptic powder for wounds, being a combination of carbolic acid and formaldehyd.

phenyl (fe'nil). The univalent radical, C₀H₅, of p. carbinol. See benzyl alcohol, under alcohol.
 p. hydrate, phenol, carbolic acid.
 p. salicylate, the U. S. P. name for salol (q. v.)

phenylalanin (fe-nil-al'an-in). Same as phenylaminopropionic acid. See under acid.

phenylamin (fen-il'am-in). Anilin,

phenylbenzamid (fen-il-ben'zam-id). Benzanilid. phenylbromoacetonitril (fe"nil-bro-mo-as"eto-m'tril). See bromobenzylcyanid.

phenylcarbylamin chlorid. A war gas, C₆H₅.-NC Cl₃, which causes lacrimation.

phenyl chinaldin (fe"nil-kin-al'din). See phenyl-quinaldin.

phenylchinolin (se-nil-kin'o-lin). A quinin derivative, C₉H₆N C₆H₅, more active than quinin.

phenyldimethylpyrazolon (fen-il-di-meth-il-pi-ra'zo-lon). Antipyrin.

phenylene (fe'nil-ēn). The divalent radical C₆H₄=. phenylene-diamin (fe''nil-ēn-di-am'in). C₆H₄-(NH₂)₂. See ursol.

phenylethene (fen-il-eth'en). Styrol.

phenylethylalcohol (fe''nil-eth-il-al'ko-hol). A local anesthetic, C₆H₀ CH₂ CH₂OH. See under alcohol

phenylethylamin (fen-il-eth-il-am'in). A liquid compound, C₆H₅.CH₂ CH₂ NH₂, formed by the decomposition of phenylaminopropionic acid.

phenyl-ethyl-barbituric acid. Phenobarbital.
phenylethylmalonylurea (fe"nil-eth-el-mal"o-nil-u-re'ah). Phenobarbital

phenylgalactosazone (fe"nil-gal-ak-to'saz-ōn). See galactosazone

phenylglucosazone (fe"nil-glu-ko'saz-ōn). See gliuosazone.

phenylglycol (fe-nil-gli'kol). A crystalline compound, C₆II₅ CHOH.CH₂OH. derivable from styrol bromid.

phenylhydrazin (fe-nil-hi'draz-in). An oily liquid principle, C₆H₅.NH.NH₂, the hydrochlorate of which is used as a test for glucose. See phenylhydrozin test, under tests

phenyl-hydroxylamin (fe"nil-hi-drok-sil'am-in). An industrial poison, C₆H₅.NH.OH, especially in certain chemical works.

phenylic (fe-nil'ik). Pertaining to phenyl.

phenyl-lactosazone (fe"nil-lak-to'saz-ōn). See

phenylmethane (fe-nil-meth'an). Diphenylmethane

phenylmethylacetone (fen-il-meth-il-as'et-ōn). Acetophenon.

phenylmethylcarbinol (fe"nil-meth-il-kar'binol). A local anesthetic, C₆H₅.CHOH.CH₂.

phenylmethylpyrazol (fe"nil-meth-il-pi'ra-zol). A substituted pyrazol, C_6H_b $C_3H_2N_2$.CH₃, of diuretic action. Dose, 15-30 gr. (1-2 gm.).

phenylmethylquinolin (fen''il-meth''il-kwin'o-lin). See phenylquinaldın.

phenylon (fen'il-on). Same as antipyrin.

phenylpropionic acid (fen''il-pro-pi-on'ik). Hydrocinnamic acid. See under acid.

phenylquinaldin (fen-il-kwin-al'din). An analgesic and antiperiodic, phenylmethylquinolin, CH₃·C₉H₆N·C₆H₆, in colorless soluble crystals. Dose, 1-3 gr. (0.06-0.2 gm).

phenylurea (fen-il-u-re'ah). A hypnotic compound, NH₂.CO.NH.C₆H₅, prepared from urea and anilin.

phenylurethan (fe-nil'u-re-than). Same as euphorin.

pheochrome (fe'o-krōm) [Gr. φαιός dark + χρῶμα color]. Staining dark with chromium salts: said of certain embryonic cells. Same as chromaffin.

pheochromoblast (fe-o-kro'mo-blast). Any one of the embryonic structures which develop into pheochrome cells.

phesin (fe'sin). A patented reddish-brown powder, acetparaphenetidin sodium sulphonate, C₆H₃.O.-C₂H₅ SO₃Na NH.CO CH₃: antipyretic and antineuralgic. Dose, 8-15 gr. (o 5-1 gm.).

Ph.G. 1. Abbreviation for Graduate in Pharmacy.
2. Abbreviation for Pharmacopæia germanica,
German pharmacopæia.

phial (fi'al) [Gr. φιάλη]. A vial or small bottle.

phialide (fi'al-id). Small ninepin-shaped bodies projecting from the rounded head of the conidiophore of Aspergillus and which carry chains of conidia.

Phialophera (fi-al-of'er-ah). A genus of hyphomycetous fungi. *P. verruco'sa* causes a skin lesion resembling blastomycosis.

Philagrius (fi-la'gre-us). A Greek physician who practised in the second half of the fourth century in Thessalonica. He was the author of numerous writings, only small fragments of which remain

philanthropist (fil-an'thro-pist). A person who exerts himself for the well-being of his fellow-man.

philanthropy (fil-an'thro-pe) [Gr φιλεῖν to love + ἄνθρωπος man]. Practical benevolence toward mankind.

philiater (fil-i'at-cr) [Gr φιλόs fond + laτρεῖa healing]. A person interested in medical science.

Philinus (fil-i'nus). A Greek physician of Cos, who lived about 250 B C. He was a pupil of Herophilus, and is believed to have been one of the founders of the school of the Empirics.

Philip's glands (fil'ips) [Robert William Philip, Scotch physician, born 1857]. See under gland.

Philisteon (fil-is'te-on). A Greek physician of Sicily in the fourth century B. C.

phillyrin (fil'ir-in). A crystalline substance, C₂₇-H₃₄O₁₁, from the leaves and bark of various species of *Phillyr'ea*. It has antimalarial properties.

philocatalase (fi-lo-kat'al-ās) [Gr. $\varphi\iota\lambda\epsilon\hat{\iota}\nu$ to love + catalase]. A substance existing in the tissues and serving to protect catalase from the destructive action of anticatalase.

philocytase (fi-lo-si'tās) [Gr. φιλεῖν to love + cy-tase]. Same as amboceptor.

philoneism (fil-o'ne-izm) [Gr. φιλεῖν to love + νέος new]. Abnormal love of novelty.

philopatridomania (fi"lo-pat"rid-o-ma'ne-ah)
[Gr. φιλόπατρις patriotic + μανία madness]. Insane desire to return to one's native land.

philothion (fil-o-thi'on) [Gr. $\varphi_l \lambda \epsilon \hat{\imath} \nu$ to love $+ \theta \epsilon \hat{\imath} \omega \nu$ sulphur]. A substance obtained from yeast and animal tissue, having the power of forming hydrogen sulphid from powdered sulphur.

philter, philtre (fil/ter). A drug or substance to provoke love or carnal appetite.

202

philtrum (fil'trum) [Gr. φίλτρον love-potion].
 1. The groove at the median line of the upper lip. 2. A philter.

phimosiectomy (fi-mo-se-ek'to-me) [phimosis + Gr. ἐκτομή excision]. Circumcision for phimosis.

phimosis (fi-mo'sis) [Gr. $\varphi l \mu \omega \sigma \iota s$ a muzzling or closure]. Tightness of the foreskin, so that it cannot be drawn back from over the glans; also the analogous condition in the clitoris. **p. vagina'lis**, atresia of the vagina.

phimotic (fi-mot'ik). Pertaining to phimosis.

phlebalgia (fleb-al'je-ah) [Gr. φλέψ vein + ἄλγος pain]. Neuralgia due to varices within or on the surface of a nerve.

phlebangioma (fleb-an-je-o'mah) [Gr. φλέψ vein + angioma]. A venous aneurysm.

phlebarteriectasia (fleb-ar-te-re-ek-ta'se-ah) [Gr. φλέψ vein + ἀρτηρία artery + ἔκτασις extension]. General dilatation of veins and arteries.

phlebarteriodialysis (fleb-ar-te-re-o-di-al'is-is)
[Gr. φλέψ vein + άρτηρία artery + διάλυσις separation]. Arteriovenous aneurysm.

phlebectasia, phlebectasis (fle-bek-ta'zhe-ah, fle-bek'tas-is) [Gr. φλέψ vein + ἔκτασις dilatation]. A varicosity; a dilatation of a vein. p. laryn'gis, permanent dilatation of the veins of the larynx.

phlebectomy (fle-bek'to-me) [Gr. φλέψ vein + ἐκτομή excision]. Excision of a vein, or of a part of a vein.

phlebectopia, phlebectopy (fle-bek-to'pe-ah, fle-bek'to-pe) [Gr. φλέψ vein + έκτοπός out of place]. Displacement of a vein.

phlebemphraxis (fle-bem-fraks'is) [Gr. φλέψ vein + ξμφραξιs stoppage]. The stoppage of a vein by a plug or clot.

phlebepatitis (fleb-ep-at-i'tis) [Gr φλέψ vein + hepatitis]. Inflammation of the hepatic vein.

phlebexairesis (fleb-ex-i-re'sis). An operation for extracting veins analogous to neurexairesis.

phlebin (fle'bin) [Gr. φλέψ vein]. A pigment supposed to exist in venous blood.

phlebismus (fle-biz'mus) [Gr. φλέψ vein]. Obstruction and consequent turgescence of veins.

phlebitic (fle-bit'ik) Pertaining to phlebitis.

phlebitis (fle-bi'tis) [Gr. φλέψ vein]. Inflammation of a vein. The condition is marked by infiltration of the coats of the vein and the formation of a thrombus of coagulated blood. disease is attended by edema, stiffness, and pain in the affected part, the development of a red cord at the site of the vein, and in the septic variety by pyemic symptoms. adhesive p., a phlebitis which tends to the obliteration of the vein. also plastic p. and proliferative p. anemic p., chlorotic p., a form associated with anemia or chlorosis. gouty p., a variety dependent upon the gouty diathesis, often recurrent, and sometimes occlusive. p. mi'grans, migrating p., phlebitis recurring in different parts of the same limb. p. nodula'ris necrot'isans, a form in which tuberculous nodules of the skin are formed, becoming necrotic at the center and spreading slowly. obliterating p., obstructive p., phlebitis that permanently closes the lumen of a vein. plastic p. See adhesive p. proliferative p. See adhesive p. puerperal p., septic inflammation of uterine or other veins following childbirth. recurrent p., that which reappears after periods of disappearance. septic p., that which depends upon a septic process, as in erysipelas, cancer, or tuberculosis. In it the thrombus breaks down and septic emboli are carried to distant parts of the body. Called also suppurative p. sinus-p., inflammation of a cerebral sinus. suppurative p., that which is characterized by the formation of pus; often an extension of a suppurative process external to the vein

phlebocholosis (fleb"o-ko-lo'sis) [Gr. φλέψ vein + χωλός maimed]. Disease of veins.

phlebogram (fleb'o-gram) [Gr. φλέψ vein + γράμμα writing]. A tracing of the movements of a vein made with a phlebograph or sphygmograph.

 phlebograph (fleb'o-graf) [Gr. φλέψ vein + γράφειν to write]. 1. An instrument for recording the venous pulse. 2. Same as phlebogram.

phlebography (fleb-og'raf-e) [Gr. φλέψ vein + γράφειν to write].
1. A description of the veins.
2. The graphic recording of the venous pulse.

phleboid (fleb'oid) [Gr. φλέψ vein + είδος form]. Resembling a vein, or composed of veins.

phlebolite, phlebolith (fleb'o-lit, fleb'o-lith) [Gr. $\varphi \lambda \dot{\epsilon} \psi$ vein $+ \lambda l \theta os$ stone]. A calculus or concretion in a vein; a vein-stone.

phlebolithiasis (fleb"o-lith-i'as-is) [Gr. φλέψ vein + lithiasis]. That condition which predisposes to the development of vein-stones.

phlebology (fle-bol'o-je) [Gr. $\varphi \lambda k \psi$ vein $+ \lambda \delta \gamma os$ treatise]. The sum of what is known regarding the veins.

phlebometritis (fleh"o-met-ri'tis) [Gr. $\varphi\lambda \dot{\psi}$ vein $+ \mu \dot{\eta} \tau \rho a$ uterus $+ \cdot \iota \tau \iota s$ inflammation]. Inflammation of the veins of the uterus.

phlebomyomatosis (fleb"o-mi-o-mat-o'sis) [Gr. $\varphi \lambda \xi \psi$ vein + myomatosis]. A condition in which the muscular fibers of a vein become overgrown, producing thickening of the walls.

phlebopexy (fleb'o-peks-e) [Gr. $\varphi\lambda \dot{\epsilon}\psi$ vein $+\pi \hat{\eta} \dot{\epsilon}\iota s$ fixation]. Extraserous transplantation of the testicle, with preservation of the reticulum of veins: done for varicocele.

phlebophthalmotomy (fleb"of-thal-mot'o-me) [Gr. φλέψ vein + δφθαλμός eye + τέμνειν to cut]. Same as ophthalmophlebotomy.

phleboplasty (fleb'o-plas-te) [Gr. φλέψ vein + πλάσσειν form]. Plastic operation for the repair of a vein.

phleborrhagia (fleb-or-a'je-ah) [Gr. φλέψ vein + ρηγνύναι to burst forth]. Copious hemorrhage from a vein.

phleborrhaphy (fleb-or'af-e) [Gr. φλέψ vein + βαφή suture]. The operation of suturing a vein.

phleborrhexis (fleb-o-rek'sis) [Gr. φλέψ vein + ρηξις rupture]. Rupture of a vein.

phlebosclerosis (fleb"o-skle-ro'sis) [Gr. φλέψ vein + σκληρός hard]. Sclerosis or hardening of a vein, especially of the inner coats of a vein.

phlebostasia (fleb-os-ta'ze-ah). Phlebostasis.

phlebostasis (fleb-os'tas-is) [Gr. φλέψ vein + στάσις stoppage].
 r. Retardation of the flow of blood in the veins.
 2. Temporary abstraction of a portion of the blood from the general circulation by compressing the veins of the extremity.

phlebostrepsis (fleb"o-strep'sis) [Gr. φλέψ vein + στρέφειν to turn]. The surgical twisting of a vein

phlebothrombosis (fleb"o-throm-bo'sis) [Gr. φλέψ vein + thrombosis]. Thrombosis of a vein.

phlebotome (fleb'o-tôm). A knife or lancet for use in phlebotomy; a fleam.

phlebotomist (fle-bot'o-mist). One who practises venesection; a bleeder.

phlebotomize (fle-bot'o-miz). To bleed; to take blood from by phlebotomy.

Phlebotomus (fle-bot'o-mus). A genus of dipterous insects. P. argen'tipes, the species which transmits kala-azar in India. P. papatas'sil, the sandfly, a dipterous insect of India and the Mediterranean countries, which conveys by its bite an infection known as sandfly fever. See under fever. P. verruco'rum, a fly abounding in Peru and regarded as the conveyor of the infection of verruga peruviana.

phlebotomy (fle-bot'o-me) [Gr. φλέψ vein + τέμνειν to cut]. The opening of a vein for bloodletting; venesection. bloodless p., phlebostasis.

phlegm (flem) [Gr. $\varphi \lambda \dot{\epsilon} \gamma \mu a$]. I. One of the four humors of the body, according to the obsolete

humoral pathology. 2. Mucus, especially that phloretin (flor'e-tin). of the throat and nose.

pound, C₁₅H₁₄O₅, deri

phlegmasia (fleg-ma'zhe-ah) [Gr. φλεγμασία heat, inflammation]. Inflammation or fever. p. al'ba do'lens, p. do'lens, phlebitis of the femoral vein, occasionally following parturition and typhoid fever. It is characterized by swelling of the leg, usually without redness. Called also leukophlegmasia, milk-leg, and white leg. cellulitic p., swelling and inflammation of the leg after childbirth from infection of the connective tissue. p. malabar'ica, clephantiasis. thrombotic p. Same as p. alba dolens.

phlegmatic (fleg-mat'ik) [Gr. φλεγματικόs]. Characterized by an excess of the supposed humor called phlegm; hence, heavy, dull, and apathetic.

phlegmon (fleg'mon) [Gr. φλεγμονή]. Inflammation of the connective tissue, leading to ulceration or abscess. diffuse p., phlegmona diffusa. Dupuytren's p., phlegmonous suppuration in the anterolateral portion of the neck on one side. gas-p., one attended with the formation of gases. See gas gangrene, under gangrene. ligneous p., induration of the subcutaneous connective tissue of the neck with little suppuration, fever, or pain; running a chronic progressive course. Called Reclus' disease. woody p., ligneous phlegmon.

phlegmona diffusa (fleg'mo-nah dif-u'sah). A more or less extensive inflammation of the cutaneous and subcutaneous tissues, with symptoms resembling both-deep crysipelas and flat carbuncle, and attended with constitutional symptoms. Called also phlegmonous cellulitis.

phlegmonous (fleg'mon-us). Of the nature of a phlegmon; attended with formation of phlegmons.

phlobaphene (flo'ba-fēn) [Gr. $\varphi\lambda$ 0:05 bark + $\beta\alpha\varphi$ 6 dye]. One of a series of compounds resembling resins and differing from the latter only in that they dissolve in dilute ammonia water. They are derived from tannin by boiling with acids and are characterized by their brown color.

phlogetan (flo'jet-an). A proprietary nucleoprotein substance obtained from albuminoid bodies: used subcutaneously in tabes.

phlogistic (flo-jis'tik). Inflammatory.

phlogisticozymoid (flo-jis"tik-o-zi'moid). A hypothetic substance supposed to supply the necessary feeding-ground for inflammatory processes.

phlogiston (flo-jis'ton) [Gr. φλογιστός burnt]. The supposed principle of fire and combustion. This term was proposed by Stahl in 1697, who supposed that combustible substances were compounds of phlogiston and that combustion is due to the phlogiston leaving the other structures of the substance behind. With the discovery of oxygen, the use of the term was discontinued.

phlogocyte (flo'go-sīt) [Gr. φλόγωσις inflammation + κύτος cell]. A cell characteristic of tissue in an inflamed state; a plasma-cell.

phlogocytosis (flo"go-si-to'sis). Presence of phlogocytes in the blood.

phlogogen (flo'go-jen) [see phlogogenic]. A body that has the power of causing inflammation.

phlogogenic (flo-go-jen'ik) [Gr. φλόξ flame + γεννᾶν to produce]. Causing inflammation.

phlogogenous (flo-goj'en-us). Phlogogenic.

phlogosin (flo-go'sin) [Gr. φλόγωσις inflammation]. A crystallizable, non-nitrogenous substance, from cultures of the Staphylococ'cus au'reus. Introduced into the eye, it produces an intense suppurative process.

phlogosis (flo-go'sis) [Gr. φλόγωσις]. Inflammation; also erysipelas.

phlogotic (flo-got'ik). Inflammatory.

phlogoselotism (flo-go-zel'ot-ism) [Gr. φλόγωσις inflammation + ζηλωτής zealot]. A perverse habit of ascribing to every disease an inflammatory origin.

phloretin (flor'e-tin). A white, crystalline compound, C₁₆H₁₄O₅, derived from phlorizin. It is the phloroglucin ester of paraoxyhydratropic acid. It is said to possess febrifuge properties.

phlorhizin (flo-ri'zin). See phlorizin.

phloridzin (flo-rid'zin). Same as phlorizin.

phlorizin (flo-ri'zin) [Gr. φλοιός bark + δίζα root]. A bitter glucosid, C₂₁H₂₄O₁₀ + 2H₂O, from the root bark of apple, cherry, plum, and pear trees. It breaks down into glucose and phloretin: it is tonic and antiperiodic. Dose, 15-30 gr. (1-2 gm.). p. diabetes. See diabetes.

phlorizinize, phloridzinize (flo'riz-in-Iz, flor-id'-zin-Iz). To bring under the influence of phlorizin.

phloroglucin (flo-ro-glu'sin) [phlorizin + Gr. γλυκύς sweet]. A sweet, crystalline, trihydric, phenol, C₆H₃(OH)₃, obtainable from the bark of apple and other trees: used as a test for woody fiber and for hydrochloric acid and for the identification of pentose in the urine. p. vanillin. See Guenzberg's test, under tests.

phloroglucinol, phloroglucol (flo-ro-glu'sin-ol, -glu'kol). Phloroglucin.

phlorol (flo'rol). Any oily liquid, C₆H₅(OC₂H₅), derived from creosote. See phenetol.

phlorose (flor'ōs). A sugar formed when phlorizin is boiled with dilute acids. Glucose.

phlorrhizin. Same as phlorizin.

phloryl (flo'ril). A principle obtainable from creosote.

phlyctena (flik-te'nah), pl. phlycte'næ [L. phlyctæ'na; Gr. φλύκταινα]. 1. A blister made by a burn. 2. A small, bladder-like pustule containing lymph or a thin ichor.

phlyctenar (flik'ten-ar). Pertaining to or marked by phlyctenæ.

phlyctenoid (flik'ten-oid) [phlyctena + Gr. el8os form]. Resembling a phlyctena.

phlyctenosis (flik-ten-o'sis) [Gr. φλυκταίνωσις].
Any phlyctenular disease or lesion. p. strepto'genes, a disease of the skin due to a streptococcus.

phlyctenular (flik-ten'u-lar). Associated with the formation of phlyctenules or vesicles, or of prominences that look like vesicles.

phlyctenule, phlyctenula (flik'ten-ul, flik-ten'ulah) [L. phlyctan'ula; Gr. φλύκταινα blister]. A minute vesicle, or an ulcerated nodule of the cornea or of the conjunctiva.

phlyctenulosis (flik-ten-u-lo'sis). The condition marked by the formation of phlyctenules.

phlysoremid (flis-o-rem'id). Koch's bacillus emulsion in capsules.

phlyzacium (fli-za'se-um) [Gr. φλυζάκιον]. 1. A little pustule. 2. Same as ecthyma. p. acu'-tum. See ecthyma.

phobia (fo'be-ah) [Gr. φόβος fear]. Any persistent insane dread or fear.

phobic (fo'bik). Of the nature of or pertaining to phobia or morbid fear.

phobophobia (fo-bo-fo'be-ah) [Gr. φόβος fear + φόβος fear]. A condition in psychasthenia marked by fear of one's own fears.

phobrol (fo'brol). A proprietary 50 per cent. solution of chlormetacresol in potassium ricinoleate: used as a disinfectant.

Phoca's disease (fo-kahz') [B. G. Phoca, French physician]. See. Tillaux's disease, under disease.

phocenic acid (fo-sen'ik). Valerianic acid. Se

phocomelus (fo-kom'el-us) [Gr. φώκη seal + μέλος limb]. A fetus with hands and feet, but no arms or legs.

phogosin (fo'go-sin). A heat-resistant crystalline substance extracted from staphylococci which has a chemotactic action on leukocytes similar to that of staphylococci. phonacoscope (fo-nak'o-skōp). The apparatus used in phonacoscopy.

phonacoscopy (fo-nak-os'ko-pe) [Gr. φωνή voice + σκοπείν to viewl. Combined auscultation and percussion by means of a bell-shaped resonating chamber containing a percussion hammer, which is held on the anterior thoracic wall while the examiner listens at the back of the thorax.

phonal (fo'nal) [Gr. φωνή voice]. Pertaining to the voice.

phonation (fo-na'shun) [Gr. φωνή voice]. utterance of vocal sounds. subenergetic p., superenergetic p., hyperphohypophonia. nia.

phonatory (fo'na-to-re). Subserving or pertaining to phonation.

phonautograph (fo-naw'to-graf) [Gr. φωνή voice + abrós self + $\gamma \rho \dot{\alpha} \varphi \epsilon \omega$ to write]. An apparatus which registers the vibrations of the air caused by the voice.

phoneme (fo'nēm) [Gr. φώνημα sound]. An insane hallucination of voices.

phonendoscope (fo-nen'do-skōp) [Gr. φωνή voice + ἐνδον within + σκοπεῖν to see]. A stethoscope that intensifies auscultatory sounds. The instruthat intensifies auscultatory sounds. The instru-ment contains two parallel plates of vulcanite, one of which is in contact with the chest of the patient, and the other, vibrating in unison with it, transmits the sound to the observer's ear.

phonendoskiascope (fo-nen"do-ski'as-kop). phonendoscope combined with a fluorescent screen for observing the heart movements at the same time as the heart-sounds are heard.

phonetic (fo-net'ik) [Gr. φωνητικόs]. Pertaining to the voice or to articulate sounds

phonetics (fo-net'iks). The science of vocal sounds.

phoniatrics (fo-ne-at'riks) [Gr. φωνή voice + laτρικός curing]. The treatment of speech defects.

phonic (fo'nik) [Gr. φωνή voice]. Pertaining to the voice.

phonism (fo'nizm) [Gr. φωνή voice]. A sound or sensation of hearing produced by the effect of something seen, felt, tasted, smelt, or thought of.

phono-auscultation (fo"no-aws-kul-ta'shun). Auscultation in which a tuning-fork is placed over the organ to be examined and its vibrations are listened to through a stethoscope placed over the same organ.

phonocardiogram (fo-no-kar'de-o-gram) [Gr. φωνή voice $+ \kappa a \rho \delta i a$ heart $+ \gamma \rho a \mu \mu a$ mark]. An instrument for registering variation in the heart's tone.

phonocardiography (fo"no-kar-de-og'raf-e). The mechanic recording of the sounds of the heart.

phonogram (fo'no-gram) [Gr. φωνή voice + γράμμα mark]. A graphic record of a sound, as, for instance, a heart sound.

phonograph (fo'no-graf) [Gr. φωνή voice + γρά-φειν to write]. An instrument for recording and reproducing sounds and speech.

phonology (fo-nol'o-je) [Gr. φωνή voice + λόγος sound]. The science which treats of vocal sounds; phonetics.

phonomania (fo-no-ma'ne-ah) [Gr. φονή murder + µavla madness]. Insanity marked by a tendency to commit murder.

phonomassage (fo"no-mas-ahzh'). The treatment of ear disease by an apparatus which carries more or less of musical vibration into the auditory

phonometer (fo-nom'et-er) [Gr. φωνή voice + μέτρον measure]. A device for measuring the intensity of sounds.

phonomyoclonus (fo-no-mi-ok'lo-nus). dition in which a sound is heard on auscultation over a muscle affected with myoclonus, whether it is at rest or contracting.

phonopathy (fo-nop'ath-e) [Gr. φωνή voice + πάθος disease]. Any disease or disorder of the organs of speech.

phonophobia (fo-no-fo'be-ah) [Gr. φωνή voice + φόβος fear]. Morbid dread of speaking aloud.

phonophore (fo'no-for) [Gr. φωνή sound + φέρειν to carry]. 1. An ossicle of the ear. 2. A kind of improved stethoscope, acting on the principle of an ear-trumpet, and rendering the sounds more audible.

phonophotography (fo"no-fo-tog raf-e) court sound + photography]. Photographic recording of the movements of a diaphragm set up by waves of sound.

phonopneumomassage (fo"no-nu"mo-masahzh') [Gr. φωνή sound + πνεθμα air + μάσσειν to knead]. Air-massage of the middle ear.

phonopsia (fo-nop'se-ah) [Gr. ωωνή voice + δψις vision]. A subjective sensation as of seeing colors, caused by the hearing of sounds.

phonoscope (fo'no-skōp) [Gr. φωνή sound + σκοπεῖν to view]. 1. An apparatus for recordσκοπείν to view]. 1. An apparatus for recording photographically the movements of a diaphragm set up by the sounds of the heart. 2. An instrument for auscultatory percussion.

phonoscopy (fo-nos'ko-pe). Recording of the heart sounds by the phonoscope.

phoria (fo're-ah) [Gr. φέρειν to bear]. The direction or tendency of the visual lines, as in orthophoria, heterophoria, exophoria, etc.

phoroblast (fo'ro-blast) [Gr. φορείν to bear + βλαστός germ]. Connective tissue.

phorocyte (fo'ro-sit). A connective-tissue cell.

phorocytosis (fo"ro-si-to'sis). Proliferation of connective-tissue cells.

phorology (fo-rol'o-je) [Gr. φορείν to carry + λόγος treatise]. The study of disease carriers

phorometer (fo-rom'et-er) [Gr. φορείν to bear + μέτρον measure]. An instrument for ascertaining the degree and kind of heterophoria, or eye declina-

phorometry (fo-rom'et-re) [see phorometer]. The use of the phorometer.

phorone (fo'ron). A yellowish, oily substance. C9H14O, obtained from acetone, camphoric acid, etc.

phoro-optometer (fo"ro-op-tom'et-er). An optic instrument combining the revolving three-cell trialframe, the double rotatory prism of 30 degrees, the Maddox multiple rod, and the phorometer.

phoroplast (fo'ro-plast) [Gr. φορείν to bear + πλαστός formed]. Connective tissue.

phoropter (fo-rop'ter). A phorometer fitted with a battery of cylindric lenses.

phoroscope (fo'ro-skop). A fixed trial-frame for eye-testing, with a head-rest which may be fastened to the table or the wall.

phorotone (fo'ro-ton) [Gr. φορά motion + τόνος tension]. An instrument for exercising the muscles of the eye.

phorozoön norozoön (fo-ro-zo'on) [Gr. φορά motion + ζφον animal]. The asexual stage in the life-history of an organism.

phorxal (forks'al). A hematogenic preparation of animal blood.

phose (fôz) [Gr. φωs light]. Any subjective sensation, as of light or color. See aphose, centraphose, centrophose, chromophose, peripheraphose, peripheraphose, etc.

phosferrin (fos-fer'in). A preparation of phos-phoric acid, ferric chlorid, and glycerin.

(tos-fer'ol). A proprietary preparation of glycerophosphates, iron, strychnin, codliver oil, and malt extract. phosferrol (fos-fer'ol).

phosgene (fos'jēn). A suffocating and highly poisonous war gas, carbonyl chlorid, COCl2.

phosgenic (fos-jen'ik) [Gr. φωs light + γεννάν to produce]. Photogenic; light-producing.

905

phosiron (fos-i'ern) The neutral iron salt of a complex phosphotartaric acid, containing 19 per cent. of iron and 65 per cent. of phosphorus.

phosis (fo'sis). The production of a phose.

phosote (fos'ōt). A preparation of creosote (80 per cent.) and phosphoric arrhydrid (20 per cent.); a syrupy liquid: used in tuberculosis like creosote carbonate.

phosphagon (fos'fag-on). An elixir of the alkaline glycerophosphates: proprietary.

phosphatase (fos'fat-ās). An enzyme which splits the phosphoric acid esters of carbohydrates.

phosphate (fos'fat) [L. phos'phas]. Any salt of phosphoric acid. acid p., any phosphate in which only one or two of the replaceable hydrogen atoms of the acid are taken up. alkaline p., a phosphate of 'an alkaline metal, as sodium or potassium. ammoniomagnesium p., a double salt of ammonium and magnesium with orthophosphoric acid, Mg(NH4)PO4.6H2O nearly allied to and often associated with triple phosphate. earthy p., a phosphate of any one of the alkaline earth metals. normal p., any phosphate in which all the replaceable hydrogen atoms are replaced. stellar p., calcium phosphate, in star-shaped masses of crystals, occurring in urinary deposits. triple p., ammoniomagnesium phosphate.

phosphated (fos'fa-ted). Containing phosphates.
phosphatemia (fos-fa-te'me-ah) [phosphate + Gr. alμa blood]. The presence of phosphates in the blood.

phosphatese (fos'fat-ēs). An enzyme which brings about the synthesis of phosphoric acid esters by carbohydrates.

phosphatic (fos-fat'ik). Pertaining to or containing phosphates.

phosphatid (fos'fat-id). Any one of a class of lipoid substances which are esters of orthophosphoric acid, they include lecithin and cephalin.

phosphatin (fos'fa-tin) [Gr.]. Any one of a considerable group of phosphorus compounds resembling the phosphates and found in the brain substance.

phosphatol (fos'fat-ol). A thick, yellowish-red liquid preparation of creosote (oo per cent.) and phosphorus trichlorid, used in tuberculosis.

phosphatometer (fos-fa-tom'et-er). An instrument for measuring the phosphates of the urine.

phosphatoptosis (fos''fat-op-to'sis) [phosphate + Gr. πτῶσις fall]. The spontaneous precipitation of phosphates from the urine.

phosphaturia (fos-fat-u're-ah) [phosphate + Gr. ουρον urine]. 1. A high percentage of phosphates in any given specimen of urine. 2. Ready precipitation of the earthy phosphates from the urine; phosphatoptosis.

phosphene (fos'fēn) [Gr. φῶs light + φalνειν to show]. A luminous appearance caused by pressing upon the eyeball. accommodation p., the streak of light surrounding the visual field seen in the dark after accommodation.

phosphergot (fos-fer'got). A preparation of sodium phosphate and ergot, exhibited in three or more forms or modifications: used in melancholia, hysteria, chlorosis, etc.

phosphid (fos'fid). Any binary compound of phosphorus and another element or radical.

phosphin (fos'fin).
a gas and radical.
A coal-tar dye extremely destructive to infusorial life. It is used as a stain.
Called also Philadelphia yellow.

phosphite (fos'fit). Any salt of phosphorous acid.
phospho-albumin (fos''fo-al-bu'min). 1. An albuminous substance containing phosphorus. 2.
A preparation of brain, spinal cord, and testes: used in anemia, chlorosis, and neurasthenia. Dose, 4-8 gr. (0.26-0.5 gm.).

phosphoglobulin (fos-fo-glob'u-lin). Same as nucleo-albumin.

phosphoglucoprotein (fos"fo-glu-ko-pro'te-in).
A phosphorus-containing glucoprotein.

phosphoguaiacol (fos-fo-gwi'ak-ol). Guaiacol phosphite, a proprietary remedy.

phospholipin (fos-fo-lip'in). A lipin containing phosphorus which on hydrolysis yields fatty acids, glycerol, and a nitrogenous compound. Lecithin is the best known example.

phosphology (fos-fol'o-je) [phosphorus + Gr. λόγος discourse]. The doctrine of the effect of excess or deficiency of oxidizable phosphorus compounds in the bioplasm.

phosphonium (fos-fo'ne-um). The univalent radical, PH₄, forming compounds analogous to those of ammonium.

phosphonuclease (fos-fo-nu'kle-ās). See nucleo-tidase.

phosphoprotein (fos-fo-pro'te-in). A protein consisting of a compound of the protein molecule with some as yet undefined phosphorus-containing substance other than nucleic acid or lecithin. To this group belong the vitellin of egg-yolk and casein of milk.

phosphoptomain (fos-fo-to'ma-in). Any one of a class of toxic compounds found in the blood in phosphorus-poisoning.

phosphorated, phosphoretted, phosphuretted (fos'fo-ra-ted, fos'fo-ret-ed, fos'fu-ret-ed). Charged or combined with phosphorus.

phosphorenesis (fos-fo-ren'es-is). Any disease due to excess of calcium phosphate in the body.

phosphorescence (fos-fo-res'ens). The emission of light without appreciable heat.

phosphorescent (fos-fo-res'ent). Exhibiting light
without heat.

phosphorhidrosis, phosphoridrosis (fos"forid-ro'sis) [phosphorus + Gr. ίδρωσις sweating]. The secretion of luminous sweat.

phosphoric acid (fos-for'ik). See acid.

phosphorism (fos'fo-rizm). Chronic phosphorus poisoning.

phosphorized (fos'fo-rizd). Containing phosphorus.

phosphorous acid (fos'fo-rus). See acid.

phosphoruria (fos-fo-ru're-ah) [phosphorus + Gr. οὐρον urinc]. The presence of free phosphorus in the urine

phosphorus (fos'fo-rus) [Gr. φωs light + φορείν to carryl. A non-metallic, translucent element: poisonous and highly inflammable; symbol, P: atomic weight, 31 04. It occurs in the three forms -amorphous, metallic, and vitreous. It is obtainable from bones, urine, and various minerals. The ordinary, or vitreous, phosphorus is the kind used in medicine, and is very inflammable and exceedingly poisonous. Free phosphorus causes a fatty degeneration of the liver and other viscera, and the inhalation of its vapor often leads to necrosis of the lower jaw. Therapeutically, it is used in rickets, osteomalacia, nervous and cerebral diseases, scrofula, and tuberculosis; as a genital stimulant in sexual exhaustion, and as a tonic in conditions of exhaustion. Dose of phosphorated oil of phosphorus in substance, 128 30 gr. (0.0005-0.0013 gm.). amorphous p., red p., a dark-red, amorphous substance, not poisonous. metallic p., rhombohedral p., an allotropic form with a metallic luster produced by heating ordinary phosphorus. ordinary p., vitreous p., a waxy solid, exceedingly poisonous.

phosphotal (fos'fo-tal). Creosote phosphite: a proprietary remedy.

phosphotungstic acid (fos-fo-tung'stik). See acid.

phosphuret (fos'fu-ret). Same as phosphid.

phosphuretted (fos'fu-ret-ed). See phosphorated.

phosphuria (fos-fu're-ah). Same as phosphaturia.

phot. Same as phote.

photalgia (fo-tal'je-ah) [Gr. φω̂s light + ἄλγος pain]. Pain, as in the eye, caused by light.

photallochromy (fo-tal'o-kro-me) [Gr. φῶs light + ἄλλοs different + χρῶμα color]. Allotropic change with color alteration due to light, as the change of yellow into red phosphorus.

photaugiaphobia (fo-taw'je-ah-fo'be-ah) [Gr. φωταυγεία glare + φόβος fear]. Abnormal intolerance of a glare of light.

phote (fot) [Gr. $\varphi \hat{\omega}_S$ light]. The CGS unit of illumination being one lumen per square centimeter.

photerythrous (fo-te-rith'rus) [Gr. φωs light + ἐρυθρός red]. Sensitive to the red rays of the spectrum: said of a form of color-blindness in which green is not clearly recognized.

photesthesis (fo-tes-the'sis) [Gr. φως light + alσθησις feeling]. Sensitiveness to light.

photic (fo'tik). Pertaining to light.

photism (fo'tizm) [Gr. $\varphi \hat{\omega}_s$ light]. A visual image; a sensation of color produced by a sensation of hearing, taste, smell, or touch.

photo-actinic (fo"to-ak-tin'ik). Giving off both luminous and actinic rays.

photobacterium (fo"to-bak-te're-um). A genus or form of photogenic bacteria from putrescent flesh.

photobiotic (fo"to-bi-ot'ik) [Gr. φωs light + βlos life]. Living in the light only.

photocatalyst (fo-to-kat'al-ist). A substance by means of which sunlight is utilized as chlorophyll in the photosynthesis of carbohydrates by green plants.

photocauterization (fo"to-kaw-ter-iz-a'shun) [Gr. $\varphi \hat{\omega}$ s light + cauterization]. Cauterization by radio-active means, such as radium, x-rays, etc.

photocautery (fo-to-kaw'ter-e). 1. Same as photocauterization. 2. An instrument for producing photocauterization.

photoceptor (fo-to-sep'tor) [Gr. φω̂s light + ceptor]. A nerve ceptor which receives sensations of light; photoreceptor.

photochemic (fo-to-kem'ik). Pertaining to the chemic properties of light.

photochemistry (fo-to-kem'is-tre) [Gr. φῶs light + chemistry]. The branch of chemistry which deals with the chemic properties or effects of light rays.

photocinetic (fo"to-sin-et'ik). Photokinetic.

photodermatism (fo-to-der'mat-izm) [Gr. φω̂s light + δέρμα skin]. Sensitiveness to light in epithelial cells.

photodromy (fo-tod'ro-me) [Gr. $\varphi \hat{\omega} s$ light $+ \delta \rho \delta \mu \omega s$ running]. The phenomenon of moving toward (positive p.) or away from (negative p.) light; as in the case of particles in suspension.

photodynamic (fo"to-di-nam'ik) [Gr. $\varphi \hat{\omega}_s$ light + $\delta i \nu \alpha \mu \iota s$ power]. Powerful in the light: said of the action exerted by fluorescent substances in the light.

photodynamics (fo"to-di-nam'iks). The science of the activating effects of light.

photodynia (fo-to-din'e-ah) [Gr. φωs light + δδύνη pain]. Photalgia.

photodysphoria (fo"to-dis-fo're-ah) [Gr. φωs light + δυσφορία distress]. Intolerance of light; photophobia.

photo-electricity (fo"to-e-lek-tris'it-e) [Gr. φωs light + dectricity]. Electricity developed by the action of light.

photo-electron (fo"to-e-lek'tron). An electron emitted from a metallic surface when the latter is illuminated with light, especially with light of short wave length. photo-element (fo-to-el'em-ent). A galvanic element which is decomposed under the influence of light and produces photo-electricity.

photo-erythema (fo"to-er-ith-e'mah). Erythema due to exposure to light.

photo-esthetic (fo-to-es-thet'ik) [Gr. φω̂s light + alσθησις sensation]. Pertaining to or having the sensation of light.

photofluoroscope (fo"to-flu-or'o-skōp). A form of fluoroscope used in making either observations or photographs by means of rontgen rays.

photogastroscope (fo-to-gas'tro-sköp) [Gr. φω̂s light + γαστήρ stomach + σκοπεῦν to see]. An apparatus for photographing the interior of the stomach.

photogen (fo'to-jen) [see *photogene*]. A substance supposed to exist in photogenic bacteria and to be the cause of their luminescence.

photogene (fo'to-jēn) [Gr. φω̂s light + γεννῶν to produce]. Same as after-image.

photogenesis (fo-to-jen'es-is) [Gr. φω̂s light + genesis]. The production of phosphorescence, or the emission of light, as by bacteria.

photogenic, photogenous (fo-to-jen'ik, fo-toj'enus). Produced by light or producing light.

photogram (fo'to-gram) [Gr. φῶs light + γράμμα record]. The photographic record of a physiologic experiment.

photohematachometer (fo"to-hem"at-ak-om'et-er) [Gr. φω̂s light + αΙμα blood + ταχύs swift + μέτρον measure]. A device for making a photographic record of the speed of the blood-current.

photohenric (fo-to-hen'rik) [Gr. $\varphi \hat{\omega} s$ light + henry]. Noting a change in inductive capacity due to the action of light.

photo-inactivation (fo"to-in-ak-tiv-a'shun). In-activation of complement by light.

photokinetic (fo"to-kin-et'ik) [Gr. φωs light + κινητικός pertaining to motion]. Moving in response to the stimulus of light.

photology (fo-tol'o-je). 1. The branch of physics which treats of light. 2. Same as photalgia.

photolysis (fo-tol'is-is) [see photolyte]. 1 Chemical decomposition by the action of light 2 Lysis or solution of cells under the influence of light.

photolyte (fo'to-lit) [Gr. $\varphi\hat{\omega}_{S}$ light $+\lambda \psi \epsilon \iota \nu$ to dissolve]. Any substance decomposable by the action of light.

photolytic (fo-to-lit'ik). Decomposed by light.

photomagnetism (fo-to-mag'net-izm). Magnetism induced by the action of light.

photomania (fo-to-ma'ne-ah) [Gr. φωs light + μανία madness]. Maniacal symptoms developed under the influence of light.

photometer (fo-tom'et-er) [Gr. φωs light + μέτρον measure]. A device for measuring the intensity of light.
 Förster's p. Same as photophometer.

photomethemoglobin (fo"to-meth-hem-o-glo'bin). A compound formed by the action of light on methemoglobin.

photometry (fo-tom'et-re) [Gr. $\varphi \hat{\omega} s$ light $+ \mu \ell r \rho \rho \nu$ measure]. 1. The measurement of light. 2. The reactions of an organism to varying intensities of light.

photomicrograph (fo-to-mik'ro-graf) [Gr. φ ω̂s light + μ ικρός small + γ ρά φ ειν to record]. 1. The photograph of a microscopic object. 2. A photograph of very minute size.

photomicrography (fo"to-mi-krog'raf-e). The production of photomicrographs.

photomicroscope (fo-to-mi'kro-sköp). A microscope and camera combined for making photomicrographs.

photomicroscopy (fo-to-mi-kros'ko-pe). Photography of enlarged pictures of minute objects with the photomicroscope.

photomorphism, photomorphosis (fo-to-mor-fizm, fo"to-mor-fo'sis) [Gr. φωs light + μορφή

- form]. The structural effects in organisms due to light.
- photoncia (fo-ton'se-ah) [Gr. φωs light + δνκος tumor]. Swelling due to the action of light.
- **photonosus** (fo-ton'o-sus) [Gr. $\varphi \hat{\omega}s$ light + $\nu \delta \sigma os$ disease]. Any disease or disorder, as of the eyes, due to excess of light.
- photopathy (fo-top'ath-e) [Gr. $\varphi \hat{\omega}$ s light $+ \pi \hat{\omega} \theta$ os affection]. 1. Photonosus. 2. The attractive or repulsive influence of light upon organisms.
- photoperceptive (fo"to-per-sep'tiv) [Gr. φω̂s light + perceptive]. Able to perceive light.
- photophilic (fo-to-fil'ik) [Gr. φω̂s light + φιλεῖν to love]. Loving light; fond of light.
- photophobia (fo-to-fo'be-ah) [Gr. φω̂s light + φόβοs fear]. Abnormal intolerance of light.
- **photophobic** (fo-to-fo'bik). Pertaining to or affected with photophobia.
- photophone (fo'to-fon) [Gr. $\varphi \hat{\omega}_s$ light $+ \varphi \omega \nu \hat{\eta}$ voice]. An instrument for producing sound by the action of waves of light.
- **photophore** (fo'to-fōr) [Gr. φω̂s light + φέρειν to bear]. A rhinoscopic or laryngoscopic lamp.
- photopia (fo-to'pe-ah) [Gr. φωs light]. Light adaptation; the adjustment of the eye for bright light. Cf. scotopia.
- photopsia, photopsy (fo-top'se-ah, fo'top-se) [Gr. $\varphi \hat{\omega}_s$ light $+ \delta \psi_{is}$ vision]. An appearance as of sparks or flashes due to retinal disease.
- photoptarmosis (fo"to-tar-mo'sis) [Gr. φω̂s light + πταρμω̂σις sneezing]. Sneezing caused by the influence of light.
- **photoptometer** (fo-top-tom'et-er) [Gr. $\varphi \hat{\omega}_s$ light + $\delta \pi \tau \hat{\sigma}_s$ seen + $\mu \hat{e} \tau \rho \sigma_s$ measure]. A device for testing the acuity of vision by determining the smallest amount of light that will render an object just visible.
- **photoptometry** (fo-top-tom'et-re). Measurement of light perception.
- photoradiometer (fo"to-ra-de-om'et-er). An apparatus for measuring the quantity of x-rays penetrating any given surface.
- photoreceptive (fo"to-re-sep'tiv) [Gr. φω̂s light + receptive]. Photoperceptive.
- photoreceptor (fo"to-re-sep'tor) [Gr. φῶs light + receptor]. A nervous end organ or receptor sensitive to light.
- photoscope (fo'to-skōp) [Gr. φω̂s light + σκοπεῖν to see]. A kind of fluoroscope.
- **photoscopy** (fo-tos'ko-pe) [Gr. φωs light + σκοπεῖν to view]. The same as *skiascopy*.
- photosensitive (fo-to-sen'sit-iv). Sensitive to light.
- **photosensitize** (fo-to-sen'sit-Iz) [Gr. $\varphi \hat{\omega}s$ light + sensitize]. To sensitize a substance or an organism to the influence of light.
- photosynthesis (fo-to-sin'the-sis) [Gr. φωs light + συνθεσις synthesis]. A chemic combination caused by the action of light.
- phototaxis (fo-to-taks'is) [Gr. φωs light + τάξιs arrangement]. The movement of cells and microorganisms under the influence of light.
- phototherapy (fo-to-ther'ap-e) [Gr. φω̂s light + therapy]. The treatment of disease by the influence of light, especially by variously concentrated light-rays.
- **phototropism** (fo-tot'ro-pizm) [Gr. $\varphi \omega s$ light + $\tau \rho \delta \pi o s$ a turning]. The tendency of an organism to turn or move toward (positive ρ .) or away from (negative ρ .) light.
- photovoltic (fo-to-vol'tik) [Gr. φωs light + voltic].
 A term applied to electromotive force due to light.
- photoxylin (fo-toks'il-in) [Gr. φωs light + ξύλον wood]. A kind of pyroxylin prepared from woodpulp: used in preparing a collodion, and employed in microscopy and minor surgery.
- photuria (fo-tu're-ah) [Gr. φωs light + οδρον urine].

- The excretion or passage of urine having a luminous appearance.
- Phragmidiothrix (frag-mid'e-o-thriks) [Gr. φραγμός inclosure + -ιδιον diminutive ending + θρίξ
 hair]. A genus of encapsulated bacteria whose cells
 appear as branchless threads. These cells divide
 into three directions and give rise to a cell-strand.
 Separate cells may grow through the capsule and
 give rise to branches.
- phragmoplast (frag'mo-plast) [Gr. φραγμός inclosure + πλαστός formed]. The barrel-shaped spindle within which the midbody forms in mitosis.
- phren (fren) [Gr. φρήν]. 1. The diaphragm. 2.
 The mind or intellect.
- phrenalgia (fren-al'je-ah) [Gr. φρήν mind + ἄλγος pain]. 1. Same as psychalgia. 2. Pain in the diaphragm.
- phrenasthenia (frēn-as-the'ne-ah, frēn''as-the-ni'-ah) [Gr. $\varphi \rho \eta \nu$ mind $+ \dot{\alpha} \sigma \theta \dot{\epsilon} \nu \epsilon \iota \alpha$ weakness]. Feebleness of mind.
- phrenetic (fren-et'ik). Maniacal; a maniac.
- phrenic (fren'ik) [L. phren'icus; Gr. φρήν mind; diaphragm]. 1. Pertaining to the mind. 2. Pertaining to the diaphragm.
- phrenicectomy (fren-is-ek'to-me) [phrenic nerve + Gr. ἐκτομή excision]. Resection of the phrenic nerve for the same purpose as phrenicotomy.
- phrenicotomy (fren-ik-ot'o-me) [phrenic nerve + Gr. τομή incision]. Surgical division of the phrenic nerve for the purpose of causing one-sided paralysis of the diaphragm, which then becomes pushed up by the viscera so as to compress a diseased lung.
- phrenitis (fre-ni'tis) [Gr. φρήν mind + -ιτιs inflammation]. τ Delirium or frenzy. 2. Inflammation of the diaphragm.
- phrenoblabia (fre-no-bla'be-ah) [Gr. $\varphi \rho \dot{\eta} \nu$ mind + $\beta \lambda \dot{\alpha} \beta \eta$ hurt]. Mental disorder.
- phrenocardia (fren-o-kar'de-ah) [Gr. φρήν mind + καρδία heart]. A psychic condition characterized by pain in the cardiac region, respiratory disorders, and cardiac palpitation. Called also triad of Hertz, cardiasthenia, and cardiovascular neurasthenia.
- phrenocolic (fren-o-kol'ik). Connecting the diaphragm and colon.
- **phrenocolopexy** (fren-o-ko'lo-peks-e) [Gr. $\varphi \rho \dot{\eta} \nu$ diaphragm + $\kappa \dot{\phi} \lambda \sigma \nu$ colon + $\pi \dot{\eta} \xi \iota s$ fixation]. The operation of anchoring the prolapsed colon to the diaphragm.
- phrenodynia (fren-o-din'e-ah) [Gr. φρήν mind + δδύνη pain]. Pain in the diaphragm.
- phrenogastric (fren-o-gas'trik). Pertaining to the diaphragm and the stomach.
- phrenoglottic (fren-o-glot'ik). Pertaining to the diaphragm and the glottis.
- phrenograph (fren'o-graf) [Gr. φρήν diaphragm + γράφειν to write]. An apparatus for recording the movements of the diaphragm.
- phrenohepatic (fre"no-he-pat'ik) [Gr. $\varphi\rho\eta\nu$ diaphragm + $\dot{\eta}\pi\alpha\rho$ liver]. Pertaining to the diaphragm and the liver.
- **phrenology** (fre-nol'o-je) [Gr. $\varphi p \dot{\eta} \nu$ mind $+ \lambda \delta \gamma os$ discourse]. The study of the mind and character from the shape of the skull.
- phrenopathic (fren-o-path'ik). Psychopathic.
- phrenopathy (fre-nop ath-e) [Gr. φρήν mind + πάθος disease]. Any mental disease or disorder.
- phrenopericarditis (fre"no-per-e-kar-di'tis) [Gr. φρήν diaphragm + pericarditis]. A condition in which the apex of the heart is attached to the diaphragm by adhesions.
- phrenoplegia (fren-o-ple'je-ah) [Gr. φρήν mind; diaphragm + πληγή stroke]. 1. A sudden attack of mental disorder. 2. Loss or paralysis of the mental faculties. 3. Paralysis of the diaphragm.
- phrenoptosis (fren-op-to'sis) [Gr. φρήν diaphragm + πτῶσις falling]. Downward displacement of the diaphragm.

phrenosin (fre-no'sin). A galactosid, probably C₄₈-H₉₁NO₈ (Levene), obtained from brain substance. It yields on hydrolysis galactose, sphingosin, and phrenosinic acid.

phrenosinic acid (fren-o-sin'ik). See acid.

phrenospasm (fren'o-spazm) [Gr. φρήν diaphragm + spasm] 1. Spasm of the diaphragm. 2. Cardiospasm.

phrenosplenic (fren-o-splen'ik). Connecting the diaphragm and the spleen.

phrenosterol (fren-o-ste'rol). A sterol from brain substance.

phrictopathic (frik-to-path'ik) [Gr. φρικτός producing a shudder $+ \pi \delta \theta_{0}$ ς disease]. Causing a shudder: a term applied to a peculiar shuddering sensation caused by irritating a hysteric anesthetic area during recovery.

phronema (fro-ne'mah) [Gr. φρόνημα mind]. That portion of the cortex of the brain which is occupied by thought centers or association centers.

phronetal (fro-ne'tal). Pertaining to thought.

phrynin (fri'nin) [Gr. φρύνη toad]. A poisonous substance obtainable from the skin and secretions of various toads. Its properties resemble those of digitalin.

phrynolysin (frin-ol'is-in) [Gr. φρύνη toad + λύσιs destruction]. The lysin or toxin from toad venom.
 phthalate (tha'lāt). A salt of phthalic acid.

phthalein (thal'e-in). Any one of a series of coloring-matters formed by the condensation of phthalic anhydrid with the phenols. Some of them have a purgative action See phenolphthalein. alphanaphthol p., an indicator used in the determination of hydrogen-ion concentration. It has a PH range of 9.3-10.5. orthocresol p., an indicator used in the determination of hydrogen-ion concentration. It has a PH range of 8.2-0.8.

phthaleinometer (thal"e-in-om'et-er). An instrument for use in performing phenolsulphonephthalein tests.

phthinoid (thi'noid). Tuberculous.

phthiremia (thir-e'me-ah) [Gr. $\varphi\theta\epsilon l\rho\epsilon\nu$ to corrupt + $al\mu a$ blood]. A deprayed state of the blood.

phthiriasis (thir-i'as-is) [Gr. φθειρίασις, φθείρ louse]. Infestation with lice See pediculosis. p. cap'itis, lousiness of the hair of the head. p. cor'poris, the presence of lice on the body or clothing. p. inguina'lis, the presence of crablice on the pubic hairs.

phthiriophobia (thir"e-o-fo'be-ah) [Gr. φθειρίασις lousiness + φόβος fear]. Morbid dread of lice.

Phthirius (thir'e-us) [Gr. φθεῖρ louse]. A genus of the Hemiptera. P. pu'bis, the pubic or crab louse. It causes a dermatitis called phthiriasis.

phthisic (tiz'ik) [Gr. φθισικόs]. 1. Affected with phthisis. 2. A popular name for asthma.

phthisical (tiz'ik-al) [Gr. φθισικός]. Affected with phthisis, or of the nature of phthisis.

phthisicky (tiz'ik-e). Affected with asthma.

phthisin (thi'sin). A therapeutic preparation of the bronchial glands of animals: used in lung diseases.

phthisiogenesis (tiz"e-o-jen'es-is). The development of phthisis.

phthisiogenetic, phthisiogenic (tiz"e-o-jenet'ik, tiz-e-o-jen'ik). Causing, or pertaining to the causation of, phthisis.

phthisiology (tiz-e-ol'o-je) [Gr. φθίσις wasting + λόγος word]. The sum of knowledge in regard to phthisis.

phthisiomania (tiz"e-o-ma'ne-ah) [phthisis + Gr. μανία madness]. A morbid and mistaken belief that one has consumption.

phthisiophobia (tiz"e-o-fo'be-ah) [phthisis + Gr. φόβος fear]. Morbid dread of phthisis.

phthisiotherapeutic (tiz"e-o-ther-ap-u'tik). Of or relating to the treatment of phthisis.

phthisiotherapeutics (tiz"e-o-ther-ap-u'tiks). Phthisiotherapy.

Phthisiotherapy.

phthisiotherapeutist, phthisiotherapist
(tiz"e-o-ther-ap-u'tist, tiz-e-o-ther'ap-ist). One
who makes a specialty of the treatment of
phthisis.

phthisiotherapy (tiz"e-o-ther'ap-e) [phthisis + therapy]. The treatment of phthisis.

phthisis (thi'sis) [Gr φθίσις, φθίων to consume].
1. A wasting away of the body or a part of the body.
2. Pulmonary consumption; pulmonary tuberculosis: a disease marked by progressive wasting or emaciation of the body, obstinate cough, with the expectoration of opaque matter and sometimes of blood, loss of strength, hectic fever, night-sweats, and diarrhea. The disease is due to the presence of the tubercle bacillus (Mycobacterium tuberculo'sis) in the lungs, the pathologic lesion consisting of the development of granular consolidations, which eventually undergo softening, with the formation of cavities or vomicæ. ab**dominal p.**, tuberculosis of the intestines and mesenteric glands bacillary p., that due to the bacillus of tuberculosis. basic p., tuberculosis of the base of the lung. black p. Same as anthracosis. bronchial p., tuberculosis of the bronchial glands. p. bul'bi, shrinkage and bronchial glands. p. bul'bi, shrinkage and wasting of the eye. colliers' p., a form of interstitial pneumonia seen in colliers, and due to the inhalation of particles of coal-dust p. confirma'ta, the second stage of tuberculosis of the lungs. p. cor'neæ, the shriveling and dis-appearance of the cornea after suppurative keratitis. p. despera'ta, the third stage of tuberculosis of the lungs diabetic p., the case-ous bronchopneumonia of diabetic patients, essential p. (of the eye), ophthalmomala-cia. fibroid p. r. Chronic phthisis in which fibrous tissue is developed in the lung 2. Interstitial pneumonia. flax-dressers p., a form of pneumonoconiosis occurring in flax-dressers. flo'rida, swift or galloping consumption. glandular p., tuberculosis of the lymphatic glands. grinders' p., a combination of tuber-culosis and silicosis of the lungs occurring among grinders in the cutlery trade and due to the inhalation of the steel dust. hepatic p., tuberculosis of the liver. p. incip'iens, the first stage of tu-berculosis of the lungs. knife-grinders' p., grinders' phthisis. laryngeal p., tuberculosis of miners' p., anthracois. p. nodo'sa, miliary tubercle non-bacillary p., any pseudotuberculosis not due to a bacillus p. pancreat'-ica, a wasted condition associated with disease of the pancreas. **p. phlegmat'ica**, tuberculous disease without loss of flesh. **potters' p.**, a combination of tuberculosis and silicosis of the lungs in potters due to inhalation of dust. pulmonary p., tuberculosis of the lung. stone-cutters'
p., pulmonary disease of stone-cutters due to the inhalation of particles of stone.
p. ventric'uli, atrophy of the mucous membrane of the stomach and alimentary canal

phthisopyrin (thiz-o-pi'rin). A proprietary tuberculosis remedy containing aspirin, sodium arsenite, and camphoric acid.

phthisoremid, phthysoremid (this-o-re'mid). Koch's bacillary emulsion in capsule form.

phulluah (foo'loo-ah). An oily medicine obtained in India from a plant: used in snake-bite, rheumatism, sprains, etc., as an anodyne, antiseptic, and stimulant.

phycochrome (fi'ko-krōm) [Gr. φῦκος seaweed + χρῶμα color]. 1. A blue-green pigment from various fresh-water algæ of the simplest type. 2. Any plant or species of alga of the class Phyco-chromophyceæ.

phycochromoprotein (fi''ko-kro-mo-pro'te-in). A chromoprotein of the seaweeds as distinguished from the hemochromoproteins.

- phycocyan (fi-ko-si'an). A blue chromoprotein found in seaweeds.
- phycoerythrin (fi-ko-er'ith-rin). A red chromoprotein found in seaweeds.
- Phycomycetes (fi-ko-mi-se'tēz) [Gr. φῦκος seaweed $+ \mu \hat{v} \kappa \eta s$ fungus]. A group of molds including the mucors
- Phydip'pus tripuncta'tus. A venomous spider of America.
- **phygogalactic** (fi"go-gal-ak'tik) [Gr. φ εῦγειν to avoid $+ \gamma \dot{\alpha} \lambda \dot{\alpha}$ milk]. Checking the secretion of milk; galactophygous.
- phylacagogic (fi-lak-ag-oj'ik) [Gr. φυλάξις guardian + άγογός leading]. Inducing the formation of phylaxins or protective antibodies.
- phylacogen (fi-lak'o-jen) [Gr. φύλαξ guard + γεν to produce]. A proprietary preparation said to be a filtrate of bacterial cultures which, when injected into the body, tends to stimulate the formation of specific defensive proteins.
- phylactic (fi-lak'tik). Pertaining to or producing phylaxis
- phylaxin (fi-laks'in) [Gr. φύλαξ guard]. Any defensive protein found in immunized animals or persons There are two classes of phylaxins. The first, or mycophylaxins, act by destroying the microorganisms themselves; the second, or toxophylaxins, destroy or neutralize the poisonous products of the bacteria.
- **phylaxis** (fi-laks'is) [Gr φύλαξ a guard]. Protection against infection; the bodily defense against infection.
- phyletic (fi-let'ik). Pertaining to phylogeny.
- phyllo-erythrin (fil-o-er'ith-rin). A derivative of chlorophyl formed in the intestinal canal of ruminant animals and found also in their bile.
- phyllopyrrol (fi-ko-pir'ol) Trimethylethylpyrrol, (CH₃)₃C₄(NH)C₂H₅, from bile pigments.
- phyllosan (fil'o-san). A proprietary chlorophyl preparation for anemia, chlorosis, etc.
- phyllyrin (fil'ir-in). A substance, C24H34O11, in silvery flakes antipyretic.
- phylogenesis, phylogeny (fi-lo-jen'es-is, fi-loj'en-e) [(ir. $\varphi \hat{p} \lambda \phi \hat{p}$ tribe $+ \gamma \hat{e} \nu \epsilon \sigma is$ generation]. The evolution or ancestral history of a race or group Cf ontogeny. of animals
- phylogenetic, phylogenic (fi"lo-jen-et'ik, fi-lo-Pertaining to phylogeny. ien'ik)
- phyloporphyrin (fil-o-por'fir-in). A compound, $C_{32}H_{34}N_4O_2$, from chlorophyl, very similar to hematoporphyrin
- phyloxanthin (fil-oks-an'thin). A compound formed together with phyllocyanic acid by treating chlorophyl with hydrochloric acid.
- **phylum** (fi'lum), pl. phy'la [Gr. φῦλον race]. One of the primary or main divisions of the animal or vegetable kingdom.
- phyma (fi'mah), pl. phy'mata [Gr. φῦμα growth]. Any skin tumor or cutaneous tubercle; especially, a circumscribed swelling on the skin, larger than a tubercle, and produced by exudation into the subcutaneous tissue or the corium.
- phymatiasis (fi-mat-i'as-is). Same as tuberculosis. phymatiosis (fi"mat-e-o'sis). Tuberculosis.
- **phymatoid** (fi'mat-oid) [Gr. φῦμα growth + είδος form]. Resembling a tumor or phyma.
- phymatorhusin (fi"mat-o-ru'sin) [Gr. φῦμα growth + pbous issue]. A dark pigment from hair and melanotic tumors. It is a form of melanin.
- phymatorrhysin (fi"mat-o-ris'in). Same as phymatorhusin.
- phymatosis (fi-mat-o'sis). A condition characterized by the presence of phymata.
- phymochrom (fi'mo-krōm). An arsenic compound of the thymus gland, used internally in skin diseases. physalides (fis-al'id-ez). The plural of physalis.
- physaliform, physalliform (fis-al'if-orm) [Gr.

- φυσαλλίs bubble + L. for'ma shape]. Resembling bubbles.
- physaliphore (fis-al'if-or) [physalis + Gr. copeiv to carry]. 1. A globular cavity in certain broodcells of cancers. 2. More correctly, the cell itself which contains such a cavity. Cf. physalis.
- physalis (fis'al-is), pl. physal'ides [Gr. φυσαλλίs bubble].
 r. A large brood-cell from a cancer.
 2. More correctly, a spheric cavity found in certain cells, such as the large brood-cells of cancers or the giant-cells of sarcoma.
- physallization (fis-al-iz-a'shun) [Gr. φυσαλλίς bubble]. The formation of a permanent froth when a liquid is shaken together with a gas.
- Physaloptera (fis-al-op'ter-ah). A genus of nematode worms of the family Strongylidæ found in the stomach and intestines of man and other verte-P. caucas'ica occurs in Russia mor'dens, a round worm not uncommon in negroes in East Africa.
- physconia, physcony (fis-ko'ne-ah, fis'ko-ne) [Gr. φύσκων pot-belly]. Enlargement or swelling of the abdomen.
- **physiatrics** (fiz-e-at'riks) [Gr. $\varphi b\sigma \iota s$ nature + $la\tau \rho \epsilon la$ healing]. The cure of disease by nature. physic (fiz'ik) [Gr. φυσικός natural].
 i. The art of medicine and of therapeutics.
 i. The art of medicine, especially a cathartic.
 Culver's p. See Leptandra.
- physical (fiz'ik-al) [Gr. φυσικός]. Pertaining to nature or to the body.
- physician (fiz-ish'un). An authorized practitioner of medicine. **attending p.**, a physician who attends a hospital at stated times to visit the patients and give directions as to their treatment. resident p. Same as intern.
- Physick's operation, pouches, tincture, etc. (fiz'iks) [Philip Syng Physick, American surgeon, 1768-1837] See under operation, pouch, tincture.
- physicochemic (fiz"ik-o-kem'ik). Pertaining to physics and chemistry.
- physicogenic (fiz"ik-o-jen'ik). Due to physical causes; of physical origin, as opposed to psychoeenic.
- physicotherapeutics, physicotherapy (fiz"iko-ther-ap-u'tiks, fiz"ik-o-ther'ap-e). Same as physiotherapy.
- physics (fiz'iks) [Gr. φύσις nature]. The science of the laws and phenomena of nature, but especially of the forces and general properties of matter.
- physicum (fiz'ik-um). A preliminary examination in German universities leading to a doctor's degree. physinosis (fiz-in-o'sis) [Gr. φύσις nature + νόσος
- disease]. Any disease due to physical agents. physiochemic (fiz"e-o-kem'ik). Pertaining
- physical chemistry.
- physiocrasy (fiz-e-ok'ras-e) [Gr. φύσις nature + κρατεῖν to rule]. The passive tendency in therapeutics which permits nature to take its course with little interference by man. Cf. anthropocracy
- physiognomy (fiz-e-og'no-me) [Gr. φύσις nature + γνώμων a judge]. 1. The determination of mental or moral character and qualities by the face. 2. The countenance, or face. 3. The facial expression and appearance as a means of diag-
- physiologic, physiological (fiz"e-o-loj'ik, fiz"eo-loj'ik-al). 1. Pertaining to physiology or the functions of the body and organs. 2. Normal; not pathologic.
